Chapter 1. The Beginnings

1. 8th Century: Beowulf

Beowulf

The Scyldings

Hwæt! We Gardena | in geardagum,
theodcyninga, | thrym gefrunon,
hu dha æthelingas | ellen fremedon.

Oft Scyld Scefing | sceathena threatum,

5
monegum mægthum, | meodosetla ofteah,
egsode eorlas. | Sydhhdhan ærest weardh
feasceaft funden, | he thæs frofre gebad,
weox under wolcnum, | weordhmyndum thah,
odhthæt him æghwylc | thara ymbsittendra

10
ofer hronrade | hyran scolde,
gomban gyldan. | Thæt wæs god cyning!
Dhæm eafera wæs | æfter cenned,
geong in geardum, | thone god sende
folce to frofre; | fyrendhearfe ongeat

15
the hie ær drugon | aldorlease
lange hwile. | Him thæs liffrea,
wuldres wealdend, | woroldare forgeaf;

Beowulf wæs breame | (blæd wide sprang),
Scyldes eafera | Scedelandum in.

20

Swa sceal geong guma | gode gewyrcean,
fromum feohgiftum | on fæder bearme,
thæt hine on ylde | eft gewunigen
wilgesithas, | thonne wig cume,
leode gelæsten; | lofdædum sceal

25

in mægtha gehwære | man getheon.

Him dha Scyld gewat | to gescæphwile
felahror feran | on frean wære.
Hi hyne tha ætbæron | to brimes farodhe,
swæse gesithas, | swa he selfa bæd,

30

thenden wordum weold | wine Scyldinga;
leaf landfruma | lange ahte.
Thær æt hydhe stod | hringedstefna,
isig ond utfus, | æthelinges fær.
Aledon tha | leofne theoden,

35

beaga bryttan, | on bearm scipes,
mærne be mæste. | Thær wæs madma fela
of feorwegum, | frætwa, gelæded;
ne hyrde ic cymlicor | ceol gegyrwan
hildewæpnum | ond headhowædum,

40

billum ond byrnum; | him on bearme læg
madma mænigo, | tha him mid scoldon
on flodes æht | feor gewitan.
Nalæs hi hine læssan | lacum teodan,
theodgestreonium, | thon tha dydon

45

the hine æt frumsceaft | fordh onsendon
æne ofer ydhe | umborwesende.
Tha gyt hie him asetton | segen geldenne
heah ofer heafod, | leton holm beran,
geafon on garsecg; | him wæs geomor sefa,

50

murnende mod. | Men ne cunnon
seggan to sodhe, | selerædende,
hæledh under heofenum, | hwa thæm hlæste onfeng.

Dha wæs on burgum | Beowulf Scyldinga,
leaf leodcyning, | longe thrage

55

folcum gefræge | (fæder ellor hwearf,
aldor of earde), | oththæt him eft onwoc
heah Healfdene; | heold thenden lifde,
gamol ond gudhreow, | glæde Scyldingas.
Dhæm feower bearn | fordh gerimed

60

in worold wocun, | weoroda ræswan,
Heorogar ond Hrodhgar | ond Halga til;
hyrde ic thæt | wæs Onelan cwen,
Headhoscilfingas | healsgebedda.

Tha wæs Hrodhgare | heresped gyfen,

65

wiges weordhmynd, | thæt him his winemagas
georne hyrdon, | odhdh thæt seo geogodh geweox,
magodriht micel. | Him on mod bearn
thæt healreced | hatan wolde,
medoærn micel, | men gewyrcean

70

thonne yldo bearn | æfre gefrunon,
ond thær on innan | eall gedælan
geongum ond ealdum, | swylc him god sealde,
buton folcscare | ond feorum gumena.
Dha ic wide gefrægn | weorc gebannan

75

manigre mægthe | geond thisne middangeard,
folcstede frætwan. | Him on fyrste gelomp,
ædre mid yldum, | thæt hit weardh ealgearo,
healærna mæst; | scop him Heort naman
se the his wordes geweald | wide hæfde.

80

He beot ne aleh, | beagas dælde,
sinc æt symle. | Sele hlifade,
heah ond horngeap, | headhowylma bad,
ladhan liges; | ne wæs hit lenge tha gen
thæt se ecghete | athumsweorum

85

æfter wælnidhe | wæcnan scolde.

The Monster Grendel

Dha se ellengæst | earfodhlice
thrage getholode, | se the in thystrum bad,
thæt he dogora gehwam | dream gehyrde
hludne in healle; | thær wæs hearpan sweg,

90

swutol sang scopes. | Sægde se the cuthe
frumsceaft fira | feorran reccan,
cwædh thæt se ælmihtiga | eordhan worhte,
wlitebeorhtne wang, | swa wæter bebagedh,
gesette sigehrethig | sunnan ond monan

95

leoman to leohte | landbuendum
ond gefræt Wade | foldan sceatas
leomum ond leafum, | lif eac gesceop
cynna gehwylcum | thara dhe cwice hwyrfath.

Swa dha drihtguman | dreamum lifdon

100

eadiglice, | odhdhæt an ongan
fyrene fremman | feond on helle.
Wæs se grimma gæst | Grendel haten,
mære mearcstapa, | se the moras heold,
fen ond fæsten; | fifelcynnnes eard

105

wonsæli wer | weardode hwile,
sithdhan him scyppend | forscriften hæfde
in Caines cynne. | Thone cwealm gewræc
ece drihten, | thæs the he Abel slog;
ne gefeah he thære fæhdhe, | ac he hine feor forwræc,

110

metod for thy mane, | mancynne fram.
Thanon untydras | ealle onwocon,
eotenas ond ylfe | ond orneas,
swylce gigantas, | tha widh gode wunnon
lange thrage; | he him dhæs lean forgeald.

115

Gewat dha neosian, | sythdhan niht becom,
hean huses, | hu hit Hringdene
æfter beorthege | gebun hæfdon.
Fand tha dhær inne | æthelinga gedriht
swefan æfter symble; | sorgne ne cudhon,

120

wonsceaft wera. | Wiht unhælo,
grim ond grædig, | gearo sona wæs,
reoc ond rethe, | ond on ræste genam
thritig thegna, | thanon eft gewat
hudhe hremig | to ham faran,

125

mid thære wælfylle | wica neosan.

Dha wæs on uhtan | mid ærdæge
Grendles gudhcraeft | gumum undyrne;
tha wæs æfter wiste | wop up ahafen,
micel morgensweg. | Mære theoden,

130

ætheling ærgod, | unblidhe sæt,
tholode dhrydhswydh, | thegnsorge dreah,
sydhthan hie thæs ladhan | last sceawedon,
wergan gastes; | wæs thæt gewin to strang,
ladh ond longsum. | Næs hit lengra fyrst,

135

ac ymb ane niht | eft gefremede
mordhbeala mare | ond no mearn fore,
fæhdhe ond fyrene; | wæs to fæst on tham.

Tha wæs eadhfynde | the him elles hwær
gerumlicor | ræste sohte,

140

bed æfter burum, | dha him gebeacnod wæs,
gesægd sodhlice | sweotolan tacne
healdhegnes hete; | heold hyne sydhthan
fyr ond fæstor | se thæm feonde ætwand.

Swa rixode | ond widh rihte wan,

145

ana widh eallum, | odhthæt idel stod
husa selest. | Wæs seo hwil micel;
XII wintra tid | torn getholode
wine Scyldinga, | weana gehwelcne,
sidra sorga. | Fordham secgum weardh,

150

ylda bearnum, | undyrne cudh,
gyddum geomore, | thætte Grendel wan
hwile widh Hrothgar, | hetenidhas wæg,
fyrene ond fæhdhe | fela missera,
singale sæce, | sibbe ne wolde

155

widh manna hwone | mægenes Deniga,
feorhbealo feorran, | fea thingian,
ne thær nænig witenā | wenan thorfte
beorhtre bote | to banan folmum,
ac se æglæca | ehtende wæs,

160

deorc deathscua, | duguthe ond geogothē,
seomade ond syrede, | sinnihtē heold
mistige moras; | men ne cunnon
hwyder helrunan | hwyrftum scrithadh.

Swa fela fyrena | feond mancynnes,

165

atol angengea, | oft gefremede,
heardra hyndha. | Heorot eardode,
sincfage sel | swartum nihtum;
no he thone gifstol | gretan moste,
mathdhum for metode, | ne his myne wisse.

170

Thæt wæs wræc micel | wine Scyldinga,
modes brecdha. | Monig oft gesæt
rice to rune; | ræd eahtedon
hwæt swidhferhdhum | selest wære
widh færgryrum | to gefremmanne.

175

Hwilum hie geheton | æt hærgtrafum
wigweorthunga, | wordum bædon
thæt him gastbona | geoce gefremede
widh theodthream. | Swylc wæs theaw hyra,
hæthenra hyht; | helle gemundon

180

in modsefan, | metod hie ne cuthon,
dæda demend, | ne wiston hie drihten god,
ne hie huru heofena helm | herian ne cuthon,
wuldres waldend. | Wa biðh thæm dhe sceal
thurh slidhne nidh | sawle bescufan

185

in fyres fæthm, | frofre ne wenan,
wihte gewendan; | wel biðh thæm the mot
æfter deadhdæge | drihten secean
ond to fæder fæthmum | freodho wilnian.

Swa dha mælceare | maga Healfdenes

190

singala seadh, | ne mihte snotor hæledh
wean onwendan; | wæs thæt gewin to swydh,
lath ond longsum, | the on dha leode becom,
nydwracu nithgrim, | nihtbealwa mæst.
thæt fram ham gefrægn | Higelaces thegn,

195

god mid Geatum, | Grendles dæda;
se wæs moncynnes | mægenes strengest
on thæm dæge | thysses lifes,
æthele ond eacen. | Het him ydhlidan
godne gegyrwan, | cwædh, he gudhcyning

200

ofer swanrade | secean wolde,
mærne theoden, | tha him wæs manna thearf.
dhone sidhfæt him | snotere ceorlas
lythwon logon, | theah he him leof wære;
hwetton higerofne, | hæl sceawedon.

205

Hæfde se goda | Geata leoda
cempa gecorone | thara the he cenoste
findan mihte; | XVna sum
sundwudu sohte; | secg wisade,
lagucræftig mon, | landgemyrcu.

210

Fyrst fordh gewat. | Flota wæs on ydhum,
bat under beorge. | Beornas gearwe
on stefn stigon; | streamas wundon,
sund widh sande; | secgas bæron
on bearm nacan | beorhte frætwe,

215

gudhsearo geatolic; | guman ut scufon,
weras on wilsidh, | wudu bundenne.

Gewat tha ofer wægholm, | winde gefysed,
flota famiheals | fugle gelicost,
odhthæt ymb antid | othres dogores

220

wundenstefna | gewaden hæfde
thæt dha lidhende | land gesawon,
brimclifu blican, | beorgas steape,
side sænæssas; | tha wæs sund liden,
eoletes æt ende. | Thanon up hradhe

225

Wedera leode | on wang stigon,
sæwudu sældon | (syrca hrysedon,
gudhgewædo), | gode thancedon
thæs the him ythlade | eadhe wurdon.
Tha of wealle geseah | weard Scildinga,

230
se the holmclifu | healdan scolde,
beran ofer bolcan | beorhte randas,
fyrdsearu fuslicu; | hine fyrwyt bræc
modgehygdum, | hwæt tha men wæron.
Gewat him tha to warodhe | wicge ridan

235
thegn Hrodhgares, | thrymmum cwehte
mægenwudu mundum, | methelwordum frægn:
"Hwæt syndon ge | searohæbbendra,
byrnum werede, | the thus brontne ceol
ofer lagustræte | lædan cwomon,

240
hider ofer holmas? | le wæs
endesæta, | ægwearde heold,
the on land Dena | ladhra nænig
mid scipherge | scedhthan ne meahthe.
No her cudhlicor | cuman ongunnon

245
lindhæbbende; | ne ge leafnesword
gudhfremmdra | gearwe ne wisson,
maga gemedu. | Næfre ic maran geseah
eorla ofer eorthan | dhonne is eower sum,
secg on searwum; | nis thæt seldeguma,

250
wæpnum geweordhad, | næfne him his wlite leoge,
ænlic ansyn. | Nu ic eower sceal
frumcyn witan, | ær ge fyr heonan,
leassceaweras, | on land Dena
furthur feran. | Nu ge feorbuend,

255
merelidhende, | minne gehyradh
anfealdne gethoht: | Ofost is selest
to gecyðhane | hwanan eowre cyme syndon."

Him se yldesta | ondswarode,
werodes wisa, | wordhord onleac:

260
"We synt gumcynnes | Geata leode
ond Higelaces | heordgeneatas.
Wæs min fæder | folcum gecyðed,

æthele ordfruma, | Ecgtheow haten.
Gebad wintra worn, | ær he on weg hwurfe,

265
gamol of gearдум; | hine gearwe geman
witena welhwylc | wide geond eorthan.
We thurh holdne hige | hlaford thinne,
sunu Healfdenes, | secean cwomon,
leodgebyrgan; | wes thu us larena god.

270
Habbadh we to thæm mæran | micel ærende,
Deniga frean, | ne sceal thær dyrne sum
wesand, thæs ic wene. | Thu wast (gif hit is
swa we sothlice | secgan hyrdon)
thæt mid Scyldingum | sceadhona ic nat hwylc,

275
deogol dædhata, | deorcum nihtum
eawedh thurh egsan | uncudhne nidh,
hyndhu ond hrafyl. | Ic thæs Hrodhgar mæg
thurh rumne sefan | ræd gelæran,
hu he frod ond god | feond oferswydheth,

280
gyf him edwendan | æfre scolde
bealuwa bisigu, | bot eft cuman,
ond tha cearwylmas | colran wurdhath;
odhdhe a sythdhan | earfodhthrage,
threanyd tholadh, | thenden thær wunadh

285
on heahstede | husa selest."
Weard mathelode, | dhær on wicge sæt,
ombeht unforht: | "Æghwæthres sceal
scearp scyldwiga | gescad witan,
worda ond worca, | se the wel thencedh.

290
Ic thæt gehyre, | thæt this is hold weorod
frean Scyldinga. | Gewitath forðh beran
wæpen ond gewædu; | ic eow wisige.
Swylce ic maguthegnas | mine hate
widh feonda gehwone | flotan eowerne,

295
niwtyrwydne | nacan on sande
arum healdan, | othdhæt eft byredh
ofer lagustreamas | leofne mannan
wudu wundenhals | to Wedermearce,
godfremmdra | swylcum gifethe bidh

300

thæt thone hilderæs | hal gedigedh."

Gewiton him tha feran. | Flota stille bad,
seomode on sale | sidfæthmed scip,
on ancre fæst. | Eoforlic scionon
ofer hleorberan | gehroden golde,

305

fah ond fyrheard; | ferhwearde heold
guthmod grimmon. | Guman onetton,
sigon ætsomne, | oththæt hy sæl timbred,
geatolic ond goldfah, | ongyton mihton;
thæt wæs foremærost | foldbuendum

310

receda under roderum, | on thæm se rica bad;
lixte se leoma | ofer landa fela.

Him tha hildedeor | hof modigra
torht getæhte, | thæt hie him to mihton
gegnum gangan; | gudhbeorna sum

315

wicg gewende, | word æfter cwædh:
"Mæl is me to feran; | fæder alwalda
mid arstafum | eowic gehealde
sidha gesunde. | Ic to sæ wille
widh wradh werod | wearde healdan."

320

Stræt wæs stanfah, | stig wisode
gumum ætgædere. | Gudhbyrne scan
heard hondlocen, | hringiren scir
song in searwum, | tha hie to sele furdhum
in hyra gryregeatwum | gangan cwomon.

325

Setton sæmethe | side scyldas,
rondas regnhearde, | widh thæs recedes weal,
bugon tha to bence. | Byrnan hringdon,
gudhsearo gumena; | garas stodon,
sæmanna searo, | samod ætgædere,

330

æscholt ufan græg; | wæs se irenthreat
wæpnum gewurthad. | Tha dhær wlonc hæledh
oretmeccas | æfter æthelum frægn:
"Hwanon ferigeadh ge | fætte scyldas,
græge syrcan | ond grimhelmas,

335

herescafta heap? | Ic eom Hrodhgares

ar ond ombiht. | Ne seah ic eltheodige
thus manige men | modiglicran.
Wen ic thæt ge for wlenco, | nalles for wræcsidhum,
ac for higethrymmum | Hrodhgar sohton."

340

Him tha ellenrof | andswarode,
wlanc Wedera leod, | word æfter spræc,
heard under helme: | "We synt Higelaces
beodgeneatas; | Beowulf is min nama.
Wille ic aseccan | sunu Healfdenes,

345

mærum theodne, | min ærende,
aldre thinum, | gif he us geunnan wile
thæt we hine swa godne | gretan moton."
Wulfgar mathelode | (thæt wæs Wendla leod;
wæs his modsefa | manegum gecydhed,

350

wig ond wisdom): | "Ic thæs wine Deniga,
frea Scildinga, | frinan wille,
beaga bryttan, | swa thu bena eart,
theoden mærne, | ymb thinne sidh,
ond the tha ondsware | ædre gecydhian

355

dhe me se goda | agifan thencedh."

Hwearf tha hrædlice | thær Hrodhgar sæt
eald ond anhar | mid his eorla gedriht;
eode ellenrof, | thæt he for ealxum gestod
Deniga frean; | cuthe he dugudhe theaw.

360

Wulfgar madhelode | to his winedrihtne:
"Her syndon geferede, | feorran cumene
ofer geofenes begang | Geata leode;
thone yldestan | oretmeccas
Beowulf nemnadh. | Hy benan synt

365

thæt hie, theoden min, | widh the moton
wordum wrixlan. | No dhu him wearne geteoh
dhinra gegnewida, | glædman Hrodhgar.
Hy on wiggetawum | wyrdhe thinceadh
eorla geæhtlan; | huru se aldor deah,

370

se thæm headhorincum | hider wisade."
Hrodhgar mathelode, | helm Scyldinga:
"Ic hine cudhe | cnihtwesende.

Wæs his ealdfæder | Ecgtheo haten,
dhæm to ham forgeaf | Hrethel Geata

375

angan dohtor; | is his eafora nu
heard her cumen, | sohte holdne wine.
Dhonne sægdon thæt | sælithende,
tha dhe gifsceattas | Geata fyredon
thyder to thance, | thæt he XXXtiges

380

manna mægen-cræft | on his mundgripe
heathorof hæbbe. | Hine halig god
for arstafum | us onsende,
to Westdenum, | thæs ic wen hæbbe,
widh Grendles gryre. | Ic thæm godan sceal

385

for his modthraece | madmas beodan.
Beo dhu on ofeste, | hat in gan
seon sibbedriht | samod ætgædere;
gesaga him eac wordum | thæt hie sint wilcuman
Deniga leodum."

390

. | word inne ahead:
"Eow het secgan | sigedrihten min,
aldor Eastdena, | thæt he eower æthelu can,
ond ge him syndon | ofer sæwylmas
heardhicgende | hider wilcuman.

395

Nu ge moton gangan | in eowrum gudhgeatawum
under heregriman | Hrodhgar geseon;
lætadh hildebord | her onbidan,
wudu, wælsceaftas, | worda gethingas."
Aras tha se rica, | ymb hine rinc manig,

400

thrydhlic thegna heap; | sume thær bidon,
headhoreaf heoldon, | swa him se hearda bebead.

Snyredon ætsomne, | tha secg wisode,
under Heorotes hrof

heard under helme, | thæt he on heodhe gestod.

405

Beowulf madhelode | (on him byrne scan,
searonet seowed | smithes orthancum):
"Wæs thu, Hrodhgar, hal! | Ic eom Higelaces
mæg ond magodhegn; | hæbbe ic mærdha fela
ongunnen on geogothe. | Me weardh Grendles thing

410

on minre etheltyrf | undyrne cudh;
secgadh sælidhend | thæt thæs sele stande,
reced selesta, | rinca gehwylcum
idel ond unnyt, | sidhdhan æfenleoht
under heofenes hador | beholen weorthedh.

415

Tha me thæt gelærdon | leode mine
tha selestan, | snotere ceorlas,
theoden Hrodhgar, | thæt ic the sohte,
forthan hie mægenes cræft | minne cuthon,
selfe ofersawon, | dha ic of searwum cwom,

420

fah from feondum, | thær ic fife geband,
ydhde eotena cyn | ond on ydhum slog
niceras nihtes, | nearohearfe dreach,
wræc Wedera nidh | (wean ahsodon),
forgrand gramum, | ond nu widh Grendel sceal,

425

widh tham aglæcan, | ana gehegan
dhing widh thyrese. | Ic the nu dha,
brego Beorhtdena, | biddan wille,
eodor Scyldinga, | anre bene,
thæt dhu me ne forwyrne, | wigendra hleo,

430

freowine folca, | nu ic thus feorran com,
thæt ic mote ana | ond minra eorla gedryht,
thes hearda heap, | Heorot fælsian.
Hæbbe ic eac geahsod | thæt se æglæca
for his wonhydum | wæpna ne recchedh.

435

Ic thæt thonne forhicge | (swa me Higelac sie,
min mondrihten, | modes blidhe),
thæt ic sweord bere | othdhe sidne scyld,
geolorand to guthe, | ac ic mid grape sceal
fon widh feonde | ond ymb feorh sacan,

440

ladh widh lathum; | dhær gelyfan sceal
dryhtnes dome | se the hine deadh nimedh.
Wen ic thæt he wille, | gif he wealdan mot,
in thæm gudhsele | Geotena leode
etan unforhte, | swa he oft dyde,

445

mægen Hredhmanna. | Na thu minne thearft
hafalan hydan, | ac he me habban wile
dreore fahne, | gif mec deadh nimedh.

Byredh blodig wæl, | byrgean thencedh,
etedh angenga | unmurnlice,

450
mearcadh morhopu; | no dhu ymb mines ne thearft
lices feorme | leng sorgian.
Onsend Higelace, | gif mec hild nime,
beaduscruða betst, | thæt mine breost weredh,
hrægla selest; | thæt is Hrædlan laf,

455
Welandes geweorc. | Gædh a wyrd swa hio scel."

Hrodhgar mathelode, | helm Scyldinga:
"For gewyrhtum thu, | wine min Beowulf,
ond for arstafum | usic sohtest.
Gesloh thin fæder | fæhdhe mæste;

460
wearth he Heatholafe | to handbonan
mid Wilfingum; | dha hine Wedera cyn
for herebrogan | habban ne mihte.
Thanon he gesohte | Sudhdena folc
ofer ydha gewealc, | Arscyldinga.

465
Dha ic furthum weold | folce Deniga
ond on geogodhe heold | ginne rice,
hordburh hæletha; | dha wæs Heregar dead,
min yldra mæg | unlifigende,
bearn Healfdenes; | se wæs betera dhonne ic.

470
Sidhdhan tha fæhdhe | feo thingode;
sende ic Wylfingum | ofer wæteres hrycg
ealde madmas; | he me athas swor.
Sorh is me to secganne | on sefan minum
gumena ængum | hwæt me Grendel hafadh

475
hyndho on Heorote | mid his hetethancum,
færnidha gefremed. | Is min fletwerod,
wigheap gewanod; | hie wyrd forsweop
on Grendles gryre. | God eathe mæg
thone dolsceadhan | dæda getwæfan.

480
Ful oft gebeotedon | beore druncne
ofer ealowæge | oretmecgas
thæt hie in beorsele | bidan woldon
Grendles guthe | mid gryrum ecga.
Dhonne wæs theos medoheal | on morgentid,

485
drihtsele dreorfah, | thonne dæg lixte,
eal bencthelu | blode bestymed,
heall heorudreore; | ahte ic holdra thy læs,
deorre dugudhe, | the tha deaðh fornam.
Site nu to symle | ond onsæl meoto,

490
sigehredh secgum, | swa thin sefa hwette."

Tha wæs Geatmæcgum | geador ætsomme
on beorsele | benc gerymed;
thær swidhferhthe | sittan eodon,
thrydhum dealle. | Thegn nytte beheold,

495
se the on handa bær | hroden ealowæge,
scencte scir wered. | Scop hwilum sang
hador on Heorote. | Thær wæs hæledha dream,
dugudh unlytel | Dena ond Wedera.

Unferdh mathelode, | Ecglafes bearn,

500
the æt fotum sæt | frean Scyldinga,
onband beadurune | (wæs him Beowulfes sidh,
modges merefaran, | micel æfthunca,
forthon the he ne uthe | thæt ænig odher man
æfre mærdha thon ma | middangeardes

505
gehedde under heofenum | thonne he sylfa):
"Eart thu se Beowulf, | se the widh Breca wunne,
on sidne sæ | ymb sund flite,
dhær git for wlence | wada cunnedon
ond for dolgilpe | on deop wæter

510
aldrum nethdon? | Ne inc ænig mon,
ne leof ne ladh, | belean mihte
sorhfullne sidh, | tha git on sund reon.
Thær git eagorstream | earmum thehton,
mæton merestræta, | mundum brugdon,

515
glidon ofer garsecg; | geofon ythum weol,
wintrys wylmum. | Git on wæteres æht
seofon niht swuncon; | he the æt sunde oferflat,
hæfde mare mægen. | Tha hine on morgentid
on Heathoræmas | holm up ætbær;

520
dhonon he gesohte | swæsne [edhel],

leof his leodum, | lond Brondinga,
freodhoburh fægere, | thær he folc ahte,
burh ond beagas. | Beot eal widh the
sunu Beanstanes | sodhe gelæste.

525

Dhonne wene ic to the | wyrsan gethingea,
dheah thu headhoræsa | gehwær dohte,
grimre gudhe, | gif thu Grendles dearest
nihtlongne fyrst | nean bidan."

Beowulf mathelode, | bearn Ecgtheowes:

530

"Hwæt! thu worn fela, | wine min Unferdh,
beore druncen | ymb Breca spræce,
sægdest from his sidhe. | Sodh ic talige,
thæt ic merestrenge | maran ahte,
earfetho on ythum, | dhonne ænig other man.

535

Wit thæt gecwædon | cnihtwesende
ond gebeotedon | (wæron begen tha git
on geogodhfeore) | thæt wit on garsecg ut
aldrum nedhdon, | ond thæt geæfndon swa.
Hæfdon swurd nacod, | tha wit on sund reon,

540

heard on handa; | wit unc widh hronfixas
werian thohton. | No he wiht fram me
flodythum feor | fleotan meahte,
hrathor on holme; | no ic fram him wolde.
Dha wit ætsomne | on sæ wæron

545

fif nihta fyrst, | oththæt unc flod todraf,
wado weallende, | wedera cealdost,
nipende niht, | ond northanwind
headhogrim ondhwearf; | hreo wæron ytha.
Wæs merefixa | mod onhrered;

550

thær me widh ladhum | licsyrce min,
heard, hondlocen, | helpe gefremede,
beadohrægl broden | on breostum læg
golde gegyrwed. | Me to grunde teah
fah feondscadha, | fæste hæfde

555

grim on grape; | hwæthre me gyfethe weardh
thæt ic aglæcan | orde geræhte,
hildebille; | heathoræs fornam
mihtig meredeor | thurh mine hand.

Swa mec gelome | ladhgeteonan

560

threatedon thearle. | Ic him thenode
deoran sweorde, | swa hit gedefe wæs.
Næs hie dhære fylle | gefean hæfdon,
manfordædlan, | thæt hie me thegon,
symbel ymbsæton | sægrunde neah;

565

ac on mergenne | mecum wunde
be ydhlafe | uppe lægon,
sweordum aswefede, | thæt sydhthan na
ymb brontne ford | brimlidhende
lade ne letton. | Leoht eastan com,

570

beorht beacen godes; | brimu swathredon,
thæt ic sænæssas | geseon mihte,
windige weallas. | Wyrð oft neredh
unfægne eorl, | thonne his ellen deah.
Hwæthere me gesælde | thæt ic mid sweorde ofslah

575

niceras nigene. | No ic on niht gefrægn
under heofones hwealf | heardran feohtan,
ne on egstreamum | earmran mannon;
hwathere ic fara feng | feore gedigde,
sithes werig. | Dha mec sæ othbær,

580

flod æfter farodhe | on Finna land,
wadu weallendu. | No ic wiht fram the
swylcra searonidha | secgan hyrde,
billa brogan. | Breca næfre git
æt headholace, | ne gehwæther incer,

585

swa deorlice | dæd gefremede
fagum sweordum | (no ic thæs fela gylpe),
theah dhu thinum brodhrum | to banan wurde,
heafodmægum; | thæs thu in helle scealt
werhdho dreogan, | theah thin wit duge.

590

Secge ic the to sodhe, | sunu Ecglafes,
thæt næfre Grendel swa fela | gryra gefremede,
atol æglæca, | ealdre thinum,
hyndho on Heorote, | gif thin hige wære,
sefa swa searogrim, | swa thu self talast.

595

Ac he hafadh onfunden | thæt he tha fæhdhe ne
thearf,
atole ecgthræce | eower leode
swidhe onsittan, | Sigescyldinga;
nymedh nydbade, | nænegum aradh
leode Deniga, | ac he lust wignedh,

600
swefedh ond sendeth, | secce ne weneth
to Gardenum. | Ac ic him Geata sceal
eafodh ond ellen | ungeara nu,
gutte gebeodan. | Gæth eft se the mot
to medo modig, | siththan morgenleoht

605
ofer ylða bearn | othres dogores,
sunne sweglwered | suthan scinedh."
Tha wæs on salum | sinces brytta,
gamolfeax ond gudhrof; | geoce gelyfde
brego Beorhtdena, | gehyrde on Beowulfe

610
folces hyrde | fæstrædne gethoht.

Dhær wæs hæletha hleahtor, | hlyn swynsode,
word wæron wynsume. | Eode Wealhtheow fordh,
cwen Hrodhgares, | cynna gemyndig,
grette goldhroden | guman on healle,

615
ond tha freolic wif | ful gesealde
ærest Eastdena | ethelwearde,
bæd hine blidhne | æt thære beorthege,
leodum leofne. | He on lust getheah
symbol ond seful, | sigerof kyning.

620
Ymbeode tha | ides Helminga
dugutte ond geogotha | dæl æghwylcne,
sincfata sealde, | oththæt sæl alamp
thæt hio Beowulfe, | beaghroden cwen
mode gethungen, | medoful ætbær;

625
grette Geata leod, | gode thancode
wisfæst wordum | thæs dhe hire se willa gelamp
thæt heo on ænigne | eorl gelyfde
fyrena frofre. | He thæt ful getheah,
wælreow wiga, | æt Wealhtheon,

630
ond tha gyddode | guthe gefysed;
Beowulf mathelode, | bearn Ecgtheowes:

"Ic thæt hogode, | tha ic on holm gestah,
sæbat gesæt | mid minra secga gedriht,
thæt ic anunga | eowra leoda

635
willan geworhte | othdhe on wæl crunge,
feondgrapum fæst. | Ic gefremman sceal
eorlic ellen, | othdhe endedæg
on thisse meoduhealle | minne gebidan."

Dham wife tha word | wel licodon,

640
gilpewide Geates; | eode goldhroden
freolicu folccwen | to hire frean sittan.
Tha wæs eft swa ær | inne on healle
thrydhword sprecen, | dheod on sælum,
sigefolca sweg, | oththæt semninga

645
sunu Healfdenes | secean wolde
æfenræste; | wiste thæm ahlæcan
to thæm heahsele | hilde gethinged,
sidhdhan hie sunnan leoht | geseon ne meahton,
othdhe nipende | niht ofer ealle,

650
scaduhelma gesceapu | scridhan cwoman,
wan under wolcnum. | Werod eall aras.
Gegrette tha | guma othere,
Hrodhgar Beowulf, | ond him hæl abead,
winærnes geweald, | ond thæt word acwædh:

655
"Næfre ic ænegum men | ær alyfde,
sithhdhan ic hond ond rond | hebban mihte,
dhrythærn Dena | buton the nu dha.
Hafa nu ond geheald | husa selest,
gemyne mærtho, | mægenellen cydh,

660
waca widh wrathum. | Ne bidh the wilna gad,
gif thu thæt ellenweorc | aldre gedigest."

Dha him Hrothgar gewat | mid his hæletha gedryht,
eodur Scyldinga, | ut of healle;
wolde wigfruma | Wealhtheo secan,

665
cwen to gebeddan. | Hæfde kyningwuldor
Grendle togeanes, | swa guman gefrungon,
seleweard aseted; | sundornytte beheold
ymb aldor Dena, | eotonweard abead.

Huru Geata leod | georne truwoðe

670

modgan mægnes, | metodes hylðo.
dha he him of dyde | isernbyrnan,
helm of hafelan, | sealde his hyrsted sweord,
irena cyst, | ombihtthegne,
ond gehealdan het | hildegeatwe.

675

Gespræc tha se goda | gylpworda sum,
Beowulf Geata, | ær he on bed stige:
"No ic me an herewæsmun | hnagran talige,
guthgeweorca, | thonne Grendel hine;
forthan ic hine sweorde | swebban nelle,

680

aldre beneotan, | theah ic eal mæge.
Nat he thara goda | thæt he me ongean slea,
rand geheawe, | theah dhe he rof sie
nithgeweorca; | ac wit on niht sculon
secge ofersittan, | gif he gesecean dear

685

wig ofer wæpen, | ond sihdhan witig god
on swa hwæthere hond, | halig dryhten,
mærdho deme, | swa him gemet thince."
Hylde hine tha heathodeor, | hleorbolster onfeng
eorles andwlitan, | ond hine ymb monig

690

snellic særinç | selereste gebeah.
Nænig heora thohte | thæt he thanon scolde
eft eardlufan | æfre gesecean,
folc othdhe freoburh, | thær he afeded wæs;
ac hie hæfdon gefrunen | thæt hie ær to fela micles

695

in thæm winsele | wældeadh fornam,
Denigea leode. | Ac him dryhten forgeaf
wigspeda gewiofu, | Wedera leodum,
frofor ond fultum, | thæt hie feond heora
dhurh anes cræft | ealle ofercomon,

700

selfes mihtum. | Sodh is gecythed
thæt mihtig god | manna cynnes
weold wideferhdh. | Com on wanre niht
scridhan sceadugenga. | Sceotend swæfon,
tha thæt hornreced | healdan scoldon,

705

ealle buton anum. | Thæt wæs yldum cuth
thæt hie ne moste, | tha metod nolde,
se scynscatha | under sceadu bregdan;
ac he wæccende | wrathum on andan
bad bolgenmod | beadwa gethinges.

710

Dha com of more | under misthleothum
Grendel gongan, | godes yrre bær;
mynte se manscadha | manna cynnes
sumne besyrwan | in sele tham hean.
Wod under wolcnum | to thæs the he winreced,

715

goldsele gumena, | gearwost wisse,
fættum fahne. | Ne wæs thæt forma sidh
thæt he Hrothgares | ham gesohte;
næfre he on aldordagum | ær ne sihdhan
heardran hæle, | healdhegnas fand.

720

Com tha to recede | rinc sihdian,
dreamum bedæled. | Duru sona onarn,
fyrbendum fæst, | syhdhan he hire folmum æthran;
onbræd tha bealohydig, | dha he gebolgen wæs,
recedes muthan. | Rathe æfter thon

725

on fagne flor | feond treddode,
eode yrremod; | him of eagum stod
ligge gelicost | leoht unfæger.
Geseah he in recede | rinca manige,
swefan sibbegedriht | samod ætgædere,

730

magorinca heap. | Tha his mod ahlog;
mynte thæt he gedælde, | ærthon dæg cwome,
atol aglæca, | anra gehwylces
lif widh lice, | tha him alumpen wæs
wistfille wen. | Ne wæs thæt wyrd tha gen

735

thæt he ma moste | manna cynnes
dhicgean ofer tha niht. | Thrydhswydh beheold
mæg Higelaces, | hu se manscadha
under færgripum | gefaran wolde.
Ne thæt se aglæca | yldan thohte,

740

ac he gefeng hradhe | forman sidhe
slæpendne rinc, | slat unwearnum,
bat banlocan, | blod edrum dranc,

synsnædum swealh; | sona hæfde
unlyfigendes | eal gefeormod,

745

fet ond folma. | Fordh near ætstop,
nam tha mid handa | higethihtigne
rinc on ræste, | ræhte ongean
feond mid folme; | he onfeng hrathe
inwitthancum | ond widh earm gesæt.

750

Sona thæt onfunde | fyrena hyrde
thæt he ne mette | middangeardes,
eorthan sceata, | on elran men
mundgripe maran. | He on mode weardh
forht on ferhdhe; | no thy ær fram meahte.

755

Hyge wæs him hinfus, | wolde on heolster fleon,
secan deofla gedræg; | ne wæs his drohtodh thær
swylce he on ealderdagum | ær gemette.

Gemunde tha se goda, | mæg Higelaces,
æfenspræce, | uplang astod

760

ond him fæste widhfeng; | fingras burston.
Eoten wæs utweard; | eorl furthur stop.
Mynte se mæra, | thær he meahte swa,
widre gewindan | ond on weg thanon
fleon on fenhopu; | wiste his fingra geweald

765

on grames grapum. | Thæt wæs geocor sidh
thæt se hearmscatha | to Heorute ateah.
Dryhtsele dynede; | Denum eallum weardh,
ceasterbuendum, | cenra gehwylcum,
eorlum ealuscerwen. | Yrre wæron begen,

770

rethe renweardas. | Reced hlynsode.
Tha wæs wundor micel | thæt se winsele
widhhæfde heathodeorum, | thæt he on hrusan ne
feol,
fæger foldbold; | ac he thæs fæste wæs
innan ond utan | irenbendum

775

searothoncum besmithod. | Thær fram sylle abeag
medubenc monig, | mine gefræge,
golde geregnad, | thær tha graman wunnon.
Thæs ne wendon ær | witan Scyldinga
thæt hit a mid gemete | manna ænig,

780

betlic ond banfag, | tobrecan meahte,
listum toluacan, | nymthe liges fæthm
swulge on swathule. | Sweg up astag
niwe geneahhe; | Nordhdenum stod
atelic egesa, | anra gehwylcum

785

thara the of wealle | wop gehyrdon,
gryreleodh galan | godes ondsacan,
sigeleasne sang, | sar wanigean
helle hæfton. | Heold hine fæste
se the manna wæs | mægene strengest

790

on thæm dæge | thysses lifes.
Nolde eorla hleo | ænige thinga
thone cwealmcuman | cwicne forlætan,
ne his lifdagas | leoda ænigum
nytte tealde. | Thær genehost brægd

795

eorl Beowulfes | ealde lafe,
wolde freadrihtnes | feorh ealgian,
mæres theodnes, | dhær hie meahton swa.
Hie thæt ne wiston, | tha hie gewin drugon,
heardhicgende | hildemecgas,

800

ond on healfa gehwone | heawan thohton,
sawle secan, | thone synscadhan
ænig ofer eorthan | irenna cyst,
gudhbilla nan, | gretan nolde,
ac he sigewæpnum | forsworen hæfde,

805

ecga gehwylcre. | Scolde his aldorgedal
on dhæm dæge | thysses lifes
earmlíc wurdhan, | ond se ellorgast
on feonda geweald | feor sidhian.
Dha thæt onfunde | se the fela æror

810

modes myrdhe | manna cynne,
fyrene gefremede | (he wæs fag widh god),
thæt him se lichoma | læstan nolde,
ac hine se modega | mæg Hygelaces
hæfde be honda; | wæs gehwæther odhrum

815

lifigende ladh. | Licsar gebad
atol æglæca; | him on eaxle weardh

syndolh sweotol, | seonowe onsprungon,
burston banlocan. | Beowulfe weardh
gudhhredh gyfethe; | scolde Grendel thanon

820

feorhseoc fleon | under fenhleodhu,
secean wynleas wic; | wiste the geornor
thæt his aldres wæs | ende gegongen,
dogera dægum. | Denum eallum weardh
æfter tham wælræse | willa gelumpen.

825

Hæfde tha gefælsod | se the ær feorran com,
snotor ond swydhferhdh, | sele Hrodhgares,
genered widh nidhe; | nihtweorce gefeh,
ellenmæর্থum. | Hæfde Eastdenum
Geatmecga leod | gilp gelæsted,

830

swylce oncythdhe | ealle gebette,
inwidsorge, | the hie ær drugon
ond for threanydum | tholian scoldon,
torn unlytel. | Thæt wæs tacen sweotol,
sythdhan hildedeor | hond alegde,

835

earn ond eaxle | (thær wæs eal geador
Grendles grape) | under geapne hrof.

Dha wæs on morgen | mine gefræge
ymb tha gifhealle | gudhrinc monig;
ferdon folctogan | feorran ond nean

840

geond widwegas | wundor sceawian,
lathes lastas. | No his lifgedal
sarlic thuhte | secga ænegum
thara the tirleases | trode sceawode,
hu he werigmod | on weg thanon,

845

nidha ofercumen, | on nicera mere
fæge ond geflymed | feorhlastas bær.
Dhær wæs on blode | brim weallende,
atol ydha geswing | eal gemenged
haton heolfre, | heorodreore weol.

850

Deathfæge deog, | sidhdhan dreama leas
in fenfreodho | feorh alegde,
hæthene sawle; | thær him hel onfeng.

Thanon eft gewiton | ealdgesidhas,

swylce geong manig | of gomenwathe

855

fram mere modge | mearum ridan,
beornas on blancum. | Dhær wæs Beowulfes
mærdho mæned; | monig oft gecwædh
thætte sudh ne nordh | be sām tweonum
ofer eormengrund | other nænig

860

under swegles begong | selra nære
rondhæbbendra, | rices wyrdhra.
Ne hie huru winedrihten | wiht ne logon,
glædne Hrodhgar, | ac thæt wæs god cyning.

Hwilum heathorofe | hleapan leton,

865

on geflit faran | fealwe mearas
dhær him foldwegas | fægere thuhton,
cystum cudhe. | Hwilum cyninges thegn,
guma gilphlæden, | gidda gemyndig,
se dhe ealfela | ealdgesegena

870

worn gemunde, | word other fand
sodhe gebunden; | secg eft ongan
sidh Beowulfes | snyttrum styrian
ond on sped wrecan | spel gerade,
wordum wrixlan. | Welhwylc gecwædh

875

thæt he fram Sigemundes | secgan hyrde
ellendædum, | uncuthes fela,
Wælsinges gewin, | wide sidhas,
thara the gumena bearn | gearwe ne wiston,
fæhdhe ond fyrena, | buton Fitela mid hine,

880

thonne he swulces hwæt | secgan wolde,
eam his nefan, | swa hie a wæron
æt nidha gehwam | nydgesteallan;
hæfdon ealfela | eotena cynnes
sweordum gesæged. | Sigemunde gesprong

885

æfter deahdæge | dom unlytel,
sythdhan wiges heard | wurm acwealde,
hordes hyrde. | He under harne stan,
æthelinges bearn, | ana genedhde
frecne dæde, | ne wæs him Fitela mid.

890

Hwæthre him gesælde | dhæt thæt swurd thurhwod
wrætligne wyrm, | thæt hit on wealle ætstod,
dryhtlic iren; | draca mordhre swealt.
Hæfde aglæca | elne gegongen
thæt he beahhordes | brucan moste

895
selfes dome; | sæbat gehleod,
bær on bearm scipes | beorhte frætwa,
Wælses eafera. | Wyrn hat gemealt.
Se wæs wreccena | wide mærost
ofer wertheode, | wigendra hleo,

900
ellendædum | (he thæs ær ondah),
sidhdhan Heremodes | hild swedhrode,
eafodh ond ellen. | He mid Eotenum weardh
on feonda geweald | fordh forlacen,
snude forsended. | Hine sorhwylmas

905
lemede to lange; | he his leodum weardh,
eallum æthellingum | to alдорceare;
swylce oft beearn | ærran mælum
swidhferthes sidh | snotor ceorl monig,
se the him bealwa to | bote gelyfde,

910
thæt thæt dheodnes bearn | getheon scolde,
fæderæthelum onfon, | folc gehealdan,
hord ond hleoburh, | hæletha rice,
[edhel] Scyldinga. | He thær eallum weardh,
mæg Higelaces, | manna cynne,

915
freondum gefægra; | hine fyren onwod.
Hwilum flitende | fealwe stræte
mearum mæton. | Dha wæs morgenleoht
scofen ond scynded. | Eode scealc monig
swidhhicgende | to sele tham hean

920
searowundor seon; | swylce self cyning
of brydbure, | beahhorda weard,
tryddode tirlæst | getrume micle,
cystum gecythed, | ond his cwen mid him
medostigge mæt | mægtha hose.

925
Hrodhgar mathelode | (he to healle geong,
stod on stapole, | geseah steapne hrof,
golde fahne, | ond Grendles hond):

"Dhisse ansyne | alwealdan thanc
lungre gelimpe! | Fela ic lathes gebad,

930
grynna æt Grendle; | a mæg god wyrcan
wunder æfter wundre, | wuldres hyrde.
Dhæt wæs ungeara | thæt ic ænigra me
weana ne wende | to widan feore
bote gebidan, | thonne blode fah

935
husa selest | heorodreorig stod,
wea widscofen | witena gehwylcum
dhara the ne wendon | thæt hie wideferhdh
leoda landgeweorc | lathum beweredon
succum ond scinum. | Nu scealc hafadh

940
thurh drihtnes miht | dæd gefremede
dhe we ealle | ær ne meahton
snyttum besyrwan. | Hwæt, thæt secgan mæg
efne swa hwylc mægtha | swa dhone magan cende
æfter gumcynnum, | gyf heo gyt lyfadh,

945
thæt hyre ealdmetod | este wære
bearngebyrdo. | Nu ic, Beowulf, thec,
secg betsta, | me for sunu wylle
freogan on ferhthe; | heald fordh tela
niwe sibbe. | Ne bidh the nænigra gad

950
worolde wilna, | the ic geweald hæbbe.
Ful oft ic for læssan | lean teohhode,
hordweorthunge | hnahan rince,
sæmran æt sæcce. | Thu the self hafast
dædum gefremed | thæt thin dom lyfadh

955
awa to aldre. | Alwalda thec
gode forgyldde, | swa he nu gyt dyde!"
Beowulf mathelode, | bearn Ectheowes:
"We thæt ellenweorc | estum miclum,
feohtan fremedon, | frecne genedhdon

960
eafodh uncuthes. | Uthe ic swithor
thæt dhu hine selfne | geseon moste,
feond on frætewum | fylwerigne.
Ic hine hrædlice | heardan clammum
on wælbedde | writhan thohte,

965

thæt he for mundgripe | minum scolde
licgean lifbysig, | butan his lic swice.
Ic hine ne mihte, | tha metod nolde,
ganges getwæman, | no ic him thæs georne ætfealh,
feorhgenidhlan; | wæs to foremihtig

970
feond on fethe. | Hwæthere he his folme forlet
to lifwrathe | last weardian,
earn ond eaxle. | No thær ænige swa theah
feasceaft guma | frofre gebohte;
no thy leng leofadh | ladhgeteona,

975
synnum geswenced, | ac hyne sar hafadh
mid nydgripe | nearwe befongen,
balwon bendum. | Dhær abidan sceal
maga mane fah | miclan domes,
hu him scir metod | scrifan wille."

980
Dha wæs swigra secg, | sunu Eclafes,
on gylpspræce | gudhgeweorca,
sithdhan æthelingas | eorles cræfte
ofer heanne hrof | hand sceawedon,
feondes fingras. | Foran æghwylc wæs,

985
stidhra nægla gehwylc, | style gelicost,
hæthenes handsporu | hilderinces,
egl, unheoru. | Æghwylc gecwædh
thæt him heardra nan | hrinan wolde
iren ærgod, | thæt dhæs ahlæcan

990
blodge beadufolme | onberan wolde.

Dha wæs haten hrethe | Heort innanweard
folmum gefrætwod. | Fela thæra wæs,
wera ond wifa, | the thæt winreced,
gestsele gyredon. | Goldfag scinon

995
web æfter wagum, | wundorsiona fela
secga gehwylcum | thara the on swylc staradh.
Wæs thæt beorhte bold | tobrocen swidhe,
eal inneward | irenbendum fæst,
heorras tohlidene. | Hrof ana genæs,

1000
ealles ansund, | the se aglæca,
fyrendædum fag, | on fleam gewand,

aldres orwena. | No thæt ydhe bydh
to befleonne, | fremme se the wille,
ac gesecan sceal | sawlberendra,

1005
nyde genydde, | nithdha bearna,
grundbuendra | gearwe stowe,
thær his lichoma | legerbedde fæst
swefeth æfter symle. | Tha wæs sæl ond mæl
thæt to healle gang | Healfdenes sunu;

1010
wolde self cyning | symbel thicgan.
Ne gefrægen ic tha mægthe | maran weorode
ymb hyra sincgyfan | sel gebæran.
Bugon tha to bence | blædagande,
fylla gefægon; | fægere gethægon

1015
medoful manig | magas thara
swidhhicgende | on sele tham hean,
Hrodhgar ond Hrothulf. | Heorot innan wæs
freondum afylled; | nalles facenstafas
theodscyldingas | thenden fremedon.

1020
Forgeaf tha Beowulfe | bearn Healfdenes
segen gyldenne | sigores to leane;
hroden hildecumbor, | helm ond byrnan,
mære madhthumsweord | manige gesawon
beforan beorn beran. | Beowulf gethah

1025
ful on flette; | no he thære feohgyfte
for sceotendum | scamigan dhorfte.
Ne gefrægn ic freondlicor | feower madmas
golde gegyrede | gummanna fela
in ealobence | odhrum gesellan.

1030
Ymb thæs helmes hrof | heafodbeorge
wirum bewunden | walu utan heold,
thæt him fela laf | frecne ne meahton
scurheard scethdhan, | thonne scyldfrecra
ongean gramum | gangan scolde.

1035
Heht dha eorla hleo | eahta mearas
fætedhleore | on flet teon,
in under eoderas. | Thara anum stod
sadol searwum fah, | since gewurthad;
thæt wæs hildesetl | heahcyninges,

1040
dhone sweorda gelac | sunu Healfdenes
efnan wolde. | Næfre on ore læg
widcuthes wig, | dhonne walu feollon.
Ond dha Beowulfe | bega gehwæthres
eodor Ingwina | onweald geteah,

1045
wicga ond wæpna, | het hine wel brucan.
Swa manlice | mære theoden,
hordweard hæletha, | heathoræsas geald
mearum ond madmum, | swa hy næfre man lydh,
se the secgan wile | sodh æfter rihte.

1050
Dha gyt æghwylcum | eorla drihten
thara the mid Beowulfe | brimlade teah
on thære medubence | mathdhum gesealde,
yrfelafe, | ond thone ænne heht
golde forgyldan, | thone dhe Grendel ær

1055
mane acwealde, | swa he hyra ma wolde,
nefne him witig god | wyrd forstode
ond dhæs mannes mod. | Metod eallum weold
gumena cynnes, | swa he nu git dedh.
Forthan bidh andgit | æghwær selest,

1060
ferhdhes forethanc. | Fela sceal gebidan
leofes ond lathes | se the longe her
on dhyssum windagum | worolde brucedh.

Thær wæs sang ond sweg | samod ætgædere
fore Healfdenes | hildewisan,

1065
gomenwudu greted, | gid oft wrecen,
dhonne healgamen | Hrothgares scop
æfter medobence | mænan scolde
be Finnes eaferum, | dha hie se fær begeat,
hæledh Healfdena, | Hnæf Scyldinga,

1070
in Freswæle | feallan scolde.
Ne huru Hildeburh | herian thorfte
Eotena treowe; | unsynnum weardh
beloren leofum | æt tham lindplegan,
bearnum ond brodrum; | hie on gebyrd hruron,

1075

gare wunde. | Thæt wæs geomuru ides!
Nalles holinga | Hoces dohtor
meotodsceaft bemearn, | sythdhan morgen com,
dha heo under swegle | geseon meahthe
morthorbealo maga, | thær heo ær mæste heold

1080
worolde wynne. | Wig ealle fornam
Finnes thegnas | nemne feaum anum,
thæt he ne mehte | on thæm medhelstede
wig Hengeste | wiht gefeohtan,
ne tha wealafe | wige forthringan

1085
theodnes dhegna; | ac hig him gethingo budon,
thæt hie him odher flet | eal gerymdon,
healle ond heahsetl, | thæt hie healfre geweald
widh Eotena bearn | agan moston,
ond æt feohgyftum | Folcwaldan sunu

1090
dogra gehwylce | Dene weorthode,
Hengestes heap | hringum wenede
efne swa swidhe | sincgestreorum
fættan goldes, | swa he Fresena cyn
on beorsele | byldan wolde.

1095
Dha hie getruwedon | on twa healfa
fæste friodhuwære. | Fin Hengeste
elne, unflitme | adhum benemde
thæt he tha wealafe | weotena dome
arum heolde, | thæt dhær ænig mon

1100
wordum ne worcum | wære ne bræce,
ne thurh inwitsearo | æfre gemænden
dheah hie hira beaggyfan | banan folgedon
dheodenlease, | tha him swa gethearfod wæs;
gyf thonne Frysna hwylc | frecnan spræce

1105
dhæs morthorhetes | myndgiend wære,
thonne hit sweordes ecg | sedhan scolde.

Ad wæs geæfned | ond icge gold
ahæfen of horde. | Herescyldinga
betst beadorinca | wæs on bæl gearu.

1110
Æt thæm ade wæs | ethgesyne
swatfah syrce, | swyn ealgylden,
eofer irenheard, | ætheling manig

wundum awyrdded; | sume on wæle crungon.
Het dha Hildeburh | æt Hnæfes ade

1115
hire selfre sunu | sweolodhe befæstan,
banfatu bærnan | ond on bældon
eame on eaxle. | Ides gnornode,
geomrode giddum. | Gudhrinc astah.
Wand to wolcnum | wælfyra mæst,

1120
hlynode for hlawe; | hafelan muldon,
bengeato burston, | dhonne blod ætspranc,
ladhbite lices. | Lig ealle forswealg,
gæsta gifrost, | thara dhe thær gudh fornam
bega folces; | wæs hira blæd scacen.

1125
Gewiton him dha wigend | wica neosian,
freondum befeallen, | Frysland geseon,
hamas ond heaburh. | Hengest dha gyt
wælfagne winter | wunode mid Finne
eal unhlitme. | Eard gemunde,

1130
theah the he ne meahte | on mere drifan
hringedstefnan; | holm storme weol,
won widh winde, | winter ythe beleac
isgebinde, | othdhæt other com
gear in geardas, | swa nu gyt dedh,

1135
tha dhe syngales | sele bewitiadh,
wuldortorhtan weder. | Dha wæs winter scacen,
fæger foldan bearm. | Fundode wrecca,
gist of gearдум; | he to gynnræce
swidhor thohte | thonne to sælade,

1140
gif he torngemot | thurhteon mihte
thæt he Eotena bearn | inne gemunde.
Swa he ne forwyrnde | woroldrædenne,
thonne him Hunlafing | hildeleoman,
billa selest, | on bearm dyde,

1145
thæs wæron mid Eotenum | ecge cudhe.
Swylce ferhdhfreca | Fin eft begeat
sweordbealo slidhen | æt his selves ham,
sithdhan grimne gripe | Gudhlaf ond Oslaf
æfter sæsidhe, | sorge, mændon,

1150
æt witon weana dæl; | ne meahte wæfre mod
forhabban in hrethre. | Dha wæs heal roden
feonda feorum, | swilce Fin slægen,
cuning on corthre, | ond seo cwen numen.
Sceotend Scyldinga | to scypon feredon

1155
eal ingesteald | eordhcyniges,
swylce hie æt Finnes ham | findan meahton
sigla, searogimma. | Hie on sælade
drihtlice wif | to Denum feredon,
læddon to leodum. | Leodh wæs asungen,

1160
gleomannes gyd. | Gamen eft astah,
beorhtode bencsweg; | byrelas sealdon
win of wunderfatum. | Tha cwom Wealhtheo fordh
gan under gyldnum beage, | thær tha godan twegen
sæton suhtergefæderan; | tha gyt wæs hiera sib
æt gædere,

1165
æghwylc odhrum trywe. | Swylce thær Unferth thyle
æt fotum sæt frean Scyldinga; | gehwylc hiora his
ferhtre treowde.

Thæt he hæfde mod micel, | theah the he his magum
nære
arfæst æt ecga gelacum. | Spræc dha ides Scyldinga:
"Onfoh thissum fulle, | freedrihten min,

1170
sinces brytta! | Thu on sælum wes,
goldwine gumena, | ond to Geatum spræc
mildum wordum, | swa sceal man don.
Beo widh Geatas glæd, | geofena gemyndig,
nean ond feorran | thu nu hafast.

1175
Me man sægde | thæt thu dhe for sunu wolde
hererinc habban. | Heorot is gefælsod,
beahsele beorhta; | bruc thenden thu mote
manigra medo, | ond thinum magum læf
folc ond rice, | thonne dhu fordh seyle

1180
metodsceaft seon. | Ic minne can
glædne Hrothulf, | thæt he tha geogodhe wile
arum healdan, | gyf thu ær thonne he,
wine Scildinga, | worold oflættest;
wene ic thæt he mid gode | gyldan wille

1185
uncran eaferan, | gif he thæt eal gemon,
hwæt wit to willan | ond to wordhmyndum
umborwesendum ær | arna gefremedon."
Hwearf tha bi bence | thær hyre byre wæron,
Hredhric ond Hrodhmund, | ond hæletha bearn,

1190
giogodh ætgædere; | thær se goda sæt,
Beowulf Geata, | be thæm gebroðrum twæm.
Him wæs ful boren | ond freondlathu
wordum bewægned, | ond wunden gold
estum geeawed, | earmreade twa,

1195
hrægl ond hringas, | healsbeaga mæst
thara the ic on foldan | gefrægen hæbbe.
Nænigne ic under swegle | selran hyrde
hordmadhdhum hæletha, | sythdhan Hama ætwæg
to thære byrhtan byrig | Brosinga mene,

1200
sigle ond sincfæt; | searonidhas fleah
Eormenrices, | geceas ecne ræd.
Thone hring hæfde | Higelac Geata,
nefa Swertinges, | nyhstan sidhe,
sidhthan he under segne | sinc ealgode,

1205
wælreaf werede; | hyne wyrd fornam,
sythdhan he for wlenco | wean ahsode,
fæhdhe to Frysum. | He tha frætwe wæg,
eorclanstanas | ofer ydha ful,
rice theoden; | he under rande gecranc.

1210
Gehwearf tha in Francna fæthm | feorh cyninges,
breostgewædu | ond se beah somod;
wyrsan wigfreca | wæl reafedon
æfter gudhsceare, | Geata leode,
hreawic heoldon. | Heal swege onfeng.

1215
Wealhdheo mathelode, | heo fore thæm werede
spræc:
"Bruc dhisses beages, | Beowulf leofa,
hyse, mid hæle, | ond thisses hrægles neot,
theodgestreona, | ond getheoh tela,
cen thec mid cræfte | ond thyssum cnyhtum wes

1220
lara lidhe; | ic the thæs lean geman.
Hafast thu gefered | thæt dhe feor ond neah

ealne wideferhth | weras ehtigadh,
efne swa side | swa sæ bebagedh,
windgeard, weallas. | Wes thenden thu lifige,

1225
ætheling, eadig. | Ic the an tela
sincgestreona. | Beo thu suna minum
dædum gedefe, | dreamhealdende.
Her is æghwylc eorl | othrum getrywe,
modes milde, | mandrihtne hold;

1230
thegnas syndon gethwære, | theod ealgearo,
druncne dryhtguman | doðh swa ic bidde."
Eode tha to setle. | Thær wæs symbla cyst;
druncon win weras. | Wyrd ne cuthon,
geosceaft grimme, | swa hit agangen weardh

1235
eorla manegum, | sythdhan æfen cwom
ond him Hrothgar gewat | to hofe sinum,
rice to ræste. | Reced weardode
unrim eorla, | swa hie oft ær dydon.
Bencthelu beredon; | hit geondbræded weardh

1240
beddum ond bolstrum. | Beorscealca sum
fus ond fæge | fletræste gebeag.
Setton him to heafdon | hilderandas,
bordwudu beorhtan; | thær on bence wæs
ofer æthelinge | ythgesene

1245
heathosteapa helm, | hringed byrne,
threcwudu thrymlíc. | Wæs theaw hyra
thæt hie oft wæron | an wig gearwe,
ge æt ham ge on herge, | ge gehwæther thara,
efne swylce mæla | swylce hira mandryhtne

1250
thearf gesælde; | wæs seo theod tilu.

[Http://www.augsburg.de/~harsch/anglica/Chronology/08thC/Beowulf/beo_bat2.html](http://www.augsburg.de/~harsch/anglica/Chronology/08thC/Beowulf/beo_bat2.html)

2. 9th Century: *The Seafarers*

Mæg ic be me sylfum soðhgied wrecan,
sithas secgan, hu ic geswincdagum
earfodhhwile oft throwade,
bitre breastceare gebiden hæbbe,

5
gecunnad in ceole cearselda fela,
atol ytha gewealc, thær mec oft bigeat
nearo nihtwaco æt nacan stefnan,
thonne he be clifum cnossadh. Calde gethrungen
wæron mine fet, forste gebunden,

10
caldum clommum, thær tha ceare seofedun
hat ymb heortan; hungor innan slat
merewerges mod. Thæt se mon ne wat
the him on foldan fægrost limpedh,
hu ic earmcearig iscealdne sæ

15
winter wunade wræccan lastum,
winemægum bidroren,
bihongen hrimgicelum; hægl scurum fleag.
Thær ic ne gehyrde butan hlimman sæ,
iscaldne wæg. Hwilum ylfete song

20
dyde ic me to gomene, ganetes hleothor
ond huilpan sweg fore hleahtor wera,
mæw singende fore medodrince.
Stormas thær stanclifu beotan, thær him stearn
oncwædh
isigfethera; ful oft thæt earn bigeal,

25
urigfethra; ne ænig hleomæga
feasceaftig ferdh frefran meahte.

Forthon him gelyfedh lyt, se the ah lifes wyn
gebiden in burgum, bealositha hwon,
wlonc ond wingal, hu ic werig oft

30
in brimlade bidan sceolde.
Nap nihtscua, northan sniwde,
hrim hrusan bond, hægl feol on eorthan,

corna caldast. Forthon cnyssadh nu
heortan gethohtas, thæt ic hean streamas,

35
sealtytha gelac sylf cunnige;
monadh modes lust mæla gehwylce
ferdh to feran, thæt ic feor heonan
eltheodigra eard gesece.
Forthon nis thæs modwlonc mon ofer eorthan,

40
ne his gifena thæs god, ne in geoguthe to thæs
hwæt,
ne in his dædum to thæs deor, ne him his dryhten to
thæs hold,
thæt he a his sæfore sorge næbbe,
to hwon hine dryhten gedon wille.
Ne bith him to hearpan hyge ne to hringthege,

45
ne to wife wyn ne to worulde hyht,
ne ymbe owiht elles, nefne ymb ydha gewealc,
ac a hafadh longunge se the on lagu fundadh.
Bearwas blostmum nimadh, byrig fægriadh,
wongas wlitigadh, woruld onettedh;

50
ealle tha gemoniadh modes fusne
sefan to sithe, tham the swa thencedh
on flodwegas feor gewitan.
Swylce geac monadh geomran reorde,
singedh sumeres weard, sorge beodedh

55
bitter in breosthord. Thæt se beorn ne wat,
esteadig secg, hwæt tha sume dreogadh
the tha wræclastas widost lecgadh.

Forthon nu min hyge hweorfedh ofer hretherlocan,
min modsefa mid mereflode

60
ofer hwæles ethel hweorfedh wide,
eorthan sceatas, cymedh eft to me
gifre ond grædig, gielledh anfloga,
hwetedh on hwælweg hrether unwearnum
ofer holma gelagu. Forthon me hatran sind

65
dryhtnes dreamas thonne this deade lif,
læne on londe. Ic gelyfe no
thæt him eordhwelan ece stondadh.
Simle threora sum thinga gehwylce,
ær his tid aga, to tweon weortheðh;

70
adl oththe ylðo oththe ecghete
fægum fromweardum feorh odhthringedh.
Forthon thæt biðh eorla gehwam æftercwethendra
lof lifgendra lastworda betst,
thæt he gewyrce, ær he on weg scyle,

75
fremum on foldan wiðh feonda nith,
deorum dædum deofle togeanes,
thæt hine ælda bearn æfter hergen,
ond his lof siththan lifge mid englum
awa to ealdre, ecan lifes blæd,

80
dream mid dugethum. Dagas sind gewitene,
ealle onmedlan eorþan rices;
næron nu cyningas ne caseras
ne goldgiefan swylce iu wæron,
thonne hi mæst mid him mærtha gefremedon

85
ond on dryhtlicestum dome lifdon.
Gedroren is theos dugudh eal, dreamas sind
gewitene,
wuniadh tha wacran ond thas woruld healdath,
brucadh thurh bisgo. Blæd is gehnæged,
eorþan indryhto ealdadh ond searadh,

90
swa nu monna gehwylce geond middangeard.
Ylðo him on faredh, onsyn blacadh,
gomelfeax gnornadh, wat his iuwine,
æthelinga bearn, eorþan forgiefene.
Ne mæg him thonne se flæschoma, thonne him thæt
feorg losadh,

95

ne swete forswelgan ne sar gefelan,
ne hond onhreran ne mid hyge thencan.
Theah the græf wille golde stregan
brothor his geborenum, byrgan be deadum,
mathmum mislicum thæt hine mid wille,

100
ne mæg thære sawle the bith synna ful
gold to geoce for godes egas,
thonne he hit ær hydedh thenden he her leofadh.

Micel bith se meotudes egas, forthon hi seo molde
oncyrrædh;
se gestathelade stithe grundas,

105
eorþan sceatas ond uprodor.
Dol bith se the him his dryhten ne ondrædeth;
cymedh him se deaðh unthinged.
Eadig biðh se the eathmod leofath; cymedh him seo
ar of heofonum,
meotod him thæt mod gestatheladh, forthon he in
his meahte gelyfedh.
Stieran mon sceal strongum mode, ond thæt on
stathelum healdan,

110
ond gewis werum, wisum clæne,
scyle monna gehwylce mid gemete healdan
wiðh leofne ond wiðh lathne [. . . .] bealo,
theah the he hine wille fyres fulne [. . . .]
oththe on bæle forbærnedne

115
his geworhtne wine. Wyrð bith swithre,
meotud meahtriga thonne ænges monnes gehygd.
Uton we hycgan hwær we ham agen,
ond thonne gethencan hu we thider cumen,
ond we thonne eac tilien, thæt we to moten

120
in tha ecan eadignesse,
thær is lif gelong in lufan dryhtnes,
hyht in heofonum. Thæs sy tham halgan thonc,
thæt he usic geweorthade, wuldres ealdor,
ece dryhten, in ealle tid. Amen.

3. *The Battle of Maldon*

The Battle of Maldon

..... brocen wurde.
Het tha hyssa hwæne | hors forlætan,
feor afysan, | and forðh gangan,
hicgan to handum | and t[o] hige godum.

5
Th[a] thæt Offan mæg | ærest onfunde,
thæt se eorl nolde | yrhdho getholian,
he let him tha of handon | leofne fleogan
hafoc widh thæs holtes, | and to thære hilde stop;
be tham man mihte oncnawan | thæt se cniht nolde

10
wacian æt tham w[i]ge, | tha he to wæpnum feng.
Eac him wolde Eadric | his ealdre gelæstan,
freat to gefeohte, | ongan tha forðh beran
gar to guthe. | He hæfde god gethanc
tha hwile the he mid handum | healdan mihte

15
bord and bradswurd; | beot he gelæste
tha he ætforan his frean | feohtan sceolde.

Dha thær Byrhtnodh ongan | beornas trymian,
rad and rædde, | rincum tæhte
hu hi sceoldon standan | and thone stede healdan,

20
and bæd thæt hyra randa[s] | rihte heoldon
fæste mid folman, | and ne forhtedon na.
Tha he hæfde thæt folc | fægere getrymmed,
he lihte tha mid leodon | thær him leofost wæs,
thær he his heordhwerod | holdost wiste.

25
tha stod on stædhe, | stidhlice clypode
wicinga ar, | wordum mælde,
se on beot abead | brimlithendra
ærænde to tham eorle, | thær he on ofre stod:
«Me sendon to the | sæmen snelle,

30
heton dhe secgan | thæt thu most sendan radhe
beagas widh gebeorge; | and eow betere is
thæt ge thisne garræs | mid gafole forgyldon,
thon we swa hearde [hi]lde dælon.
Ne thurfe we us spillan, | gif ge spedath to tham;

35
we willadh widh tham golde | gridh fæstnian.
Gyf thu that gerædest, | the her ricost eart,
thæt thu thine leoda | lysan wille,
syllan sæmannum | on hyra sylfra dom
feoh widh freode, | and niman fridh æt us,

40
we willath mid tham sceattum | us to scype gangan,
on flot feran, | and eow frithes healdan.»

Byrhtnodh mathelode, | bord hafenode,
wand wacne æsc, | wordum mælde,
yrre and anræd | ageaf him andsware:

45
«Gehyrst thu, sælida, | hwæt this folc segedh?
Hi willadh eow to gafole | garas syllan,
ættrynne ord | and ealde swurd,
tha heregeatu | the eow æt hilde ne deah.
Brimmanna boda, | abeod eft ongean,

50
sege thinum leodum | miccle lathre spell,
thæt her stynt unforcudh | eorl mid his werode,
the wile gealgean | ethel thysne,
æthelredes eard, | ealdres mines,
folc and foldan. | Feallan sceolon

55
hæthene æt hilde. | To heanlic me thinceth
thæt ge mid urum sceattum | to scype gangon
unbefohtene, | nu ge thus feor hider
on urne eard | in becomon.
Ne sceole ge swa softe | sinc gegangan;

60
us sceal ord and ecg | ær geseman,
grim gudhplega, | ær [w]e gofol syllon.»

Het tha bord beran, | beornas gangan,
thæt hi on tham eastedhe | ealle stodon.
Ne mihte thær for wætere | werod to tham odhrum;

65
thær com flowende | flod æfter ebban,
lucon lagustreamas. | To lang hit him thuhte,
hwænne hi togædere | garas beron.

Hi thær Pantan stream | mid prasse bestodon,
Eastseaxena ord | and se æschere.

70

Ne mihte hyra ænig | othrum derian,
buton hwa thurh flanes flyht | fyl gename.
Se flod ut gewat; | tha flotan stodon gearowe,
wicinga fela, | wiges georne.
Het tha hæledha hleo | healdan tha bricge

75

wigan wigheardne, | se wæs haten Wulfstan,
cafe mid his cynne, | thæt wæs Ceolan sunu,
the dhone forman man | mid his francan ofsceat
the thær baldlicost | on tha bricge stop.
Thær stodon mid Wulfstane | wigan unforhte,

80

ælfere and Maccus, | modige twegen,
tha noldon æt tham forda | fleam gewyrca,
ac hi fæstlice | widh dha fynd weredon,
tha hwile the hi wæpna | wealdan moston.
Tha hi thæt ongeaton | and georne gesawon

85

thæt hi thær bricgweardas | bitere fundon,
ongunnon lytegian tha | ladhe gystas,
bædon thæt hi upgangan | agan moston,
ofer thone ford faran, | fethan lædan.

Dha se eorl ongan | for his ofermode

90

alyfan landes to fela | lathere dheode.
Ongan ceallian tha | ofer cald wæter
Byrhtelmes bearn | (beornas gehlyston):
«Nu eow is gerymed, | gadh ricene to us,
guman to guthe; | god ana wat

95

hwa thære wælstowe | wealdan mote.»
Wodon tha wælwulfas | (for wætere ne murnon),
wicinga werod, | west ofer Pantan,
ofer scir wæter | scyldas wegona,
lidmen to lande | linde bæron.

100

Thær ongean gramum | gearowe stodon
Byrhtnodh mid beornum; | he mid bordum het
wyrca thone wihagan, | and thæt werod healdan
fæste widh feondum. | tha wæs f[e]ohte neh,
tir æt getohte. | Wæs seo tid cumen

105

thæt thær fæge men | feallan sceoldon.
Thær weardh hream ahafen, | hremmas wundon,
earn æses georn; | wæs on eorþan cyrm.
Hi leton tha of folman | feolhearde speru,
[grimme] gegrundene | garas fleogan;

110

bogan wæron bysige, | bord ord onfeng.

Biter wæs se beaduræs, | beornas feollon
on gehwædhere hand, | hyssas lagon.
Wund wear[dh] Wulfmær, | wælræste geceas,
Byrhtnodhes mæg; | he mid billum weardh,

115

his swuster sunu, | swidhe forheawen.
Thær wear[dh] wicingum | witherlean agyfen.
Gehyrde ic thæt Eadweard | anne sloge
swidhe mid his swurde, | swenges ne wyrnde,
thæt him æt fotum | feoll fæge cempa;

120

thæs him his dheoden | thanc gesæde,
tham burthene, | tha he byre hæfde.
Swa stemnetton | stidhhicgende
hysas æt hilde, | hogodon georne
hwa thær mid orde | ærost mihte

125

on fægean men | feorh gewinnan,
wigan mid wæpnum; | wæl feol on eorþan.
Stodon stædefæste; | stihte hi Byrhtnodh,
bæd thæt hyssa gehwylc | hogode to wige
the on Denon wolde | dom gefeohtan.

130

Wod tha wiges heard, | wæpen up ahof,
bord to gebeorge, | and widh thæs beornes stop.
Eode swa anræd | eorl to tham ceorle,
ægther hyra odhrum | yfeles hogode.
Sende dha se særinc | sutherne gar,

135

thæt gewundod weardh | wigena hlaforð;
he sceaf tha mid dham scylde, | thæt se sceaft
tobærst,
and thæt spere sprengde, | thæt hit sprang ongean.
Gegremod weardh se gudhrinc; | he mid gare stang
wlancne wicing, | the him tha wunde forgeaf.

140

Frod wæs se fyrdrinc; | he let his francan wadan

thurh dhæs hysses hals, | hand wisode
thæt he on tham færsceadhan | feorh geræhte.
Dha he otherne | ofstlice sceat,
thæt seo byrne tobærst; | he wæs on breostum wund

145
thurh dha hringlocan, | him æt heortan stod
ætterne ord. | Se eorl wæs the blithra,
hloh tha, modi man, | sæde metode thanc
dhæs dægweorces | the him drihten forgeaf.

Forlet tha drenga sum | darodh of handa,

150
fleogan of folman, | thæt se to fordh gewat
thurh dhone æthelan | æthelredes thegen.
Him be healfe stod | hyse unweaxen,
cniht on gecampe, | se full caflice
bræd of tham beorne | blodigne gar,

155
Wulfstanes bearn, | Wulfmær se geonga,
forlet forheardne | faran eft ongean;
ord in gewod, | thæt se on eorþan læg
the his theoden ær | thearle geræhte.
Eode tha gesyrwed | secg to tham eorle;

160
he wolde thæs beornes | beagas gefecgan,
reaf and hringas | and gerenod swurd.
Tha Byrhtnodh bræd | bill of scedhe,
brad and bruneccg, | and on tha byrnan sloh.
To rathe hine gelette | lidmanna sum,

165
tha he thæs eorles | earm amyrd.
Feoll tha to foldan | fealohilte swurd;
ne mihte he gehealdan | heardne mece,
wæpnas wealdan. | tha gyt thæt word gecwædh
har hilderinc, | hyssas bylde,

170
bæd gangan fordh | gode geferan;
ne mihte tha on fotum leng | fæste gest[a]ndan.
He to heofenum wlat:
«Gethanc[i]e the, | dheoda waldend,
ealra thæra wynna | the ic on worulde gebad.

175
Nu ic ah, milde metod, | mæste thearfe
thæt thu minum gaste | godes geunne,
thæt min sawul to dhe | sidhian mote
on thin geweald, | theoden engla,

mid frithe ferian. | Ic eom frymdi to the

180
thæt hi helsceadhan | hynan ne moton.»

Dha hine heowon | hædhene scealcas
and begen tha beornas | the him big stodon,
ælfnodh and Wulfmær | begen lagon,
dha onemn hyra frean | feorh gesealdon.

185
Hi bugon tha fram beaduwe | the thær beon noldon.
Thær w[earth] Oddan bearn | ærest on fleame,
Godric fram guthe, | and thone godan forlet
the him mænigne oft | mear gesealde;
he gehleop thone eoh | the ahte his hlaforð,

190
on tham gerædum | the hit riht ne wæs,
and his broðhru mid him | begen ær[n]don,
God[w]ine and Godwig, | guthe ne gymdon,
ac wendon fram tham wige | and thone wudu
sohton,
flugon on thæt fæsten | and hyra feore burgon,

195
and manna ma | thonne hit ænig mædh wære,
gyf hi tha gearnunga | ealle gemundon
the he him to duguthe | gedon hæfde.
Swa him Offa on dæg | ær asæde
on tham methelstede, | tha he gemot hæfde,

200
thæt thær mod[e]lice | manega spræcon
the eft æt th[ea]r[f]e | tholian noldon.

Tha weardh afeallen | thæs folces ealdor,
æthelredes eorl; | ealle gesawon
heordhgeneatas | thæt hyra heorra læg.

205
Tha dhær wendon fordh | wlance thegenas,
unearge men | efston georne;
hi woldon tha ealle | odher twega,
lif forlæt[a]n | odhdhe leofne gewrecan.
Swa hi bylde fordh | bearn ælfrices,

210
wiga wintrum geong, | wordum mælde,
ælfwine tha cwædh, | he on ellen spræc:
«Gemunu tha mæla | the we oft æt meodo spræcon,
thonne we on bence | beot ahofon,
hæledh on healle, | ymbe heard gewinn;

215

nu mæg cunnian | hwa cene sy.
Ic wylle mine æthelo | eallum gecythan,
thæt ic wæs on Myrcon | miccles cynnes;
wæs min ealda fæder | Ealhelm haten,
wis ealdorman, | woruldgesælig.

220

Ne sceolon me on thære theode | thegenas ætwitan
thæt ic of dhisse fyrde | feran wille,
eard gesecan, | nu min ealdor lighed
forheawen æt hilde. | Me is thæt hearma mæst;
he wæs æg[dh]er min mæg | and min hlaford.»

225

Tha he fordh eode, | fæhdhe gemunde,
thæt he mid orde | anne geræhte
flotan on tham folce, | thæt se on foldan læg
forwegen mid his wæpne. | Ongan tha winas
manian,
frynd and geferan, | thæt hi fordh eodon.

230

Offa gemælde, | æscholt asceoc:
«Hwæt thu, ælfwine, hafast | ealle gemanode
thegenas to thearfe, | nu ure theoden lidh,
eorl on eordhan. | Us is eallum thearf
thæt ure æghwylc | otherne bylde

235

wigan to wige, | tha hwile the he wæpen mæge
habban and healdan, | heardne mece,
gar and godswurd. | Us Godric hæfdh,
earh Oddan bearn, | ealle beswicene.
Wende thæs formoni man, | tha he on meare rad,

240

on wlancan tham wigge, | thæt wære hit ure hlaford;
forthan weardh her on felda | folc totwæmed,
scyldburch tobrocen. | Abreodhe his angin,
thæt he her swa manigne | man aflymde!»

Leofsunu gemælde | and his linde ahof,

245

bord gebeorge; | he tham beorne oncwædh:
«Ic thæt gehate, | thæt ic heonon nelle
fleon fotes trym, | ac wille furdhor gan,
wrecan on gewinne | minne winedrihten.
Ne thurfon me embe Sturmere | stedefæste hælædh

250

wordum ætwitan, | nu min wine gecranc,
thæt ic hlafordleas | ham sidhie,
wende fram wige, | ac me sceal wæpen niman,
ord and iren.» | He ful yrre wod,
feahst fæstlice, | fleam he forhogode.

255

Dunnere tha cwædh, | darodh acwehte,
unorne ceorl, | ofer eall clypode,
bæd thæt beorna gehwylc | Byrhtnodh wr[æ]ce:
«Ne mæg na wandian | se the wrecan thencedh
frecan on folce, | ne for feore murnan.»

260

Tha hi fordh eodon, | feores hi ne rohton;
ongunnon tha hiredmen | heardlice feohtan,
grame garberend, | and god bædon
thæt hi moston gewrecan | hyra winedrihten
and on hyra feondum | fyl gewyrcean.

265

Him se gysel ongan | geornlice fylstan;
he wæs on Nordhhymbron | heardes cynnes,
Ecglafes bearn, | him wæs æscferdh nama.
He ne wandode na | æt tham wigplegan,
ac he fysde fordh | flan genehe;

270

hwilon he on bord sceat, | hwilon beorn tæsde,
æfre embe stunde | he sealde sume wunde,
tha hwile dhe he wæpna | wealdan moste.

Tha gyt on orde stod | Eadweard se langa,
gearo and geornful, | gylpwordum spræc

275

thæt he nolde fleogan | fotmæl landes,
ofer bæc bugan, | tha his betera leg.
He bræc thone bordweall | and widh tha beornas
feahst,
odhthæt he his sincgyfan | on tham sæmannum
wurdhlice wrec, | ær he on wæle l[æ]ge.

280

Swa dyde ætheric, | æthele gefera,
fus and fordhgeorn, | feahst eornoste.
Sibyrhtes brodhor | and swidhe mænig other
clufon cellod bord, | cene hi weredon;
bærst bordes lærig, | and seo byrne sang

285

gryreleodha sum. | tha æt gudhe sloh
Offa thone sælidan, | thæt he on eordhan feoll,

and dhær Gaddes mæg | grund gesohte.
Radhe weardh æt hilde | Offa forheawen;
he hæfde dheah geforthod | thæt he his frean gehet,

290

swa he beotode ær | widh his beahgifan
thæt hi sceoldon begen | on burh ridan,
hale to hame, | odhdhe on here crin[c]gan,
on wælstowe | wundum sweltan;
he læg dhegenlice | dheodne gehende.

295

Dha weardh borda gebræc. | Brimmen wodon,
gudhe gegremode; | gar oft thurhwod
fæges feorhhus. | For[dh] tha eode Wistan,
thurstanes sun[u], | widh thas secgas feaht;
he wæs on gethrang[e] | hyra threora bana,

300

ær him Wigelines bearn | on tham wæle læge.
Thær wæs stidh gemot; | stodon fæste
wigan on gewinne, | wigend cruncon,
wundum werige. | Wæl feol on eorthan.
Oswold and Eadwold | ealle hwile,

305

begen tha gebrothru, | beornas trymedon,
hyra winemagas | wordon bædon

thæt hi thær æt dhearfe | tholian sceoldon,
unwaclice | wæpna neotan.
Byrhtwold mathelode | bord hafenode

310

(se wæs eald geneat), | æsc acwehte;
he ful baldlice | beornas lærde:
«Hige sceal the heardra, | heorte the cenre,
mod sceal the mare, | the ure mægen lytladh.
Her lidh ure ealdor | eall forheawen,

315

god on greote. | A mæg gnornian
se dhe nu fram this wigplegan | wendan thencedh.
Ic eom frod feores; | fram ic ne wille,
ac ic me be healfe | minum hlaforde,
be swa leofan men, | licgan thence.»

320

Swa hi æthelgares bearn | ealle bylde,
Godric to guthe. | Oft he gar forlet,
wælspere windan | on tha wicingas,
swa he on tham folce | fyrrest eode,
heow and hynde, | o[dh]æt he on hilde gecranc.

325

Næs thæt na se Godric | the dha gu[dh]e forbeah
.....

4. 11th Century: Wulfstan

Sermo Lupi ad Anglos

Version I

Larspell

Leofan men, gecnawadh thæt sodh is: theos woruld is on ofste, (and) hit nealæcdh tham ende, (and) thy hit is on worulde aa swa lencg swa wyrse, (and) swa hit sceal nyde ær Antecristes tocyme yfelian swidhe. Understandadh eac georne thæt deofol thas theode nu fela geara dwelode to swidhe, (and) thæt lytle getreowdha wæron mid mannum, theah heo wel sprecan, (and) unrihta to fela rixode on lande; (and) næs a fela manna the hogade ymbe tha bote swa georne swa man sceolde, ac dæghwamlice man ehte yfel æfter odhrum (and) unriht rærde (and) unlaga manege ealles to wide geond ealle thas dheode. And we eac fordham habbadh fela byrsta (and) bismra gebiden, (and) gif we ænige bote gebidan scylen, thonne mote we thæs to Gode gearnian bet thonne we ær thyssan dydan. Fordham mid miclum earnungan we gearnedan tha yrmðha the us onsittadh, (and) mid swidhe micelan earnungan we tha bote motan æt Gode geræcan gif hit sceal heonanforðh godiende weordhan. La hwæt, we witan full georne thæt to miclan bryce sceal micel bot nyde, (and) to miclan bryne wæter unlytel gif man thæt fyr sceal to ahte acwencan. And mycel is neodthearf manna gehwylcum thæt he Godes lage gyne heonanforðh georne and Godes gerihta mid rihte gelæste. On hædhenum theodum ne dear man forhealdan lytel ne micel thæs dhe gelagod is to gedwolgoda weordhunga, (and) we forhealdadh Godes gerihta æghwær ealles to gelome. And ne dear man gewanian on hædhenum theodum inne ne ute ænig thara thinga the gedwolgoda gebroht biðh (and) to lacum betæht biðh, (and) we habbadh Godes hus inne (and) ute clæne berypte ælcra gerisena. And Godes theowas syndan mæthe (and) munde gewelhwær bedælde; (and) gedwolgoda thenan ne dear man misbeodan on ænige wisan mid hædhenum leodum, swa swa man Godes theowan nu dedh to wide thær cristene sceoldan Godes lage healdan.

Ac sodh is thæt ic secge: Godes gerihta wanedon nu lange, (and) folclaga wyrseadan ealles to swidhe, (and) halignessa syndan to gridhlease wide, (and) Godes hus syndon to clæne berypte ealdra gerihta (and) innan bestrypte ælcra gerisena, (and) godcunde hadas wæron nu lange swidhe forsawene; (and) wydewan fornydde on unriht to ceorle, (and) to manige foryrmde, (and) earme men beswicene (and) hreowlice besyrwde, ge æt fremre ge æt fostre, ge æt feo ge æt feore, ealles to gelome, (and) ut of thysan earde wide gesealde, swydhe unforworhte fremdan to gewealde; (and) cradolcild gedheowade thurh wælhreowe unlage for lytlere theofdhe, (and) freoriht fornumene (and) thrælrht genyrwde, (and) ælmesriht gewanode, (and), hrædest is to cwedhenne, Godes laga ladhe (and) lara forsawene; (and) thæs we habbadh ealle thurh Godes yrre bysmor gelome, gecnawe se dhe cunne. And se byrst wyrðh gemæne, theh man swa ne wene, ealre thyssere dheode, butan God byrge.

Fordham hit is on us eallum swutol (and) gesene thæt we ær thyssan oftor bræcon thonne we bettan, (and) thy is thisse theode fela onsæge. Ne dohte hit nu lange inne ne ute, ac wæs here (and) hunger, bryne (and) blodgyte on gewelhwylcan ende oft (and) gelom; (and) us stalu (and) cwalu, stric (and) steorfa, orfcwealm (and) uncodhu, hol (and) hete (and) rypera reafac derede swidhe thearle, (and) us ungylda swidhe gedrehtan, (and) us unwedera foroft weoldan unwæstma; fordham on thysan earde wæs, swa hit thyncan mæg, nu fela geara unrihta fela (and) tealte getreowdha æghwær mid mannum. Ne bearh nu foroft gesib gesibban the ma the fremdan, ne fæder his suna, ne hwilum bearn his agenum fæder, ne brodher odhrum; ne ure ænig his lif ne fadode swa swa he sceolde, ne gehadode regollice, ne læwede lahlice, ne ænig widh odherne getreowlice ne thohte swa rihte swa he sceolde. Ac mæst ælc swicode (and) odhrum derede wordes (and) dæde, (and) huru unrihtlice mæst ælc odherne æftan heawedh mid sceandlican onscytan, do mare gif he mæge. Fordham syn on lande ungetreowdha micele for Gode and for worulde, (and) eac her syn on earde on mistlice wisan hlaforðswican manige. And ealra mæst hlaforðswica se biðh on worulde thæt man his hlaforðes sawle beswice; (and) ful micel hlaforðswica eac biðh on worulde thæt man his hlaforð on life beswice odhdhon of lande lifigende drife, (and) ægdher is geworden on thyssan earde: Eadweard man forrædde (and) sydhðhan acwealde (and) æfter tham forbærnde; (and) Æthelred man dræfde ut of his earde. And godsibbas (and) godbearn to fela man forspilde wide geond thas dheode; (and) ealles to manege halige stowa wide forwurdan thurh thæt the man sume men ær tham gelogode, swa man na ne sceolde, gif man on Godes gridhe mæthe witan wolde; (and) cristenes folces to fela man gesealde ut of thysson earde nu ealle hwile; (and) thæt is Gode ladh,

gelyfe se dhe wille. Eac we witan ful georne hwær seo yrmðh gewearðh thæt fæder gesælde bearn widh weorthe, (and) bearn his moder, (and) broðhor odherne fremdum to gewælde; (and) eall thæt syndon micle (and) egeslice dæda, understande se the wille. And gyt hit is mare (and) eac menigfealdre thæt deredh thissere theode; manige synd forsworene (and) swidhe forlogene, (and) wedd synd tobrocene oft (and) gelome; (and) thæt is gesyne on thisse theode thæt us Godes yrre hetelice onsitt, gecnawe se dhe cunne.

Nis eac nan wundor theah us mislimpe, forðham we witon ful georne thæt nu fela geara man na ne rohtan foroft hwæt hy worhtan wordes odhdhe dæde. Eac weardh thes theodscipe, swa hit thyncan mæg, swydhe forsyngod thurh menigfealde synna (and) thurh fela misdæda: thurh mordhdæda (and) thurh mandæda, thurh gitsunga (and) thurh gifernessa, thurh stala (and) thurh strudunga, thurh mansylene (and) thurh hæthene unsida, thurh swicdomas (and) thurh searocræftas, thurh lahbricas (and) thurh æswicas, thurh mægræsas (and) thurh manslihtas, thurh hadbricas (and) thurh æwbricas, thurh siblegeru (and) thurh mistlice forligeru. And eac syndon wide, swa we ær cwædon, thurh adhbricas (and) thurh wedbrycas (and) thurh mistlice leasunga forloren (and) forlogen ma thonne sceolde; (and) freolsbrycas (and) fæstenbrycas wide geworhte oft (and) gelome. And eac her synd on earde Godes widhersacan (and) cirichatan hetole (and) leodhatan grimme ealles to manege, (and) oferhogan wide godcundra rihtlaga (and) cristenra theawa, (and) hocorwyrde dysige æghwær on theode oftost on tha thing the Godes bodan beodath (and) swidhost to Godes lage gebyriadh mid rihte. And thy is nu geworden wide (and) side to ful yfelan gewunan thæt men sceamadh for godan dædan swydhor thonne for yfelan dædan, forðham to oft man mid hocere gode dæda hyrwedh (and) godfyrhte lehtredh ealles to swidhe, (and) swidhost man tæledh (and) mid olle gegretedh ealles to gelome tha dhe riht lufiadh (and) Godes ege habbadh be ænigum dæle. 5. 12th Century: *Poema Morale*

Poema Morale (contained in the Lambeth Manuscript 487)

[f. 59v] Ich em nu alder thene ich wes awintre & a lare.

Ich welde mare thene ich dede mi wit ahte bon mare.
Wel longe ich hadde child ibon a worde & a dede
thah ich bo a wintre ald to ung ich em on rede.

5

vnnet lif ich hadde iled. & et me thingth ilede.
thenne ich me bithenche wel ful sare ich me adrede.
mest al thet ich hadde idon bifealt to childhade.
Wel late ich hadde me bithocht bute God me nu rede.
Fole idel word ich hadde iquedhen sodhdhen ich
speke kudhe.

10

fole 3unge dede idon the me ofthinchet nudhe.
mest al thet me likede er nu hit me mislikedh
tha muchel fuliedh his wil hine solf he biswikedh.
Ich mihte hadde bet idon. hefde ich the iselthe.
Nu ich walde ah ich ne mei for elde & for un helthe.

15

Elde me is bistolen on. er ich hit wiste.
ne michte ich seon bifore me. for smike ne for miste.
Er3e we beodh to done god. & to ufele al to thriste.
mare eie stonedh men of monne thanne hom do of
criste.
the wel ne dodh the hwile the ho mu3en. wel oft hit
schal rowen

20

thenne 3e mawen sculen & repen thet ho er sowen.
Do he to gode thet he mu3e the hwile thet he bo
aliue.
ne lipnie na mon to muchel to childe ne to wiue.
the him solue foret for wiue ne for childe
he scal cumen in uuel stude bute him God bo milde.

25

Sendedh sum god biforen eow. the hw[i]le thet e
muen to houene.
for betere is an elmesse biforen thenne bodh efter
souene.
Alto lome ich hadde igult a werke & o worde.
Al to muchel ich hadde ispent. to litel ihud in horde.
Ne beo the loure thene the solf ne thin mei. ne thin
mae.

30

Soht is thet is odhers monnes frond betre then his
a3en.

Ne lipnie wif to hire were. ne were to his wiue
bo for him solue ech .Mon. the hwile thet he bo aliue.
Wis is the to him solue thench the hwile the mot
libben.

for sone wule hine for3eten the fremede & the sibbe.

35

the wel ne dedh the hwile he mai ne scal wenne he
walde.

Monies monnes sare iswinc habbedh oft unholde.
Ne scal na mon don afirst. ne slawen wel to done.
for moni mon bihatedh wel the hit for3etedh sone.
The .Mon. the wule siker bon to habben Godes blisse.

40

do wel him solf hwile thet he mai thenne hauedh he
his mid iwise.

thes riche .Men. wenedh bon siker thurh walle &
thurh diche.

the dedh his echte on sikere stude he hit sent to
heueneriche.

for ther ne therf he bon ofdred of fure ne of thoue
ther ne [f. 60v] therf he him binimen the ladhe ne the
loue.

45

ther ne therf he habben kare of 3eve ne of 3elde.
thider he sent. & solf beredh to lutel & to selde.

thider we sculen dra3en & don wel ofte & ilome.
for ther ne scal me us naut binimen mid wrangwise
dome.

thider 3e sculen 3orne dra3en. walde 3e god ileue.

50

for ne mei ther hit ou binimen king ne reue.
Al thet beste thet we hefden thider we hit solde
senden

for ther we hit michte finden eft. & habben buten
ende.

Tho the er dodh eni God for habben godes are.
al he hit scal finden eft ther & hundred fald mare.

55

The thet echte wile halden wel hwile the he mu3e es
welden.

Giue hies for godes luue thenne deth hes wel ihalden.
Vre swinc & ure tilthe is ofte iwoned to swinden.

Ach thet the we dodh for godes luue eft we sculen al finden.
Ne scal nan ufel bon unbocht. ne nan god unfor3olden.

60
vfel we doth al to muchel. & god lesse thenne we sculden.
Tho the mest dodh nu to gode. & the lest to ladhe.
Eidher to lutel & to muchel scal thunchen eft hom bathe.
Ther me scal ure werkes weien biforan the heuen king.
and 3euen us ure swinkes lan efter ure erninge.

65
Ech mon mid thet he hauet. mei buggen houene riche.
the mare haueth & the the lesse bathe hi muen iliche.
Also mid his penie also odher midh his punde.
Thet is the wunderlukeste chep thet eni mon efre funde.
& the dhe mare ne mai don do hit mid his gode thonke.

70
Also wel se the the hauedh golde fele manke.
& oft god kon mare thonc then the him euedh lesse.
& his werkes & his we3es his milce. & rihtwisnesse.
lutel lac is gode lof thet kumedh of gode wille.
& elete muchel eue of than the herte is ille.

75
Houene & horth he ouer sich. his een bodh swa brichte.
Sunne & mone & houen fur bodh thestre aen his lihte.
Nis him noht forholen ni hud. swa muchele bodh his mihte.
nis hit ne swa derne [idon] ne [a] swa thostre nihte.
he wat wet thenkedh & hwet dodh alle quike wihte.

Ich hit wille seggen than the hit hom solf nusten.
warni hom widh hore unfrome. 3if ho me wulledh
lusten.
vnderstodedh nu to me edi men & arme.
Ich wulle tellen of helle pin & wernin ow widh
herme.
In helle his hunger & thirst twa ueele iuere.

230
thas tholiedh tha [the] weren maket nithinges here.
Ther is waning & wow. efter eche streche.
ho faredh from hete to hete. & hech to frure the
wreche.
thenne hi bidh in there hete the chele him thunchet
blisse.
thenne hi cumedh eft to the chele of hete hi habbedh
misse.

235
hi hem dedh wa inoch nabbedh hi nane blisse.
Nute hi hwether hem deth wurs mid neure nane
wisse.

hi walkedh eure & sechedh reste [f. 64v] ac ho ne mu3en imeten.

forthi the ho nolden the hwile thet ho mihten here sunne beten.

ho sechedh reste ther nis nan. forthi ne mu3en hi es finden.

240

Ac walkedh weri up & dun se water deth mid winde.

tho bodh tha the weren her a thanke unstedefeste.

& tha the gode biheten heste & nolden hit ileste.

tha the god werc bigunnen & ful enden hit nolden.

Nu witen her. & nudhe ther. & nusten hwat hi wolden.

245

ther is bernunde pich hore saule to bathien inne.

tha the ledden here lif in werre & in winne.

ther is fur thet is undret fald hattre. thene bo ure.

Ne mei quenchen salt weter ne uersc of the burne.

this is thet fur thet efre bernd ne mei nawiht hit quenchen

250

Ther inne bodh tha the was to lof wreche men to swenchen.

tha the weren swikelemen & ful of uuel wrenchen.

tha the mihten uuel don. the the lef hit wes to thenchen.

The luueden tening & stale. hordom & drunken.

& a doules werche blitheliche swunken.

255

Tha the weren swa lese thet me hom ne mihte ileuen.

Medierne domes men. & wrongwise reuen.

thet odher monnes wif lof. his a3en etlete.

tho the sungede muchel a drunke & an ete.

the wreche mon binom his ehte. & leide his on horde.

260

thet lutel let of godes borde. & godes worde.

& tho the his a3en nalde 3euen ther he isech [f. 65r]

the node

Ne nalde iheren godes sonde. thenne he hit herde bode.

The thet is odhers monnes thing. loure thene hit sculde.

& weren to gredi of solure & of golde.

265

& tha the untrownesse duden thon the ho sculden bon holde.

& leten thet ho sculden don. & duden thet ho wolden.

Tha the weren eure abuten thisse worldes echte.

& duden al thet the lathe gast hechte to & tachte.

& alle the then anigewise doulen iquemde.

270

Tha bodh nu mid him in helle fordon & fordemet.

Chapter 2.

High Middle Ages and Modernity

1. 13th Century: *The Owl and the Nightingale*

The Owl and the Nightingale

f233r1

Ich was in one sumere dale,
in one suthe diyhele hale,
iherde ich holde grete tale
an hule and one nyhtingale.

5

That plait was stif & starc & strong,
sum wile softe & lud among;
an aither ayhen other sval,
& let that [vue]le mod ut al.
& either seide of otheres custe

10

that alre-worste that hi wuste:
& hure & hure of othere[s] songe
hi holde plaiding suthe stronge.

The nyhtingale bigon the speche,
in one hurne of one breche,

15

& sat up one vaire boyhe,
- thar were abute blosme inoyhe,-
in ore waste thicke hegge
imeind mid spire & grene segge.
Ho was the gladur uor the rise,

20

& song auele cunne wise:
[b]et thuyhte the dreim that he were
of harpe & pipe than he nere:
bet thuyhte that he were ishote
of harpe & pipe than of throte.

25

[Th]o stod on old stoc thar biside,
thar tho vle song hire tide,
& was mid iui al bigrowe;
hit was thare hule earding-stowe.

[Th]e nyhtingale hi iseyh,

30

& hi bihold & ouerseyh,
& thuyhte wel [vu] of thare hule,
for me hi halt lodlich & fule.
"Vnwyht," ho sede, "awei thu flo!
me is the w[u]rs that ich the so.

f233r2

Iwis for thine [vu]le lete,
wel [oft ich] mine song forlete;
min horte atflith & falt mi tonge,
wonne thu art [to me] ithrunge.
Me luste bet speten thane singe

40

of thine fule yhoyhelinge."

Thos hule abod fort hit was eve,
ho ne miyhte no leng bileue,
vor hire horte was so gret
that wel neyh hire fnast atschet,

45

& warp a word thar-after longe;
"Hu thincthe nu bi mine songe?
We[n]st thu that ich ne cunne singe,
theyh ich ne cunne of writeling?
Ilome thu dest me grame,

50

& seist me [bothe tone] & schame.
Yhif ich the holde on mine uote,
(so hit bitide that ich mote!)
& thu were vt of thine rise,
thu sholdest singe an other w[i]se."

55

The nyhtingale yhaf answare:
"Yhif ich me loki wit the bare,
& me schilde wit the blete,
ne reche ich noyht of thine threte;
yhif ich me holde in mine hegge,

60

ne recche ich neuer what thu segge.
Ich wot that thu art unmilde
with hom that ne muyhe from [th]e schilde;

& thu tukest wrothe & vuele,
whar thu miyht, over smale fuyhele.

65

Vorthi thu art loth al fuel-kunne,
& alle ho the driueth honne,
& the bischricheth & bigredet,
& wel narewe the biledet;

f233v1

& ek forthe the sulue mose,

70

hire thonkes, wolde the totose.
thu art lodlich to biholde,
& thu art loth in monie volde;
thi bodi is short, thi swore is smal,
grettere is thin heued than thu al;

75

thin eyhene both col-blake & brode,
riyht swo ho weren ipeint mid wode;
thu starest so thu wille abiten
al that thu mi[yh]t mid cliure smiten:
thi bile is stif & scharp & hoked,

80

riyht so an owel that is coked;
thar-mid thu clackes[t] oft & longe,
& that is on of thine songe.
Ac thu threst to mine fleshe,
mid thine cliures woldest me meshe.

85

the were icundur to one frogge
.....
snailes, mus, & fule wiyhte,
both thine cunde & thine riyhte.
Thu sittest adai & fliyh[s]t aniyht,

90

thu cuthest that thu art on vnwiyht.
Thu art lodlich & unclene,
bi thine neste ich hit mene,
& ek bi thine fule brode,
thu fedest on hom a wel ful fode.

95

Vel wostu that hi doth tharinne,
hi fuleth hit up to the chinne:
ho sitteth thar so hi bo bisne.
Tharbi men segget a uorbisne:
"Dahet habbe that ilke best

100

that fuleth his owe nest."
That other yher a faukun bredde;
his nest noyht wel he ne bihedde:
tharto thu stele in o dai,

f233v2

& leidest tharon thi fole ey.

105

Tho hit bicom that he hayhte,
& of his eyre briddes wrayhte;
ho broyhte his briddes mete,
bihold his nest, iseyh hi ete:
he iseyh bi one halue

110

his nest ifuled uthalue.
The faucun was wroth wit his bridde,
& lude yhal & sterne chidde:
"Segget me, wo hauet this ido?
Ov nas neuer icunde tharto:

115

hit was idon ov a loth[e] [cu]ste.
Segge[th] me yhif yhe hit wiste."
Tho quath that on & quad that other:
"Iwis it was ure oyher brother,
the yhond that haue[th] that grete heued:

120

wai that hi[t] nis tharof bireued!
Worp hit ut mid the alre-[vu]rste
that his necke him to-berste!"
The faucun ilefde his bridde,
& nom that fule brid amidde,

125

& warp hit of than wilde bowe,
thar pie & crowe hit todrowe.
Herbi men segget a bispel,
theyh hit ne bo fuliche spel;
al so hit is bi than un gode

130

that is icumen of fule brode,
& is meind wit fro monne,
euer he cuth that he com thonne,
that he com of than adel-eye,
theyh he a fro nest[e] leie.

135

theyh appel trendli fro[m] thon trowe,
thar he & other mid growe,
theyh he bo thar-from bicume,

f234r1

he cuth wel whonene he is icume."

Thos word ayhaf the nyhtingale,

140

& after thare longe tale
he song so lude & so scharpe,
riyht so me grulde schille harpe.
Thos hule luste thiderward,
& hold hire eyhe notherwa[r]d,

145

& sat tosvolle & ibolwe,
also ho hadde one frogge isuolyhe:
for ho wel wiste & was iwar
that ho song hire a-bisemar.
& notheles ho yha[f] andsuare,

150

"Whi neltu flon into the bare,
& sewi [w]are unker bo
of bryhter howe, of uairur blo?"
"No, thu hauest wel scharpe clawe,
ne kepich noyht that thu me clawe.

155

thu hauest cliuers suth stronge,
thu tuengst thar-mid so doth a tonge.
Thu thoyhtest, so doth thine ilike,
mid faire worde me biswike.
Ich nolde don that thu me raddest,

160

ich wiste wel that thu me misraddest.
Schamie the for thin unrede!
Vnwroyhen is thi svikelhede!
Schild thine svikeldom vram the liyhte,
& hud that woyhe amon[g] the riyhte.

165

Thane thu wilt thin unriyht spene,
loke that hit ne bo isene:
vor svikedom haue[th] schome & hete,
yhif hit is ope & underyhete.
Ne speddestu noyht mid thine unwrenche,

170

for ich am war & can wel blenche.

Ne helpth noyht that thu bo to [th]riste:

f234r2

ich wolde viyhte bet mid liste
than thu mid al thine strengthe.
Ich habbe, on brede & eck on lengthe,

175

castel god on mine rise:
"Wel fiyht that wel fliyht," seith the wise.
Ac lete we awei thos cheste,
vor suiche wordes both unw[re]ste;
& fo we on mid riyhte dome,

180

mid faire worde & mid ysome.
Theyh we ne bo at one acorde,
we m[a]yhe bet mid fayre worde,
witute cheste, & bute fiyhte,
plaidi mid foyhe & mid riyhte:

185

& mai hure either wat h[e] wile
mid riyhte segge & mid scikle."

Tho quath the hule "[W]u schal us seme,
that kunne & wille riyht us deme?"
"Ich wot wel" quath the nyhtingale,

190

"Ne tharef tharof bo no tale.
Maister Nichole of Guldeforde,
he is wis an war of worde:
he is of dome suth gleu,
& him is loth eurich untheu.

195

He wot insiyht in eche songe,
wo singet wel, wo singet wronge:
& he can schede vrom the riyhte
that woyhe, that thuster from the liyhte."

Tho hule one wile hi bithoyhte,

200

& after than this word upbroyhte:
"Ich granti wel that he us deme,
vor theyh he were wile breme,
& lof him were nyhtingale,
& other wiyhte gente & smale,

205

ich wot he is nu suth acoled.

f234v1

Nis he vor the noyht afoled,
that he, for thine olde luue,
me adun legge & the buue:
ne schaltu neure so him queme,

210

that he for the fals dom deme.
He is him ripe & fast-rede,
ne lust him nu to none unrede:
nu him ne lust na more pleie,
he wile gon a riyhte weie."

215

The nyhtingale was al yhare,
ho hadde ilorned wel aiware:
"Hule," ho sede, "seie me soth,
wi dostu that unwiyhtis doth?
thu singist aniyht & noyht adai,

220

& al thi song is wailawai.
Thu miyht mid thine songe afere
alle that ihereth thine ibere:
thu sch[ri]chest & yhollest to thine fere,
that hit is grislich to ihere:

225

hit thinche[th] bothe wise & snepe
noyht that thu singe, ac that thu wepe.
Thu fliyhst aniyht & noyht adai:
tharof ich w[u]ndri & wel mai.
vor eurich thing that schuniet riyht,

230

hit luueth thuster & hatiet liyht:
& eurich thing that is lof misdede,
hit luueth thuster to his dede.
A wis word, theyh hit bo unclene,
is fele manne a-muthe imene,

235

for Alured King hit seide & wrot:
"He schunet that hine [vu]l wot."
Ich wene that thu dost also,
vor thu fliyhst nyhtes euer mo.
An other thing me is a-wene,

f234v2

thu hauest aniyht wel briyhte sene;
bi daie thu art stare-blind,
that thu ne sichst ne bov ne strind.

Adai thu art blind other bisne,
tharbi men segget a uorbisne:

245

"Riyht so hit farth bi than ungede
that noyht ne suth to none gode,
& is so ful of vuele wrenche
that him ne mai no man atprenche,
& can wel thane thu[st]r]e wai,

250

& thane briyhte lat awai."
So doth that both of thine cunde,
of liyhte nabbeth hi none imunde."

Thos hule luste suthe longe,
& was oftone suthe stronge:

255

ho quath "Thu [h]atatest nyhtingale,
thu miyhtest bet hoten galegale,
vor thu hauest to monie tale.
Lat thine tunge habbe spale!
Thu wenest that thes dai bo thin oyhe:

260

lat me nu habbe mine throyhe:
bo nu stille & lat me speke,
ich wille bon of the awreke.
& lust hu ich con me bitelle,
mid riyhte sothe, witute spelle.

265

Thu seist that ich me hude adai,
tharto ne segge ich nich ne nai:
& lust ich telle the wareuore,
al wi hit is & wareuore.
Ich habbe bile stif & stronge,

270

& gode cliuers scharp & longe,
so hit bicumeth to hauekes cunne;
hit is min hiyhte, hit is mi w[u]nne,
that ich me drayhe to mine cunde,

f235r1

ne mai [me] no man thareuore schende :

275

on me hit is wel isene,
vor riyhte cunde ich am so kene.
Vorthi ich am loth smale foyhle
that floth bi grunde an bi thueele:

hi me bichermet & bigredeth,

280

& hore flockes to [m]e ledeth.
Me is lof to habbe reste
& sitte stille in mine neste:
vor nere ich neuer no the betere,
[yh]if ich mid chauling & mid chatere

285

hom schende & mid fule worde,
so herdes doth other mid schit-worde.
Ne lust me wit the screwen chide;
forthi ich wende from hom wide.
Hit is a wise monne dome,

290

& hi hit segget wel ilome,
that me ne chide wit the gidie,
ne wit than ofne me ne yhonie.
At sume sithe herde [I] telle
hu Alured sede on his spelle:

295

"Loke that thu ne bo thare
thar chauling both & cheste yhare:
lat sottes chide & uorth thu go."
& ich am wis & do also.
& yhet Alured seide an other side

300

a word that is isprunge wide:
"That wit the fule haueth imene,
ne cumeth he neuer from him cleine."
Wenestu that haueck bo the worse
thoyh crowe bigrede him bi the mershe,

305

& goth to him mid hore chirme
riyht so hi wille wit him schirme?
The hauec folyheth gode rede,

f235r2

& fliyht his wei & lat him grede."

"Yhet thu me seist of other thinge,

310

& telst that ich ne can noyht singe,
ac al mi rorde is woning,
& to ihire grislich thing.
That nis noyht soth, ich singe efne,
mid fulle dreame & lude stefne.

315

Thu wenist that ech song bo grislich,
that thine pipinge nis ilich.
Mi stefne is [bold] & noyht unorne,
ho is ilich one grete horne,
& thin is ilich one pipe,

320

of one smale wode unripe.
Ich singe bet than thu dest:
thu chaterest so doth on Irish prost.
Ich singe an eue a riyhte time,
& soththe won hit is bed-time,

325

the thridde sithe a[t] middel-niyhte:
& so ich mine song adiyhte
wone ich iso arise vorre
other dai-rim other dai-sterre.
Ich do god mid mine throte,

330

& warni men to hore note.
Ac thu singest alle longe niyht,
from eue fort hit is dai-liyht,
& eure seist thin o song
so longe so the niyht is long:

335

& eure croweth thi wrecche crei,
that he ne swiketh niyht ne dai.
Mid thine pipinge thu adunest
thas monnes earen thar thu wunest,
& makest thine song so unw[u]rth

340

tha[t] me ne telth of thar noyh[t] w[u]rth.
Eurich muryhthe mai so longe ileste

f235v1

that ho shal liki wel unwreste:
vor harpe, & pipe, & fuyheles [song]
misliketh, yhif hit is to long.

345

Ne bo the song neuer so murie,
that he ne shal thinche wel unmurie
yhef he ilesteth ouer unwille:
so thu miyht thine song aspille.
Vor hit is soth, Alured hit seide,

350

& me hit mai ine boke rede:
"Eurich thing mai losen his godhede
mid unmethe & mid ouerdede."
Mid este thu the miyht ouerquatie,
& ouerfulle maketh wlatie:

355
an eurich mureyhthe mai agon
yhif me hit halt eure forth in on,
bute one, that is Godes riche,
that eure is svete & eure iliche:
theyh thu nime eure o[f] than lepe,

360
hit is eure ful bi hepe.
Wunder hit is of Godes riche,
that eure spenth & euer is iliche.

yhut thu me seist an other shome,
that ich a[m] on mine eyhen lome,

365
an seist, for that ich flo bi niyhte,
that ich ne mai iso bi liyhte.
Thu liest! on me hit is isene
that ich habbe gode sene:
vor nis non so dim thusterness

370
that ich euer iso the lasse.
Thu wenest that ich ne miyhte iso,
vor ich bi daie noyht ne flo.
The hare luteth al dai,
ac notheles iso he mai.

375
Yhif hundes urneth to him-ward,

f235v2
[h]e gength wel suithe awai-ward,
& hoketh pathes svithe narewe,
& haueth mid him his blenches yharewe,
& hupth & star[t] suthe coue,

380
an secheth pathes to the groue:
ne sholde he uor bothe his eyhe
so don, yhif he the bet niseyhe.
Ich mai ison so wel so on hare,
theyh ich bi daie sitte an dare.

385
Thar ayhte men [both] in worre,

an fareth bothe ner an forre,
an oueruareth fele [th]ode,
an doth bi niyhte gode node,
ich folyhi than ayhte manne,

390
an flo bi niyhte in hore banne."

The nyhtingale in hire thoyhte
athold al this, & longe thoyhte
wat ho tharafter miyhte segge:
vor ho ne miyhte noyht alegge

395
that the hule hadde hire ised,
vor he spac bothe riyht an red.
An hire ofthuyhte that ho hadde
the speche so for uorth iladde,
an was oferd that hire answare

400
ne w[u]rthe noyht ariyht ifare.
Ac notheles he spac boldeliche,
vor he is wis that hardeliche
with is uo berth grete ilete,
that he uor areyhthe hit ne forlete:

405
vor suich worth bold yhif thu [f]lyhst],
that w[u]le flo yhif thu [n]isviest;
yhif he isith that thu nart areyh,
he wile of [bore] w[u]rchen bareyh.
& forthi, theyh the nyhtingale

f236r1
were aferd, ho spac bolde tale.

"[H]ule" ho seide " wi dostu so?
thu singest a-winter wolawo!
thu singest so doth hen a-snowe,
al that ho singeth hit is for wowe.

415
A-wintere thu singest wrothe & yhomere,
an eure thu art dumb a-sumere.
Hit is for thine fule nithe
that thu ne miyht mid us bo blithe,
vor thu forbernest wel neyh for onde

420
wane ure blisse cumeth to londe.
thu farest so doth the ille,
evrich blisse him is unwill:

grucching & luring him both rade,
yhif he isoth that men both glade.

425

He wolde that he iseyhe
teres in evrich monnes eyhe:
ne royhte he theyh flockes were
imeind bi toppes & bi here.
Al so thu dost on thire side:

430

vor wanne snov lith thicke & wide,
an alle wiyhtes habbeth soryhe,
thu singest from eue fort a-moryhe.
Ac ich alle blisse mid me bringe:
ech wiyht is glad for mine thinge,

435

& blisseth hit wanne ich cume,
& hiyhteth ayhen mine kume.
The blostme ginneth springe & sprede,
bothe ine tro & ek on mede.
The lilie mid hire faire wlite

440

wolcumeth me, that thu hit w[i]te,
bit me mid hire faire blo
that ich shulle to hire flo.
The rose also mid hire rude,

f236r2

that cumeth ut of the thorne wode,

445

bit me that ich shulle singe
vor hire luue one skentinge:
& ich so do thuryh nyht & dai,
the more ich singe the more I mai,
an skente hi mid mine songe,

450

ac notheles noyht ouerlonge;
wane ich iso that men both glade,
ich nelle that hi bon to sade:
than is ido vor wan ich com,
ich fare ayhen & do wisdom.

455

Wane mon hoyheth of his sheue,
an falewi cumeth on grene leue,
ich fare hom & nime leue:
ne recche ich noyht of winteres reue.
wan ich iso that cumeth that harde,

460

ich fare hom to min erde,
an habbe bothe luue & thonc
that ich her com & hider swonk.
Than min erende is ido,
sholde ich bileue? nai, [w]arto?

465

vor he nis nother yhep ne wis,
that longe abid thar him nod nis."

Thos hule luste, & leide an hord
al this mot, word after word,
an after thoyhte hu he miyhte

470

ansvere uinde best mid riyhte:
vor he mot hine ful wel bithenche,
that is aferd of plaites wrenche.

"Thv aishest me," the hule sede,
"wi ich a-winter singe & grede.

475

Hit is gode monne iwone,
an was from the worlde frome,
that ech god man his frond icnowe,

f236v1

an blisse mid hom sume throwe
in his huse at his borde,

480

mid faire speche & faire worde.
& hure & hure to Cristesmasse,
thane riche & poure, more & lasse,
singeth cundut nyht & dai,
ich hom helpe what ich mai.

485

& ek ich thenche of other thinge
thane to pleien other to singe.
Ich habbe herto gode ansuare
anon iredi & al yhare:
vor sumeres-tide is al to [w]lonc,

490

an doth misreken monnes thonk:
vor he ne recth noyht of clennesses,
al his thoyht is of golnesses:
vor none dor no leng nabiteth,
ac eurich upon other rideth:

495
the sulue stottes ine the stode
both bothe wilde & mere-wode.
& thu sulf art thar-among,
for of golnesse is al thi song,
an ayhen thet thu w[i]lt teme,

500
thu art wel modi & wel breme.
Sone so thu hau[e]st itrede,
ne miyhtu leng a word iquethe,
ac pipest al so doth a mose,
mid chokeringe, mid steune hose.

505
yhet thu singst worse thon the heisugge,
[th]at fliYhth bi grunde among the stubbe:
wane thi lust is ago,
thonne is thi song ago also.
A-sumere chorles awedeth

510
& uorcrempeth & uorbredeth:
hit nis for luue notheles,
ac is the chorles wode res;

f236v2
vor wane he haueth ido his dede,
ifallen is al his boldhede,

515
habbe he istunge under gore,
ne last his luue no leng more.
Al so hit is on thine mode:
so sone so thu sittest a-brode,
thu forlost al thine wise.

520
Al so thu farest on thine rise:
wane thu hauest ido thi gome,
thi steune goth anon to shome.
Ac [w]ane niyhtes cumeth longe,
& b[r]ingeth forstes starke an stronge,

525
thanne erest hit is isene
war is the snelle, [w]ar is the kene.
At than harde me mai auinde
[w]o geth forth, wo lith bihinde.
Me mai ison at thare node,

530

[w]an me shal harde wike bode;
thanne ich am snel & pleie & singe,
& hiyhte me mid mi skentinge:
of none wintere ich ne recche,
vor ich nam non asv[u]nde wrecche.

535
& ek ich frouri uele wiyhte
that mid hom nabbe[th] none miyhtte:
hi both hoyhfule & uel arme,
an secheth yhorne to the warme;
oft ich singe uor hom the more

540
for lutli sum of hore sore.
Hu thincth the? artu yhut inume?
Artu mid riyhte ouercume?"

"Nay, nay!" sede the niyhtingale,
" thu shalt ihere another tale:

545
yhet nis thos speche ibroyht to dome.

f237r1
Ac bo wel stille, & lust nu to me
ich shal mid one bare worde
do that thi speche [wurth] forworthe."

"That nere noht riyht" the hule sede,

550
"thu hauest bicloped al so thu bede,
an ich the habbe iyhiue ansuare.
Ac ar we to unker dome fare,
ich wille speke toward the
al so thu speke toward me;

555
an thu me ansuare yhif thu miyht.
Seie me nu, thu wrecche wiyht,
is in the eni other note
bute thu hauest schille throte?
Thu nart noyht to non other thinge,

560
bute thu canst of chateringe:
vor thu art lutel an unstrong,
an nis thi regel nothing long.
Wat dostu godes among monne?
Na mo the deth a w[re]cche wranne.

565

Of the ne cumeth non other god,
bute thu gredest suich thu bo wod:
an bo thi piping ouergo,
ne both on the craftes namo.
Alured sede, that was wis:

570
(he miyhte wel, for soth hit is,)
"Nis no man for is bare songe
lof ne w[u]rth noyht suthe long:
vor that is a forworthe man
that bute singe noyht ne can."

575
Thu nart bute on forworthe thing:
on the nis bute chatering.
Thu art dim an of fule howe,
an thinchest a lutel soti clowe.
Thu nart fair, no thu nart strong,

f237r2
ne thu nart thicke, ne thu nart long:
thu hauest imist al of fairhede,
an lutel is al thi godede.
An other thing of the ich mene,
thu nart vair ne thu nart clene.

585
Wane thu comest to manne hayhe,
thar thornes both & ris idrayhe,
bi hegge & bi thicke wode,
thar men goth oft to hore node,
tharto thu drayhst, tharto thu w[u]nest,

590
an other clene stede thu schunest.
Than ich flo niyhtes after muse,
I mai the uinde ate rum-huse;
among the wode, among the netle,
thu sittest & singst bihinde the setle:

595
thar me mai the ilomest finde,
thar men worpeth hore bihinde.
Yhet thu atuitest me mine mete,
an seist that ich fule wiyhtes etc.
Ac wat etestu, that thu ne liyhe,

600
bute attercoppe & fule ulige,
an wormes, yhif thu miyhte finde
among the uolde of harde rinde?
Yhet ich can do wel gode wike,

vor ich can loki manne wike:

605
an mine wike both wel gode,
vor ich helpe to manne uode.
Ich can nimen mus at berne,
an ek at chirche ine the derne:
vor me is lof to Cristes huse,

610
to clansi hit with fule muse,
ne schal thar neure come to
ful wiyht, yhif ich hit mai iuo.
An yhif me lust one mi skentinge

f237v1
to wernen other w[u]nienge,

615
ich habbe at wude tron wel grete,
mit thicke boyhe nothing blete,
mid iui grene al bigrowe,
that eure stont iliche iblowe,
an his hou neuer ne uorlost,

620
wan hit sniuw ne wan hit frost.
Tharin ich habbe god ihold,
a-winter warm, a -sumere cold.
Wane min hus stont briyht & grene,
of thine nis nothing isene.

625
Yhet thu me telst of other thinge,
of mine briddes seist gabbinge,
that hore nest nis noyht clene.
Hit is fale other wiyhte imene:
vor hors a-stable & oxe a-stalle

630
[d]oth al that hom wule thar falle.
An lutle children in the cradele,
bothe chorles an ek athele,
[d]oth al that in hore yhoethe
that hi uorleteth in hore duyhethe.

635
Wat! can that yhongling hit bihede?
Yhif hit misdeth, hit mo[t] nede:
a uorbisne is of olde i[vu]rne,
[th]at node maketh old wif urne.
An yhet ich habbe an other andsware:

640
wiltu to mine neste uare
an loki hu hit is idiyht?
Yhif thu art wis lorni thu [miyht]:
mi nest is holyh & rum amidde,
so hit is softest mine bridde.

645
Hit is broiden al abute,
vrom the neste uor withute:
tharto hi go[th] to hore node,

f237v2
ac that thu menest ich hom forbode.
We nimeth yheme of manne bure,

650
an after than we maketh ure:
men habbet, among other i[h]ende,
a rum-hus at hore bures ende,
vor that hi nelleth to uor go,
an mine briddes doth al so.

655
Site nu stille, chaterestre!
nere thu neuer ibunde uastre:
herto ne uindestu neuer andsware.
Hong up thin ax! nu thu miyht fare!"
The nyhtingale at thisse worde

660
was wel neyh ut of rede iworthe,
an thoyhte yhorne on hire mode
yhif ho oyht elles understode,
yhif ho kuthe oyht bute singe,
that miyhte helpe to other thinge.

665
Herto ho moste andswere uinde,
other mid alle bon bihinde:
an hit is suthe strong to fiyhte
ayhen soth & ayhen riyhte.
He mot gon to al mid ginne,

670
than the horte both on [w]inne:
an the man mot on other segge,
he mot bihemmen & bilegge,
yhif muth withute mai biwro
that me the horte noyht niso:

675

an sone mai a word misreke
thar muth shal ayhen horte speke;
an sone mai a word misstorte
thar muth shal speken ayhen horte.
Ac notheles yhut upe thon,

680
her is to red wo hine kon:
vor neuer nis wit so kene

f238r1
so thane red him is a-wene.
thanne erest kume[th] his yhephede
wone hit is alre-mest on drede:

685
for Aluered seide of olde quide,
an yhut hit nis of horte islide:
"Wone the bale is alre-hecst,
thonne is the bote alre-necst";
vor wit west among his sore,

690
an for his sore hit is the more.
Vorthi nis neuere mon redles
ar his horte bo witles:
ac yhif that he forlost his wit,
thonne is his red-purs al to-slit;

695
yhif he ne kon his wit atholde,
ne uint he red in one uolde.
Vor Alur[e]d seide, that wel kuthe,
eure he spac mid sothe muthe:
"Wone the bale is alre-hecst,

700
thanne is the bote alre-nest."

The nyhtingale al hire hoyhe
mid rede hadde wel bitoyhe;
among the harde, among the toyhte,
ful wel mid rede hire bithoyhte,

705
an hadde andsuere gode ifunde
among al hire harde stunde.

"[H]ule, thu axest me," ho seide,
"yhif ich kon eni other dede
bute singen in sume tide,

710

an bringe blisse for & wide.
Wi axestu of craftes mine?
Betere is min on than alle thine,
betere is o song of mine muthe
than al that eure thi kun kuthe:

715
an lust, ich telle the wareuore.

f238r2
Wostu to wan man was ibore?
To thare blisse of houene-riche,
thar euer is song & muryhthe iliche:
thider fundeth eurich man

720
that eni thing of gode kan.
Vorthi me singth in holi-chirche,
an clerkes ginneth songes wirche,
that man ithenche bi the songe
wider he shal, & thar bon longe:

725
that he the muryhthe ne uoryhete,
ac tharof thenche & biyhete,
an nime yheme of chirche steuene,
hu murie is the blisse of houene.
Clerkes, munekes, & kanunes,

730
thar both thos gode wicke-tunes,
ariseth up to midel-niyhte,
an singeth of the houene-liyhte:
an prostes upe londe singeth,
wane the lyght of daie springeth.

735
An ich hom helpe wat I mai,
ich singe mid hom niyht & dai,
an ho both alle for me the gladdere,
an to the songe both the raddere.
Ich warni men to hore gode,

740
that hi bon blithe on hore mode,
an bidde that hi moten iseche
than ilke song that euer is eche.
Nu thu miyht, hule, sitte & clinge:
her-among nis no chateringe:

745
ich graunti that [w]e go to dome
tofore the [sulfe Pope] of Rome.

Ac abid yhete, notheles,
thu shalt ihere an other [h]es;
ne shaltu, for Engelonde,

f238v1
at thisse worde me atstonde.
Wi atuitestu me mine unstrengthe,
an mine ungrete & mine unlengthe,
an seist that ich nam noyht strong,
vor ich nam nother gret ne long?

755
Ac thu nost neuer wat thu menst,
bute lese wordes thu me lenst:
for ich kan craft & ich kan liste,
an [th]areuore ich am thus thriste.
Ich kan wit & song man[t]eine,

760
ne triste ich to non other maine:
vor soth hit is that seide Alured:
"Ne mai no strengthe ayhen red."
Oft spet wel a lute liste,
thar muche strengthe sholde miste;

765
mid lutle strengthe, thuryh ginne,
castel & buryh me mai iwinne.
Mid liste me mai walle[s] felle,
an worpe of horsse kniyhtes snelle.
Vuel strengthe is lutel wurth,

770
.....
.....
ac wisdom naueth non euening.
An hors is strengur than a mon;
ac for hit non iwit ne kon,

775
hit berth on rugge grete semes,
an drayhth biuore grete temes,
an tholeth bothe yherd & spure,
an stont iteid at mulne dure.
An hit deth that mon hit hot:

780
an for than that hit no wit not,
ne mai his strenthe hit ishilde
that hit nabuyhth the lutle childe.
Mon deth, mid strengthe & mid witte,
that other thing nis non his fitte.

785

Theyh alle strengthe at one were,

f238v2

monnes wit yhet more were;
vor the mon mid his crafte,
ouerikumeth al orthliche shafte.
Al so ich do mid mine one songe

790

bet than thu al the yher longe:
vor mine crafte men me luuieth,
vor thine strengthe men the shunieth.
Telstu bi me the wurs for than
that ich bute anne craft ne kan?

795

Yhif tueie men goth to wraslinge,
an either other faste thringe,
an the on can swenges suthe fele,
an kan his wrenches wel forhele,
an the other ne can sweng but anne,

800

an the is god with eche manne,
an mid thon one leith to grunde
anne after other a lutle stunde,
[w]at tharf he recche of a mo swenge,
thone the on him is swo genge?

805

Th[u] seist that thu canst fele wike,
ac euer ich am thin unilike.
Do thine craftes alle togadere,
yhet is min on horte betere.
Oft than hundes foxes driueth,

810

the kat ful wel him sulue liueth,
theyh he ne kunne wrench bute anne.
The fo[x] so godne ne can nanne,
the[yh] he kunne so uele wrenche,
that he wenth eche hunde atprenche.

815

Vor he can pathes riyhte & woyhe,
an he kan hongy bi the boyhe,
an so forlost the hund his fore,
an turnth ayhen eft to than more.
The uox kan crope bi the heie,

f239r1

an turne ut from his forme weie,

an eft sone kume tharto:
thonne is the hundes smel fordo:
he not, thur[yh] the imeinde smak,
wether he shal auorth the abak.

825

Yhif the uox mist of al this dwole,
at than ende he cropth to hole:
ac natheles mid alle his wrenche,
ne kan he hine so bithenche,
theyh he bo yhep an suthe snel,

830

that he ne lost his rede uel.
The cat ne kan wrench bute anne
nother bi dune ne bi uenne:
bute he kan climbe suthe wel,
tharmid he wereth his greie uel.

835

Al so ich segge bi mi solue,
betere is min on than thine twelue."

"Abid! abid!" the ule seide,
"thu gest al to mid swikelede:
alle thine wordes thu bileist

840

that hit thincth soth al that thu seist;
alle thine wordes both isliked,
an so bisemed an biliked,
that alle tho that hi auoth,
hi weneth that thu segge soth.

845

Abid! abid! me shal the yhene.
[N]u hit shal w[u]rthe wel isene
that thu hauest muchel iloyhe,
wone thi lesing both unwroyhe.
Thu seist that thu singist mankunne,

850

& techest hom that hi fundieth honne
vp to the songe that eure ilest:
ac hit is alre w[u]nder mest,
that thu darst liyhe so opeliche.

f239r2

Wenest thu hi bringe so liyhtliche

855

to Godes riche al singin[d]e?
Nai! nai! hi shulle wel auinde

that hi mid longe wope mote
of hore sunnen bidde bote,
ar hi mote euer kume thare.

860

Ich rede thi that men bo yhare,
an more wepe thane singe,
that fundeth to than houen-kinge:
vor nis no man witute sunne.
Vorthi he mot, ar he wende honne,

865

mid teres an mid wope bete,
that him bo sur that er was swete.
Tharto ich helpe, God hit wot!
Ne singe i[c]h hom no foliot:
for al m[i] song is of longinge,

870

an imend sumdel mid woninge,
that mon bi me hine bithenche
that he gro[ni] for his unwrenche:
mid mine songe ich hine pulte,
that he groni for his gulte.

875

Yhif thu gest herof to disputinge,
ich wepe bet thane thu singe:
yhif riyht goth forth, & abak wrong,
betere is mi wop thane thi song.
Theyh sume men bo thuryhut gode,

880

an thuryhut clene on hore mode,
ho[m] longeth honne notheles.
That both her, [w]o is hom thes:
vor theyh hi bon hom solue iboryhe,
hi ne soth her nowiyht bote sorwe.

885

Vor other men hi wepeth sore,
an for hom biddeth Cristes ore.
Ich helpe monne on either halue,

f239v1

mi muth haueth tweire kunne salue :
than gode ich fulste to longinge,

890

vor than hi[m] longeth, ich him singe:
an than sunfulle ich helpe alswo,
vor ich him teche thare is wo.
Yhet ich the yhene in other wise:

vor thane thu sittest on thine rise,

895

thu drayhst men to fleses luste,
that w[u]lleth thine songes luste.
Al thu forlost the muryhthe of houene,
for tharto neuestu none steuene :
al that thu singst is of golnesse,

900

for nis on the non holinesse,
ne wene[th] na man for thi pipinge
that eni preost in chir[ch]e singe.
Yhet I the wulle an o[th]er segge,
yhif thu hit const ariht bilegge:

905

[w]i nultu singe an o[th]er theode,
thar hit is muchele more neode?
Thu neauer ne singst in Irlonde,
ne thu ne cumest noyht in Scotlonde.
Hwi nultu fare to Noreweie,

910

an singin men of Galeweie?
Thar beodh men that lutel kunne
of songe that is bineodh the sunne.
Wi nultu thare preoste singe,
an teche of thire writelinge,

915

an wisi hom mid thire steuene
hu engeles singedh ine heouene?
Thu farest so dodh an ydel wel
that springeth bi burue tha[t] is snel,
an let fordruue the dune,

920

& flo[th] on idel thar adune.
Ac ich fare bothe north & s[u]th:

f239v2

in eauereuch londe ich am cuuth:
east & west, feor & neor,
I do wel faire mi meoster,

925

an warni men mid mine bere,
that thi dweole-song heo ne forlere.
Ich wisse men mid min[e] songe,
that hi ne sunegi nowiht longe :
I bidde hom that heo iswike,

930
that [heo] heom seolue ne biswike:
for betere is that heo wepen here,
than elles hwar [beon] deoulene fere."

The nyhtingale was igr[amed]
an ek heo was sum del of[s]chamed,

935
for the hule hire atwiten hadde
in hwucche stude he sat an gradde,
bihinde the bure, among the wede,
thar men godh to here neode:
an sat sum-del, & heo bithohte,

940
an wiste wel on hire thohte
the wraththe binimeth monnes red.
For hit seide the king Alfred:
"Sel[d]e endedh wel the lothe,
an selde plaidedh wel the wrothe."

945
For wraththe meinth the horte blod
that hit floweth so wilde flod,
an al the heorte ouergeth,
that heo naueth no thing bute breth,
an so forleost al hire liht,

950
that heo ni sith soth ne riht.
The nyhtingale hi understod,
an ouergan lette hire mod:
he mihte bet speken a-sele
than mid wraththe wordes deale.

955
"[H]ule," heo seide "lust nu hider:

f240r1
thu schalt falle, the wei is slider.
Thu seist ich fleo bihinde bure:
hit is riht, the bur is ure:
thar lauerd liggeth & lauedi,

960
ich schal heom singe & sitte bi.
Wenstu that uise men forlete,
for fule venne, the riyhtte strete ?
ne sunne the later shine,
theyh hit bo ful ine nest[e] thine?

965

Sholde ich, for one hole brede,
forlete mine riyhte stede,
that ich ne singe bi the bedde,
thar louerd haueth his loue ibedde?
Hit is mi riyht, hit is mi layhe,

970
tha[t] to the he[x]st ich me drayhe.
Ac yhet thu yhelpst of thine songe,
that thu canst yholle wrothe & stronge,
an seist thu uisest mankunne,
that hi biwepen hore sunne.

975
Solde euch mon wonie & grede
riyht suich hi weren unlede,
solde hi yhollen al so thu dest,
hi miyhte oferen here brost.
Man schal bo stille & noyht grede;

980
he mot biwepe his misdede:
ac thar is Cristes heriinge,
thar me shal grede & lude singe.
Nis nother to lud ne to long,
at riyhte time, chirche-song.

985
Thu yholst & wones[t], & ich singe:
thi steuene is wop, & min skentinge.
Euer mote thu yholle & wepen
that thu thi lif mote forleten!
an yhollen mote thu so heyhe

f240r2
that ut berste bo thin eyhe!
Wether is betere of twe[n]e twom,
that mon bo blithe other grom ?
So bo hit euer in unker sithe,
that thu bo sori & ich blithe.

995
Yhut thu aiseist wi ich ne fare
into other londe & singe thare?
No! wat sholde ich among hom do,
thar neuer blisse ne com to?
That lond nis god, ne hit nis este,

1000
ac wildernisse hit is & weste:
knarres & cludes houen[e]-tinge,
snou & hayhel hom is genge.
That lond is grislich & unuele,

the men both wilde & unisele,

1005

hi nabbeth nother grith ne sibbe:
hi ne reccheth hu hi libbe.
Hi eteth fihs an flehs unsode,
suich wulues hit hadde tobrode:
hi drinketh milc & wei tharto,

1010

hi nute elles that hi do:
hi nabbeth noth[er] win ne bor,
ac libbeth al so wilde dor:
hi goth bitiyht mid ruyhe uelle,
riyht suich hi comen ut of helle.

1015

Theyh eni god man to hom come,
so wile dude sum from Rome,
for hom to lere gode thewes,
an for to leten hore unthewes,
he miyhte bet sitte stille,

1020

vor al his wile he sholde spille:
he miyhte bet teche ane bore
to weyhe bothe sheld & spere,
than me that wilde folc ibringe

f240v1

that hi [me] wolde ihere singe.

1025

Wat sol[d]ich thar mid mine songe?
ne sunge ich hom neuer so longe,
mi song were ispild ech del:
for hom ne mai halter ne bridel
bringe vrom hore w[o]de wise,

1030

ne mon mid stele ne mid i[s]e.
Ac war lon[d] is bothe este & god,
an thar men habbeth milde mod,
ich noti mid hom mine throte,
vor ich mai do thar gode note:

1035

an bringe hom loue tithinge,
vor ich of chirche-songe singe.
Hit was iseid in olde layhe,
an yhet ilast thilke soth-sayhe,
that man shal erien an sowe,

1040

thar he wenth after sum god mowe:
for he is wod that soweth his sed
thar neuer gras ne sprinth ne bled."

The hule was wroth, to cheste rad,
mid thisse worde hire eyhen abrad:

1045

"Thu seist thu witest manne bures,
thar leues both & faire flores,
thar two iloue in one bedde
liggeth biclop[t] & wel bihedde.
Enes thu sunge, ic wo[t] wel ware,

1050

bi one bure, & woldest lere
the lefdi to an uuel luue,
an sunge bothe loyhe & buue,
an lerdest hi to don shome
an vnriyht of hire licome.

1055

The louerd that sone underyhat,
liim & grine [&] wel eiwat,
sette & le[i]de the for to lacche.
Thu come sone to than hacche,
thu were inume in one grine,

1060

al hit aboyhte thine shine:
thu naddest non other dom ne layhe,
bute mid wilde horse were todrayhe.
Vonde yhif thu miyht eft misrede,
wather thu wult, wif the maide:

1065

thi song mai bo so longe genge
that thu shalt wippen on a spreng."

The nyhtingale at thisse worde,
mid sworde an mid speres orde,
yhif ho mon were, wolde fiyhte:

1070

ac tho ho bet do ne miyhte,
ho uayht mid hire wise tunge.
"Wel fiyht that wel specth," seith in the songe.
Of hire tunge ho nom red:
"Wel fiyht that wel specth" seide Alured.

1075

"Wat! seistu this for mine shome?"

the louerd hadde herof grame.
He was so gelus of his wiue,
that he ne miyhte for his liue
iso that man with hire speke,

1080
that his horte nolde breke.
He hire bileck in one bure,
that hire was bothe stronge & sure:
ich hadde of hire milse an ore,
an sori was for hire sore,

1085
an skente hi mid mine songe
al that ich miyhte, rathe an longe.
Vorthan the kniyht was with me wroth,
vor riyhte nithe ich was him loth:
he dude me his oyhene shome,

1090
ac al him turnde it to grome.
That underyat the king Henri:

f241r1
Jesus his soule do merci!
He let forbonne thene kniyht,
that hadde idon so muchel unriyht

1095
ine so gode kinges londe;
vor riyhte nithe & for fule onde
let thane lutle fuyhel nime
an him fordeme lif an lime.
Hit was w[u]rthsipe al mine kunne;

1100
forthon the kniyht forles his wunne,
an yhaf for me an hundred punde:
an mine briddes seten isunde,
an hadde soththe blisse & hiyhte,
an were blithe, & wel miyhte.

1105
Vorthon ich was so wel awreke,
euer eft ich dar[r] the bet speke:
vor hit bitidde ene swo,
ich am the blithur euer mo.
Nu ich mai singe war ich wulle,

1110
ne dar me neuer eft mon agrulle.
Ac thu, eremi[n]g! thu wrecche gost!
thu ne canst finde, ne thu nost,

an holyh stok thar thu the miyht hude,
that me ne twengeth thine hude.

1115
Vor children, gromes, heme & hine,
hi thencheth alle of thire pine:
yhif hi muyhe iso the sitte,
stones hi doth in hore slitte,
an the totorue[th] & toheneth,

1120
an thine fule bon tosheneth.
Yhif thu art iworpe other ishote,
thanne thu miyht erest to note.
Vor me the hoth in one rodde,
an thu, mid thine fule codde,

1125
an mid thine ateliche s[w]ore,

f241r2
biwerest manne corn urom dore.
Nis nother noyht, thi lif ne thi blod:
ac thu art sh[e]ueles suthe god.
Thar nowe sedes bothe isowe,

1130
pinnuc, golfinc, rok, ne crowe
ne dar thar neuer cumen ihende,
yhif thi buc hongeth at than ende.
Thar tron shulle ayhere blowe,
an yhunge sedes springe & growe,

1135
ne dar no fuyhel tharto uonge,
yhif thu art tharouer ihonge.
Thi lif is eure luther & qued,
thu nar[t] noyht bute ded.
Nu thu miyht wite sikerliche

1140
that thine leches both grisliche
the wile thu art on lifdayhe:
vor wane thu hongest islayhe,
yhut hi both of the ofdradde,
the fuyheles that the er bigradde.

1145
Mid riyhte men both with the wrothe,
for thu singist euer of hore lothe:
al that thu singst, rathe other late,
hit is euer of manne unwate:
wane thu hauest aniyht igrad,

1150
men both of the wel sore ofdrad.
Thu singst thar sum man shal be ded:
euer thu bodest sumne qued.
Thu singst ayhen eyhte lure,
other of summe frondes rure :

1155
other thu bodes[t] huses brune,
other ferde of manne, other thoues rune;
other thu bodest cualm of oreue,
other that londfolc wurth idorue,
other that wif lost hire make;

f241v1
other thu bodest cheste an sake.
Euer thu singist of manne hareme,
thurh the hi both sori & areme.
thu ne singst neuer one sithe,
that hit nis for sum unsithe.

1165
Heruore hit is that me the shuneth,
an the totorueth & tobuneth
mid staue, & stoone, & turf, & clute,
that thu ne miyht nowar atrute.
Dahet euer suich budel in tune

1170
that euer bodeth unwreste rune,
an euer bringeth vuele tithinge,
an that euer specth of vuele thinge!
God Almiyhti w[u]rthe him wroth,
an al that werieth linnene cloth!"

1175
The hule ne abo[d] noyht swith[e] longe,
ah yhef ondsware starke & stronge:
" Wat," quath ho, " hartu ihoded ?
other thu kursest al unihoded ?
For prestes wike ich wat thu dest.

1180
Ich not yhef thu were yhaure prest:
ich not yhef thu canst masse singe:
inoh thu canst of mansinge.
Ah hit is for thine alde nithe,
that thu me akursedest other sithe:

1185
ah tharto is lihtlich ondsware;
"Drah to the!" cwith the cartare.

Wi attwitestu me mine insihte,
an min iwit & mine miyhte?
For ich am witi ful iwis,

1190
an wo[t] al that to kumen is:
ich wot of hunger, of hergonge:
ich wot yhef men schule libbe longe:
ich wat yhef wif lus[t] hire make:

f241v2
ich wat thar schal beo nith & wrake;

1195
ich wot hwo schal beon [an]honge,
other elles fulne deth afonge.
Yhef men habbeth bataile inume,
ich wat hwather schal beon ouerkume :
ich wat yhif cwalm scal comen on orfe,

1200
an yhif dor schul ligge [a]storue;
ich wot yhef treon schule blowe:
ich wat yhef cornes schule growe :
ich wot yhef huses schule berne:
ich wot yhef men schule eorne other erne:

1205
ich wot yhef sea schal schipes drenche:
ich wot yhef snuw[e] schal ueele clenche.
An yhet ich con muchel more:
ich con inoh in bokes lore,
an eke ich can of the Goddspelle

1210
more than ich nule the telle:
for ich at chirche come ilome,
an muche leorni of wisdome :
ich wat al of the tacninge,
an of other feole thinge.

1215
Yhef eni mon schal rem abide,
al ich hit wot ear hit itide.
Ofte, for mine muchele iwitte,
wel sori-mod & w[ro]th ich sitte :
wan ich iseo that sum wrechede

1220
is manne neh, innoh ich grede:
ich bidde that men beon iwar[r]e,
an habbe gode reades yhar[r]e.
For Alfred seide a wis word,

each mon hit schulde legge on hord:

1225

"Yhef thu isihst [er] he beo icume,
his str[e]ncthe is him wel neh binume."
An grete duntas beoth the lasse,

f242r1

yhef me ikepth mid iwarnesse,
an [flo] schal toward misyhenge,

1230

yhef thu isihst hu fleo of strenge;
for thu miyht blenche wel & fleo,
yhif thu isihst heo to the teo.
That eni man beo falle in [e]dwite,
wi schal he me his sor atwite?

1235

Thah ich iseo his harm biuore,
ne cometh hit noyht of me tharu[o]re.
Thah thu iseo that sum blind mon,
that nanne rihtne wei ne con,
to thare diche his dweole fulie[th],

1240

an falleth, and tharone sulie[th],
wenest thu, thah ich al iseo,
that hit for me the rathere beo?
Al swo hit fareth bi mine witte:
hwanne ich on mine bowe sitte,

1245

ich wot & iseo swithe brihte
an summe men kume[&] harm tharrihte.
Schal he, that therof nothing not,
hit wite me for ich hit wot?
Schal he his mishap wite me,

1250

for ich am wisure thane he?
Hwanne ich iseo that sum wrechede
is manne neh, inoh ich grede,
an bidde inoh that hi heom schilde,
for toward heom is [harm unmilde].

1255

Ah thah ich grede lude an stille,
al hit itid thur[h] Godes wille.
Hwi wulleth men of me hi mene,
thah ich mid sothe heo awene?
Thah ich hi warni al that yher,

1260

nis heom therfore harem no the ner:

f242r2

ah ich heom singe for ich wolde
that hi wel understonde schulde
that sum unselthe heom is ihende,
hwan ich min huing to heom sende.

1265

Naueth no man none sikerhede
that he ne mai wene & adrede
that sum unhwate ne[h] him beo,
thah he ne conne hit iseo.
Forthi seide Alfred swithe wel,

1270

and his worde was Goddspel,
that "euereuch man, the bet him beo,
eauer the bet he hine beseo."
"ne truste no mon to his weole
to swithe, thah he habbe ueole."

1275

"Nis [nout] so hot that hit nacoeth,
ne noyht so hwit that hit ne soleth,
ne noyht so leof that hit ne alotheth,
ne noyht so glad that hit ne awrotheth:
ac eauereeu[c]h thing that eche nis,

1280

agon schal, & al this worldes blis."
Nu thu miyht wite readliche,
that eauere thu spekest gideliche:
for al that thu me seist for schame,
euer the seolue hit turneth to grome.

1285

Go so hit go, at eche fenge
thu fallest mid thine ahene swenge;
al that thu seist for me to schende,
hit is mi wurschipe at than ende.
Bute thu wille bet aginne,

1290

ne shaltu bute schame iwinne."

The nyhtingale sat & siyhte,
& hohful was, & ful wel miyhte,
for the hule swo ispeke hadde,

f242v1

an hire speche swo iladde.

1295

Heo was ho[h]ful, & erede
hwat heo tharafter hire sede:
ah neotheles heo hire understod.
" Wat!" heo seide, "hule, artu wod?
thu yheolpest of seolliche wisdom,

1300

thu nustest wanene he the come,
bute hit of wicchecrefte were.
Tharof thu, wrecche, mos[t] the skere
yhif thu wult among manne b[eo]:
other thu most of londe fleo.

1305

For alle theo that [th]erof cuthe,
heo uere ifurn of prestes muthe
amanset: swuch thu art yhette,
thu wiecche-crafte neauer ne lete.
Ich the seide nu lutel ere,

1310

an thu askedest yhef ich were
a-bisemere to preost ihoded.
Ah the mansing is so ibroded,
thah no preost a-londe nere,
a wrecche neotheles thu were:

1315

for eauereuch chil[d] the cleopeth fule,
an euereuch man a wrecche hule.
Ich habbe iherd, & soth hit is,
the mon mot beo wel storre-wis,
[that] wite inno[h] of wucche thinge kume,

1320

so thu seist th[e] is iwune.
Hwat canstu, wrecche thing, of storre,
bute that thu biha[u]est hi feorre?
Alswo deth mani dor & man,
theo of [swucche] nawiht ne con.

1325

On ape mai a boc bih[o]lde,
an leues wenden & eft folde:
ac he ne con the bet tharuore

f242v2

of clerkes lore top ne more.
Thah thu iseo the steorre alswo,

1330

nartu the wisure neauer the mo.
Ah yhet thu, fule thing, me chist,
an wel grimliche me atwist
that ich singe bi manne huse,
an teache wif breke spuse.

1335

Thu liest iwis, thu fule thing!
th[urh] me nas neauer ischend spusing.
Ah soth hit is ich singe & grede
thar lauedies beoth & faire maide;
& soth hit is of luue ich singe:

1340

for god wif mai i[n] spusing
bet luuien hire oyhene were,
thane awe[r] hire copenere;
an maide mai luue cheose
that hire wurthschipe ne forleose,

1345

an luuie mid rihte luue
thane the schal beon hire buue.
Swiche luue ich itache & lere,
therof beoth al mine ibere.
Thah sum wif beo of nesche mode,

1350

for wumm[e]n beoth of softe blode,
that heo, thurh sume sottes lore
the yheorne bit & siketh sore,
mis[r]empe & misdo sumne stunde,
schal ich tharuore beon ibunde ?

1355

Yhif wimmen luuieth unrede,
[w]itestu me hore misdede?
Yhef wimmon thencheth luuie derne,
[ne] mai ich mine songes werne.
Wummon mai pleie under clothe,

1360

wether heo wile, wel the wrothe:
& heo mai do bi mine songe,

f243r1

hwather heo wule, wel the wronge.
For nis a-worlde thing so god,
that ne mai do sum ungod,

1365

yhif me hit wule turne amis.
For gold & seoluer, god hit is:

an notheles tharmid thu miyht
spusbruche buggen & unriyht.
Wepne beoth gode grith to halde:

1370
ah neotheles tharmide beoth men acwalde
ayheines riht [an] fale londe,
thar theoues hi beredh an honde.
Alswa hit is bi mine songe,
thah heo beo god, me hine mai misfonge,

1375
an drahe hine to sothede,
an to othre uuele dede.
Ah [schaltu] wrecch, luue tele ?
Bo wuch ho bo, vich luue is fele
bitweone wepmon & wimmane:

1380
ah yhef heo is atbroide, thenne
he is unfele & forbrode.
Wroth wurthe heom the holi rode
the rihte ikunde swo forbreideth!
W[u]nder hit is that heo nawedeth.

1385
An swo heo doth, for heo beoth wode
the bute nest goth to brode.
Wummon is of nesche flesche,
an flesches [lust] is strong to cwesse:
nis wunder nan thah he abide.

1390
For flesches lustes hi maketh slide,
ne beoth heo nowt alle forlore,
that stumpeth at the flesches more:
for moni wummon haueth misdo
that aris[t] op of the slo.

1395
Ne beoth nowt ones alle sunne,

f243r2
forthan hi beoth tweire kunne:
su[m] arist of the flesches luste,
an sum of the gostes custe.
Thar flesch draheth men to drunnesse,

1400
an to [wrouehede] & to golnesse,
the gost misdeth thurch nithe an onde,
& seoththe mid murhthe of [monne shonde,]
an yheoneth after more & more,

an lutel rehth of milce & ore ;

1405
an stiyhth on he[h] thur[h] modinesse,
an ouerhohedh thanne lasse.
Sei [me sooth], yhef thu hit wost,
hwether deth wurse, flesch the gost?
Thu miyht segge, yhef thu wult,

1410
that lasse is the flesches gult:
moni man is of his flesche clene,
that is mid mode deouel-imene.
Ne schal non mon wimman bigrede,
an flesches lustes hire upbreide:

1415
swuch he may te[l]en of golnesse,
that sunegeth wurse i[n] modinesse.
[Yh]et yhif ich schulde a-luue bringe
wif other maide, hwanne ich singe,
ich wolde with the maide holde,

1420
yhif thu hit const ariht atholde:
Lust nu, ich segge the hwaruore,
vp to the toppe from the more.
Yhef maide luueth dernliche,
heo stumpeth & falth icundeliche:

1425
for thah heo sum hwile pleie,
heo nis nout feor ut of the weie;
heo mai hire guld atwende
a rihte weie thur[h] chirche-bende,
an mai eft habbe to make

f243v1
hire leofmon withute sake,
an go to him bi daies lihte,
that er stal to bi theostre nihte.
An yhunling not hwat swuch thing is:
his yhunge blod hit drayheth amis,

1435
an sum sot mon hit tihth tharto
mid alle than that he mai do.
He cometh & fareth & beod & bi[t]
an heo bistant & ouersi[t],
an bisehth ilome & longe.

1440
Hwat mai that chil[d] thah hit misfonge?

Hit nuste neauer hwat hit was,
forthi hit thohte fondi [th]as,
an wite iwis hwuch beo the gome
that of so wilde maketh tome.

1445

Ne mai ich for reo[w]e lete,
wanne ich iseo the tohte ilete
the luue bring[e] on the yhunglinge,
that ich of muryhthe him ne singe.
Ich [t]eache heom bi mine songe

1450

that swucch luue ne lest noyht longe:
for mi songe lutle hwile ilest,
an luue ne deth noyht bute rest
on swuch childre, & sone ageth,
an falth adun the hote breth.

1455

Ich singe mid heom one throyhe,
biginne on heh & endi layhe,
an lete [mine] songes falle
an lutle wile adun mid alle.
That maide wot, hwanne ich swike,

1460

that luue is mine songes ili[k]e,
for hit nis bute a lutel breth,
that sone kumeth, & sone geth.
That child bi me hit understond,

f243v2

an his unred to red[e] wend,

1465

an iseyhth wel, bi mine songe,
that dusi luue ne last noyht longe.
Ah wel ich wule that thu hit wite,
loth me beoth wiues utschute:
ah [w]if mai [of] me nime yheme,

1470

ich ne singe nawt hwan ich teme.
An wif ah lete so[t]tes lore,
thah spusing-bendes thuncheth sore.
Wundere me thungth wel starc & stor,
hu eni mon so eauar for,

1475

that [h]e his heorte miyhte driue
[to] do hit to others mannes wiue:
for other hit is of twam thinge,

ne mai that thridde no man bringe;
o[th]ar the lauerd is wel aht,

1480

other aswunde, & nis naht.
Yhef he is wurthful & aht man,
nele no man, that wisdo[m] can,
hure of is wiue do him schame:
for he mai him adrede grame,

1485

an that he forleose that ther hongeth,
that him eft tharto noyht ne longeth.
An thah he that noyht ne adrede,
hit is unriht & gret sothede
[to] misdun one gode manne,

1490

an his ibedde from him spanne.
Yhef hire lauerd is forwurde
an unorne at bedde & at borde,
hu miyhte thar beo eni luue
wanne [a] cheorles buc hire ley buue?

1495

Hu mai thar eni luue beo,
war swuch man gropeth hire theo?
Herbi thu miyht wel understonde

f244r1

that on [is a reu], that other schonde,
to stele to othres mannes bedde.

1500

For yhif aht man is hire bedde,
thu miyht wene that the mistide,
wanne thu list bi hire side.
An yhef the lauerd is a w[re]cche,
hwuch este miyhtistu thar uecche?

1505

Yhif thu bithenchest hwo hire ofligge,
thu miyht mid wlate the este bugge.
Ich not hu mai eni freo-man
for hire sechen after than.
Yhef he bitheneth bi hwan he lai,

1510

al mai the luue gan awai."

The hule was glad of swuche tale:
heo thoyhte that te nihtegale,
thah heo wel speke atte frume,

hadde at then ende misnume :

1515
an seide: "Nu ich habbe ifunde
that maidenen beoth of thine imunde:
mid heom thu holdest, & heom biwerest,
an ouerswithe thu hi herest.
The lauedies beoth to me iwend,

1520
to me heo hire mo[n]e send.
For hit itit ofte & ilome,
that wif & were beoth unisome:
& therefore the were gulte,
that leof is over wummon to pulte,

1525
an speneth on thare al that he haueth,
an siueth thare that no riht naueth,
an haueth attom his riyhte spuse,
wowes weste, & lere huse,
wel thunne isch[r]ud & iued wrothe,

1530
an let heo bute mete & clothe.
Wan he cometh ham eft to his wiue,

f244r2
ne dar heo noyht a word ischire:
he chid & gred swuch he beo wod,
an ne bringth [hom] non other god.

1535
Al that heo deth him is unwille,
al that heo speketh hit is him ille:
an oft hwan heo noyht ne misdeth,
heo haueth the fust in hire teth.
Th[er] is nan mon that ne mai ibringe

1540
his wif amis mid swucche thinge:
me hire mai so ofte misbeode,
that heo do wule hire ahene neode.
La, Godd hit wot! heo nah iweld,
tha[h] heo hine makie kukeweld.

1545
For hit itit lome & ofte,
that his wif is wel nesche & softe,
of faire bleo & wel idiht:
[For]thi hit is the more unriht
that he his luue spene on thare,

1550
that nis wurth one of hire heare.
An swucche men beoth wel manifolde,
that wif ne kunne noyht ariyht holde.
Ne mot non mon with hire speke:
he uenedh heo wule anon tobroke

1555
hire spusing, yhef heo loketh
other with manne faire speketh.
He hire bilu[k]th mid keie & loke:
thar-thurh is spusing ofte tobroke.
For yhef heo is tharto ibroht,

1560
he deth that heo nadde ear ithoht.
Dahet that to swuthe hit bispeke,
thah swucche wiues [heom] awreke !
Herof the lauedies to me meneth,
an wel sore me ahweneth:

1565
wel neh min heorte wule tochine,

f244v1
hwon ich biholde hire pine.
Mid heom ich wepe swi[th]e sore,
an for heom bidde Cristis ore,
that the lauedi sone aredde

1570
an hire sende betere ibedde.
An other thing ich mai the telle,
that thu ne schal[t], for thine felle,
ondswere none tharto finde:
al thi sputing schal aswinde.

1575
Moni chapmon & moni cniht
luueth & [hald] his wif ariht,
an swa deth moni bondeman:
that gode wif deth after than,
an serueth him to bedde & to borde

1580
mid faire dede & faire worde,
an yheorne fondeth hu heo muhe
do thing that him beo iduyhe.
The lauerd into thare [th]eode
fareth ut on thare beire nede,

1585
an is that gode wif unblithe

for hire lauerdes hou[h]sithe,
an sit & sihdh wel sore oflonged,
an hire sore an horte onged:
al for hire louerdess sake

1590

haueth daies kare & niyhtes wake:
an swuthe longe hire is the hwile,
an [ech] steape hire thunth a mile.
Hwanne othre slepeth hire abute,
ich one lust thar widthtute,

1595

an wot of hire sore mode,
an singe anyht for hire gode:
an mine gode song, for hire thinge,
ich turne su[m]del to murni[n]ge.
Of hure seorhe ich bere sume,

f244v2

forthan ich am hire wel welcome:
ich hire helpe hwat [I] mai,
for [ho geth] thane rehte wai.
Ah thu me hauest sore igramed,
that min heorte is wel neh alamed,

1605

that ich mai unneathe speke:
ah yhet ich wule forthure reke.
Thu seist that ich am manne [lodh],
an euereuch man is widh me wrodh,
an me mid stone & lugge threteth,

1610

an me tobu[r]steth & tobeteth,
an hwanne heo hab[b]eth me ofslahe,
heo hongeth me on heore hahe,
thar ich ascheweale pie an crowe
fro[m] than the thar is isowe.

1615

Thah hit beo soth, ich do heom god,
an for heom ich [s]chadde mi blod:
ich do heom god mid mine deathe,
waruore the is wel unneathe.
For thah thu ligge dead & clinge,

1620

thi deth nis nawt to none thinge:
ich not neauer to hwan thu miyht,
for thu nart bute a wrecche wiyht.
Ah thah mi lif me beo atschote,
the yhet ich mai do gode note:

1625

me mai up one smale sticke
me sette a-wude ine the thicke,
an swa mai mon tolli him to
lutle briddes & iuo,
an swa me mai mid me biyhete

1630

wel gode brede to his mete.
Ah thu neure mon to gode
liues ne deathes stal ne stode:
ich not to hwan thu bre[d]ist thi brod,

f245r1

liues ne deathes ne deth hit god."

1635

The nihtegale ih[e]rde this,
an hupte uppon on blowe ris,
an herre sat than heo dude ear:
"Hule," he seide, "beo nu wear,
nulle ich with the plaidi namore,

1640

for her the mist thi rihte lore:
thu yheilpest that thu art manne loth,
an euereuch wiht is widh the w[ro]th;
an mid yhulinge & mid igrede
thu wanst wel that thu art unlede.

1645

Thu seist that gromes the ifodh,
an heie on rodde the anhodh,
an the totwichet & toschakedh,
an summe of the schawles makedh.
Me thunc[th] that thu forleost that game,

1650

thu yhulpest of thire oyhe schame:
me thunc[th] that thu me gest an honde,
thu yhulpest of thire oyhene scho[nd]e."
Tho heo hadde theos word icwede,
heo sat in ore faire stude,

1655

an tharafter hire steuene dihte,
an song so schille & so brihte,
that feor & ner me hit iherde.
Tharuore anan to hire cherde
thrusche & throstle & wudewale,

1660

an fuheles bothe grete & smale:
forthan heom thuhte that heo hadde
the houles ouercome, uorthan heo gradde
an sunge als wa uale wise,
an blisse was among the rise.

1665
Riht swa me gred the manne a schame,
that taeleth & forleost that gome.

Theos hule, tho heo this iherde,

f245r2
"Haestu," heo seide, "ibanned ferde ?
an wultu, wreche, widh me fihhte?"

1670
Nai! nai! naestu none miyhte!
Hwat gredeth theo that hider come?
Me thunchth thu ledest ferde to me.
Yhe schule wite, ar yhe fleo heonne,
hwuch is the strenthe of mine kunne:

1675
for theo the haueth bile ihoked,
an cliures [s]charpe & wel icroked,
alle heo beoth of mine kunrede,
an walde come yhif ich bede.
The seolfe coc, that wel can fihhte,

1680
he mot mid me holde mid rihte,
for [bothe] we habbeth steuene bryhte,
an sitteth under weolcne bi niyhte.
Schille ich an utest uppen ow grede,
ich shal swo stronge ferde lede,

1685
that ower pr[u]de schal aualle:
a tort ne yhiue ich for ow alle!
ne schal, ar hit beo fulliche eue,
a wreche fether on ow bileaue.
Ah hit was unker uoward,

1690
tho we come hiderward,
that we tharto holde scholde,
thar riht dom us yhiue wolde.
Wultu nu breke foreward?
Ich wene dom the thing[th] to hard:

1695
for thu ne darst domes abide,

tho wult nu, wreche, fihhte & chide.
Yh[u]t ich ow alle wolde rede,
ar [ich] utheste uppon ow grede,
that ower fihhtlac leteth beo,

1700
an ginneth rathe awei fleo.
For, bi the cliures that ich bere,

f245v1
yhef yhe abideth mine here,
yhe schule on other wise singe,
an acursi alle fihhtinge :

1705
vor nis of ow non so kene,
that durre abide mine onsene."
Theos hule spac wel baldeliche,
for thah heo nadde swo hwatliche
ifare after hire here,

1710
heo walde neotheles yhefe answere
the niyhtegale mid swucche worde.
For moni man mid speres orde
haueth lutle strenthe, & mid his [s]chelde,
ah neotheles in one felde,

1715
thurh belde worde an mid ilete,
deth his iuo for arehthe swete.
The wranne, for heo cuthe singe,
thar com in thare moreyhen[i]nge
to helpe thare niyhtegale:

1720
for thah heo hadde steuene smale,
heo hadde gode th[ro]te & schille,
an fale manne song a wille.
The wranne was wel wis iholde,
vor theyh heo nere ibred a-wolde,

1725
ho was itoyhen among man[k]enne,
an hire wisdom brohte thenne:
heo miyhte speke hwar heo walde,
touore the king thah heo scholde.
"Lusteth," heo cwath, "lateth me speke.

1730
Hwat! wulle yhe this pes tobreke,
an do thanne [kinge] swuch schame?
Yhe[t] nis he nouthere ded ne lame.

Hunke schal itide harm & schonde,
yhef yhe doth grithbruche on his londe.

1735

Lateth beo, & beoth isome,

f245v2

an fareth riht to o[w]er dome,
an lateth dom this plaid tobreke,
al swo hit was erur bispeke."

"Ich an wel," cwadh the nyhtegale,

1740

"ah, wranne, nawt for thire tale,
ah do for mire lahfulnesse.
Ich nolde that unrihtfulnesse
me at then ende ouerkome:
ich nam ofdrad of none dome.

1745

Bihote ich habbe, soth hit is,
that Maister Nichole, that is wis,
bituxen vs deme schul[l]e,
an yhe[t] ich wene that he wule.
Ah, [w]ar mihte we hine finde?"

1750

The wranne sat in ore linde;
"Hwat! nu[s]te yhe," cwath heo, "his hom?
He wuneth at Porteshom,
at one tune ine Dorsete,
bi thare see in ore utlete:

1755

thar he demeth manie riyhte dom,
an diht & writ mani wisdom,
an thurh his muthe & thurh his honde
hit is the betere into Scotlonde,
To seche hine is lihtlich thing;

1760

he naueth bute one woning.
That [is] bischopen muchel schame,
an alle [th]an that of his nome
habbeth ihert, & of his dede.
Hwi nulleth hi nimen heom to rede,

1765

that he were mid heom ilome
for teche heom of his wisdom,
an yhiue him rente auale stude,
that he miyhte heom ilome be mide?"

"Certes," cwath the hule, "that is sodh:

f246r1

theos riche men wel muche misdodh,
that leteth thane gode mon,
that of so feole thinge con,
an yhiueth rente wel misliche,
an of him leteth wel lihtliche.

1775

Widh heore cunne heo beoth mildre,
au yheueth rente litle childre:
swo heore wit hi demth adwole,
thut euer abid Maistre Nichole.
Ah ute we thah to him fare,

1780

for thar is unker dom al yhare."

"Do we" the nyhtegale seide:

"ah [w]a schal unker speche rede,
an telle touore unker deme ?"

"Tharof ich schal the wel icweme,"

1785

cwath the houle; "for al, ende of orde,
telle ich con, word after worde:
an yhef the thincth that ich misrempe,
thu stond ayhein & do me crempe."
Mid thisse worde forth hi ferden,

1790

al bute here & bute uerde,
to Portesham that heo bicom.
Ah hu heo spedde of heore dome,
ne [c]an ich eu namore telle:
her nis namore of this spelle.

2. 14th Century: *Sir Orfeo*

Sir Orfeo

[We redeth oft and findeth ywrite,
And this clerkes wele it wite,
Layes that ben in harping
Ben yfounde of ferli thing.

5
Sum bethe of wer and sum of wo,
And sum of joie and mirthe also,
And sum of trecherie and of gile,
Of old aventours that fel while,
And sum of bourdes and ribaudy,

10
And mani ther beth of fairy.
Of al thinges that men seth,
Mest o love, for sothe, thai beth.
In Breteyne this layes were wrou3t,
First yfounde and forth ybrou3t,

15
Of aventours that fel bi dayes,
Wherof Bretouns made her layes.
When kinges mi3t our yhere
Of ani mervailles that ther were,
Thai token an harp in gle and game

20
And maked a lay and 3af it name.
Now of this aventours that weren yfalle
Y can tel sum, ac nou3t alle.
Ac herkneth, lordinges that beth trewe,
Ichil 3ou telle of Sir Orfewe.

25
Orfeo mest of ani thing
Loved the gle of harping.
Siker was everi gode harpour
Of him to have miche honour.
Himself he lerned for to harp

30

And leyd theron his wittes scharp;
He lerned so ther nothing was

A better harpour in no plas.
In al the world was no man bore
That ones Orfeo sat bifore,

35
And he mi3t of his harping here,
Bot he schuld thenche that he were
In on of the joies of Paradis,
Swiche melody in his harping is.]

Orfeo was a king

40
In Inglond, an hei3e lording,
A stalworth man and hardi bo,
Large and curteys he was also;
His fader was comen of King Pluto
And his moder of King Juno,

45
That sumtime were as godes yhold
For aventours that thai dede and told.
This king sojournd in Traciens,
That was a cité of noble defens,
For Winchester was cleped tho

50
Traciens, withouten no.
The king hadde a quen of priis
That was ycleped Dame Herodis,
The fairest levedi, for the nones,
That mi3t gon on bodi and bones,

55
Ful of love and of godenisse;
Ac no man may telle hir fairnise.

Bifel so in the comessing of May
When miri and hot is the day,
And oway beth winter schours,

60
And everi feld is ful of flours,
And blosme breme on everi bou3

Over al wexeth miri anou3,
This ich quen, Dame Heurodis,
Tok to maidens of priis,

65

And went in an undrentide
To play bi an orchard side,
To se the floures sprede and spring
And to here the foules sing.
Thai sett hem doun al thre

70

Under a fair ympe-tre,
And wel sone this fair quene
Fel on slepe opon the grene.
The maidens durst hir nou3t awake,
Bot fete hir ligge and rest take;

75

So sche slepe til after none,
That undertide was al ydone.
Ac as sone as sche gan awake,
Sche crid and lothli bere gan make,
Sche froted hir honden and hir fet

80

And crached hir visage, it bled wete,
Hir riche robe hye al torett,
And was reveyd out of hir witt.
The tuo maidens hir biside
No durst with hir no leng abide,

85

Bot ourn to the palays ful ri3t
And told bothe squier and kni3t
That her quen awede wold,
And bad hem go and hir at-hold.
Kni3tes urn, and levedis also,

90

Damisels sexti and mo,
In the orchard to the quen hye come,
And her up in her armes nome
And brou3t hir to bed atte last,
And held hir there fine fast,

95

Ac ever sche held in o cri,
And wold up and owy.

When Orfeo herd that tiding,
Never him nas wers for nothing;
He come with kni3tes tene

100

To chaumber ri3t bifor the quene,
And biheld and seyde with grete pité:
«O lef liif, what is te,
That ever 3ete hast ben so stille
And now gredest wonder schille?»

105

Thi bodi that was so white ycore
With thine nailes is al totore;
Allas, thi rode that was so red
Is al wan as thou were ded,
And also thine fingres smale

110

Beth al blodi and al pale.
Allas, thi lovesom ey3en to
Loketh so man doth on his fo.
A, dame, ich biseche merci!
Lete ben al this reweful cri,

115

And tel me what the is and hou,
And what thing may the help now.»

Tho lay sche stille atte last
And gan to wepe swithe fast,
And seyde thus the king to:

120

«Alias mi lord, Sir Orfeo,
Seththen we first togider were,
Ones wroth never we nere,
Bot ever ich have yloved the
As mi liif, and so thou me,

125

Ac now we mot delen ato;
Do thi best, for y mot go.»

«Allas,» quath he, «forlorn ich am!
Whider wiltow go, and to wham?
Whider thou gost ichil with the,

130

And whider y go thou schalt with me.»

«Nay, nay, sir, that nou3t nis;
Ichil the telle al hou it is.
As ich lay this undertide
And slepe under our orchard side,

135

Ther come to me to fair kni3tes
Wele y-armed al to ri3tes,
And bad me comen an hei3ing
And speke with her lord the king,
And ich answerd at wordes bold,

140

Y no durst nou3t, no y nold.
Thai priked o3ain as thai mi3t drive;
Tho com her king also blive
With an hundred kni3tes and mo
And damisels an hundred also,

145

Al on snowe-white stedes,
As white as milke were her wedes.
Y no sei3e never 3ete bifore
So fair creatours ycore;
The king hadde a croun on hed,

150

It nas of silver no of gold red,
Ac it was of a precious ston,
As bri3t as the sonne it schon.
And as son as he to me cam,
Wold ich, nold ich, he me nam,

155

And made me with him ride
Opon a palfray bi his side,
And brou3t me to his palays
Wele atird in ich ways,
And schewed me castels and tours,

160

Rivers, forestes, frith with flours,
And his riche stedes ichon,
And seththen me brou3t o3ain hom
Into our owen orchard,
And said to me thus afterward:

165

«Loke, dame, tomorwe thatow be
Ri3t here under this ympe-tre,
And then thou schalt with ous go
And live with ous evermo;
And 3if thou makest ous ylet,

170

Whar thou be, thou worst yfet,
And totore thine limes al,
That nothing help the no schal,

And thei thou best so totorn,
3ete thou worst with ous yborn.»

175

When King Orfeo herd this cas,
«O we!» quath he, «allas, allas!
Lever me were to lete mi liif
Than thus to lese the quen mi wiif.»
He asked conseyl at ich man,

180

Ac no man him help no can.
Amorwe the undertide is come
And Orfeo hath his armes ynome
And wele ten hundred kni3tes with him,
Ich y-armed stout and grim,

185

And with the quen wenten he
Ri3t unto that ympe-tre.
Thai made scheltrom in ich a side,
And sayd thai wold there abide
And dye ther everichon

190

Er the quen schuld fram hem gon;
Ac 3ete amiddes hem ful ri3t
The quen was oway ytui3t,
With fairi forth ynome;
Men wist never wher sche was bicom.

195

Tho was ther criing, wepe and wo;
The king into his chaumber is go
And oft swoned opon the ston,
And made swiche diol and swiche mon
That nei3e his liif was yspent;

200

Ther was non amendement.
He cleped togider his barouns,
Erls, lordes of renouns,
And when thai al ycomen were,
«Lordinges,» he said, «bifor 3ou here

205

Ich ordainy min hei3e steward
To wite mi kingdom afterward.
In mi stede ben he schal,
To kepe mi londes over al;
For now ichave mi quen ylore,

210

The fairest levedi that ever was bore,
Never eft y nil no woman se.
Into wildernes ichil te
And live ther evermore
With wilde bestes in holtes hore,

215

And when 3e understond that y be spent,
Make 3ou than a parlement
And chese 3ou a newe king.
Now doth 3our best with al mi thing.»

Tho was ther wepeing in the halle,

220

And grete cri among hem alle;
Unnethe mi3t old or 3ong
For wepeing speke a word with tong.
Thai kneled adoun al yfere
And praid him, 3if his wille were,

225

That he no schuld nou3t fram hem go.
«Do way!» quath he, «It schal be so.»
Al his kingdom he forsoke,
Bot a sclavin on him he toke;
He no hadde kirtel no hode,

230

Schert no no nother gode;
Bot his harp he tok algate
And dede him barfot out atte 3ate;
No man most with him go.

O way! what ther was wepe and wo

235

When he that hadde ben king with croun
Went so poverlich out of toun.
Thurth wode and over heth
Into the wildernes he geth;
Nothing he fint that him is ays,

240

Bot ever he liveth in gret malais.
He that hadde ywerd the fowe and griis,
And on bed the purper biis,
Now on hard hethe he lith,
With leves and gresse he him writh.

245

He that hadde had castels and tours,
River, forest, frith with flours,
Now thei it comenci to snewe and frese,
This king mot make his bed in mese.
He that had yhad kni3tes of priis

250

Bifor him kneland, and levedis,
Now seth he nothing that him liketh,
Bot wilde wormes bi him striketh.
He that had yhad plenté
Of mete and drink, of ich deynté,

255

Now may he al day digge and wrote
Er he finde his fille of rote.
In somer he liveth bi wild frut
And berien bot gode lite;
In winter may he nothing finde

260

Bot rote, grases and the rinde;
Al his bodi was oway duine
For missays, and al tochine.
Lord, who may telle the sore
This king sufferd ten 3ere and more?

265

His here of his berd, blac and rowe,
To his girdel-stede was growe.
His harp whereon was al his gle
He hidde in an holwe tre,
And when the weder was clere and bri3t,

270

He toke his harp to him wel rit
And harped at his owen wille;
Into alle the wode the soun gan schille,
That alle the wilde bestes that ther beth
For joie abouten him thai teth,

275

And alle the foules that ther were
Come and sete on ich a brere
To here his harping afine,
So miche melody was therin;
And when he his harping fete wold,

280

No best bi him abide nold.

He mi3t se him bisides,
Oft in hot undertides,

The king o fairy with his rout
Com to hunt him al about

285

With dim cri and bloweing,
And houndes also with him berking;
Ac no best thai no nome,
No never he nist whider thai bicom.
And otherwhile he mi3t him se

290

As a gret ost bi him te,
Wele atourned, ten hundred kni3tes,
Ich y-armed to his ri3tes,
Of cuntenance stout and fers,
With mani desplaid baners,

295

And ich his swerd ydrawe hold;
Ac never he nist whider thai wold.
And otherwhile he sei3e other thing:
Kni3tes and levedis com daunceing
In queynt atire gisely,

300

Queynt pas and softly;
Tabours and trunpes 3ede hem bi,
And al maner menstraci.

And on a day he sei3e him biside
Sexti levedis on hors ride,

305

Gentil and jolif as brid on ris;
Nou3t o man amonges hem ther nis;
And ich a faucon on hond bere,
And riden on haukin bi o rivere.
Of game thai founde wel gode haunt,

310

Maulardes, hayroun and cormeraunt.
The foules of the water ariseth,
The faucouns hem wele deviseth;
Ich faucoun his pray slou3.
That sei3e Orfeo and lou3.

315

«Parfay,» quath he, «ther is fair game.
Thider ichil, bi Godes name!
Ich was ywon swiche werk to se.»
He aros and thider gan te;
To a levedi he was ycome,

320

Biheld and hath wele undernome
And seth bi al thing that it is
His owen quen, Dam Heurodis.
3ern he biheld hir, and sche him eke,
Ac noither to other a word no speke;

325

For messais that sche on him sei3e,
That had ben so riche and so hei3e,
The teres fel out of her ei3e.
The other levedis this ysei3e
And maked hir oway to ride;

330

Sche most with him no lenger abide.
«Allas,» quath he, «now me is wo.
Whi nil deth now me slo?
Allas, wroche, that y no mi3t
Dye now after this si3t.

335

Allas, to long last mi liif,
When y no dar nou3t with mi wiif,
No hye to me, o word speke.
Allas, whi nil min hert breke?
Parfay,» quath he, «tide wat bitide,

340

Whider so this levedis ride,
The selve way ichil streche.
Of liif no deth me no reche.»

His sclavain he dede on also spac
And henge his harp opon his bac,

345

And had wel gode wil to gon;
He no spard noither stub no ston.
In at a roche the levedis rideth
And he after and nou3t abideth.
When he was in the roche ygo

350

Wele thre mile other mo,
He com into a fair cuntray
As bri3t so sonne on somers day,
Smothe and plain and al grene,
Hille no dale nas ther non ysene.

355

Amidde the lond a castel he si3e,
Riche and real and wonder hei3e.

Al the utmast wal
Was clere and schine as cristal;
An hundred tours ther were about,

360
Degiselich and bataild stout;
The butras com out of the diche
Of rede gold y-arched riche;
The voursour was anowrned al
Of ich maner divers aumal.

365
Within ther wer wide wones
Al of precious stones;
The werst piler on to biholde
Was al of burnist gold.
Al that lond was ever li3t,

370
For when it schuld be therk and ni3t,
The riche stones li3t gonne
As bri3t as doth at none the sonne.
No man may telle no thenche in thou3t
The riche werk that ther was wrou3t;

375
Bi al thing him think that it is
The proude court of Paradis.
In this castel the levedis ali3t;
He wold in after 3if he mi3t.

Orfeo knokketh atte gate;

380
The porter was redi therate
And asked what he wold have ydo.
«Parfay,» quath he, «ich am a minstrel, lo!
To solas thi lord with mi gle,
3if his swete wille be.»

385
The porter undede the 3ate anon
And lete him in to the castel gon.

Than he gan bihold about al,
And sei3e liggeand within the wal
Of folk that were thider ybrou3t

390
And thou3t dede and nare nou3t.
Sum stode withouten hade,
And sum non armes nade,
And sum thurth the bodi hadde wounde,

And sum lay wode ybounde,

395
And sum armed on hors sete,
And sum astrangled as thai ete,
And sum were in water adreynt,
And sum with fire al forschreynt;
Wives ther lay on child-bedde,

400
Sum ded and sum awedde,
And wonder fele ther lay bisides
Ri3t as thai slepe her undertides;
Eche was thus in this warld ynome,
With fairi thider ycome.

405
Ther he sei3e his owen wiif,
Dame Heurodis, his lef liif,
Slepe under an ympe-tre;
Bi her clothes he knewe that it was he.
And when he hadde bihold this mervails alle

410
He went in to the kinges halle;
Than seie he ther a semly sit,
A tabernacle blisseful and brit,
Therin her maister king sete
And her quen fair and swete;

415
Her crounes, her clothes schine so brit
That unnethe bihold he hem mit.
When he hadde biholden al that thing,
He kneled adoun bifor the king.
«O lord,» he seyde, «if it thi wille were,

420
Mi menstraci thou schust yhere.»
The king answerd: «What man artow
That art hider ycomen now?
Ich, no non that is with me,
No sent never after the.

425
Seththen that ich here regni gan,
Y no fond never so folehardi man
That hider to ous durst wende
Bot that ichim wald ofsende.»
«Lord,» quath he, «trowe ful wel,

430
Y nam bot a pover menstrel,

And, sir, it is the maner of ous
To seche mani a lordes hous;
Thei we nou3t welcom no be,
3ete we mot proferi forth our gle.»

435
Bifor the king he sat adoun
And tok his harp so miri of soun,
And tempreth his harp as he wele can,
And blisseful notes he ther gan,
That al that in the palays were

440
Com to him for to here,
And liggeth adoun to his fete,
Hem thenketh his melody so swete.
The king herkneth and sitt ful stille,
To here his gle he hath gode wille;

445
Gode bourde he hadde of his gle,
The riche quen also hadde he.
When he hadde stint his harping
Than seyde to him the king:
«Menstrel, me liketh wele thi gle.

450
Now aske of me what it be;
Largelich ichil the pay.
Now speke and tow mit asay.»
«Sir,» he seyde, «ich biseche the
Thatow woldest ive me

455
That ich levedi brit on ble
That slepeth under the ympe-tre.»
«Nay,» quath the king, «that nout nere!
A sori couple of ou it were,
For thou art lene, rowe and blac,

460
And sche is lovesum withouten lac.
A lothlich thing it were forthi
To sen hir in thi compayni.»
«O sir,» he seyde, «gentil king,
ete were it a wele fouler thing

465
To here a lesing of thi mouthe.
So, sir, as 3e seyde nouthe,
What ich wold aski, have y schold,
And nedes thou most thi word hold.»

The king seyde, «Seththen it is so,

470
Take hir bi the hond and go.
Of hir ichil thatow be blithe.»
He kneled adoun and thonked him swithe
His wiif he tok bi the hond
And dede him swiipe out of that lond,

475
And went him out of that thede;
Ri3t as he come, the way he 3ede.

So long he hath the way ynome,
To Winchester he is ycome,
That was his owen cité,

480
Ac no man knewe that it was he.
No forther than the tounes ende
For knoweleche no durst he wende,
Bot with a begger ybilt ful narwe,
Ther he tok his herbarwe

485
To him and to his owen wiif
As a minstrel of pover liif,
And asked tidinges of that lond
And who the kingdom held in hond.
The pover begger in his cote

490
Told him everich a grot,
Hou her quen was stole owy
Ten er gon with fairy,
And hou her king en exile ede,
Bot no man nist in wiche thede,

495
And hou the steward the lond gan hold,
And other mani thinges him told.

Amorwe oain none-tide
He maked his wiif ther abide;
The beggers clopes he borwed anon

500
And heng his harp his rigge opon,
And went him into that cité
That men mit him bihold and se.
Erls and barouns bold,
Burjays and levedis him gun bihold.»

505
 «Lo!» thai seyð, «swiche a man!
 Hou long the here hongeth him opan.
 Lo, hou his berd hongeth to his kne!
 He is yclongen also a tre.»
 And as he 3ede in the strete,

510
 With his steward he gan mete
 And loude he sett on him a crie:
 «Sir steward,» he seyð, «merci!
 Ich am an harpou of hethenisse;
 Help me now in this destresse.»

515
 The steward seyð, «Com with me, come!
 Of that ichave thou schalt have some.
 Everich gode harpou is welcom me to
 For mi lordes love Sir Orfeo.»

In the castel the steward sat atte mete,

520
 And mani lording was bi him sete;
 Ther were trompours and tabourers,
 Harpours fele and crouders;
 Miche melody thai maked alle,
 And Orfeo sat stille in the halle

525
 And herkneth when thai ben al stille.
 He toke his harp and tempred schille;
 The blifulest notes he harped there
 That ever ani man yherd with ere;
 Ich man liked wele his gle.

530
 The steward biheld and gan yse,
 And knewe the harp als blive.
 «Menstrel,» he seyð, «so mot thou thrive,
 Where hadestow this harp and hou?
 Y pray that thou me telle now.»

535
 «Lord,» quath he, «in uncouthe thede
 Thurth a wildernes as y 3ede,
 Ther y founde in a dale
 With lyouns a man totorn smale,
 And wolves him frete with teth so scharp;

540
 Bi him y fond this ich harp,
 Wele ten ere it is ygo.»

«O,» quath the steward, «now me is wo!
 That was mi lord Sir Orfeo.
 Allas, wreche, what schal y do

545
 That have swiche a lord ylore?
 A, way, that ich was ybore!
 That him was so hard grace y3arked
 And so vile deth ymarked!»
 Adoun he fel aswon to grounde;

550
 His barouns him tok up in that stounde
 And telleth him hou it geth:
 It nis no bot of mannes deth.

King Orfeo knewe wele bi than
 His steward was a trewe man

555
 And loved him as he au3t to do,
 And stont up and seyð thus, lo:
 «Steward, herkne now this thing.
 if ich were Orfeo the king,
 And hadde ysuffred ful ore

560
 In wildernisse miche sore,
 And hadde ywon mi quen owy
 Out of the lond of fairy,
 And hadde ybrouth the levedi hende
 Rit here to the tounes ende,

565
 And with a begger her in ynome,
 And were miself hider ycome
 Poverlich to the thus stille
 For to asay thi gode wille,
 And ich founde the thus trewe,

570
 Thou no schust it never rewe.
 Sikerlich, for love or ay,
 Thou schust be king after mi day.
 And if thou of mi deth hadest ben blithe,
 Thou schust have voided also swithe.»

575
 Tho al tho that perin sete
 That it was King Orfeo underete,
 And the steward him wele knewe,
 Over and over the bord he threwe

And fel adoun to his fet,

580

So dede everich lord that ther sete,
And al thai seyde at o criing:
«e beth our lord, sir, and our king!»
Glad thai were of his live.
To chaumber thai ladde him als bilive,

585

And bathed him and schaved his berd
And tired him as a king apert,
And seththen with gret processiou
Thai brout the quen in to the toun
With al maner menstraci.

590

Lord, ther was grete melody!
For joie thai wepe with her eie

That hem so sounde ycomen seie.

Now King Orfeo newe coround is,
And his quen Dame Heurodis,

595

And lived long afterward,
And seththen was king the steward.
Harpours in Bretaine after than
Herd hou this mervaile bigan
And made herof a lay of gode likeing

600

And nempned it after the king;
That lay «Orfeo» is yhote;
Gode is the lay, swete is the note.
Thus com Sir Orfeo out of his care;
God graunt ous alle wele to fare. Amen.

Vxor ejus: Gyll

Angelus

Maria

Christ Child]

Primus Pastor
Lord, what these weders are cold!
And I am yll happyd;
I am nerehande dold,
So long haue I nappyd;

5
My legys thay fold,
My fyngers ar chappyd,
It is not as I wold,
For I am al lappyd
In sorow.

10
In stormes and tempest,
Now in the eest, now in the west,
Wo is hym has neuer rest
Mydday nor morow!

Bot we sely husbandys

15
That walkys on the moore,
In fayth we ar nerehandys
Outt of the doore.

f 38v
No wonder, as it standys,
If we be poore,

20
For the tylthe of oure landys

Lyys falow as the floore,
As ye ken.
We ar so hamyd,
Fortaxed and ramyd,

25
We ar mayde handtamyd,
With thyse gentlery-men.

Thus thay refe vs oure rest
Oure Lady theym wary!
These men that ar lord-fest

30
Thay cause the ploghe tary;
That, men say, is for the best -
We fynde it contrary.
Thus ar husbandys opprest,
In ponte to myscary

35
On lyfe.
Thus hold, thay vs hunder,
Thus thay bryng vs in blonder;
It were greate wonder
And euer shuld we thryfe.

40
For may he gett a paynt slefe
Or a broche now-on-dayes,
Wo is hym that hym grefe

Or onys agane-says!
Dar noman hym reprefe

45
What mastry he may;
And yit may noman lefe
Oone word that he says -
No letter.
He can make purveance

50
With boste and bragance,
And all is thugh maintenance
Of men that are gretter.

Ther shall com a swane
As prowde as a po;

55
He must borow my wane,
My ploghe also;
Then I am full fane
To graunt or he go.
Thus lyf we in payne

60
Anger, and wo,
By nyght and day.
He must haue if he langyd,
If I shuld, forgang it;
I were better be hangyd

65
Then oones say hym nay.

It dos me good, as I walk
Thus by myn oone,
Of this warld for to talk
In maner of mone.

70
To my shepe wyll I stalk
And herkyn anone,
Ther abyde on a balk
Or sytt on a stone
Full soyne;

75
For I trowe, perdé,
Trew men if thay be,
We gett more compané
Or it be noyne.

S e c u n d u s P a s t o r
Bensté and Dominus,

80
What may this bemeyne?
Why fares this warld thus?
Oft haue we not sene.
Lord, thyse weders ar spytus
And the wyndys full kene.

f 39r
And the frostys so hydus
Thay water myn eeyne,
No ly.
Now in dry, now in wete,
Now in snaw, now in slete,

90
When my shone freys to my fete,
It is not all esy.

Bot as far as I ken
Or yit as I go,
We sely wedmen

95
Dre mekyll wo:
We haue sorow then and then;
It fallys oft so.
Sely Copyle, oure hen,
Both to and fro

100
She kakyls;
Bot begyn she to crok,
To groyne or to klok,
Wo is hym is of oure cok,
For he is in the shakyls.

105
These men that ar wed
Haue not all thare wyll;
When they ar full hard sted,
Thay sygh full styll.
God wayte thay ar led

110
Full hard and full yll;
In bowere nor in bed
Thay say noght thertyll
This tyde.
My parte haue I fun,

115

I know my lesson:
Wo is hym that is bun,
For he must abyde.

Bot now late in oure lyfys
A meruell to me,

120

That I thynk my hart ryfys
Sich wonders to see;
What that destany dryfys
It shuld so be -
Som men wyll haue two wyfys

125

And som men thre
In store;
Som ar wo that has any.
Bot so far can I:
Wo is hym that has many,

130

For he felys sore.

Bot, yong men, of wowyng,
For God that you boght,
Be well war of wedyng,
And thynk in youre thought,

135

«Had-I-wyst» is a thyng
It seruys of noght.
Mekyll styll mownyng
Has wedyng home broght,
And greffys,

140

With many a sharp showre;
For thou may cach in an owre
That shall sow the full sowre
As long as thou lyffys.

For, as euer red I pystyll,

145

I haue oone to my fere
As sharp as a thystyll
As rugh as a brere;
She is browyd lyke a brystyll,
With a sowre-loten chere;

f 39v

Had she oones wett hyr whystyll,
She couth syng full clere
Hyr Paternoster.
She is as greatt as a whall,
She has a galon of gall;

155

By hym that dyed for vs all,
I wald I had ryn to I had lost hir!

P r i m u s P a s t o r

God looke ouer the raw,
Full defly ye stand!

S e c u n d u s P a s t o r

Yee, the dewill in thi maw,

160

So tariand!
Sagh thou awre of Daw?
P r i m u s P a s t o r
Yee, on a ley-land
Hard I hym blaw.
He commys here at hand,

165

Not far.
Stand styll.
S e c u n d u s P a s t o r
Qwhy?

P r i m u s P a s t o r

For he commys, hope I.

S e c u n d u s P a s t o r

He wyll make vs both a ly
Bot if we be war.

T e r c i u s P a s t o r

170

Crystys crosse me spede,
And Sant Nycholas!
Therof had I nede;
It is wars then it was.
Whoso couthe take hede

175

And lett the warld pas,
It is euer in drede
And brekyll as glas,
And slythys.
This warld fowre neuer so,

180

With meruels mo and mo:
Now in weyll, now in wo,
And all thyng wrythys.

Was neuer syn Noe floode
Sich floodys seyn,

185

Wyndys and ranys so rude,
And stormes so keyn
Som stamerd, som stod
In dowte, as I weyn.
Now God turne all to good!

190

I say as I mene,
For ponder:
These floodys so thay drowne,
Both in feyldys and in towne,
And berys all downe;

195

And that is a wonder.

We that walk on the nyghtys,
Oure catell to kepe,
We se sodan syghtys
When othere men slepe.

200

Yit me thynk my hart lyghtys;
I se shrewys pepe.
Ye ar two all-wyghtys -
I wyll gyf my shepe
A turne.

205

Bot full yll haue I ment,
As I walk on this bent;
I may lyghtly repent,
My toes if I spurne.

A, syr, God you saue,

210

And master myne!
A drynk fayn wold I haue,
And somewhat to dyne.
P r i m u s P a s t o r
Crystys curs, my knaue
Thou art a ledyr hyne!
S e c u n d u s P a s t o r

215

What, the boy lyst raue!
Abyde vnto syne;
We haue mayde it,

f 40r

Yll thryft on thy pate!
Though the shrew cam late,

220

Yit is he in state
To dyne - if he had it.

T e r c i u s P a s t o r

Sich seruandys as I,
That swettys and swynkys,
Etys oure brede full dry,

225

And that me forthynkys.
We ar oft weytt and wery
When master-men wynkys,
Yit commys full lately
Both dyners and drynkys;

230

Bot nately
Both oure dame and oure syre,
When we haue ryn in the myre,
Thay can nyp at oure hyre,
And pay vs full lately.

235

Bot here my trouth, master:
For the fayr that ye make,
I shall do thereafter -
Wyrk as I take.
I shall do a lytyll, syr,

240

And emang euer lake,
For yit lay my soper
Neuer on my stomake
In feyldys.
Wherto shuld I threpe?

245

With my staf can I lepe;
And men say «Lyght chepe
Letherly foryeldys.»

P r i m u s P a s t o r

Thou were an yll lad
To ryde on wowyng

250

With a man that had
Bot lytyll of spendyng.
S e c u n d u s P a s t o r
Peasse, boy, I bad.
No more ianglyng,
Or I shall make the full rad,

255

By the heuens kyng!
With thy gawdys -
Where ar oure shepe, boy? - we skorne.
T e r c i u s P a s t o r
Sir, this same day at morne
I thaym left in the corne,

260

When thay rang lawdys.

They haue pasture good,
Thay can not go wrong.
P r i m u s P a s t o r
That is right. By the roode,
Thyse nyghtys ar long!

265

Yit I wold, or we yode,
Oone gaf vs a song.
S e c u n d u s P a s t o r
So I thoght as I stode,
To myrth vs emong.
T e r c i u s P a s t o r
I grauntt.
P r i m u s P a s t o r

270

Lett me syng the tenory.
S e c u n d u s P a s t o r
And I the tryble so hye.
T e r c i u s P a s t o r
Then the meyne fallys to me.
Lett se how ye chauntt.

Tunc intrat Mak in clamide se super togam vestitus.

M a k

Now lord, for thy naymes sewyn,

275

That made both moyn and starnes
Well mo then I can neuen,
Thi will, Lorde, of me tharnys.

f 40v

I am all vneuen;
That moves oft my harnes.

280

Now wold God I were in heuen,
For the[r] wepe no barnes
So styll.
P r i m u s P a s t o r
Who is that pypys so poore?
M a k
Wold God ye wyst how I foore!

285

Lo, a man that walkys on the moore
And has not all his wyll.

S e c u n d u s P a s t o r
Mak, where has thou gone?
Tell vs tythyng.
T e r c i u s P a s t o r
Is he comen? then ylkon

290

Take hede to his thyng.
Et accipit clamidem ab ipso.
M a k
What! ich be a yoman,
I tell you, of the kyng,
The self and the some,
Sond from a greatt lordyng,

295

And sich.
Fy on you! Goyth hence
Out of my presence!
I must haue reuerence.
Why, who be ich?

P r i m u s P a s t o r

300

Why make ye it so qwaynt?
Mak, ye do wrang.
S e c u n d u s P a s t o r
Bot, Mak, lyst ye saynt?
I trow that ye lang.
T e r c i u s P a s t o r
I trow the shrew can paynt,

305
The dewyll myght hym hang!
M a k
Ich shall make complaynt,
And make you all to thwang
At a worde,
And tell euyn how ye doth.
P r i m u s P a s t o r

310
Bot, Mak, is that sothe?
Now take outt that Sothren tothe,
And sett in a torde!

S e c u n d u s P a s t o r
Mak, the dewill in youre ee!
A stroke wold I leyne you.
T e r c i u s P a s t o r

315
Mak, know ye not me?
By God, I couthe teyn you.
M a k
God looke you all thre!
Me thought I had sene you;
Ye ar a fare compané.
P r i m u s P a s t o r

320
Can ye now mene you?
S e c u n d u s P a s t o r
Shrew, pepe!
Thus late as thou goys,
What wyll men suppos?
And thou has an yll noys

325
Of stelyng of shepe.

M a k
And I am trew as steyll,
All men waytt;
Bot a sekene I feyll
That haldys me full haytt:

330
My belly farys not weyll;
It is out of astate.
T e r c i u s P a s t o r
Seldom lyys the dewyll
Dede by the gate.
M a k

Therfor
335
Full sore am I and yll.
If I stande stone-styll,
I ete not an nedyll
Thys moneth and more.

P r i m u s P a s t o r
How farys thi wyff? By thi hoode,

340
How farys she?
M a k
Lyys walteryng - by the roode -
By the fyere, lo!

f 41r
And a howse full of brude.
She drynkys well, to;

345
Yll spede othere good
That she wyll do!
Bot s[h]o
Etys as fast as she can,
And ilk yere that commys to man

350
She bryngys furth a lakan -
And, som yeres, two.

Bot were I now more gracyus
And rychere be far,
I were eten outt of howse

355
And of harbar.
Yit is she a fowll dowse,
If ye com nar;
Ther is none that trowse
Nor knowys a war

360
Then ken I.
Now wyll ye se what I profer? -
To gyf all in my cofer
To-morne at next to offer
Hyr hed-maspenny.

S e c u n d u s P a s t o r

365

I wote so forwakyd
Is none in this shyre;
I wold slepe, if I takyd
Les to my hyere.
T e r c i u s P a s t o r
I am cold and nakyd,

370
And wold haue a fyere.
P r i m u s P a s t o r
I am wery, forrakyd,
And run in the myre -
Wake thou!
S e c u n d u s P a s t o r
Nay, I wyll lyg downe by,

375
For I must slepe truly.
T e r c i u s P a s t o r
As good a mans son was I
As any of you.

Bot, Mak, com heder! Betwene
Shall thou lyg downe.
M a k

380
Then myght I lett you bedene
Of that ye wold rowne,
No drede.
Fro my top to my too,
Manus tuas commendo,

385
Poncio Pilato;
Cryst-crosse me spede!

Tunc surgit, pastoribus dormientibus, et dicit:

Now were tyme for a man
That lakkys what he wold
To stalk preuely than

390
Vnto a fold,
And neemly to wyrk than
And be not to bold,
For he myght aby the bargan,
If it were told

395
At the endyng.
Now were tyme for to reyll;

Bot he nedys good counsell
That fayn wold fare weyll,
And has bot lytyll spendyng.

400
Bot abowte you a serkyll
As rownde as a moyn,
To I haue done that I wyll,
Tyll that it be noyn,
That ye lyg stone-styll

405
To that I haue doyne;
And I shall say thertyll
Of good wordys a foyne:
«On hight,

f 41v
Ouer youre heydys, my hand I lyft.

410
Outt go youre een! Fordo your syght!»
Bot yit I must make better shyft
And it be right.

Lord! what thay slepe hard!
That may ye all here.

415
Was I neuer a shepard,
Bot now wyll I lere.
If the flok be skard,
Yit shall I nyp nere.
How! drawes hederward!

420
Now mendys oure chere
>>>>>From sorow
A fatt shepe, I dar say,
A good flese, dar I lay.
Eft-whyte when I may,

425
Bot this will I borow.

How, Gyll, art thou in?
Gett vs som lyght.
V x o r e i u s
Who makys sich dyn
This tyme of the nyght?

430

I am sett for to spyn;
I hope not I myght
Ryse a penny to wyn,
I shrew them on hight!
So farys

435
A huswyff that has bene
To be rasyd thus betwene.
Here may no note be sene
For sich small charys.

M a k
Good wyff, open the hek!

440
Seys thou not what I bryng?
V x o r
I may thole the dray the snek.
A, com in, my swetyng!
M a k
Yee, thou thar not rek
Of my long standyng.
V x o r

445
By the nakyd nek
Art thou lyke for to hyng!
M a k
Do way!
I am worthy my mete,
For in a strate can I gett

450
More then thay that swynke and swette
All the long day.

Thus it fell to my lott.
Gyll, I had sich grace.
V x o r
It were a fowll blott

455
To be hanged for the case.
M a k
I haue skapyd, Ielott,
Oft as hard a glase.
V x o r
«Bot so long goys the pott
To the water,» men says,

460
«At last

Comys it home broken.»
M a k
Well knowe I the token,
Bot let it neuer be spoken,
Bot com and help fast.

465
I wold, he were flayn;
I lyst well ete.
This twelmothe was I not so fayn
Of oone shepe-mete.
V x o r
Com thay or he be slayn,

470
And here the shepe blete -
M a k
Then myght I be tane.
That were a cold swette!
Go spar

f 42r
The gaytt-doore.
V x o r
Yis, Mak,

475
For and thay com at thy bak -
M a k
Then myght I by, for all the pak,
The dewill of the war!

V x o r
A good bowrde haue I spied,
Syn thou can none:

480
Here shall we hym hyde,
To thay be gone,
In my credyll. Abyde!
Lett me alone,
And I shall lyg besyde

485
In chylbed, and grone.
M a k
Thou red,
And, I shall say thou was lyght
Of a knaue childe this nyght.
V x o r
Now well is me day bright

490
That euer was I bred!

This is a good gyse
And a far cast;
Yit a woman avyse
Helpys at the last.

495
I wote neuer who spyse;
Agane go thou fast.
M a k
Bot I com or thay ryse,
Els blowes a cold blast!
I wyll go slepe.

500
Yit slepys all this meneye,
And I shall go stalk preuely,
As it had neuer bene I
That caryed thare shepe.

P r i m u s P a s t o r
Resurrex a mortruus!

505
Haue hold my hand.
Iudas carnas dominus!
I may not well stand;
My foytt slepys, by Iesus,
And I water fastand.

510
I thocht that we layd vs
Full nere Yngland.
S e c u n d u s P a s t o r
A ye!
Lord, what I haue slept weyll!
As fresh as an eyll,

515
As lyght I me feyll
As leyfe on a tre.

T e r c i u s P a s t o r
Bensté be herein!
So me qwakys,
My hart is outt of skyn,

520
Whatso it makys.
Who makys all this dyn?
So my browes blakys,

To the dowore wyll I wyn.
Harke, felows, wakys!

525
We were fowre -
Se ye awre of Mak now?
P r i m u s P a s t o r
We were vp or thou.
S e c u n d u s P a s t o r
Man, I gyf god avowe,
Yit yede he nawre.

T e r c i u s P a s t o r

530
Me thocht he was lapt
In a wolfe-skyn.
P r i m u s P a s t o r
So ar many hapt
Now, namely within.
T e r c i u s P a s t o r
When we had long napt,

535
Me thocht with a gyn

f 42v
A fatt shepe he trapt;
Bot he mayde no dyn.
S e c u n d u s P a s t o r
Be styll!
Thi dreme makys the woode;

540
It is bot fantom, by the roode.
P r i m u s P a s t o r
Now God turne all to good,
If it be his wyll.

S e c u n d u s P a s t o r
Ryse, Mak, for shame!
Thou lygys right lang.
M a k

545
Now Crystys holy name
Be vs emang!
What is this? for Sant Iame,
I may not well gang!
I trow I be the same.

550
A! my nek has lygen wrang

Enoghe.
Mekill thank! syn yister-euen,
Now by Sant Strevyn,
I was flayd with a swevyn -

555
My hart out of sloghe.

I thocht Gyll began to crok
And trauell full sad,
Wel-ner at the fyrst cok,
Of a yong lad

560
For to mend oure flok.
Then be I neuer glad;
I haue tow on my rok
More then euer I had.
A, my heede!

565
A house full of yong tharmes,
The dewill knok outt thare harnes!
Wo is hym has many barnes,
And therto lytyll brede.

I must go home, by youre lefe,

570
To Gyll, as I thocht.
I pray you looke my slefe,
That I steyll noght;
I am loth you to grefe,
Or from you take oght.
T e r c i u s P a s t o r

575
Go furth, yll myght thou chefe!
Now wold I we soght,
This morne,
That we had all oure store.
P r i m u s P a s t o r
Bot I will go before;

580
Let vs mete.
S e c u n d u s P a s t o r
Whore?
T e r c i u s P a s t o r
At the crokyd thorne.

M a k
Vndo this doore!

[V x o r]
Who is here?
M a k
How long shall I stand?
V x o r
Who makys sich a bere?

585
Now walk in the wenyand!
M a k
A, Gyll, what chere?
It is I, Mak, youre husbände.
V x o r
Then may we se here
The dewill in a bande,

590
Syr Gyle!
Lo, he commys with a lote,
As he were holden in the throthe.
I may not syt at my note
A handlang while.

M a k

595
Wyll ye here what fare she makys
To gett hir a glose?
And dos noght bot lakys
And clowse hir toose.
V x o r
Why, who wanders, who wakys?

600
Who commys, who gose?
Who brewys, who bakys?
What makys me thus hose?
And than -
It is rewthe to beholde -

605
Now in hote, now in colde,
Full wofull is the householde
That wantys a woman.

f 43r
Bot what ende has thou mayde
With the hyrdys, Mak?
M a k

610
The last worde that thay sayde

When I turnyd my bak,
Thay wold looke that thay hade
Thare shepe, all the pak.
I hope thay wyll nott be well payde

615

When thay thare shepe lak,
Perdé!
Bot howso the gam gose,
To me thay wyll suppose,
And make a fowll noyse,

620

And cry outt apon me.

Bot thou must do as thou hyght.

V x o r

I accorde me thertyll;
I shall swedyll hym right
In my credyll.

625

If it were a gretter slyght,
Yit couthe I help tyll.

I wyll lyg downe stright.

Com hap me.

M a k

I wyll.

V x o r

Behynde!

630

Com Coll and his maroo,
Thay will nyp vs full naroo.

M a k

Bot I may cry out, «haroo!»,

The shepe if thay fynde.

V x o r

Harken ay when thay call;

635

Thay will com onone.
Com and make redy all,
And syng by thyn oone;
Syng «lullay» thou shall,
For I must grone,

640

And cry outt by the wall
On Mary and Iohn
For sore.
Syng «lullay» on fast

When thou heris at the last,

645

And bot I play a fals cast
Trust me no more.

T e r c i u s P a s t o r

A, Coll, goode morne!

Why slepys thou nott?

P r i m u s P a s t o r

Alas, that euer was I borne!

650

We haue a fowll blott -
A fat wedir haue we lorne.

T e r c i u s P a s t o r

Mary, Godys forbott!

S e c u n d u s P a s t o r

Who shuld do vs that skorne?

That were a fowll spott.

P r i m u s P a s t o r

655

Som shrewe.

I haue soght with my dogys

All Horbery shrogys,

And of fefteyn hogys

Fond I bot oone ewe.

T e r c i u s P a s t o r

660

Now trow me, if ye will -
By Sant Thomas of Kent,

Ayther Mak or Gyll

Was at that assent.

P r i m u s P a s t o r

Peasse, man, be still!

665

I sagh when he went.

Thou sklanders hym yll;

Thou aght to repent

Goode spede.

S e c u n d u s P a s t o r

Now as euer myght I the,

670

If I shuld euyne here de,

I wold say it were he

That dyd that same dede.

T e r c i u s P a s t o r

Go we theder, I rede,
And ryn on oure feete;

675
Shall I neuer ete brede,
The sothe to I wytt.
P r i m u s P a s t o r
Nor drynk in my heede,
With hym tyll I mete.

f 43v
S e c u n d u s P a s t o r
I wyll rest in no stede

680
Tyll that I hym grete,
My brothere.
Oone I will hight:
Tyll I se hym in sight,
Shall I neuer slepe one nyght

685
Ther I do another.

T e r c i u s P a s t o r
Will ye here how thay hak?
Oure syre, lyst croyne.
P r i m u s P a s t o r
Hard I neuer none crak
So clere out of toyne.

690
Call on hym.
S e c u n d u s P a s t o r
Mak,
Vndo youre doore soyne!
M a k
Who is that spak,
As it were noyne,
On loft?

695
Who is that, I say?
T e r c i u s P a s t o r
Goode fellowse, were it day.
M a k
As far as ye may,
Good, spekys soft,

Ouer a seke woman's heede

700
That is at mayllesse;

I had leuer be dede
Or she had any dyseasse.
V x o r
Go to another stede!
I may not well qweasse;

705
Ich fote that ye trede
Goys thorow my nese
So hee.
P r i m u s P a s t o r
Tell vs, Mak, if ye may,
How fare ye, I say?
M a k

710
Bot ar ye in this towne to-day?
Now how fare ye?

Ye haue ryn in the myre
And ar weytt yit;
I shall make you a fyre,

715
If ye will sytt.
A nores wold I hyre.
Thynk ye on yit?
Well qwyt is my hyre -
My dreme, this is itt -

720
A seson.
I haue barnes, if ye knew,
Well mo then enewe;
Bot we must drynk as we brew,
And that is bot reson.

725
I wold ye dynyd or ye yode.
Me thynk that ye swette.
S e c u n d u s P a s t o r
Nay, nawther mendys oure mode
Drynke nor mette.
M a k
Why, syr, alys you oght bot goode?
T e r c i u s P a s t o r

730
Yee, oure shepe that we gett
Ar stollyn as thay yode;
Oure los is grette.
M a k

Syrs, drynkys!
Had I bene thore,

735

Som shuld haue boght it full sore.
P r i m u s P a s t o r
Mary, some men trowes that ye wore,
And that vs forthynkys.

S e c u n d u s P a s t o r

Mak, som men trowys
That it shuld be ye.

T e r c i u s P a s t o r

740

Ayther ye or youre spouse,
So say we.
M a k
Now if ye haue suspowse
To Gill or to me,
Com and rype oure howse,

745

And then may ye se
Who had hir.
If I any shepe fott,
Ayther cow or stott -
And Gyll, my wyfe, rose nott

750

Here syn she lade hir -

f 44r

As I am true and lele,
To God here I pray
That this be the fyrst mele
That I shall ete this day.
P r i m u s P a s t o r

755

Mak, as haue I ceyll,
Avyse the, I say:
He lernyd tymely to steyll
That couth not say nay.

V x o r

I swelt!

760

Outt, thefys, fro my wonys!
Ye com to rob vs for the nonys.
M a k
Here ye not how she gronys?

Youre hartys shuld melt.

V x o r

Outt, thefys, fro my barne!

765

Negh hym not thor!
M a k
Wyst ye how she had farne
Youre hartys wold be sore.
Ye do wrang, I you warne,
That thus commys before

770

To a woman that has farne -
Bot I say no more.

V x o r

A, my medyll!
I pray to God so mylde,
If euer I you begyld,

775

That I ete this chylde
That lygys in this credyll.

M a k

Peasse, woman, for Godys payn,
And cry not so!
Thou spyllys thy brane

780

And makys me full wo.
S e c u n d u s P a s t o r
I trow oure shepe be slayn.
What fynde ye two?
T e r c i u s P a s t o r
All wyrk we in vayn;
As well may we go.

785

Bot hatters!
I can fynde no flesh,
Hard nor nesh,
Salt nor fresh -
Bot two tome platers.

790

Whik catell bot this,
Tame nor wylde,
None, as haue I blys,
As lowde as he smylde.
V x o r

No, so God me blys

795

And gyf me ioy of my chyld!

Primus Pastor

We haue merkyd amys;

I hold vs begyld.

Secundus Pastor

Syr, don.

Syr - oure lady hym saue! -

800

Is youre chyld a knaue?

Mak

Any lord myght hym haue,

This chyld, to his son.

When he wakyns he kyppys,

That ioy is to se.

Tercius Pastor

805

In good tyme to hys hyppys,

And in celé!

Bot who was his gossypys

So sone redé?

Mak

So fare fall thare lyppys!

Primus Pastor

810

Hark now, a le.

Mak

So God thaym thank,

f 44v

Parkyn, and Gybon Waller, I say,

And gentill Iohn Horne, in good fay -

He made all the garray -

815

With the greatt shank.

Secundus Pastor

Mak, freyndys will we be,

For we ar all oone.

Mak

We! Now I hald for me,

For mendys gett I none.

820

Fare well all thre! -

All glad were ye gone.

Tercius Pastor

Fare wordys may ther be,

Bot luf is ther none

This yere.

Primus Pastor

825

Gaf ye the chyld, any thyng?

Secundus Pastor

I trow not oone farthyng.

Tercius Pastor

Fast agane will I flyng;

Abyde ye me there.

Mak, take it to no grefe

830

If I com to thi barne.

Mak

Nay, thou dos me greatt reprefe,

And fowll has thou farne.

Tercius Pastor

The child will it not grefe,

That lytyll day-starne.

835

Mak, with youre leyfe,

Let me gyf youre barne

Bot sex pence.

Mak

Nay do way! He slepys.

Tercius Pastor

Me thynk he pepys.

Mak

840

When he wakyns he wepys.

I pray you go hence!

Tercius Pastor

Gyf me lefe hym to kys

And lyft vp the clowtt.

What the dewill is this?

845

He has a long snowte!

Primus Pastor

He is markyd amys.

We wate ill abowte.

Secundus Pastor

Ill-spon weft, iwys,

Ay commys foull owte.

850

Ay, so!
He is lyke to oure shepe!
T e r c i u s P a s t o r
How, Gyb, may I pepe?
P r i m u s P a s t o r
I trow kynde will crepe
Where it may not go.

S e c u n d u s P a s t o r

855

This was a qwantt gawde
And a far-cast:
It was a hee frawde.
T e r c i u s P a s t o r
Yee, syrs, wast.
Lett bren this bawde

860

And bynd hir fast.
A! fals skawde!
Hang at the last
So shall thou.
Wyll ye se how thay swedyll

865

His foure feytt in the medyll?
Sagh I neuer in a credyll
A hornyd lad or now.

f 45r

M a k
Peasse, byd I. What!
Lett be youre fare!

870

I am he that hym gatt,
And yond woman hym bare.
P r i m u s P a s t o r
What dewill shall he hatt? -
Mak? Lo, God, makys ayre!
S e c u n d u s P a s t o r
Lett be all that!

875

Now God gyf hym care,
I sagh.
V x o r
A pratty child is he
As syttys on a wamans kne;
A dyllydowne, perdé,

880

To gar a man laghe.

T e r c i u s P a s t o r

I know hym by the eere-marke;
That is a good tokyn.
M a k
I tell you, syrs, hark!
Hys noyse was brokyn.

885

Sythen told me a clerk
That he was forspokyn.
P r i m u s P a s t o r
This is a fals wark;
I wold fayn be wrokyn.
Gett wepyn!
V x o r

890

He was takyn with an elfe,
I saw it myself;
When the klok stroke twelf
Was he forshapyn.

S e c u n d u s P a s t o r

Ye two ar well feft

895

Sam in a stede.
T e r c i u s P a s t o r
Syn thay manteyn thare theft,
Let do thaym to dede.
M a k
If I trespas eft,
Gyrd of my heede.

900

With you will I be left.
T e r c i u s P a s t o r
Syr, do my reede:
For this trespas
We will nawther ban ne flyte,
Fyght nor chyte,

905

Bot haue done as tyte,
And cast hym in canvas.

[P r i m u s P a s t o r]

Lord! what I am sore,
In poynt for to bryst!

In fayth, I may no more;

910

Therfor wyll I ryst.
S e c u n d u s P a s t o r
As a shepe of sewyn skore
He weyd in my fyst.
For to slepe aywhore
Me thynk that I lyst.
T e r c i u s P a s t o r

915

Now, I pray you,
Lyg downe on this grene.
P r i m u s P a s t o r
On these thefys yit I mene.
T e r c i u s P a s t o r
Wherto shuld ye tene?
Do as I say you.

Angelus cantat «Gloria in excelsis»; postea dicat:

A n g e l u s

920

Ryse, hyrd-men heynd,
For now is he borne
That shall take fro the feynd
That Adam had lorne;
That warloo to sheynd,

925

This nyght is he borne.
God is made youre freynd
Now at this morne,
He behestys.
At Bedlem go se

930

Ther lygys that fre
In a cryb full poorely,
Betwyx two bestys.

f 45v

P r i m u s P a s t o r
This was a qwant stevyn
That euer yit I hard.

935

It is a meruell to neuyn,
Thus to be skard.
S e c u n d u s P a s t o r

Of Godys son of heuyn
He spak vpward.
All the wod on a leuyn

940

Me thocht that he gard
Appere.
T e r c i u s P a s t o r
He spake of a barne
In Bedlem, I you warne.
P r i m u s P a s t o r
That betekyns yond starne;

945

Let vs seke hym there.

S e c u n d u s P a s t o r
Say, what was his song?
Hard ye not how he crakyd it,
Thre brefes to a long?
T e r c i u s P a s t o r
Yee, Mary, he hakt it:

950

Was no crochett wrong,
Nor nothyng that lakt it.
P r i m u s P a s t o r
For to syng vs emong,
Right as he knakt it,
I can.
S e c u n d u s P a s t o r

955

Let se how ye croyne!
Can ye bark at the mone?
T e r c i u s P a s t o r
Hold youre tonges! Haue done!
P r i m u s P a s t o r
Hark after, than.

S e c u n d u s P a s t o r
To Bedlem he bad

960

That we shuld gang;
I am full fard
That we tary to lang.
T e r c i u s P a s t o r
Be mery and not sad -
Of myrth is oure sang!

965

Euerlastyng glad

To mede may we fang
Withoutt noyse.
P r i m u s P a s t o r
Hy we theder forthy,
If we be wete and wery,

970

To that chyld and that lady!
We haue it not to lose.

S e c u n d u s P a s t o r
We fynde by the prophecy -
Let be youre dyn! -
Of Dauid and Isay

975

And mo then I myn -
Thay prophecye by clergy -
That in a vyrgyn
Shuld he lyght and ly,
To slokyn oure syn

980

And slake it,
Oure kynde, from wo;
For Isay sayd so:
Ecce virgo
Concipiet a chylde that is nakyd.

T e r c i u s P a s t o r

985

Full glad may we be,
And abyde that day
That lufly to se,
That all myghtys may.
Lord, well were me

990

For ones and for ay,
Myght I knele on my kne,
Som word for to say
To that chylde.
Bot the angell sayd

995

In a cryb was he layde;
He was poorly arayd,
Both mener and mylde.

P r i m u s P a s t o r
Patriarkes that has bene,
And prophetys beforen,

1000

Thay desyryd to haue sene
This chylde that is borne.
Thay ar gone full clene;
That haue thay lorne.

f 46r

We shall se hym, I weyn,

1005

Or it be morne,
To tokyn.
When I se hym and fele,
Then wote I full weyll
It is true as steyll

1010

That prophetys haue spokyn:

To so poore as we ar
That he wold appere,
Fyrst fynd, and declare
By his messyngere.
S e c u n d u s P a s t o r

1015

Go we now, let vs fare;
The place is vs nere.
T e r c i u s P a s t o r
I am redy and yare;
Go we in fere
To that bright.

1020

Lord, if thi wylls be -
We ar lewde all thre -
Thou grauntt vs som kyns gle
To comforth thi wight.

P r i m u s P a s t o r

Hayll, comly and clene!

1025

Hayll, yong child!
Hayll, maker, as I meyne,
Of a madyn so mylde!
Thou has waryd, I weyne
The warlo so wylde:

1030

The fals gyler of teyn,
Now goys he begylde.

Lo, he merys,
Lo, he laghys, my swetyng!
A wel fare metyng!

1035
I haue holden my hetyng;
Haue a bob of cherys.

S e c u n d u s P a s t o r
Hayll, sufferan sauouere,
For thou has vs soght!
Hayll, frely foyde and floure,

1040
That all thyng has wroght!
Hayll, full of faouere,
That made all of noght!
Hayll! I kneyll and I cowre.
A byrd haue I broght

1045
To my barne.
Hayll, lytyll tyne mop!
Of oure crede thou art crop;
I wold drynk on thy cop,
Lytyll day-starne.

T e r c i u s P a s t o r

1050
Hayll, derlyng dere,
Full of Godhede!
I pray the be nere
When that I haue nede.
Hayll, swete is thy chere!

1055
My hart wold blede
To se the sytt here
In so poore wede,
With no pennys.
Hayll! Put furth thy dall!

1060
I bryng the bot a ball:
Haue and play the withall,
And go to the tenys.

M a r i a
The fader of heuen,
God omnyotent,

1065

That sett all on seuen,
His son has he sent.
My name couth he neuene,
And lyght or he went.
I conceuyd hym full euen

1070
Thurgh myght as he ment,
And now is he borne.
He kepe you fro wo!
I shall pray hym so.
Tell furth as ye go,

1075
And myn on this morne.

f 46v
P r i m u s P a s t o r
Fare well, lady
So fare to beholde,
With thy childe on thi kne.
S e c u n d u s P a s t o r
Bot he lygys full cold.

1080
Lord, well is me!
Now we go, thou behold.
T e r c i u s P a s t o r
Forsothe, allredy
It semys to be told
Full oft.
P r i m u s P a s t o r

1085
What grace we haue fun!
S e c u n d u s P a s t o r
Com furth; now ar we won!
T e r c i u s P a s t o r
To syng ar we bun -
Let take on loft!

5. 16th Century: George Puttenham. *The Arte of English Poesie*

TO THE RIGHT HONORABLE SIR WILLIAM CECILL KNIGHT, LORD OF BVRGHLEY, LORD HIGH TREASVRER OF ENGLAND, R.F.

Printer wisheth health and prosperitie, with the commandement and vse of his continuall seruice.

This Booke (right Honorable) coming to my handes, with his bare title without any Authours name or any other ordinarie addresse, I doubted how well it might become me to make you a present thereof, seeming by many expresse passages in the same at large, that it was by the Authour intended to our Soueraigne Lady the Queene, and for her recreation and seruice chiefly deuised, in which case to make any other person her highnes partener in the honour of his giuft it could not stand with my dutie, nor be without some prejudice to her Maiesties interest and his merrite. Perceyuing besides the title to purport so slender a subiect, as nothing almost could be more discrepant from the grauitie of your yeeres and Honorable function, whose contemplations are euery houre more seriously employed upon the publicke administration and services: I thought it no condigne gratification, nor scarce any good satisfaction for such a person as you. Yet when I considered, that bestowing vpon your Lordship the first vewe of this mine impression (a feat of mine owne simple facultie) it could not scypher her Maiesties honour or prerogatiue in the giuft, nor yet the Authour of his thanks: and seeing the thing it selfe to be a deuice of some noueltie (which commonly it giveth euery good thing a speciall grace) and a noueltie so highly tending to the most worthy praises of her Maiesties most excellent name. So deerer to you I dare conceiue them any worldly thing besides love although I could not deuise to have presented your Lordship any gift more agreeable to your appetite, or fitter for my vocation and abilitie to bestow, your Lordship beyng learned and a louer of learning, my present a Book and my selfe a printer alwaies ready and desirous to be at your Honourable commaundement. And thus I humbly take my leave from the Black-friers, this xxvii of May, 1589.

Your Honours most humble at commaundement,

R.F.

CHAP. I.

What a Poet and Poesie is, and who may be worthily sayd the most excellent Poet of our time.

A Poet is as much to say as a maker. And our English name well conformes with the Greeke word: for of [Greek: poiein] to make, they call a maker Poeta. Such as (by way of resemblance and reuerently) we may say of God: who without any trauell to his diuine imagination, made all the world of nought, nor also by any paterne or mould as the Platonicks with their Idees do phantastically suppose. Euen so the very Poet makes and contriues out of his owne braine both the verse and matter of his poeme, and not by any foreine copie or example, as doth the translator, who therefore may well be sayd a versifier, but not a Poet. The premises considered, it giueth to the name and profession no smal dignitie and preheminance aboue all other artificers, Scientificke or Mechanicall. And neuerthesse without any repugnancie at all, a Poet may in some sort be said a follower or imitator, because he can expresse the true and liuely of euery thing is set before him, and which he taketh in hand to describe: and so in that respect is both a maker and a counterfaior: and Poesiean art not only of making, but also of imitation. And this science in his perfection, can not grow, but by some diuine instinct, the Platonicks call it furor: or by excellencie of nature and complexion: or by great subtiltie of the spirits & wit or by much experience and obseruation of the world, and course of kinde, or peradventure by all or most part of them. Otherwise how was it possible that Homer being but a poore priuate man, and as some say, in his later age blind, should so exactly set forth and describe, as if he had bene a most excellent Captaine or Generall, the order and array of battels, the conduct of whole armies, the sieges and assaults of cities and townes? or as some great Princes maiordome and perfect Surueyour in Court, the order, sumptuousnesse and magnificence of royal bankers, feasts, weddings, and enteruewes? or as a Polititian very prudent, and much inured with the priuat and publique affaires, so grauely examine the lawes and ordinances Ciuill, or so profoundly discourse in matters of estate, and formes of all politique regiment? Finally how could he so naturally paint out the speeches, countenance and maners of Princely persons and priuate, to wit, the wrath of

Achilles, the magnanimitie of Agamemnon, the prudence of Menelaus, the prowesse of Hector, the maiestie of king Priamus, the grauitie of Nestor, the pollicies and eloquence of Vlysses, the calamities of the distressed Queenes, and valiance of all the Captaines and aduenturous knights in those lamentable warres of Troy? It is therefore of Poets thus to be conceiued, that if they be able to deuise and make all these things of them selues, without any subiect of veritie, that they be (by maner of speech) as creating gods. If they do it by instinct diuine or naturall, then surely much fauoured from aboue. If by their experience, then no doubt very wise men. If by any president or paterne layd before them, then trully the most excellent imitators & counterfactors of all others. But you (Madame) my most Honored and Gracious: if I should seeme to offer you this my deuise for a discipline and not a delight, I might well be reputed, of all others the most arrogant and iniurious: your selfe being already, of any that I know in our time, the most excellent Poet. Forsooth by your Princely pursefaouours and countenance, making in maner what ye list, the poore man rich, the lewd well learned, the coward couragious, and vile both noble and valiant. Then for imitation no lesse, your person as a most cunning counterfator liuely representing Venus in countenance, in life Diana, Pallas for gouernement, and Iuno in all honour and regall magnificence.

CHAP. II.

That there may be an Art of our English Poesie, as well as there is of the Latine and Greeke.

Then as there was no art in the world till by experience found out: so if Poesie be now an Art, & of al antiquitie hath bene among the Greeks and Latines, & yet were none, vntill by studious persons fashioned and reduced into a method of rules & precepts, then no doubt may there be the like with vs. And if th'art of Poesie be but a skill appertaining to vtterance, why may not the same be with vs as wel as with them, our language being no lesse copious pithie and significatiue then theirs, our conceipts the same, and our wits no lesse apt to deuise and imitate then theirs were? If againe Art be but a certaine order of rules prescribed by reason, and gathered by experience, why should not Poesie be a vulgar Art with vs as well as with the Greeks and Latines, our language admitting no fewer rules and nice diuersities then theirs? but peradventure moe by a peculiar, which our speech hath in many things differing from theirs: and yet in the generall points of that Art, allowed to go in common with them: so as if one point perchance which is their feete whereupon their measures stand, and in deede is all the beautie of their Poesie, and which feete we haue not, nor as yet neuer went about to frame (the nature of our language and wordes not permitting it) we haue in stead thereof twentie other curious points in that skill more then they euer had, by reason of our rime and tunable concords or simphonie, which they neuer obserued. Poesie therefore may be an Art in our vulgar, and that verie methodicall and commendable.

CHAP. III.

How Poets were the first priests, the first prophets, the first Legislators and politicians in the world.

The profession and vse of Poesie is most ancient from the beginning, and not as manie erroneously suppose, after, but before any ciuill society was among men. For if it was first that Poesie was th'originall cause and occasion of their first assemblies; when before the people remained in the woods and mountains, vagarant and dipersed like the wild beasts; lawlesse and naked, or verie ill clad, and of all good and necessarie prouision for harbour or sustenance vtterly vnfurnished: so as they litle diffred for their maner of life, from the very brute beasts of the field. Whereupon it is fayned that Amphion and Orpheus, two Poets of the first ages, one of them, to wit Amphion, builded vp cities, and reared walles with the stones that came in heapes to the sound of his harpe, figuring thereby the mollifying of hard and stonie hearts by his sweete and eloquent perswasion. And Orpheus assembled the wilde beasts to come in heards to harken to his musicke and by that meanes made them tame, implying thereby, how by his discrete and wholesome lessons vttered in harmonie and with melodious instruments, he brought the rude and sauage people to a more ciuill and orderly life, nothing as it seemeth, more preuailing or fit to redresse and edifie the cruell and sturdie courage of man then it. And as these two Poets and Linus before them, and Museus also and Hesiodus in Greece and Archadia: so by all likelihood had mo Poets done in other places and in other ages before them, though there be no remembrance left of them, by reason of the Recordes by some accident of time perished and failing. Poets therefore are of great antiquitie. Then forasmuch as they were the first that entended to the obseruation of nature and her works, and specially of the Celestiall courses, by reason of the continuall motion of the heauens, searching after the first mouer, and from thence by degrees comming to know and consider of the

substances separate & abstract, which we call the diuine intelligences or good Angels (Demes) they were the first that instituted sacrifices of placation, with inuocations and worship to them, as to Gods; and inuented and stablished all the rest of the obseruances and ceremonies of religion, and so were the first Priests and ministers of the holy misteries. And because for the better execution of that high charge and function, it behoued than to live chast, and in all holines of life, and in continuall studie and contemplation: they came by instinct diuine, and by deepe meditation, and much abstinence (the same assubtiling and refining their spirits) to be made apt to receaue visions, both waking and sleeping, which made them vtter prophesies, and foretell things to come. So also were they the first Prophetes or sears, Vidontes, for so the Scripture tearmeth them in Latine after the Hebrue word, and all the oracles and answers of the gods were giuen in meeter or verse, and published to the people by their direction. And for that they were aged and graue men, and of much wisdom and experience in th'affaires of the world, they were the first lawmakers to the people, and the first polititiens, deuising all expedient meanes for th'establishment of Common wealth, to hold and containe the people in order and duty by force and virtue of good and wholesome lawes, made for the preseruacion of the publique peace and tranquillitie. The same peraduenture not purposely intended, but greatly furthered by the aw of their gods, and such scruple of conscience, as the terrors of their late inuented religion had led them into.

CHAP. III.

How the Poets were the first Philosophers, the first Astronomers and Historiographers and Oratours and Musiciens of the world.

Vtterance also and language is giuen by nature to man for perswasion of others, and aide of them selues, I meane the first abilitie to speake. For speech it selfe is artificiall and made by man, and the more pleasing it is, the more it preuaileth to such purpose as it is intended for: but speech by meeter is a kind of vtterance, more cleanly couched and more delicate to the eare then prose is, because it is more currant and slipper vpon the tongue, and withall tunable and melodious, as a kind of Musicke, and therefore may be tearmed a musicall speech or vtterance, which cannot but please the hearer very well. Another cause is, for that it is briefer & more compendious, and easier to beare away and be retained in memorie, then that which is contained in multitude of words and full of tedious ambage and long periods. It is beside a maner of vtterance more eloquent and rethoricall then the ordinarie prose, which we use in our daily talke: because it is decked and set out with all manner of fresh colours and figures, which maketh that it sooner inuegleth the iudgement of man, and carieth his opinion this way and that, whither soeuer the heart by impression of the eare shall be most affectionatly bent and directed. The vtterance in prose is not of so great efficacie, because not only it is dayly vsed, and by that occasion the eare is ouerglutt with it, but is also not so voluble and slipper vpon the tong, being wide and lose, and nothing numerous, nor contriued into measures, and sounded with so gallant and harmonical accents, nor in fine allowed that figuratiue conueyance, nor so great licence in choise of words and phrases as meeter is. So as the Poets were also from the beginning the best perswaders and their eloquence the first Rethoricke of the world. Euen so it became that the high mysteries of the gods should be reuealed & taught, by a maner of vtterance and language of extraordinarie phrase, and brieft and compendious, and aboue al others sweet and ciuill as the Metricall is. The same also was meetest to register the liues and noble gestic of Princes, and of the great Monarkes of the world, and all other the memorable accidents of time: so as the Poet was also the first historiographer. Then for as much as they were the first obseruers of all naturall causes & effects in the things generable and corruptible, and from thence mounted vp to search after the celestiall courses and influences, & yet penetrated further to know the diuine essences and substances separate, as is sayd before, they were the first Astronomers and Philosophists and Metaphisicks. Finally, because they did altogether endeour themselues to reduce the life of man to a certaine method of good maners, and made the first differences betweene vertue and vice, and then tempered all these knowledges and skilles with the exercise of a delectable Musicke by melodious instruments, which withall serued them to delight their hearers, & to call the people together by admiration, to a plausible and vertuous conuersation, therefore were they the first Philosophers Ethick, & the first artificiall Musiciens of the world. Such was Linus, Orpheus, Amphion & Museus the most ancient Poets and Philosophers, of whom there is left any memorie by the prophane writers King Dauid also & Salomon his sonne and many other of the holy Prophets wrate in meeters, and vsed to sing them to the harpe, although to many of vs ignorant of the Hebrue language and phrase, and not obseruing it, the same seeme but a prose. It can not bee

therefore that anie scorn or indignitie should iustly be offred to so noble, profitable, ancient and diuine a science as Poesie is.

CHAP. V.

How the wilde and sauage people vsed a naturall Poesie in versicte and time as our vulgar is.

And the Greeke and Latine Poesie was by verse numerous and metricall, running vpon pleasant feete, sometimes swift, sometime slow (their words very aptly seruing that purpose) but without any rime or tunable concord in th'end of their verses, as we and all other nations now use. But the Hebrues & Chaldees who were more ancient then the Greekes, did not only use a metricall Poesie, but also with the same a maner or rime, as hath bene of late obserued by learned men. Wherby it appeareth, that our vulgar running Poesie was common to all the nations of the world besides, whom the Latines and Greekes in speciall called barbarous. So as it was notwithstanding the first and most ancient Poesie, and the most vniuersall, which two points do otherwise giue to all humane inuentions and affaires no small credit. This is proued by certificate of marchants & trauellers, who by late nauigations haue surueyed the whole world, and discovered large countries and strange peoples wild and sauage, affirming that the American, the Perusine & the very Canniball, do sing and also say, their highest and holiest matters in certaine riming versicles and not in prose, which proues also that our maner of vulgar Poesie is more ancient then the artificiall of the Greeks and Latines, ours comming by instinct of nature, which was before Art or obseruation, and vsed with the sauage and vnciuill, who were before all science or ciuilitie, euen as the naked by prioritie of time is before the clothed, and the ignorant before the learned. The naturall Poesie therefore being aided and amended by Art, and not vtterly altered or obscured, but some signe left of it, (as the Greekes and Latines haue left none) is no lesse to be allowed and commended then theirs.

CHAP. VI.

How the riming Poesie came first to the Grecians and Latines, and had altered and almost split their maner of Poesie.

But it came to passe, when fortune fled farre from the Greekes and Latines, & that their townes flourished no more in traficke, nor their Vniuersities in learning as they had done continuing those Monarchies: the barbarous conquerers inuading them with innumerable swarmes of strange nations, the Poesie metricall of the Grecians and Latines came to be much corrupted and altered, in so much as there were times that the very Greekes and Latines themselues tooke pleasure in Riming verses, and vsed it as a rare and gallant thing: Yea their Oratours proses nor the Doctors Sermons were acceptable to Princes nor yet to the common people vnlesse it went in manner of tunable rime or metricall sentences, as appeares by many of the auncient writers, about that time and since. And the great Princes, and Popes, and Sultans would one salute and greet an other sometime in frendship and sport, sometime in earnest and enmitie by ryming verses, & nothing seemed clerkly done, but must be done in ryme: Whereof we finde diuers examples from the time of th'Emperours Gracian & Valentinian downwards; For then aboutes began the declination of the Romain Empire, by the notable inundations of the Hunnes and Vandalles in Europe, vnder the conduct of Totila & Atila and other their generalles. This brought the ryming Poesie in grace, and made it preuaile in Italie and Greece (their owne long time cast aside, and almost neglected) till after many yeares that the peace of Italie and of th'Empire Occidentall reuiued new clerkes, who recouering and perusing the bookes and studies of the ciuiler ages, restored all maner of arts, and that of the Greeke and Latine Poesie withall into their former puritie and netnes. Which neuerthelesse did not so preuaile, but that the ryming Poesie of the Barbarians remained still in his reputation, that one in the schole, this other in Courts of Princes more ordinary and allowable.

CHAP VII.

How in the time of Charlemaine and many yeares after him the Latine Poetes wrote in ryme.

And this appeareth evidently by the workes of many learned men, who wrote about the time of Charlemaines raigne in the Empire Occidentall, where the Christian Religion, became through the excessive authoritie of Popes, and deepe deuotion of Princes strongly fortified and established by erection of orders Monasticall in which many simple clerks for deuotion sake & sanctitie were receiued more then for any learning, by which occasion & the solitarinesse of their life, waxing studious without discipline or instruction by any good methode, some of them grew to be historiographers, some Poets, and following either the barbarous rudenes of the time, or els their own idle inuentions, all that they wrote to the fauor or prayse of Princes, they did it in such maner of minstrelsie, and thought themselues no small fooles, when they could make their verses goe all in ryme as did the Schoole of Salerno, dedicating their booke of medicinall rules vnto our king of England, with this beginning. Anglorum Regi scripsit tota schola Salerni Sibus incolumem, sibus te reddere sanicari Curas tolle graues, irasci crede prophanum Necretine ventram nec stringas as fortiter annum.

And all the rest that follow throughout the whole booke more curiously than cleanly, neuerthelesse very well to the purpose of their arte. In the same time king Edward the iij. him selfe quartering the Armes of England and France, did discouer his pretence and clayme to the Crowne of Fraunce, in these ryming verses. Rex sum regnorum bina ratione duorum Anglorum regnio sum rex ego iure paterno Matris iure quidem Francorum nuncupor idem Hinc est armorum variatio facta meorum.

Which verses Philip de Valois then possessing the Crowne as next heire male by pretexte of the law Salique, and holding our Edward the third, aunswered in these other of as good stuffe. Prædo regnorum qui diceris esse duorum Regno materno priuaberis atque paterno Prolis ius nullum ubi matris non fuit vllum Hinc est armorum variatio stulta tuorum.

It is found written of Pope Lucius, for his great auarice and tyranny vsed ouer the Clergy thus in ryming verses. Lucius est piscis rex et tyrannus aquarum A quo discordat Lucius iste parum Deurat hic hom homines, his piscibus insidiatur Esurit hic semper hic aliquando satur Amborum vitam si laus aquata notaret Plus rationis habet qui ratione caret.

And as this was vsed in the greatest and gayest matters of Princes and Popes by the idle inuention of Monasticall men then raigning al in their superlative. So did every scholer & secular clerke or versifier, when he wrote any short poeme or matter of good lesson put it in ryme, whereby it came to passe that all your old Proverbes and common sayings, which they would have plausible to the reader and easy to remember and beare away, were of that sorte as these. In mundo mira faciunt duo nummias & ira Molleficant dura peruertunt omnia iura.

And this verse in dispraise of the Courtiers life following the Court of Rome. Vita palatina dura est animaque ruina.

And these written by a noble learned man. Ire redire fequi regum sublimia castra Eximius status est, sed non sic itur ad astra.

And this other which to the great injurie of all women was written (no doubt by some forlorne lover, or else some old malicious Monke) for one woman's sake blemishing the whole sex. Fallere stere nere mentari nilque tacere Haec qumque vere statuit Deus in muliere.

If I might have bene his Iudge, I would have had him for his labour serued as Orpheus was by the women of Thrace. His eyes to be picket out with pinnes for his so deadly belying of them, or worse handled if worse could be deuised. But will ye see how God raised a revenger for the silly innocent women, for about the same ryming age came an honest civill Courtier somewhat bookish, and wrate these verses against the whole rable of Monkes. O Monachi vestri stomachi sunt amphora Bacchi Vos estos Deis est restes turpissima pestis.

Anon after came your secular Priestes as jolly rymers as the rest, who being sore agreeued with their Pope Calixtus, for that he had enjoyned them from their wives, & railed as fast against him. O bone Calixte totus mundus perodit te Quondam Presbiteri, poterant vxoribus vti Hoc destruxisti, postquam tu Papa fursti.

Thus what in writing of rymes and registring of lyes was the Clergy of that fabulous age wholly occupied.

We finde some but very few of these ryming verses among the Latines of the ciuiller ages, and those rather hapning by chaunce then of any purpose in the writer, as this Distick among the disportes of Ouid. *Quot coem stellas tot habet tua Roma puellas Pascua quotque haedos tot habet tua Roma Cynedos,*

The posteritie taking pleasure in this manner of Simphonie had leasure as it seemes to deuise many other knackes in their versifying that the auncient and ciuill Poets had not vfed before, whereof one was to make euery word of a verse to begin with the same letter, as did Hugobald the Monke who made a large poeme to the honour of Carolus Caluus, euery word beginning with C. which was the first letter of the king's name thus. *Carmina clarisona Caluis cantate camenæ.*

And this was thought no small peece of cunning, being in deed a matter of some difficultie to finde out so many wordes beginning with one letter as might make a iust volume, though in truth it were but a phantasticall deuise and to no purpose at all more then to make them harmonically to the rude eares of those barbarous ages.

Another of their pretie inuentions was to make a verse of such wordes as by their nature and manner of construction and situation might be turned backward word by word, and make another perfit verse, but of quite contrary sence as the gibing Monke that wrote of Pope Alexander these two verses. *Laus tua non tua fraus, virtus non copia rerum, Scandere te faciunt hoc decus eximium.*

Which if ye will turne backward they make two other good verses, but of a contrary sence, thus. *Eximium decus hoc faciunt te scandere rerum Copia, non virtus, fraus tua non tua laus.*

And they called it Verse Lyon.

Thus you may see the humors and appetites of men how diuers and changeable they be in liking new fashions, though many tymes worse then the old, and not onely in the manner of their life and vse of their garments, but also in their learninges and arts, and specially of their languages.

CHAP. VIII.

In what reputation Poesie and Poets were in old time with Princes and otherwise generally, and how they be now become contemptible and for what causes.

For the respectes aforesayd in all former ages and in the most ciuill countreys and commons wealthes, good Poets and Poesie were highly esteemed and much fauoured of the greatest Princes. For prooffe whereof we read how much Amyntas king of Macedonia made of the Tragicall Poet Euripides. And the Athenians of Sophocles. In what price the noble poemes of Homer were holden with Alexander the great, in so much as euery night they were layd vnder his pillow, and by day were carried in the rich iewell cofer of Darius lately before vanquished by him in battaile. And not onely Homer the father and Prince of the Poets was so honored by him, but for his sake all other meaner Poets, in so much as Cherillus one no very great good Poet had for euery verse well made a Phillips noble of gold, amounting in value to an angell English, and so for euery hundreth verses (which a cleanly pen could speedely dispatch) he had a hundred angells. And since Alexander the great how Theocritus the Greeke Poet was fauored by Tholomee king of Egipt & Queene Berenice his wife, Ennius likewise by Scipio Prince of the Romaines, Virgill also by th'Emperour Augustus. And in later times how much were Jehan de Mehune & Guillaume de Loris made of by the French kinges, and Geffrey Chaucer father of our English Poets by Richard the second, who as it was supposed gaue him the maner of new Holme in Oxfordshire. And Gower to Henry the fourth, and Harding to Edward the fourth. Also how Frauncis the Frenche king made Sangelais, Salmonius, Macrinus, and Clement Marot of his priuy Chamber for their excellent skill in vulgare and Latine Poesie. And king Henry the 8. her Maiesties father for a few Psalmes of Dauid turned into English meetre by Sternhold, made him groome of his priuy chamber, & gaue him many other good gifts. And one Gray what good estimation did he grow vnto with the same

king Henry, & afterward with the Duke of Sommerset Protectour, for making certaine merry Ballades, whereof one chiefly was, The hunte is vp, the hunte is up. And Queene Mary his daughter for one Epithalamie or nuptiall song made by Vargas a Spanish Poet at her mariage with king Phillip in Winchester gaue him during his life two hundred Crownes pension: nor this reputation was giuen them in auncient times altogether in respect that Poesie was a delicate arte, and the Poets them selues cunning Princepleasers, but for that also they were thought for their vniuersall knowledge to be very sufficient men for the greatest charges in their common wealthes, were it for counsell or for conduct, whereby no man neede to doubt but that both skilles may very well concurre and be most excellent in one person. For we finde that Iulius Cæsar the first Emperour and a most noble Captaine, was not onely the most eloquent Orator of his time, but also a very good Poet, though none of his doings therein be now extant. And Quintus Catulus a good Poet, and Cornelius Gallus treasurer of Egipt, and Horace the most delicate of all the Romain Lyrickes, was thought meete and by many letters of great instance prouoked to be Secretarie of estate to Augustus th'Emperour, which neuerthesse he refused for his vnhealthfulnesse sake, and being a quiet mynded man and nothing ambitious of glory: non voluit accedere ad Rempubicam, as it is reported. And Ennius the Latine Poet was not as some perchance thinke, onely fauored by Scipio the Africane for his good making of verses, but vsed as his familiar and Counsellor in the warres for his great knowledge and amiable conuersation. And long before that Antinienides and other Greeke Poets, as Aristotle reportes in his Politiques, had charge in the warres. And Firtus the Poet being also a lame man & halting vpon one legge, was chosen by the Oracle of the gods from the Athenians to be generall of the Lacedemonians armie, not for his Poetrie, but for his wisdom and graue perswasions, and subtile Stratagemes whereby he had the victory ouer his enemies. So as the Poets seemed to haue skill not onely in the subtilties of their arte, but also to be meete for all maner of functions ciuill and martiall, euen as they found fauour of the times they liued in, insomuch as their credit and estimation generally was not small. But in these dayes (although some learned Princes may take delight in them) yet vniuersally it is not so. For as well Poets as Poesie are despised, & the name become, of honorable infamous, subiect to scorne and derision, and rather a reproch than a prayse to any that vseth it: for commonly who so is studious in th'Arte or shewes himselfe excellent in it, they call him in disdayne a phantasticall: and a light headed or phantasticall man (by conuersion) they call a Poet. And this proceedes through the barbarous ignoraunce of the time, and pride of many Gentlemen, and others, whose grosse heads not being brought vp or acquainted with any excellent Arte, nor able to contriue, or in manner conceiue any matter of subtiltie in any businesse or science, they doe deride and scorne it in all others as superfluous knowledges and vayne sciences, and whatsoever deuise be of rare inuention they terme it phantasticall, construing it to the worst side: and among men such as be modest and graue, & of litle conuersation, nor delighted in the busie life and vayne ridiculous actions of the popular, they call him in scorne a Philosopher, or Poet, as much to say as a phantasticall man, very iniuriously (God wot) and to the manifestation of their own ignoraunce, not making difference betwixt termes. For as the cuill and vicious disposition of the braine hinders the sounde iudgement and discourse of man with busie & disordered phantasies, for which cause the Greekes call him [Greek: phantasikos] so is that part being well affected, not onely nothing disorderly or confused with any monstrous imaginations or conceits, but very formall, and in his much multiformitie vniforme, that is well proportioned, and so passing cleare, that by it as by a glasse or mirrour, are represented vnto the soule all maner of bewtiful visions, whereby the inuentiue parte of the mynde is so much holpen, as without it no man could deuise any new or rare thing: and where it is not excellent in his kind, there could be no politique Captaine, nor any witty enginer or cunning artificer, nor yet any law maker or counsellor of deepe discourse, yea the Prince of Philosophers stickes not to say animam non intelligere absque phantasmate, which text to another purpose Alexander Aphrodisiscus well noteth, as learned men know. And this phantasie may be resembled to a glasse as hath bene sayd, whereof there be many tempers and manner of makinges, as the perspectiues doe acknowledge, for some be false glasses and shew things otherwise than they be in deede, and others right as they be in deede, neither fairer nor fouler, nor greater nor smaller. There be againe of these glasses that shew things exceeding faire and comely, others that shew figures very monstrous & illfaured. Euen so is the phantasticall part of man (if it be not disordered) a representer of the best, most comely and bewtiful images or apparances of things to the soule and according to their very truth. If otherwise, then doth it breede Chimeres & monsters in mans imaginations, & not onely in his imaginations, but also in all his ordinarie actions and life which ensues. Wherefore such persons as be illuminated with the brightest irradiations of knowledge and of the veritie and due proportion of things, they are called by the learned men not phantastics but euphantasiote, and of this sorte of phantasie are all good Poets, notable Captaines stratagematique, all cunning artificers and enginers, all Legislators Polititiens & Counsellours of estate, in whose exercises the inuentiue part is most employed and is to the sound & true iudgement of man most needful. This diuersitie in the termes perchance eury man hath not noted, & thus much be said in defence of the Poets honour, to the end no noble and generous minde be discomforted in the studie thereof, the rather for that worthy & honorable

memoriall of that noble woman twice French Queene, Lady Anne of Britaine, wife first to king Charles the viij and after to Lewes the xij, who passing one day from her lodging toward the kinges side, saw in a gallerie Master Allaine Chartier the kings Secretarie, an excellent maker or Poet leaning on a tables end a sleepe, & stooped downe to kisse him, saying thus in all their hearings, we may not of Princely courtesie passe by and not honor with our kisse the mouth from whence so many sweete ditties & golden poems haue issued. But me thinks at these words I heare some smilingly say, I would be loath to lacke liuing of my own till the Prince gaue me a maner of new Elme for my riming: And another to say I haue read that the Lady Cynthia came once downe out of her skye to kisse the faire yong lad Endimion as he lay a sleep: & many noble Queenes that haue bestowed kisses upon their Princes paramours, but neuer vpon any Poets. The third me thinks shruggingly saith, I kept not to sit sleeping with my Poesie till a Queene came and kissed me: But what of all this? Princes may giue a good Poet such conuenient countenance and also benefite as are due to an excellent artificer, though they neither kisse nor cokes them, and the discret Poet lookes for no such extraordinarie fauours, and aswell doth he honour by his pen the iust, liberall, or magnanimous Prince, as the valiaunt, amiable or bewtifull though they be euery one of them the good giftes of God. So it seemes not altogether the scorne and ordinarie disgrace offered vnto Poets at these dayes, is cause why few Gentlemen do delight in the Art, but for that liberalitie, is come to fayle in Princes, who for their largesse were wont to be accompted th'onely patrons of learning, and first founders of all excellent artificers. Besides it is not perceiued, that Princes them selues do take any pleasure in this science, by whose example the subiect is commonly led, and allured to all delights and exercises be they good or bad, according to the graue saying of the historian. *Rex multitudinem religione impleuit, quæ semper regenti similis est.* And peradventure in this iron & malitious age of ours, Princes are lesse delighted in it, being ouer earnestly bent and affected to the affaires of Empire & ambition, whereby they are as it were inforced to indeuour them selues to armes and practises of hostilitie, or to entend to the right pollicing of their states, and haue not one houre to bestow vpon any other ciuill or delectable Art of naturall or morall doctrine: nor scarce any leisure to thincke one good thought in perfect and godly contemplation, whereby their troubled mindes might be moderated and brought to tranquillitie. So as, it is hard to find in these dayes of noblemen or gentlemen any good Mathematician, or excellent Musitian, or notable Philosopher, or els a cunning Poet: because we find few great Princes much delighted in the same studies. Now also of such among the Nobilitie or gentry as be very well seene in many laudable sciences, and especially in making of Poesie, it is so come to passe that they haue no courage to write & if they haue, yet are they loath to be a knowen of their skill. So as I know very many notable Gentlemen in the Court that haue written commendably, and suppressed it agayne, or els suffred it to be publisht without their owne names to it: as if it were a discredit for a Gentleman, to seeme learned, and to shew himselfe amorous of any good Art. In other ages it was not so, for we read that Kinges & Princes haue written great volumes and publisht them vnder their owne regall titles. As to begin with Salomon the wisest of Kings, Iulius Caesar the greatest of Emperours, Hermes Trisingistus the holiest of Priestes and Prophetes, Euax king of Arabia wrote a booke of precious stones in verse, prince Auicenna of Phisicke and Philosophie, Alphonsus king of Spaine his Astronomicall Tables, Almansor a king of Marrocco diuerse Philosophicall workes, and by their regall example our late soueraigne Lord king Henry the eight wrate a booke in defence of his faith, then perswaded that it was the true and Apostolicall doctrine, though it hath appeared otherwise since, yet his honour and learned zeale was nothing lesse to be allowed. Queenes also haue bene knowen studious, and to write large volumes, as Lady Margaret of Fraunce Queene of Nauarre in our time. But of all others the Emperour Nero was so well learned in Musique and Poesie, as when he was taken by order of the Senate and appointed to dye, he offered violence to him selfe and sayd, *O quantus artifex pereò!* as much to say, as, how is it possible a man of such science and learning as my selfe, should come to this shamefull death? Th'emperour Octauian being made executor to Virgill who had left by his last will and testament that his bookes of the Aeneidos should be committed to the fire as things not perfited by him, made his excuse for infringing the deads will, by a number of verses most excellently wntten, whereof these are part. *Frangatur potius legure, veneranda potestas, Quam tot congestos noctesque diesque labores Hauserit vna dies.*

And put his name to them. And before him his vncler & father adoptiue Iulius Caesar, was not ashamed to publish vnder his owne name, his Commentaries of the French and Britaine warres. Since therefore so many noble Emperours, Kings and Princes haue bene studious of Poesie and other ciuill arts, & not ashamed to bewray their skills in the same, let none other meaner person despise learning, nor (whether it be in prose or in Poesie, if they them selues be able to write, or haue written any thing well or of rare inuention) be any whit squeimish to let it be publisht vnder their names, for reason serues it, and modestie doth not repugne.

CHAP. IX.

How Poesie should not be employed vpon vayne conceits or vicious or infamous.

Wherefore the Nobilitie and dignitie of the Art considered aswell by vniuersalitie as antiquitie and the naturall excellence of it selfe, Poesie ought not to be abased and employed vpon any vnworthy matter & subject, nor vsed to vaine purposes, which neuerthelesse is dayly seene, and that is to vtter contents infamous & vicious or ridiculous and foolish, or of no good example & doctrine. Albeit in merry matters (not vn honest) being vsed for mans solace and recreation it may well be allowed, for as I said before, Poesie is a pleasant maner of vtterance varying from the ordinarie of purpose to refresh the mynde by the eares delight. Poesie also is not onely laudable, because I said it was a metricall speach vsed by the first men, but because it is a metricall speach corrected and reformed by discreet iudgements, and with no lesse cunning and curiositie than the Greeke and Latine Poesie, and by Art bewtified & adorned, & brought far from the primitiue rudenesse of the first inuentors, otherwise it might be sayd to me that Adam and Eues apernes were the gayest garmentes, because they were the first, and the shepherdes tente or pauillion, the best housing, because it was the most auncient & most vniversall: which I would not haue so taken, for it is not my meaning but that Art & cunning concurring with nature, antiquitie & vniuersalitie, in things indifferent, and not euill, doe make them more laudable. And right so our vulgar riming Poesie, being by good wittes brought to that perfection we see, is worthily to be preferred before any other matter of vtterance in prose, for such vse and to such purpose as it is ordained, and shall hereafter be set downe more particularly.

CHAP. X.

The subject or matter of Poesie.

Having sufficiently sayd of the dignitie of Poets and Poesie, now it is tyme to speake of the matter or subject of Poesie, which to myne intent is, what soeuer wittie and delicate conceit of man meet or worthy to be put in written verse, for any necessary use of the present time, or good instruction of the posteritie. But the chief and principall is: the laud honour & glory of the immortall gods (I speake now in phrase of the Gentiles.) Secondly the worthy gests of noble Princes: the memoriall and registry of all great fortunes, the praise of vertue & reproofe of vice, the instruction of morall doctrines, the reuealing of sciences naturall & other profitable Arts, the redresse of boistrous & sturdie courages by perswasion, the consolation and repose of temperate myndes, finally the common solace of mankind in all his trauails and cares of this transitorie life. And in this last sort being vsed for recreation onely, may allowably beare matter not alwayes of the grauest, or of any great commoditie or profit, but rather in some sort, vaine, dissolute, or wanton, so it be not very scandalous & of euill example. But as our intent is to make this Art vulgar for all English mens vse, & therefore are of necessitie to set downe the principal rules therein to be obserued: so in mine opinion it is no lesse expedient to touch briefly all the chief points of this auncient Poesie of the Greeks and Latines, so far forth as it is conformeth with ours. So as it may be knowen what we hold of them as borrowed, and what as of our owne peculiar. Wherefore now that we haue said, what is the matter of Poesie, we will declare the manner and formes of poemes used by the auncients.

CHAP. XI.

Of poemes and their sundry formes and how thereby the auncient Poets receaued surnames.

As the matter of Poesie is diuers, so was the forme of their poemes & maner of writing, for all of them wrote not in one sort, euen as all of them wrote not vpon one matter. Neither was euery Poet alike cunning in all as in some one kinde of Poesie, not vttered with like felicitie. But wherein any one most excelled, thereof he tooke a surname, as to be called a Poet Heroick, Lyrick, Elegiack, Epigrammatist or otherwise. Such therefore as gaue them selves to write long histories of the noble gests of kings & great Princes, entermeddling the dealings of the gods, halfe gods or Heroes of the gentiles, & the great & waighty consequences of peace and warre, they called Poets Heroick, whereof Homer was chief and most auncient among the Greeks, Virgill among the Latines. Others who more delighted to write songs or ballads of pleasure, to be song with the voice, and to the harpe, lute, or citheron & such other musical instruments, they were called melodious Poets [melici] or by a more common name Lirique Poets, of which sort

was Pindarus, Anacreon and Callimachus with others among the Greeks: Horace and Catullus among the Latines. There were an other sort, who sought the fauor of faire Ladies, and coueted to bemone their estates at large, & the perplexities of loue in a certain pitious verse called Elegie, and thence were called Eligiack: such among the Latines were Ouid, Tibullus, & Propertius. There were also Poets that wrote onely for the stage, I meane playes and interludes, to reccate the people with matters of disporte, and to that intent did set forth in shewes pageants, accompanied with speach the common behaiours and maner of life of priuate persons, and such as were the meaner sort of men, and they were called Comicall Poets, of whom among the Greekes Menander and Aristophanes were most excellent, with the Latines Terence and Plautus. Besides those Poets Comick there were other who serued also the stage, but medled not with so base matters: For they set forth the dolefull falles of infortunate & afflicted Princes, & were called Poets Tragicall. Such were Euripides and Sophocles with the Greeks, Seneca among the Latines. There were yet others who mounted nothing so high as any of them both, but in base and humble stile by maner of Dialogue, vttered the priuate and familiar talke of the meanest sort of men, as shepheards, heywards and suchlike, such was among the Greekes Theocritus: and Virgill among the Latines, their poemes were named Eglogues or shepheardly talke. There was yet another kind of Poet, who intended to taxe the common abuses and vice of the people in rough and bitter speaches, and their inuectiues were called Satyres, and them selues Satyricques. Such were Lucilius, Iuuenall and Persius among the Latines, & with vs he that wrote the booke called Piers plowman. Others of a more fine and pleasant head were giuen wholly to taunting and scoffing at vndecent things, and in short poemes vttered pretie merry conceits, and these men were called Epigrammatistes. There were others that for the peoples good instruction, and triall of their owne witts vsed in places of great assembly, to say by rote numbers of short and sententious meetres, very pithie and of good edification, and thereupon were called Poets Mimistes: as who would say, imitable and meet to be followed for their wise and graue lessons. There was another kind of poeme, inuented onely to make sport, & to refresh the company with a maner of buffonry or counterfaiting of merry speaches, conuerting all that which they had hard spoken before, to a certaine derision by a quite contrary sence, and this was done, when Comedies or Tragedies were a playing, & that betweene the actes when the players went to make ready for another, there was great silence, and the people waxt weary, then came in these maner of counterfaite vices, they were called Pantomimi, and all that had before bene sayd, or great part of it, they gaue a crosse construction to it very ridiculously. Thus haue you how the names of the Poets were giuen them by the formes of their poemes and maner of writing.

CHAP. XII.

In what forme of Poesie the gods of the Gentiles were prayed and honored.

The gods of the Gentiles were honoured by their Poetes in hymnes, which is an extraordinarie and diuine praise, extolling and magnifying them for their great powers and excellencie of nature in the highest degree of laude, and yet therein their Poets were after a sort restrained: so as they could not with their credit vntruly praise their owne gods, or vse in their lauds any maner of grosse adulation or vnueritable report. For in any writer vntruth and flatterie are counted most great reproches. Wherefore to praise the gods of the Gentiles, for that by authoritie of their owne fabulous records, they had fathers and mothers, and kinred and allies, and wiues and concubines: the Poets first commended them by their genealogies or pedegrees, their mariages and aliances, their notable exploits in the world for the behoofe of mankind, and yet as I sayd before, none otherwise then the truth of their owne memorials might beare, and in such sort as it might be well auouched by their old written reports, though in very deede they were not from the beginning all historically true, and many of them verie fictions, and such of them as were true, were grounded vpon some part of an historie or matter of veritie, the rest altogether figuratiue & misticall, couertly applied to some morall or natural sense, as Cicero setteth it forth in his bookes de natura deorum. For to say that Iupiter was sonne to Saturne, and that he married his owne sister Iuno, might be true, for such was the guise of all great Princes in the Orientall part of the world both at those dayes and now is. Againe that he loued Danae, Europa, Leda, Calisto & other faire Ladies daughters to kings, besides many meaner women, it is likely enough, because he was reported to be a very incontinent person, and giuen ouer to his lustes, as are for the most part all the greatest Princes, but that he should be the highest god in heauen, or that he should thunder and lighten, and do manie other things very vnnaturally and absurdly: also that Saturnus should geld his father Celius, to th'intent to make him vnable to get any moe children, and other such matters as are reported by them, it seemeth to be some wittie deuise and fiction made for a purpose, or a very noble and impudent lye, which could not be reasonably suspected by the Poets, who were otherwise discrete and graue men, and teachers of wisdom to others. Therefore either to

transgresse the rules of their primitiue records, or to seeke to giue their gods honour by belying them (otherwise then in that sence which I haue alledged) had bene a signe not onely of an vnskilfull Poet, but also of a very impudent and leude man. For vntrue praise neuer giueth any true reputation. But with vs Christians, who be better disciplined, and do acknowledge but one God Almighty, euerlasting, and in euery respect selfe suffizant [autharcos] reposed in all perfect rest & soueraigne blisse, not needing or exacting any forreine helpe or good. To him we can not exhibit ouermuch praise, nor belye him any wayes, vnlesse it be in abasing his excellencie by scarsitie of praise, or by misconceauing his diuine nature, weening to praise him, if we impute to him such vaine delights and peeuish affections, as commonly the frailest men are reprov'd for. Namely to make him ambitious of honour, iealous and difficult in his worships, terrible, angrie, vindicatiue, a loue, a hater, a pitier, and indigent of mans worships: finally so passionate as in effect he shold be altogether Anthropopathis. To the gods of the Gentiles they might well attribute these infirmities, for they were but the children of men, great Princes and famous in the world, and not for any other respect diuine, then by some resemblance of vertue they had to do good, and to benefite many. So as to the God of the Christians, such diuine praise might be verified: to th'other gods none, but figuratiuely or in misticall sense as hath bene said. In which sort the ancient Poets did in deede giue them great honors & praises, and made to them sacrifices, & offred them oblations of sundry sortes, euen as the people were taught and perswaded by such placations and worships to receaue any helpe, comfort or benefite to them selues, their wiues, children, possessions or goods. For if that opinion were not, who would acknowledge any God? the verie Etimologie of the name with vs of the North partes of the world declaring plainely the nature of the attribute, which is all one as if we sayd good, [bonus] or a giuer of good things. Therefore the Gentiles prayed for peace to the goddesse Pallas: for warre (such as thriued by it) to the god Mars: for honor and empire to the god Iupiter: for riches & wealth to Pluto: for eloquence and gayne to Mercurie: for safe nauigation to Neptune: for faire weather and prosperous windes to Eolus: for skill in musick and leechcraft to Apollo: for free life & chastitie to Diana: for bewtie and good grace, as also for issue & prosperitie in loue to Venus: for plenty of crop and corne to Ceres: for seasonable vintage to Bacchus: and for other things to others. So many things as they could imagine good and desirable, and to so many gods as they supposed to be authors thereof, in so much as Fortune was made a goddesse, & the feuer quartaine had her aulters, such blindnes & ignorance raigned in the harts of men at that time, and whereof it first proceeded and grew, besides th'opinion hath bene giuen, appeareth more at large in our bookes of Ierotejni, the matter being of another consideration then to be treated of in this worke. And these hymnes to the gods was the first forme of Poesie and the highest & the stateliest, & they were song by the Poets as priests, and by the people or whole congregation as we sing in our Churchs the Psalmes of Daud, but they did it commonly in some shadie groues of tall tymber trees: In which places they reared aulters of greene turfe, and bestrewed them all ouer with flowers, and vpon them offred their oblations and made their bloody sacrifices, (for no kinde of gift can be dearer then life) of such quick cattaille, as euery god was in their conceit most delighted in, or in some other respect most fit for the misterie: temples or churches or other chappels then these they had none at those dayes.

CHAP. XIII.

In what forme of Poesie vice and the common abuses of mans life was reprehended.

Some perchance would thinke that next after the praise and honoring of their gods, should commence the worshippings and praise of good men, and specially of great Princes and gouernours of the earth; in souerainety and function next vnto the gods. But it is not so, for before that came to passe, the Poets or holy Priests, chiefly studied the rebuke of vice, and to carpe at the common abuses, such as were most offensiuie to the publike and priuate, for as yet for lacke of good ciuility and wholesome doctrines, there was greater store of lewde lourdaines then of wife and learned Lords, or of noble and vertuous Princes and gouernours. So as next after the honours exhibited to their gods, the Poets finding in man generally much to reprove & litle to praise, made certaine poems in plaine meetres, more like to sermons or preachings then otherwise, and when the people were assembled together in those hallowed places dedicate to their gods, because they had yet no large halles or places of conuenticle, nor had any other correction of their faults, but such as rested onely in rebukes of wife and graue men, such as at these dayes make the people ashamed rather then afeard, the said auncient Poets used for that purpose, three kinds of poems reprehensiue, to wit, the Satyre, the Comedie, & the Tragedie: and the first and most bitter inuectiue against vice and vicious men, was the Satyre: which to th'intent their bitterness should breede none ill will, either to the Poets, or to the recitours, (which could not haue bene chosen if they had bene openly knowen) and besides to make their admonitions and reproofs seeme grauer and of more efficacie, they made wife as if the gods of the woods,

whom they called Satyres or Silvanes, should appeare and recite those verses of rebuke, whereas in deede they were but disguised persons vnder the shape of Satyres as who would say, these terrene and base gods being conuersant with mans affaires, and spiers out of all their secret faults: had some great care ouer man, & desired by good admonitions to reforme the euill of their life, and to bring the bad to amendment by those kinde of preachings, whereupon the Poets inuentours of the deuise were called Satyristes.

CHAP. XIII.

How vice was afterward reproofed by two other maner of poems, better reformed then the Satyre, whereof the first was Comedy, the second Tragedie.

Bvt when these maner of solitary speaches and recitals of rebuke, vttered by the rurall gods out of bushes and briers, seemed not to the finer heads sufficiently perswasie, nor so popular as if it were reduced into action of many persons, or by many voyces liuely represented to the eare and eye, so as a man might thinke it were euen now a doing. The Poets deuised to haue many parts played at once by two or three or foure persons, that debated the matters of the world, sometimes of their owne priuate affaires, sometimes of their neighbours, but neuer meddling with any Princes matters nor such high personages, but commonly of marchants, souldiers, artificers, good honest housholders, and also of vnthrifty youthes, yong damsels, old nurses, bawds, brokers, ruffians and parasites, with such like, in whose behaiours, lyeth in effect the whole course and trade of mans life, and therefore tended altogether to the good amendment of man by discipline and example. It was also much for the solace & recreation of the common people by reason of the pageants and shewes. And this kind of poeme was called Comedy, and followed next after the Satyre, & by that occasion was somewhat sharpe and bitter after the nature of the Satyre, openly & by expresse names taxing men more maliciously and impudently then became, so as they were enforced for feare of quarell & blame to disguise their players with strange apparell, and by colouring their faces and carying hatts & capps of diuerse fashions to make them selues lesse knowen. But as time & experience do reforme euery thing that is amisse, so this bitter poeme called the old Comedy, being disused and taken away, the new Comedy came in place, more ciuill and pleasant a great deale and not touching any man by name, but in a certain generalitie glancing at euery abuse, so as from thenceforth fearing none ill-will or enmitie at any bodies hands, they left aside their disguisings & played bare face, till one Roscius Gallus the most excellent player among the Romaines brought vp these vizards, which we see at this day vsed, partly to supply the want of players, when there were moe parts then there were persons, or that it was not thought meet to trouble & pester princes chambers with too many folkes. Now by the change of a vizard one man might play the king and the carter, the old nurse & the yong damsell, the marchant & the souldier or any other part he listed very conueniently. There be that say Roscius did it for another purpose, for being him selfe the best Histrien or buffon that was in his dayes to be found, insomuch as Cicero said Roscius contended with him by varietie of liuely gestures to surmount the copy of his speach, yet because he was squint eyed and had a very vnpleasant countenance, and lookes which made him ridiculous or rather odious to the presence, he deuised these vizards to hide his owne ilfauored face. And thus much touching the Comedy.

CHAP. XV.

In what forme of Poesie the euill and outrageous bahaiours of Princes were reprehended.

Bvt because in those dayes when the Poets first taxed by Satyre and Comedy, there was no great store of Kings or Emperors or such high estats (al men being yet for the most part rude, & in a maner popularly egall) they could not say of them or of their behaiours any thing to the purpose, which cases of Princes are sithens taken for the highest and greatest matters of all. But after that some men among the moe became mighty and famous in the world, soueraignetic and dominion hauing learned them all maner of lusts and licentiousnes of life, by which occasions also their high estates and felicities fell many times into most lowe and lamentable fortunes: whereas before in their great prosperities they were both feared and reuerenced in the highest degree, after their deathes when the posteritie stood no more in dread of them, their infamous life and tyrannies were layd open to all the world, their wickednes reproched, their follies and extreme insolencies derided, and their miserable ends painted out in playes and

pageants, to shew the mutabilitie of fortune, and the iust punishment of God in reuenge of a vicious and euill life. These matters were also handled by the Poets and represented by action as that of the Comedies: but because the matter was higher then that of the Comedies the Poets stile was also higher and more loftie, the prouision greater, the place more magnificent: for which purpose also the players garments were made more rich & costly and solemne, and euery other thing appertaining, according to that rate: So as where the Satyre was pronounced by rusticall and naked Syluanes speaking out of a bush, & the common players of interludes called Plampedes, played barefoote vpon the floore: the later Comedies vpon scaffolds, and by men well and cleanly hosed and shod. These matters of great Princes were played vpon lofty stages, & the actors thereof ware vpon their legges buskins of leather called Cothurni, and other solemne habits, & for a speciall preheminece did walke vpon those high corked shoes or pantofles, which now they call in Spaine & Italy Shoppini. And because those buskins and high shoes were commonly made of goats skinnes very finely tanned, and dyed into colours: or for that as some say the best players reward, was a goate to be giuen him, or for that as other thinke, a goate was the peculiar sacrifice to the god Pan, king of all the gods of the woodes: forasmuch as a goate in Greeke is called Tragos, therefore these stately playes were called Tragedies. And thus haue ye foure sundry formes of Poesie Dramaticke reprehensiuie, & put in execution by the feate & dexteritie of mans body, to wit, the Satyre, old Comedie, new Comedie, and Tragedie, whereas all other kinde of poems except Eglogue whereof shalbe entreated hereafter, were onely recited by mouth or song with the voyce to some melodious instrument.

CHAP. XVI.

In what forme of Poesie the great Princes and dominators of the world were honored.

Bvt as the bad and illawdable parts of all estates and degrees were taxed by the Poets in one sort or an other, and those of great Princes by Tragedie in especial, (& not till after their deaths) as hath bene before remembred, to th'intent that such exemplifying (as it were) of their blames and aduersities, being now dead, might worke for a secret reprehension to others that were aliue, liuing in the fame or like abuses. So was it great reason that all good and vertuous persons should for their well doings be rewarded with commendation, and the great Princes about all others with honors and praises, being for many respects of greater moment, to haue them good & vertuous then any inferior sort of men. Wherefore the Poets being in deede the trumpeters of all praise and also of slaunders (not slaunders, but well deserued reproch) were in conscience & credit bound next after the diuine praises of the immortall gods, to yeeld a like ratable honour to all such amongst men, as most resembled the gods by excellencie of function and had a certaine affinitie with them, by more then humane and ordinarie virtues shewed in their actions here vpon earth. They were therefore praised by a second degree of laude: shewing their high estates, their Princely genealogies and pedegrees, mariages, aliances, and such noble exploites, as they had done in th'affaires of peace & of warre to the benefit of their people and countries, by inuention of any noble science, or profitable Art, or by making wholesome lawes or enlarging of their dominions by honorable and iust conquests, and many other wayes. Such personages among the Gentiles were Bacchus, Ceres, Perseus, Hercules, Theseus and many other, who thereby came to be accompted gods and halfe gods or goddesses [Heroes] & had their commedations giuen by Hymne accordingly or by such other poems as their memorie was therby made famous to the posteritie for euer after, as shal be more at large sayd in place conuenient. But first we will speake somewhat of the playing places, and prouisions which were made for their pageants & pomps representatiue before remembred.

CHAP. XVII.

Of the places where their enterludes or poems drammaticke were represented to the people.

As it hath bene declared, the Satyres were first vttered in their hallowed places within the woods where they honoured their gods vnder the open heauen, because they had no other housing fit for great assemblies. The old comedies were plaid in the broad streets vpon wagons or carts vncouered, which carts were floored with bords & made for remouable stages to passe from one streete of their townes to another, where all the people might stand at their ease to gaze vpon the sights. Their new comedies or ciuill enterludes were played in open pauillions or tents of

linnen cloth or lether, halfe displayed that the people might see. Afterward when Tragidies came vp they deuised to present them vpon scaffolds or stages of timber, shadowed with linen or lether as the other, and these stages were made in the forme of a Semicircle, wherof the bow serued for the beholders to fit in, and the string or forepart was appointed for the floore or place where the players vttered, & had in it sundry little diuisions by curteins as trauerses to serue for seuerall roomes where they might repaire vnto & change their garments & come in againe, as their speaches & parts were to be renewed. Also there was place appointed for the musiciens to sing or to play vpon their instrumentes at the end of euery scene, to the intent the people might be refreshed, and kept occupied. This maner of stage in halfe circle, the Greekes called theatrum, as much to say as a beholding place, which was also in such sort contriued by benches and greeces to stand or sit vpon; as no man should empeach anothers sight. But as ciuilitie and withall wealth encreased, so did the minde of man growe dayly more haultie and superfluous in all his deuises, so as for their theaters in halfe circle, they came to be by the great magnificence of the Romain princes and people somptuously built with marble & square stone in forme all round, & were called Amphitheaters, wherof as yet appears one among the ancient ruines of Rome, built by Pompeius Magnus, for capasitie able to receiue at ease fourscore thousand persons as it is left written, & so curiously contriued as euery man might depart at his pleasure, without any annoyance to other. It is also to be knowne that in those great Amphitheaters, were exhibited all maner of other shewes & disports for the people, as their ferce playes, or digladiations of naked men, their wrastlings, runnings leapings and other practises of actiuitie and strength, also their baitings of wild beasts, as Elephants, Rhinocerons, Tigers, Leopards and others, which sights much delighted the common people, and therefore the places required to be large and of great content.

CHAP. XVIII.

Of the Shepheards or pastorall Poesie called Eglogue, and to what purpose it was first inuented and vsed.

Some be of opinion, and the chiefe of those who haue written in this Art among the Latines, that the pastorall Poesie which we commonly call by the name of Eglogue and Bucolick, a tearme brought in by the Sicilian Poets, should be the first of any other, and before the Satyre comedie or tragedie, because, say they, the shepheards and haywards assemblies & meetings when they kept their cattell and heards in the common fields and forests, was the first familiar conuersation, and their babble and talk vnder bushes and shadie trees, the first disputation and contentious reasoning, and their fleshly heates growing of ease, the first idle wooings, and their songs made to their mates or paramours either vpon sorrow or iolity of courage, the first amorous musicks, sometime also they sang and played on their pipes for wagers, striuing who should get the best game, and be counted cunningest. All this I do agree vnto, for no doubt the shepheards life was the first example of honest felowship, their trade the first art of lawfull acquisition or purchase, for at those daies robbery was a manner of purchase. So saith Aristotle in his bookes of the Politiques, and that pasturage was before tillage, or fishing or fowling, or any other predatory art or cheuisance. And all this may be true, for before there was a shepherd keeper of his owne, or of some other bodies flocke, there was none owner in the world, quick cattel being the first property of any forreine possession. I say forreine, because alway men claimed property in their apparell and armour, and other like things made by their owne trauel and industry, nor thereby was there yet any good towne or city or Kings palace, where pageants and pompes might be shewed by Comedies or Tragedies. But for all this, I do deny that the Eglogue should be the first and most auncient forme of artificiall Poesie, being perswaded that the Poet deuised the Eglogue long after the other drammatick poems, not of purpose to counterfait or represent the rusticall manner of loues and communication: but vnder the vaile of homely persons, and in rude speeches to insinuate and glaunce at greater matters, and such as perchance had not bene safe to haue bene disclosed in any other sort, which may be perceived by the Eglogues of Virgill, in which are treated by figure matters of greater importance then the loues of Titirus and Corydon. These Eglogues came after to containe and enforme morall discipline, for the amendment of mans behaiour, as be those of Mantuan and other moderne Poets.

CHAP. XIX.

Of historical Poesie, by which the famous acts of Princes and the vertuous and worthy liues of our forefathers were reported.

There is nothing in man of all the potential parts of his mind (reason and will except) more noble or more necessary to the actiue life then memory: because it maketh most to a sound iudgement and perfect worldly wisdom, examining and comparing the times past with the present, and by them both considering the time to come, concludeth with a stedfast resolution, what is the best course to be taken in all his actions and aduices in this world: it came vpon this reason, experience to be so highly commended in all consultations of importance, and preferred before any learning or science, and yet experience is no more than a masse of memories assembled, that is, such trials as man hath made in time before. Right so no kinde of argument in all the Oratorie craft, doth better perswade and more vniuersally satisfie then example, which is but the representation of old memories, and like successes happened in times past. For these regards the Poesie historical is of all other next the diuine most honorable and worthy, as well for the common benefit as for the speciall comfort euery man receiueth by it. No one thing in the world with more delectation reuiuing our spirits then to behold as it were in a glasse the liuely image of our deare forefathers, their noble and vertuous maner of life, with other things autentike, which because we are not able otherwise to attaine to the knowledge of by any of our senses, we apprehend them by memory, whereas the present time and things so swiftly passe away, as they giue vs no leasure almost to looke into them, and much lesse to know & consider of them thoroughly. The things future, being also euent very vncertaine, and such as can not possibly be knowne because they be not yet, can not be vsed for example nor for delight otherwise then by hope. Though many promise the contrary, by vaine and deceitfull arts taking vpon them to reueale the truth of accidents to come, which if it were so as they surmise, are yet but sciences meerey coniecturall, and not of any benefit to man or to the common wealth, where they be vsed or professed. Therefore the good and exemplary things and actions of the former ages, were reserued only to the historical reportes of wise and graue men: those of the present time left to the fruition and iudgement of our senses: the future as hazards and incertaine euent vtterly neglected and layd aside for Magicians and mockers to get their liuings by: such manner of men as by negligence of Magistrates and remisses of lawes euery countrie breedeth great store of. These historical men neuertheless vsed not the matter so precisely to wish that al they wrote should be accounted true, for that was not needefull nor expedient to the purpose, namely to be vsed either for example or for pleasure: considering that many times it is seene a fained matter or altogether fabulous, besides that it maketh more mirth than any other, works no lesse good conclusions for example then the most true and veritable: but often times more, because the Poet hath the handling of them to fashion at his pleasure, but not so of th'other which must go according to their veritie & none otherwise without the writers great blame. Againe as ye know mo and more excellent examples may be fained in one day by a good wit, then many ages through mans frailtie are able to put in vse, which made the learned and wittie men of those times to deuise many historical matters of no veritie at all, but with purpose to do good and no hurt, as vsing them for a maner of discipline and president of commendable life. Such was the common wealth of Plato, and Sir Thomas Moores Vtopia, resting all in deuise, but neuer put in execution, and easier to be wished then to be performed. And you shall perceiue that histories were of three sortes, wholly true and wholly false, and a third holding part of either, but for honest recreation, and good example they were all of them. And this may be apparent to vs not onely by the Poeticall histories, but also by those that be written in prose: for as Homer wrate a fabulous or mixt report of the siege of Troy, and another of Ulisses errors or wandrings, so did Museus compile a true treatise of the life & loues of Leander and Hero, both of them Heroick, and to none ill edification. Also as Theucidides wrate a worthy and veritable historie, of the warres betwixt the Athenians and the Peloponneses: so did Zenophon, a most graue Philosopher, and well trained courtier and counsellour make another (but fained and vntrue) of the childhood of Cyrus king of Persia, neuertheles both to one effect, that is for example and good information of the posteritie. Now because the actions of meane & base personages, tend in very few cases to any great good example: for who passeth to follow the steps, and maner of life of a craftes man, shepheard or sailer, though he were his father or dearest frend? yea how almost is it possible that such maner of men should be of any vertue other then their profession requireth? Therefore was nothing committed to historie, but matters of great and excellent persons & things that the same by irritation of good courages (such as emulation causeth) might worke more effectually, which occasioned the story writer to chuse an higher stile fit for his subiect, the Prosaicke in prose, the Poet in meetre, and the Poets was by verse exameter for his grauitie and statelinesse most allowable: neither would they intermingle him with any other shorter measure, vnlesse it were in matters of such qualitie, as became best to be song with the voyce, and to some musicall instrument, as were with the Greeks, all your Hymnes & Encomia of Pindarus & Callimachus, not very histories but a maner of historical reportes in which cases they made those poemes in variable measures, & coupled a short verse with a long to serue that purpose the better, and we our selues who

compiled this treatise haue written for pleasure a litle brief Romance or historicall ditty in the English tong of the Isle of great Britaine in short and long meetres, and by breaches or diuisions to be more commodiously song to the harpe in places of assembly, where the company shalbe desirous to heare of old aduentures & valiaunces of noble knights in times past, as are those of king Arthur and his knights of the round table, Sir Beuys of Southampton, Guy of Warwicke and others like. Such as haue not premonition hereof, and consideration of the causes alledged, would peradventure reprove and disgrace euery Romance, or short historicall ditty for that they be not written in long meeters or verses Alexandrins, according to the nature & stile of large histories, wherin they should do wrong for they be sundry formes of poems and not all one.

CHAP. XX.

In what forme of Poesie vertue in the inferiour sort was commended.

In euerie degree and sort of men vertue is commendable, but not egally: not onely because mens estates are vnegall, but for that also vertue it selfe is not in euery respect of egall value and estimation. For continence in a king is of greater merit, than in a carter, th'one hauing all opportunities to allure him to lusts, and abilitie to serue his appetites, th'other partly, for the basenesse of his estate wanting such meanes and occasions, partly by dread of lawes more inhibited, and not so vehemently caried away with vnbridled affections, and therefore deserue not in th'one and th'other like praise nor equall reward, by the very ordinarie course of distributiue iustice. Euen so parsimonie and illiberalitie are greater vices in a Prince then in a priuate person, and pusillanimitie and iniustice likewise: for to th'one, fortune hath supplied inough to maintaine them in the contrarie vertues, I meane, fortitude, iustice, liberalitie, and magnanimitie: the Prince hauing all plentie to vse largesse by, and no want or neede to driue him to do wrong. Also all the aides that may be to lift vp his courage, and to make him stout and fearelesse (augent animos fortunaee) saith the Mimist, and very truly, for nothing pulleth downe a mans heart so much as aduersitie and lacke. Againe in a meane man prodigalitie and pride are faultes more reprehensible then in Princes, whose high estates do require in their countenance, speech & expense, a certaine extraordinary, and their functions enforce them sometime to exceede the limites of mediocritie not excusable in a priuat person, whose manner of life and calling hath no such exigence. Besides the good and bad of Princes is more exemplarie, and thereby of greater moment then the priuate persons. Therefore it is that the inferiour persons, with their inferiour vertues haue a certaine inferiour praise, to guerdon their good with, & to comfort them to continue a laudable course in the modest and honest life and behaiour. But this lyeth not in written laudes so much as in ordinary reward and commendation to be giuen them by the mouth of the superiour magistrate. For histories were not intended to so generall and base a purpose, albeit many a meane souldier & other obscure persons were spoken of and made famous in stories, as we finde of Irus the begger, and Thersites the glorious noddie, whom Homer maketh mention of. But that happened (& so did many like memories of meane men) by reason of some greater personage or matter that it was long of, which therefore could not be an vniuersall case nor chauce to euery other good and vertuous person of the meaner sort. Wherefore the Poet in praising the maner of life or death of anie meane person, did it by some litle dittie or Epigram or Epitaph in fewe verses & meane stile conformable to his subiect. So haue you how the immortall gods were praised by hymnes, the great Princes and heroicke personages by ballades of praise called Encomia, both of them by historicall reports of great grauitie and maiestie, the inferiour persons by other slight poems.

CHAP. XXI.

The forme wherein honest and profitable Artes and sciences were treated.

The profitable sciences were no lesse meete to be imported to the greater number of ciuill men for instruction of the people and increase of knowledge, then to be reserued and kept for clerkes and great men onely. So as next vnto the things historicall such doctrines and arts as the common wealth fared the better by, were esteemed and allowed. And the same were treated by Poets in verse Exameter faouoring the Heroicall, and for the grauitie and comelinesse of the meetre most vsed with the Greekes and Latines to sad purposes. Such were the Philosophicall

works of Lucretius Carus among the Romaines, the Astronomicall of Aratus and Manilius, one Greeke th'other Latine, the Medicinall of Nicander, and that of Oprianus of hunting and fishes, and many moe that were too long to recite in this place.

CHAP. XXII.

In what forme of Poesie the amorous affections and allurements were vttered.

The first founder of all good affections is honest loue, as the mother of all the vicious is hatred. It was not therefore without reason that so commendable, yea honourable a thing as loue well meant, were it in Princely estate or priuate, might in all ciuill common wealths be vttered in good forme and order as other laudable things are. And because loue is of all other humane affections the most puissant and passionate, and most generall to all sortes and ages of men and women, so as whether it be of the yong or old or wise or holy, or high estate or low, none euer could truly bragge of any exemption in that case: it requireth a forme of Poesie variable, inconstant, affected, curious and most witty of any others, whereof the ioyes were to be vttered in one sorte, the sorrowes in an other, and by the many formes of Poesie, the many moodes and pangs of louers, throughly to be discouered: the poore soules sometimes praying, beseeching, sometime honouring, auancing, praising: an other while railing, reuiling, and cursing: then sorrowing, weeping, lamenting: in the ende laughing, reioysing & solacing the beloued againe, with a thousand delicate deuises, odes, songs, elegies, ballads, sonets and other ditties, moouing one way and another to great compassion.

CHAP. XXIII.

The forme of Poeticall reioysings.

Pleasure is the chiefe parte of mans felicity in this world, and also (as our Theologians say) in the world to come. Therefore while we may (yea alwaies if it could be) to reioyce and take our pleasures in vertuous and honest sort, it is not only allowable, but also necessary and very naturall to man. And many be the ioyes and consolations of the hart: but none greater, than such as he may vtter and discouer by some conuenient meanes: euen as to suppress and hide a mans mirth, and not to haue therein a partaker, or at least wise a witnes, is no little grieffe and infelicity. Therefore nature and ciuility haue ordained (besides the priuate solaces) publike reioysings for the comfort and recreation of many. And they be of diuerse sorts and vpon diuerse occasions growne: one & the chiefe was for the publike peace of a countrie the greatest of any other ciuill good. And wherein your Maiestie (my most gracious Soueraigne) haue shewed your selfe to all the world for this one and thirty yeares space of your glorious raigne, aboue all other Princes of Christendome, not onely fortunate, but also most sufficient vertuous and worthy of Empire. An other is for iust & honourable victory atchieued against the forraine enemy. A third at solemne feasts and pompes of coronations and enstallments of honourable orders. An other for iollity at weddings and marriages. An other at the births of Princes children. An other for priuate entertainements in Court, or other secret disports in chamber, and such solitary places. And as these reioysings tend to diuers effects, so do they also carry diuerse formes and nominations: for those of victorie and peace are called Triumphall, whereof we our selues haue heretofore giuen some example by our Triumphals written in honour of her Maiesties long peace. And they were vsed by the auncients in like manner, as we do our generall processions or Letanies with bankets and bonfires and all manner of ioyes. Those that were to honour the persons of great Princes or to solemnisise the pompe of any installment were called Encomia, we may call them carols of honour. Those to celebrate marriages were called songs nuptiall or Epithalamies, but in a certaine misticall sense as shall be said hereafter. Others for magnificence at the natiuities of Princes children, or by custome vsed yearely vpon the same dayes, are called songs natall or Genethliaca. Others for secret recreation and pastime in chambers with company or alone were the ordinary Musickes amorous, such as might be song with voice or to the Lute, Citheron or Harpe, or daunced by measures as the Italian Pauan and galliard are at these daies in Princes Courts and other places of honourable of ciuill assembly, and of all these we will speake in order and very briefly.

CHAP. XXIII.

The forme of Poeticall lamentations.

Lamenting is altogether contrary to reioising, euery man saith so, and yet is it a peece of ioy to be able to lament with ease, and freely to poure forth a mans inward sorrowes and the greefs wherewith his minde is surcharged. This was a very necessary deuise of the Poet and a fine, besides his poetrie to play also the Phisitian, and not onely by applying a medicine to the ordinary sicknes of mankind, but by making the very greef it selfe (in part) cure of the disease. Nowe are the causes of mans sorrowes many: the death of his parents, friends, allies, and children: (though many of the barbarous nations do reioyce at their burials and sorrow at their birthes) the ouerthrowes and discomforts in battell, the subuersions of townes and cities, the desolations of countreies, the losse of goods and worldly promotions, honour and good renoune: finally the trauails and torments of loue forlorne or ill bestowed, either by disgrace, deniall, delay, and twenty other wayes, that well experienced louers could recite. Such of these greefs as might be refrained or holpen by wisdom, and the parties owne good endeouour, the Poet gaue none order to sorrow them: for first as to the good renoune it is lost, for the more part by some default of the owner, and may be by his well doings recouered againe. And if it be vniustly taken away, as by vntrue and famous libels, the offenders recantation may suffice for his amends: so did the Poet Stesichorus, as it is written of him in his Pallinodie vpon the dispraise of Helena, and recouered his eye sight. Also for worldly goods they come and go, as things not long proprietary to any body, and are not yet subject vnto fortunes dominion so, but that we our selues are in great part accessarie to our own losses and hinderaunces, by ouersight & misguiding of our selues and our things, therefore why should we bewaile our such voluntary detriment? But death the irrecouerable losse, death the dolefull departure of frendes, that can neuer be recontinued by any other meeting or new acquaintance. Besides our vncertaintie and suspition of their estates and welfare in the places of their new abode, seemeth to carry a reasonable pretext of iust sorrow. Likewise the great ouerthrowes in battell and desolations of countreys by warres, aswell for the losse of many liues and much libertie as for that it toucheth the whole state, and euery priuate man hath his portion in the damage: Finally for loue, there is no frailtie in flesh and blood so excusable as it, no comfort or discomfort greater then the good and bad successe thereof, nothing more naturall to man, nothing of more force to vanquish his will and to inuegle his iudgement. Therefore of death and burials, of th'aduersities by warres, and of true loue lost or ill bestowed, are th'onely sorrowes that the noble Poets sought by their arte to remoue or appease, not with any medicament of a contrary temper, as the Galenistes vse to cure [contraria contrarijs] but as the Paracelsians, who cure [similia similibus] making one dolour to expell another, and in this case, one short sorrowing the remedie of a long and grieuous sorrow. And the lamenting of deathes was chiefly at the very burials of the dead, also at monethes mindes and longer times, by custome continued yearely, when as they vsed many offices of seruice and loue towards the dead, and thereupon are called Obsequies in our vulgare, which was done not onely by cladding the mourners their friendes and seruauntes in blacke vestures, of shape dolefull and sad, but also by wofull countenaunces and voyces, and besides by Poeticall mournings in verse. Such funerall songs were called Epicedia if they were song by many, and Monodia if they were vttered by one alone, and this was vsed at the enterment of Princes and others of great accompt, and it was reckoned a great ciuilitie to vse such ceremonies, as at this day is also in some countrey vsed. In Rome they accustomed to make orations funeral and commendatorie of the dead parties in the publique place called Procostris: and our Theologians, in stead thereof vse to make sermons, both teaching the people some good learning, and also saying well of the departed. Those songs of the dolorous discomfits in battaile, and other desolations in warre, or of townes sacked and subuerted, were song by the remnant of the army ouerthrowen, with great skriking and outcries, holding the wrong end of their weapon vpwards in signe of sorrow and dispaire. The cities also made generall mournings & offred sacrifices with Poeticall songs to appease the wrath of the martiall gods & goddesses. The third sorrowing was of loues, by long lamentation in Elegie: so was their song called, and it was in a pitious maner of meetre, placing a limping Pentameter, after a lusty Exameter, which made it go dolourously more then any other meeter.

CHAP. XXV.

Of the solemne reioysings at the natiuitie of Princes children.

To returne from sorrow to reioysing it is a very good hap and no vnwise part for him that can do it, I say therefore, that the comfort of issue and procreation of children is so naturall and so great, not onely to all men but specially to Princes, as duetie and ciuilitie haue made it a common custome to reioyse at the birth of their noble children, and to keepe those dayes hallowed and festiuall for euer once in the yeare, during the parentes or childrens liues: and that by publike order & consent. Of which reioysings and mirthes the Poet ministred the first occasion honorable, by presenting of ioyfull songs and ballades, praysing the parentes by prooffe, the child by hope, the whole kinred by report, & the day it selfe with wishes of all good successe, long life, health & prosperitie for euer to the new borne. These poems were called in Greeke Genethaca, with vs they may be called natall or birth songs.

CHAP. XXVI.

The maner of reioysings at mariages and weddings.

As the consolation of children well begotten is great, no lesse but rather greater ought to be that which is occasion of children, that is honorable matrimonie, a loue by al lawes allowed, not mutable nor encombred with such vaine cares & passions, as that other loue, whereof there is no assurance, but loose and fickle affection occasioned for the most part by sodaine sights and acquaintance of no long triall or experience, nor vpon any other good ground wherein any suretie may be conceiued: wherefore the Ciuill Poet could do no lesse in conscience and credit, then as he had before done to the ballade of birth: now with much better deuotion to celebrate by his poeme the chearefull day of mariages aswell Princely as others, for that hath alwayes bene accompted with euery countrey and nation of neuer so barbarous people, the highest & holiest, of any ceremonie apperteining to man: a match forsooth made for euer and not for a day, a solace prouided for youth, a comfort for age, a knot of alliance & amitie indissoluble: great reioysing was therefore due to such a matter and to so gladsome a time. This was done in ballade wise as the natall song, and was song very sweetely by Musicians at the chamber dore of the Bridegroom and Bride at such times as shalbe hereafter declared and they were called Epithalamies as much to say as ballades at the bedding of the bride: for such as were song at the borde at dinner or supper were other Musickes and not properly Epithalamies. Here, if I shall say that which apperteineth to th'arte, and disclose the misterie of the whole matter, I must and doe with all humble reuerence bespeake pardon of the chaste and honorable eares, least I should either offend them with licentious speach, or leaue them ignorant of the ancient guise in old times vsed at weddings (in my simple opinion) nothing reproveable. This Epithalamie was deuided by breaches into three partes to serue for three seuerall fits or times to be song. The first breach was song at the first parte of the night when the spouse and her husband were brought to their bed & at the very chamber dore, where in a large vtter roome vsed to be (besides the musiciens) good store of ladies or gentlewomen of their kinsefolkes, & others who came to honor the mariage, & the tunes of the songs were very loude and shrill, to the intent there might no noise be hard out of the bed chamber by the skreeking & outcry of the young damosell feeling the first forces of her stiffe & rigorous young man, she being as all virgins tender & weake, & vnexpert in those maner of affaires. For which purpose also they vsed by old nurses (appointed to that seruice) to suppress the noise by casting of pottes full of nuttes round about the chamber vpon the hard floore or pauement, for they vsed no mattes nor rushes as we doe now. So as the Ladies and gentlewomen should haue their eares so occupied what with Musicke, and what with their handes wantonly scambling and catching after the nuttes, that they could not intend to harken after any other thing. This was as I said to diminish the noise of the laughing lamenting spouse. The tenour of that part of the song was to congratulate the first acquaintance and meeting of the young couple, allowing of their parents good discretions in making the match, then afterward to sound cheerfully to the onset and first encounters of that amorous battaile, to declare the comfort of children, & encrease of loue by that meane chiefly caused: the bride shewing her self euery waies well disposed and still supplying occasions of new lustes and loue to her husband, by her obedience and amorous embracings and all other allurementes. About midnight or one of the clocke, the Musicians came again to the chamber dore (all the Ladies and other women as they were of degree, hauing taken their leaue, and being gone to their rest.) This part of the ballade was to refresh the faint and wried bodies and spirits, and to animate new appetites with cherefull wordes, encoraging them to the recontinuance of the same entertainments, praising and commending (by supposall) the good conformities of them both, & their desire one to vanquish the other by such friendly conflictes: alledging that the first embracements neuer bred barnes, by reason of their ouermuch affection and heate, but onely made passage for children and enforced greater liking to the late made match. That the second assaultes, were less rigorous, but more vigorous and apt to auance the purpose of procreation, that therefore they should persist in all

good appetite with an inuincible courage to the end. This was the second part of the Epithalamie. In the morning when it was faire broad day, & that by liklyhood all tournes were sufficiently serued, the last actes of the enterlude being ended, & that the bride must within few hours arise and apparrell her selfe, no more as a virgine, but as a wife, and about dinner time must by order come forth Sicut sponsa de thalamo, very demurely and stately to be sene and acknowledged of her parents and kinsfolkes whether she were the same woman or a changeling, or dead or aliue, or maimed by any accident nocturnall. The same Musicians came againe with this last part, and greeted them both with a Psalme of new applausions, for that they had either of them so well behaued them selues that night, the husband to rob his spouse of her maidenhead and saue her life, the bride so lustely to satisfie her husbandes loue and scape with so litle daunger of her person, for which good chaunce that they should make a louely truce and abstinence of that warre till next night sealing the placard of that louely league, with twentie maner of sweet kisses, then by good admonitions enformed them to the frugall & thriutie life all the rest of their dayes. The good man getting and bringing home, the wife sauing that which her husband should get, therewith to be the better able to keepe good hospitalitie, according to their estates, and to bring vp their children, (if God sent any) vertuously, and the better by their owne good example. Finally to perseuer all the rest of their life in true and inuiolable wedlocke. This ceremony was omitted when men married widowes or such as had tasted the frutes of loue before, (we call them well experienced young women) in whom there was no feare of daunger to their persons, or of any outcry at all, at the time of those terrible approches. Thus much touching the vsage of Epithalamie or bedding ballad of the ancient times, in which if there were any wanton or lasciuious matter more then ordinarie which they called Ficenina licentia it was borne withal for that time because of the matter no lesse requiring. Catullus hath made of them one or two very artificiall and ciuil: but none more excellent then of late yeares a young noble man of Germanie as I take it Iohannes secundus who in that and in his poeme De basis, passeth any of the auncient or moderne Poetes in my iudgment.

CHAP. XXVII.

The manner of Poesie by which they uttered their bitter taunts, and priuy nips, or witty scoffes and other merry conceits.

Bvt all the world could not keepe, nor any ciuill ordinance to the contrary so preuaile, but that men would and must needs vtter their splenes in all ordinarie matters also: or else it seemed their bowels would burst, therefore the poet deuised a pretty fashioned poeme short and sweete (as we are wont to say) and called it Epigramma in which euery merry conceited man might without any long studie or tedious ambage, make his frend sport, and anger his foe, and giue a prettie nip, or shew a sharpe conceit in few verses: for this Epigramme is but an inscription or writting made as it were vpon a table, or in a windowe, or vpon the wall or mantel of a chimney in some place of common resort, where it was allowed euery man might come, or be sitting to chat and prate, as now in our tauernes and common tabling houses, where many merry heades meete, and scribe with ynke with chalke, or with a cole such matters as they would euery man should know, & descant vpon. Afterward the same came to be put in paper and in bookes, and vsed as ordinarie missiues, some of frendship, some of defiaunce, or as other messages of mirth: Martiall was the cheife of this skil among the Latines, & at ahese days the best Epigrammes we finde, & of the sharpest conceit are those that haue bene gathered among the reliques of the two muet Satyres in Rome, Pasquill and Marphorir, which in time of Sede vacante, when merry conceited men listed to gibe & iest at the dead Pope, or any of his Cardinales, they fastened them vpon those Images which now lie in the open streets, and were tollerated, but after that terme expired they were inhibited againe. These inscriptions or Epigrammes at their beginning had no certaine author that would auouch them, some for feare of blame, if they were ouer saucy or sharpe, others for modestie of the writer as was that disticke of Virgil which he set vpon the pallace gate of the emperour Augustus, which I will recite for the breifnes and quicknes of it, & also for another euento that fell out vpon the matter worthy to be remembred. These were the verses. Nocte pluit tota, redeunt spectacula mane Diuisum imperium cum Ioue Caesar habet. Which I haue thus Englished, It raines all night, early the shewes returne God and Caesar, do raigne and rule by turne.

As much to say, God sheweth his power by the night raines. Caesar his magnificence by the pompes of the day.

These two verses were very well liked, and brought to th'Emperours Maiestie, who tooke great pleasure in them, & willed the author should be knowen. A sausie courtier profered him selfe to be the man, and had a good reward giuen him: for the Emperour him self was not only learned, but of much munificence toward all learned men: whereupon Virgill seing him self by his ouermuch modestie defrauded of the reward, that an impudent had gotten by abuse of his merit, came the next night, and fastened vpon the same place this halfe metre, foure times iterated. Thus. Sic vos non vobis Sic vos non vobis Sic vos non vobis Sic vos non vobis

And there it remained a great while because no man wist what it meant, till Virgill opened the whole fraude by this deuise. He wrote aboute the same halfe metres this whole verse Exameter. Hos ego versiculos feci tulit alter honores.

And then finished the foure half metres, thus. Sic vos non vobis Fertis aratra boues Sic vos non vobis Vellera fertis oues Sic vos non vobis Mellificatis apes Sic vos non vobis Indificatis aues.

And put to his name Publius Virgilius Maro. This matter came by and by to Th'emperours eare, who taking great pleasure in the deuise called for Virgill, and gaue him not onely a present reward, with a good allowance of dyet a bonche in court as we vse to call it: but also held him for euer after vpon larger triall he had made of his learning and vertue in so great reputation, as he vouchsafed to giue him the name of a frend (amicus) which among the Romanes was so great an honour and speciall fauour, as all such persons were allowed to the Emperours table, or to the Senatours who had receiued them (as frendes) and they were the only men that came ordinarily to their boords, & solaced with them in their chambers, and gardins when none other could be admitted.

CHAP. XXVIII.

Of the poeme called Epitaph used for memoriall of the dead.

An Epitaph is but a kind of Epigram only applied to the report of the dead persons estate and degree, or of his other good or bad partes, to his commendation or reproch: and is an inscription such as a man may commodiously write or engraue vpon a tombe in few verses, pithie, quicke and sententious for the passer by to peruse, and iudge vpon without any long tariaunce: So as if it exceede the measure of an Epigram, it is then (if the verse be correspondent) rather an Elegie then an Epitaph which errour many of these bastard rimers commit, because they be not learned, nor (as we are wont to say) their catftes masters, for they make long and tedious discourses, and write them in large tables to be hanged vp in Churches and chauncells ouer the tombes of great men and others, which be so exceeding long as one must haue halfe a dayes leasure to reade one of them, & must be called away before he come halfe to the end, or else be locked into the Church by the Sexten as I my selfe was once serued reading an Epitaph in a certain cathedrall Church of England. They be ignorant of poesie that call such long tales by the name of Epitaphes, they might better call them Elegies, as I said before, and then ought neither to be engrauen nor hanged vp in tables. I haue seene them neuertheles vpon many honorable tombes of these late times erected, which doe rather disgrace then honour either the matter or maker.

CHAP. XXIX.

A certaine auncient forme of poesie by which men did vse to reproch their enemies.

As frendes be a rich a ioyfull possession, so be foes a continuall torment and canker to the minde of man, and yet there is no possible meane to auoide this inconuenience, for the best of vs all, & he that thinketh he liues most blamelesse, liues not without enemies, that enuy him for his good parts, or hate him for his euill. There be wise men, and of them the great learned man Plutarch that tooke vpon them to perswade the benefite that men receiue by their enemies, which though it may be true in manner of Paradoxe, yet I finde mans frailtie to be naturally such, and always hath beene, that he cannot conceiue it in his owne case, nor shew that patience and moderation in such greifs, as becommeth the man perfite and accomplit in all vertue: but either in deede or by word, he will seeke reuenge against them that malice him, or practise his harmes, specially such foes as oppose themselues to a mans

loues. This made the auncient Poetes to inuent a meane to rid the gall of all such Vindicatiue men: so as they might be a wrecked of their wrong, & neuer bely their enemie with slaunderous vntruthes. And this was done by a maner of imprecation, or as we call it by cursing and banning of the parties, and wishing all euill to a light vpon them, and though it neuer the sooner happened, yet was it great easment to the boiling stomacke: They were called Dirae, such as Virgill made against Battarus, and Ouide against Ibis: we Christians are forbidden to vse such vncharitable fashions, and willed to referre all our reuenges to God alone.

CHAP. XXX.

Of short Epigrammes called Posies.

There be also other like Epigrammes that were sent vsually for new yeares giftes or to be Printed or put vpon their banketting dishes of suger plate, or of march paines, & such other dainty meates as by the curtesie & custome euery gest might carry from a common feast home with him to his owne house, & were made for the nonce, they were called Nenia or apophoreta, and neuer contained aboue one verse, or two at the most, but the shorter the better, we call them Posies, and do paint them now a dayes vpon the backe sides of our fruite trenchers of wood, or vse them as deuises in rings and armes and about such courtly purposes. So haue we remembered and set forth to your Maiestie very briefly, all the commended fourmes of the auncient Poesie, which we in our vulgare makings do imitate and vse vnder these common names: enterlude, song, ballade, carroll and ditty: borrowing them also from the French al sauing this word (song) which is our naturall Saxon English word. The rest, such as time and vsurpation by custome haue allowed vs out of the primitiue Greeke & Latine, as Comedie, Tragedie, Ode, Epitaphe, Elegie, Epigramme, and other moe. And we haue purposely omitted all nice or scholasticall curiosities not meete for your Maiesties contemplation in this our vulgare arte, and what we haue written of the auncient formes of Poemes, we haue taken from the best clerks writing in the same arte. The part that next followeth to wit of proportion, because the Greeks nor Latines neuer had it in vse, nor made any obseruation, no more then we doe of their feete, we may truly affirme, to haue bene the first deuisers thereof our selues, as [Greek: autodidaktoi], and not to haue borrowed it of any other by learning or imitation, and thereby trusting to be holden the more excusable if any thing in this our labours happen either to mislike, or to come short of th'authors purpose, because commonly the first attempt in any arte or engine artificiall is amendable, & in time by often experiences reformed. And so no doubt may this devise of ours be, by others that shall take the penne in hand after vs.

CHAP. XXXI.

Who in any age haue bene the most commended writers in our English Poesie, and the Authors censure giuen vpon them.

It appeareth by sundry records of bookes both printed & written, that many of our countrey men haue painfully trauelled in this part: of whose works some appeare to be but bare translations, other some matters of their owne inuention and very commendable, whereof some recitall shall be made in this place, to th'intent chiefly that their names should not be defrauded of such honour as seemeth due to them for hauing by their thankfull studies so much beautified our English tong (as at this day) it will be found our nation is in nothing inferiour to the French or Italian for copie of language, subtiltie of deuice, good method and proportion in any forme of poeme, but that they may compare with the most, and perchance passe a great many of them. And I will not reach aboue the time of king Edward the third, and Richard the second for any that wrote in English meeter: because before their times by reason of the late Normane conquest, which had brought into this Realme much alteration both of our langage and lawes, and there withall a certain martiall barbarousnes, whereby the study of all good learning was so much decayd, as long time after no man or very few entended to write in any laudable science: so as beyond that time there is litle or nothing worth commendation to be founde written in this arte. And those of the first age were Chaucer and Gower both of them as I suppose Knightes. After whom followed Iohn Lydgate the monke of Bury, & that nameles, who wrote the Satyre called Piers Plowman, next him followed Harding the Chronicler, then in king Henry th'eight times Skelton, (I wot not for what great worthines) surnamed the Poet Laureat. In the latter end of the same kings raigne

sprong vp a new company of courtly makers, of whom Sir Thomas Wyat th'elder & Henry Earle of Surrey were the two chieftaines, who hauing trauailed into Italie, and there tasted the sweete and stately measures and stile of the Italian Poesie as nouices newly crept out of the schooles of Dante Arioste and Petrarch, they greatly polished our rude & homely maner of vulgar Poesie, from that it had bene before, and for that cause may iustly be sayd the first reformers of our English meetre and stile. In the same time or not long after was the Lord Nicholas Vaux, a man of much facilitie in vulgar makings. Afterward in king Edward the sixths time came to be in reputation for the same facultie Thomas Sternehold, who first translated into English certaine Psalmes of Daud, and Iohn Hoywood the Epigrammatist who for the myrth and quicknesse of his conceits more then for any good learning was in him came to be well benefited by the king. But the principall man in this profession at the same time was Maister Edward Ferrys a man of no lesse mirth & felicitie that way, but of much more skil, & magnificence in this meeter, and therefore wrate for the most part to the stage, in Tragedie and sometimes in Comedie or Enterlude, wherein he gaued the king so much good recreation, as he had thereby many good rewardes. In Queenes Maries time flourished about any other Doctour Phaer one that was well learned & excellently well translated into English verse Heroicall certaine bookes of Virgils Aeneidos. Since him followed Maister Arthure Golding, who with no lesse commendation turned into English meetre the Metamorphosis of Ouide, and that other Doctour, who made the supplement to those bookes of Virgils Aeneidos, which Maister Phaer left vndone. And in her Maiesties time that now is are sprong vp an other crew of Courtly makers Noble men and Gentlemen of her Maiesties owne seruantes, who haue written excellently well as it would appeare if their doings could be found out and made publicke with the rest, of which number is first that noble Gentleman Edward Earle of Oxford, Thomas Lord of Bukhurst, when he was young, Henry Lord Paget, Sir Philip Sydney, Sir Walter Rawleigh, Master Edward Dyar, Maister Fulke Greuell, Gascon, Britton, Turberuille and a great many other learned Gentlemen, whose names I do not omit for enuie, but to auoyde tediousnesse, and who haue deserued no little commendation. But of them all particularly this is myne opinion, that Chaucer, with Gower, Lidgat and Harding for their antiquitie ought to haue the first place, and Chaucer as the most renowned of them all, for the much learning appeareth to be in him about any of the rest. And though many of his bookes be but bare translations out of the Latin & French, yet are they wel handled, as his bookes of Troilus and Cresseid, and the Romant of the Rose, whereof he translated but one halfe, the deuice was Iohn de Mehunes a French Poet, the Canterbury tales were Chaucers owne inuention as I suppose, and where he sheweth more the naturall of his pleasant wit, then in any other of his workes, his similitudes comparisons and all other descriptions are such as can not be amended. His meetre Heroicall of Troilus and Cresseid is very graue and stately, keeping the staffe of seuen, and the verse of ten, his other verses of the Canterbury tales be but riding ryme, neuertheless very well becoming the matter of that pleasaunt pilgrimage in which euery mans part is playd with much decency. Gower sauing for his good and graue moralities, had nothing in him highly to be commended, for his verse was homely and without good measure, his wordes strained much deale out of the French writers, his ryme wrested, and in his inuentions small subtiltie: the applications of his moralities are the best in him, and yet those many times very grossely bestowed, neither doth the substance of his workes sufficiently aunswere the subtiltie of his titles. Lydgat a translatur onely and no deuiser of that which he wrate, but one that wrate in good verse. Harding a Poet Epick or Historicall, handled himselfe well according to the time and maner of his subiect. He that wrote the Satyr of Piers Ploughman, seemed to haue bene a malcontent of that time, and therefore bent himselfe wholly to taxe the disorders of that age, and specially the pride of the Romane Clergy, of whose fall he seemeth to be a very true Prophet, his verse is but loose meetre, and his termes hard and obscure, so as in them is litle pleasure to be taken. Skelton a sharpe Satirist, but with more rayling and scoffery then became a Poet Lawreat, such among the Greekes were called Pantomimi, with vs Buffons, altogether applying their wits to Scurrillities & other ridiculous matters. Henry Earle of Surrey and Sir Thomas Wyat, betweene whom I finde very litle difference, I repute them (as before) for the two chief lanternes of light to all others that haue since employed their penes vpon English Poesie, their conceits were loftie, their stiles stately, their conueyance cleanly, their termes proper, their meetre sweete and well proportioned, in all imitating very naturally and studiously their Maister Francis Petrarcha. The Lord Vaux his commendation lyeth chiefly in the facilitie of his meetre, and the aptnesse of his descriptions such as he taketh vpon him to make, namely in sundry of his Songs, wherein he sheweth the counterfait action very liuely & pleasantly. Of the later sort I thinke thus. That for Tragedie, the Lord of Buckhurst, & Maister Edward Ferrys for such doings as I haue sene of theirs do deserue the hiest price: Th'Earle of Oxford and Maister Edwardes of her Maiesties Chappell for Comedie and Enterlude. For Eglogue and pastorall Poesie, Sir Philip Sydney and Maister Challenner, and that other Gentleman who wrate the late shepherdes Callender. For dittie and amorous Ode I finde Sir Walter Rawleyghs vayne most loftie, insolent, and passionate. Maister Edward Dyar, for Elegie most sweete, solempne and of high conceit. Gascon for a good meeter and for a plentifull vayne. Phaer and Golding for a learned and well corrected verse, specially in translation cleare and very faithfully answering their

authours intent. Others haue also written with much facilitie, but more commendably perchance if they had not written so much nor so popularly. But last in recitall and first in degree is the Queene our soueraigne Lady, whose learned, delicate, noble Muse, easily surmounteth all the rest that haue written before her time or since, for sence, sweetnesse and subtiltie, be it in Ode, Elegie, Epigram, or any other kinde of poeme Heroick or Lyricke, wherein it shall please her Maiestie to employ her penne, euen by as much oddes as her owne excellent estate and degree exceedeth all the rest of her most humble vassalls.

THE SECOND BOOKE, OF PROPORTION POETICAL.

CHAP. I.

Of Proportion Poeticall.

It is said by such as professe the Mathematicall sciences, that all things stand by proportion, and that without it nothing could stand to be good or beautiful. The Doctors of our Theologie to the same effect, but in other termes, say: that God made the world by number, measure and weight: some for weight say tune; and peradventure better. For weight is a kind of measure or of much conueniencie with it: and therefore in their descriptions be alwayes coupled together (statica & metrica) weight and measures. Hereupon it seemeth the Philosopher gathers a triple proportion, to wit, the Arithmetical, the Geometrical, and the Musical. And by one of these three is euery other proportion guided of the things that haue conueniencie by relation, as the visible by light colour and shadow: the audible by stirres, times and accents: the odorable by smelles of sundry temperaments: the tastible by sauours to the rate: the tangible by his obiectes in this or that regard. Of all which we leaue to speake, returning to our poetical proportion, which holdeth of the Musical, because as we sayd before Poesie is a skill to speake & write harmonically: and verses or rime be a kind of Musickall vtterance, by reason of a certaine congruities in sounds pleasing the eare, though not perchance so exquisitely as the harmonickal concerts of the artificial Musicke, consisting in strained tunes, as is the vocall Musike, or that of melodious instruments, as Lutes, Harpes, Regals, Records and such like. And this our proportion Poeticall resteth in fiue points: Staffe, Measure, Concord, Scituation and figure all which shall be spoken of in their places.

CHAP. II.

Of proportion in Staffe.

Staffe in our vulgare Poesie I know not why it should be so called, unless it be for that we vnderstand it for a bearer or supporter of a song or ballad, not vnlike the old weake bodie, that is stayed vp by his staffe, and were not otherwise able to walke or to stand vpriht. The Italian called it Stanza, as if we should say a resting place: and if we consider well the forme of this Poeticall staffe, we shall finde it to be a certaine number of verses allowed to go altogether and ioyne without any intermission, and doe or should finish vp all the sentences of the same with a full period, vnlesse it be in som special cases, & there to stay till another staffe follow of like sort: and the shortest staffe containeth not vnder foure verses, nor the longest aboue ten, if it passe that number it is rather a whole ditty then properly a staffe. Also for the more part the staues stand rather vpon the euen number of verses then the odde, though there be of both sorts. The first proportion then of a staffe is by quadrien or foure verses. The second of fiue verses, and is seldome vsed. The third by sizeine or sixe verses, and is not only most vsual, but also very pleasant to th'eare. The fourth is in seven verses, & is the chiefe of our ancient proportions vsed by any rimer writing any thing of historical or graue poeme, as ye may see in Chaucer and Lidgate th'one writing the loues of Troylus and Cresseida, th'other of the fall of Princes: both by them translated not deuised. The first proportion is of eight verses very stately and Heroicke, and which I like better then that of seuen, because it receaueth better band. The fixt is of nine verses, rare but very graue. The seuenth proportion is of tenne verses, very stately, but in many mens opinion too long: neuerthelesse of very good grace & much grautie. Of eleuen and twelue I find none ordinary staues vsed in any vulgar language, neither doth it serue well to continue any historical report or ballade, or other song: but is a ditty of it self, and no staffe, yet some moderne writers haue vsed it but very seldome. Then last of all haue ye a

proportion to be vsed in the number of your staues, as to a caroll and a ballade, to a song, & a round, or virelay. For to an historically poeme no certain number is limited, but as the matter fals out: also a distick or couple of verses is not to be accompted a staffe, but serues for a continuance as we see in Elegie, Epitaph, Epigramme or such meetres, of plaine concord not harmonically entertangled, as some other songs of more delicate musick be.

A staffe of foure verses containeth in it selfe matter sufficient to make a full periede or complement of sence, though it doe not alwayes so, and therefore may go by diuisions.

A staffe of fiue verses, is not much vsed because he that can not comprehend his periede in foure verses, will rather driue it into six then leaue it in fiue, for that the euen number is more agreeable to the eare then the odde is.

A staffe of sixe verses, is very pleasant to the eare, and also serueth for a greater complement then the inferiour staues, which maketh him more commonly to be vsed.

A staffe of seuen verses, most vsuall with our auncient makers, also the staffe of eight, nine and ten of larger complement then the rest, are onely vsed by the later makers, & vnlesse they go with very good bande, do not so well as the inferiour staues. Therefore if ye make your staffe of eight, by two fowers not entertangled, it is not a huitaine or a staffe of eight, but two quadreins, so is it in ten verses, not being entertangled they be but two staues of fiue.

CHAP. III.

Of proportion in measure.

Meeter and measure is all one, for what the Greekes call [Greek: metron], the Latines call Mensura, and is but the quantitie of a verse, either long or short. This quantitie with them consisteth in the number of their feete: & with vs in the number of sillables, which are comprehended in euery verse, not regarding his feete, otherwise then that we allow in scanning our verse, two sillables to make one short portion (suppose it a foote) in euery verse. And after that sort ye may say, we haue feete in our vulgare rymes, but that is improperly: for a foote by his sence naturall is a member of office and function, and serueth to three purposes, that is to say, to go, to runne, & to stand still so as he must be sometimes swift, sometimes slow, sometime vnegally marching or peradventure stedly. And if our feete Poeticall want these qualities it can not be sayd a foote in sence translative as here. And this commeth to passe, by reason of the euident motion and stirre, which is perceiued in the sounding of our wordes not alwayes egall: for some aske longer, some shorter time to be vttered in, & so by the Philosophers definition, stirre is the true measure of time. The Greekes & Latines because their wordes hapned to be of many sillables, and very few of one sillable, it fell out right with them to conceiue and also to perceiue, a notable diuersitie of motion and times in the pronuntiation of their wordes, and therefore to euery bissillable they allowed two times, & to a trissillable three times, & to euery polisillable more, according to his quantitie, & their times were some long, some short according as their motions were slow or swift. For the sound of some sillable stayd the eare a great while, and others slid away so quickly, as if they had not bene pronounced, then euery sillable being allowed one time, either short or long, it fell out that euery tetrasillable had foure times, euery trissillable three, and the bissillable two by which obseruation euery word, not vnder that sise, as he ranne or stood in a verse, was called by them a foote of such and so many times, namely the bissillable was either of two long times as the spondeus, or two short, as the pirchius, or of a long & a short as the trocheus, or of a short and a long as the iambus: the like rule did they set vpon the word trissillable, calling him a foote of three times: as the dactilus of a long and two short: the mollossus of three long, the tribracchus of three short, the amphibracchus of two long and a short, the amphimacer of two short and a long. The word of foure sillables they called a foote of foure times, some or all of them, either long or short: and yet not so content they mounted higher, and because their wordes serued well thereto, they made feete of sixe times: but this proceeded more of curiositie, then otherwise: for whatsoever foote passe the trissillable is compounded of his inferiour as euery number Arithmetically aboue three, is compounded of the inferiour numbers as twise two make foure, but the three is made of one number, videl. of two and an vnitie. Now because our naturall & primitive language of the Saxon English, beares not any wordes (at least very few) of more sillables then one (for whatsoever we see exceede, commeth to vs by the alterations of our language growen vpon many conquestes and otherwise)

there could be no such obseruation of times in the sound of our wordes, & for that cause we could not haue the feete which the Greeks and Latines haue in their meetres: but of this stirre & motion of their deuised feete, nothing can better shew the qualitie then these runners at common games, who setting forth from the first goale, one giueth the start speedely & perhaps before he come half way to th'other goale, decayeth his pace, as a man weary & fainting: another is slow at the start, but by amending his pace keepes euen with his fellow or perchance gets before him: another one while gets ground, another while loseth it again, either in the beginning, or middle of his race, and so proceedes vnegally sometimes swift sometimes slow as his breath or forces serue him: another sort there be that plod on, & will neuer change their pace, whether they win or lose the game: in this maner doth the Greeke dactilus begin slowly and keepe on swifter till th'end, for his race being deuided into three parts, he spends one, & that is the first slowly, the other twaine swiftly: the anapestus his two first parts swiftly, his last slowly: the Molossus spends all three parts of his race slowly and egally Bacchius his first part swiftly, & two last parts slowly. The tribrachus all his three parts swiftly: the antibacchius his two first partes slowly, his last & third swiftly: the amphimacer, his first & last part slowly & his middle part swiftly: the amphibracus his first and last parts swiftly but his midle part slowly, & so of others by like proportion. This was a pretie phantasticall obseruation of them, & yet brought their meetres to haue a maruelous good grace, which was in Greeke called [Greek: rithmos]: whence we haue deriued this word ryme, but improperly & not wel because we haue no such feete or times or stirres in our meeters, by whose simparchie, or pleasant conueniencie with th'eare, we could take any delight: this rithmus of theirs, is not therfore our rime, but a certaine musicall numerositie in vtterance, and not a bare number as that of the Arithmetically computation is, which therefore is not called rithmus but arithmus. Take this away from them, I meane the running of their feete, there is nothing of curiositie among them more then with vs nor yet so much.

CHAP. III.

How many sorts of measures we use in our vulgar.

To returne from rime to our measure againe, it hath bene sayd that according to the number of the sillables contained in euery verse, the same is sayd a long or short meeter, and his shortest proportion is of foure sillables, and his longest of twelue, they that vse it aboue, passe the bounds of good proportion. And euery meeter may be aswel in the odde as in the euen sillable, but better in the euen, and one verse may begin in the euen, & another follow in the odde, and so keepe a commendable proportion. The verse that containeth but two sillables which may be in one word, is not vsuall: therefore many do deny him to be a verse, saying that it is but a foot, and that a meeter can haue no lesse then two feete at the least, but I find it otherwise aswell among the best Italian Poets, as also with our vulgar makers, and that two sillables serue wel for a short measure in the first place, and midle, and end of a staffe: and also in diuerse scituations and by sundry distances, and is very passionate and of good grace, as shalbe declared more at large in the Chapter of proportion by scituation.

The next measure is of two feete or of foure sillables, and then one word tetrasillable diuided in the middest makes vp the whole meeter, as thus Re-ue- re-ntli-e

Or a trissillable and one monosillable thus. Soueraine God, or two bissillables and that is pleasant thus, Restore againe, or with foure monosillables, and that is best of all thus, When I doe thinke, I finde no fauour in a meetre of three sillables nor in effect in any odde, but they may be vsed for varietie sake, and specially being enterlaced with others the meetre of six sillables is very sweete and delicate as thus. O God when I behold This bright heauen so hie By thine owne hands of old Contrivd so cunningly.

The meter of seuen sillables is not vsual, no more is that of nine and eleuen, yet if they be well composed, that is, their Cesure well appointed, and their last accent which makes the concord, they are commendable inough, as in this ditty where one verse is of eight an other is of seuen, and in the one the accent vpon the last, in the other vpon the last saue on. The smoakie sighes, the bitter teares That I in vaine haue wasted The broken sleepes, the woe and feares That long time haue lasted Will be my death, all by thy guilt And not by my deseruing Since so inconstantly thou wilt Not loue but still be sweruing.

And all the reason why these meeters in all sillable are allowable is, for that the sharpe accent falles vpon the penultima or last saue one sillable of the verse, which doth so drowne the last, as he seemeth to passe away in maner vnpronounced, & so make the verse seeme euen: but if the accent fall vpon the last and leaue two flat to finish the verse, it will not feeme so: for the odnes will more notoriously appeare, as for example in the last verse before recited Not loue but still be sweruing, say thus Loue it is a maruelous thing. Both verses be of egall quantitie, vidz. seauen sillables a peece, and yet the first seemes shorter then the later, who shewes a more odnesse then the former by reason of his sharpe accent which is vpon the last sillable, and makes him more audible then if he had slid away with a flat accent, as the word swéruing.

Your ordinarie rimers vse very much their measures in the odde as nine and eleuen, and the sharpe accent vpon the last sillable, which therefore makes him go ill fauouredly and like a minstrels musicke. Thus sayd one in a meeter of eleven very harshly in mine eare, whether it be for lacke of good rime or of good reason, or of both I wot not. Now sucke childe and sleepe childe, thy mothers owne ioy Her only sweete comfort, to drowne all annoy For beauty surpassing the azured skie I loue thee my darling, as ball of mine eye.

This sort of compositiō in the odde I like not, vnlesse it be holpen by the Cesure or by the accent as I sayd before.

The meeter of eight is no lesse pleasant then that of sixe, and the Cesure fals iust in the middle, as this of the Earle of Surreyes. When raging loue, with extreme payne.

The meeter of ten sillables is very stately and Heroicall, and must haue his Cesure fall vpon the fourth sillable, and leaue sixe behind him thus. I serue at ease, and gouerne all with woe.

This meeter of twelue sillables the French man calleth a verse Alexandrine, and is with our moderne rimers most usuall: with the auncient makers it was not so. For before Sir Thomas Wiats time they were not vsed in our vulgar, they be for graue and stately matters fitter than for any other ditty of pleasure. Some makers write in verses of foureteene sillables giuing the Cesure at the first eight, which proportion is tedious, for the length of the verse kepeth the eare too long from his delight, which is to heare the cadence or the tuneable accent in the ende of the verse. Neuerthelesse that of twelue if his Cesure be iust in the middle, and that ye suffer him to runne at full length, and do not as the common rimers do; or their Printer for sparing of paper, cut them of in the midst, wherein they make in two verses but halfe rime. They do very wel as wrote the Earle of Surrey translating the booke of the preacher. Salomon Davids sonne, king of Ierusalem.

This verse is a very good Alexandrine, but perchance woulde haue sounded more musically, if the first word had bene a dissillable, or two monosillables and not a trissillable: hauing his sharpe accent vpon the Antepenultima as it hath, by which occasion it runnes like a Dactill, and carries the two later sillables away so speedily as it seemes but one foote in our vulgar measure, and by that meanes makes the verse seeme but of eleuen sillables, which odnesse is nothing pleasant to the eare. Iudge some body whether it would haue done better (if it might) haue bene fayd thus, Robóham Dauids sonne, king of Ierusalem. Letting the sharpe accent fall vpon bo, or thus Restóre king Dáuids sónné vntó Ierúsalm. For now the sharpe accent falles vpon bo, and so doth it vpon the last in restóre, which was not in th'other verse. But because we haue seemed to make mention of Cesure, and to appoint his place in euery measure, it shall not be amisse to say somewhat more of it, & also of such pauses as are vsed in vtterance, & what commoditie or delectation they bring either to the speakers or to the hearers.

CHAP. III.

Of Cesure.

There is no greater difference betwixt a ciuill and brutish vtterance then cleare distinction of voices: and the most laudable languages are alwaies most plaine and distinct, and the barbarous most confuse and indistinct: it is therefore requisit that leasure be taken in pronuntiation, such as may make our wordes plaine & most audible and agreeable to the eare: also the breath asketh to be now and then releued with some pause or stay more or lesse: besides that the very nature of speach (because it goeth by clauses of seuerall construction & sence) requireth some

space betwixt them with intermission of sound, to th'end they may not huddle one vpon another so rudly & so fast that th'eare may not perceiue their difference. For these respectes the auncient reformers of language, inuented, three maner of pauses, one of lesse leasure then another, and such seuerall intermissions of sound to serue (besides easment to the breath) for a treble distinction of sentences or parts of speach, as they happened to be more or lesse perfect in sence. The shortest pause or intermission they called comma as who would say a peece of a speach cut of. The second they called colon, not a peece but as it were a member for his larger length, because it occupied twice as much time as the comma. The third they called periodus, for a complement or full pause, and as a resting place and perfection of so much former speach as had bene vttered, and from whence they needed not to passe any further vnles it were to renew more matter to enlarge the tale. This cannot be better represented then by example of these common traualers by the hie ways, where they seeme to allow themselues three maner of staies or easements: one a horsebacke calling perchance for a cup of beere or wine, and hauing dronken it vp rides away and neuer lights: about noone he commeth to his Inne, & there baites him selfe and his horse an houre or more: at night when he can conueniently trauaile no further, he taketh vp his lodging, and rests him selfe till the morrow: from whence he followeth the course of a further voyage, if his business be such. Euen so our Poet when he hath made one verse, hath as it were finished one dayes iourney, & the while easeth him selfe with one baite at the least, which is a Comma or Cesure in the mid way, if the verse be euen and not odde, otherwise in some other place, and not iust in the middle. If there be no Cesure at all, and the verse long, the lesse is the makers skill and hearers delight. Therefore in a verse of twelue sillables the Cesure ought to fall right vpon the sixt sillable: in a verse of eleuen vpon the sixt also leauing fwe to follow. In a verse of ten vpon the fourth, leauing sixe to follow. In a verse of nine vpon the fourth, leauing fwe to follow. In a verse of eight iust in the midst, that is, vpon the fourth. In a verse of seauen, either vpon the fourth or none at all, the meeter very ill brooking any pause. In a verse of sixe sillables and vnder is needefull no Cesure at all, because the breath asketh no reliefe: yet if ye giue any Comma, it is to make distinction of sence more then for any thing else: and such Cesure must neuer be made in the midst of any word, if it be well appointed. So may you see that the vse of these pawses or distinctions is not generally with the vulgar Poet as it is with the Prose writer because the Poetes cheife Musicke lying in his rime or concorde to heare the Simphonie, he maketh all the hast he can to be at an end of his verse, and delights not in many staves by the way, and therefore giueth but one Cesure to any verse: and thus much for the sounding of a meetre. Neuerthesse he may vse in any verse both his comma, colon, and interrogatiue point, as well as in prose. But our auncient rymers, as Chaucer, Lydgate & others, vsed these Cesures either very seldome, or not at all, or else very licentiously, and many times made their meetres (they called them riding ryme) of such vnshapely wordes as would allow no conuenient Cesure, and therefore did let their rymes runne out at length, and neuer stayd till they came to the end: which maner though it were not to be misliked in some sort of meetre, yet in euery long verse the Cesure ought to be kept precisely, if it were but to serue as a law to correct the licentiousnesse of rymers, besides that it pleaseth the eare better, & sheweth more cunning in the maker by following the rule of his restraint. For a rymers that will be tyed to no rules at all, but range as he list, may easily vtter what he will: but such maner of Poesie is called in our vulgar, ryme dogrell, with which rebuke we will in no case our maker should be touched. Therefore before all other things let his ryme and concord be true, cleare, and audible with no lesse delight, then almost the strayed note of a Musicians mouth, & not darke or wrenched by wrong writing as many doe to patch vp their meetres, and so follow in their arte neither rule, reason, nor ryme. Much more might be sayd for the vse of your three pauses, comma, colon, & periode, for perchance it be not all a matter to vse many commas, and few, nor colons likewise, or long or short periodes, for it is diuersly vsed, by diuers good writers. But because it apperteineth more to the oratour or writer in prose then in verse, I will say no more in it, then thus, that they be vsed for a commodious and sensible distinction of clauses in prose, since euery verse is as it were a clause of it selfe and limited with a Cesure howsoeuer the sence beare, perfect or imperfect, which difference is obseruable betwixt the prose and the meeter.

CHAP. V.

Of Proportion in Concord, called Symphonie or rime.

Because we vse the word rime (though by maner of abusion) yet to helpe that fault againe we apply it in our vulgar Poesie another way very commendably & curiously. For wanting the currantnesse of the Greeke and Latine feete, in stead thereof we make in th'ends of our verses a certaine tunable sound: which anon after with another

verse reasonably distant we accord together in the last fall or cadence: the eare taking pleasure to heare the like tune reported, and to feele hie returne. And for this purpose serue the monosillables of our English Saxons excellently well, because they do naturally and indifferently receiue any accent, & in them if they finish the verse, resteth the shrill accent of necessitie, and so doth it not in the last of euery bissillable, nor of euery polisillable word: but to the purpose, ryme is a borrowed word from the Greekes by the Latines and French, from them by vs Saxon angles and by abusio as hath bene sayd, and therefore it shall not do amisse to tell what this rithmos was with the Greekes, for what is it with vs hath bene already sayd. There is an accomptable number which we call arithmetically (arithmos) as one, two, three. There is also a musicall or audible number, fashioned by stirring of tunes & their sundry times in the vtterance of our wordes, as when the voice goeth high or low, or sharpe or flat, or swift or slow: & this is called rithmos or numerositie, that is to say, a certaine flowing vtterance by slipper words and sillables, such as the young easily vtters, and the eare with pleasure receiueth, and which flowing of wordes with much volubilitie smoothly proceeding from the mouth is in some sort harmonically and breedeth to th'eare a great compasiion. This point grew by the smooth and delicate running of their feete, which we haue not in our vulgare, though we use as much as may be the most flowing words & slippery sillables, that we can picke out: yet do not we call that by the name of ryme, as the Greekes did: but do give the name of ryme onely to our concordes, or tunable consentes in the latter end of our verses, and which concords the Greekes nor Latines neuer vsed in their Poesie till by the barbarous souldiers out of the campe, it was brought into the Court and thence to the schoole, as hath bene before remembred: and yet the Greekes and Latines both vsed a maner of speach, by clauses of like termination, which they called [Greek: illegible] and was the nearest that they approached to our ryme: but is not our right concord: so as we in abusing this terme (ryme) be neuertheless excusable applying it to another point in Poesie no lesse curious then their rithme or numerositie which in deede passed the whole verse throughout, whereas our concordes keepe but the latter end of euery verse, or perchance the middle and the end in metres that be long.

CHAP. VI.

Of accent, time and stir perceiued euidently in the distinction of mans voice, and which makes the flowing of a meeter.

Nowe because we haue spoken of accent, time and stirre or motion in wordes, we will set you downe more at large what they be. The auncient Greekes and Latines by reason their speech fell out originally to be fashioned with words of many syllables for the most part, it was of necessity that they could not vtter euery sillable with one like and egall sounde, nor in like space of time, nor with like motion or agility: but that one must be more suddenly and quickly forsaken, or longer pawsed vpon then another: or sounded with a higher note & clearer voyce then another, and of necessitie this diuersitie of sound, must fall either vpon the last sillable, or vpon the last saue one, or vpon the third and could not reach higher to make any notable difference; it caused them to giue vnto three different sounds three seuerall names: to that which was highest lift vp and most eleuate or shrillest in the eare, they gaue the name of the sharpe accent, to the lowest and most base because it seemed to fall downe rather then to rise vp, they gaue the name of the heauy accent, and that other which seemed in part to lift vp and in part to fall downe, they called the circumflex, or compast accent: and if new termes were not odious, we might very properly call him the (windabout) for so is the Greek word. Then bycause euery thing that by nature fals down is said heauy, & whatsoever naturally mounts upward is said light, it gaue occasion to say that there were diuersities in the motion of the voice, as swift & slow, which motion also presupposes time, by cause time is mensura motus, by the Philosopher: so haue you the causes of their primitiue inuention and vse in our arte of Poesie, all this by good obseruation we may perceiue in our vulgar wordes if they be of mo sillables then one, but specially if they be trissillables, as for example in these wordes [altitude] and [heauinesse] the sharpe accent falles vpon [al] & [he] which be the antepenultimaes: the other two fall away speedily as if they were scarce founded in this trissillable [forsaken] the sharp accent fals vpon [sa] which is the penultima, and in the other two is heauie and obscure. Againe in these bisillables, endüre, unsüre, demüre, aspüre, desüre, retire, your sharpe accent falles vpon the last sillable: but in words monosillable which be for the more part our naturall Saxon English, the accent is indifferent, and may be vsed for sharp or flat and heauy at our pleasure. I say Saxon English, for our Normane English alloweth vs very many bissillables, and also triffillables as, reuerence, diligence, amorous, desirous, and such like.

CHAP. VII.

Of your Cadences by which your meeter is made Symphonically when they be sweetest and most solemne in a verse.

As the smoothnesse of your words and sillables running vpon feete of sundrie qualities, make with the Greekes and Latines the body of their verses numerous or Rithmicall, so in our vulgar Poesie, and of all other nations at this day, your verses answering eche other by couples, or at larger distances in good [cadence] is it that maketh your meeter symphonically. This cadence is the fall of a verse in euery last word with a certaine tunable sound which being matched with another of like sound, do make a [concord.] And the whole cadence is contained sometime in one sillable, sometime in two, or in three at the most: for aboute the antepenultima there reacheth no accent (which is chiefe cause of the cadence) vnlesse it be vsurpation in some English words, to which we giue a sharpe accent vpon the fourth as, Hónorable, mátrimonie, pátrimonie, miserable, and such other as would neither make a sweete cadence, nor easily find any word of like quantitie to match them. And the accented sillable with all the rest vnder him make the cadence, and no sillable aboute, as in these words, Agillitie, facillitie, subiéction, diréction, and these bissillables, Téndér, sléndér, trústie, lústie, but alwayes the cadence which falleth vpon the last sillable of a verse is sweetest and most commendable: that vpon the penultima more light, and not so pleasant: but falling vpon the antepenultima is most vnpleasant of all, because they make your meeter too light and triuiall, and are fitter for the Epigrammatist or Comicall Poet then for the Lyrick and Elegiack, which are accompted the sweeter Musickes. But though we haue sayd that (to make good concored) your seuerall verses should haue their cadences like, yet must there be some difference in their orthographie, though not in their sound, as if one cadence be [constraine] the next [restraine] or one [aspire] another [respire] this maketh no good concord, because they are all one, but if ye will exchange both these consonants of the accented sillable, or voyde but one of them away, then will your cadences be good and your concord to, as to say, restraine, refraine, remaine: aspire, desire, retire: which rule neuerthelesse is not well obserued by many makers for lacke of good iudgement and a delicate eare. And this may suffice to shew the vse and nature of your cadences, which are in effect all the sweetnesse and cunning in our vulgar Poesie.

CHAP. VIII

How the good maker will not wrench his word to helpe his rime, either by falsifying his accent, or by untrue orthographie.

Now there can not be in a maker a fowler fault then to falsifie his accent to serue his cadence, or by untrue orthographie to wrench his words to helpe his rime, for it is a signe that such a maker is not copious in his owne language, or (as they are wont to say) not halfe his crafts maister: as for example, if one should rime to this word [Restore] he may not match him with [Doore] or [Poore] for neither of both are of like terminant, either by good orthography or in naturall sound, therefore such rime is strained, so is it to this word [Ram] to say [came] or to [Beane [Den] for they sound not nor be written alike, & many other like cadences which were superfluous to recite, and are vsuall with rude rimers who obserue not precisely the rules of [prosodie] neuerthelesse in all such cases (if necessitie constrained) it is somewhat more tolerable to help the rime by false orthographie, than to leaue an unpleasant dissonance to the eare, by keeping trewe orthographie and loosing the rime, as for example it is better to rime [Dore] with [Restore] then in his truer orthographie, which is [Doore] and to this word [Desire] to say [Fier] then fyre though it be otherwise better written fire. For since the cheife grace of our vulgar Poesie consisteth in the Symphonie, as hath bene already sayd, our maker must not be too licentious in his concords, but see that they go euen, iust and melodious in the eare, and right so in the numerositie or currantnesse of the whole body of his verse, and in euery other of his proportions. For a licentious maker is in truth but a bungler and not a Poet. Such men were in effect the most part of all your old rimers and specially Gower, who to make vp his rime would for the most part write his terminant sillable with false orthographie, and many times not sticke to put in a plaine French word for an English, & so by your leaue do many of our common rimers at this day: as he that by all likelyhood, hauing no word at hand to rime to this word [ioy] he made his other verse ende in [Roy] saying very impudently thus, O mightie Lord of loue, dame Venus onely ioy Who art the highest God of any heauenly Roy. Which word was neuer yet receiued in our language for an English word. Such extreme licentiousnesse is vtterly to be banished from

our schoole, and better it might haue bene borne with in old riming writers, bycause they liued in a barbarous age, & were graue morall men but very homely Poets, such also as made most of their workes by translation out of the Latine and French tounge, & few or none of their owne engine as may easely be knowen to them that list to looke vpon the Poemes of both languages.

Finally as ye may ryme with wordes of all sortes, be they of many sillables or few, so neuerthelesse is there a choise by which to make your cadence (before remembred) most commendable, for some wordes of exceeding great length, which haue bene fetched from the Latine inkhorne or borrowed of strangers, the vse of them in ryme is nothing pleasant, sauing perchaunce to the common people, who reioyce much to be at playes and enterludes, and besides their naturall ignoraunce, haue at all such times their eares so attentiu to the matter, and their eyes vpon the shewes of the stage, that they take little heede to the cunning of the rime, and therefore be as well satisfied with that which is grosse, as with any other finer and more delicate.

Chap. IX.

Of Concorde in long and short measures, and by neare or farre distaunces, and which of them is most commendable.

But this ye must obserue withall, that bycause your concords containe the chief part of Musicke in your meetre, their distaunces may not be too wide or farre asunder, lest th'eare should loose the tune, and be defrauded of his delight, and whensoever ye see any maker vse large and extraordinary distaunces, ye must thinke he doth intende to shew himselfe more artificiall then popular, and yet therein is not to be discommended, for respects that shalbe remembred in some other place of this booke.

Note also that rime or concorde is not commendably vsed both in the end and middle of a verse, vnlesse it be in toyes and trifling Poesies, for it sheweth a certaine lightnesse either of the matter or of the makers head, albeit these common rimers vse it much, for as I sayd before, like as the Symphonie in a versse of great length, is (as it were) lost by looking after him, and yet may the meetre be very graue and stately: so on the other side doth the ouer busie and too speedy returne of one maner of tune, too much annoy & as it were glut the eare, vnlesse it be in small & popular Musickes song by these Cantabanqui vpon benches and barrells heads where they haue none other audience then boys or countrey fellowes that passe by them in the streete, or else by blind harpers or such like tauerne minstrels that giue a fit of mirth for a groat, & their matters being for the most part stories of old time, as the tale of Sir Topas, the reportes of Beuis of Southampton, Guy of Warwicke, Adam Bell, and Clymme of the Clough & such other old Romances or historicall rimes, made purposely for recreation of the common people at Christmasse diners & brideales, and in tauernes & alehouses and such other places of base resort, also they be vsed in Carols and rounds and such light or lasciuious Poemes, which are commonly more commodiously vttered by these buffons or vices in playes then by any other person. Such were the rimes of Skelton (vsurping the name of a Poet Laureat) being in deede but a rude rayling rimer & all his doings ridiculous, he vsed both short distaunces and short measures pleasing onely the popular eare: in our courtly maker we banish them vtterly. Now also haue ye in euery song or ditty concorde by compasse & concorde entertangled and a mixt of both, what that is and how they be vsed shalbe declared in the chapter of proportion by scituation.

CHAP. X

Of proportion by situation.

This proportion consisteth in placing of euery verse in a staffe or ditty by such reasonable distaunces, as may best serue the eare for delight, and also to shew the Poets art and variety of Musick, and the proportion is double. One by marshalling the meetres, and limiting their distaunces hauing regard to the rime or concorde how they go and returne: another by placing euery verse, hauing a regard to his measure and quantitie onely, and not to his concorde as to set one short meetre to three long, or foure short and two long, or a short measure and a long, or of diuers

lengthes with relation one to another, which maner of Situation, euen without respect of the rime, doth alter the nature of the Poesie, and make it either lighter or grauer, or more merry, or mournfull, and many wayes passionate to the eare and hart of the hearer, seeming for this point that our maker by his measures and concordes of sundry proportions doth counterfait the harmonically tunes of the vocall and instrumentall Musickes. As the Dorian because his falls, sallyes and compasse be diuers from those of the Phrigien, the Phrigien likewise from the Lydien, and all three from the Eolien, Miolidien, and Ionien, mounting and falling from note to note such as be to them peculiar, and with more or lesse leasure or precipitation. Euen so by diuersitie of placing and situation of your measures and concordes, a short with a long, and by narrow or wide distances, or thicker or thinner bestowing of them your proportions differ, and breedeth a variable and strange harmonie not onely in the eare, but also in the conceit of them that heare it, whereof this may be an ocular example.

[Illustration: diagram of four lines with line one connected to line three and line two connected to line four.]
 Scituation in Concord ----- \ -----) \ ----- /) ----- /

Scituation in Measure ----- ----- ----- ----- ----- -----
 ----- ----- ----- ----- ----- -----
 ----- ----- ----- ----- ----- -----

Where ye see the concord or rime in the third distance, and the measure in the fourth, sixth or second distances, where of ye may deuise as many others as ye list, so the staffe be able to beare it. And I set you downe an ocular example: because ye may the better conceiue it. Likewise it so falleth out most times your ocular proportion doeth declare the nature of the audible: for if it please the eare well, the fame represented by delineation to the view pleaseth the eye well and é conuerso: and this is by a naturall simpatie, betweene the eare and the eye, and betweene tunes & colours euen as there is the like betweene the other sences and their obiects of which it apperteineth not here to speake. Now for the distances vsually obserued in our vulgar Poesie, they be in the first second third and fourth verse, or if the verse be very short in the fift and sixt and in some maner of Musickes farre aboue.

And the first distance for the most part goeth all by distick or couples of verses agreeing in one cadence, and do passe so speedily away away and so often returne agayne, as their tunes are neuer lost, nor out of the eare, one couple supplying another so nye and so suddenly, and this is the most vulgar proportion of distance or situation, such as vsed Chaucer in his Canterbury tales, and Gower in all his workes.

[Illustration: diagram of four lines with line one connected to line two and line three connected to line four.]

Second distance is, when ye passe ouer one verse, and ioyne the first and the third, and so continue on till an other like distance fall in, and this is also usuall and common, as

[Illustration: diagram of four lines with line one connected to line three and line two connected to line four.]

Third distaunce is, when your rime falleth vpon the first and fourth verse ouerleaping two; this manner is not so common but pleasant and allowable inough.

[Illustration: diagram of four lines with line one connected to line four and line two connected to line three.]

In which case the two verses ye leaue out are ready to receiue their concordcs by the same distaunce or any other ye like better.

The fourth distaunce is by ouerskipping three verses and lighting vpon the fift, this manner is rare and more artificiall then popular, vnlesse it be in some special case, as when the meetres be so little and short as they make no shew of any great delay before they returne, ye shall haue example of both.

[Illustration: two diagrams: the first of five lines with line 1 connected to line 5 and lines 2, 3, and 4 connected; the second of ten lines with line 1 and 5 connected, lines 2 and 6 connected, lines 3 and 7 connected, lines 4 and 8 connected, lines 5 and 9 connected, and lines 8 and 10 connected.]

And these ten little meeters make but one Decameter at length.

---,---,---,---,---,---,---

There be larger distances also, as when the first concord falleth upon the sixth verse & is very pleasant if they be ioyned with other distances not so large as

[Illustration: diagram of six lines with lines 1 and 6 connected, line 2 and 5 connected, and lines 3 and 4 connected.]

There be also, of the seventh, eighth, tenth, and twelfth distance, but then they may not go thicke, but two or three such distances serue to proportion a whole song, and all betweene must be of other lesse distances, and these wide distaunces serue for coupling of slaues, or for to declare high and passionate or graue matter, and also for art: Petrarch hath giuen us examples hereof in his Canzoni, and we by lines of sundry lengths & and distances as followeth,

[Illustration: four diagrams: first of eight lines with lines 1 and 8 connected, 2 and 3 connected, 4 and 5 connected, and 6 and 7 connected; second of ten lines with lines 1 and 10 connected, 2 and 4 connected, 3 and 5 connected, 5 and 7 connected, 6 and 8 connected and 7 and 9 connected; third of twelve lines with lines 1 and 12 connected, 2 and 5 connected, 3 and 4 connected, and 6 and 9 connected, 7 and 8 connected, 9 and 12 connected, 10 and 11 connected; fourth of thirteen lines with 1 and 13 connected, 2 and 5 connected, 3 and 4 connected, 6 and 9 connected, 7 and 8 connected, 10 and 13 connected, and 11 and 12 connected.]

And all that can be objected against this wide distance is to say that the eare by loosing his concord is not satisfied. So is in deede the rude and popular eare but not the learned, and therefore the Poet must know to whose eare he maketh his rime, and accommodate himselfe thereto, and not giue such musicke to the rude and barbarous, as he would to the learned and delicate eare.

There is another sort of proportion used by Petrarche called the Seizino, not riming as other songs do, but by chusing sixe wordes out of which all the whole dittie is made, euery of those sixe commencing and ending his verse by course, which restraint to make the dittie sensible will try the makers cunning, as thus. -----)
(-----) (-----) (-----) (-----)

Besides all this there is in Situation of the concords two other points, one that it go by plaine and cleere compasse not intangled: another by enterweauing one with another by knots, or as it were by band, which is more or lesse busie and curious, all as the maker will double or redouble his rime or concords, and set his distances farre or nigh, of all which I will giue you ocular examples, as thus.

[Illustration: two diagrams: Concord in Plaine compasse, has four lines with 1 and 4 connected and 2 and 3 connected; Concord in Entertangle, has alternating lines connected - 1 and 3, 2 and 4, 3 and 5, etc.]

And first in a Quadreine there are but two proportions, for foure verses in this last sort coupled, are but two Disticks, and not a staffe quadreine or of foure.

[Illustration: three diagrams of four lines each: first, with lines 1 and 4 connected and lines 2 and 3 connected; second, with lines 1 and 3 connected and lines 2 and 4 connected; third, with lines 1 and 2 connected and lines 3 and 4 connected.]

The staffe of fieve hath seuen proportions, whereof some of them be harsher and vnpleasaunter to the eare then other some be.

[Illustration: seven diagrams of five lines each: first, connecting these pairs of lines - 1 with 3, 2 with 4, 3 with 5; second, connecting these pairs of lines - 1 with 4, 2 with 5, 3 with 4; third, connecting these pairs of lines - 1 with 2, 2 with 5, 3 with 4; fourth, connecting these pairs of lines - 1 with 4, 2 with 3, 4 with 5; fifth, connecting these pairs

of lines - 1 with 5, 2 with 3, 3 with 4; sixth, connecting these pairs of lines - 1 with 3, 2 with 4, 4 with 5; seventh, connecting these pairs of lines - 1 with 2, 2 with 4, 3 with 5.]

The Sixaine or staffe of sixe hath ten proportions, whereof some be vsuall, some not vsuall, and not so sweet one as another.

[Illustration: ten diagrams of six lines each: first, connecting these lines - 1 with 6, 2 with 5, 3 with 4; second, connecting these lines - 1 with 3, 2 with 4, 5 with 6; third, connecting these lines - 1 with 3, 2 with 6, 3 with 4 and 5; fourth, connecting these lines - 1 with 4, 2 with 5, 3 with 6; fifth, connecting these lines - 1 with 6, 2 with 4, 3 with 5; sixth, connecting these lines - 1 with 6, 2 with 3, 4 with 5; seventh, connecting these lines - 1 with 5, 2 with 6, 3 with 4; eighth, connecting these lines - 1 with 2, 5 and 6, 3 with 4; ninth, connecting these lines - 1 with 3, 2 with 5, 4 with 6; tenth, connecting these lines - 1 with 2 and 4, 3 with 5 and 6.]

The staffe of seuen verses hath seuen proportions, whereof one onley is the vsuall of our vulgar, and kept by our old Poets Chaucer and other in their historicall reports and other ditties: as in the last part of them that follow next.

[Illustration: eight diagrams of seven lines each: first, connecting these lines - 1 with 3, 2 with 4, 4 with 6, 5 with 7; second, connecting these lines - 1 with 3, 2 with 4, 3 with 5, 6 with 7; third, connecting these lines - 1 with 4, 2 with 3, 4 with 7, 5 with 6; fourth, connecting these lines - 1 with 2, 6 and 7, 3 with 4 and 5; fifth, connecting these lines - 1 with 7, 2 with 6, 3 with 4 and 5; sixth, connecting these lines - 1 with 2, 5 and 6, 3 with 4 and 7; seventh, connecting these lines - 1 with 4 and 7, 2 with 3, 5 and 6; eighth, connecting these lines - 1 with 2, 3 with 4 and 5, 6 with 7.]

The huitain or staffe of eight verses, hath eight proportions such as the former staffe, and is because he is longer, he hath one more then the sestaine.

The staffe of nine verses hath yet moe then the eight, and the staffe of ten more then the ninth and the twelfth, if such were allowable in ditties, more then any of them all, by reason of his largenesse receiuing moe compasses and enterweauings, alwayes considered that the very large distances be more artificiall, then popularly pleasant, and yet do giue great grace and grautie, and moue passion and affections more vehemently, as it is well to be obserued by Petrarcha his Canzoni.

Now ye may perceiue by these proportions before described, that there is a band to be giuen euery verse in a staffe, so as none fall out alone or vncoupled, and this band maketh that the staffe is sayd fast and not loose: euen as ye see in buildings of stone or bricke the mason giueth a band, that is a length to two breadths, & vpon necessitie diuers other sorts of bands to hold in the worke fast and maintaine the perpendicularitie of the wall: so in any staffe of seuen or eight or more verses, the coupling of the moe meeters by rime or concord, is the faster band: the fewer the looser band, and therefore in a huitaine he that putteth foure verses in one concord and foure in another concord, and in a dizaine fiue, sheweth him selfe more cunning, and also more copious in his owne language. For he that can find two words of concord, can not find foure or fiue or sixe, vnlesse he haue his owne language at will. Sometimes also ye are driuen of necessitie to close and make band more then ye would, lest otherwise the staffe should fall asunder and seeme two staues: and this is in a staffe of eight and ten verses: whereas without a band in the middle, it would seeme two quadriens or two quintaines, which is an error that many makers slide away with. Yet Chaucer and others in the staffe of seuen and sixe do almost as much a misse, for they shut vp the staffe with a disticke, concurring with none other verse that went before, and maketh but a loose rime, and yet bycause of the double cadence in the last two verses serue the eare well inough. And as there is in euery staffe, band, giuen to the verses by concord more or lesse busie: so is there in some cases a band giuen to euery staffe, and that is by one whole verse running alone throughout the ditty or ballade, either in the middle or end of euery staffe. The Greekes called such vncoupled verse Epimonie, the Latines Versus intercallaris. Now touching the situation of measures, there are as manie or more proportions of them which I referre to the makers phantasie and choise, contented with two or three ocular examples and no moe.

Which maner or proportion by situation of measures giueth more efficacie to the matter oftentimes then the concords them selues, and both proportions concurring together as they needes must, it is of much more beautie and force to the hearers mind.

To finish the learning of this diuision, I will set you downe one example of a dittie written extempore with this deuice, shewing not onley much promptnesse of wit in the maker, but also great arte and a notable memorie. Make me saith this writer to one of the comnpanie, so many strokes or lines with your pen as ye would haue your song containe verses: and let euery line beare his seuerall length, euen as ye would haue your verse of measure. Suppose of foure, fiue, sixe, or eight or more sillables, and set a figure of euerie number at th'end of the line, whereby ye may knowe his measure. Then where you will haue your rime or concord to fall, marke it with a compast stroke or semicircle passing ouer those lines, be they farre or neare in distance, as ye haue seene before described. And bycause ye shall not thinke the maker hath premeditated beforehand any such fashioned ditty, do ye your selfe make one verse whether it be of perfect or imperfect sense, and giue it him for a theame to make all the rest upon: if ye shall perceiue the maker do keepe the measures and rime as ye haue appointed him, and besides do make his dittie sensible and ensuant to the first verse in good reason, then may ye say he is his crafts maister. For if he were not of a plentiful discourse, he could not vpon the sudden shape an entire dittie vpon your imperfect theame or proposition in one verse. And if he were not copious in his language, he could not haue such store of wordes at commaundement, as should supply your concords. And if he were not of a maruelous good memory he could not obserue the rime and measures after the distances of your limitation, keeping with all grauitie and good sense in the whole dittie.

CHAP. XI.

Of Proportion in figure.

Your last proportion is that of figure, so called for that it yelds an ocular representation, your meeters being by good symmetricke reduced into certaine Geometricall figures, whereby the maker is restrained to keepe him within his bounds, and sheweth not onley more art, but serueth also much better for briefenesse and subtiltie of deuice. And for the same respect are also fittest for the pretie amourets in Court to entertaine their seruants and the time withall, their delicate wits requiring some commendable exercise to keepe them from idlenesse. I find not of this proportion, vsed by any of the Greeke or Latine Poets, or in any vulgar writer, sauing of that one forme which they cal Anacreens egge. But being in Italie conuersant with a certaine gentleman, who had long trauailed the Orientall parts of the world, and seene the Courts of the great Princes of China and Tartarie. I being very inquisitiue to know of the subtilties of those countreyes, and especially in matter of learning and of their vulgar Poesie, he told me that they are in all their inuentions most wittie, and haue the vse of Poesie or riming, but do not delight so much as we do in long tedious descriptions, and therefore when they will vtter any pretie conceit, they reduce it into metricall feet, and put it in forme of a Lozange or square, or such other figure, and so engrauen in gold, siluer, or iuorie, and sometimes with letters of ametist, rubie, emeralde or topas curiously cemented and peeced together, they sende them in chaines, bracelets, collars and girdles to their mistresses to weare for a remembrance. Some fewe measures composed in this sort this gentleman gaue me, which I translated word for word and as neere as I could followed both the phrase and the figure, which is somewhat hard to performe, because of the restraint of the figure from which ye may not digresse. At the beginning they will seeme nothing pleasant to an English eare, but time and vsage will make them acceptable inough, as it doth in all other new guises, be it for wearing of apparell or otherwise. The formes of your Geometricall figures be hereunder represented.

[Illustration: labelled diagrams of lines of different lengths (forming different shapes): The Lozange, called Rombus (diamond) The Fuzie or spindle, called Romboides (narrow diamond) The Triangle or Tricquet (pyramid) The Square or quadrangle (square) The Pillaster or Cillinder (tall rectangle) The Spire or taper, called piramis (tall pyramid) The Rondel or Sphere (circle) The egge or figure ouall (vertical egg) The Tricquet reuerst (triangle) The Tricquet displayed (hour-glass) The Taper reuersed (narrow triangle) The Rondel displayed (half circle upon the

other half) The Lozange reuersed (wide diamond \diamond) u The Egge displayed (half oval upon the other half - n)
The Lozange rabbated (hexagon).]

Of the Lozange.

The Lozange is a most beautifull figure, & fit for this purpose, being in his kind a quadrangle reuerst, with his point vpward like to a quarrell of glasse the Greekes and Latines both call it Rombus which may be the cause as I suppose why they also gaue that name to the fish commonly called the Turbot, who beareth iustly that figure, it ought not to containe about thirteene or fifteene or one & twentie meetres, & the longest furnisheth the middle angle, the rest passe vpward and downward, still abating their lengthes by one or two sillables till they come to the point: the Fuzie is of the same nature but that he is sharper and slenderer. I will giue you an example of two of those which my Italian friend bestowed vpon me, which as neare as I could I trnslated into the same figure obseruing the phrase of the Orientall speach word for word.

A great Emperour in Tartary whom they cal Can, for his good fortune in the wars & many notable conquests he had made, was surnamed Temir Cutzclewe, this man loued the Lady Kermesine, who presented him returning from the conquest of Corasoon (a great kindgom adioyning) with this Lozange made in letters of rubies & diamants entermingled thus:

Sound O Harpe Shril lie out Temir the stout Rider who with
sharpe Trenching slide of brite steele Hath made his feircest foes so feele All such as wrought him shame
or harme The strength of his braue right arme, Cleauing hard downe vnto the eyes The raw skulles of his
enemies Much honour hath he wonne By doughtie deedes done In Cora soon And all the
Worlde Round.

To which Can Temir answered in Fuzie, with letters of Emeralds and Ametists artificially cut and entermingled, thus

Five Sore batailes Manfully fought In blouddy fielde With bright blade in hand
Hath Temir won & forst to yeld Many a Captaine strong and stoute And many a king his Crowne to vayle,
Conquering large countreys and land, Yet ne uer wanne I vic to rie I speake it to my greate glorie So
deare and ioy full vn to me, As when I did first con quere thee O Kerme sine, of all myne foes The most
cruell, of all myne woes The smartest, the sweetest My proude con quest My ri chest pray
O once a daye Lend me thy sight Whose only light Keepes me Alive.

Of the Triange or Triquet.

The triangle is an halfe square, Lozange or Fuzie parted vpon the crosse angles: and so his base being brode and his top narrow it receaueth meetres of many sizes one shorter then another: and ye may vse this figure standing or reuersed, as thus.

A certaine great Sultan of Persia called Ribuska, entertaynes in loue the Lady Selamour, sent her this triquet reuest pitiously bemoaning his estate, all set in merquetry with letters of blew Saphire and Topas artificially cut and entermingled.

Selamour dearer then his owne life To thy di stressed wretch cap tive, Ri buska whome late ly erst
Most cru el ly thou perst With thy dead ly dart, That paire of starres Shi ning a farre
Turne from me, to me That I may & may not see The smile, the loure That lead and driue Me
to die to liue Twise yea thrise In one hurre.

To which Selamour to make the match egall, and the figure entire, answered in a standing Triquet richly engrauen with letters of like stuffe.

Power Of death Nor of life Hath Selamour, With Gods it
is rife To giue and bereue breath I may for pitie perchaunce Thy lost libertie re - store, Vpon thine
othe with this penaunce, That while thou liuest thou neuer loue no more.

This condition seeming to Sultan Ribuska very hard to performe, and cruell to be enjoyned him, doeth by another figure a Taper, signifying hope, answerd the Lady Selamour, which dittie for lack of time I translated not.

Of the Spire or Taper called Pyramis.

The Taper is the longest and sharpest triangle that is, & while he mounts vpward he waxeth continually more slender, taking both his figure and name of the fire, whole flame if ye marke it, is alwaies pointed, and naturally by his forme couets to clymbe: the Greekes call him Pyramis. The Latines in vse of Architecture call him Obeliscus, it holdeth the altitude of six ordinary triangles, and in metrifying his base can not well be larger then a meetre of six, therefore in his altitude he will require diuers rabates to hold so many sizes of meetres as shall serue for his composition, for neare the toppe there wil be roome little inough for a meetre of two sillables, and sometimes of one to finish the point. I haue set you downe one or two examples to try how ye can digest the maner of the deuise.

Her Maiestie, for many parts in her most noble and vertuous nature to be found, resembled to the spire. Ye must begin beneath according to the nature of the deuice.

Skie, 1 ---- A zurd 2 in the assurde. ----- And better, 3 And richer,
Much greter, ----- Crowne & empir After an hier For to aspire 4 Like flames of fire In
formes of spire ----- To mount on hie, Con ti nu al ly With trauel & teen Most gracious
queen Ye haue made a vow 5 Shewes vs plainly how Not fained but true To euery mans vue Shining
cleere in you Of so bright an hewe Euen thus vertwe ----- Vanish out of our sight Till his
fine top be quite To taper in the ayre 6 Endeavors soft and faire By his kindly nature Of tall comely
stature Like as this faire figure

From God the fountaine of all good, are deriued into the world all good things: and vpon her maiestie all the good fortunes any worldly creature can be furnisht with. Reade downward according to the nature of the deuice.

1 God On Hie Frome 2 A bove Sends loue, Wise dome, Iu stice
Cou rage, Boun tie, 3 And doth geue All that liue Life & breath Harts ese helth
Children, welth Beauty strength Restfull age, And at length A mild death, 4 He doeth
bestowe All mens fortunes Both high & low And the best things That earth can haue Or
mankind craue, Good queens & kings Fi nally is the same Who gae you (madam) Seyson of
this Crowne With pouer soueraigne 5 Impug nable right, Redoubt able might, Most prosperous
raigne Eternall re nowne, And that your chiefest is Sure hope of heavens blis.

The Piller, Pillaster or Cillinder.

The Piller is a figure among all the rest of the Geometricall most beautifull, in respect that he is tall and vpriight and of one bignesse from the bottom to the toppe. In Architecture he is considered with two accessarie parts, a pedestall or base, and a chapter or head, the body is the shaft. By this figure is signified stay, support, rest, state and magnificence, your dittie then being reduced into the forme of a Piller, his base will require to beare the breath of a meetre of six or seuen or eight sillables: the shaft of foure: the chapter egall with the base, of this proportion I will giue you one or two examples which may suffice.

Her Maiestie resembled to the crowned piller, Ye must read vpward.

Is blisse with immortalitie. Her trymest top of all ye see, Garnish the crowne. Her iust renowne Chapter
and head, Parts that maintain And woman head Her mayden raigne In te gri tie: In ho nour and
with ve ri tie: Her roundnes stand Strengthen the state. By their increase With out de bate Concord
and peace Of her sup port, They be the base with stedfastnesse Vertue and grace Stay and comfort
Of Albi ons rest, The sounde Pillar And seene a farre Is plainly exprest Tall stately and strayt By this
no ble pour trayt

Philo to the Lady Calia, sendeth this Odolet of her prayse in forme of a Piller, which ye must read downward.

Thy princely port and Majestie Is my terrene dei tie, Thy wit and sense The streame & source Of eloquence
 And deepe discours, Thy faire eyes are My bright load starre, Thy speach a dart Percing my harte,
 Thy face a las, My looking glasse, Thy louely lookes My prayer bookes, Thy pleasant cheare
 My sunshine cleare Thy ruff sight My darke midnight, Thy will the stent Of my content,
 Thy glory flour Of myne honour, Thy loue doth giue The lyfe I lyve, Thy lyfe it is
 Mine earthly blisse: But grace & fauour in thine eyes My bodies soule & soules paradise.

The Roundell or Spheare.

The most excellent of all the figures Geometrical is the round for his many perfections. First because he is euen & smooth, without any angle, or interruption, most voluble and apt to turne, and to continue motion, which is the author of life: he conteyneth in him the commodious description of euery other figure, & for his ample capacite doth resemble the world or uniuers, & for his indefiniteness hauing no speciall place of beginning nor end, beareth a similitude with God and eternitie. This figure hath three principall partes in his nature and vse much considerable: the circle, the beame, and the center. The circle is his largest compasse or circumference: the center is his middle and indiuisible point: the beame is a line stretching directly from the circle to the center, & contrariwise from the center to the circle. By this description our maker may fashion his meetre in Roundell, either with the circumference, and that is circlewise, or from the circumference, that is, like a beame, or by the circumference, and that is ouerthwart and dyametrally from one side of the circle to the other.

A generall resemblance of the Roundell to God, the world and the Queene.

All and whole, and euer, and one, Single, simple, eche where, alone, These be counted as Clerkes can tell, True properties, of the Roundell. His still turning by consequence And change, doe breede both life and sense. Time, measure of stirre and rest. Is also by his course exprest. How swift the circle stirre aboue, His center point, doeth neuer moue: All things that euer were or be, Are closde in his concauitie. And though he be, still turnde and tost, No roome there wants nor none is lost. The Roundell hath no bonch or angle, Which may his course stay or entangle. The furthest part of all his spheare, Is equally both farre and neare. So doth none other figure fare Where natures chattels closed are: And beyond his wide compasse, There is no body nor no place, Nor any wit that comprehends, Where it begins, or where it ends: And therefore all men doe agree, That it purports eternitie. God about the heauens so hie Is this Roundell, in world the skie, Vpon earth she, who beares the bell Of maydes and Queenes, is this Roundell: All and whole and euer alone, Single, sans peere, simple, and one.

A speciall and particular resemblance of her Maiestie to the Roundell.

First her authoritie regall Is the circle compassing all: The dominion great and large Which God hath geuen to her charge: Whithin which most spatious bound She enuirones her people round, Retaining them by oth and liegeance. Whithin the pale of true obeysance: Holding imparked as it were, Her people like to herds of deere. Sitting among them in the middes Where foe allowes and bannes and bids In what fashion she list and when, The seruices of all her men. Out of her breast as from an eye, Issue the rayes incessantly Of her iustice, bountie and might Spreading abroad their beams so bright And reflect not, till they attaine The fardest part of her domaine. And makes eche subiect clearley see, What he is bounden for to be To God his Prince and common wealth, His neighbour, kinred and to himselfe. The same centre and middle pricke, Whereto our deedes are drest so thicke, From all the parts and outmost side Of her Monarchie large and wide, Also fro whence reflect these rayes, Twentie hundred maner of wayes Where her will is them to conuey Within the circle of her suruey. So is the Queene of Briton ground, Beame, circle, center of all my round.

Of the square or quadrangle equilater.

The square is of all other accompted the figure of most folliditie and stedfastnesse, and for his owne stay and firmitie requireth none other base then himselfe, and therefore as the roundell or Spheare is appropriat to the heauens, the Spire to the element of the fire: the Triangle to the ayre, and the Lozange to the water: so is the square for his inconcussable steadinesse likened to the earth, which perchance might be the reason that the Prince of Philosophers in his first booke of the Ethicks, termeth a constant minded man, euen egal and direct on all sides, and not easily ouerthrowne by euery little aduersitie, hominem quadratum, a square man. Into this figure may ye reduce

your ditties by vsing no moe verses then your verse is of sillables, which will make him fall out square, if ye go aboute it wil grow into the figure Trapezion, which is some portion longer then square. I neede not giue you any example, by cause in good arte all your ditties, Odes & Epigrammes should keepe & not exceede the number of twelue verses, and the longest verse to be of twelue sillables & not aboute, but vnder that number as much as ye will.

The figure Ouall.

This figure taketh his name of an egge, and also as it is thought his first origine, and is as it were a bastard or imperfect rounde declining toward a longitude, and yet keeping within one line for his periferie or compasse as the rounde, and it seemeth that he receiueth this forme not as an imperfection but any impediment vnaturally hindring his rotunditie, but by the wisdom and prouidence of nature for the commoditie of generation in such of her creatures as bring not forth a liuely body (as do foure footed beasts) but in stead thereof a certaine quantitie of shapelesse matter contained in a vessell, which after it is sequestred from the dames body receiueth life and perfection, as in the egges of birdes, fishes, and serpents: for the matter being of some quantitie, and to issue out at a narrow place, for the easie passage thereof, it must of necessitie beare such shape as might not be sharpe and greuous to passe at an angle, nor so large or obtuse as might not essay some issue out with one part moe then other as the rounde, therefore it must be slenderer in some part, & yet not without a rotunditie & smoothnesse to giue the rest an easie deliuerie. Such is the figure Ouall whom for his antiquitie, dignitie and vse, I place among the rest of the figures to embellish our proportions: of this sort are diuers of Anacreons ditties, and those other of the Grecian Liricks, who wrate wanton amorous deuises, to solace their witts with all, and many times they would (to giue it right shape of an egg) deuide a word in the midst, and peece out the next verse with the other halfe, as ye may see by perusing their meetres.

When I wrate of these deuices, I smiled with myselfe, thinking that the readers would do so to, and many of them say, that such trifles as these might well haue bene spared, considering the world is full inough of them, and that it is pitie mens heades should be fedde with such vanities as are to none edification nor instruction, either of morall vertue, or otherwise behooffull for the common wealth, to whose seruice (say they) we are all borne, and not to fill and replenish a whole world full of idle toyes. To which sort of reprehendours, being either all holy and mortified to the world, and therefore esteeming nothing that fauoureth not of Theologie, or altogether graue and worldly, and therefore caring for nothing but matters of pollicie, & discourses of estate, or all giuen to thrift and passing for none art that is not gainefull and lucratiue, as the sciences of the Law, Phisicke and marchaundise: to these I will giue none other aunswere then referre them to the many trifling poemes of Homer, Ouid, Virgill, Catullus and other notable writers of former ages, which were not of any grauitie or seriousnessse, and many of them full of impudicitie and ribaudrie, as are not these of ours, nor for any good in the world should haue bene: and yet those trifles are come from many former siecles vnto our times, vncontrolled or condemned or suppress by any Pope or Patriarch or other seure censor of the ciuill maners of men, but haue bene in all ages permitted as the conuenient solaces and recreations of mans wit. And as I can not denie but these conceits of mine be trifles: no lesse in very deede be all the most serious studies of man, if we shall measure grauitie and lightnesse by the wise mans ballance who after he had considered of all the profoundest artes and studies among men, in th'ende cryed out with this Epyphoneme, Vanitas vanitatum & omnia vanitas. Whose authoritie if it were not sufficient to make me beleue so, I could be content with Democritus rather to condemne the vanities of our life by derision, then as Heraclitus with teares, saying with that merrie Greeke thus, Omnia sunt risus, sunt puluis, & omnia nil sunt. Res hominum cunctae, nam ratione carent. Thus Englished, All is but a iest, all daft, all not worth two peason: For why in mans matters is neither rime nor reason.

Now passing from these courtly trifles, let vs talke of our scholasticall toyes, that is of the Grammaticall versifying of the Greeks and Latines and see whether it might be reduced into our English arte or no.

CHAP. XII.

How if all maner of sodaine innouations were not very scandalous, specially in the lawes of any langage or arte, the use of the Greeke and Latine feete might be brought into our vulgar Poesie, and with good grace enough.

Now neuerthesse albeit we haue before alledged that our vulgar Saxon English standing most vpon wordes monosyllable, and little vpon polysyllables doth hardly admit the vse of those fine inuented feete of the Greeks & Latines, and that for the most part wise and graue men doe naturally mislike with all sodaine innouations specially of lawes (and this the law of our auncient English Poesie) and therefore lately before we imputed it to a nice & scholasticall curiositie in such makers as haue fought to bring into our vulgar Poesie some of the auncient feete, to wit the Dactile into verses exámetros, as he that translated certaine bookes of Virgils Eneydos in such measures & not vncommendably: if I should now say otherwise it would make me seeme contradictorie to my selfe, yet for the information of our yong makers, and pleasure of all others who be delighted in noueltie, and to th'intent we may not seeme by ignorance or ouersight to omit any point of subtiltie, materiall or necessarie to our vulgar arte, we will in this present chapter & by our own idle obseruations shew how one may easily and commodiously lead all those feete of the auncients into our vulgar language. And if mens eares were not perchance to daintie, or their iudgementes ouer partiall, would peradventure nothing at all misbecome our arte, but make in our meetres a more pleasant numerositie then now is. Thus farre therefore we will aduventure and not beyond, to th'intent to shew some singularitie in our arte that euery man hath not heretofore obserued, and (her maiesty good liking always had) whether we make the common readers to laugh or to lowre, all is a matter, since our intent is not so exactlie to prosecute the purpose, nor so earnestly, as to thinke it should by authority of our owne iudgement be generally applauded at to the discredit of our forefathers maner of vulgar Poesie, or to the alteration or peradventure totall destruction of the same, which could not stand with any good discretion or curtesie in vs to attempt, but thus much I say, that by some leasurable trauell it were no hard matter to induce all their auncient feete into vse with vs, and that it should proue very agreable to the eare and well according with our ordinary times and pronounciation, which no man could then iustly mislike, and that is to allow euery world polisillable one long time of necessitie, which should be where his sharpe accent falls in our owne ydiome most aptly and naturally, wherein we would not follow the license of the Greeks and Latines, who made not their sharpe accent any necessary prolongation of their tunes, but vsed such sillable sometimes long sometimes short at their pleasure. The other sillables of any word where the sharpe accent fell not, to be accompted of such time and quantitie as his ortographie would best beare hauing regard to himselfe, or to his next neighbour word, bounding him on either side, namely to the smoothnes & hardnesse of the sillable in his vtterance, which is occasioned altogether by his ortographie & situation as in this word [dáyly] the first sillable for his vsuall and sharpe accent sake to be always long, the second for his flat accents sake to be alwayes shoft, and the rather for his ortographie, bycause if he goe before another word commencing with a vowell not letting him to be eclipsed, his vtterance is easie & currant, in this trissillable [dau-nge`ro`us] the first to be long, th'other two short for the same causes. In this word [da-nge`rou`sne-sse] the first & last to be both long, bycause they receiue both of them the sharpe accent, and the two middlemost to be short, in these words [remedie] & [remedillesse] the time to follow also the accent, so as if it please better to set the sharpe accent vpon [re] then vpon [dye] that sillable should be made long and é conuerso, but in this word [remedillesse] bycause many like better to accent the sillable [me] then the sillable [les] therefore I leaue him for a common sillable to be able to receiue both a long and a short time as occasion shall serue. The like law I set in these wordes [reuocable][recourable] [irreuocable][irrecourable] for sometimes it sounds better to say ré-uo`ca`blé then re`uo-ca`ble`, re-cóue`rable then ré-co-ue`ra`blé for this one thing ye must alwayes marke that if your time fall either by reason of his sharpe accent or otherwise vpon the penultima, ye shal finde many other words to rime with him, bycause such terminations are not geazon, but if the long time fall vpon the antepenultima ye shall not finde many wordes to match him in his termination, which is the cause of his concord or rime, but if you would let your long time by his sharpe accent fall aboute the antepenultima as to say [co-ue`ra`ble] ye shall seldome or perchance neuer find one to make vp rime with him vnlesse it be badly and by abuse, and therefore in all such long polisillables ye doe commonly giue two sharpe accents, and thereby reduce him into two feete as in this word [re-mu`nèra`ti`on] which makes a couple of good Dactils, and in this word [contribu-ti`o`n] which makes a good spo-ndeus & a good dactill, and in this word [reca-pi`tu`la-tio`n] it makes two dactills and a sillable ouerplus to annexe to the word precedent to helpe peece vp another foote. But for wordes monosyllables (as be most of ours) because in pronouncing them they do of necessitie retaine a sharpe accent, ye may iustly allow then to be all long if they will so best serue your turne, and if they be tailed one to another, or th'one to a dissillable or polyssillable ye ought to allow them that time that best serues your purpose and pleaseth your eare most, and truliest aunsweres the nature of the ortographie in which I would as neare as I could obserue and keepe the lawes of the Greeke and Latine versifiers, that is to prolong the sillable which is written with double consonants or by dipthong or with finale consonants that run hard and harshly vpon the toung: and to shorten all sillables that stand vpon vowels, if there were no cause of elision and single consonants & such of them as are most flowing and slipper vpon the toung as n.r.t.d.l. for this purpose to take away all aspirations, and many times the last consonant of a word as the Latine Poetes vsed to do, specially Lucretius and

Ennius to say [finibu] for [finibus] and so would not I stick to say thus [delite] for [delight] [hye] for [high] and such like, & doth nothing at all impugne the rule I gaue before against the wresting of wordes by false ortographie to make vp rime, which may not be falsified. But this omission of letters in the midst of a meetre to make him the more slipper, helps the numerositie and hinders not the rime. But generally the shortning or prolonging of the monosillables dependes much vpon the nature or their ortographie which the Latin Grammariens call the rule of position, as for example if I shall say thus. No-t ma`ni`e daye-s pa-st. Twentie dayes after, This makes a good Dactill and a good spondeus, but if ye turne them backward it would not do so, as. Many dayes, not past. And the distick made all of monosillables. Bu-t no-ne o-f u-s tru-e me-n a-nd fre-e, Could finde so great good lucke as he. Which words serue well to make the verse all spondiacke or iambicke, but not in dactil, as other words or the same otherwise placed would do, for it were at illfaured dactil to say. Bu-t no`ne o`f, u-s a`ll tre`we.

Therefore whensoever your words will not make a smooth dactil, ye must alter them or their situations or else turne them to other feete that may better beare their maner of sound and orthographie: or if the word be polysillable to deuide him, and to make him serue by peeces, that he could not do whole and entierly. And no doubt by like consideration did the Greeke & Latine versifiers fashion all their feete at the first to be of sundry times, and the selfe same sillable to be sometime long and sometime short for the eares better satisfaction as hath bene before remembred. Now also wheras I said before that our old Saxon English for his many monosillables did not naturally admit the vse of the ancient feete in our vulgar measures so aptly as in those languages which stood most vpon polisillables, I sayd it in a sort truly, but now I must recant and confesse that our Normane English which hath growen since William the Conquerour doth admit any of the auncient feete, by reason of the many polysillables euen to sixe and seauen in one word, which we at this day vse in our most ordinarie language: and which corruption hath bene occasioned chiefly by the peeuish affectation not of the Normans them selues, but of clerks and scholars or secretaries long since, who not content with the vsual Normane or Saxon word, would conuert the very Latine and Greeke word into vulgar French, as to say innumerable for innombrable, reuocable, irreuocable, irradiation, depopulation & such like, which are not naturall Normane nor yet French, but altered Latines, and without any imitation at all: which therefore were long time despised for inkehorne termes, and now be reputed the best & most delicat of any other. Of which & many other causes of corruption of our speach we haue in another place more amply discoursed, but by this meane we may at this day very well receiue the auncient feete metricall of the Greeks and Latines sauing those that be superfluous as be all the feete about the trissillable, which the old Grammarians idly inuented and distinguisht by speciall names, whereas in deede the same do stand compounded with the inferiour feete, and therefore some of them were called by the names of didactilus, dispondeus, and disiambus: which feete as I say we may be allowed to vse with good discretion & precise choise of wordes and with the fauorable approbation of readers, and so shall our plat in this one point be larger and much surmount that which Stamhurst first tooke in hand by his exameters dactilicke and spondaicke in the translation of Virgills Eneidos, and such as for a great number of them my stomacke can hardly digest for the ill shapen sound of many of his wordes polisillable and also his copulation of monosillables supplying the quantitie of a trissillable to his intent. And right so in promoting this deuise of ours being (I feare me) much more nyce and affected, and therefore more misliked then his, we are to bespeake fauour, first of the delicate eares, then of the rigorous and seuerer dispositions, lastly to craue pardon of the learned & auncient makers in our vulgar, for if we should seeke in euery point to egall our speach with the Greeke and Latin in their metricall observations it could not possible be by vs performed, because their sillables came to be timed some of them long, some of them short not by reason of any euident or apparant cause in writing or sounde remaining vpon one more then another, for many times they shortned the sillable of sharpe accent and made long that of the flat, & therefore we must needes say, it was in many of their wordes done by preelection in the first Poetes, not hauing regard altogether to the ortographie, and hardnesse or softnesse of a sillable, consonant, vowell or diphthong, but at their pleasure, or as it fell out: so as he that first put in a verse this word [Penelope] which might be Homer or some other of his antiquitie, where he made [pe-] in both places long and [ne`] and [lo`] short, he might haue made them otherwise and with as good reason, nothing in the world appearing that might moue them to make such (preelection) more in th'one sillable then in the other for pe, ne, and lo, being sillables vocals be egally smoth and currant vpon the toung, and might beare aswel the long as the short time, but it pleased the Poet otherwise: so he that first shortned, ca, in this word cano, and made long tro, in troia, and o, in oris, might haue aswell done the contrary, but because he that first put them into a verse, found as it is to be supposed a more sweetnesse in his owne eare to haue them so tyled, therefore all other Poets who followed, were fayne to doe the like, which made that Virgill who came many yeares after the first reception of wordes in their seuerall times, was driuen of neceisitie to accept them in such quantities as they were left him and therefore said. a-rma`ni` ru-mqu-e ca`ro- tro- ie- qui- pri-mu`s a`bo-ris.

Neither truly doe I see any other reason in that lawe (though in other rules of shortning and prolonging a sillable there may be reason) but that it stands vpon bare tradition. Such as the Cabalists auouch in their mysticall constructions Theologicall and others, saying that they receaued the same from hand to hand from the first parent Adam, Abraham and others, which I will giue them leaue alone both to say and beleue for me, thinking rather that they haue bene the idle occupations, or perchaunce the malicious and craftie constructions of the Talmudists and others of the Hebrue clerks to bring the world into admiration of their lawes and Religion. Now peradventure with vs Englishmen it be somewhat too late to admit a new inuention of feet and times that our forefathers neuer vused nor neuer observed till this day, either in their measures or in their pronuntiation, and perchaunce will seeme in vs a presumptuous part to attempt, considering also it would be hard to find many men to like of one mans choise in the limitation of times and quantities of words, with which not one, but euery eare is to be pleased and made a particular iudge, being most truly sayd, that a multitude or comminalltie is hard to please and easie to offend, and therefore I intend not to proceed any further in this curiositie then to shew some small subtillitie that any other hath not yet done, and not by imitation but by obseruation, nor to th'intent to haue it put in execution in our vulgar Poesie, but to be pleasantly scanned vpon, as are all nouelties so friuolous and ridiculous as it.

CHAP. XIII.

A more particular declaration of the metricall feete of the ancient Poets Greeke and Latine and chiefly of the feete of two times.

Their Grammarians made a great multitude of feete, I wot not to what huge number, and of so many sizes as their wordes were of length, namely sixe sizes, whereas indeede, the metricall feete are but twelve in number, wherof foure only be of two times, and eight of three times, the rest compounds of the premised two sorts, even as the Arithmetically numbers about three are made of two and three. And if ye will know how many of these feete will be commodiously received with vs, I say all the whole twelve, for first for the foote, spondeus of two long times ye haue these English words mo-rni-ng, mi-dni-ght, mi-scha-unce, and a number moe whose ortographie may direct your iudgement in this point: for your Trocheus of a long and short ye haue these words ma-ne`r, bro-ke`n, ta-ke`n, bo-die`, me-mbe`r, and a great many moe if there last sillables abut not vpon the consonant in the beginning of another word, and in these whether they do abut or no wi-tti`e, di-tti`e, so-rrò`w, mo-rrò`w, & such like, which end in a vowell for your Iambus of a short and a long, ye haue these words [re`sto-re] [re`mo-rse] [de`si-re] [e`ndu-re] and a thousand besides. For your foote pirrichius or of two short sillables ye haue these words [ma`ni`e] [mo`ne`y] [pe`ni`e] [si`lie`] and others of that construction or the like: for your feete of three times and first your dactill, ye haue these words & a number moe pa-ti`e`nce, te-mpe`ra`nce, wo-ma`nhea`d, io-li`ti`e, dau-nge`ro`us, du-eti`fu`ll & others. For your molossus, of all three long, ye haue a member of wordes also and specially most of your particples actiue, as pe-rsi-sti-ng, de-spo-ili-ng, e-nde-nti-ng, and such like in ortographie: for your anapestus of two short and a long ye haue these words but not many moe, as ma`ni`fo-ld, mo`ni`le-sse, re`ma`ne-nt, ho`li`ne-sse. For your foote tribracchus of all three short, ye haue very few trissillables, because the sharpe accent will aways make one of them long by pronuntiation, which els would be by ortographie short as, [me`ri`ly`] [minion] & such like. For your foote bacchius of a short & two long ye haue these and the like words trissillables [la`me-nti-ng] [re`que-sti-ng] [re`nou-nci-ng] [re`pe-nta-nce] [e`nu-ri-ng]. For your foote antibacchius, of two long and a short ye haue these words [fo-rsa-ke`n] [i-mpu-gne`d] and others many: For your amphimacer that is a long, a short and a long ye haue these words and many more [e-xce`lle-nt] [i-mi`ne-nt] and specially such as be propre names of persons or townes or other things and namely Welsh words; for your foote amphibracchus, of a short, a long and a short, ye haue these words and many like to these [re`si-ste`d] [de`li-ghtfu`ll] [re`pri-sa`ll] [i`nau-nte`r] [e`na-mi`ll] so as for want of English wordes if your eare be not to daintie and your rules to precise, ye neede not be without the metricall feete of the ancient Poets such as be most pertinent and not superfluous. This is (ye will perchaunce say) my singular opinion: then ye shall see how well I can maintaine it. First the quantitie of a word comes either by (preelection) without reason or force as hath bene alledged, and as the auncient Greekes and Latines did in many wordes, but not in all, or by (election) with reason as they did in some, and not a few. And a sound is drawn at length either by the infirmitie of the toung, because the word or sillable is of such letters as hangs long in the palate or lippes ere he will come forth, or because he is accented and tuned hier and sharper then another, whereby he somewhat obscureth the other sillables in the same word that be not accented so high, in both these cases we will

establish our syllable long, contrariwise the shortning of a syllable is, when his sounde or accent happens to be heauy and flat, that is to fall away speedily, and as it were inaudible, or when he is made of such letters as be by nature slipper & voluble and smoothly passe from the mouth. And the vowell is alwayes more easily deliuered then the consonant: and of consonants, the liquide more than the mute, & a single consonant more then a double, and one more then twayne coupled together: all which points were obserued by the Greekes and Latines, and allowed for maximes in versifying. Now if ye will examine these foure bissillables [re-mna-nt] [re`ma-ine] [re-nde`r] [re`ne`t] for an example by which ye may make a generall rule, and ye shall finde, that they aunswere our first resolution. First in [remnant] [rem] bearing the sharpe accent and hauing his consonant abbut vpon another, soundes long. The syllable [nant] being written with two consonants must needs be accompted the same, besides that [nant] by his Latin originall is long, viz. [remane-ns.] Take this word [remaine] because the last syllable beares the sharpe accent, he is long in the eare, and [re] being the first syllable, passing obscurely away with a flat accent is short, besides that [re] by his Latine originall and also by his ortographie is short. This word [render] bearing the sharpe accent upon [ren] makes it long, the syllable [der] falling away swiftly & being also written with a single consonant or liquide is short and makes the trocheus. This word [re`ne`t] hauing both syllables sliding and slipper make the foote Pirrichius, because if he be truly vttered, he beares in maner no sharper accent upon the one then the other syllable, but be in effect egall in time and tune, as is also the Spondeus. And because they be not written with any hard or harsh consonants, I do allow them both for short syllables, or to be used for common, according as their situation and place with other words shall be: and as I haue named to you but onely foure words for an example, so may ye find out by diligent obseruation foure hundred if ye will. But of all your words bissillables the most part naturally do make the foot Iambus, many the Trocheus, fewer the Spondeus, fewest of all the Pirrichius, because in him the sharpe accent (if ye follow the rules of your accent as we haue presupposed) doth make a litle oddes: and ye shall find verses made all of monosillables, and do very well, but lightly they be Iambickes, bycause for the more part the accent falles sharpe vpon euery second word rather then contrariwise, as this of Sir Thomas Wiats. I fi-nde no` pea-ce a`nd ye-t mi`e wa-rre i`s do-ne, I feare and hope, and burne and freese like ise.

And some verses where the sharpe accent falles vpon the first and third, and so make the verse wholly Trochaicke, as thus, Worke not, no nor, with thy friend or foes harme Try but, trust not, all that speake thee so faire.

And some verses made of monosillables and bissillables enterlaced as this of th'Earles, When raging loue with extreme paine And this A fairer beast of fresher hue beheld I neuer none.

And some verses made all of bissillables and others all of trissillables, and others of polisillables egally increasing and of diuers quantities, and sundry situations, as in this of our owne, made to daunt the insolence of a beautifull woman. Brittle beauty blossome daily fading Morne, noone, and eue in age and eke in eld Dangerous disdain full pleasantly perswading Easie to gripe but combrous to weld. For slender bottome hard and heauy lading Gay for a while, but little while durable Suspicious, incertaine, irreuocable, O since thou art by triall not to trust Wisedome it is, and it is also iust To sound the stemme before the tree be feld That is, since death will driue us all to dust To leaue thy loue ere that we be compeld.

In which ye haue your first verse all of bissillables and of the foot trocheus. The second all of monosillables, and all of the foote Iambus, the third all of trissillables, and all of the foote dactilus, your fourth of one bissillable, and two monosillables interlarded, the fift of one monosillable and two bissillables enterlaced, and the rest of other sortes and scituations, some by degrees encreasing, some diminishing: which example I haue set downe to let you perceiue what pleasant numerosity in the measure and disposition of your words in a meetre may be contriued by curious wits & these with other like were the obseruations of the Greeke and Latine versifiers.

CHAP. XIII.

Of your feet of three times, and first of the Dactil.

Your feete of three times by prescription of the Latine Grammariens are of eight sundry proportions, for some notable difference appearing in euery syllable of three falling in a word of that size: but because about the antepenultima there was (among the Latines) none accent audible in any long word, therefore to deuise any foote of

longer measure then of three times was to them but superfluous: because all about the number of three are but compounded of their inferiours. Omitting therefore to speake of these larger feete, we say that of all your feete of three times the Dactil is most usuall and fit for our vulgar meeter, & most agreeable to the eare, specially if ye ouerlade not your verse with too many of them but here and there enterlace a Iambus or some other foote of two times to giue him grauitie and stay, as in this quadrein Trimeter or of three measures. Rende`r a`gai-ne mi`e li-be`rti`e a`nd se-t yo`ur ca-pti`ue fre-e Glo-ri`ou`s i`s the` vi-cto`ri`e Co-nque`ro`urs u-se wi`th le-ni`ti`e

Where ye see euery verse is all of a measure, and yet vnegall in number of sillables: for the second verse is but of sixe sillables, where the rest are of eight. But the reason is for that in three of the same verses are two Dactils a peece, which abridge two sillables in euery verse: and so maketh the longest euen with the shortest. Ye may note besides by the first verse, how much better some bisillable becommeth to peece out an other longer foote than another word doth: for in place of [render] if ye had sayd [restore] it had marred the Dactil, and of necessitie driuen him out at length to be a verse Iambic of foure feet, because [render] is naturally a Trocheus & makes the first two times of a dactil. [Restore] is naturally a Iambus, & in this place could not possibly haue made a pleasant dactil.

Now againe if ye will say to me that these two words [libertie] and [conquerours] be not precise Dactils by the Latine rule. So much will I confesse to, but since they go currant inough vpon the tongue and be so vsually pronounced, they may passe wel inough for Dactils in our vulgar meeters, & that is inough for me, seeking but to fashion an art, & not to finish it: which time only & custom haue authoritie to do, specially in all cases of language as the Poet hath wittily remembred in this verse si volet usus, Quem penes arbitrium est & vis & norma loquendi.

The Earle of Surrey upon the death of Sir Thomas Wiat made among other this verse Pentameter and of ten sillables, What holy graue (alas) what sepulcher

But if I had had the making of him, he should haue bene of eleuen sillables and kept his measure of fiue still, and would so haue runne more pleasantly a great deale; for as he is now, though he be euen he seemes odde and defectiue, for not well obseruing the natural accent of euery word, and this would haue bene soone holpen by inserting one monosyllable in the middle of the verse, and drawing another syllable in the beginning into a Dactil, this word [holy] being a good [Pirrichius] & very well seruing the turne, thus, Wha-t ho`li`e gra-ue a`la-s wha`t fit se`pu-lche`r. Which verse if ye peruse throughout ye shall finde him after the first dactil all Trochaick & not Iambic, nor of any other foot of two times. But perchance if ye would seeme yet more curious, in place of these four Trocheus ye might induce other feete of three times, as to make the three sillables next following the dactil, the foote [amphimacer] the last word [Sepulcher] the foote [amphibracus] leauing the other middle word for a [Iambus] thus. Wha-t ho`li`e gra-ue a`la-s wha`t fit se`pu-lche`r. If ye aske me further why I make [what] first long & after short in one verse, to that I satisfied you before, that it is by reason of his accent sharpe in one place and flat in another, being a common monosyllable, that is, apt to receive either accent, & so in the first place receiuing aptly the sharpe accent he is made long: afterward receiuing the flat accent more aptly then the sharpe, because the sillable precedent [las] vtterly distaines him, he is made short & not long, & that with very good melodie, but to haue giuen him the sharpe accent & plucked it from the sillable [las] it had bene to any mans eare a great discord: for euermore this word [alás] is accented vpon the last, & that lowdly & notoriously as appeareth by all our exclamations vsed vnder that terme. The same Earle of Surrey & Sir Thomas Wyat the first reformers & polishers of our vulgar Poesie much affecting the stile and measures of the Italian Petrarcha, vsed the foote dactil very often but not many in one verse, as in these, Fu-ll ma`ni`e that in presence of thy li-ueli`e he`d, Shed Cæsars teares vpon Po-mpe`iu`s he`d. Th'e-ne`mi`e to life destroi`er of all kinde, If a-mo`ro`us faith in an hart un fayned, Myne old dee-re e`ne`my my froward master. The- fu`ri`ous gone in his most ra ging ire.

And many moe which if ye would not allow for dactils the verse would halt vnlesse ye would seeme to helpe it contracting a sillable by vertue of the figure Syneresis which I thinke was neuer their meaning, nor in deede would haue bred any pleasure to the eare, but hindred the flowing of the verse. Howsoever ye take it the dactil is commendable inough in our vulgar meetres, but most plausible of all when he is sounded vpon the stage, as in these comicall verses shewing how well it becommeth all noble men and great personages to be temperat and modest, yea more then any meaner man, thus. Le-t no`no`bi-li`ti`e ri-che`s o`r he-ri`ta`ge Ho-no`ro`r e-mpi`re o`r ea-rthli`e do`mi-ni`o`n Bre-ed I`n yo`ur hea-d a`ni`e pe-eu-ish o`pi-ni`o`n That ye`ma`y sa-fe`r a`uo-uch a`ni`e o-utra-ge.

And in this distique taxing the Prelate symoniacke standing all upon perfect dactils. No-w ma-ni-e bi-e mo-ne-y pu-rue'y pro'mo-ti'o'n For mony mooues any hart to deuotion.

But this aduertisement I will giue you withall, that if ye vse too many dactils together ye make your musike too light and of no solemne grauitie such as the amorous Elegies in court naturally require, being alwaies either very dolefull or passionate as the affections of loue enforce, in which busines ye must make your choice of very few words dactilique, or them that ye cannot refuse, to dissolue and breake them into other feete by such meanes as it shall be taught hereafter: but chiefly in your courtly ditties take heede ye vse not these maner of long polisillables and specially that ye finish not your verse them as [retribution] restitution] remuneration] recapitulation] and such like: for they smatch more the schoole of common players than of any delicate Poet Lyricke or Elegiacke.

CHAP. XV.

Of all your other feete of three times and how well they would fashion a meetre in our vulgar.

All your other feete of three times I find no vse of them in our vulgar meeters nor no sweetenes at all, and yet words inough to serue their proportions. So as though they haue not hitherto bene made artificiall, yet nowe by more curious obseruation they might be. Since all artes grew first by obseruation of natures proceedings and custome. And first your [Molossus] being of all three long is evidently discouered by this word [pe-rmi-tti-ng] The [Anapestus] of two short and a long by this word [fu'ri'o-us] if the next word beginne with a consonant. The foote [Bacchius] of a short and two long by this word [re'si-sta-nce] the foote [Antibacchius] of two long and a short by this word [e-xa-mple`] the foote [Amphimacer] of a long a short & a long by this word [co-nque`ri-ng] the foote of [Amphibrachus] of a short a long and a short by this word [re'me-mbe`r] if a vowell follow. The foote [Tribrachus] of three short times is very hard to be made by any of our trissillables vnles they be compounded of the smoothest sort of consonants or sillables vocals, or of three smooth monosillables, or of some peece of a long polysillable & after that sort we may with wresting of words shape the foot [Tribrachus] rather by vsurpation then by rule, which neuertheles is allowed in euery primitiue arte & inuention: & so it was by the Greekes and Latines in their first versifying, as if a rule should be set downe that from henceforth these words should be counted al Tribrachus [e'ne'mi'e] re'me'di'e] se'li'ne's] mo'ni'le's] pe'ni'le's] cru'e'lli'e] & such like, or a peece of this long word [re'co-ue'ra'ble`] innu'me'ra'ble`] rea'di'li'e] and others. Of all which manner of apt wordes to make these stranger feet of three times which go not so currant with our eare as the dactil, the maker should haue a good iudgement to know them by their manner of orthographie and by their accent which serue most fitly for euery foote, or else he shoulde haue always a little calender of them apart to vse readily when he shall neede them. But because in very truth I thinke them but vaine & superstitious obseruations nothing at all furthering the pleasant melody of our English meeter, I leaue to speake any more of them and rather wish the continuance of our old maner of Poesie, scanning our verse by sillables rather than by feete, and vsing most commonly the word Iambique & sometime the Trochaicke which ye shall discerne by their accents, and now and then a dactill keeping precisely our symphony or rime without any other mincing measures, which an idle inuentiue head could easily devise, as the former examples teach.

CHAP. XVI.

Of your verses perfect and defectiue; and that which the Graecians called the halfe foote.

The Greekes and Latines vsed verses in the odde sillable of two sortes, which they called Catalecticke and Acatalecticke, that is odde vnder and odde ouer the iust measure of their verse, & we in our vulgar finde many of the like, and specially in the rimes of Sir Thomas Wiat, strained perchaunce out of their originall, made first by Francis Petrarcha: as these Like vnto these, immeasurable mountaines, So is my painefull life the burden of ire: For hie be they, and hie is my desire And I of teares, and they are full of fountaines. Where in your first second and fourth verse, ye may find a sillable superfluous, and though in the first ye will seeme to helpe it, by drawing

these three sillables, [i-m me` su`] into a dactil, in the rest it can not be so excused, wherefore we must thinke he did it of purpose, by the odde sillable to giue greater grace to his meetre, and we finde in our old rimes, this odde sillable, sometime placed in the beginning and sometimes in the middle of a verse, and is allowed to go alone & to hang to any other sillable. But this odde sillable in our meetres is not the halfe foote as the Greekes and Latines vsed him in their verses, and called such measure pentimimeris and eptamimeris, but rather is that, which they called the catalectik or maymed verse. Their hemimeris or halfe foote serued not by licence Poeticall or necessitie of words, but to bewtifie and exornate the verse by placing one such halfe foote in the middle Cesure, & one other in the end of the verse, as they vfed all their pentameters elegiack: and not by coupling them together, but by accompt to make their verse of a iust measure and not defectiue or superflous: our odde sillable is not altogether of that nature, but is in a maner drownd and supprest by the flat accent, and shrinks away as it were inaudible and by that meane the odde verse comes almost to be an euen in euery mans hearing. The halfe foote of the auncients was reserued purposely to an vse, and therefore they gaue such odde sillable, wheresoeuer he fell the sharper accent, and made by him a notorious pause as in this pentameter. Ni-l mi` hi` re-scri-ba`s a-tta`me`n i-pse` ve` ni`.

Which in all make fiue whole feete, or the verse Pentameter. We in our vulgar haue not the vse of the like halfe foote.

CHAP. XVII.

Of the breaking your bissillables and polysillables and when it is to be used.

Bvt whether ye suffer your sillable to receiue his quantitie by his accent, or by his ortography, or whether ye keepe your bissillable whole or whether ye breake him, all is one to his quantitie, and his time will appeare the selfe same still and ought not to be altered by our makers, vnlesse it be when such sillable is allowed to be common and to receiue any of both times, as in the dimeter, made of two sillables entier. e-xtre-ame de`si-re

The first is a good spondeus, the second a good iambus, and if the same wordes be broken thus it is not so pleasant. I`n e-x tre-ame de` sire

And yet the first makes a iambus, and the second a trocheus ech sillable retayning still his former quantities. And alwaies ye must haue regard to the sweetenes of the meetre, so as if your word polysillable would not sound pleasantly whole, ye should for the nonce breake him, which ye may easily doo by inserting here and there one monosillable among your polysillables, or by changing your word into another place then where he soundes vnpleasantly, and by breaking, turne a trocheus to a iambus, or contrariwise: as thus: Ho-llo`w va-lle`is u-nde`r hi-e`st mou-ntai`nes Cra-ggi`e cli-ffes bri`ng foo-rth the` fai-re`st fou-ntai`nes

These verses be trochaick, and in mine eare not so sweete and harmonicall as the iambicque, thus: The` ho-llo`wst va-ls li`e u-nde`r hi-e`st mo-unta-ines The` cra-ggi`st clifs bri-ng fo-rth the` fai-re`st fou-nta-ines.

All which verses bee now become iambicque by breaking the first bissillables, and yet alters not their quantities though the feete be altered: and thus, Restlesse is the heart in his desires Rauing after that reason doth denie.

Which being turned thus makes a new harmonie. The restlesse heart, renues his old desires Ay rauing after that reason doth it deny.

And following this obseruation your meetres being builded with polysillables will fall diuersly out, that is some to be spondaick, some iambick, others dactilick, others trochaick, and of one mingled with another, as in this verse. He-aui`e I-s the` bu-rde`n of Pri`nce`s i-re

The verse is trochaick, but being altered thus, is iambicque. Fu`ll he-aui`e i-s the` pa-ise o`f Pri-nce`s i-re

And as Sir Thomas Wiat song in a verse wholly trochaick, because the wordes do best shape to that foote by their naturall accent, thus, Fa-rewe`ll lo-ue a`nd a-ll thi`e la-wes fo`r e-ve`r

And in this ditty of th'Erle of Surries, passing sweete and harmonick: all be Iambick. When raging loue with extreme paine So cruell doth straine my hart, And that the teares like fluds of raine Beare wnesse of my wofull smart.

Which beyng disposed otherwise or not broken, would proue all trochaick, but nothing pleasant.

Now furthermore ye are to note, that al monosyllables may receiue the sharp accent, but not so aptly one as another, as in this verse where they serue well to make him iambicque, but not trochaick. Go'd grau-nt thi's pea-ce ma'y lo-ng e`ndu-re

Where the sharpe accent falles more tunably vpon [graunt] [peace] [long] [dure] then it would by conuersion, as to accent then thus: Go-d grau`nt - thi-s pea`ce - ma-y lo`ng - e-ndu-re.

And yet if ye will aske me the reason I can not tell it, but that it shapes so to myne eare, and as I thinke to euery other mans. And in this meeter where ye haue whole words bissillable vnbroken, that maintaine (by reason of their accent) sundry feete, yet going one with another be very harmonickall.

Where ye see one to be a trocheus another the iambus, and so entermingled not by election but by constraint of their seuerall accents, which ought not to be altdred, yet comes it to passe that many times ye must of necessitie alter the accent of a sillable, and put him from his naturall place, and then one sillable, of a word polysillable, or one word monosillable, will abide to be made sometimes long, sometimes short, as in this quadreyne of ours playd in a mery moode. Geue mé mine ówne ànd wén I dó dèsi're Geue others theirs, and nothing that is mine Nòr giue mè thát, wherto all men aspire Then neither gold, nor faire women nor wine.

Where in your first verse these two words [giue] and [me] are accented one high th'other low, in the third verse the same words are accented contrary, and the reason of this exchange is manifest, because the maker playes with these two clauses of sundry relations [giue me] and [giue others] so as the monosillable [me] being respectiue to the word [others] and inferring a subtilitie or wittie implication, ought not to haue the same accent, as when he hath no such respect, as in this distik of ours. Pro-ue me' (Madame) ere ye re-pro`ue Meeke minds should e-xcu`se not a-cu`se.

In which verse ye see this word [reprooue,] the sillable [prooue] alters his sharpe accent into a flat, for naturally it is long in all his singles and compoundes [reprooue] [approoue] [disprooue] & so is the sillable [cuse] in [excuse] [accuse] [recuse] yet in these verses by reason one of them doth as it were nicke another, and haue a certaine extraordinary sence with all, it behoueth to remoue the sharpe accents from whence they are most naturall, to place them where the nicke may be more expresly discoverd, and therefore in this verse where no such implication is, nor no relation it is otherwise, as thus. If ye re`pro-ue my constancie I will excu-se you curtesly.

For in this word [reprooue] because there is no extraordinary sence to be inferred, he keepeth his sharpe accent vpon the sillable [prooue] but in the former verses because they seeme to encounter ech other, they do thereby merite an audible and pleasant alteration of their accents in those sillables that cause the subtiltie. Of these maner of nicetees ye shal finde in many places of our booke, but specially where we treat of ornament, vnto which we referre you, sauing that we thought good to set downe one example more to solace your mindes with mirth after all these scholasticall preceptes, which can not but bring with them (specially to Courtiers) much tediousnesse, and so to end. In our Comedie intituled Ginecocratia: the king was supposed to be a person very amorous and effeminate, and therefore most ruled his ordinary affaires by the aduise of women either for the loue he bare to their persons of liking he had to their pleasant ready witts and vtterance. Comes me to the Court one Polemon an honest plaine man of the country, but rich: and hauing a suite to the king, met by chance with one Philino, a louer of wine and a merry companion in Court, and praied him in that he was a stranger that he would vouchsafe to tell him which way he were best to worke to get his suite, and who were most in credit and fauour about the king, that he might seek to them to further his attempt. Philino perceyuing the plainnesse of the man, and that there would be some good done with him, told Polemon that if he would well consider him for his labor he would bring him where he should know the truth of all his demaundes by the sentence of the Oracle. Polemon gaue him twentie crownes, Philino brings him into a place where behind an arras cloth hee himselfe spake in manner of an Oracle in these matters, for so did

all the Sybils and sothsaiers in old times giue their answers. Your best way to worke - and marke my words well, Not money: nor many, Nor any: but any, Not weemen, but weemen beare the bell.

Polemon wist not what to make of this doubtfull speach, & not being lawfull to importune the oracle more then once in one matter, conceyued in his head the pleasanter construction, and stacke to it: and hauing at home a fayre yong damsell of eighteene yeares old to his daughter, that could very well behaue her self in countenance and also in her language, appalled her as gay as he could, and brought her to the Court, where Philino harkning daily after the euent of this matter, met him, and recommended his daughter to the Lords, who perceiuing her great beauty and other good parts, brought her to the King, to whom she exhibited her fathers supplication, and found so great fauour in his eye, as without any long delay she obtained her sute at his hands. Poleman the diligent solliciting of his daughter, wanne his purpose: Philino gat a good reward and vsed the matter so, as howsoever the oracle had bene construed, he could not haue receiued blame nor discredit by the successe, for euery waies it would haue proued true, whether Polemons daughter had obtayned the sute, or not obtained it. And the subtiltie lay in the accent and Ortographie of these two wordes [any] and [weemen] for [any] being deuided sounds a nie or neere person to the king: and [weemen] being diuided soundes wee men, and not [weemen] and so by this meane Philino serued all turnes and shifted himselfe from blame, not vnlike the tale of the Rattlemouse who in the warres proclaimed betweene the foure footed beasts and the birdes, beyng sent for by the Lyon to beat his musters, excused himselfe for that he was a foule and flew with winges: and beyng sent for my the Eagle to serue him, sayd that he was a foure footed beast, and by that craftie cauill escaped the danger of the warres, and shunned the seruice of both Princes. And euer since sate at home by the fire side, eating vp the poore husbandmans baken, halfe lost for lacke of a good huswifes looking too.

FINIS.

THE THIRD BOOKE, OF ORNAMENT.

CHAP. I.

Of Ornament Poeticall.

As no doubt the good proportion of any thing doth greatly adorne and commend it and right so our late remembred proportions doe to our vulgar Poesie: so is there yet requisite to the perfection of this arte, another maner of exornation, which resteth in the fashioning of our makers language and stile, to such purpose as it may delight and allure as well the mynde as the eare of the hearers with a certaine noueltie and strange maner of conueyance, disguising it no litle from the ordinary and accustomed: neuertheless making it nothing the more vnseemely or misbecomming, but rather decenter and more agreable to any ciuill eare and understanding. And as we see in these great Madames of honour, be they for personage or otherwise neuer so comely and bewtifull, yet if they want their courtly habillements or at leastwise such other apparell as custome and ciuilitie haue ordained to couer their naked bodies, would be halfe ashamed or greatly out of countenance to be seen in that sort, and perchance do then thinke themselves more amiable in euery mans eye, when they be in their richest attire, suppose of silkes or tyssews & costly embroderies, then when they go in cloth or in any other plaine and simple apparell. Euen so cannot our vulgar Poesie shew it self either gallant or gorgious, if any lymme be left naked and bare and not clad in his kindly clothes and coulours, such as may conuey them somewhat our of sight, that is from the common course of ordinary speach and capacitie of the vulgar iudgement, and yet being artificially handled must needes yeld it much more bewtie and commendation. This ornament we speake of is giuen to it by figures and figurative speeches, which be the flowers as it were and coulours that a Poet setteth vpon his language by arte, as the embroiderer doth his stone and perle, or passements of golde vpon the stufte of a Princely garment, or as th'excellent painter bestoweth the rich Orient coulours vpon his table of pourtraite: so neuerthelessse as if the same coulours in our art of Poesie (as well as in those other mechanicall artes) be not well tempered, or not well layd, or be vused in excesse, or neuer so litle disordered or misplaced, they not onely giue it no maner of grace at all, but rather do disfigure that stufte and spill the whole workmanship taking away all bewtie and good liking from it, no lesse then if the crimson tainte, which

should be laid vpon a Ladies lips, or right in the center of her cheekes should by some ouersight or mishap be applied to her forehead or chinne, it would make (ye would say) but a very ridiculous bewtie, wherfore the chief prayse and cunning of our Poet is in the discreet vsing of his figures, as the skilfull painters is in the good conueyance of his coulours and shadowing traits of his pensill, with a delectable varietie, by all measure and iust proportion, and in places most aptly to be bestowed.

CHAP. II.

How our writing and speeches publike ought to be figuratiue, and if they be not doe greatly disgrace the cause and purpose of the speaker and writer.

Bvt as it hath bene alwayes reputed a great fault to vse figuratiue speeches foolishly and indiscretly, so is it esteemed no lesse an imperfection in mans vtterance, to haue none vse of figure at all, specially in our writing and speeches publike, making them but as our ordinary talke, then which nothing can be more vnsauourie and farre from all ciuilitie. I remember in the first yeare of Queenes Maries raigne a Knight of Yorkshire was chosen speaker of the Parliament, a good gentleman and wise, in the affaires of his shire, and not vnlearned in the lawes of the Realme, but as well for some lack of his teeth, as for want of language nothing well spoken, which at that time and businesse was most behooffull for him to haue bene: this man after he had made his Oration to the Queene; which ye know is of course to be done at the first assembly of both houses; a bencher of the Temple both well learned and very eloquent, returning from the Parliament house asked another gentleman his frend how he liked M. Speakers Oration: mary quoth th'other, methinks I heard not a better alehouse tale told this seuen yeares. This happened because the good old Knight made no difference betweene an Oration or publike speach to be deliuered to the eare of a Princes Maiestie and state of a Realme, then he would haue done of an ordinary tale to be told at his table in the cuntry, wherein all men know the oddes is very great. And though graue and wise counsellours in their consultations doe not vse much superfluous eloquence, and also in their iudicall hearings do much mislike all scholasticall rhetoricks: yet in such a case as it may be (and as this Parliament was) if the Lord Chancelour of England or Archbishop of Canterbury himselfe were to speake, he ought to doe it cunningly and eloquently, which can not be without the vse of figures: and neuerthelesse none impeachment or blemish to the grauitie of the persons or of the cause: wherein I report me to them that knew Sir Nicholas Bacon Lord keeper of the great Seale, or the now Lord Treasurer of England, and haue bene conuersant with their speeches made in the Parliament house & Starrechamber. From whose lippes I haue seene to proceede more graue and naturall eloquence, then from all the Oratours of Oxford or Cambridge, but all is as it is handled, and maketh no matter whether the same eloquence be naturall to them or artificiall (though I thinke rather naturall) yet were they knowen to be learned and not vnskilfull of th'arte, when they were yonger men: and as learning and arte teacheth a schollar to speake, so doth it also teach a counsellour, and aswell an old man as a yong, and a man in authoritie, aswell as a priuate person and a pleader aswell as a preacher, euery man after his sort and calling as best becommeth: and that speach which becommeth one, doth not become another, for maners of speeches, some serue to work in excesse, some in mediocritie, some to graue purposes, some to light, some to be short and brief, some to be long, some to stirre vp affections, some to pacifie and appease them, and these common despisers of good vtterance, which resteth altogether in figuratiue speeches, being well vsed whether it come by nature or by arte or by exercise, they be but certaine grosse ignorance of whom it is truly spoken, scientia non habet inimicum nisi ignorantem. I haue come to the Lord Keeper Sir Nicholas Bacon, & found him sitting in his gallery alone with the works of Quintilian before him, in deede he was a most eloquent man, and of rare learning and wisdom, as euer I knew England to breed, and one that ioyed as much in learned men and men of good witts. A Knight of the Queenes priue chamber, once intreated a noble woman of the Court, being in great fauour about her Maiestie (to th'intent to remoue her from a certaine displeasure, which by sinister opinion she had conceiued against a gentleman his friend) that it would please her to heare him speake in his own cause & not to condemne him vpon his aduersaries report: God forbid said she, he is to wise for me to talke with, let him goe and satisfie such a man naming him: why quoth the Knight againe, had your Ladyship rather heare a man talke like a foole or like a wise man? This was because the Lady was a little peruerse, and not disposed to reforme her selfe by hearing reason, which none other can so well beate into the ignorant head, as the well spoken and eloquent man. And because I am so farre waded into this discourse of eloquence and figuratiue speeches, I will tell you what hapned on a time my selfe being present whene certaine Doctours of the ciuil law were heard in a litigious cause betwixt a man and his wife: before a great Magistrat who

(as they can tell that knew him) was a man very well learned and graue, but somewhat sowre, and of no plausible vtterance: the gentlemans chaunce, was to say: my Lord the simple woman is not so much to blame as her lewde abbettours, who by violent perswasions haue lead her into this wilfulnesse. Quoth the iudge, what neede such eloquent termes in this place, the gentleman replied, doth your Lordship mislike the terme, [violent] & me thinkes I speake it to great purpose: for I am sure she would neuer haue done it, but by force of perswasion. & if perswasions were not very violent to the minde of man it could not haue wrought so strange an effect as we read that it did once in Ægypt, & would haue told the whole tale at large, if the Magistrate had not passed it ouer very pleasantly. Now to tell you the whole matter as the gentleman intended, thus it was. There came into Ægypt a notable Oratour, whose name was Hegesias who inueyed so much against the incommodities of this transitory life, & so highly commended death the dispatcher of all euils; as a great number of his hearers destroyed themselues, some with weapon, some with poyson, others by drowning and hanging themselues to be rid out of this vale of misery, in so much as it was feared least many moe of the people would haue miscaried by occasion of his perswasions, if king Ptolome had not made a publicke proclamation, that the Oratour should auoyde the countrey, and no more be allowed to speake in any matter. Whether now perswasions, may not be said violent and forcible to simple myndes in speciall, I referre it to all mens iudgements that heare the story. At least waies, I finde this opinion, confirmed by a pretie deuise or embleme that Lucianus alleageth he saw in the pourtrait of Hercules within the Citie of Marseills in Prouence: where they had figured a lustie old man with a long chayne tyed by one end at his tong, by the other end at the peoples eares, who stood a farre of and seemed to be drawn to him by the force of that chayne fastned to his tong, as who would say, by force of his perswasions. And to shew more plainly that eloquence is of great force (and not as many men thinke amisse) the propertie and gift of yong men onely, but rather of old men, and a thing which better becommeth hory haire then beardlesse boyes, they seeme to ground it vpon this reason: age (say they and most truly) brings experience, experience bringeth wisdom, long life yeldes long vse and much exercise of speach, exercise and custome with wisdom, make an assured and volluble vtterance: so is it that old men more then any other sort speake most grauely, wisely, assuredly, and plausibly, which partes are all that can be required in perfite eloquence, and so in all deliberations of importance where counsellours are allowed freely to opyne & shew their conceits, good perswasion is no lesse requisite then speach it selfe: for in great purposes to speake and not to be able or likely to perswade, is a vayne thing: now let vs returne backe to say more of this Poeticall ornament.

CHAP. III.

How ornament Poeticall is of two sortes according to the double vertue and efficacie of figures.

This ornament then is of two sortes, one to satisfie & delight th'eare onely by a goodly outward shew fet vpon the matter with wordes, and speaches smothly and tunably running: another by certaine intendments or sence of such wordes & speeches inwardly working a stirre to the mynde: that first qualitie the Greeks called Enargia, of this word argos, because it geueth a glorious lustre and light. This latter they callled Energia of ergon, because it wrought with a strong and vertuous operation; and figure breedeth them both, some seruing to giue glosse onely to a language, some to geue it efficacie by sence, and so by that meanes some of them serue th'eare onely, some serue the conceit onely and not th'eare: there be of them also that serue both turnes as common seruitours appointed for th'one and th'other purpose, which shalbe hereafter spoken of in place: but because we haue alleaged before that ornament is but the good or rather bewtifull habite of language and stile and figuratiue speaches the instrument wherewith we burnish our language fashioning it to this or that measure and proportion, whence finally resulteth a long and continuall phrase or maner of writing or speach, which we call by the name of stile: we wil first speake of language; then of stile, lastly of figure, and declare their vertue and differences, and also their vse and best application, & what portion in exornation euery of them bringeth to the bewtifying of this Arte.

CHAP. IIII.

Of Language.

Speech is not naturall to man sauing for his onely habilitie to speake, and that he is by kinde apt to vtter all his conceits with sounds and voyces diuersified many maner of wayes, by meanes of the many & fit instruments he hath by nature to that purpose, as a broad and voluble tong, thinne and mouable lippes, teeth euen and not shagged; thick ranged, a round vaulted pallate, and a long throte, besides an excellent capacitie of wit that maketh him more disciplinable and imitative than any other creature: then as to the forme and action of his speach, it commeth to him by arte & teaching, and by vse or exercise. But after a speach is fully fashioned to the common vnderstanding, & accepted by consent of a whole countrey & nation, it is called a language, & receaueth none allowed alteration, but by extraordinary occasions by little & little, as it were insensibly bringing in of many corruptions that creepe along with the time: of all which matters, we haue more largely spoken in our bookes of the originals and pedigree of the English tong. Then when I say language, I meane the speach wherein the Poet or maker writeth be it Greek or Latine or as our case is the vulgar English, & when it is peculiar vnto a countrey it is called the mother speach of that people: the Greekes terme it Idioma: so is ours at this day the Norman English. Before the Conquest of the Normans it was the Anglesaxon and before that the British, which as some will, is at this day, the Walsh, or as others affirme the Cornish: I for my part thinke neither of both, as they be now spoken and pronounced. This part in our maker or Poet must be heedly looked vnto, that it be naturall, pure, and the most vsuall of all his countrey: and for the same purpose rather that which is spoken in the kings Court, or in the good townes and Cities within the land, then in the marches and frontiers, or in port townes, where straungers haunt for traffike sake, or yet in Vniuersities where Schollers vse much peeuish affectation of words out of the primatiue languages, or finally, in any vplandish village or corner of a Realme, where is no resort but of poore rusticall or vnciuill people: neither shall he follow the speach of a craftes man or carter, or other of the inferiour sort, though he be inhabitant or bred in the best towne and Citie in this Realme, for such persons doe abuse good speaches by strange accents or illshapen soundes, and false ortographie. But he shall follow generally the better brought vp sort, such as the Greekes call [charientes] men ciuill and graciously behaoured and bred. Our maker therefore at these dayes shall not follow Piers plowman nor Gower nor Lydgate nor yet Chaucer, for their language is now out of vse with vs: neither shall he take the termes of Northern-men, such as they vse in dayly talke, whether they be noble men or gentlemen, or of their best clarkes all is a matter: nor in effect any speach vsed beyond the riuer of Trent, though no man can deny but that theirs is the purer English Saxon at this day, yet it is not so Courtly nor so currant as our Southerne English is, no more is the far Westerne mans speach: ye shall therefore take the vsuall speach of the Court, and that of London and the shires lying about London within lx. myles, and not much aboue. I say not this but that in euery shyre of England there be gentlemen and others that speake but specially write as good Southerne as we of Middlesex or Surrey do, but not the common people of euery shire, to whom the gentlemen, and also their learned clarkes do for the most part condescend, but herein we are already ruled by th'English Dictionaries and other bookes written by learned men, and therefore it needeth none other direction in that behalfe. Albeit peradventure some small admonition be not impertinent, for we finde in our English writers many wordes and speaches amendable & ye shall see in some many inkhorne termes so ill affected brought in by men of learning as preachers and schoolmasters and many straunge termes of other languages by Secretaries and Marchaunts and trauailours, and many darke wordes and not vsuall nor well sounding, though they be dayly spoken in Court. Wherefore great heed must be taken by our maker in this point that his choise be good. And peradventure the writer hereof be in that behalfe no lesse faultie then any other, vsing many straunge and vnaccustomed wordes and borrowed from other languages: and in that respect him selfe no meete Magistrate to refome the same errors in any other person, but since he is not vnwilling to acknowledge his owne fault, and can the better tell how to amend it, he may seeme a more excusable correctour of other mens: he intendeth therefore for an indifferent way and vniuersall benefite to taxe himselfe first and before any others.

These be words vsed by th'author in this present treatise, scientificke, but with some reason, for it ausuereth the word mechanicall, which no other word could haue done so properly, for when hee spake of all artificers which rest either in science or in handy craft, it followed necessarilie that scientificke should be coupled with mechanicall: or els neither of both to haue bene allowed, but in their places: a man of science liberall, and a handicrafts man, which had not bene so cleanly a spech as the other Maior-domo: in truth this word is borrowed of the Spaniard and Italian, and therefore new and not vsuall, but to them that are acquainted with the affaires of Court: and so for his iolly magnificence (as this case is) may be accepted among Courtiers, for whom this is specially written. A man might haue said in steade of Maior-domo, the French word (maistre d'hostell) but ilfauouredly, or the right English word (Lord Steward.) But me thinks for my owne opinion this word Maior-domo though he be borrowed, is more acceptable than any of the rest, other men may iudge otherwise. Politien, this word also is receued from the Frenchmen, but at this day vsuall in Court and with all good Secretaries: and cannot finde an English word to match

him, for to haue said a man politique, had not bene so wel: bicause in trueth that had bene no more than to haue said a ciuil person. Politien is rather a surueyour of ciuilitie than ciuil, & a publique minister or Counsellor in the state. Ye haue also this worde Conduict, a French word, but well allowed of vs, and long since vsuall, it soundes somewhat more than this word (leading) for it is applied onely to the leading of a Captaine, and not as a little boy should leade a blinde man, therefore more proper to the case when he saide, conduct of whole armies: ye finde also this word Idiomie, taken from the Greekes, yet seruing aptly, when a man wanteth to expresse so much vnles it be in two words, which surplussage to auoide, we are allowed to draw in other words single, and asmuch significatiue: this word significatiue is borrowed of the Latine and French, but to vs brought in first by some Noble-mans Secretarie, as I thinke, yet doth so well serue the turne, as it could not now be spared: and many more like vsurped Latine and French words: as, Methode, methodicall, placation, function, assubriling, refining, compendious, prolixie, figuratiue, inueigle. A terme borrowed of our common Lawyers, impression, also a new terme, but well expressing the matter, and more than our English word. These words, Numerous, numerositee, metricall, harmonicall, but they cannot be refused, specially in this place for description of the arte. Also ye finde these words, penetrate, penetrable, indignitie, which I cannot see how we may spare them, whatsoever fault wee finde with Inkhorne termes: for our speach wanteth words to such sense so well to be vsed: yet in steade of indignitie, yee haue vnworthinesse: and for penetrate, we may say peece, and that a French terme also, or broche, or enter into with violence, but not so well sounding as penetrate. Item, sauage, for wilde: obscure, for darke. Item these words, declamation, delineation, dimention, are scholasticall termes in deede, and yet very proper. But peradventure (& I could bring a reason for it) many other like words borrowed out of the Latin and French, were not so well to be allowed by vs, as these words, audacious, for bold: facunditie, for eloquence, egregious, for great or notable: implete, for replenished; attemptat, for attempt: compatible, for agreeable in nature, and many more. But herein the noble Poet Horace hath said enough to satisfie vs all in these few verses. *Multa renascentur quae iam cecidere cadentque Quae nunc sunt in honore vocabula si volet usus Quem penes arbitrium est et ius et norma loquendi.* Which I haue thus englished, but nothing with so good grace, nor so briefly as the Poet wrote. Many a word if able shall est arise And such as now bene held in hiest prise Will fall as fast, when vse and custome will Onely vmpiers of speach, for force and skill.

CHAP. V.

Of Stile.

Stile is a constant & continuall phrase or tenour of speaking and writing, extending to the whole tale or processe of the poeme or historie, and not properly to any peece or member of a tale: but is of words speeches and sentences together, a certaine contriued forme and qualitie, many times naturall to the writer, many times his peculier by election and arte, and such as either he keepeth by skill, or holdeth on by ignorance, and will not or peradventure cannot easily alter into any other. So we say that Ciceros stile and Salusts were not one, nor Cesars and Linies, nor Homers and Hesiodus, nor Herodotus and Theucidides, nor Euripides & Aristophones, nor Erasmus and Budeus stiles. And because this continuall course and manner of writing or speech sheweth the matter and disposition of the writers minde, more than one or few words or sentences can shew, therefore there be that haue called stile, the image of man [mentes character] for man is but his minde, and as his minde is tempered and qualified, so are his speeches and language at large, and his inward conceits be the mettall of his minde and his manner of vtterance the very warp & woofe of his conceits, more plaine, or busie and intricate, or otherwise affected after the rate. Most men say that not any one point in all Physiognomy is so certaine, as to iudge a mans manners by his eye: but more assuredly in mine opinion, by his dayly maner of speech and ordinary writing. For if the man be graue, his speech and stile is graue: if light-headed, his stile and language also light: if the minde be haughtie and hoate, the speech and stile is also vehement and stirring: if it be colde and temperate, the stile is also very modest: if it be humble, or base and meeke, so is also the language and stile. And yet peradventure not altogether so, but that euery mans stile is for the most part according to the matter and subiect of the writer, or so ought to be and conformable thereunto. Then againe may it be said as wel, that men doo chuse their subjects according to the mettall of their minds, & therefore a high minded man chuseth him high & lofty matter to write of. The base courage, matter base & lowe, the meane & modest mind, meane & moderate matters after the rate. Howsoever it be, we finde that vnder these three principall complexions (if I may with leaue so terme them) high, meane and base stile, there be contained many other humors or qualities of stile, as the plaine and obscure, the rough and smoth, the facill and hard, the plentifull

and barraine, the rude and eloquent, the strong and feeble, the vehement and cold stiles, all which in their euill are to be reformed, and the good to be kept and vsed. But generally to haue the stile decent & comely it behooueth the maker or Poet to follow the nature of his subiect, that is if his matter be high and loftie that the stile be so to, if meane, the stile also to be meane, if base, the stile humble and base accordingly: and they that do otherwise vse it, applying to meane matter, hie and loftie stile, and to hie matters, stile eyther meane or base, and to the base matters, the meane or hie stile, do vtterly disgrace their poesie and shew themselues nothing skilfull in their arte, nor hauing regard to the decencie, which is the chiefe praise of any writer. Therefore to ridde all louers of learning from that errour, I will as neere as I can set downe, which matters be hie and loftie, which be but meane, and which be low and base, to the intent the stiles may be fashioned to the matters, and keepe their decorum and good proportion in euery respect: I am not ignorant that many good clerkes be contrary to mine opinion, and say that the loftie style may be decently vsed in a meane and base subiect & contrariwise, which I do in parte acknowledge, but with a reasonable qualification. For Homer hath so vsed it in his trifling worke of Batrachomyomachia: that is in his treatise of the warre betwixt the frogs and the mice. Virgill also in his bucolickes, and in his georgicks, whereof the one is counted meane, the other base, that is the husbandmans discourses and the shepheards, but hereunto serueth a reason in my simple conceite: for first to that trifling poeme of Homer, though the frog and the mouse be but litle and ridiculous beasts, yet to treat of warre is an high subiect, and a thing in euery respect terrible and daungerous to them that it alights on: and therefore of learned dutie asketh martiall grandiloquence, if it be set fourth in his kind and nature of warre, euen betwixt the basest creatures that can be imagined: so also is the Ante or pismire, and they be but litle creeping things, not perfect beasts, but insects, or wormes: yet in describing their nature & instinct, and their manner of life approaching to the forme of a common-welth, and their properties not vnlike to the vertues of most excellent gouernors and captaines, it asketh a more maiestie of speach then would the description of any other beastes life or nature, and perchance of many matters perteyning vnto the baser sort of men, because it resembleth the historie of a ciuill regiment, and of them all the chiefs and most principall which is Monarchie: so also in his bucolicks, which are but pastorall, speaches and the basest of any other poeme in their owne proper nature: Virgill vsed a somewhat swelling stile when he came to insinuate the birth of Marcellus heire apparant to the Emperour Augustus, as child to his sister, aspiring by hope and greatnes of the house, to the succession of the Empire, and establishment thereof in that familie: whereupon Virgill could do no lesse then to vse such manner of stile, whatsoever condition the poeme were of and this was decent, & no fault or blemish, to confound the tennors of the stiles for that cause. But now when I remember me againe that this Eglogue, (for I haue read it somewhere) was conceiued by Octauian th'Emperour to be written to the honour of Pollio a citizen of Rome, & of no great nobilitie, the same was misliked againe as an implicatiue, nothing decent nor proportionable to Pollio his fortunes and calling, in which respect I might say likewise the stile was not to be such as if it had bene for the Emperours owne honour, and those of the bloud imperiall, then which subiect there could not be among the Romane writers an higher nor grauer to treat vpon: so can I not be remoued from mine opinion, but still me thinks that in all decencie the stile ought to conforme with the nature of the subiect, otherwise if a writer will seeme to obserue no decorum at all, nor passe how he fashion his tale to his matter, who doubteth but he may in the lightest cause speake like a Pope, & in the grauest matters prate like a parrat, & finde wordes & phrases ynough to serue both turnes, and neither of them commendably, for neither is all that may be written of Kings and Princes such as ought to keepe a high stile, nor all that may be written vpon a shepheard to keepe the low, but according to the matter reported, if that be of high or base nature: for euery pety pleasure, and vayne delight of a king are not to accompted high matter for the height of his estate, but meane and perchance very base and vile: nor so a Poet or historiographer, could decently with a high stile reporte the vanities of Nero, the ribaudries of Caligula, the idleness of Domitian, & the riots of Heliogabalus. But well the magnanimitie and honorable ambition of Caesar, the prosperities of Augustus, the grauitie of Tiberius, the bountie of Traiane, the wisdom of Aurelius, and generally all that which concerned the highest honours of Emperours, their birth, alliaunces, gouernment, exploits in warre and peace, and other publike affaires: for they be matter stately and high, and require a stile to be lift vp and aduanced by choyse of wordes, phrases, sentences, and figures, high, loftie, eloquent, & magnifik in proportion: so be the meane matters, to be caried with all wordes and speaches of smothnesse and pleasant moderation, & finally the base things to be holden within their teder, by low, myld, and simple maner of vtterance, creeping rather then clyming, & marching rather then mounting vpwardes, with the wings of the stately subiects and stile.

Of the high, low, and meane subject.

The matters therefore that concerne the Gods and diuine things are highest of all other to be couched in writing, next to them the noble gests and great fortunes of Princes, and the notable accidents of time, as the greatest affaires of war & peace, these be all high subiectes, and therefore are deliuered ouer to the Poets Hymnick & historicall who be occupied either in diuine laudes, or in heroicall reports: the meane matters be those that concerne meane men their life and busines, as lawyers, gentlemen, and marchants, good housholders and honest Citizens, and which found neither to matters of state nor of warre, nor leagues, nor great alliances, but smatch all the common conuersation, as of the ciuill and better sort of men: the base and low matters be the doings of the common artificer, seruingman, yeoman, groome, husbandman, day-labourer, sailer, shepherd, swynard, and such like of homely calling, degree and bringing vp: so that in euery of the sayd three degrees, not the selfe same vertues be egally to be prayed nor the same vices, egally to be dispraised, nor their loues, mariages, quarels, contracts and other behauiours, be like high nor do require to be set fourth with the like stile: but euery one in his degree and decencie, which made that all hymnes and histories, and Tragedies, were written in the high stile; all Comedies and Enterludes and other common Poesies of loues, and such like in the meane stile, all Eglogues and pastorall poemes in the low and base file, otherwise they had bene vtterly disproportioned: likewise for the same cause some phrases and figures be onely peculiar to the high stile, some to the base or meane, some common to all three, as shalbe declared more at large hereafter when we come to speake of figure and phrase: also some wordes and speaches and sentences doe become the high stile, that do not become th'other two. And contrariwise, as shalbe said when we talke of words and sentences: finally some kinde of measure and concord, doe not beseeme the high stile, that well become the meane and low, as we haue said speaking of concord and measure. But generally the high stile is disgraced and made foolish and ridiculous by all wordes affected, counterfait, and puffed vp, as it were a windball carrying more countenance then matter, and can not be better resembled then to these midsommer pageants in London, where to make the people wonder are set forth great and vglie Gyants marching as if they were aliue, and armed at all points, but within they are stuffed full of browne paper and tow, which the shrewd boyes vnderpeering, do guilefully discouer and turne to a great derision: also all darke and vnaccustomed wordes, or rusticall and homely, and sentences that hold too much of the mery & light, or infamous & vnshamefast are to be accounted of the same sort, for such speaches become not Princes, nor great estates, nor them that write of their doings to vtter or report and intermingle with the graue and weightie matters.

CHAP. VII.

Of Figures and figuratiue speaches.

As figures be the instruments of ornament in euery language, so be they also in a sorte abuses or rather trespasses in speach, because they passe the ordinary limits of common vtterance, and be occupied of purpose to deceiue the eare and also the minde, drawing it from plainnesse and simplicitie to a certaine doublenesse, whereby our talke is the more guilefull & abusing, for what els is your Metaphor but an inuersion of sence by transport; your allegorie by a duplicite of meaning or dissimulation vnder couert and darke intendments: one while speaking obscurely and in riddle called Ænigma: another while by common prouerbe or Adage called Pemia: then by merry skoffe called Ironia: then by bitter tawnt called Sarcasmus: then by periphrase or circumlocution when all might be said in a word or two: then by incredible comparison giuing credit, as by your Hyperbole, and many other waies seeking to inuegle and appassionate the mind: which thing made the graue iudges Areopagites (as I find written) to forbid all manner of figuratiue speaches to be vsed before them in their consistorie of Iustice, as meere illusions to the minde, and wresters of vpright iudgement, saying that to allow such manner of forraine & coulored talke to make the iudges affectioned, were all one as if the carpenter before he began to square his timber would make his squire crooked: in so much as the strait and vpright mind of a Iudge is the very rule of iustice till it be peruerted by affection. This no doubt is true and was by them grauely considered: but in this case because our maker or Poet is appointed not for a iudge but rather for a pleader, and that of pleasant & louely causes and nothing perillous, such as be those for the triall of life, limme, or liuelyhood; and before iudges neither sower nor seuere, but in the care of princely dames, yong ladies, gentlewomen and courtiers, beyng all for the most part either meeke of nature, or of pleasant humour, and that all his abuses tende but to dispose the hearers to mirth and sollace by pleasant conueyance and efficacy of speach, they are not in truth to be accompted vices but for vertues in the poetical

science very commendable. On the other side, such trespasses in speach (whereof there be many) as geue dolour and disliking to the eare & minde, by any foule indecencie or disproportion of sound, situation, or sence, they be called and not without cause the vicious parts or rather heresies of language: wherefore the matter resteth much in the definition and acceptance of this word [decorum] for whatsoever is so, cannot iustly be misliked. In which respect it may come to passe that what the Grammarians setteth downe for a viciostee in speach may become a vertue and no vice, contrariwise his commended figure may fall into a reprochfull fault: the best and most assured remedy whereof is, generally to follow the saying of Bias: ne quid nimis. So as in keeping measure, and not exceeding nor shewing any defect in the vse of his figures, he cannot lightly do amisse, if he haue besides (as that must needes be) a speciall regard to all circumstances of the person, place, time, cause and purpose he hath in hand, which being well obserued it easily auoideth all the recited inconueniences, and maketh now and then very vice goe for a formall vertue in the exercise of this Arte.

CHAP. VIII.

Sixte pointes set downe by our learned forefathers for a generall regiment of all good vtterance be it by mouth or by writing.

Bvt before there had bene yet any precise obseruation made of figuratiue speeches, the first learned artificers of language considered that the bewtie and good grace of vtterance rested in no many pointes: and whatsoever transgressed those lymits, they counted it for vitious; and thereupon did set downe a manner of regiment in all speech generally to be obserued, consisting in sixte pointes. First they said that there ought to be kept a decent proportion in our writings and speach, which they termed Analogia. Secondly, that it ought to be voluble vpon the tongue, and tunable to the eare, which they called Tasis. Thirdly, that it were not tediously long, but briefe and compendious, as the matter might beare, which they called Syntomia. Fourthly, that it should cary an orderly and good construction, which they called Synthesis. Fiftly, that it should be a sound, proper and naturall speach, which they called Ciriologia. Sixtly, that it should be liuely & stirring, which they called Tropus. So as it appeareth by this order of theirs, that no vice could be committed in speech, keeping within the bounds of that restraint. But sir, all this being by them very well conceiued, there remayned a greater difficultie to know what this proportion, volubilitie, good construction, & the rest were, otherwise we could not be euer the more relieued. It was therefore of necessitie that a more curious and particular description should bee, made of euery manner of speech, either transgressing or agreeing with their said generall prescript. Whereupon it came to passe, that all the commendable parts of speech were set forth by the name of figures, and all the illaudable partes vnder the name of vices, or viciosties, of both which it shall bee spoken in their places.

CHAP. IX.

How the Greekes first, and afterward the Latines, inuented new names for euery figure, which this Author is also enforced to doo in his vulgar.

The Greekes were a happy people for the freedome & liberty of their language, because it was allowed them to inuent any new name that they listed, and to peece many words together to make of them one entire, much more significatiue than the single word. So among other things did they to their figuratiue speeches devise certainen ames. The Latines came somewhat behind them in that point, and for want of conuenient single wordes to expresse that which the Greekes could do by cobling many words together, they were faine to vse the Greekes still, till after many yeares that the learned Oratours and good Grammarians among the Romaines, as Cicero, Verro, Quintilian, & others strained themselues to giue the Greeke wordes Latin names, and yet nothing so apt and fitty. The same course are we driuen to follow in this description, since we are enforced to cull out for the vse of our Poet or maker all the most commendable figures. Now to make them knowen (as behoueth) either we must do it by th'originall Greeke name or by the Latine, or by our owne. But when I consider to what sort of Readers I write, & how illfaring the Greeke terme would sound in the English eare, then also how short the Latines come to expresse manie of the Greeke originals. Finally, how well our language serueth to supplie the full signification of them both, I haue

thought it no lesse lawfull, yea peradventure under licence of the learned, more laudable to vse our owne naturall, if they be well chosen, and of proper signification, than to borrow theirs. So shall not our English Poets, though they be to seeke of the Greeke and Latin languages, lament for lack of knowledge sufficient to the purpose of this arte. And in case any of these new English names giuen by me to any figure, shall happen to offend, I pray that the learned will beare with me and to thinke the straungenesse thereof proceedes but of noueltie and disaquaintance with our eares, which in processe of time, and by custome will frame very well: and such others as are not learned in the primitiue languages, if they happen to hit vpon any new name of myne (so ridiculous in their opinion) as may moue them to laughter, let such persons, yet assure themselues that such names go as neare as may be to their originals, or els serue better to the purpose of the figure then the very originall, reseruing alwayes, that such new name should not be vnpleasant in our vulgar nor harsh vpon the tong: and where it shall happen otherwise, that it may please the reader to thinke that hardly any other name in our English could be found to serue the turne better. Againe if to auoid the hazard of this blame I should haue kept the Greeke or Latin still it would haue appeared a little too scholasticall for our makers, and a peece of worke more fit for clerkes then for Courtiers for whose instruction this trauaile is taken: and if I should haue left out both the Greeke and Latine name, and put in none of our owne neither: well perchance might the rule of the figure haue bene set downe, but no conuenient name to hold him in memory. It was therefore expedient we deuised for euery figure of importance his vulgar name, and to ioyn the Greeke or Latine originall with them; after that sort much better satisfying aswel the vulgar as the learned learner, and also the authors owne purpose, which is to make of a rude rimer, a learned and a Courtly Poet.

CHAP. X.

A division of figures, and how they serue in exornation of language.

And because our chiefe purpose herein is for the learning of Ladies and young Gentlewomen, or idle Courtiers, desirous to become skilful in their owne mother tongue, and for their priuate recreation to make now & then ditties of pleasure, thinking for our parte none other science so fit for them & the place as that which teacheth beau semblant, the chiefe profession aswell of Courting as of poesie: since to such manner of mindes nothing is more combersome then tedious doctrines and schollarly methodes of discipline, we haue in our owne conceit deuised a new and strange modell of this arte, fitter to please the Court then the schoole, and yet not vnecessary for all such as be willing themselues to become good makers in the vulgar, or to be able to iudge of other mens makings: wherefore, intending to follow the course which we haue begun, thus we say: that though the language of our Poet or maker being pure & clenly, & not disgraced by such vicious parts as haue bene before remembered in the Chapter of language, be sufficiently pleasing and commendable for the ordinarie vse of speech; yet is not the same so well appointed for all purposes of the excellent Poet, as when it is gallantly arrayed in all his colours which figure can set vpon it, therefore we are now further to determine of figures and figuratiue speeches. Figuratiue speech is a noueltie of language euidently (and yet not absurdly) estranged from the ordinarie habite and manner of our dayly talke and writing and figure it selfe is a certaine liuely or good grace set vpon wordes, speaches and sentences to some purpose and not in vaine, giuing them ornament or efficacie by many maner of alterations in shape, in sounde, and also in sence, sometime by way of surplusage, sometime by defect, sometime by disorder, or mutation, & also by putting into our speaches more pithe and substance, subtilitie, quicknesse, efficacie or moderation, in this or that sort tuning and tempring them, by amplification, abridgement, opening, closing, enforcing, meekening, or otherwise disposing them to the best purpose whereupon the learned clerks who haue written methodically of this Arte in the two master languages, Greeke and Latine, haue sorted all their figures into three rankes, and the first they bestowed vpon the Poet onely: the second vpon the Poet and Oratour indifferently: the third vpon the Oratour alone. And that first sort of figures doth serue th'eare onely and may be therefore called Auricular: your second serues the conceit onely and not th'eare, and may be called sensible, not sensible nor yet sententious: your third sort serues as well th'eare as the conceit and may be called sententious figures, because not only they properly apperteine to full sentences, for bewtifying them with a currant & pleasant numerositie, but also giuing them efficacie, and enlarging the whole matter besides with copious amplifications. I doubt not but some busie carpers will scorne at my new deuised termes: auricular and sensible, saying that I might with better warrant haue vsed in their steads these words, orthographicall or syntacticall, which the learned Grammarians left ready made to our hands, and do importe as much as th'other that I haue brought, which thing peradventure I deny not in part, and neuerthesse for some causes thought them not so necessarie: but with these maner of men I do willingly beare, in respect of their laudable

endeuour to allow antiquitie and slie innouation: with like beneuolence I trust they will beare with me writing in the vulgar speach and seeking by my nouelties to satisfie not the schoole but the Court: whereas they know very well all old things soone waxe stale & lothsome, and the new deuises are euer dainty and delicate, the vulgar instruction requiring also vulgar and communicable termes, not clerkly or vncouth as are all these of the Greeke and Latine languages primitiue receiued, vnlesse they be qualified or by much vse and custome allowed and our eares made acquainted with them. Thus then I say that auricular figures be those which worke alteration in th'eare by sound, accent, time, and slipper volubilitie in vtterance, such as for that respect was called by the auncients numerositie of speach. And not onely the whole body of a tale in poeme or historie may be made in such sort pleasant and agreable to the eare, but also euery clause by it selfe, and euery single word carried in a clause, may haue their pleasant sweetnesse apart. And so long as this qualitie extendeth but to the outward tuning of the speach reaching no higher then th'eare and forcing the mynde little or nothing, it is that vertue which the Greeks call Enargia and is the office of the auricular figures to performe. Therefore as the members of language at large are whole sentence, and sentences are compact of clauses, and clauses of words, and euery word of letters and sillables, so is the alteration (be it but of a sillable or letter) much materiall to the sound and sweetnesse of vtterance. Wherefore beginning first at the smallest alterations which rest in letters and sillables, the first sort of our figures auricular we do appoint to single words as they lye in language; the second to clauses of speach; the third to perfit sentences and to the whole masse or body of the tale be it poeme or historie written or reported.

CHAP. XI

Of auricular figures appertaining to single wordes and working by their diuers soundes and audible tunes alteration to the eare onely and not the mynde.

A word as he lieth in course of language is many wayes figured and thereby not a little altered in sound, which consequently alters the tune and harmonie of a meeter as to the eare. And this alteration is sometimes by adding sometimes by rabbating, of a sillable or letter to or from a word either in the beginning, middle or ending ioyning or vnoyning of sillibles and letters suppressing or confounding their seuerall soundes, or by misplacing of a letter, or by cleare exchange of one letter for another, or by wrong ranging of the accent. And your figures of addition or surpluse be three, videl. In the beginning, as to say: I-doon for doon, endanger for danger, embolden for bolden.

In the middle, as to say renuers for reuers, meeterly for meetly, goldylockes for goldlockes.

In th'end, as to say [remembren for remembre] [spoken for spoke]. And your figures of rabbate be as many, videl.

From the beginning, as to say [twixt for betwixt] [gainsay for againsay] [ill for euill].

From the middle, as to say [paraunter for paraenture] [poorety for pouertie] [souraigne for soueraigne] [tane for taken.]

From the end, as to say [morne for morning] [bet for better] and such like.

Your swallowing or eating vp one letter by another is when two vowels meete, whereof th'ones sound goeth into other, as to say for to attaine, t'attaine] for sorrow smart, sor'smart.]

Your displacing of a sillable as to say [desier for desire] [sier for sire.]

By cleare exchange of one letter or sillable for another, as to say euermare for euermore, wrang for wrong: Gould for gold: fright for freight and a hundred moe, which be commonly misused and strained to make rime.

By wrong ranging the accent of a sillable by which meane a short sillable is made long and a long short as to say soueraine for soueraigne: gratious for grátious: éndure for endúre: Salómon for Sálomon.

These many wayes may our maker alter his wordes, and sometimes it is done for pleasure to giue a better sound, sometimes vpon necessitie and to make vp the rime. But our maker must take heed that he be not to bold specially in exchange of one letter for another for vnlesse vsuall speach and custome allow it, it is a fault and no figure, and because these be figures of the smallest importaunce, I forbear to giue them any vulgar name.

CHAP. XII.

Of Auricular figures pertaining to clauses of speech and by them working no little alteration to the eare.

As your single words may be many waies transfigured to make the meetre or verse more tunable and melodious, so also may your whole and entire clauses be in such sort contriued by the order of their construction as the eare may receiue certaine recreation, although the mind for any noueltie of sence be little or nothing affected. And therefore al your figures of grammaticall construction, I accompt them but merely auricular in that they reach no further then the eare. To which there will appeare some sweete or vnsauery point to offer you dolour or delight, either by some eident defect, or surplusage, or disorder, or immutation in the same speaches notably altering either the congruitie grammaticall, or the sence, or both.

[Sidenote: Eclipsis or the Figure of default.] And first of those that worke by defect, if but one word or some little portion of speach be wanting, it may be supplied by ordinary vnderstanding and vertue of the figure Eclipsis, as to say so early a man, for [are ye] so early a man: he is to be intreated, for he is [easie] to be intreated: I thanke God I am to liue like a Gentleman, for I am [able] to liue, and the Spaniard said in his deuise of armes *acuerdo oluido*, I remember I forget whereas in right congruitie of speach it should be: I remember [that I [doo] forget. And in a deuise of our owne [empechement pur a choison] a let for a furdurance whereas it should be said [vse] a let for a furdurance, and a number more like speaches defectiue, and supplied by common vnderstanding.

[Sidenote: Zeugma or the Single supply.] But if it be to mo clauses then one, that some such word be supplied to perfit the congruitie or sence of them all, it is by the figure [Zeugma] we call him the [single supplie] because by one word we serue many clauses of one congruitie, and may be likened to the man that serues many maisters at once, but all of one country or kindred: as to say Fellowes, and friends and kinne forsooke me quite.

Here this word forsooke satisfieth the congruitie and sence of all three clauses, which would require euery of them asmuch. And as we setting forth her Maiesties regall petigree said in this figure of [Single supplie.] Her groundsires Father and Brother was a King Her mother a crowned Queene, her Sister and her selfe.

Whereas ye see this one Word [was] serues them all in that they require but one congruitie and sence.

[Sidenote: Prozeugma, or the Ringleader.] Yet hath this figure of [Single supply] another propertie, occasioning him to change now and then his name: by the order of his supplie, for if it be placed in the forefront of all the seuerall clauses whom he is to serue as a common seruitour, then is he called by the Greeks Prozeugma, by vs the Ringleader: thus Her beautie perst mine eye, her speach mine wofull hart; Her presence all the powers of my discourse. &c.

Where ye see this one word [perst] placed in the foreward, satisfieth both in sence & congruitie all those other clauses that followe him.

[Sidenote: Mezozeugma, or the Middlemarcher.] And if such word of supplie be placed in the middle of all such clauses as he serues: it is by the Greeks called Mezozeugma, by us the [Middlemarcher] thus: Faire maydes beautie (alack) with yeares it weares away, And with wether and sicknes, and sorrow as they say.

Where ye see this word [weares] serues one clause before him, and two clauses behind him, in one and the same sence and congruitie. And in this verse, Either the troth or talke nothing at all.

Where this word [talke] serues the clause before and also behind.

[Sidenote: Hypozeugma, or the Rerewarder.] But if such supplie be placed after all the clauses, and not before nor in the middle, then is he called by the Greeks Hypozeugma, and by vs the [Rerewarder] thus: My mates that wont, to keepe me companie And my neighbours, who dwelt next to my wall The friends that sware, they would not sticke to die In my quarrell: they are fled from me all.

Where ye see this word [fled from me] serue all the three clauses requiring but one congruitie & sence.

[Sidenote: Sillepsis, or the Double supply.] But if such want be in sundrie clauses, and of seuerall congruities or sence, and the supply be made to serue them all, it is by the figure Sillepsis, whom for that respect we call the [double supplie] conceiuing, and, as it were, comprehending vnder one, a supplie of two natures, and may be likened to the man that serues many masters at once, being of strange Countries or kinreds, as in these verses, where the lamenting widow shewed the Pilgrim the graues in which her husband & children lay buried. Here my sweete sonnes and daughters all my blisse, Yonder mine owne deere husband buried is.

Where ye see one verbe singular supplyeth the plurall and singular, and thus Iudge ye louers, if it be strange or no; My Ladie laughs for ioy, and I for wo.

Where ye see a third person supplie himselfe and a first person. And thus, Madame ye neuer shewed your selfe vntrue, Nor my deserts would euer suffer you.

Viz. to show. Where ye see the moode Indicatiue supply him selfe and an Infinitiu. And the like in these other. I neuer yet failde you in constancie, Nor neuer doo intend vntill I die.

Viz. [to show.] Thus much for the congruitie, now for the sence. One wrote thus of a young man, who slew a villaine that had killed his father, and rauished his mother. Thus valiantly and with a manly minde, And by one feate of euerlasting fame, This lustie lad fully requited kinde, His fathers death, and eke his mothers shame.

Where ye see this word [requite] serue a double sence: that is to say, to reuenge, and to satisfie. For the parents iniurie was reuenged, and the duetie of nature performed or satisfied by the childe.

[Sidenote: Hypozeuxis, or the Substitute.] But if this supplie be made to sundrie clauses, or to one clause sundrie times iterated, and by seuerall words, so as euery clause hath his owne supplie: then is it called by the Greekes Hypozeuxis, we call him the substitute after his originall, and is a supplie with iteration, as thus: Vnto the king she went, and to the king she said, Mine owne liege Lord behold thy poore handmaid.

Here [went to the king] and [said to the king] be but one clause iterated with words of sundrie supply. Or as in these verses following. My Ladie gaue me, my Lady wist not what, Geuing me leaue to be her Soueraine: For by such gift my Ladie hath done that, Which whilst she liues she may not call againe.

Here [my Ladie gaue] and [my Ladie wist] be supplies with iteration, by vertue of this figure.

Ye haue another auricular figure of defect, and is when we begin to speake a thing, and breake of in the middle way, as if either it needed no further to be spoken of, or that we were ashamed, or afraide to speake it it out. It is also sometimes done by way of threatning, and to shew a moderation of anger. The Greekes call him Aposiopesis. I, the figure of silence, or of interruption, indifferently.

[Sidenote: Aposiopesis, or the Figure of silence.] If we doo interrupt our speech for feare, this may be an example, where as one durst not make the true report as it was, but staid halfe way for feare of offence, thus: He said you were, I dare not tell you plaine For words once out, neuer returne againe.

If it be for shame, or that the speaker suppose it would be indecent to tell all, then thus: as he that said to his sweete hart, whom he checked for secretly whispering with a suspected person. And did ye not come by his chamber dore? And tell him that: goe to, I say no more.

If it be for anger or by way of manace or to show a moderation of wrath as the graue and discreeter sort of men do, then thus. If I take you with such another cast I swear by God, but let this be the last.

Thinking to haue said further viz. I will punish you.

If it be for none of all these causes but vpon some sodaine occasion that moues a man to breake of his tale, then thus. He told me all at large: lo yonder is the man Let himselfe tell the tale that best tell can.

This figure is fit for phantasticall heads and such as be sodaine or lacke memorie. I know one of good learning that greatly blemisheth his discretion with this maner of speach: for if he be in the grauest matter of the world talking, he will vpon the sodaine for the flying of a bird ouerthwart the way, or some other such sleight cause, interrupt his tale and neuer returne to it againe.

[Sidenote: Prolepsis, or the Propounder.] Ye haue yet another maner of speach purporting at the first blush a defect which afterward is supplied the, Greekes call him Prolepsis, we the Propounder, or the Explaner which ye will: because he workes both effectes, as thus, where in certaine verses we describe the triumphant enter-view of two great Princesses thus. These two great Queenes, came marching hand in hand, Vunto the hall, where store of Princes stand: And people of all countreys to behold, Coronis all clad, in purple cloth of gold: Celiar in robes, of siluer tissew white With rich rubies, and pearles all bedighte.

Here ye see the first proposition in a sort defectiue and of imperfect sence, till ye come by diuision to explane and enlarge it, but if we should follow the originall right, we ought rather to call him the forestaller, for like as he that standes in the market way, and takes all vp before it come to the market in grosse and sells it by retaile, so by this maner of speach our maker settis down before all the matter by a brief proposition, and afterward explanes it by a diuision more particularly.

By this other example it appeares also. Then deare Lady I pray you let it bee, That our long loue may lead us to agree: Me since I may not wed you to my wife, To serue you as a mistresse all my life: Ye that may not me for your husband haue, To clayme me for your seruant and your slaue.

CHAP. XIII.

Of your figures Auricular working by disorder.

[Sidenote: Hiperbaton, or the Trespasser.] To all of speaches which wrought by disorder by the Greekes gaue a general name [Hiperbaton] as much to say as the [trespasser] and because such disorder may be committed many wayes it receiue sundry particulars vnder him, whereof some are onely proper to the Greekes and Latines and not to vs, other some ordinarie in our maner of speaches, but so foule and intollerable as I will not seeme to place them among the figures, but do raunge them as they deserue among the vicious or faultie speaches.

[Sidenote: Parenthesis, or the Insertour] Your first figure of tollerable disorder is [Parenthesis] or by an English name the [Insertour] and is when ye will seeme for larger information or some other purpose, to peece or graffe in the midst of your tale an vnecessary parcell of speach, which neuerthelesse may be thence without any detriment to the rest. The figure is so common that it needeth none example, neuerthelesse because we are to teache Ladies and Gentlewomen to know their schoole points and termes appertaining to the Art, we may not refuse to yeeld examples euen in the plainest cases, as that of maister Diars very aptly. But now my Deere (for so my loue makes me to call you still) That loue I say, that lucklesse loue, that works me all this ill.

Also in our Eglogue intituled Elpine, which we made being but eightene yeares old, to king Edward the sixt a Prince of great hope, we surmised that the Pilot of a ship answering the King, being inquisitiue and desirous to know all the parts of the ship and tackle, what they were, & to what vse they serued, vsing this insertion or Parenthesis. Soueraigne Lord (for why a greater name To one on earth no mortall tongue can frame No statelie stile can giue the practisd penne: To one on earth conuersant among men.)

And so procedes to answer the kings question? The shippe thou seest sayling in sea so large, &c.

This insertion is very long and vtterly impertinent to the principall matter, and makes a great gappe in the tale, neuerthelesse is no disgrace but rather a bewtie and to very good purpose, but you must not vse such insertions often nor to thicke, nor those that bee very long as this of ours, for it will breede great confusion to haue the tale so much interrupted.

[Sidenote: Histeron proteron, or the Preposterous.] Ye haue another manner of disordered speach, when ye misplace your words or clauses and set that before which should be behind, & è conuerso, we call it in English prouerbe, the cart before the horse, the Greeks call it Histeron proteron, we name it the Preposterous, and if it be not too much vsed is tollerable inough, and many times scarce perceiueable, vnlesse the sence be thereby made very absurd: as he that described his manner of departure from his mistresse, said thus not much to be misliked. I kist her cherry lip and tooke my leaue:

For I tooke my leaue and kist her: And yet I cannot well say whether a man vse to kisse before hee take his leaue, or take his leaue before he kisse, or that it be all one busines. It seemes the taking leaue is by vsing some speach, intreating licence of departure: the kisse a knitting vp of the farewell, and as it were a testimoniall of the licence without which here in England one may not presume of courtesie to depart, let yong Courtiers decide this controuersie. One describing his landing vpon a strange coast, sayd thus preposterously. When we had climbde the cliffs, and were a shore,

Whereas he should haue said by good order. When we were come ashore and clymed had the cliffs

For one must be on land ere he can clime. And as another said: My dame that bred me up and bare me in her wombe.

Whereas the bearing is before the bringing vp. All your other figures of disorder because they rather seeme deformities then bewties of language, for so many of them as be notoriously vndecent, and make no good harmony, I place them in the Chapter of vices hereafter following.

CHAP. XIII.

Of your figures Auricular that worke by Surplusage.

Your figures auricular that worke by surplusage, such of them as be materiall and of importaunce to the sence or bewtie of your language, I referre them to the harmonically speeches oratours among the figures rhetorically, as be those of repetition, and iteration or amplification. All other sorts of surplusage, I accompt rather vicious then figuratiue, & therefore not melodious as shalbe remembred in the chapter of viciosities or faultie speeches.

CHAP. XV.

Of auricular figures working by exchange.

[Sidenote: Enallage, or the Figure of Exchange.] Your figures that worke auricularly by exchange, were more obseruable to the Greekes and Latines for the brauenesse of their language, ouer that ours is, and for the multiplicite of their Grammaticall accidents, or verball affects, as I may terme them, that is to say, their diuers cases, moodes, tenses, genders, with variable terminations, by reason whereof, they changed not the very word, but kept the word, and changed the shape of him onely, vsing one case for another, or tense, or person, or gender, or number, or moode. We, hauing no such varietie of accidents, haue little or no vse of this figure. They called it Enallage.

[Sidenote: Hipallage, or the Changeling.] But another sort of exchange which they had, and very pretty, we doe likewise vse, not changing one word for another, by their accidents or cases, as the Enallage: nor by the places, as the [Preposterous] but changing their true construction and application, whereby the sence is quite peruerted and made very absurd: as he that should say, for tell me troth and lie not, lie me troth and tell not. For come dine with me and stay not, come stay with me and dine not.

A certaine piteous louer, to moue his mistres to compassion, wrote among other amorous verses, this one. Madame, I set your eyes before mine woes.

For, mine woes before your eyes, spoken to th'intent to winne fauour in her sight.

But that was pretie of a certaine sorrie man of law, that gaue his Client but bad councell, and yet found fault with his fee, and said: my fee, good friend, hath deserued better counsel. Good master, quoth the Client, if your selfe had not said so, I would neuer haue beleued it; but now I thinke as you doo. The man of law perceiuing his error, I tell thee (quoth he) my counsel hath deserued a better fee. Yet of all others was that a most ridiculous, but very true exchange, which the yeoman of London vsed with his Sergeant at the Mace, who said he would goe into the countrie, and make merry a day or two, while his man plyed his busines at home: an example of it you shall finde in our Enterlude entituled Lustie London: the Sergeant, for sparing of hors-hire, said he would goe with the Carrier on foote. That is not for your worship, saide his yeoman, whereunto the Sergeant replied. I wot what I meant Iohn, it is for to stay And company the knaue Carrier, for loosing my way.

The yeoman thinking it good manner to soothe his Sergeant, said againe, I meant what I wot Sir, your best is to hie, And carrie a knaue with you for companie.

Ye see a notorious exchange of the construction, and application of the words in this: I wot what I meane; and I meane what I wot, and in the other, company the knaue Carrier, and carrie a knaue in your company. The Greekes call this figure [Hipallage] the Latins Submutatio, we in our vulgar may call him the [under-change] but I had rather haue him called the [Changeling] nothing at all sweruing from his originall, and much more aptly to the purpose, and pleasanter to beare in memory: specially for our Ladies and pretie mistresses in Court, for whose learning I write, because it is a terme often in their mouthes, and alluding to the opinion of Nurses, who are wont to say, that the Fayries vse to steale the fairest children out of their cradles, and put other ill fauoured in their places, which they called changelings, or Elfs: so, if ye mark, doeth our Poet, or maker play with his wordes, vsing a wrong construction for a right, and an absurd for a sensible, by manner of exchange.

CHAP. XVI.

Of some other figures which because they serue chiefly to make the meeters tunable and melodious, and affect not the minde but very little, be placed among the auricular.

[Sidenote: Omoioteleton, or the Like loose.] The Greekes vsed a manner of speech or writing in their proses, that went by clauses, finishing in words of like tune, and might be by vsing like cases, tenses, and other points of consonance, which they called Omoioteleton, and is that wherein they nearest approached to our vulgar ryme, and may thus be expressed. Weeping creeping beseeching I wan, The loue at length of Lady Lucian.

Or thus if we speake in prose and not in meetre. Mischaunces ought not to be lamented, But rather by wisdomed in time preuented: For such mishappes as be remedillesse, To sorrow them it is but foolishnesse: Yet are we all so frayle of nature, As to be greeued with euery displeasure.

The craking Scotts as the Cronicle reportes at a certaine time made this bald rime vpon the English-men. Long beards hartlesse, Painted hoodes witlesse: Gay coates gracelesse, Make all England thriftlesse.

Which is no perfect rime in deede, but clauses finishing in the self same tune: for a rime of good simphonie should not conclude his concords with one & the same terminant sillable, as less, less, less, but with diuers and like terminants, as les, pres, mes, as was before declared in the chapter of your cadences, and your clauses in prose should neither finish with the same nor with the like terminants, but with the contrary as hath bene shewed before in the booke of proportions; yet many vse it otherwise, neglecting the Poeticall harmonie and skill. And th'Earle of Surrey with Syr Thomas Wyat the most excellent makers of their time, more peraduenture respecting the fitnessse and ponderositie of their wordes then the true cadence or simphonie, were very licencious in this point. We call this figure following the originall, the [like loose] alluding to th'Archers terme who is not said to finish the feate of his shot before he giue the loose, and deliuer his arrow from his bow, in which respect we vse to say marke the loose of a thing for marke the end of it.

[Sidenote: Parimion, or the Figure of like letter.] Ye do by another figure notably affect th'eare when ye make euery word of the verse to begin with a like letter, as for example in this verse written in an Epithaphe of our making. Time tried his truth his trauales and his trust, And time to late tried his integritie.

It is a figure much vsed by our common rimers, and doth well if it be not too much vsed, for then it falleth into the vice which shalbe hereafter spoken of called Tautologia.

[Sidenote: Asyndeton, or the Loose language.] Ye haue another sort of speach in a maner defectiue because it wants good band or coupling, and is the figure [Asyndeton] we call him [loose language] and doth not a litle alter th'eare as thus. I saw it, I said it, I will swere it.

Caesar the Dictator vpon the victorie hee obtained against Pharnax king of Bithinia shewing the celeritie of his conquest, wrate home to the Senate in this tenour of speach no lesse swift and speedy then his victorie. Veni, vidi, vici, I came, I saw, I overcame.

Meaning thus I was no sooner come and beheld them but the victorie fell on my side.

The Prince of Orenge for his deuise of Armes in banner displayed against the Duke of Adua and the Spaniards in the Low-countrie vsed the like maner of speach. Pro Rege, pro lege, pro grege, For the king, for the commons, for the countrie lawes.

It is a figure to be vsed when we will seeme to make hast, or to be earnest, and these examples with a number more be spoken by the figure of [lose language.]

[Sidenote: Polisindeton, or the Couple clause.] Quite contrary to this ye haue another maner of construction which they called [Polisindeton] we may call him the [couple clause] for that euery clause is knit and coupled together with a coniunctiue thus, And I saw it, and I say it and I Will swere it to be true.

So might the Poesie of Caesar haue bene altered thus. I came, and I saw, and I ouercame.

One wrote these verses after the same sort, For in her mynde no thought there is, But how she may be true to is: And tenders thee and all thy heale, And wisheth both thy health and weale: And is thine owne, and so she sayes, And cares for thee ten thousand wayes.

[Sidenote: Irmus, or the Long loose.] Ye haue another maner of speach drawn out at length and going all after one tenure and with an imperfit sence till you come to the last word or verse which concludes the whole premisses with a perfit sence & full periode, the Greeks call it [Irmus,] I call him the [long loose] thus appearing in a dittie of Sir Thomas Wyat where he describes the diuers distempers of his bed. The restlesse state renuer of my smart, The labours salue increasing my sorrow: The bodies ease and troubles of my hart, Quietour of mynde mine unquiet foe: Forgetter of paine remembrer of my woe, The place of sleepe wherein I do but wake: Besprent with teares my bed I thee forsake.

Ye see here how ye can gather no perfection of sence in all this dittie till ye come to the last verse in these wordes my bed I thee forsake. And in another Sonet of Petrarcha which was thus Englished by the same Sir Thomas Wyat.

If weaker care of sodaine pale collour, If many sighes with little speach to plaine: Now ioy now woe, if they my ioyes distaine, For hope of small, if much to feare therefore, Be signe of loue then do I loue againe.

Here all the whole sence of the dittie is suspended till ye come to the last three wordes, then do I loue againe, which finisheth the song with a full and perfit sence.

[Sidenote: Epitheton, or the Qualifier.] When ye will speake giuing euery person or thing besides his proper name a qualitie by way of addition whether it be of good or of bad it is a figuratiue speach of audible alteration, so is it also of sence as to say. Fierce Achilles, wise Nestor, wilie Vlysses, Diana the chast and thou louely Venus: With thy blind boy that almost neuer misses, But hits our hartes when he levels at vs.

Or thus commending the Isle of great Brittain. Albion hugest of Westerne Ilands all, Soyle of sweete ayre and of good store: God send we see thy glory neuer fall, But rather dayly to grow more and more.

Or as we sang of our Soueraigne Lady giuing her these Attributes besides her proper name. Elizatbeth regent of the great Brittain Ile, Honour of all regents and of Queenes.

But if we speake thus not expressing her proper name Elizabeth, videl. The English Diana, the great Britton mayde.

Then is it not by Epitheton or figure of Attribution but by the figures Antonomasia, or Periphrasis.

[Sidenote: Endiadis, or the Figure of Twynnes.] Ye haue yet another manner of speach when ye will seeme to make two of one, not thereunto constrained, which therefore we call the figure of Twynnes, the Greekes Endiadis thus. Not you coy dame your lowrs nor your lookes.

For [your lowring lookes] And as one of our ordinary rimers said, Of fortune nor her frowning face, I am nothing agast.

In stead of [fortunes frowning face.] One praying the Neapolitans for good men at armes, said by the figure of Twynnes thus. A proud people and wise and valiant, Fiercely fighting with horses and with barbes: By whole prowes the Romain Prince did daunt, Wild Affricanes and the lawlesse Alarbes: The Nubiens marching with their armed cartes, And sleaing a farre with venim, and with dartes.

Where ye see this figure of Twynnes twice vsed, once when he said horses and barbes for barbd horses: againe when he saith with venim and with dartes for venomous dartes.

CHAP. XVII.

Of the figures which we call Sensable, because they alter and affect the minde by alteration of sence, and first in single wordes.

The eare hauing receiued his due satisfaction by the auricular figures, now must the minde also be seured, with his naturall delight by figures sensible such as by alteration of intendments affect the courage, and geue a good liking to the conceit. And first, single words haue their sence and vnderstanding altered and figured many wayes, to wit, by transport, abuse, crosse-naming, new naming, change of name. This will seeme very darke to you, vnlesse it be otherwise explained more particularly: and first of Transport.

[Sidenote: Metaphora, or the Figure of transporte.] There is a kinde of wresting of a single word from his owne right signification, to another not so naturall, but yet of some affinitie or conueniencie with it, as to say, I cannot digest your vnkinde words, for I cannot take them in good part: or as the man of law said, I feele you not, for I vnderstand not your case, because he had not his fee in his hand. Or as another said to a mouthy Aduocate, why barkest thou at me so sore? Or to call the top of a tree, or of a hill, the crowne of a tree or of a hill: for in deede crowne is the highest ornament of a Princes head, made like a close garland, or els the top of a mans head, where

the haire windes about, and because such terme is not applyed naturallly to a tree or to a hill, but is transported from a mans head to a hill or tree, therefore it is called by metaphore, or the figure of transport. And three causes moue vs to vse this figure, one for necessitie or want of a better word, thus: As the drie ground that thirstes after a shower Seems to reioyce when it is well wet, And speedely brings foorth both grasse and flowr, If lacke of sunne or season doo not let.

Here for want of an apter and more naturall word to declare the drie temper of the earth, it is said to thirst & to reioyce, which is onley proper to liuing creatures, and yet being so inuerted, doth not so much swerue from the true sence but that euery man can easilie conceiue the meaning thereof.

Againe, we vse it for pleasure and ornament of our speach, as thus in an Epitaph of our owne making, to the honourable memorie of a deere friend, Sir Iohn Throgmorton, knight, Iustice of Chester, and a man of many commendable vertues. Whom vertue rerde, enuy hath ouerthrowen And Iudged full low, vnder this marble stone: Ne neuer were his values so well knowen, Whilest he liued here, as now that he is gone.

Here these words, rered, overthrowen, and lodged, are inuerted, & metaphorically applyed, not vpon necessitie, but for ornament onely, afterward againe in these verses. No sunne by day that euer saw him rest Free from the toyles of his so busie charge, No night that harbourd rankor in his breast, Nor merry moode made reason runne at large.

In these verses the inuersion or metaphore, lyeth in these words, saw, harbourd, run: which naturallly are applyed to liuing things, & not to insensible: as the sunne, or the night: & yet they approach so neere, & so conueniently, as the speech is thereby made more commendable. Againe, in moe verses of the same Epitaph, thus. His head a source of grauitie and sence, His memory a shop of ciuill arte, His tongue a streame of sugred eloquence, Wisdome and meekenes lay mingled in his harte,

In which verses ye see that these words, source, shop, find, sugred, are inuerted from their owne signification to another, not altogether so naturall, but of much affinitie with it.

Then also do we it sometimes to enforce a sence and make the word more significatiue: as thus, I burne in loue, I freese in deadly hate I swimme in hope, and sinke in deepe dispaire.

These examples I haue the willinger giuen you to set foorth the nature and vse of your figure metaphore, which of any other being choisly made, is the most commendable and most common.

[Sidenote: Catachresis, or the Figure of abuse] But if for lacke of naturall and proper terme or worde we take another, neither naturall nor proper and do vntruly applie it to the thing which we would seeme to expresse, and without any iust inconuenience, it is not then spoken by this figure Metaphore or of inuersion as before, but by plaine abuse as he that bad his man go into his library and set him his bowe and arrowes, for in deede there was neuer a booke there to be found, or as one should in reproch say to a poore man, thou raskall knaue, where raskall is properly the hunters terme giuen to young deere, leane & out of season, and not to people: or as one said very pretily in this verse. I lent my loue to losse, and gaged my life in vaine.

Whereas this worde lent is properly of mony or some such other thing, as men do commonly borrow, for vse to be repayed againe, and being applied to loue is vtterly abused, and yet very commendably spoken by vertue of this figure. For he that loueth and is not beloued againe; hath no lesse wrong, that he that lendeth and is neuer repayde.

[Sidenote: Metonimia, or the Misnamer] Now doth this vnderstanding or secret conceyt reach many times to the only nomination of persons or things in their names, as of men, or mountaines, seas, countries and such like, in which respect the wrong naming, or otherwise naming of them then is due, carieth not onely an alteration of sence but a necessitie of intendment figuratiuely, as when we cal loue by the name of Venus, fleshly lust by the name of Cupid, bicause they were supposed by the auncient poets to be authors and kindlers of loue and lust: Vulcane for fire, Ceres for bread: Bacchus for wine by the same reason; also if one should say to a skilfull craftsman knowen for a glutton or common drunkard, that had spent all his goods on riot and delicate fare. Thy hands they made thee rich, thy pallat made thee poore.

It is ment, his trauaile and arte made him wealthie, his riotous life had made him a beggar: and as one that boasted of his housekeeping, said that neuer a yeare passed ouer his head, that he drank not in his house euery moneth foure tonnes of beere, & one hogshead of wine, meaning not the caskes, or vessels, but that quantitie which they conteyned. These and such other speaches, where ye take the name of the Author for the thing it selfe, or the thing conteining, for that which is contained, & in many other cases do as it were wromg name the person or the thing. So neuertheless as it may be vnderstood, it is by the figure metonymia, or misnamer.

[Sidentote: Antonomasia, or the Surnamer.] And if this manner of naming of persons or things be not by way of misnaming as before, but by a conuenient difference, and such as is true or esteemed and likely to be true, it is then called not metonimia, but antonomasia, or the Surnamer, (not the misnamer, which might extend to any other thing aswell as to a person) as he that would say: not king Philip of Spaine, but the Westerne king, because his dominion lieth the furdest West of any Christen prince: and the French king the great Vallois, because so is the name of his house, or the Queene of England, The maiden Queene, for that is her hiest peculiar among all the Queenes of the world, or as we said in one of our Partheniades, the Bryton mayde, because she is the most great and famous maiden of all Brittain: thus, But in chaste stile, am borne as I weene To blazon foorth the Brytton mayden Queene.

So did our forefathers call Henry the first, Beauclerke, Edmund Ironside, Richard coeur de lion: Edward the Confessor, and we of her Maiestie Elisabeth the peisible.

[Sidenote: Onomatopeia, or the New namer.] Then also is the sence figuratiue when we deuise a new name to any thing consonant, as neere as we can to the nature thereof, as to say: flashing of lightning, clashing of blades, clinking of fetters, chinking of money: & as the poet Virgil said of the sounding a trumpet, ta-ra-tant, taratantara, or as we giue special names to the voices of dombe beasts, as to say, a horse neigheth, a lyon brayes, a swine grunts, a hen cackleth, a dogge howles, and a hundreth mo such new names as any man hath libertie to deuise, so it be fittie for the thing which he couets to expresse.

[Sidenote: Epitheton, or the Quallifier, otherwise the figure of Attribution.] Your Epitheton or qualifier, whereof we spake before, placing him among the figures auricular, now because he serues also to alter and enforce the sence, we will say somewhat more of him in this place, and do conclude that he must be apt and proper for the thing he is added vnto, & not disagreeable or repugnant, as one that said: darke disdaine and miserable pride, very absurdly, for disdaine or disdained things cannot be said darke, but rather bright and cleere, because they be beholden and much looked vpon, and pride is rather enuid then pitied or miserable, vnlesse it be in Christian charitie, which helpeth not the terme in this case. Some of our vulgar writers take great pleasure in giuing Epithets and do it almost to euery word which may receiue them, and should not be so, vea though they were neuer so propre and apt, for sometimes wordes suffered to go single, do giue greater sence and grace than words qualified by attributions do.

[Sidenote: Metalepsis, or the Farreset.] But the sence is much altered & the hearers conceit strangely entangled by the figure Metalepsis, which I call the farset, as when we had rather fetch a word a great way off then to vse one nerer hand to expresse the matter aswel & plainer. And it seemeth the deuiser of this figure had a desire to please women rather then men: for we vse to say by manner of Prouerbe: things farreset and deare bought are good for Ladies: so in this manner of speach we vfe it, leaping ouer the heads of a great many words, we take one that is furdest off, to vtter our matter by: as Medea cursing hir first acquaintance with prince Iason, who had very vnkindly forsaken her, said: Woe worth the mountaine that the maste bare Which was the first causer of all my care.

Where she might aswell haue said, woe worth our first meeting, or woe worth the time that Iason arriued with his ship at my fathers cittie in Colchos, when he tooke me away with him, & not so farre off as to curse the mountaine that bare the pinetree, that made the mast, that bare the sailes, that the ship sailed with, which caried her away. A pleasant Gentleman came into a Ladies nursery, and saw her for her owne pleasure rocking of her young child in the cradle, and sayd to her: I speake it Madame without any mocke, Many a such cradell may I see you rocke.

Gods passion hourson said she, would thou haue me beare mo children yet, no Madame quoth the Gentleman, but I would haue you liue long, that ye might the better pleasure your friends, for his meaning was that as euery cradle

signified a new borne childe, & euery child the leasure of one yeares birth, & many yeares a long life: so by wishing her to rocke many cradels of her owne, he wished her long life. Virgill said: Post multas mea regna videns murabor aristas.

Thus in English. After many a stubble shall I come And wonder at the sight of my kingdome.

By stubble the Poet vnderfoode yeares, for haruests come but once euery yeare, at least wayes with vs in Europe. Thus is spoken by the figure of farre-set Metalepsis.

[Sidenote: Emphasis, or the Renforcer.] And one notable meane to affect the minde, is to inforce the sence of any thing by a word of more than ordinary efficacie, and neuertheles is not apparant, but as it were, secretly implied, as he that laid thus of a faire Lady. O rare beautie, ô grace, and curtesie.

And by a very euill man thus. O sinne it selfe, not wretch, but wretchednes.

Whereas if he had said thus, O gracious, courteous and beautifull woman: and, O sinfull and wretched man, it had bene all to one effect, yet not with such force and efficacie to speake by the denominatiue, as by the thing it selfe.

[Sidenote: Liptote, or the Moderatour.] As by the former figure we vse to enforce our sence, so by another we temper our sence with wordes of such moderation, as in appearaunce it abateth it but not in deede, and is by the figure Liptote, which therefore I call the Moderator, and becomes us many times better to speake in that sort quallified, than if we spake it by more forcible termes, and neuertheles is equipolent in sence, thus. I know you hate me not, nor wish me any ill.

Meaning in deede that he loued him very well and dearely, and yet the words doe not expresse so much, though they purport so much. Or if you would say; I am not ignorant, for I know well inough. Such a man is no foole, meaning in deede that he is a very wise man.

[Sidenote: Paradiastole, or the Curry-fauell.] But if such moderation of words tend to flattery, or soothing, or excusing, it is by the figure Paradiastole, which therefore nothing improperly we call the Curry-fauell, as when we make the best of a bad thing, or turne a signification to the more plausible sence: as, to call an vnthrift, a liberall Gentleman: the foolish-hardy, valiant or couragious: the niggard, thriftie: a great riot, or outrage, an youthfull pranke, and such like termes: moderating and abating the force of the matter by craft, and for a pleasing purpose, as appeareth by these verses of ours, teaching in what cases it may commendably be vsed by Courtiers.

[Sidenote: Meiosis, or the Disabler.] But if you diminish and abbase a thing by way of spight or malice, as it were to deprauie it, such speach is by the figure Meiosis or the disabler spoken of hereafter in the place of sententious figures. A great mountaine as bigge as a molehill, A heauy burthen perdy, as a pound of fethers.

[Sidenote: Tapinosis, or the Abaser.] But if ye abase your thing or matter by ignorance or error in the choise of your word, then is it by vicious maner of speach called Tapinosis, whereof ye shall haue examples in the chapter of vices hereafter folowing.

[Sidenote: Synecdoche, or the Figure of quick conceite.] Then againe if we vse such a word (as many times we doe) by which we driue the hearer to conceiue more or lesse or beyond or otherwise then the letter expresseth, and it be not by vertue of the former figures Metaphore and Abase and the rest, the Greeks then call it Synecdoche, the Latines sub intellectio or vnderftanding, for by part we are enforced to vnderstand the whole, by the whole part, by many things one thing, by one, many, by a thing precedent, a thing consequent, and generally one thing out of another by maner of contrariety to the word which is spoken, aliudex alio, which because it seemeth to aske a good, quick, and pregnant capacitie, and is not for an ordinarie or dull wit so to do, I chose to call him the figure not onely of conceit after the Greeke originall, but also of quick conceite. As for example we will giue none because we will speake of him againe in another place, where he is ranged among the figures sensible appertaining to clauses.

CHAP. XVIII.

Of sensible figures altering and affecting the mynde by alteration of sense or intendements in whole clauses or speaches.

As by the last remembred figures the sence of single wordes is altered, so by these that follow is that of whole and entire speach: and first by the Courtly figure Allegoria, which is when we speake one thing and thinke another, and that our wordes and our meanings meete not. The vse of this figure is so large, and his vertue of so great efficacie as it is supposed no man can pleasantly vtter and perswade without it, but in effect is sure neuer or very seldome to thriue and prosper in the world, that cannot skilfully put in vse, in somuch as not onely euery common Courtier, but also the grauest Counsellour, yea and the most noble and wisest Prince of them all are many times enforced to vse it, by example (say they) of the great Emperour who had it vsually in his mouth to say, Qui nescit dissimulare nescit regnare. Of this figure therefore which for his duplicitie we call the figure of [false semblant or dissimulation] we will speake first as of the chief ringleader and captaine of all other figures, either in the Poeticall or oratorie science.

[Sidenote: Allegoria, or the Figure of false semblant.] And ye shall know that we may dissemble, I meane speake otherwise then we thinke, in earnest as well as in sport, vnder couert and darke termes, and in learned and apparant speaches, in short sentences, and by long ambage and circumstance of wordes, and finally aswell when we lye as when we tell truth. To be short euery speach wrested from his owne naturall signification to another not altogether so naturall is a kinde of dissimulation, because the wordes beare contrary countenance to th'intent. But properly & in his principall vertue Allegoria is when we do speake in sence translatiue and wrested from the owne signification, neuertheless applied to another not altogether contrary, but hauing much coueniencie with it as before we said of the metaphore: as for example if we should call the common wealth, a shippe; the Prince a Pilot, the Counsellours mariners, the stormes warres, the calme and [hauen] peace, this is spoken all in allegorie: and because such inuersion of sence in one single worde is by the figure Metaphore, of whom we spake before, and this manner of inuersion extending to whole and large speaches, it maketh the figure allegorie to be called a long and perpetuall Metaphore. A noble man after a whole yeares absence from his ladie, sent to know how she did, and whether she remayned affected toward him as she was when he left her. Louely Lady I long full sore to heare, If ye remaine the same, I left you last yeare.

To whom she answered in allegorie other two verses: My louing Lorde I will well that ye wist, The thred is spon, that neuer shall untwist.

Meaning, that her loue was so stedfast and constant toward him as no time or occasion could alter it. Virgill in his shepherdy poemes called Eglogues vsed as rusticall but fit allegorie for the purpose thus: Claudite iam riuos pueri sat prata biberunt.

Which I English thus: Stop up your streames (my lads) the medes haue drunk ther fill.

As much to say, leaue of now, yee haue talked of the matter inough: for the shepheards guise in many places is by opening certaine sluces to water their pastures, so as when they are wet inough they shut them againe: this application is full Allegoricke.

Ye haue another manner of Allegorie not full, but mixt, as he that wrate thus: The cloudes of care haue coured all my coste, The stormes of strife, do threaten to appeare: The waues of woe, wherein my ship is toste. Haue broke the banks, where lay my life so deere. Chippes of ill chance, are fallen amidst my choise, To marre the minde that ment for to reioyce.

I call him not a full Allegorie, but mixt, bicause he discouers withall what the cloud, storme, waue, and the rest are, which in a full allegorie should not be discouered, but left at large to the readers iudgement and coniecture.

[Sidenote: Enigma, or the Riddle.] We dissemble againe vnder couert and darkes speaches, when we speake by way of riddle (Enigma) of which the sence can hardly be picked out, but by the parties owne assoile, as he that said: It is my mother well I wot, And yet the daughter that I begot.

Meaning it by the ise which is made of frozen water, the same being molten by the sunne or fire, makes water againe.

My mother had an old woman in her nurserie, who in the winter nights would put vs forth many pretty riddles, whereof this is one: I haue a thing and rough it is And in the midst a hole I wis: There came a yong man with his gaine, And he put it a handfull in.

The good old Gentlewoman would tell vs that were children how it was meant by a furd glooue. Some other naughty body would peradventure haue construed it not halfe so mannerly. The riddle is pretie but that it holdes too much of the Cachemphaton or foule speach and may be drawn to a reprobate sence.

[Sidenote: Parimia, or Prouerb.] We dissemble after a sort, when we speake by comon prouerbs, or, as we vse to call them, old said sawes, as thus: As the olde cocke crowes so doeth the chick: A bad Cooke that cannot his owne fingers lick.

Meaning by the first, that the yong learne by the olde, either to be good or euill in their behaiours: by the second, that he is not to be counted a wise man, who being in authority, and hauing the administration of many good and great things, will not serue his owne turne and his friends whilst he may, & many such prouerbiall speeches: as Totnesse is turned French, for a strange alteration: Skarborow warning, for a sodaine commandement, allowing no respect or delay to bethinke a man of his busines. Note neuerthesse a diuersitie, for the two last examples be prouerbs, the two first prouebiall speeches.

[Sidenote: Ironia, or the Drie mock.] Ye doe likewise dissemble, when ye speake in derision or mokerie, & that may be many waies: as sometime in sport, sometime in earnest, and priuily, and apertly, and pleasantly, and bitterly: but first by the figure Ironia, which we call the drye mock: as he that said to a bragging Ruffian, that threatened he would kill and slay, no doubt you are a good man of your hands: or, as it was said by a French king, to one that praide his reward, shewing how he had bene cut in the face at a certain battell fought in his seruice: ye may see, quoth the king, what it is to runne away & looke backwards. And as Alphonso king of Naples, said to one that profered to take his ring when he washt before dinner, this wil serue another well: meaning that the Gentlemen had another time taken them, & becaufe the king forgot to aske for them, neuer restored his ring againe.

[Sidenote: Sarcasmus, or the Bitter taunt.] Or when we deride with a certaine seueritie, we may call it the bitter taunt [Sarcasmus] as Charles the fift Emperour aunswered the Duke of Arskot, beseeching him recompence of seruice done at the siege of Renty, against Henry the French king, where the Duke was taken prisoner, and afterward escaped clad like a Colliar. Thou wert taken, quoth the Emperour, like a coward, and scapedst like a Colliar, wherefore get thee home and liue vpon thine owne. Or as king Henry the eight said to one of his priuy chamber, who sued for Sir Anthony Rowse, knight of Norfolke, that his Maiestie would be good vnto him, for that he was an ill begger. Quoth the king againe, if he be ashamed to beg, we are ashamed to geue. Or as Charles the fift Emperour, hauing taken in battaile Iohn Frederike Duke of Saxon, with the Lantgraue of Hessen and others: this Duke being a man of monstrous bignes and corpulence, after the Emperour had seene the prisoners, said to those that were about him, I haue gone a hunting many times, yet neuer tooke I such a swine before.

[Sidenote: Asteismus or the Merry scoffe, otherwise the ciuill iest.] Or when we speake by manner of pleasantery, or mery skoffe, that is by a kind of mock, whereof the sence is farreset, & without any gall or offence. The Greekes call it [Asteismus] we may terme it the ciuill iest, because it is a mirth very full of ciuilitie, and such as the most ciuill men doo vse. As Cato said to one that had geuen him a good knock on the head with a long peece of timber he bare on his shoulder, and then bad him beware: what (quoth Cato) wilt thou strike me againe? for ye know, a warning should be geuen before a man haue receiued harme, and not after. And as king Edward the sixt, being of young yeres, but olde in wit, saide to one of his priue chamber, who sued for a pardon for one that was condemned for a robberie, telling the king that it was but a small trifle, not past sixteene shillings matter which he had taken: quoth the king againe, but I warrant you the fellow was sorrie it had not bene sixteene pound: meaning how the malefactors intent was as euill in that trifle, as if it had bene a greater summe of money. In these examples if ye marke there is no grieue or offence ministred as in those other before, and yet are very wittie, and spoken in plaine derision.

The Emperor Charles the fift was a man of very few words, and delighted little in talke. His brother king Ferdinando being a man of more pleasant discourse, sitting at the table with him, said, I pray your Maiestie be not so silent, but let vs talke a little. What neede that brother, quoth the Emperor, since you haue words enough for vs both.

[Sidenote: Micticismus, or the Fleering frumpe.] Or when we giue a mocke with a scornfull countenance as in some smiling sort looking aside or by drawing the lippe awry, or shrinking vp the nose; the Greeks called it Micticismus, we may terme it a fleering frumpe, as he that said to one whose wordes he beleued not, no doubt Sir of that. This fleering frumpe is one of the Courtly graces of hicke the scorne.

[Sidenote: Antiphrasis, or the Broad floute.] Or when we deride by plaine and flat contradiction, as he that saw a dwarfe go in the streete said to his companion that walked with him: See yonder gyant: and to a Negro or woman blackemoore, in good sooth ye are a faire one, we may call it the broad floute.

[Sidenote: Charientismus, or the Priuy nippe.] Or when ye giue a mocke vnder smooth and lowly wordes as he that hard one call him all to nought and say, thou art sure to be hanged ere thou dye: quoth th'other very soberly, Sir I know your maistership speakes but in iest, the Greeks call it (charientismus) we may call it the priuy nippe, or a myld and appealing mockery: all these be souldiers to the figure allegoria and fight vnder the banner of dissimulation.

[Sidenote: Hiperbole, or the Ouer reacher, otherwise called the loud lyer.] Neuerthesse ye haue yet two or three other figures that smatch a spice of the same false semblant, but in another sort and maner of phrase, whereof one is when we speake in the superlatiue and beyond the limites of credit, that is by the figure which the Greeks call Hiperbole, Latines Dementiens or the lying figure. I for his immoderate excesse cal him the ouer reacher right with his originall or [lowd lyer] & me thinks not amisse: now when I speake that which neither I my selfe thinke to be true, nor would haue any other body beleuee, it must needs be a great dissimulation, because I meane nothing lesse then that I speake, and this maner of speech is vsed, when either we would greatly aduaunce or greatly abase the reputation of any thing or person, and must be vsed very discretely, or els it will seeme odious, for although a prayse or other report may be allowed beyond credit, it may not be beyond all measure, specially in the proseman, as he that was a speaker in a Parliament of king Henry the eights raigne, in his Oration which ye know is of ordinary to be made before the Prince at the first assembly of both houses, ould seeme to prayse his Maiestie thus. What should I go about to recite your Maiesties innumerable vertues, euen as much as if I tooke vpon me to number the stares of the skie, or to tell the sands of the sea. This Hyperbole was both ultra fidem and also ultra modum, and therefore of a graue and wise Counsellour made the speaker to be accompted a grosse flattering foole: peradventure if he had vsed it thus, it had bene better and neuerthesse a lye too, but a more moderate lye and no lesse to the purpose of the kings commendation, thus. I am not able with any wordes sufficiently to expresse your Maiesties regall vertues, your kingly merites also towardes vs your people and realme are so exceeding many, as your prayses therefore are infinite, your honour aud renowne euerlasting: And yet all this if we shall measure it by the rule of exact veritie, is but an vntruth, yet a more cleanly commendation then was maister Speakers. Neuerthesse as I said before if we fall a praysing, specially of our mistresses vertue, bewtie, or other good parts, we be allowed now and then to ouer-reach a little by way of comparison as he that said thus in prayse of his Lady. Giue place ye louers here before, That spent your boasts and brags in vaine: My Ladies bewtie passeth more, The best of your I dare well fayne: Then doth the sunne the candle light, Or brightest day the darkest night.

And as a certaine noble Gentlewoman lamenting at the vnkindnesse of her louer said very pretily in this figure. But since it will no better be, My teares shall neuer blin: To moist the earth in such degree, That I may drowne therein: That by my death all men may say, Lo weemen are as true as they.

[Sidenote: Periphrasis, or the Figure of ambage.] Then haue ye the figure Periphrasis, holding somewhat of the disempler, by reason of a secret intent not appearing by the words, as when we go about the bush, and will not in one or a few words expresse that thing which we desire to haue knowen, but do chose rather to do it by many words, as we our selues wrote of our Soueraigne Lady thus: Whom Princes serue, and Realmes obay, And greatest of Bryton kings begot: She came abroad euen yesterday, When such as saw her, knew her not.

And the rest that followeth, meaning her Maiesties person, which we would seeme to hide leauing her name vnspoken to the intent the reader should gesse at it: neuerthelesse vpon the matter did so manifestly disclose it, as any simple iudgement might easily perceiue by whom it was ment, that is by Lady Elizabeth, Queene of England and daughter to king Henry the eight, and therein resteth the dissimulation. It is one of the gallantest figures among the poetes so it be vsed discretely and in his right kinde, but many of these makers that be not halfe their craftes maisters, do very often abuse it and also many waies. For if the thing or person they go about to describe by circumstance, be by the writers improvidence otherwise bewrayed, it looseth the grace of a figure, as he that said: The tenth of March when Aries receiued, Dan Phoebus raies into his horned hed.

Intending to describe the spring of the yeare, which euery man knoweth of himselfe, hearing the day of March named: the verses be very good the figure nought worth, if it were meant in Periphrase for the matter, that is the season of the yeare which should haue bene couertly disclosed by ambage, was by and by blabbed out by naming the day of the moneth, & so the purpose of the figure disapointed, peraduenture it had bin better to haue said thus: The month and date when Aries receiud, Dan Phoebus raies into his horned head.

For now there remaineth for the Reader somewhat to studie and gesse vpon, and yet the spring time to the learned iudgement sufficiently expressed.

The Noble Earle of Surrey wrote thus: In winters iust returne, when Boreas gan his raigne, And euery tree vnclodhed him fast as nature taught them plaine.

I would faine learne of some good maker, whether the Earle spake this in figure of Periphrase or not, for mine owne opinion I thinke that if he ment to describe the winter season, he would not haue disclosed it so broadly, as to say winter at the first worde, for that had bene against the rules of arte, and without any good iudgement: which in so learned & excellent a personage we ought not to suspect, we say therefore that for winter it is no Periphrase but language at large: we say for all that, hauing regard to the second verse that followeth it is a Periphrase, seeming that thereby he intended to shew in what part of the winter his loues gaue him anguish, that is in the time which we call the fall of the leafe, which begins in the moneth of October, and stands very well with the figure to be vttered in that sort notwithstanding winter be named before, for winter hath many parts: such namely as do not shake of the leafe, nor vnclod the trees as here is mentioned: thus may ye iudge as I do, that this noble Erle wrate excellently well and to purpose. Moreouer, when a maker will seeme to vse circumlocution to set forth any thing pleasantly and figuratiuely, yet no lesse plaine to a ripe reader, then if it were named expresly, and when all is done, no man can perceiue it to be the thing intended. This is a foule ouersight in any writer as did a good fellow, who weening to shew his cunning, would needs by periphrase expresse the realme of Scotland in no lesse then eight verses, and when he had said all, no man could imagine it to be spoken of Scotland: and did besides many other faults in his verse, so deadly belie the matter by his description, as it would pitie any good maker to heare it.

[Sidenote: Synecdoche, or the Figure of quick conceite.] Now for the shutting vp of this Chapter, will I remember you farther of that manner of speech which the Greekes call Synecdoche, and we the figure of [quicke conceite] who for the reasons before alleged, may be put under the speeches allegoricall, because of the darkenes and duplicitie of his sence: as when one would tell me how the French king was ouerthrowen at Saint Quintans. I am enforced to think that it was not the king himselfe in person, but the Constable of Fraunce with the French kings power. Or if one would say, the towne of Andwerpe were famished, it is not so to be taken, but of the people of the towne of Andwerp, and this conceit being drawen aside, and (as it were) from one thing to another, it encombers the minde with a certaine imagination what it may be that is meant, and not expressed: as he that said to a young gentlewoman, who was in her chamber making her selfe vnready. Mistresse will ye geue me leaue to vnlace your peticote, meaning (perchance) the other thing that might follow such vnclacing. In the olde time, whosoever was allowed to vndoe his Ladies girdle, he might lie with her all night: wherfore the taking of a womans maydenhead away, was said to vndoo her girdle. Virgineam dissoluit zonam, saith the Poet, conceiuing out of a thing precedent, a thing subsequent. This may suffice for the knowledge of this figure [quicke conceit.]

Of Figures sententious, otherwise called Rhetoricall.

Now if our presupposall be true that the Poet is of all other the most auncient Orator, as he that by good & pleasant perswasions first reduced the wilde and beastly people into publicke societies and ciuilitie of life, insinuating vnto them, vnder fictions with sweete and coloured speeches, many wholesome lessons and doctrines, then no doubt there is nothing so fitte for him, as to be furnished with all the figures that be Rhetoricall, and such as do most beautifie language with eloquence & sententiousnes. Therefore since we haue already allowed to our maker his auricular figures, and also his sensible, by which all the words and clauses of his meeters are made as well tunable to the eare, as stirring to the minde, we are now by order to bestow vpon him those other figures which may execute both offices, and all at once to beautifie and geue sence and sententiousnes to the whole language at large. So as if we should intreate our maker to play also the Orator, and whether it be to pleade, or to praise, or to aduise, that in all three cases he may vtter, and also perswade both copiously and vehemently.

And your figures rhethoricall, besides their remembered ordinarie vertues, that is, sententiousnes, & copious amplification, or enlargement of language, doe also containe a certaine sweet and melodious manner of speech, in which respect, they may, after a sort, be said auricular: because the eare is no lesse rauished with their currant tune, than the mind is with their sententiousnes. For the eare is properly but an instrument of conueyance for the minde, to apprehend the sence by the sound. And our speech is made melodious or harmonicall, not onely by strayned tunes, as those of Musick, but also by choise of smoothe words: and thus, or thus, marshalling them in their comeliest construction and order, and aswell by sometimes sparing, sometimes spending them more or lesse liberally, and carrying or transporting of them farther off or neerer, setting them with sundry relations, and variable formes, in the ministry and vse of words, doe breede no little alteration in man. For to say truely, what els is man but his minde? which, whosoeuer haue skil to compasse, and make yeelding and flexible, what may not he commaund the body to perfourme? He therefore that hath vanquished the minde of man, hath made the greatest and most glorious conquest. But the minde is not assailable vnlesse it be by sensible approaches, whereof the audible is of greatest force for instruction or discipline: the visible, for apprehension of exterior knowledges as the Philosopher saith. Therefore the well tuning of your words and clauses to the delight of the eare, maketh your information no lesse plausible to the minde than to the eare: no though you filled them with neuer so much sence and sententiousnes. Then also must the whole tale (if it tende to perswasion) beare his iust and reasonable measure, being rather with the largest, than with the scarcest. For like as one or two drops of water perce not the flint stone, but many and often droppings doo: so cannot a few words (be they neuer so pithie or sententious) in all cases and to all manner of mindes, make so deepe an impression, as a more multitude of words to the purpose discretely, and without superfluitie vttered: the minde being no lesse vanquished with large loade of speech, than the limmes are with heauie burden. Sweetenes of speech, sentence and amplification, are therefore necessarie to an excellent Orator and Poet, ne may in no wise be spared from any of them.

And first of all others your figure that worketh by iteration or repetition of one word or clause doth much alter and affect the eare and also the mynde of the hearer, and therefore is counted a very braue figure both with the Poets and rhetoriciens, and this repetition may be in seuen sortes.

[Sidenote: Anaphora, or the Figure of Report.] Repetition in the first degree we call the figure of Report according to the Greeke originall, and is when we make one word begin, and as they are wont to say, lead the daunce to many verses in sute, as thus. To thinke on death it is a miserie To thinke on life it is a vanitie: To thinke on the world verily it is, To thinke that heare man hath no perfit blisse.

And this written by Sir Walter Raleigh of his greatest mistresse iin most excellent verses. In vayne mine eyes in vayne you wast your teares, In vayne my sighs the smokes of my desaires: In vayne you search th'earth and heauens aboue, In vayne ye seeke, for fortune keeps my loue.

Or as the buffon in our enterlude called Lustie London said very knaushly and like himselfe. Many a faire lasse in London towne, Many a bawdie basket borne up and downe: Many a broker in a thridbare gowne. Many a bankrowte scarce worth a crowne. In London.

[Sidenote: Antistrophe, or the Counter turne.] Ye haue another sort of repetition quite contrary to the former when ye make one word finish many verses in sute, and that which is harder, to finish many clauses in the midst of

your verses or dittie (for to make them finish the verse in our vulgar it should hinder the rime) and because I do finde few of our English makers vse this figure, I haue set you down two litle ditties which our selues in our yonger yeares played vpon the Antistrophe, for so is the figures name in Greeke: one vpon the mutable loue of a Lady, another vpon the meritorious loue of Christ our Sauour, thus. Her lowly lookes, that gaue life to my loue, With spitefull speach, curstnesse and crueltie: She kild my loue, let her rigour remoue, Her cherefull lights and speaches of pitie Reuiue my loue: anone with great disdaine, She shunnes my loue, and after by a traine She seekes my loue, and faith she loues me most, But seing her loue, so lightly wonne and lost: I longd not for her loue, for well I thought, Firme is the loue, if it be as it ought.

The second vpon the merites of Christes passion toward mankind, thus, Our Christ the sonne of God, chief authour of all good, Was he by his allmight, that first created man: And with the costly price, of his most precious bloud, He that redeemed man: and by his instance wan Grace in the sight of God, his onely father deare, And reconciled man: and to make man his peere Made himselfe very man: brief to conclude the case, This Christ both God and man, he all and onely is: The man brings man to God and to all heauens blisse.

The Greekes call this figure Antistrophe, the Latines, conuersio, I following the originall call him the counterturne, because he turnes counter in the middest of euery meetre.

[Sidenote: Symploche, or the figure of replie.] Take me the two former figures and put them into one, and it is that which the Greekes call symploche, the Latines complexio, or conduplicatio, and is a maner of repeton, when one and the selfe word doth begin and end many verses in sute & so wrappes vp both the former figures in one, as he that sportingly complained of his vntrustie mistresse, thus. Who made me shent for her loues sake? Myne owne mistresse. Who would not seeme my part to take, Myne owne mistresse.

What made me first so well content Her curtesie. What makes me now so sore repent Her crueltie.

The Greekes name this figure Symploche, the Latins Complexio, perchance for that he seemes to hold in and to wrap vp the verses by reduplication, so as nothing can fall out. I had rather call him the figure of replie.

[Sidenote: Anadiplosis, or the Redouble.] Ye haue another sort of repetition when with the worde by which you finish your verse, ye beginne the next verse with the same, as thus: Comforte it is for man to haue a wife, Wife chaste, and wise, and lowly all her life.

Or thus: Your beutie was the cause of my first loue, Looue while I liue, that I may sore repent.

The Greeks call this figure Anadiplosis, I call him the Redouble as the originall beares.

[Sidenote: Epanalepsis, or the Eccho sound, otherwise, the slow return.] Ye haue an other sorte of repetition, when ye make one worde both beginne and end your verse, which therefore I call the slow retourne, otherwise the Eccho sound, as thus: Much must he be beloued, that loueth much, Feare many must he needs, whom many feare.

Vnlesse I called him the eccho sound, I could not tell what name to giue him, vnlesse it were the slow returne.

[Sidenote: Epizeuxis, or the Vnderlay, or Coocko-spel.] Ye haue another sort of repetition when in one verse or clause of a verse, ye iterate one word without any intermission, as thus: It was Maryne, Maryne that wrought mine woe.

And this bemoaning the departure of a deere friend. The chiefest staffe of mine assured stay, With no small grieve, is gon, is gon away.

And that of Sir Walter Raleighs very sweet. With wisdomes eyes had but blind fortune seene, Than had my looue, my looue for euer beene.

The Greeks call him Epizeuxis, the Latines Subiunctio, we may call him the vnderlay, me thinks if we regard his manner of iteration, & would depart from the originall, we might very properly, in our vulgar and for pleasure call

him the cuckowspell, for right as the cuckow repeats his lay, which is but one manner of note, and doth not insert any other tune betwixt, and sometimes for hast stammers out two or three of them one immediatly after another, as cuck, cuck, cuckow, so doth the figure Epizeuxis the former verses, Maryne, Maryne, without any intermission at all.

[Sidenote: Ploche, or the Doubler.] Yet haue ye one sorte of repetition, which we call the doubler, and is as the next before, a speedie iteration of one word, but with some little intermission by inserting one or two words betweene, as in a most excellent dittie written by Sir Walter Raleigh these two closing verses: Yet when I sawe my selfe to you was true, I loued my selfe, bycause my selfe loued you.

And this spoken in common Prouerbe. An ape wilbe an ape, by kinde as they say, Though that ye clad him all in purple array.

Or as we once sported vpon a fellowes name who was called Woodcock, and for an ill part he had plaid entreated fauour by his friend. I praie you intreate no more for the man, Woodcocke wilbe a woodcocke do what ye can.

Now also be there many other sortes of repetition if a man would vse them, but are nothing commendable, and therefore are not obserued in good poesie, as a vulgar rimer who doubled one word in the end of euery verse, thus: adieu, adieu my face, my face.

And an other that did the like in the beginning of his verse, thus: To loue him and loue him, as sinners should doo.

These repetitions be not figuratiue but phantastical, for a figure is euer vsed to a purpose, either of beautie or of efficacie: and these last recited be to no purpose, for neither can ye say that it vrges affection, nor that it beautifieth or enforceth the sence, nor hath any other subtilitie in it, and therefore is a very foolish impertinency of speech, and not a figure.

[Sidenote: Prosonomasia, or the Nicknamer.] Ye haue a figure by which ye play with a couple of words or names much resembling, and because the one seemes to answere th'other by manner of illusion, and doth, as it were, nick him, I call him the Nicknamer. If any other man can geue him a fitter English name, I will not be angrie, but I am sure mine is very neere the originall sense of the Prosonomasia, and is rather a by-name geuen in sport, than a surname geuen of any earnest purpose. As, Tiberius the Emperour, because he was a great drinker of wine, they called him by way of derision to his owne name Caldius Biberius Mero, in steade of Claudius Tiberius Nero: and so a iesting frier that wrate against Erasmus, called him by resemblance to his own Errans mus, and are mainteined by this figure Prosonomasia, or the Nicknamer. But euery name geuen in iest or by way of a surname, if it do not resemble the true, is not by this figure, as, the Emperour of Greece, who was surnamed Constantinus Cepronimus, because he beshit the foont at the time he was christened: and so ye may see the difference betwixt the figures Antonomasia & Prosonomatia. Now when such resemblance happens betweene words of another nature and not vpon mens names, yet doeth the Poet or maker finde pretie sport to play with them in his verse, specially the Comicall Poet and the Epigrammatist. Sir Philip Sidney in a dittie plaide very pretily with these two words, Loue and liue, thus. And all my life I will confesse, The lesse I loue, I liue the lesse.

And we in our Enterlude called the woer, plaid with these two words, lubber and louer, thus, the country clowne came & woed a young maide of the Citie, and being agreeued to come so oft, and not to haue his answere, said to the old nurse very impatiently. [Sidenote: Woer.] Iche pray you good mother tell our young dame, Whence I am come and what is my name, I cannot come a woing euery day.

Quoth the nurse. [Sidenote: Nurse.] They be lubbers not louers that so use to say.

Or as one replyed to his mistresse charging him with some disloyaltie towards her. Proue me madame ere ye fall to reprove, Meeke mindes should rather excuse than accuse.

Here the words proue and reprove, excuse and accuse, do pleasantly encounter, and (as it were) mock one another by their much resemblance: and this is by the figure Prosonomatia, as wel as if they were mens proper names, alluding to each other.

[Sidenote Traductio, or the tranlacer.] Then haue ye a figure which the Latines call Traductio, and I the tranlacer: which is when ye turne and tranlace a word into many sundry shapes as the Tailor doth his garment, & after that sort do play with him in your dittie: as thus, Who liues in loue his life is full of feares, To lose his loue, liuelode or libertie But liuely sprites that young and recklesse be, Thinke that there is no liuing like to theirs.

Or as one who much gloried in his owne wit, whom Persius taxed in a verse very pithily and pleasantly, thus. Scire tuum nihil est nisi te scire, hoc sciat alter.

Which I haue turned into English, not so briefly, but more at large of purpose the better to declare the nature of the figure: as thus, Thou weenest thy wit nought worth if other weet it not As wel as thou thy selfe, but a thing well I wot, Who so in earnest weenes, he doth in mine aduise, Shew himselfe witlesse, or more wittie than wise.

Here ye see how in the former rime this word life is tranlaced into liue, liuing, liuely, liuelode: & in the latter rime this word wit is translated into weete, weene, wotte, witlesse, witty & wise: which come all from one originall.

[Sidenote: Antipophora, or Figure of responce.] Ye haue a figuratiue speach which the Greeks cal Antipophora, I name him the Responce, and is when we will seeme to aske a question to th'intent we will aunswere it our selues, and is a figure of argument and also of amplification. Of argument, because proponing such matter as our aduersarie might obiection and then to answere it our selues, we do vnfurnish and preuent him of such helpe as he would otherwise haue vsed for himselfe: then because such obiection and answere spend much language it serues as well to amplifie and enlarge our tale. Thus for example. Wylie worldling come tell me I thee pray, Wherein hopest thou, that makes thee so to swell? Riches? alack it taries not a day, But where fortune the fickle list to dwell: In thy children? how hardlie shalt thou finde, Them all at once, good and thriftie and kinde: Thy wife? o' faire but fraile mettall to trust, Seruants? what theeues? what threachours and iniust? Honour perchance? it restes in other men: Glorie? a smoake: but wherein hopest thou then? In Gods iustice? and by what merite tell? In his mercy? o' now thou speakest wel, But thy lewd life hath lost his loue and grace, Daunting all hope to put dispaire in place.

We read that Crates the Philosopher Cinicke in respect of the manifold discommodities of mans life, held opinion that it was best for man neuer to haue bene borne or soone after to dye, [Optimum non nasci vel citò mori] of whom certaine verses are left written in Greeke which I haue Englished, thus. What life is the liefest? the needy is full of woe and awe, The wealthie full of brawle and brabbles of the law: To be a married man? how much art thou beguild, Seeking thy rest by carke, for houshold wife and child: To till it is a toyle, to grase some honest gaine, But such as gotten is with great hazard and paine: The sayler of his shippe, the marchant of his ware, The souldier in armes, how full of dread and care? A shrewd wife brings thee bate, wiue not and neuer thriue, Children a charge, childlesse the greatest lacke aliue: Youth witlesse is and fraile, age sicklie and forlorne, Then better to dye soone, or neuer to be borne.

Metrodorus the Philosopher Stoick was of a contrary opinion, reuersing all the former suppositions against Crates, thus. What life list ye to lead? in good Citie and towne Is wonne both wit and wealth, Court gets vs great renoune, Countrey keeps vs in heale, and quietnesse of mynd, Where holesome aires and exercise and pretie sports we find: Traffick it turnes to gaine, by land and eke by seas, The land-borne liues safe, the forriene at his ease: Housholder hath his home, the roge romes with delight, And makes moe merry meales, then dothe the Lordly wight: Wed and thost hast a bed, of solace and of ioy, Wed not and haue a bed, of rest without annoy: The settled loue is safe, sweete is the loue at large, Children they are a store, no children are no charge, Lustie and gay is youth, old age honourd and wise: Then not to dye or be unborne, is best in myne aduise.

Edward Earle of Oxford a most noble & learned Gentleman made in this figure of responce an emble of desire otherwise called Cupide which for his excellencie and wit, I set downe some part of the verses, for example. When wert thou borne desire? In pompe and pryde of May, By whome sweete boy wert thou begot? By good conceit men say, Tell me who was they nurse? Fresh youth in sugred ioy. What was thy meate and dayly foode? Sad sighes with great annoy. What hast thou then to drinke? Vnfayned louers teares. What cradle wert thou rocked in? In hope deuoyde of feares.

[Sidenote: Synteiosis, or the Crosse copling.] Ye haue another figure which me thinkes may well be called (not much sweruing from his originall in sence) the Crosse-couple, because it takes me two contrary words, and tieth them as it were in a paire of couples, and so makes them agree like good fellowes, as I saw once in Fraunce a wolfe coupled with a mastiffe, and a foxe with a hounde. Thus it is. The niggards fault and the unthrifths is all one, For neither of them both knoweth how to vse his owne.

Or thus. The couetous miser, of all his goods ill got, Aswell wants that he hath, as that he hath not.

In this figure of the Crosse-couple we wrate for a forlorne louer complaining of his mistresse crueltie these verses among other. Thus for your sake I daily dye, And do but seeme to liue in deede: Thus is my blisse but miserie, My lucre losse without your meede.

[Sidenote: Atanaclasis, or the Rebounde.] Ye haue another figure which by his nature we may call the Rebounde, alluding to the tennis ball which being smitten with the racket reboundes backe againe, and where the last figure before played with two wordes somewhat like, this playeth with one word written all alike but carrying diuers sences as thus. The maide that soone married is, soone marred is.

Or thus better because married & marred be different in one letter. To pray for you euer I cannot refuse, To pray vpon you I should you much abuse.

Or as we once sported vpon a country fellow who came to runne for the best game, and was by his occupation a dyer and had very bigge swelling legges. He is but course to runne a course, Whose shankes are bigger then his thye: Yet is his lucke a little worse, That often dyes before he dye.

Where ye see this word course, and dye, vsed in diuers sences, one giuing the Rebounde vpon th'other.

[Sidenote: Clymax, or the Marching figure.] Ye haue a figure which as well by his Greeke and Latine originals, & also by allusion to the maner of a mans gate or going may be called the marching figure, for after the first steppe all the rest proceeds by double the space, and so in our speach one word proceedes double to the first that was spoken, and goeth as it were by strides or paces: it may aswell be called the clyming figure, for Clymax is as much to say as a ladder, as in one of our Epitaphes shewing how a very meane man by his wisdom and good fortune came to great estate and dignitie. His vertue made him wise, his wisdom broght him wealth, His wealth won many friends, his friends made much supply: Of aides in weale and woe in sicknesse and in health, Thus came he from a low, to sit in state so hye.

Or as Ihean de Mehune the French Poet. Peace makes plentie, plentie makes pride, Pride breeds quarrell, and quarrell brings warre: Warre brings spoile, and spoile pouertie, Pouertie pacience, and pacience peace. So peace brings warre, and warre brings peace.

[Sidenote: Antimetauole, or the Counterchange] Ye haue a figure which takes a couple of words to play with in a verse, and by making them to chaunge and shift one into others place they do very pretily exchange and shift the sence, as thus. We dwell not here to build us boures, And halles for pleasure and good cheare: But halles we build for us and ours, To dwell in then whilst we are here.

Meaning that we dwell not here to build, but we build to dwell, as we liue not to eate, but eate to liue, or thus. We wish not peace to maintaine cruell warre, But we make warre to maintaine us in peace.

Or thus. If Poesie be, as some haue said, A speaking picture to the eye: Then is a picture not denaid, To be a muet Poesie.

Or as the Philosopher Musonius wrote. With pleasure if we worke vnonestly and ill, The pleasure passeth, the bad it bideth still. Well if we worke with trauaile and with paines, The paine passeth and still the good remaines.

A wittie fellow in Rome wrate vnder the Image of Caesar the Dictator these two verses in Latine, which because they are spoke by this figure of Counterchaunge I haue turned into a couple of English verses very well keeping the

grace of the figure. Brutus for casting out of kings, was first of Consuls past, Caesar for casting Consuls out, is of our kings the last.

Cato of any Senatour not onely the grauest but also the promptest and wittiest in any ciuill scoffe, misliking greatly the engrossing of offices in Rome that one should haue many at once, and a great number goe without that were as able men, said thus by Counterchange. It seemes your offices are very litle worth, Or very few of you worthy of offices.

Againe: In trifles earnest as any man can bee, In earnest matters no such trifler as hee.

[Sidenote: Insultatio, or the Disdainefull.] Yee haue another figure much like to the Sarcasimus, or bitter taunt wee spake of before: and is when with proud and insolent words, we do vpbraide a man, or ride him as we terme it: for which cause the Latines also call it Insultatio, I chose to name him the Reproachfull or scorner, as when Queene Dido saw, that for all her great loue and entertainements bestowed vpon Æneas, he would needs depart and follow the Oracle of his destinies, she brake out in a great rage and said disdainefully. Hye thee, and by the wild waues and the wind, Seeke Italie and Realmes for thee to raigne, If piteous Gods haue power amidst the mayne, On ragged rocks thy penance thou maist find.

Or as the poet Iuuenall reproached the couetous Merchant, who for luces sake passed on no perill either by land or sea, thus: Goe now and giue thy life unto the winde, Trusting unto a piece of bruckle wood, Foure inches from thy death or seauen good The thickest planke for shipboord that we finde.

[Sidenote: Antitheton, or the renconter] Ye haue another figure very pleasnt and fit for amplification, which to answer the Greeke terme, we may call the encounter, but following the Latine name by reason of his contentious nature, we may call him the Quarreller, for so be al such persons as delight in taking the contrary part of whatsoever shalbe spoken: when I was scholler in Oxford they called euery such one Iohannes ad oppositum. Good haue I doone you, much, harme did I neuer none, Ready to ioy your gaines, your losses to bemone, Why therefore should you grutch so sore as my welfare: Who onely bred your blisse, and neuer caused your care.

Or as it is in these two verses where one speaking of Cupids bowe, deciphered thereby the nature of sensual loue, whose beginning is more pleasant than the end, thus allegorically and by antitheton. His bent is sweete, his loose is somewhat sowre, In ioy begunne, ends oft in wofull bowre.

Maister Diar in this quarelling figure. Nor loue hath now the force, on me which it ones had, Your frownes can neither make me mourne, nor fauors make me glad.

Socrates the Greek Oratour was a litle too full of this figure, & so was the Spaniard that wrote the life of Marcus Aurelius & many of our moderne writers in vulgar, vse it in excesse & incurre the vice of fond affectation: otherwise the figure is very commendable.

In this quarrelling figure we once plaid this merry Epigrame of an importune and shrewd wife, thus: My neighbour hath a wife, not fit to make him thriue, But good to kill a quicke man, or make a dead reuiue. So shrewd she is for God, so cunning and so wise, To counter with her goodman, and all by contraries. For when he is merry, she lurcheth and she loures, When he is sad she sings, or laughes it out by houres. Bid her be still her tongue to talke shall neuer cease, When she should speake and please, for spight she holds her peace, Bid spare and she will spend, bid spend she spares as fast, What first ye would haue done, be sure it shalbe last. Say go, she comes, say come, she goes, and leaues him all alone, Her husband (as I thinke) calles her ouerthwart Ione.

[Sidenote: Erotema, or the Questioner.] There is a kinde of figuratiue speach when we aske many questions and looke for none answer, speaking indeed by interrogation, which we might as well say by affirmation. This figure I call the Questioner or inquisitiue, as when Medea excusing her great crueltie vsed in the murder of her owne children which she had by Iason, said: Was I able to make them I praie you tell, And am I not able to marre them all aswell?

Or as another wrote very commendably. Why strive I with the streame, or hoppe against the hill, On search that neuer can be found, and loose my labour still?

Cato vnderstanding that the Senate had appointed three citizens of Rome for embassadours to the king of Bithinia, whereof one had the Gowte, another the Meigrim, the third very little courage or discretion to be employd in any such businesse, said by way of skoffe in this figure. Must not (trowe ye) this message be well sped, That hath neither heart, nor heeles, nor hed?

And as a great Princesse answered her seruitour, who distrusting in her fauours toward him, praised his owne constancie in these verses. No fortune base or frayle can alter me:

To whome she in this figure repeting his words: No fortune base or frayle can alter thee. And can so blind a witch so conquere mee?

[Sidenote: Ecphronisis, or the Outcry.] The figure of exclamation, I call him [the outcry] because it vtters our minde by all such words as do shew any extreme passion, whether it be by way of exclamation or crying out, admiration or wondering, imprecation or cursing, obtestation or taking God and the world to witnes, or any such like as declare an impotent affection, as Chaucer of the Lady Cresseida by exclamation. O soppe of sorrow soonken into care, O caytife Cresseid, for now and evermare.

Or as Gascoine wrote very passionatly and well to purpose: Ay me the dayes that I in dole consume, Alas the nights which witness well mine woe: O wrongfull world which makest my fancie faine Fie fickle fortune, fie, fie thou art my foe: Out and alas so froward is my chance, No nights nor daies, nor worldes can me auance.

Petrarche in a sonet which Sir Thomas Wiat Englished excellently well, said in this figure by way of imprecation and obtestation: thus, Perdie I said it not, Nor neuer thought to doo: Aswell as I ye wot, I haue no power thereto: "And if I did the lot That first did me enchaine, May neuer shake the knot But strait it to my paine. "And if I did each thing, That may do harme or woe: Continually may wring, My harte where so I goe. "Report may alwaies ring: Of shame on me for aye, If in my hart did spring, The wordes that you doo say. "And if I did each starre, That is in heauen aboue. And so forth, &c.

[Sidenote: Brachiologa, or the Cutted comma] We vse sometimes to proceede all by single words, without any close or coupling, sauing that a little pause or comma is geuen to euery word. This figure for pleasure may be called in our vulgar the cutted comma, for that there cannot be a shorter diuision then at euery words end. The Greekes in their language call it short language, as thus. Enuy, malice, flattery, disdain, Auarice, deceit, falsned, filthy gaine.

If this loose language be vsed, not in single words, but in long clauses, it is called Asindeton, and in both cases we vtter in that fashion, when either we be earnest, or would seeme to make hast.

[Sidenote: Parison, or the Figure of euen] Ye haue another figure which we may call the figure of euen, because it goeth by clauses of egall quantitie, and not very long, but yet not so short as the cutted comma: and they geue good grace to a dittie, but specially to a prose. In this figure we once wrote in a melancholike humor these verses. The good is geason, and short is his abode, The bad bides long, and easie to be found: Our life is loathsome, our sinnes a heavy lode, Conscience a curst iudge, remorse a priuie goade. Disease, age and death still in our eare they round, That hence we must the sickly and the sound: Treading the steps that our forefathers trod, Rich, poore, holy, wise; all flesh it goes to ground.

In a prose there should not be vsed at once of such euen clauses past three or foure at the most.

[Sidenote: Sinonimia, or the Figure of store] When so euer we multiply our speech by many words or clauses of one sence, the Greekes call it Sinonimia, as who would say like or consenting names: the Latines hauing no fitte terme to giue him, called it by a name of euent, for (said they) many words of one nature and sence, one of them doth expound another. And therefore they called this figure the [Interpreter] I for my part had rather call him the figure of [store] because plenty of one manner of thing in our vulgar we call so. Æneas asking whether his Captaine

Orontes were dead or aliue, vsed this store of speches all to one purpose. It he aliue, Is he as I left him queauing and quick, And hath he not yet geuen up the ghost, Among the rest of those that I haue lost?

Or if it be in single words, then thus. What is become of that beautifull face, Those louely lookes, that fauour amiable, Those sweete features, and visage full of grace, That countenance which is alonly able To kill and cure?

Ye see that all these words, face, lookes, fauour, features, visage, countenance, are all in sence but all one. Which store, neuerthelesse, doeth much beautifie and enlarge the matter. So said another. My faith, my hope, my trust, my God and eke my guide, Stretch forth thy hand to saue the soule, what ere the body bide.

Here faith, hope and trust be words of one effect, allowed to vs by this figure of store.

[Sidenote: Metanoia, or the Penitent.] Otherwhiles we speake and be sorry for it, as if we had not wel spoken, so that we seeme to call in our word againe, and to put in another fitter for the purpose: for which respects the Greekes called this manner of speech the figure of repentance: then for that vpon repentance commonly followes amendment, the Latins called it the figure of correction, in that the speaker seemeth to reforme that which was said amisse. I following the Greeke originall, choose to call him the penitent, or repentant: and singing in honor of the mayden Queen, meaning to praise her for her greatnesse of courage ouershooting my selfe, called it first by the name of pride: then fearing least fault might be found with that terme, by & by turned this word pride to praise: resembling her Maiesty to the Lion, being her owne noble armory, which by a slye construction purporteth magnanimitie. Thus in the latter end of a Parthemiade. O peereles you, or els no one aliue, Your pride serues you to seaze them all alone: Not pride madame, but praise of the lion, To conquer all and be conquerd by none.

And in another Parthemiade thus insinuating her Maiesties great constancy in refusall of all marriages offred her, thus: Her heart is hid none may it see, Marble or flinte folke weene it be.

Which may imploy rigour and cruelty, than correcteth it thus. Not flinte I trowe I am a lier, But Siderite that feelles no fire.

By which is intended, that it proceeded of a cold and chaste complexion not easily allured to loue.

[Sidenote: Antenagoge, or the Recompencer] We haue another manner of speech much like to the repentant, but doth not as the same recant or vnsay a word that hath bene said before, putting another fitter in his place, but hauing spoken any thing to depraue the matter or partie, he denieth it not, but as it were helpeth it againe by another more fauourable speach and so seemeth to make amends, for which cause it is called by the originall name in both languages, the Recompencer, as he that was merily asked the question; whether his wife were not a shrewe as well as others of his neighbours wiues, answered in this figure as pleasantly, for he could not well denie it. I must needs say, that my wife is a shrewe, but such a huswife as I know but a fewe.

Another in his first preposition giuing a very faint commendation to the Courtiers life, weaning to make him amends, made it worse by a second proposition, thus: The Courtiers life full delicate it is, but where no wise man will euer set his blis.

And an other speaking to the incoragement of youth in studie and to be come excellent in letters and armies, said thus: Many are the paines and perils to be past, But great is the gaine and glory at the last.

[Sidenote: Epithonema, or the Surclose.] Our poet in his short ditties, but specially playing the Epigrammatist will vse to conclude and shut vp his Epigram with a verse or two, spoken in such sort, as it may seeme a manner of allowance to all the premisses, and that wich a ioyfull approbation, which the Latines call Acclamatio, we therefore call this figure the surcloze or consenting close, as Virgill when he had largely spoken of Prince Eneas his successe and fortunes concluded with this close. Tant molis erat Romanum condere gentens.

In English thus: So huge a peece of worke it was and so hie, To reare the house of Romane progenie.

Sir Philip Sidney very pretily closed vp a dittie in this sort. What medicine then, can such disease remoue, Where loue breedes hate, and hate engenders loue.

And we in a Partheniade written of her Maiestie, declaring to what perils vertue is generally subiect, and applying that fortune to her selfe, closed it vp with this Epiphoneme. Than if there bee, Any so cancard hart to grutch, At your glories: my Queene: in vaine, Repining at your fatall raigne; It is for that they feele too much, Of your bountee.

As who would say her owne ouermuch lenitie and goodness, made her ill willers the more bold and presumptuous.

Lucretius Carus the philosopher and poet inueighing sore against the abuses of the superstitious religion of the Gentils, and recompting the wicked fact of king Agamemnon in sacrificing his only daughter Iphigenia, being a yoong damsell of excellent bewtie, to th'intent to please the wrathfull gods, hinderers of his nauigation, after he had said all, closed it vp in this one verse, spoken in Epiphonema. Tantum relligio potuit suadere malorum.

In English thus: Lo what an outrage, could cause to be done, The peevisch scruple of blinde religion.

[Sidenote: Auxesis, or the Auancer] It happens many times that to vrge and enforce the matter we speake of, we go still mounting by degrees and encreasing our speech with wordes or with sentences of more waight one then another, & is a figure of great both efficacie & ornament, as he that declaring the great calamitie of an infortunate prince, said thus: He lost besides his children and his wife, His realme, ronowne, liege, libertie and life.

By which it appeareth that to any noble Prince the losse of his estate ought not to be so greeuous, as of his honour, nor any of them both like to the lacke of his libertie, but that life is the dearest detriment of any other. We call this figure by the Greeke originall the Auancer or figure of encrease because every word that is spoken is one of more weight then another. And as we lamented the crueltie of an inexorable and unfaithfull mistresse. If by the lawes of love it be a falt, The faithfull friend, in absence to forget: But if it be (once do thy heart but halt,) A secret sinne: what forfeit is so great: As by dispute in view of every eye, The solemne vowes oft sworne with teares so salt, As holy Leagues fast seald with hand and hart: For to repeale and breake so wilfully? But now (alas) without all iust desart, My lot is for my troth and much goodwill, To reape disdain, hatred and rude refuse, Or if ye would worke me some greater ill: And of myne earned ioyes to feele no part, What els is this (o cruell) but to vse, Thy murdring knife to guiltlesse bloud to spill.

Where ye see how she is charged first with a fault, then with a secret sinne, afterward with a foule forfeit, last of all with a most cruel & bloody deede. And thus againe in a certaine lovers complaint made to the like effect. They say it is a ruth to see thy lover neede, But you can see me weepe, but you can see me bleede: And neuer shrinke nor shame, ne shed no teare at all, You make my wounds your selfe, and fill them up with gall: Yea you can see me sound, and faint for want of breath, And gaspe and grone for life, and struggle still with death, What can you now do more, sweare by your maydenhead, The for to flea me quicke, or strip me being dead.

In these verses you see how one crueltie surmounts another by degrees till it come to very slaughter and beyond, for it is thought a despite done to a dead carkas to be an euidence of greater crueltie then to haue killed him.

[Sidenote: Meiosis, or the Disabler.] After the Auancer followeth the abbaser working by wordes and sentences of extenuation or diminution. Whereupon we call him the Disabler or figure of Extenuation: and this extenuation is vsed to diuers purposes, sometimes for modesties sake, and to auoide the opinion of arrogancie, speaking of our selues or of ours, as he that disabled himselfe to his mistresse thus. Not all the skill I haue to speake or do, Which litle is God wot (set loue apart:) Liueload nor life, and put them both thereto, Can counterpeise the due of your desart.

It may be also be done for despite to bring our aduersaries in contempt, as he that sayd by one (commended for a very braue souldier) disabling him scornefully, thus. A iollie man (forsooth) and fit for the warre, Good at hand gripes, better to fight a farre: Whom bright weapon in shew as is said, Yea his owne shade; hath often made afraide.

The subtiltie of the scoffe lieth in these Latin wordes [eminus & cominus pugnare.] Also we vse this kind of Extenuation when we take in hand to comfort or cheare any perillous enterprise, making a great matter seeme small, and of litle difficultie, & is much vsed by captaines in the warre, when they (to giue courage to their souldiers) will seeme to disable the persons of their enemies, and abase their forces, and make light of euery thing than might be a discouragement to the attempt, as Hanniball did in his Oration to his souldiers, when they should come to passe the Alpes to enter Italie, and for sharpnesse of the weather, and steepnesse of the mountaines their hearts began to faile them.

We vse it againe to excuse a fault, & to make an offence seeme lesse then it is, by giuing a terme more fauorable and of lesse vehemencie then the troth requires, as to say of a great robbery, that it was but a pilfry matter: of an arrant ruffian that he is a tall fellow of his hands: of a prodigall foole, that he is a kind hearted man: of a notorious vnthrif, a lustie youth, and such like phrases of extenuation, which fall more aptly to the office of the figure Curry fauell before remembred.

And we vse the like termes by way of pleasant familiaritie, and as it were for Courtly maner of speach with our egalls or inferiours, as to call a young Gentlewoman Mall for Mary, Nell for Elner: Iack for Iohn, Robin for Robert: or any other like affected termes spoken of pleasure, as in our triumphals calling familiarly vpon our Muse, I called her Moppe. But will you weete, My litle muse, nay prettie moppe: If we shall aligates change our stoppe, Chose me a sweet.

Vnderstanding by this word (Moppe) a litle pretty Lady, or tender young thing. For so we call litle fishes, that be not come to their full growth (moppes), as whiting moppes, gurnard moppes.

Also such termes are vsed to be giuen in derision and for a kind of contempt, as when we say Lording for Lord, & as the Spaniard that calleth an Earle of small reuenue Contadilio: the Italian calleth the poore man by contempt pouerachio or pouerino, the little beast animalculo or animaluchio, and such like diminutives appertaining to this figure, the (Disabler) more ordinary in other languages than our vulgar.

[Sidenote: Epanodis, or the figure of Retire] This figure of retire holds part with the propounder of which we spake before (prolepsis) because of the resumption of a former proposition vuttered in generalitie to explaine the same better by a particular diuision. But their difference is, in that the propounder resumes but the matter only. This [retire] resumes both the matter and the termes, and is therefore accompted one of the figures of repetition, and in that respect may be called by his originall Greeke name the [Resounde] or the [retire] for this word [Greek: illegible] serues both sences resound and retire. The vse of this figure, is seen in this dittie following, Loue hope and death, do stirre in me much strife, As neuer man but I lead such a life: For burning loue doth wound my heart to death: And when death comes at call of inward grief, Cold lingring hope doth feede my fainting breath: Against my will, and yeelds my wound relief, So that I liue, but yet my life is such: As neuer death could greewe me halfe so much.

[Sidenote: Dialisis, or the Dismembrer.] Then haue ye a maner speach, not so figuratiue as fit for argumentation, and worketh not vnlike the dilemma of the Logicians, because he propones two or moe matters entierly, and doth as it were set downe the whole tale or rekoning of an argument and then cleare euery part by it selfe, as thus. It can not be but nigardsship or neede, Made him attempt this foule and wicked deede: Nigardship not, for alwayes he was free, Nor neede, for who doth not his richesse see?

Or as one than entreated for a faire young maide who was taken by the watch in London and carried to Bridewell to be punished. Now gentill Sirs let this young maide alone, For either she hath grace or els she hath none: If she haue grace, she may in time repent, If she haue none what bootes her punishment.

Or as another pleaded his deserts with his mistresse. Were it for grace, or els in hope of gaine, To say of my deserts, it is but vaine: For well in minde, in case ye do them beare, To tell them oft, it should but irke your eare: Be they forgot: as likely should I faile, To winne with wordes, where deedes can not preuaile.

[Sidenote: Merismus, or the Distributer.] Then haue ye a figure very meete for Orators or eloquent perswaders such as our maker or Poet must in some cases shew him selfe to be, and is when we may coueniently vtter a matter in

one entier speech or proportion and will rather do it peecemeale and by distribution of euery part for amplification sake, as for example he that might say, a house was outrageously plucked downe: will not be satisfied so to say, but rather will speake it in this sort: they first vndermined the groundsills, they beate downe the walles, they vnfloored the loftes, they vtiled it and pulled downe the rooffe. For so in deede is a house pulled downe by circumstances, which this figure of distribution doth set forth euery one apart, and therefore I name him the distributor according to his originall, as wrate the Tuscane Poet in a Sonet which Sir Thomas Wyat translated with very good grace, thus. Set me whereas the sunne doth parch the greene, Or where his beames do not dissolue the yce: In temperate heate where he is felt and seene, In presence prest of people mad or wise: Set me in hye or yet in low degree, In longest night or in the shortest day: In clearest skie, or where clouds thickest bee, In lustie youth or when my heares are gray: Set me in heauen, in earth or els in hell, In hill or dale or in the foaming flood: Thrall or at large, aliue where so I dwell, Sicke or in health, in euill fame or good: Hers will I be, and onely with this thought, Content my selfe, although my chaunce be naught.

All which might haue been said in these two verses. Set me wherefoeuer ye will I am and wilbe yours still.

The zealous Poet writing in prayse of the maiden Queene would not seeme to wrap vp all her most excellent parts in a few words them entierly comprehending, but did it by a distributor or merismus in the negatiue for the better grace, thus. Not your bewtie, most gracious soueraine, Nor maidenly lookes, mainteind with maiestie: Your stately port, which doth not match but staine, For your presence, your pallace and your traine, All Princes Courts, mine eye could euer see: Not of your quicke wits, your sober gouernaunce: Your cleare foresight, your faithfull memorie, So sweete features, in so staid countenance: Nor languages, with plentuous utterance, So able to discourse, and entertaine: Not noble race, farre beyond Caesars raigne, Runne in right line, and bloud of nointed kings: Not large empire, armies, treasurs, domaine, Lustie liueries, of fortunes dearest darlings: Not all the skilles, fit for a Princely dame, Your learned Muse, with vse and studie brings. Not true honour, ne that immortall fame Of mayden raigne, your only owne renowne And no Queenes els, yet such as yeeldes your name Greater glory than doeth your treble crowne.

And then concludes thus. Not any one of all these honord parts Your Princely happes, and habites that do moue, And, as it were, ensorcell all the hearts Of Christen kings to quarrell for your loue, But to possesse, at once and all the good Arte and engine, and euery starre about Fortune or kinde, could farce in flesh and bloud, Was force inough to make so many striue For your person, which in our world stode By all consents the minionst mayde to wiue.

Where ye see that all the parts of her commendation which were particularly remembred in twenty verses before, are wrapt vp in the two verses of this last part, videl. Not any one of all your honord parts, Those Princely haps and habites, &c.

This figure serues for amplification, and also for ornament, and to enforce perswasion mightely. Sir Geffrey Chaucer, father of our English Poets, hath these verses following in the distributor. When faith failes in Priestes sawes, And Lords hestes are holden for lawes, And robberie is tane for purchase, And lechery for solace Then shall the Realme of Albion Be brought to great confusion.

Where he might haue said as much in these words: when vice abounds, and vertue decayeth in Albion, then &c. And as another said, When Prince for his people is wakefull and wise, Peeres ayding with armes, Counsellors with aduise, Magistrate sincerely vsing his charge, People prest to obey, nor let to runne at large, Prelate of holy life, and with deuotion Preferring pietie before promotion, Priest still preaching, and praying for our heale: Then blessed is the state of a common-weale.

All which might haue bene said in these few words, when euery man in charge and authoritie doeth his duety, & executeth his function well, then is the common-wealth happy.

[Sidenote: Epimone, or the Loue burden.] The Greeke Poets who made musicall ditties to be song to the lute or harpe, did vse to linke their staues together with one verse running throughout the whole song by equall distance, and was, for the most part, the first verse of the staffe, which kept so good sence and conformitie with the whole, as his often repetition did geue it greater grace. They called such linking verse Epimone, the Latines versus

intercalaris, and we may terme him the Loue-burden, following the originall, or if it please you, the long repeate: in one respect because that one verse alone beareth the whole burden of the song according to the originall: in another respect, for that it comes by large distances to be often repeated, as in this ditty made by the noble knight Sir Philip Sidney, My true loue hath my heart and I haue his, By iust exchange one for another geuen: I holde his deare, and mine he cannot misse, There neuer was a better bargaine driuen. My true loue hath my heart and I haue his. My heart in me keeps him and me in one, My heart in him his thoughts and sences guides: He loues my heart, for once it was his owne, I cherish his because in me it bides. My true loue hath my heart, and I haue his.

[Sidenote: Paradoxon, or the Wondrer.] Many times our Poet is caried by some occasion to report of a thing that is maruelous, and then he will seeme not to speake it simply but with some signe of admiration, as in our enterlude called the Woer. I woonder much to see so many husbands thriue, That haue but little wit, before they come to wiue: For one would easily weene who so hath little wit, His wife to teach it him, were a thing much unfit.

Or as Cato the Romane Senatour said one day merily to his companion that walked with him, pointing his finger to a yong vnthrift in the streete who lately before had sold his patrimonie, of a goodly quantitie of salt marshes, lying neere vnto Capua shore. Now is it not, a wonder to behold, Yonder gallant skarce twenty winter old, By might (marke ye) able to do more Than the mayne sea that batters on his shore? For what the waues could neuer wash away, This proper youth hath wasted in a day.

[Sidenote: Aporia, or the Doubtfull.] Not much vnlike the wondrer haue ye another figure called the doubtfull, because oftentimes we will seeme to cast perils, and make doubt of things when by a plaine manner of speech wee might affirme or deny him, as thus of a cruell mother who murdred her owne child. Whether the cruell mother were more to blame, Or the shrewd childe come of so curst a dame: Or whether some smatch of the fathers blood, Whose kinne were neuer kinde, nor neuer good. Mooued her thereto &c.

[Sidenote: Epitropis, or the Figure of Reference.] This manner of speech is vsed when we will not seeme, either for manner sake or to auoid tediousnesse, to trouble the iudge or hearer with all that we could say, but hauing said inough already, we referre the rest to their consideration, as he that said thus: Me thinkes that I haue said, what may well suffise, Referring all the rest, to your better aduise.

[Sidenote: Parisia, or the Licentious.] The fine and subtile perswader when his intent is to sting his aduersary, or els to declare his mind in broad and liberal speeches, which might breede offence or scandall, he will seeme to bespeake pardon before hand, whereby his licentiousnes may be the better borne withall, as he that said: If my speech hap t'offend you any way, Thinke it their fault, that force me so to say.

[Sidenote: Anachinosis, or the Impartener.] Not much vnlike to the figure of reference, is there another with some little diuersitie which we call the impartener, because many times in pleading and perswading, we thinke it a very good policie to acquaint our iudge or hearer or very aduersarie with some part of our Counsell and aduice, and to aske their opinion, as who would say they could not otherwise thinke of the matter then we do. As he that had tolde a long tale before certaine noblewomen of a matter somewhat in honour touching the Sex: Tell me faire Ladies, if the case were your owne, So foule a fault would you haue it be knowen?

Maister Gorge in this figure, said very sweetly, All you who read these lines and skanne of my desart, Iudge whether was more good, my hap or els my hart.

[Sidenote: Paramologia, or the figure of Admittance.] The good Orator vseth a manner of speach in his perswasion and is when all that should seeme to make against him being spoken by th'other side, he will first admit it, and in th'end auoid all for his better aduantage, and this figure is much vsed by our English pleaders in the Star Chamber and Chancery, which they call to confesse and auoid, if it be in case of crime or iniury, and is a very good way. For when the matter is so plaine that it cannot be denied or trauersed, it is good that it be iustified by confessall and auoidance. I call it the figure of admittance. As we once wrate to the reproofe of a Ladies faire but crueltie. I know your witte, I know your pleasant tongue, Your some sweet smiles, your some, but louely lowrs: A beautie to enamour olde and yong. Those chast desires, that noble minde of yours, And that chiefe part whence all your honor springs, A grace to entertaine the greatest kings. All this I know: but sinne it is to see, So faire partes spilt by too much crueltie.

[Sidenote: Etiologia, or the Reason rent, or the Tellcause.] In many cases we are driuen for better perswasion to tell the cause that moues vs to say thus or thus: or els when we would fortifie our allegations by rendring reasons to euery one, this assignation of cause the Greekes called Etiologia, which if we might without scorne of a new inuented terme call [Tellcause] it were right according to the Greeke originall: & I pray you why should we not? and with as good authoritie as the Greekes? Sir Thomas Smith, her Maiesties principall Secretary, and a man of great learning and grautie, seeking to geue an English word to this Greeke word [Greek: illegible] called it Spitewed or wedspite. Master Secretary Wilson gueing an English name to his arte of Logicke, called it Witcraft, me thinke I may be bolde with like liberty to call the figure Etiologia [Tellcause.] And this manner of speech is always contemned, with these words, for, because, and such other confirmatiues. The Latines hauing no fitte name to geue it in one single word, gaue it no name at all, but by circumlocution. We also call him the reason-rendrer, and leaue the right English word [Telcause] much better answering the Greeke originall. Aristotle was most excellent in vse of this figure, for he neuer propones any allegation, or makes any surmise, but he yeelds a reason or cause to fortifie and proue it, which geues it great credit. For example ye may take these verses, first pointing, than confirming by similitudes. When fortune shall haue spat out all her gall, I trust good luck shall be to me allowde, For I haue seene a shippe in hauen fall, After the storme had broke both maste and shrowde.

And this. Good is the thing that moues vs to desire, That is to say the beauty we behold: Els were we louers as in an endlesse fire, Alwaies burning and euer chill a colde.

And in these verses. Accused though I be without desart, Sith none can proue beleue it not for true: For neuer yet since first ye had my hart, Entended I to false or be untrue.

And in this Disticque. And for her beauties praise, no right that with her warres: For where she comes she shewes her selfe like sun among the stars.

And in this other dittie of ours where the louer complains of his Ladies crueltie, rendring for euery surmise a reason, and by telling the cause, seeketh (as it were) to get credit, thus. Cruel you be who can say nay, Since ye delight in others wo: Vnwise am I, ye may well say, For that I haue, honoured you so. But blamelesse I, who could not chuse To be enchanted by your eye: But ye to blame, thus to refuse My seruice, and to let me die.

[Sidenote: Dichologia, or the Figure of excuse.] Sometimes our error is so manifest, or we be so hardly prest with our aduersaries, as we cannot deny the fault layd vnto our charge: in which case it is good pollicie to excuse it by some allowable pretext, as did one whom his mistresse burdened with some vnkindne speeches which he had past of her, thus. I said it: but by lapse of lying tongue, When furie and iust grieffe my heart opprest: I sayd it: as ye see, both fraile and young, When your rigor had ranckled in my brest. The cruell wound that smarted me so sore, Pardon therefore (sweete sorrow) or at least Beare with mine youth that neuer fell before, Least your offence increaseth my grieffe the more.

And againe in these, I spake amysse I cannot it deny. But caused by your great discourtesie: And if I said that which I now repent, And said it not, but by misgouernment Of youthfull yeres, your selfe that are so young Pardon for once this error of my tongue, And thinke amends can neuer come to late: Loue may be curst, but loue can neuer hate.

[Sidenote: Noema, or the Figure of close conceit.] Speaking before of the figure [Synechdoche] wee called him [Quicke conceit] because he inured in a single word onely by way of intendment or large meaning, but such as was speedily discovered by euery quicke wit, as by the halfe to vnderstand the whole, and many other waies appearing by the examples. But by this figure [Noema] the obscurity of the sence lieth not in a single word, but in an entier speech, whereof we do not so easily conceiue the meaning, but as it were by coniecture, because it is wittie and subtile or darke, which makes me therefore call him in our vulgar the [Close conceit] as he that said by himselfe and his wife, I thanke God in fortie winters that we haue liued together, neuer any of our neighbours set vs at one, meaning that they neuer fell out in all that space, which had bene the directer speech and more apert, and yet by intendment amounts all to one, being neuerthelesse dissemblable and in effect contrary. Pawlet Lord Treasurer of England, and first Marques of Winchester, with the like subtill speech gaue a quippe to Sir William Gifford, who had married the Marques sister, and all her life time cound neuer loue her nor like of her company, but when she

was dead made the greatest moane for her in the world, and with teares and much lamentation vttered his grieffe to the L. Treasurer, o good brother, quoth the Marques, I am right sorry to see you now loue my sister so well, meaning that he shewed his loue too late, and should haue done it while she was aliue.

A great counsellour somewhat forgetting his modestie, vsed these words: Gods lady I reckon my selfe as good a man as he you talke of, and yet I am not able to do so. Yea sir quoth the party, your L. is too good to be a man, I would ye were a Saint, meaning he would he were dead, for none are shrined for Saints before they be dead.

[Sidenote: Orismus, or the Definer of difference.] The Logician vseth a definition to expresse the truth or nature of euery thing by his true kinde and difference, as to say wisdom is a prudent and wittie foresight and consideration of humane or worldly actions with their euentes. This definition is Logicall. The Oratour vseth another maner of definition, thus: Is this wisdom? no it is a certaine subtill knauish craftie wit, it is no industrie as ye call it, but a certaine busie brainsickness, for industrie is a liuely and vnweried search and occupation in honest things, egeresse is an appetite in base and small matters.

[Sidenote: Procatalepsis, or the presumptuous, otherwise the figure of Presupposall.] It serueth many times to great purpose to preuent our aduersaries arguments, and take vpon vs to know before what our iudge or aduersary or hearer thinketh, and that we will seeme to vtter it before it be spoken or alleaged by them, in respect of which boldnesse to enter so deeply into another mans conceit or conscience, and to be so priuie of another mans mynde, gaue cause that this figure was called the [presumptuous] I will also call him the figure of presupposall or the preuenter, for by reason we suppose before what may be said, or perchaunce would be said by our aduersary or any other, we do preuent them of their aduantage, and do catch the ball (as they are wont to say) before it come to the ground.

[Sidenote: Paralepsis, or the Passager.] It is also very many times vsed for a good pollicie in pleading or perswasion to make wise as if we set but light of the matter, and that therefore we do passe it ouer lightly when in deede we do then intend most effectually and despightfully if it be inuectiue to remember it: it is also when we will not seeme to know a thing, and yet we know it well inough, and may be likened to the maner of women, who as the common saying is, will say nay and take it. I hold my peace and will not say for shame, The much vntruth of that vnciuill dame: For if I should her coullours kindly blaze, It would so make the chast eares amaze, &c.

[Sidenote: Commoratio, or the figure of abode.] It is said by maner of a prouerbiall speach that he who findes himselfe well should not wadge, euen so the perswader finding a substantiall point in his matter to serue his purpose, should dwell vpon that point longer then vpon any other lesse assured, and vse all endeouour to maintaine that one, & as it were to make his chief aboad thereupon, for which cause I name him the figure of aboad, according to the Latine name: Some take it not but for a course of argument & therefore hardly may one giue any examples thereof.

[Sidenote: Metastasis, or the Flitting figure, or the Remoue.] Now as arte and good pollicy in perswasion bids vs to abide & not to stirre from the point of our most aduantage, but the same to enforce and tarry vpon with all possible argument, so doth discretion will vs sometimes to flit from one matter to another, as a thing meete to be forsaken, and another entred vpon, I call him therefore the flitting figure, or figure of remoue, like as the other before was called the figure of aboade.

[Sidenote: Parecuasis, or the Stragler.] Euen so againe, as it is wisdom for a perswader to tarrie and make his aboad as long as he may conueniently without tediousness to the hearer, vpon his chiefe proofes or points of the cause tending to his aduantage, and likewise to depart againe when time serues, and goe to a new matter seruing the purpose aswell. So is it requisite many times for him to talke farre from the principall matter, and as it were to range aside, to th'intent by such extraordinary meane to induce or inferre other matter, aswell or better seruing the principal purpose, and neuertheles in season to returne home where he first strayed out. This maner of speech is termed the figure of digression by the Latines, following the Greeke originall, we also call him the stragler by allusion to the souldier that marches out of his array, or by those that keepe no order in their marche, as the battailes well ranged do: of this figure there need be geuen no example.

[Sidenote: Expeditio, or the speedie dispatcher.] Occasion offers many times that our maker as an oratour, or perswader, or pleader should go roundly to worke, and by a quick and swift argument dispatch his perswasion, & as they are woont to say not stand all day trifling to no purpose, but to rid it out of the way quickly. This is done by a manner of speech, both figuratiue and argumentatiue, when we do briefly set down all our best reasons seruing the purpose and reiect all of them sauuing one, which we accept to satisfie the cause: as he that in a litigious case for land would prooue it not the aduersaries, but his clients. No man can say its his by heritage, Nor by Legacie, or Testatours deuice: Nor that it came by purchase or engage, Nor from his Prince for any good seruice. Then needs must it be his by very wrong, Which he hath offred this poore plaintife so long.

Though we might call this figure very well and properly the [Paragon] yet dare I not so to doe for feare of the Courtiers enuy, who will haue no man vse that terme but after a courtly manner, that is, in praysing of horses, haukes, hounds, pearles, diamonds, rubies, emerodes, and other precious stones: specially of faire women whose excellencie is discouered by paragonizing or setting one to another, which moued the zealous Poet, speaking of the mayden Queene, to call her the paragon of Queenes. This considered, I will let our figure enioy his best beknownen name, and call him stil in all ordinarie cases the figure of comparison: as when a man wil seeme to make things appeare good or bad, or better or worse, or more or lesse excellent, either vpon spite or for pleasure, or any other good affection, then he sets the lesse by the greater, or the greater to the lesse, the equall to his equall, and by such confronting of them together, driues out the true ods that is betwixt them, and makes it better appeare, as when we sang of our Soueraigne Lady thus, in the twentieth Partheniade. As falcon fares to bussards flight, As egles eyes to owlates sight, As fierce saker to coward kite, As brightest noone to darkest night: As summer sunne exceedeth farre, The moone and euery other starre: So farre my Princesse praise doeth passe, The famoust Queene that euer was.

And in the eighteene Partheniade thus. Set rich rubie to red esmayle, The rauens plume to peacocks tayle, Lay me the larkes to lizards eyes, The duskie cloude to azure skie, Set shallow brookes to surging seas, An orient pearle to a white pease.

&c. Concluding. There shall no lesse an ods be seene In mine from euery other Queene.

[Sidenote: Dialogismus, or the right reasoner.] We are sometimes occasioned in our tale to report some speech from another mans mouth, as what a king said to his priuy counsel or subiect, a captaine to his souldier, a souldiar to his captaine, a man to a woman, and contrariwise: in which report we must always geue to euery person his fit and naturall, & that which best becommeth him. For that speech becommeth a king which doth not a carter, and a young man that doeth not an old: and so, in euery sort and degree. Virgil speaking in the person of Eneas, Turnus and many other great Princes, and sometimes of meaner men, ye shall see what decencie euery of their speeches holdeth with the qualitie, degree and yeares of the speaker. To which examples I will for this time referre you.

So if by way of fiction we will seem to speake in another mans person, as if king Henry the eight were aliue, and should say of the towne of Bulleyn, what we by warretime hazard of our person hardly obtained, our young sonne without any peril at all, for little mony deliuered vp againe. Or if we should faine king Edward the thirde, vnderstanding how his successour Queene Marie had lost the towne of Calays by negligence, should say: That which the sword wanne, the distaffe hath lost. This manner of speech is by the figure Dialogismus, or the right reasoner.

[Sidenote: Gnome, or the Director.] In waightie causes and for great purposes, wise perswaders vse graue & weighty speaches, specially in matter of aduise or counsel, for which purpose there is a maner of speach to alleage textes or authorities of wittie sentence, such as smatch morall doctrine and teach wisdome and good behaiour, by the Greeke originall we call him the directour, by the Latin he is called sententia: we may call him the sage sayer, thus.

[Sidenote: Sententia, or the Sage sayer.] Nature bids vs as a louing mother, To loue our selues first and next to loue another.

The Prince that couets all to know and see, Had neede full milde and patient to bee.

Nothing stickes faster by us as appeares, Then that which we learne in our tender yeares.

And that which our foueraigne Lady wrate in defiance of fortune. Neuer thinke you fortune can beare the sway,
Where vertues force, can cause her to obay.

Heede must be taken that such rules or sentences be choisly made and not often vsed least excesse breed
lothsomnesse.

[Sidenote: Sinathrismus, or the Heaping figure.] Arte and good pollicie moues vs many times to be earnest in our
speach, and then we lay on such load and so go to it by heapes as if we would winne the game by multitude of
words & speaches, not all of one but of diuers matter and sence, for which cause the Latines called it Congeries and
we the heaping figure, as he that said To muse in minde how faire, how wise, how good, How braue, how free,
how curteous and how true, My Lady is doth but inflame my blood.

Or thus. I deeme, I dreame, I do, I tast, I touch, Nothing at all but smells of perfit blisse.

And thus by maister Edward Diar, vehement swift & passionatly. But if my faith my hope, my loue my true intent,
My libertie, my seruice vowed, my time and all be spent, In vaine, &c.

But if such earnest and hastie heaping vp of speaches be made by way of recapitulation, which commonly is in the
end of euery long tale and Oration, because the speaker seemes to make a collection of all the former materiall
points, to binde them as it were in a bundle and lay them forth to enforce the cause and renew the hearers memory,
then ye may geue him more properly the name of the [collectour] or recapitulatour, and serueth to very great
purpose as in an hymphne written by vs to the Queenes Maiestie entitled [Mourua] wherein speaking of the
mutabilitie of fortune in the case of all Princes generally, wee seemed to exempt her Maiestie of all such casualltie,
by reason she was by her destinie and many diuine partes in her, ordained to a most long and constant prosperitie in
this world, concluding with this recapitulation. But thou art free, but were thou not in deede, But were thou not,
come of immortall seede: Neuer yborne, and thy minde made to blisse, Heauens mettall that euerlasting is: Were
not thy wit, and that thy vertues shall, Be deemd diuine thy fauour face and all: And that thy loze, ne name may
neuer dye, Nor thy state turne, stayd by destinie: Dread were least once thy noble hart may feele, Some ruffull
turne, of her unsteady wheele.

[Sidenote: Apostrophe, or the turne tale.] Many times when we haue runne a long race in our tale spoken to the
hearers, we do sodainly flye out & either speake or exclaime at some other person or thing, and therefore the
Greekes call such figure (as we do) the turnway or turnetale, & breedeth by such exchange a certaine recreation to
the hearers minds, as this vsed by a louer to his vnkind mistresse. And as for you (faire one) say now by prooffe ye
finde, That rigour and ingratitude soone kill a gentle minde.

And as we in our triumphals, speaking long to the Queenes Maiestie, vpon the sodaine we burst out in an
exclamtion to Phebus, seeming to draw in a new matter, thus. But O Phebus, All glistening in thy gorgious
gowne, Wouldst thou wit safe to slide a downe: And dwell with us,

But for a day, I could tell thee close in thine eare, A tale that thou hadst leuer heare --I dare well say:

Then ere thou wert, To kisse that unkind runnaway, Who was transformed to boughs of bay: For her curst hert.
&c .

And so returned againe to the first matter.

[Sidenote: Hypotiposis, or the counterfait representation.] The matter and occasion leadeth vs many times to
describe and set forth many things, in such sort as it should appeare they were truly before our eyes though they
were not present, which to do it requireth cunning: for nothing can be kindly counterfait or represented in his
absence, but by great discretion in the doer. And if the things we couet to describe be not naturall or not veritable,
than yet the same axeth more cunning to do it, because to faine a thing that neuer was nor is like to be, proceedeth
of a greater wit and sharper inuention than to describe things that be true.

[Sidenote: Prosopographia.] And these be things that a poet or maker is woont to describe sometimes as true or naturall, and sometimes to faine as artificiall and not true. viz. The visage, speach and countenance of any person absent or dead: and this kinde of representation is called the Counterfait countenance: as Homer doth in his Iliades, diuerse personages: namely Achilles and Thersites, according to the truth and not by fiction. And as our poet Chaucer doth in his Canterbury tales set for the Sumner, Pardoner, Manciple, and the rest of the pilgrims, most naturally and pleasantly.

[Sidenote: Prosopopeia, or the Counterfait in personation.] But if ye wil faine any person with such features, qualities & conditions, or if ye wil attribute any humane quality, as reason or speech to dombe creatures or other insensible things, & do study (as one may say) to giue them a humane person, it is not Prosopographia, but Prosopopeia, because it is by way of fiction, & no prettier examples can be giuen to you thereof, than in the Romant of the rose translated out of French by Chaucer, describing the persons of auarice, enuie, old age, and many others, whereby much moralities is taught.

[Sidenote: Cronographia, or the Counterfait time.] So if we describe the time or season of the yeare, as winter, summer, haruest, day, midnight, noone, euening, or such like: we call such description the counterfait time. Cronographia examples are euery where to be found.

[Sidenote: Topographia, or the Counterfait place.] And if this description be of any true place, citie, castell, hill, valley or sea, & such like: we call it the counterfait place Topographia, or if ye fayne places vntrue, as heauen, hell, paradise, the house of fame, the pallace of the sunne, the denne of sheepe, and such like which ye shall see in Poetes: so did Chaucer very well describe the country of Saluces in Italie, which ye may see, in his report of the Lady Grysyll.

[Sidenote: Pragmatographia, or the Counterfait action.] But if such description be made to represent the handling of any busines with the circumstances belonging therevnto as the manner of a battell, a feast, a marriage, a buriall or any other matter that heth in feat and actiutie: we call it then the counterfeit action [Pragmatographia.]

In this figure the Lord Nicholas Vaux a noble gentleman, and much delighted in vulgar making, & a man otherwise of no great learning but hauing herein a maruelous facultie, made a dittie representing the battayle and assault of Cupide, so excellently well, as for the gallant and propre application of his fiction in euery part, I cannot choose but set downe the greatest part of his ditty, for in truth it can not be amended. When Cupid scaled first the fort, Wherein my hart lay wounded sore, The battrie was of such a sort, That I must yeeld or die therefore. There saw I loue vpon the wall, How he his banner did display, Alarme alarme he gan to call, And had his souldiers keepe aray. The armes the which that Cupid bare, We pearced harts with teares besprent: In siluer and sable to declare The stedfast loue he alwaies meant. There might you see his band all drest In colours like to white and blacke, With pouder and with pellets prest, To bring them forth to spoile and sacke, Good will the master of the shot, Stood in the Rampire braue and proude, For expence of pouder he spared not, Assault assault to crie aloude. There might you heare the Canons rore, Eche peece discharging a louers looke, &c.

[Sidenote: Omiosis, or Resemblance.] As well to a good maker and Poet as to an excellent perswader in prose, the figure of Similitude is very necessary by which we not onely bewtifie our tale, but also very much inforce & enlarge it. I say inforce because no one thing more preuaileth with all ordinary iudgements than perswasion by similitude. Now because there are sundry sorts of them, which also do worke after diuerse fashions in the hearers of conceits, I will set them forth by a triple diuision, exempting the generall Similitude as their common Auncestour, and I will cal him by the name of Resemblance without any addition, from which I deriue three other sorts: and giue euery one his particular name, as Resemblance by Pourtrait or Imagery, which the Greeks call Icon, Resemblance morall or misticall, which they call Parabola, & Resemblance by example, which they call Paradigma, and first we will speake of the general resemblance, or bare similitude, which may be thus spoken. But as the watrie showres delay the raging wind, So doeth good hope cleane put away dispaire out of my mind.

And in this other likening the forlorne louer to a striken deer. Then as the striken deere, withdrawes himselfe alone, So do I seeke some secret place, where I may make my mone.

And in this of ours where we liken glory to a shadow. As the shadow (his nature being such,) Followeth the body, whether it will or no, So doeth glory, refuse it here so much, Wait on virtue, be it in weale or wo. And euen as the shadow in his kind, What time it beares the carcas company, Goeth oft before, and often comes behind: So doeth renowne, that raiseth us so hye, Come to vs quicke, sometime not till we dye. But the glory, that growth not ouer fast, Is euer great, and likeliest long to last.

Againe in a ditty to a mistresse of ours, where we likened the cure of Loue to Achilles lance. The lance so bright, that made Telephus wound, The same rusty, salued the sore againe, So may my meede (Madame) of you redownd, Whose rigour was first suthour of my paine.

The Tuskan poet vseth this Resemblance, inuring as well by Dissimilitude as Similitude, likening himselfe (by Implication) to the flie, and neither to the eagle nor to the owle: very well Englished by Sir Thomas Wiat after his fashion and by myselfe thus: There be some fowles of sight so proud and starke, As can behold the sunne, and neuer shrink, Some so feeble, as they are faine to winke, Or neuer come abroad till it be darke: Others there be so simple, as they thinke, Because it shines, so sport them in the fire, And feele vnware, the wrong of the desire, Fluttring amidst the flame that doth them burne, Of this last ranke (alas) am I aright, For in my ladies looks to stand or turne I haue no power, ne find place to retire, Where any darke may shade me from her sight But to her beames so bright whilst I aspire, I perish by the bane of my delight.

Againe in these likening a wise man to the true louer. As true loue is constant with his enioy, And asketh no witness nor no record, And as faint loue is euermore most coy, To boast and brag his troth at euery word: Euen so the wise without another meede: Contents him with the guilt of his good deede.

And in this resembling the learning of an euill man to the seedes sown in barren ground. As the good seedes sown in fruitfull soyle, Bring forth foison when barren doeth them spoile: So doeth it fare when much good learning hits, Vpon shrewde willes and ill disposed wits.

And in these likening the wise man to an idiot. A sage man said, many of those that come To Athens schoole for wisdom, ere they went They first seem'd wise, then louers of wisdom, Then Orators, then idiots, which is meant That in wisdom all such as profite most, Are least surly, and little apt to boast.

Againe, for a louer, whose credit vpon some report had bene shaken, he prayeth better opinion by similitude. After ill crop the soyle must eft be sown, And fro shipwracke we sayle to seas againe, Then God forbid whose fault hath once bene knowen, Should for euer a spotted wight remaine.

And in this working by resemblance in a kinde of dissimilitude betweene a father and a master. It fares not by fathers as by masters it doeth fare, For a foolish father may get a wise sonne, But of a foolish master it haps very rare Is bred a wise seruant where euer he wonne.

And in these, likening the wise man to the Giant, the foole to the Dwarf. Set the Giant deepe in a dale, the dwarf vpon an hill, Yet will the one be but a dwarf, th'other a giant still. So will the wise be great and high, euen in the lowest place: The foole when he is most aloft, will seeme but low and base.

[Sidenote: Icon, or Resemblance by imagerie.] But when we liken an humane person to another in countenance, stature, speach or other qualitie, it is not called bare resemblance, but resemblance by imagerie or pourtrait, alluding to the painters terme, who yeldeth to th'eye a visible representation of the thing he describes and painteth in his table. So we commending her Maiestie for the wisdom bewtie and magnanimitie likened her to the Serpent, the Lion and the Angell, because by common vsurpation, nothing is wiser then the Serpent, more courageous then the Lion, more bewtiful then the Angell. These are our verses in the end of the seuenth Partheniade. Nature that seldome workes amisse, In womans brest by passing art: Hath lodged safe the Lyons hart, And stately fixt with all good grace, To Serpents head an Angels face.

And this maner of resemblance is not onely performed by likening liuely creatures one to another, but also of any other naturall thing bearing a proportion of similitude, as to liken yellow to gold, white to siluer, red to the rose, soft to silke, hard to the stone and such like. Sir Philip Sidney in the description of his mistresse excellently well

handled this figure of resemblance by imagerie, as ye may see in his booke of Archadia: and ye may see the like, of our doings, in a Partheniade written of our soueraigne Lady, wherein we resemble euery part of her body to some naturall thing of excellent perfection in his kind, as of her forehead, browes, and haire, thus: Of siluer was her forehead hie, Her browes two bowes of hebenie, Her tresses trust were to behold Frizled and fine as fringe of gold.

And of her lips. Two lips wrought out of rubie rocke, Like leaues to shut and to vnlock. As portall dore in Princes chamber: A golden tongue in mouth of amber.

And of her eyes. Her eyes God wot what stuffe they are, I durst be sworne each is a starre: As cleere and bright as woont to guide The Pylot in his winter tide.

And of her breasts. Her bosome sleake as Paris plaster, Helde up two balles of alabaster, Eche byas was a little cherrie: Or els I thinke a strawberie.

And all the rest that followeth, which may suffice to exemplifie your figure Icon, or resemblance by imagerie and portrait.

[Sidenote: Parabola or Resemblance mistical.] But whensoever by your similitude ye will seeme to teach any moralitie or good lesson by speeches mistical and darke, or farre sette, vnder a sence metaphoricall applying one naturall thing to another, or one case to another, inferring by them a like consequence in other cases the Greekes call it Parabola, which terme is also by custome accepted of vs: neuerthelesse we may call him in English the resemblance mistical: as when we liken a young childe to a greene twigge which ye may easilie bende euery way ye list: or an old man who laboureth with continuall infirmities, to a drie and dricklie oke. Such parables were all the preachings of Christ in the Gospell, as those of the wise and foolish virgins, of the euil steward, of the labourers in the vineyard, and a number more. And they may be fayned aswell as true: as those fables of Aesope, and other apologies inuented for doctrine sake by wise and graue men.

[Sidenote: Paradigma, or a resemblance by example.] Finally, if in matter of counsell or perswasion we will seeme to liken one case to another, such as passe ordinarily in mans affaires, and doe compare the past with the present, gathering probabilitie of like successe to come in the things wee haue presently in hand: or if ye will draw the iudgements precedent and authorized by antiquitie as veritable, and peradventure fayned and imagined for some purpose, into similitude or dissimilitude with our present actions and affaires, it is called resemblance by example: as if one should say thus, Alexander the great in his expedition to Asia did thus, so did Hanniball comming into Spaine, so did Caesar in Egypt, therefore all great Captains & Generals ought to doe it.

And thus againe, It hath bene alwayes vsuall among great and magnanimous princes in all ages, not only to repulse any iniury & inuasion from their owne realmes and dominions, but also with a charitable & Princely compassion to defend their good neighbors Princes and Potentats, from all oppression of tyrants & vsurpers. So did the Romaines by their armes restore many Kings of Asia and Affricke expelled out of their kingdoms. So did K. Edward I restablish Baliol rightfull owner of the crowne of Scotland against Robert le brus no lawfull King. So did king Edward the third aide Dampeter king of Spaine against Henry bastard and vsurper. So haue many English Princes holpen with their forces the poore Dukes of Britaine their ancient friends and allies, against the outrages of the French kings: and why may not the Queene our soueraigne Lady with like honor and godly zeale yeld protection to the people of the Low countries, her nearest neighbours to rescue them a free people from the Spanish seruitude.

And as this resemblance is of one mans action to another, so may it be made by examples of brute beastes, aptly corresponding in qualitie or euent, as one that wrote certaine prety verses of the Emperour Maximinus, to warne him that he should not glory too much in his owne strength, for so he did in very deede, and would not take any common souldier to taske at wrastling, or weapon, or in any other actiuitie and feates of armes, which was by the wiser sort mislliked, these were the verses. The Elephant is strong, yet death doeth it subdue, The bull is strong, yet cannot death eschue. The Lion strong, and slaine for all his strength: The Tygar strong, yet kilde is at the length. Dread thou many, that darest not any one, Many can kill, that cannot kill alone.

And so it fell out, for Maximinus was slaine in a mutinie of his souldiers, taking no warning by these examples written for his admonition.

CHAP. XX.

The last and principall figure of our poetick Ornament.

[Sidenote: Exargasia or The Gorgious.] For the glorious lustre it setteth vpon our speech and language, the Greeks call it [Exargasia] the Latine [Expolisio] a terme transferred from these polishers of marble or porphirite, who after it is rough hewen & reduced to that fashion they will do set vpon it a goodly glasse, so smoth and cleere as ye may see your face in it, or otherwise as it fareth by the bare and naked body, which being attired in rich and gorgious apparell, seemeth to the common vsage of th'eye much more comely & bewtifull then the naturall. So doth this figure (which therefore I call the Gorgious) polish our speech & as it were attire it with copious & pleasant amplifications and much varietie of sentences all running vpon one point & to one intent so as I doubt whether I may terme it a figure, or rather a masse of many figurative speaches, applied to the bewtifying of our tale or argument. In a worke of ours intituled Philocalia we have strained to shew the vse & application of this figure and all others mentioned in this booke, to which we referre you. I finde none example in English meetre, so well maintaining this figure as that dittie of her Maiesties owne making passing sweete and harmonick, which figure beyng as his very originall name purporteth the most bewtifull and gorgious of all others, it asketh in reason to be reserued for a last complement, and desciphred by the arte of a Ladies penne, her selfe being the most bewtifull, or rather bewtie of Queenes. And this was the occasion: our soueraigne Lady perceiuing how by the Sc.Q. residence within this Realme at so great libertie and ease (as were skarce meete for so great and daungerous a prysoner) bred secret factions among her people, and made many of the nobilitie incline to faour her partie: some of them desirous of innouation in the state: others aspiring to greater fortunes by her libertie and life. The Queene our soueraigne Lady to declare that she was nothing ignorant of those secret practizes, though she had long with great wisdom and pacience dissembled it, writeth this ditty most sweet and sententious, not hiding from all such aspiring minds the daunger of their ambition and disloyaltie: which afterward fell out most truly by th'exemplary chastisement of sundry persons, who in faour of the said Sc.Q. declining from her Maiestie, sought to interrupt the quiet of the Realme by many euill and vndutifull practizes. The ditty is as followeth. The doubt of future foes, exiles my present ioy, And wit me warnes to shun such snares as threaten mine annoy. For falshood now doth flow, and subiect faith doth ebbe, Which would not be, if reason rul'd or widsome wev'd the webbe. But clowdes of tois vntried, do cloake aspiring mindes, Which turne to raigne of late repent, by course of changed windes. The toppe of hope supposed, the roote of ruth wil be, And frutelesse all their grassed guiles, as shortly ye shall see. The dazeld eyes with pride, which great ambition blinds, Shalbe vnseeld by worthy wights, whose foresight falshood finds. The daughter of debate, that eke discord doth sowe Shal reap no gaine where formor rule hath taught stil peace to growe. No forreine bannisht wight shall ancre in this port, Our realme it brookes no strangers force, let them elsewhere resort. Our rusty sworde with rest shall first his edge employ, To polle their toppes that seeke, such change and gape for ioy.

In a worke of ours intituled [Philo Calia] where we entreat of the loues betwene prince Philo and Lady Calia in their mutual letters messages, and speaches: we have strained our muse to shew the vse and application of this figure, and of all others.

CHAP. XXI.

Of the vices or deformities in speach and writing principally noted by auncient Poets.

It hath bene said before how by ignorance of the maker a good figure may become a vice, and by his good discretion, a vicious speach go for a vertue in the Poetick science. This saying is to be explained and qualified, for some maner of speaches are always intollerable and such as cannot be vsed with any decencie, but are euer vndecent namely barbarousnesse, incongruities, ill disposition, fond affectation, rusticities, and all extreme

darknesse, such as it is not possible for a man to vnderstand the matter without an interpretour, all which partes are generally to be banished out of euery language, vnlesse it may appeare that the maker or Poet do it for the nonce, as it was reported by the Philosopher Heraclitus that he wrote in obscure and darke termes of purpose not to be vnderstood, whence he merited the nickname Scotinus, otherwise I see not but the rest of the common faultes may be borne with sometimes, or passe without any greate reproofe, not being vsed ouermuch or out of season as I said before: so as euery surplusage or preposterous placing or vndue iteration or darke word, or doubtfull speach are not so narrowly to be looked vpon in a large poeme, nor specially in the pretie Poesies and deuises of Ladies, and Gentlewomen makers, whom we would not haue too precise Poets least with their shrewd wits, when they were married they might become a little too phantasticall wiues, neuerthelesse because we seem to promise an arte, which doth not iustly admit any wilful errorr in the teacher, and to th'end we may not be carped at by these methodicall men, that we haue omitted any necessary point in this businesse to be regarded, I will speake somewhat touching these viciosities of language particularly and briefly, leauing no little to the Grammarians for maintenaunce of the scholasticall warre, and altercations: we for our part condescending in this deuise of ours, to the appetite of Princely personages & other so tender & quesiue complexions in Court, as are annoyed with nothing more then long lessons and ouermuch good order.

CHAP. XXII.

Some vices in speaches and writing are alwayes intollerable, some others now and then borne withall by licence of approoued authors and custome.

[Sidenote: Barbarismus, or Forrein speech.] The foulest vice in language is to speake barbarously: this terme grew by the great pride of the Greekes and Latines, when they were dominatours of the world reckoning no language so sweete and ciuill as their owne, and that all nations beside them selues were rude and vnciuill, which they called barbarous: So as when any straunge word not of the naturall Greeke or Latin was spoken, in the old time they called it barbarisme, or when any of their owne naturall wordes were sounded and pronounced with straunge and ill shapen accents, or written by wrong ortographie, as he that would say with vs in England, a dousand for a thousand, asterday, for yesterday, as commonly the Dutch and French people do, they said it was barbarously spoken. The Italian at this day by like arrogance calleth the Frenchman, Spaniard, Dutch, English, and all other breed behither their mountaines Appennines, Tramontani, as who would say Barbarous. This terme being then so vsed by the auncient Greekes, there haue bene since, notwithstanding who haue digged for the Etimologie somethat deeper, and many of them haue said that is was spoken by the rude and barking language of the Affricans now called Barbarians, who had great trafficke with the Greekes and Romanes, but that can not be so, for that part or Affricke hath but of late receiued the name of Burbarie and some others rather thinke that of this word Barbarous, that countrey came to be called Barbaria and but few yeares in respect agone. Others among whom is Ihan Leon a Moore of Granada, will seeme to deriue Barbaria, from this word Bar, twice iterated thus Barbar, as much to say as flye, flye, which chaunced in a persecution of the Arabians by some seditious Mahometanes in the time of their Pontif, Habdul mumi, when they were had in the chase, & driuen out of Arabia Westward into the countreys of Mauritania, & during the pursuite cried one vpon another flye away, flye away, or passe passe, by which occasion they say, when the Arabians which were had in chase came to stay and settle themselues in that part of Affrica, they called it Barbar, as much to say, the region of their flight or pursuite. Thus much for the terme, though not greatly pertinent to the matter, yet not vnpleasant to know for them that delight in such niceties.

[Sidenote: Solecismus, or Incongruitie.] Your next intollerable vice is solecismus or incongruitie, as when we speake halfe English, that is by misusing the Grammaticall rules to be obserued in cases, genders, tenses, and such like, euery poore scholler knowes the fault, & cals it the breaking of Priscians head, for he was among the Latines a principall Grammarian.

[Sidenote: Cacozeria, or Fonde affectation.] Ye haue another intollerable ill maner of speach, which by the Greekes originall we may call fonde affectation and is when we affect new words and phrases other then the good speakers and writers in any language, or then custome hath allowed, & is the common fault of young schollers not halfe well studied before they come from the Vniuersitie or schooles, and when they come to their friends, or happen to get

some benefice or other promotion in their countreys, will seeme to coigne fine wordes out of the Latin, and to vse new fangled speaches, thereby to shew theselues among the ignorant the better learned.

[Sidenote: Soraismus, or The mingle mangle.] Another of your intollerable vices is that which the Greekes call Soraismus, & we may call the [mingle mangle] as when we make our speach or writings of sundry languages vsing some Italian word, or French, or Spanish, or Dutch, or Scottish, not for the nonce or for any purpose (which were in part excusable) but ignorantly and affectedly as one that said vsing this French word Roy, to make ryme with another verse, thus. O mightie Lord of loue, dame Venus onely ioy, Whose Princely power exceedes ech other heauenly roy.

The verse is good but the terme peeuishly affected.

Another of reasonable good facilitie in translation finding certaine of the hymnes of Pyndarus and of Anacreons odes, and other Lirickes among the Greekes very well translated by Rounsard the French Poet, & applied to the honour of a great Prince in France, comes our minion and translates the same out of French into English, and applieth them to the honour of a great noble man in England (wherein I commend his reuerent minde and duetie) but doth so impudently robbe the French Poet both of his prayse and also of his French termes, that I cannot so much pitie him as be angry with him for his inurious dealing, our sayd maker not being ashamed to vse these French wordes freddon, egar, superbous, filanding, celest, calabrois, thebanois and a number of others, for English wordes, which haue no maner of conformitie with our language either by custome or deriuation which may make them tollerable. And in the end (which is worst of all) makes his vaunt that neuer English finger but his hath toucht Pindars string which was neuerthesse word by word as Rounsard had said before by like braggery. These be his verses. And of an ingenious inuention infanted with pleasant trauaile.

Whereas the French word is enfante as much to say borne as a child, in another verse he saith. I will freddon in thine honour.

For I will shake or quiuer my fingers, for so in French is freddon, and in another verse. But if I will thus like pindar, In many discourses egar.

This word egar is as much to say as to wander or stray out of the way, which in our English is not receiued, nor these wordes calabrois, thebanois, but rather calabrian, theba [filanding sisters] for the spinning sisters: this man deserues to be endited of pety larceny for pilfring other mens deuices from them & conuerting them to his owne vse for in deede as I would with euery inuentour which is the very Poet to receaue the prayses of his inuention, so would I not haue a translatur be ashamed to be acknowen of this translation.

[Sidenote: Cacosinthon, or the Misplacer.] Another of your intollerable vices is ill disposiiton or placing of your words in a clause or sentence: as when you will place your adiectiue after your substantiue, thus: Mayde faire, widow riche, priest holy, and such like, which though the Latines did admit, yet our English did not, as one that said ridiculously. In my yeares lustie, many a deed doughtie did I.

All these remembred faults be intollerable and euer vndecnt.

[Sidenote: Cacemphaton, or figure of foule speech.] Now haue ye other vicious manners of speech, but sometimes and in some cases tollerable, and chiefly to the intent to mooue laughter, and to make sport, or to giue it some prety strange grace, and is when we vse such wordes as may be drawn to a foule and vnshamefast sence, as one that would say to a young woman, I pray you let me iape with you, which indeed is no more but let me sport with you. Yea and though it were not altogether so directly spoken the very sounding of the word were not commendable, as he that in the presence of Ladies would vse this common Prouerbe, Iape with me but hurt me not, Bourde with me but shame me not.

For it may be taken in another peruerser sence by that sorte of persons that heare it, in whose eares no such matter ought almost to be called in memory, this vice is called by the Greekes Cacemphaton, we call it the vnshamefast or figure of foule speech, which our courtly maker shall in any case shunne, least of a Poet he become a Buffon or rayling companion, the Latines called him Scurra. There is also another sort of ilfauoured speech subject to this

vice, but resting more in the manner of the ilshapen sound and accent, than for the matter it selfe, which may easily be auoyded in choosing your wordes those that bee of the pleasantest orthography, and not to rune too many like sounding words together.

[Sidenote: Tautologia, or the figure of selfe saying.] Ye haue another manner of composing your metre nothing commendable, specially if it be too much vsed, and is when our maker takes too much delight to fill his verse with wordes beginning all with a letter, as an English rimer that said: The deadly droppes of darke disdain, Do daily drench my due desartes.

And as the Monke we spake of before, wrote a whole Poeme to the honor of Carolus Caluus euery word in his verse beginning with C, thus: Carmina clarifone Caluis cantate camena.

Many of our English makers vse it too much, yet we confesse it doth not ill but pretily becomes the meetre, if ye passe not two or three words in one verse, and vse it not very much, as he that said by way of Epithete. The smoakie sighes: the trickling teares.

And such like, for such composition makes the meetre runne away smoother, and passeth from the lippes with more facilitie by iteration of a letter then by alteration, which alteration of a letter requires an exchange of ministry and office in the lippes, teeth or palate, and so doth not the iteration.

[Sidenote: Histeron, proteron, or the Preposterous.] Your misplacing and preposterous placing is not all one in behaiour of language, for the misplacing is alwaies intollerable, but the preposterous is a pardonable fault, and many times giues a pretie grace vnto the speech. We call it by a common saying to set the carte before the horse, and it may be done eyther by a single word or by a clause of speech: by a single word thus: And if I not performe, God let me neuer thriue.

For performe not: and this vice is sometime tollerable inough, but if the word carry any notable sence, it is a vice not tollerable, as he that said praising a woman for her red lippes, thus: A corral lippe of hew.

Which is no good speech, because either he should haue sayd no more but a corral lip, which had bene inough to declare the rednesse or els he should haue said a lip of corral hew, and not a corral lip of hew. Now if this disorder be in a whole clause which carieth more sentence then a word, it is then worst of all.

[Sidenote: Acyron, or the Vncouth.] Ye haue another vicious speech which the Greeks call Acyron, we call it the vncouth, and is when we vse an obscure and darke word, and vtterly repugnant to that we would expresse, if it be not by vertue of the figures metaphore, allegorie, abusio, or such other laudable figure before remembered, as he that said by way of Epithete. A dongeon deep, a dampe as darke as hell.

Where it is euident that a dampe being but a breath or vapour, and not to be discerned by the eye, ought not to haue this epithete (darke,) no more then another that praysing his mistresse for her bewtifull haire, said very improperly and with an vncouth terme. Her haire surmounts Apollos pride, In it such bewty raignes.

Whereas this word raigne is ill applied to the bewtie of a womans haire, and might better haue bene spoken of her whole person, in which bewtie, fauour, and good grace, may perhaps in some sort be said to raigne as our selues wrate, in a Partheniade praising her Maiesties countenance, thus: A cheare where loue and Maiestie do raigne, Both milde and sterne, &c.

Because this word Maiestie is a word expressing a certaine Soueraigne dignitie, as well as a quallitie of countenance, and therefore may properly be said to raigne, & requires no meaner a word to set him foorth by. So it is not of the bewtie that remaines in a womans haire, or in her hand or any other member: therefore when ye see all these unproper or harde Epithets vsed, ye may put them in the number of [uncouths] as one that said, the flouds of graces: I haue heard of the flouds of teares, and the flouds of eloquence, or of any thing that may resemble the nature of a water-course, and in that respect we say also, the streames of teares, and the streames of utterance, but not the streames of graces, or of beautie. Such manner of vncouth speech did the Tanner of Tamworth vse to king Edward the fourth, which Tanner hauing a great while mistaken him, and vsed very broad talke with him, at length

perceiuing by his traine that it was the king, was afraide he should be punished for it, said thus with a certaine rude repentance. I hope I shall be hanged tomorrow.

For [I fear me] I shall be hanged, whereat the king laughed a good, not only to see the Tanners vaine feare, but also to heare his ill shapen terme, and gaue him for recompence of his good sport, the inheritance of Plumton parke, I am afraid the Poets of our time that speake more finely and correctedly will come too short of such a reward.

[Sidenote: The vice of Surplusage.] Also the Poet or makers speech becomes vicious and vnpleasant by nothing more than by vsing too much surplusage: and this both not only in a word or two more than ordinary, but in whole clauses, and peradventure large sentences impertinently spoken, or with more labour and curiositie than is requisite.

[Sidenote: Pleonasmus, or Too ful speech.] The first surplusage the Greekes call Pleonasmus, I call him [too much speech] and is no great fault, as if one should say, I heard it with mine eares, and saw it with mine eyes, as if a man could heare with his heeles, or see with his nose. We our selues vsed this superfluous speech in a verse written of our mistresse, neuertheles, not much to be misliked, for euen a vice sometime being seasonably vsed, hath a pretie grace, For euer may my true loue liue and neuer die And that mine eyes may see her crownde a Queene.

As, if she liued euer, she could euer die, or that one might see her crowned without his eyes.

[Sidenote: Macrologia, or Long language.] Another part of surplusage is called Macrologia, or long language, when we vse large clauses or sentences more than is requisite to the matter: it is also named by the Greeks Perissologia, as he that said, the Ambassadors after they had receiued this answere at the kings hands, they tooke their leaue and returned home into their cuntry from whence they came.

So said another of our rimers, meaning to shew the great annoy and difficultie of those warres of Troy, caused for Helenas sake. Nor Menelaus was vnwise, Or troupe of Troians mad, When he with them and they with him, For her such combat had.

The clauses (he with them and they with him) are surpluage, and one of them very impertinent, because it could not otherwise be intended, but that Menelaus, fighting with the Troians, the Troians must of necessitie fight with him.

[Sidenote: Periergia, or Ouerlabor, otherwise called the curious.] Another point of surplusage lieth not so much in superfluitie of your words, as of your trauaile to describe the matter which yee take in hand, and that ye ouer-labour your selfe in your businesse. And therefore the Greekes call it Periergia, we call it ouer-labor, iumpe with the originall: or rather [the curious] for his ouermuch curiositie and studie to shew himselfe fine in a light matter, as one of our late makers, who in most of his things wrote very well, in this (to mine opinion) more curiously than needed, the matter being ripely considered: yet is his verse very good, and his meetre cleanly. His intent was to declare how vpon the tenth day of March he crossed the riuer of Thames, to walke in Saint Georges field, the matter was not as great as ye may suppose. The tenth of March when Aries receiued Dan Phoebus raies into his horned head, And I my selfe by learned lore perceiued That Ver approacht and frosty winter fled I crost the Thames to take the cheerefull aire, In open fields, the weather was so faire.

First, the whole matter is not worth all this solemne circumstance to describe the tenth day of March, but if he had left at the two first verses it had bene enough. But when he comes with two other verses to enlarge his description, it is not only more than needes, but also very ridiculous for he makes wise, as if he had not bene a man learned in some of the mathematickes (by learned lore) that he could not haue told that the x. of March had fallen in the spring of the yeare: which euery carter, and also euery child knoweth without any learning. Then also when he saith [Ver approacht, and frosty winter fled] though it were a surplusage (because one season must needes geue place to the other) yet doeth it well enough passe without blame in the maker. These, and a hundred more of such faultie and impertinent speeches may yee finde amongst vs vulgar Poets when we be carelesse of our doings.

[Sidenote: Tapinosis, or the Abbaser.] It is no small fault in a maker to vse such wordes and termes as do diminish and abbase the matter he would seeme to set forth, by imparing the dignitie, height vigour or maiestie of the cause he takes in hand, as one that would say king Philip shrewdly harmed the towne of S. Quinaines, when in deede he

wanne it and put it to the sacke, and that king Henry the eight made spoiles in Turwin, when as in deede he did more than spoile it, for he caused it to be defaced and razed flat to the earth, and made in inhabitable. Therefore the historiographer that should by such wordes report of these two kings gestes in that behalfe, should greatly blemish the honour of their doings and almost speake untruly and iniuriously by way of abbasement, as another of our bad rymers that very indecently said. A misers mynde thou hast, thou hast a Princes pelfe.

A lewd terme to be giuen to a Princes treasure (pelfe) and was a little more manerly spoken by Seriant Bendlowes, when in a progresse time comming to salute the Queene in Huntingtonshire he said to her Cochman, stay thy cart good fellow, stay thy cart, that I may speake to the Queene, whereat her Maiestie laughed as she had bene tickled, and all the rest of the company although very graciously (as her manner is) she gaue him great thanks and her hand to kisse. These and such other base wordes do greatly disgrace the thing & the speaker or writer: the Greekes call it [Tapinosis] we the [abbaser.]

[Sidenote: Bomphiologia, or Pompious speech.] Others there be that fall into the contrary vice by vsing such bombasted wordes, as seeme altogether farced full of winde, being a great deale to high and loftie for the matter, whereof ye may finde too many in all popular rymers.

[Sidenote: Amphibologia, or the Ambiguous.] Then haue ye one other vicious speach with which we will finish this Chapter, and is when we speake or write doubtfully and that the sence may be taken two wayes, such ambiguous termes they call Amphibologia, we call it the ambiguous, or figure of sence incertaine, as if one should say Thomas Tayler saw William Tyler dronke, it is indifferent to thinke either th'one or th'other dronke. Thus said a gentleman in our vulgar pretily notwithstanding because he did it not ignoratly, but for the nonce. I sat by my Lady soundly sleeping, My mistresse lay by me bitterly weeping.

No man can tell by this, whether the mistresse or the man, slept or wept: these doubtfull speaches were vsed much in the old times by their false Prophets as appeareth by the Oracles of Delphos and and of the Sybille prophecies deuised by the religious persons of those dayes to abuse the superstitious people, and to encumber their busie braynes with vaine hope or vaine feare.

Lucretius the merry Greeke reciteth a great number of them, deuised by a coosening companion one Alexander, to get himselfe the name and reputation of the God Aesculapius, and in effect all our old Brittainish and Saxon prophesies be of the same sort, that turne them on which side ye will, the matter of them may be verified, neuerthesse carryeth generally such force in the heades of fonde people, that by the comfort of those blind prophecies many insurrections and rebellions have bene stirred vp in this Realme, as that of Iacke Straw & Iacke Cade in Richard the seconds time, and in our time by a seditious fellow in Norffolke calling himselfe Captaine Ket and others in other places of the Realme lead altogether by certaine propheticall rymes, which might be construed two or three wayes as well as to that one whereunto the rebelles applied it: our maker shall therefore auoyde all such ambiguous speaches vnlesse it be when he doth it for the nonce and for some purpose.

CHAP. XXIII.

What it is that generally makes our speach well pleasing & commeniabie and of that which the Latines call Decorum.

In all things to vse decencie, is it onely that giueth euery thing his good grace & without which nothing in mans speach could seeme good or gracious, in so much as many times it makes a bewtiful figure fall into deformitie, and on th'other side a vicious speach seeme pleasaunt and bewtiful: this decencie is therfore the line & leuell for all good makers to do their busines by. But herein resteth the difficultie to know what this good grace is, & wherein it confitted, for peraduenture it be easier to conceaue then to expresse, we wil therfore examine it to the bottome & say: that euery thing which pleaseth the mind or senses, & the mind by the senses as by means instrumentall, doth it for some amiable point or qualitie that is in it, which draweth them to a good liking and contentment with their proper objects. But that cannot be if they discouer any illfaourednesse or disproportion to the partes apprehensiuie, as for example, when a sound is either too loude or too low or otherwise confuse, the eare is ill affected: so is

th'eye if the coulour be sad or not liminous and recreatiue, or the shape of a membred body without his due measures and simmetry, and the like of euery other sence in his proper function. These excesses or defectes or confusions and disorders in the sensible objectes are deformities and vnseemely to the sence. In like sort the mynde for the things that be his mentall objectes hath his good graces and his bad, whereof th'one contents him wonderous well, th'other displeaseth him continually, no more nor no lesse then ye see the discords of musicke do to a well tuned eare. The Greekes call this good grace of euery thing in his kinde, [Greek: illegible], the Latines [decorum] we in our vulgar call it by a scholasticall terme [decencie] our owne Saxon English terme is [seemelynesse] that is to say, for his good shape and vtter appearance well pleasing the eye, we call it also [comelynesse] for the delight it bringeth comming towards vs, and to that purpose may be called [pleasant approche] so as euery way seeking to expresse this [Greek: illegible] of the Greekes and decorum of the Latines, we are faine in our vulgar tounge to borrow the terme which our eye onely for his noble prerogatiue ouer all the rest of the sences doth vsurpe, and to apply the same to all good, comely, pleasant and honest things, euen to the spirituall objectes of the mynde, which stand no lesse in the due proportion of reason and discourse than any other materiall thing doth in his sensible bewtie, proportion and comelynesse.

Now because this comelynesse resteth in the good conformitie of many things and their sundry circumstances, with respect one to another, so as there be found a iust correspondencie betweene them by this or that relation, the Greekes call it Analogie or a conuenient proportion. This louely conformitie or proportion or conueniencie betweene the sence and the sensible hath nature her selfe first most carefully obserued in all her owne workes, then also by kinde graft it in the appetites of euery creature working by intelligence to couet and desire: and in their actions to imitate & performe: and of man chiefly before any other creature as well in his speaches as in euery other part of his behauiour. And this in generalitie and by an vsuall terme is that which the Latines call [decorum.] So albeit we before alleaged that all our figures be but transgressions of our dayly speach, yet if they fall out decently to the good liking of the mynde or eare and to the bewtifying of the matter or language, all is well, if indecently, and to the eares and myndes misliking (be the figure of it selfe neuer so commendable) all is amisse, the election is the writers, the iudgement is the worlds, as theirs to whom the reading apperteineth. But since the actions of man with their circumstances be infinite, and the world likewise replenished with many iudgements, it may be a question who shal haue the determination of such controuersie as may arise whether this or that action or speach be decent or indecent: and verely it seemes to go all by discretion, not perchaunce of euery one, but by a learned and experienced discretion, for otherwise seemes the decorum to a weake and ignorant iudgement, then it doth to one of better knowledge and experience: which sheweth that it resteth in the discerning part of the minde, so as he who can make the best and most differences of things by reasonable and wittie distinction is to be the fittest iudge or sentencer of [decencie.] Such generally is the discreetest man, particularly in any art the most skilfull and discreetest, and in all other things for the more part those that be of much obseruation and greatest experience. The case then standing that discretion must chiefly guide all those business, since there be sundry sortes of discretion all unlike, euen as there be men of action or art, I see no way so fit to enable a man truly to estimate of [decencie] as example, by whose veritie we may deeme the differences of things and their proportions, and by particular discussions come at length to sentence of it generally, and also in our behauiours the more easily to put it in execution. But by reason of the sundry circumstances, that mans affaires are as it were wrapt in, this [decencie] comes to be very much alterable and subiect to varietie, in so much as our speech asketh one maner of decencie, in respect of the person who speakes: another of his to whom it is spoken: another of whom we speake: another of what we speak, and in what place and time and to what purpose. And as it is of speach, so of al other our behauiours. We wil therefore set you down some few examples of euery circumstance how it alters the decencie of speach or action. And by these few shal ye be able to gather a number more to confirme and establish your iudgement by a perfit discretion.

This decencie, so farforth as apperteineth to the consideration of our art, resteth in writing, speach and behauiour. But because writing is no more then the image or character of speach, they shall goe together in these our observations. And first wee wil sort you out diuers points, in which the wise and learned men of times past haue noted much decency or vndecencie, every man according to his discretion, as it hath bene said afore: but wherein for the most part all discrete men doe generally agree, and varie not in opinion, whereof the examples I will geue you be worthie of remembrance: & though they brought with them no doctrine or institution at all, yet for the solace they may geue the readers, after such a rable of scholasticall precepts which be tedious, these reports being of the nature of matters historicall, they are to be embraced: but olde memories are very profitable to the mind and serue as a glasse to looke vpon and behold the euent of time, and more exactly to skan the trueth of every case that

shall happen in the affaires of man, and many there be that haply doe not obserue euery particularitie in matters of decencie or vndecencie: and yet when the case is tolde them by another man, they commonly geue the same sentence vpon it. But yet whosoeuer obserueth much, shalbe counted the wisest and discreetest man, and whosoeuer spends all his life in his owne vaine actions and conceits, and obserues no mans else, he shal in the ende prouue but a simple man. In which respect it is alwaies said, one man of experience is wiser than tenne learned men, because of his long and studious obseruation and often triall.

And your decencies are of sundrie sorts, according to the many circumstances accompanying our writing, speech or behaiour, so as in the very sound or voice of him that speaketh, there is a decencie that becommeth, and an vndecencie that misbecommeth vs, which th'Emperor Anthonine marked well in the Orator Philisetes, who spake before him with so small and shrill a voice as the Emperor was greatly annoyed therewith, and to make him shorten his tale, said, by thy beard thou shouldst be a man, but by thy voice a woman.

Phanorinus the Philosopher was counted very wise and well learned, but a little too talkatiue and full of words: for the which Timocrates reprooued him in the hearing of one Polemon. That is no wonder quoth Polemon, for so be all women. And besides, Phanorinus being knowen for an Eunuke or gelded man, came by the same nippe to be noted as an effeminate and degenerate person.

And there is a measure to be vsed in a mans speech or tale, so as it be neither for shortnesse too darke, nor for length too tedious. Which made Cleomenes king of the Lacedemonians geue this vnpleasant answer to the Ambassadors or the Samiens, who had tolde him a long message from their Citie, and desired to know his pleasure in it. My masters (saith he) the first part of your tale was so long, that I remember it not, which made that the second I vnderstode not, and as for the third part I doe nothing well allow of. Great princes and graue counsellors who haue little spare leisure to hearken, would haue speeches vsed to them such as be short and sweete.

And if they be spoken by a man of account, or one who for his yeares, profession or dignitie should be thought wise & reuerend, his speeches & words should also be graue, pithie & sententious, which was well noted by king Antiochus, who likened Hermogenes the famous Orator of Greece, vnto these fowles in their moulting time, when their feathers be sick, and be so loase in the flesh that at any little rowse they can easilie shake them off: so saith he, can Hermogenes of all the men that euer I knew, as easilie deliuer from him his vaine and impertinent speeches and words.

And there is a decencie, that euery speech should be to the appetite and delight, or dignitie of the hearer & not for any respect arrogant or vndutifull, as was that of Alexander sent Embassadour from the Athenians to th'Emperour Marcus, this man seing th'emperour not so attentiu to his tale, as he would haue had him, said by way of interruption, Ceasar I pray thee giue me better eare, it seemest thou knowest me not, nor from whom I came: the Emperour nothing well liking his bold malapert speech, said: thou art deceyued, for I heare thee and know well inough, that thou art that fine, foolish, curious, sawcie Alexander that tendest to nothing but to combe & cury thy haire, to pare thy nailes, to pick thy teeth, and to perfume thy selfe with sweet oyles, that no man may abide the sent of thee. Prowde speeches, and too much finesse and curiositie is not commendable in an Embassadour. And I haue knowen in my time such of them, as studied more vpon what apparel they should weare, and what countenances they should keepe at the times of their audience, then they did vpon th'effect of their errant or commission.

And there is decency in that euery man should talke of the things they haue best skill of, and not in that, their knowledge and learning serueth them not to do, as we are wont to say, he speaketh of Robin hood that neuer shot in his bow: there came a great Oratour before Cleomenes king of Lacedemonia, and vttered much matter to him touching fortitude and valiancie in the warres: the king laughed: why laughest thou quoth the learned man, since thou art a king thy selfe, and one whom fortitude best becommeth? why said Cleomenes would it not make any body laugh, to heare the swallow who feeds onely vpon flies to boast of his great pray, and see the eagle stand by and say nothing? if thou wert a man of warre or euer hadst bene day of thy life, I would not laugh to here thee speake of valiancie, but neuer being so, & speaking before an old captaine I can not choose but laugh.

And some things and speeches are decent or indecent in respect of the time they be spoken or done in. As when a great clerk presented king Antiochus with a booke treating all of iustice, the king that time lying at the siege of a

towne, who lookt vpon the title of the booke, and cast it to him againe: saying, what a diuell tellest thou to me of iustice, now thou seest me vse force and do the best I can to bereeue mine enimie of his towne? every thing hath his season which is called Oportunitie, and the vnfitness or vndecency of the time is called Importunitie.

Sometime the vndecency ariseth by the indignitie of the word in respect of the speaker himselfe, as when a daughter of Fraunce and next heyre generall to the crowne (if the law Salique had not barred her) being set in a great chaufe by some harde words giuen her by another prince of the bloud, said in her anger, thou durst not haue said thus much to me if God had giuen me a paire of, &c. and told all out, meaning if God had made her a man and not a woman she had bene king of Fraunce. The word became not the greatnesse of her person, and much lesse her sex, whose chiefe virtue shamefastnesse, which the Latines call Verecundia, that is a naturall feare to be noted with any impudicitie: so as when they heare or see any thing tending that way they commonly blush, & is a part greatly praised in all women.

Yet will ye see in many cases how pleasant speches and faououring some skurrillity and vnshamefastnes haue now and then a certaine decencie, and well become both the speaker to say, and the hearer to abide, but that is by reason of some other circumstance, as when the speaker himselfe is knowne to be a common iester or buffon, such as take vpon them to make princes merry, or when some occasion is giuen by the hearer to induce such a pleasaunt speech, and in many other cases whereof no generall rule can be giuen, but are best known by example: as when Sir Andrew Flamock king Henry the eights standerbearer, a merry conceyted man and apt to skoffe, waiting one day at the kings heeles when he entred the parke at Greenwich, the king blew his horne, Flamock hauing his belly full, and his tayle at commaundment, gaue out a rappe nothing faintly, that the king turned him about and said how now sirra? Flamock not well knowing how to excuse his vnmannerly act, if it please you Sir quoth he, your Maiesty blew one blast for the keeper and I another for his man. The king laughed hartily and tooke it nothing offensiue: for indeed as the case fell out it was not vndecently spoken by Sir Andrew Flamock, for it was the cleaneliest excuse he could make, and a merry implicatiue in termes nothing odious, and therefore a sporting satisfaction to the kings mind, in a matter which without some such merry answeere could not haue bene well taken. So was Flamocks action most vncomely, but his speech excellently well becoming the occasion.

But at another time and in another like case, the same skurrillitie of Flamock was more offensiue, because it was more indecent. As when the king hauing Flamock with him in his barge, passing from Westminster to Greenwich to visite a fayre Lady whom the king loued and was lodged in the tower of the Parke: the king comming within sight of the tower, and being disposed to be merry, said, Flamock let vs rime: as well as I can said Flamock if it please your grace. The king began thus: Within this towre, There lieth a flowre, That hath my hart.

Flamock for aunswer: Within this hower, she will, &c. with the rest in so vncleanly termes, as might not now become me by the rule of Decorum to vtter writing to so great a Maiestie, but the king tooke them in so euill part, as he bid Flamock auant varlet, and that he should no more be so neere vnto him. And wherein I would faine learne, lay this vndecencie? in the skurrill and filthy termes not meete for a kings eare? perchance so. For the king was a wise and graue man, and though he hated not a faire woman, liked he nothing well to heare speches of ribaudrie: as they report of th'emperour Octavian: Licet fuerit ipse incontinentissimus, fuit tamen incontinenense feuerissimus vltor. But the very cause in deed was for that Flamocks reply answered not the kings expectation, for the kings rime commencing with a pleasant and amorous proposition: Sir Andrew Flamock to finish it not with loue but with lothsomnesse, by termes very rude and vnciuill, and seing the king greatly fauour that Ladie for her much beauty by like or some other good partes, by his fastidious aunswer to make her seeme odious to him, it helde a great disproportion to the kings appetite, for nothing is so vnpleasant to a man, as to be encountered in his chiefe affection, & specially in his loues, & whom we honour we should also reuerence their appetites, or at the least beare with them (not being wicked and vtterly euill) and whatsoever they do affect, we do not as becommeth vs if we make it seeme to them horrible. This in mine opinion was the chiefe cause of the vndecencie and also of the kings offence. Aristotle the great philosopher knowing this very well, what time he put Calistenes to king Alexander the greats seruice gaue him this lesson. Sirra quoth he, ye go now from a scholler to be a courtier, see ye speake to the king your maister, either nothing at all, or else that which pleaseth him, which rule if Calistenes had followed and forborne to crosse the kings appetite in diuerse speches, it had not cost him so deeply as afterward it did. A like matter of offence fell out betweene th'Emperour Charles the fifth, & an Embassadour of king Henry the eight, whom I could name but will not for the great opinion the world had of his wisdome and sufficiency in that behalfe, and all for misusing of a terme. The king in the matter of controuersie betwixt him and Ladie Catherine

of Castill the Emperours awnt, found himselfe grieved that the Emperour should take her part and worke vnder hand with the Pope to hinder the diuorce: and gaue his Embassadour commission in good termes to open his griefes to the Emperour, and to expostulat with his Maiestie, for that he seemed to forget the kings great kindnesse and friendship before times vsed with th'Emperour, aswell by disbursing for him sundry great summes of monie which were not all yet repayd: as also furnishing him at his neede with store of men and munition to his warres, and now to be thus vsed he thought it a very euill requitall. The Embassadour for too much animositie and more then needed in the case, or perchance by ignorance of the proprietie of the Spanish tongue, told the Emperour among other words, that he was Hombre el mas ingrato enel mondo, the ingratest person in the world to vse his maister so. The Emperour tooke him suddainly with the word, and said: callest thou me ingrate? I tell thee learne better termes, or else I will teach them thee. Th'Embassadour excused it by his commission, and said: they were the king his maisters words, and not his owne. Nay quoth th'Emperour, thy maister durst not haue sent me these words, were it not for that broad ditch betweene him & me, meaning the sea, which is hard to passe with an army of reuenge. The Embassadour was commanded away & no more hard by the Emperor, til by some other means afterward the grief was either pacified or forgotten, & all this inconuenience grew by misuse of one word, which being otherwise spoken & in some sort qualified, had easily holpen all, & yet th'Embassadour might sufficiently haue satisfied his commission & much better aduanced his purpose, as to haue said for this word [ye are ingrate,] ye haue not vsed such gratitude towards him as he hath deserued: so ye may see how a word spoken vndecently, not knowing the phrase or proprietie of a language, maketh a whole matter many times miscarrie. In which respect it is to be wished, that none Ambassadour speake his principall commandements but in his own language or in another as naturall to him as his owne, and so it is vsed in all places of the world sauing in England. The Princes and their commissioners fearing least otherwise they might vtter any thing to their disaduantage, or els to their disgrace: and I my selfe hauing seene the Courts of Fraunce, Spaine, Italie, and that of the Empire, with many inferior Courts, could neuer perceiue that the most noble personages, though they knew very well how to speake many forraine languages, would at any times that they had bene spoken vnto, answer but in their owne, the Frenchman in French, the Spaniard in Spanish, the Italian in Italian, and the very Dutch Prince in the Dutch language: whether it were more for pride, or for feare of any lapse, I cannot tell. And Henrie Earle of Arundel being an old Courtier and a very princely man in all his actions, kept that rule alwaies. For on a time passing from England towards Italie by her maiesties licence, he was very honorably entertained at the Court of Brussels, by the Lady Duches of Parma, Regent there: and sitting at a banquet with her, where also was the Prince of Orange, with all the greatest Princes of the state, the Earle, though he could reasonably well speake French, would not speake one French word, but all English, whether he asked any question, or answered it, but all was done by Truchemen. In so much as the Prince of Orange maruelling at it, looked a side on that part where I stode a beholder of the feast, and sayd, I maruell your Noblemen of England doe not desire to be better languaged in the forraine languages. This word was by and by reported to the Earle. Quoth the Earle againe, tell my Lord the Prince, that I loue to speake in that language, in which I can best vtter my mind and not mistake.

Another Ambassadour vsed the like ouersight by ouerweening himselfe that he could naturally speake the French tongue, whereas in troth he was not skilfull in their termes. This Ambassadour being a Bohemian, sent from the Emperour to the French Court, whereafter his first audience, he was highly feasted and banquetted. On a time, among other a great Princesse sitting at the table, by way of talke asked the Ambassador whether the Empresse his his mistresse when she went a hunting, or otherwise trauailed abroad for her solace, did ride a horsback or goe in her coach. To which the Ambassadour answered vnwares and not knowing the French terme, Par ma foy elle chenauche fort bien; & si en prend grand plaisir. She rides (saith he) very well, and takes great pleasure in it. There was good smiling one vpon another of the Ladies and Lords, the Ambassador wist not whereat, but laughed himselfe for companie. This word Chenaucher in the French tongue hath a reprobate sence, specially being spoken of a womans riding.

And as rude and vnciuill speaches carry a marueilous great indecencie, so doe sometimes those that be ouermuch affected and nice: or that doe fauour of ignorance or adulation, and be in the eare of graue and wise persons no lesse offensive than the other: as when a sutor in Rome came to Tiberius the Emperor and said, I would open my case to your Maiestie, if it were not to trouble your sacred businesse, sacras vestras occupationes as the Historiographer reporteth. What meanest thou by that terme quoth the Emperor, say laboriosas I pray thee, & so thou maist truely say, and bid him leaue off such affected flattering termes.

The like vndencie vsed a Herald at armes sent by Charles the fifth Emperour, to Fraunces the first French king, bringing him a message of defiance, and thinking to qualifie the bitterness of his message with words pompous and magnificent for the kings honor, vsed much this terme (sacred Maiestie) which was not vsually geuen to the French king, but to say for the most part [Sire] The French king neither liking his errant, nor yet of his pompous speech, said somewhat sharply, I pray thee good fellow claue me not where I itch not with thy sacred maiestie but goe to they businesse, and tell thine errand in such termes as are decent betwixt enemies, for thy master is not my frend, and turned him to a Prince of the bloud who stode by, saying, me thinks this fellow speakes like Bishop Nicholas, for on Saint Nicholas night commonly the Scholars of the Countrey make them a Bishop, who like a foolish boy, goeth about blessing and preaching with so childish termes, as maketh the people laugh at his foolish counterfait speeches.

And yet in speaking or writing of a Princes affaires & fortunes there is a certaine Decorum, that we may not vse the same termes in their busines, as we might very wel doe in a meaner persons, the case being all one, such reuerence is due to their estates. As for example, if an Historiographer shal write of an Emperour or King, how such a day hee ioyned battel with his enemy, and being ouer-laide ranne out of the field, and tooke his heeles, or put spurre to his horse and fled as fast as he could: the termes be not decent, but of a meane souldier or captaine, it were not vndecently spoken. And as one, who translating certaine bookes of Virgils Æneidos into English meetre, said that Æneas was fayne to trudge out of Troy: which terme became better to be spoken of a beggar, or of a rogue, or a lackey: for so wee vse to say to such maner of people, be trudging hence.

Another Englishing this word of Virgill [fato profugus] called Æneus [by fate a fugitiue] which was vndecently spoken, and not to the Authours intent in the same word: for whom he studied by all means to auauance aboue all other men of the world for virtue and magnanimitie he meant not to make him a fugitiue. But by occasion of his great distresses, and of the hardnesse of his destinies, he would haue it appeare that Æneas was enforced to flie out of Troy, and for many yeeres to be a romer and a wandrer about the world both by land and sea [fato profugus] and never to find any resting place till he came into Italy, so as ye may evidently perceiue in this terme [fugitiue] a notable indignity offred to that princely person, and by th'other word a wanderer, none indignitie at all, but rather a terme of much loue and commiseration. The same translatour when he came to these words: Insignem pietate virum tot voluere casus tot adire labores compulit. Hee turned it thus, what moued Iuno to tuggge so great a captaine as Æneus, which word tuggge spoken in this case is so vndecent as none other coulde haue bene deuised, and tooke his first originall from the cart, because it signifieth the pull or draught of the oxen or horses, and therefore the leathers that beare the chiefe stresse of the draught, the cartars call them tugges, and so wee vse to say that shrewd boyes tuggge each other by the eares, for pull.

Another of our vulgar makers, spake as illfaringly in this verse written to the dispraise of a rich man and couetous. Thou hast a misers minde (thou hast a princes pelfe) a lewde terme to be spoken of a princes treasure, which in no respect nor for any cause is to be called pelfe, though it were neuer so meane, for pelfe is properly the scrappes or shreds of taylors and of skimmers, which are accompted of so vile price as they be commonly cast out of dores, or otherwise bestowed vpon base purposes: and carrieth not the like reason or decencie, as when we say in reproch of a niggard or vsurer, or worldly couetous man, that he setteth more by a little pelfe of the world, than by his credit or health, or conscience. For in comparison of these treasours, all the gold or siluer in the world may by a skornefull terme be called pelfe, & so ye see that the reason of the decencie holdeth not alike in both cases. Now let vs passe from these examples, to treat of those that concerne the comelinesse and decencie of mans behauiour.

And some speech may be whan it is spoken very vndecent, and yet the same hauing afterward somewhat added to it may become prety and decent, as was the stowte worde vfed by a captaine in Fraunce, who sitting at the lower end of the Duke of Guyses table among many, the day after there had bene a great battaile foughten, the Duke finding that this captaine was not seene that day to do any thing in the field, taxed him priuily thus in al the hearings. Where were you Sir the day of the battaile, for I saw ye not? the captaine answered promptly: where ye durst not haue bene: and the Duke began to kindle with the worde, which the Gentleman perceiuing, said spedily: I was that day among the carriages, where your excellencie would not for a thousand crownes haue bene seene. Thus from vndecent it came by a wittie reformation to be made decent againe.

The like hapned on a time at the Duke of Northumberlandes bourd, where merry John Heywood was allowed to sit at the tables end. The Duke had a very noble and honorable mynde always to pay his debts well, and when he

lacked money, would not stick to sell the greatest part of his plate: so had he done few dayes before. Heywood being loth to call for his drinke so oft as he was dry, turned his eye toward the cupbord and sayd I finde great misse of your graces standing cups: the Duke thinking he had spoken it of some knowledge that his plate was lately sold, said somewhat sharpely, why Sir will not those cuppes serue as good a man as your selfe. Heywood readily replied. Yes if it please your grace, but I would haue one of them stand still at myne elbow full of drinke that I might not be driuen to trouble your men so often to call for it. This pleasant and speedy reuers of the former wordes holpe all the matter againe, whereupon the Duke became very pleasaunt and dranke a bolle of wine to Heywood, and bid a cup should alwayes be standing by him.

It were to busie a peece of worke for me to tell you of all the partes of decencie and indecency which haue bene obserued in the speaches of man & in his writings, and this that I tell you is rather to solace your eares with pretie conceits after a sort of long scholasticall preceptes which may happen haue doubled them, rather then for any other purpose of institution or doctrine, which to any Courtier of experience, is not necessarie in this behalfe. And as they appeare by the former examples to rest in our speach and writing: so do the same by like proportion consist in the whole behaiour of man, and that which he doth well and commendably is euer decent, and the contrary vndecent, not in euery mans iudgement alwayes one, but after their seuerall discretion and by circumstance diuersly, as by the next Chapter shalbe shewed.

CHAP. XXIII.

Of decencie in behaiour which also belongs to the consideration of the Poet or maker.

And there is a decency to be obserued in euery mans action & behaiour aswell as in his speach & writing which some peradventure would thinke impertinent to be treated of in this booke, where we do but informe the commendable fashions of language & stile: but that is otherwise, for the good maker or poet who is in decent speach & good termes to describe all things and with prayse or dispraise to report euery mans behaiour, ought to know the comliness of an action aswell as of a word & thereby to direct himselfe both in praise & perswation or any other point that perteines to the Oratours arte. Wherefore some examples we will set downe of this maner of decency in behaiour leauing you for the rest to our booke which we haue written de Decoro, where ye shall see both partes handled more exactly. And this decencie of mans behaiour aswell as of his speach must also be deemed by discretion, in which regard the thing that may well become one man to do may not become another, and that which is seemely to be done in this place is not so seemely in that, and at such a time decent, but at another time vndecent, and in such a case and for such a purpose, and to this and that end and by this and that euent, perusing all the circumstances with like consideration. Therefore we say that it might become king Alexander to giue a hundreth talentes to Anaxagoras the Philosopher, but not for a beggerly Philosopher to accept so great a gift, for such a Prince could not be impouerished by that expence, but the Philosopher was by it excessiue to be enriched, so was the kings action proportionable to his estate and therefore decent, the Philosophers, disproportionable both to his profession and calling and therefore indecent.

And yet if we shall examine the same point with a clearer discretion, it may be said that whatsoever it might become king Alexander of his regal largesse to bestow vpon a poore Philosopher vnasked, that might aswell become the Philosopher to receiue at his hands without refusal, and had otherwise bene some empeachment of the kings abilitie or wisdom, which had not bene decent in the Philosopher, nor the immoderatenesse of the kinges gift in respect of the Philosophers meane estate made his acceptance the lesse decent, since Princes liberalities are not measured by merite nor by other mens estimations, but by their owne appetites and according to their greatnesse. So said king Alexander very like himselfe to one Perillus to whom he had geuen a very great gift, which he made curtesy to accept, saying it was too much for such a mean person, what quoth the king if it be too much for thy self, hast thou neuer a friend or kinsman that may fare the better by it? But peradventure if any such immoderat gift had bene craued by the Philosopher and not voluntarily offred by the king it had bene vndecent to haue taken it. Euen so if one that standeth vpon his merite, and spares to craue the Princes liberalitie in that which is moderate and fit for him, doth vndecently. For men should not expect till the Prince remembred it of himselfe and began as it were the gratification, but ought to be put in remembraunce by humble folicitations, and that is duetifull, & decent, which made king Henry th'eight her Maiesties most noble father, and for liberality nothing

inferiour to king Alexander the great, answered one of his private chamber, who prayed him to be good & gracious to a certaine old Knight being his servant for that he was but an ill begger, if he be ashamed to begge we will thinke scorne to giue. And yet peradventure in both these cases, the vndecencie for too much craving or sparing to craue, might be easily holpen by a decent magnificence in the Prince, as Amazas king of Ægypt very honorably considered, who asking one day for one Diopithus a noble man of his Court, what was become of him for that he had not sent him wait of long time, one about the king told him that he heard say he was sicke and of some conceit he had taken that his Maiestie had but slenderly looked to him, vsing many others very bountifully. I beshrew his fooles head quoth the king, why had he not sued vnto vs and made vs priue of his want, then added, but in truth we are most to blame our selues, who by a mindeful beneficence without sute should haue supplied his bashfullnesse, and forthwith commaunded a great reward in money & pension to be sent vnto him, but it hapned that when the kings messengers entred the chamber of Diopithus, he had newly giuen vp the ghost: the messengers sorrowed the case, and Diopithus friends sate by and wept, not so much for Diopithus death, as for pitie that he ouerliued not the comming of the kings reward. Therupon it came euer after to be vsed for a prouerbe that when any good turne commeth too late to be vsed, to call it Diopithus reward.

In Italy and Fraunce I haue knowen it vsed for common pollicie, the Princes to differre the bestowing of their great liberalities as Cardinalships and other high dignities & offices of gayne, till the parties whom they should seeme to gratifie be so old or so sicke as it is not likely they should long enjoy them.

In the time of Charles the ninth French king, I being at the Spaw waters, there lay a Marshall of Fraunce called Monsieur de Sipier, to vse those waters for his health, but when the Phisitions had all giuen him vp, and that there was no hope of life in him, came from the king to him a letters patents of six thousand crownes yearly pension during his life with many comfortable wordes: the man was not so much past remembrance, but he could say to the messenger trop tard, trop tard, it should haue come before, for in deede it had bene promised long and came not till now that he could not fare the better by it.

And it became king Antiochus, better to bestow the faire Lady Stratonica his wife vpon his sonne Demetrius, who lay sicke for her loue and would else haue perished, as the Physitions cunningly discovered by the beating of his pulse, then it could become Demetrius to be inamored with his fathers wife, or to enjoy her of his guilt, because the fathers act was led by discretion and of a fatherly compassion, not grutching to depart from his dearest possession to saue his childes life, where as the sonne in his appetite had no reason to lead him to loue vnlawfully, for whom it had rather bene decent to die, then to haue violated his fathers bed with safetie of his life.

No more would it be seemely for an aged man to play the wanton like a child, for it stands not with the conueniency of nature, yet when king Agesilaus hauing a great sort of little children, was one day disposed to solace himself among them in a gallery where they plaied, and tooke a little hobby horse of wood and bestrid it to keepe them in play, one of his friends seemed to mislike his lightnes, o good friend quoth Agesilaus, rebuke me not for this fault till thou haue children of thine owne, shewing in deede that it came not of vanitie but of a fatherly affection, ioying in the sport and company of his little children, in which respect and as that place and time serued, it was dispencheable in him & not indecent.

And in the choise of a man's delights & maner of his life, there is a decencie, and so we say th'old man generally is no fit companion for the young man, nor the rich for the poore, nor the wise for the foolish. Yet in some respects and by discretion it may be otherwise, as when the old man hath the gouernment of the young, the wise teaches the foolish, the rich is wayted on by the poore for their reliefe, in which regard the conuersation is not indecent.

And Proclus the Philosopher knowing how euery indecencie is vnpleasant to nature, and namely, how vncomely a thing it is for young men to doe as old men doe (at leastwise as young men for the most part doe take it) applied it very wittily to his purpose: for hauing his sonne and heire a notable vnthrift, & delighting in nothing but in haukes and hounds and gay apparrell, and such like vanities, which neither by gentle nor sharpe admonitions of his father, could make him leaue. Proclus himselfe not onely bare with his sonne, but also vsed it himselfe for company, which some of his friends greatly rebuked him for, saying, o Proclus, an olde man and a Philosopher to play the foole and lasciuious more than the sonne. Mary, quoth Proclus, & therefore I do it, for it is the next way to make my sonne change his life, when he shall see how vndecent it is in me to leade such a life, and for him being a yong man, to keepe companie with me being an old man, and to doe that which I doe.

So is it not vnseemely for any ordinarie Captaine to winne the victory or any other auantage in warre by fraud & breach of faith: as Hanniball with the Romans, but it could not well become the Romaines managing so great an Empire, by examples of honour and iustice to doe as Hanniball did. And when Parmenio in a like case perswaded king Alexander to breake the day of his appointment, and to set vpon Darius at the sodaine, which Alexander refused to doe, Parmenio saying, I would doe it if I were Alexander, and I too quoth Alexander if I were Parmenio: but it behooueth me in honour to fight liberally with mine enemies, and iustly to ouercome. And thus ye see that was decent in Parmenios action, which was not in the king his masters.

A great nobleman and Counseller in this Realme was secretlie aduised by his friend, not to vse so much writing his letters in fauour of euery man that asked them, specially to the Iudges of the Realme in cases of iustice. To whom the noble man answered, it becomes vs Councillors better to vse instance for our friend, then for the Iudges to sentence at instance: for whatsoever we doe require them, it is in their choise to refuse to doe, but for all that the example was ill and dangerous.

And there is a decencie in chusing the times of a mans busines, and as the Spaniard sayes, es tiempo de negociar, there is a fitte time for euery man to performe his businesse in, & to attend his affaires, which out of that time would be vndecent: as to sleepe al day and wake al night, and to goe a hunting by torch-light as an old Earle of Arundel vsed to doe, or for any occasion of little importance, to wake a man out of his sleepe, or to make him rise from his dinner to talke with him, or such like importunities, for so we call euery vnseasonable action, and the vndecencie of time.

Callicrasides being sent Ambassador by the Lacedemonians, to Cirus the young king of Persia to contract him for money and men toward their warres against the Athenians, came to the Court at such vnseasonable time as the king was yet in the midst of his dinner and went away againe saying, it is now no time to interrupt the kings mirth. He came againe another day in the after noone, and finding the king at a rere-banquet, and to haue taken the wine somewhat plentifully, turned back againe, saying, I thinke there is no houre fitte to deal with Cirus, for he is euer in his banquets; I will rather leaue all business vndone, then doe any thing that shall not become the Lacedemonians: meaning to offer conference of so great importance to his Countrey, with a man so distempered by surfet as hee was not likely to geue him any reasonable resolution in the cause.

One Eudamidas brother to the king Agis of Lacedemonia, coming by Zenocrates schoole and looking in, saw him sit in his chaire, disputing with a long hoare beard, asked who it was, one answered, Sir it is a wise man and one of them searches after virtue, and if he haue not yet found it quoth Eudamidas when will he vse it, that now at his yeares is seeking after it, as who would say it is not time to talke of matters when they should be put in execution nor for an old man to be to seeke what virtue is, which all his youth he should haue had in exercise.

Another time coming to heare a notable Philosopher dispute, it happened, that all was ended euen as he came, and one of his familiars would haue had him requested the Philosopher to beginner againe, that were indecent and nothing ciuill quoth Eudamidas, for if he should come to me supperlesse when I had supped before, were it seemely for him to pray me to suppe againe for his companie?

And the place makes a thing decent or indecent, in which consideration one Eubondae being sent Embassadour into a forraine realme, some of his familiars tooke occasion at the table to praise the wines and women of that country in preface of their owne husbands, which th'embassadour mislikes, and when supper was ended and the guesstes departed, tooke his familiars aside, and told them that is was nothing decent in a strange country to praise thewomen, nor specially a wife before her husbands face, for inconueniencie that might rise thereby, aswell to the prayser as to the woman, and that the chief commendation of a chaste matrone, was to be known onely to her husband, and not to be observed by strangers and guesstes.

And in the vse of apparel there is no little decency and vndecencie to be perceiued, as well for the fashion as the stuffe, for it is comely that euery estate and vocation should be knowen by the differences of their habit: a Clarke from a lay man: a gentleman from a yeoman: a souldier from a citizen, and the chief of euery degree from their inferiours, because in confusion and disorder there is no manner of decencie.

The Romaines of any other people most seure censurers of decencie, thought no vpper garment so comely for a ciuill man as a long playted qowne, because it sheweth much grauitie & also pudicitie, hiding euery member of the body which had not bin pleasant to behold. In somuch as a certain Proconsull or Legat of theirs dealing one day with Ptolome king of Egypt, seeing him clad in a straite narrow garment very licentiously, disclosing euery part of his body, gave him a great checke for it: and said that vnlesse he vsed more saf and comely garments, the Romaines would take no pleasure to hold amitie with him, for by the wantonness of his garment they would iudge the vanitie of his mind, not to be worthy of their constant friendship. A pleasant old courtier wearing one day in the sight of a great councellour, after the new guise a French cloake scarce reaching to the wast, a long beaked doublet hanging downe to his thies, & an high paire of silke netherstocks that couered all his buttocks and loignes the Councillor marueled to see him in that sort disguised, and otherwise than he had binwoont to be. Sir quoth the Gentleman to excuse it: if I should not be able when I had need to pisse out of my doublet, and to do the rest in my netherstocks (vsing the plaine terme) all men would say that I was but a lowte, the Councillor laughed hartily at the absurditie of the speech, but what those sower fellows of Rome haue said trowe ye? truly in mine opinion, that all such persons as take pleasure to shew their limbes, specially those that natures hath commanded out of sight, should be inioyned either to go starke naked, or else to resort backe to the comely and modest fashion of their owne countrie apparel, vsed by their old honourable auncestors.

And there is a decency of apparel in respect of the place where it is to be vsed: in the Court to be richely apparelled: in the country to weare more plain & homely garments. For who would not thinke it a ridiculous thing to see a Lady in her milke-house with a velvet gowne, and at a bridal in her cassock of mockado: a Gentleman of the Countrey among the bushes and briers, goes in a pounced dublet and a paire of embroidered hosen, the the Cities to weare a fries Ierkin and a paire of leather breeches? yet some such phantasticals haue I knowen, and one a certaine knight, of all other the most vaine, who commonly would come to the Sessions, and other ordinarie meetings and Commissions in the Countrey, so bedect with buttons and aglets of gold and such costly embroideries, as the poore plaine men of the Countrey called him for his gaynesse, the golden knight. Another for the like cause was called Saint Sunday; I thinke at this day they be so farre spent, as either of them would be content with a good cloath cloake: and this came by want of discretion, to discern and deeme right of decencie, which many Gentlemen doe wholly limite by the person or degree where reason doeth it by the place and presence: which may be such as it might very well become a great Prince to wear courser apparel than in another place or presence a meaner person.

Neuerthelesse in the vse of a garment many occasions alter the decencies, sometimes the qualities of the person, sometimes of the case, otherwise the countrie custome, and often the constitution of lawes, and the very nature of vse it selfe. As for example a king and prince may vse rich and gorgeous apparel decently so cannot a meane person doo, yet if an herald of armes to whom a king giueth his gowne of cloth of gold, or to whom it was incident as a fee of his office, do were the same, he doth it decently, because such hath alwise bene th'allowances of heraldes: but if such herald haue worne out, or sold, or lost that gowne, to buy him a new of the like stuffe with his owne mony and to weare it, is not decent in the eye and iudgement of them that know it.

And the country custome maketh things decent in ves as in Asia for all men to weare long gownes both a foot and horsebacke: in Europa short gaberdins, or clokes, or iackets, euen for their vpper garments. The Turke and Persian to weare great tolibants of ten, fiteene, and twentie elles of linen a peece vpon their heads, which can not be remooued: in Europe to were caps or hats, which vpon euery occasion of salutation we vse to put of as a signe of reuerence. In th'East partes the men to make water couring like women, with vs standing as a wall. With them to congratulat and salute by giuing a becke with the head, or a bende of the bodies, with vs here in England, and in Germany, and all other Northern parts of the world to shake handes. In France, Italie, and Spaine to embrace ouer the shoulder, vnder the armes, at the very knees, according the superiors degree. With vs the wemen giue their mouth to be kissed in other places their cheek, in many places their hand, or in steed of an offer to the hand, to say these words Beso los manos. And yet some others surmounting in all courtly ciuilitie will say, Los manos & los pieder. And aboue that reach too, there be that will say to the Ladies, Lombra de fus pisadae, the shadow of your steps. Which I recite vnto you to shew the phrase of those courtly seruitours in yeelding the mistresses honour and reuerence.

And it is seen that very particular vse of it selfe makes a matter of much decencie and vndecencie, without any countrie custome or allowance, as if one that hath many yeares worne a gowne shall come to be seen weare a iakquet or ierkin, or he that hath many yeares worne a beard or long haire among those that had done the contrary,

and come sodainly to be pold and shauen, it will seeme not only to himself, a deshight and very vndecent, but also to all others that neuer vsed to go so, vntill the time and custome haue abrogated that mislike.

So it was in England till her Maiesties most noble father for diuers good respects, caused his owne head and all his Courtiers to be polled and his beard to be cut short. Before that was thought more decent both for old men and young to be all shauen and to weare long haire either rounded or square. Now againe at this time, the young Gentlemen of the Court haue taken vp the long haire trayling on their shoulders, and thinke it more decent: for what respect I would be glad to know.

The Lacedemonians bearing long bushes of haire, finely kept & curled vp, vsed this ciuill argument to maintaine that custome. Haire (say they) is the very ornament of nature appointed for the head, which therforeto vse in his most sumptuous degree is comely, specially for them that be Lordes, Maisters of men, and of a free life, hauing abilitie & leasure inough to keepe it cleane, and so for a signe of seignorie, riches and libertie, the masters of the Lacedemonians vsed long haire. But their vassals, seruants and slaues vsed it short or shauen in signe of seruitude and because they had no meane nor leasure to kembe and keepe it cleanly. It was besides combersome to them hauing many businesse to attende, in some seruices there might no maner of filth be falling from their heads. And to all souldiers it is very noysome and a daungerous disauantage in the warres or in any particular combat, which being the most comely profession of euery noble young Gentleman, it ought to perswade them greatly from wearing long haire. If there be any that seeke by long haire to helpe or to hide an ill featured face, it is in them allowable so to do, because euery man may decently reforme by arte, the faultes and imperfections that nature hath wrought in them.

And all singularities or affected parts of a mans behaiour seeme vndecent, as for one man to march or let in the street more stately, or to looke more solempnely, or to go more gayly & in other coulours or fashioned garments then another of the same degree and estate.

Yet such singularities haue had many time both good liking and good successe, otherwise then many would haue looked for. As When Dinocrates the famous architect, desirous to be knowen to king Alexander the great, and hauing none acquaintance to bring him to the kings speech he came one day to the Court very strangely apparelled in long skarlet robes, his head compast with a garland of Laurell, and his face all to be slicked with sweet oyle, and stooode in the kings chamber, motioning nothing to any man: newes of this stranger came to the king, who caused him to be brought to his presence, and asked his name and the cause of his repaire to the Court. He aunswered, his name was Dinocrates the Architect, who came to present his Maiestie with a platforme of his own deuising, how his Maiestie might buylde a Citie vpon the mountaine Athos in Macedonia, which should beare the figure of a mans body, and tolde him all how. Forsooth the breast and bulke of his body should rest vpon such a fiat: that hil should be his head, all set with foregrowen woods like haire: his right arme should stretch out to such a hollow bottome as might be like his hand: holding a dish conteyning al the waters that should serue that Citie: the left arme with his hand should hold a valley of all the orchards and gardens of pleasure pertaining thereunto: and either legge should lie vpon a ridge of rocke, very gallantly to behold, and so should accomplish the full figure of a man. The king asked him what commoditie of soyle, or sea, or nauigable riuier lay neere vnto it, to be able to sustaine so great a number of inhabitants. Truly Sire (quoth Dinocrates) I haue not yet considered thereof: for in trueth it is the barest part of all the Countrey of Macedonia. The king smiled at it, and said very honourably, we like your deuce well, and mean to vse your seruice in the building of a Citie, but we wil chuse out a more commodious scituation: and made him attend in that voyage in which he conquered Asia and Egypt, and there made him chiefe Surueyour of his new Cite of Alexandria. Thus did Dinocrates singularitie in attire greatly further him to his aduancement.

Yet are generally all rare things and such as breede maruell & admiration somewhat holding of the vndecent, as when a man is bigger & exceeding the ordinary stature of a man like a Giaunt, or farre vnder the reasonable and common size of men as a dwarfe, and such vndecencies do not angre vs, but either we pittie them or scorne at them.

But at all insolent and vnwoonted partes of a mans behaiour, we find many times cause to mislike or to be mistrustfull, which proceedeth of some vndecency that is in it, as when a man that hath alwaies bene strange and vnacquainted with vs, will suddenly become our familiar and domestick: and another that hath bene alwaies sterne and churlish, wilbe vpon the suddaine affable and curteous, it is neyther a comely sight, nor a signe of any good

towards vs. Which the subtil Italian well obserued by the successes thereof, saying in Prouerbe. Chi me fa meglio chon fuole, Tradito me ha o tradir me vuole.

He that speakes me fairer, than his woont was too Hath done me harme, or meanes for to doo.

Now againe all maner of conceites that stirre vp any vehement passion in a man, doo it by some turpitude or euill and vndecency that is in them, as to make a man angry there must be some iniury or contempt offered, to make him enuy there must proceede some vnderdeserued prosperitie of his egall or inferiour, to make him pitie some miserable fortune or spectakle to behold.

And yet in euery of the these passions being as it were vndecencies, there is a comelinesse to be discerned, which some men can keepe and some men can not, as to be angry, or to enuy, or to hate, or to pitie, or to be ashamed decently, that is none otherwise then reason requireth. This surmise appeareth to be true, for Homer the father of Poets writing that famous and most honourable poeme called the Iliades or warres of Troy: made his commencement the magnanimous wrath and anger of Achilles in his first verse thus: [Greek: illegible] Sing fourth my muse the wrath of Achilles Peleus sonne: which the Poet would neuer haue done if the wrath of a prince had not beene in some sort comely & allowable. But when Arrianus and Curtius historiographers that wrote the noble gestes of king Alexander the great, came to prayse him for many things, yet for his wrath and anger they reproched him, because it proceeded not of any magnanimitie, but vpon surfet & distemper in his diet, not growing of any iust causes, was exercised to the destruction of his dearest friends and familiers, and not of his enemies nor any other waies so honorably as th'others was, and so could not be reputed a decent and comely anger.

So may al your other passions be vsed decently though the very matter of their originall be grounded vpon some vndecencie, as it is written by a certaine king of Egypt, who looking out of his window, and seing his owne sonne for some grieuous offence, carried by the officers of his iustice to the place of execution: he neuer once changed his countenance at the matter, though the sight were neuer so full of ruth and atrocitie. And it was thought a decent countenance and constant animositie in the king to be so affected, the case concerning so high and rare a peece of his owne iustice. But within few daies after when he beheld out of the same window an old friend and familiar of his, stand begging an almes in the streete, he wept tenderly, remembering their old familiarity and considering how by the mutabilitie of fortune and frailtie of mans estate, it might one day come to passe that he himselfe should fall into the like miserable estate. He therefore had a remorse very comely for a king in that behalfe, which also caused him to giue order for his poore friends plentiful reliefe.

But generally to weepe for any sorrow (as one may doe for pitie) is not so decent in a man: and therefore all high minded persons, when they cannot chuse but shed teares, wil turne away their face as a countenance vndecent for a man to shew, and so will the standers by till they haue suppress such passion, thinking it nothing decent to behold such an vncomely countenance. But for Ladies and women to weepe and shed teares at euery little greefe it is nothing vncomely, but rather a signe of much good nature & meekness of minde, a most decent propertie for that sexe, and therefore they be for the more part more deuout and charitable, and greater geuers of almes than men, and zealous relieuers of prisoners, and beseechers of pardons, and such like parts of commiseration. Yea they be more than so too: for by the common prouerbe, a woman will weepe for pitie to see a gosling goe barefoote.

But most certainly all things that moue a man to laughter, as doe these scurrilities & other ridiculous behaiours, it is for some vndecencie that is found in them: which maketh it decent for euery man to laugh at them. And therefore when we see or heare a natural foole and idiot doe or say any thing foolishly, we laugh not at him: but when he doeth or speaketh wisely, because that is vnlike him selfe: and a buffonne or counterfet foole, to heare him speake wisely which is like himselfe, it is no sport at all, but for such a counterfait to talke and looke foolishly it maketh us laugh, because it is no part of his naturall, for in euery vncomlinesse there must be a certaine absurditie and disproportion to nature, and the opinion of the hearer or beholder to make the thing ridiculous. But for a foole to talke foolishly or a wiseman wisely, there is no such absurditie or disproportion.

And though at all absurdities we may decently laugh, & when they be no absurdities not decently, yet in laughing is there an vndecencie for other respectes sometime, than of the matter it selfe, Which made Philippus sonne to the first Christen Emperour, Phillipus Arabicus sitting with his father one day in the theatre to behold the sports, giue his father a great rebuke because he laughed, saying that it was no comely countenance for an Emperour to bewray

in such a publicke place, nor specially to laugh at euery foolish toy: the posteritie gaue the sonne for that cause the name of Philippus Agelastos or without laughter.

I haue seene forraine Embassadors in the Queenes presence laugh so dissolutely at some rare pastime or sport that hath beene made there that nothing in the world could worse haue becomen them, and others very wise men, whether it haue ben of some pleasant humour and complexion, or for other default in the spleene, or for ill education or custome, that could not vtter any graue and earnest speech without laughter, which part was greatly discommended in them.

And Cicero the wisest of any Romane writers, thought it vncomely for a man to daunce: saying, Saltantem sobrium vidi neminem. I neuer saw any man daunce that was sober and his right wits, but there by your leaue he failed, not our young Courtiers will allow it, besides that it is the most decent and comely demeanour of all exultations and reioycements of the hart, which is no lesse naturall to man then to be wise or well learned, or sober.

To tell you the decencies of a number of other behaiours, one might do it to please you with pretie reportes, but to the skilfull Courtiers it shalbe nothing necessary, for they know all by experience without learning. Yet some few remembraunces wee will make you of the most materiall, which our selues haue obserued, and so make an end.

It is decent to be affable and curteous at meales & meetings, in open assemblies more solemne and straunge, in place of authoritie and iudgement not familiar nor pleasant, in counsell secret and sad, in ordinary conferences easie and apert, in conuersation simple, in capitulation subtill and mistrustfull, at mournings and burials sad and sorrowfull, in feasts and bankets merry & ioyfull, in household expence pinching and sparing, in publicke entertainment spending and pompous. The Prince to be sumptuous and magnificent, the priuate man liberall with moderation, a man to be in giuing free, in asking spare, in promise slow, in performance speedy, in contract circumspect but iust, in amitie sincere, in ennimitie wily and cautelous [dolus an virtus quis in hoste requirit, saith the Poet] and after the same rate euery sort and maner of businesse or affaire or action hath his decencie and vndecencie, either for the time or place or person or some other circumstance, as Priests to be sober and sad, a Preacher by his life to giue good example, a Iudge to be incorrupted, solitarie and vnacquainted with Courtiers or Courtly entertainments, & as the Philosopher saith Oportet iudicem esse rudem & simplicem, without plaite or wrinkle, sower in looke and churlish in speach, contrariwise a Courtly Gentleman to be loftie and curious in countenance, yet sometimes a creeper and a curry fauell with his superiours.

And touching the person we say it is comely for a man to be a lambe in the house, and a Lyon in the field, appointing the decencie of his qualitie by the place, by which reason also we limit the comely parts of a woman to consist in foure points, that is to be a shrewe in the kitchin, a saint in the Church, an Angell at the board, and an Ape in the bed, as the Chronicle reportes by Mistresse Shore paramour to king Edward the fourth.

Then also there is a decency in respect of the persons with whom we do negotiate, as with the great personages his egals to be solemne and surly, with meaner men pleasant and popular, stoute with the sturdie and milde with the meek, which is a most decent conuersation and not reprochfull or vnseemely, as the prouerbe goeth, by those that vse the contrary, a Lyon among sheepe and a sheepe among Lyons.

Right so in negotiating with Princes we ought to seeke their fauour by humilitie & not by sternnesse, nor to trafficke with them by way of indent or condition, but frankly and by manner of submission to their wils, for Princes may be lead but not driuen, nor they are to be vanquisht by allegation, but must be suffered to haue the victorie and be relented vnto: nor they are not to be challenged for right or iustice, for that is a maner of accusation: nor to be charged with their promises, for that is a kinde of condemnation: and at their request we ought not to be hardly entreated but easily, for that is a signe of deffidence and mistrust in their bountie and gratitude: nor to recite the good seruices which they haue receiued at our hands, for that is but a kind of exprobration, but in crauing their bountie or largesse to remember vnto them all their former beneficences, making no mention of our owne merites, & so it is thankfull, and in praying them to their faces to do it very modestly: and in their commendations not to be excessiue for that is tedious, and alwayes fauours of suttelty more then of sincere loue.

And in speaking to a Prince the voyce ought to be lowe and not lowde nor shrill, for th'one is a signe of humilitie th'other of too much audacitie and presumption. Nor in looking on them seeme to ouerlooke them, nor yet behold

them too stedfastly, for that is a signe of impudence or litle reuerence, and therefore to the great Princes Orientall their seruitours speaking or being spoken vnto abbase their eyes in token of lowlines, which behauiour we do not obserue to our Princes with so good a discretion as they do: & such as retire from the Princes presence, do not by & by turne taylor to them as we do, but go backward or sideling for a reasonable space, til they be at the wal or chamber doore passing out of sight, and is thought a most decent behauiour to their soueraignes. I haue heard that king Henry th'eight her Maiesties father, though otherwise the most gentle and affable Prince of the world, could not abide to haue any man stare in his face or to fix his eye too steddily vpon him when he talked with them: nor for a common suter to exclaime or cry out for iustice, for that is offensiue and as it were a secret impeachment of his wrong doing, as happened once to a Knight in this Realme of great worship speaking to the king. Nor in speaches with them to be too long, or too much affected, for th'one is tedious th'other is irksome, nor with lowd acclamations to applaude them, for that is too popular & rude and betokens either ignoraunce, or seldome accesse to their presence, or litle frequenting their Courts: nor to shew too mery or light a countenance, for that is a signe of litle reuerence and is a peece of a contempt.

And in gaming with a Prince it is decent to let him sometimes win of purpose, to keepe him pleasant, & neuer to refuse his gift, for that is vndutifull: nor to forgiue him his losses, for that is arrogant: nor to giue him great gifts, for that is either insolence or follie: nor to feast him with excessiue charge for that is both vaine and enuious, & therefore the wise Prince king Henry the seuenth her Maiesties grandfather, if his chaunce had bene to lye at any of his subiects houses, or to passe moe meales than one, he that would take vpon him to defray the charge of his dyet, or of his officers and household, he would be maruelously offended with it, saying what priuate subiect dare vndertake a Princes charge, or looke into the secret of his expence? Her Maiestie hath bene knowne oftentimes to mislike the superfluous expence of her subiects bestowed vpon her in times of her progresses.

Likewise in matter of aduise it is neither decent to flatter him for that is seruile, neither to be too rough or plaine with him, for that is daungerous, but truly to Counsell & to admonish, grauely not greuously, sincerely not souerely: which was the part that so greatly commended Cineas Counsellour to king Pirrhus, who kept that decencie in all his perswasions, that he euer preuailed in aduice, and carried the king which way he would.

And in a Prince it is comely to giue vnasked, but in a subiect to aske vnbidden: for that first is signe of a bountifull mynde, this of a loyall & confident. But the subiect that craues not at his Princes hand, either he is of no desert, or proud, or mistrustfull of his Princes goodnesse: therefore king Henry th'eight to one that entreated him to remember one Sir Anthony Rouse with some reward for that he had spent much and was an ill beggar: the king answered (noting his insolencie,) If he be ashamed to begge, we are ashamed to giue, and was neuertheless one of the most liberall Princes of the world.

And yet in some Courts it is otherwise vsed, for in Spaine it is thought very vndecent for a Courtier to craue, supposing that it is the part of an importune: therefore the king of ordinarie calleth euery second, third or fourth yere for his Checker roll, and bestoweth his mercedes of his owne meere motion, and by discretion, according to euery mans merite and condition.

And in their commendable delights to be apt and accommodate, as if the Prince be geuen to hauking, hunting, riding of horses, or playing vpon instruments, or any like exercise, the seruitour to be the same: and in their other appetites wherein the Prince would seeme an example of vertue, and would not mislike to be egalled by others: in such cases it is decent their seruitours & subiects studie to be like to them by imitation, as in wearing their haire long or short, or in this or that sort of apparrell, such excepted as be only fitte for Princes and none els, which were vndecent for a meaner person to imitate or counterfet: so is it not comely to counterfet their voice, or looke, or any other gestures that be not ordinary and naturall in euery common person: and therefore to go vpright or speake or looke assuredly, it is decent in euery man. But if the Prince haue an extraordinarie countenance or manner of speech, or bearing of his body, that for a common seruitour to counterfet is not decent, and therefore it was misliked in the Emperour Nero, and thought uncomely for him to counterfet Alexander the great by holding his head a little awrie, & neerer toward the tone shoulder, because it was not his own naturall.

And in a Prince it is decent to goe slowly, and to march with leysure, and with a certaine granditie rather than grauitie: as our soueraigne Lady and mistresse, the very image of maiestie and magnificence, is accustomed to doe generally, vnlesse it be when she walketh apace for her pleasure, or to catch her a heate in the colde mornings.

Neuerthelesse, it is not so decent in a meaner person, as I haue obserued in some counterfet Ladies of the Countrey, which vse it much to their owne derision. This comelines was wanting in Queene Marie, otherwise a very good and honourable Princesse. And was some blemish to the Emperor Ferdinando, a most noble minded man, yet so carelesse and forgetfull of himselfe in that behalfe, as I haue seene him runne vp a paire of staires so swift and nimble a pace as almost had not become a very meane man, who had not gone in some hastie businesse.

And in a noble Prince nothing is more decent and welbeseeming his greatnesse than to spare foule speeches, for that breedes hatred, and to let none humble suiters depart out of their presence (as neere as may be) miscontented. Wherein her Maiestie hath of all others a most Regall gift, and nothing inferior to the good Prince Titus Vespasianus in that point.

Also, not to be passionate for small detriments or offences, nor to be a reuenger of them, but in cases of great iniurie and specially of dishonors: and therein to be the very sterne and vindicatiue, for that sauours of Princely magnanimitie: nor to seeke reuenge vpon base and obscure persons, ouer whom the conquest is not glorious, nor the victorie honourable, which respect moued our soueraign Lady (keeping alwaies the decorum of a Princely person) at her first comming to the crowne, when a knight of this Realme, who had very insolently behaued himselfe toward her when she was Lady Elizabeth, fell vpon his knee to her, and besought her pardon: suspecting (as there was good cause) that he should haue bene sent to the Tower, she said vnto him most mildly: do you not know that we are descended of the Lion, whose nature is not to harme or pray vpon the mouse, or any other such small vermin?

And with these examples I thinke sufficient to leaue, geuing you information of this one point, that all your figures Poeticall or Rhethoricall are but obseruations of strange speeches and such as without any arte at al we should vse, & commonly do, euen by very nature without discipline But more or lesse aptly and decently, or scarcely, or abundantly, or of this or that kind of figure, & one of vs more then another, according to the disposition of our nature, constitution of the heart, & facilities of each mans vtterance: so as we may conclude, that nature her selfe suggesteth the figure in this or that forme: but arte aydeth the iudgement of his vse and application, which geues me occasion finally and for a full conclusion to this whole treatise, to enforme you in the next chapter how art should be vsed in all respects, and specially in this behalfe of language, and when the naturall is more commendable then the artificiall, and contrariwise.

CHAP. XXV.

That the good Poet or maker ought to dissemble his arte, and in what cases the artificiall is more commended then the naturall, and contrariwise.

And now (most excellent Queene) having largely said of Poets & Poesie and about what matters they be employed: then of all the commended fourmes of Poemes, thirdly of metricall proportions, such as do appertaine to our vulgar arte: and last of all set forth the poeticall ornament consisting chiefly in the beautie and gallantness of his language and stile, and so haue apparelled him to our seeming, in all his gorgeous habilliments, and pulling him first from the carte to the schoole, and from thence to the Court, and preferred him to your Maiesties seruice, in that place of great honour and magnificence to geue entertainment to Princes, Ladies of honour, Gentlewomen and Gentlemen, and by his many moodes of skill, to serue the many humors of men thither haunting and resorting, some by way of solace, some of serious aduise and in matters aswell profitable as pleasant and honest. Wee haue in our humble conceit sufficiently perfourmed our promise or rather dutie to your Maiestie in the description of this arte, so alwaies as we leaue him not vnfurnisht of one peece that best befeemes that place of any other, and may serue as a principall good lesson for al good makers to beare continually in mind, in the vsage of this science: which is that being now lately become a Courtier he shew not himself a craftsman, & merit to be disgraded, & with scorne sent back againe to the shop, or other place of his first facultie and calling, but that so wisely & discreetly he behaue himselfe as he may worthily returne the credit of his place, and profession of a very Courtier, which is in plaine termes, cunningly to be able to dissemble. But (if it please your Maiestie) may it not seeme enough for a Courtier to know how to weare a fether, and set his cappe a slaunt, his chaine en echarpe, a straight buskin al inglesse, a loose alo Turquesque, the cape alla Spaniola, the breech a la Françoise, and by twentie maner of new faishoned garments

to disguise his body, and his face with as many countenances, whereof it seemes there be many that make a very arte, and studie who can shew himselfe most fine, I will not say most foolish and ridiculous? or perhaps rather that he could dissemble his conceits as well as his countenances, so as he neuer speake as he thinkes, or thinke as he speaks, and that in any matter of importance his words and his meaning very seldome meete: for so as I remember it was concluded by vs setting foorth the figure Allegoria, which therefore not impertinently we call the Courtier or figure of faire semblant, or is it not perchance more requisite our courtly Poet do dissemble not onely his countenances & conceits, but also all his ordinary actions of behaiour, or the most part of them, whereby the better to winne his purposes & good aduantages, as now & then to haue a iourney or sicknesse in his sleeue, thereby to shake of other importunities of greater consequence, as they vse their pilgrimages in Fraunce, the Diet in Spaine, the baines in Italy? and when a man is whole to faine himselfe sicke to shunne the businesse in Court, to entertaine time and ease at home, to salue offences without discredite, to win purposes by mediation in absence, which their presence would eyther impeach or not greatly preferre, to harken after the popular opinions and speech, to entend to their more priuate solaces, to practize more deeply both at leasure & libertie, & when any publique affaire or other attempt & counsaile of theirs hath not receaued good successe, to auoid therby the Princes present reproofe, to coole their chollers by absence, to winne remorse by lamentable reports, and reconciliation by friends intreatie. Finally by sequestering themselues for a time fro the Court, to be able the frecher & cleerer to discern the factions and state of the Court and of al the world besides, no lesse then doth the looker on or beholder of a game better see into all points of auantage, then the player himselfe? and in dissembling of diseases which I pray you? for I haue obserued it in the Court of Fraunce, not a burning feuer or a plurisie, or a palsie or the hydropick and swelling gowte, or any other like disease, for if they may be such as may be either easily discerned or quickly cured, they be ill to dissemble and doo halfe handsomely serue the turne.

But it must be either a dry dropsie, or a megrim or letarge, or a fistule in ano, or some such other secret disease, as the common conuersant can hardly discouer, and the Phisition either not speedily heale, or not honestly bewray? of which infirmities the scoffing Pasquil wrote, Vleus vesicae renum dolor in peno scirrus. Or as I haue seene in diuers places where many make themselues hart whole, when in deede they are full sicke, bearing it stoutly out to the hazard of their health, rather then they would be suspected of any lothsome infirmity, which might inhibit them from the Princes presence, or entertainment of the ladies. Or as some other do to beare a port of state & plentie when they haue neither penny nor possession, that they may not seeme to droope, and be reiected as vnworthy or insufficient for the greater seruices, or be pitied for their pouertie, which they hold for a marueilous disgrace as did the poore Squire of Castile, who had rather dine with a sheepes head at home & drinke a cruse of water to it, then to haue a good dinner giuen him by his friend who was nothing ignorant of his pouertie. Or as others do to make wise they be poore when they be riche, to shunne thereby the publicke charges and vocations, for men are not now a dayes (specially in states of Oligarchie as the most in our age) called somuch for their wisdom as for their wealth, also to auoyde enuie of neighbours or bountie in conuersation, for whosoeuer is reputed rich cannot without reproch, but be either a lender or a spender. Or as others do to seeme very busie when they haue nothing to doo, and yet will make themselues so occupied and ouerladen in the Princes affaires, as it is a great matter to haue a couple of wordes with them, when notwithstanding they lye sleeping on their beds all an after noone, or sit solemnly at cardes in their chambers, or enterteinyng of the Dames, or laughing and gibing with their familiars foure houres by the clocke, whiles the poore suter desirous of his dispatch is aunswered by some Secretarie or page il fault attendre, Monsieur is dispatching the kings businesse into Languedock, Prouence Piemont, a common phrase with the Secretaries of France. Or as I haue obserued in many of the Princes Courts of Italie, to seeme idle when they be earnestly occupied & entend to nothing but mischieuous practizes, and do busily negotiate by coulor of otiation. Or as others of them that go ordinarily to Church and neuer pray to winne an opinion of holinesse: or pray still apace, but neuer do good deede, and geue a begger a penny and spend a pound on a harlot, to speake faire to a mans face, and foule behinde his backe, to set him at his trencher and yet sit on his skirts for so we vse to say by a fayned friend, then also to be rough and churlish in speach and apparance, but inwardly affectionate and fauouring, as I haue sene of the greatest podestates and grauest iudges and Presidentes of Parliament in Fraunce.

These & many such like disguisings do we find in mans behaiour, & specially in the Courtiers of forraine Countreyes, where in my youth I was brought vp, and very well obserued their maner of life and conuersation, for of mine owne Countrey I haue not made so great experience. Which parts, neuerthesse, we allow not now in our English maker, because we haue geuen him the name of an honest man, and not of an hypocrite: and therefore leauing these manner of dissimulations to all base-minded men, & of vile nature or misterie, we doe allow our Courtly Poet to be a dissembler only in the subtilties of his arte: that is, when he is most artificiall, so to disguise

and cloake it as it may not appeare, nor seeme to proceede from him by any studie or trade of rules, but to be his naturall: nor so euidently to be descried, as euery ladde that reades him shall say he is a good scholler, but will rather haue him to know his arte well, and little to vse it.

And yet peradventure in all points it may not be so taken, but in such onely as may discouer his grossenes or his ignorance by some schollerly affectation: which thing is very irkesome to all men of good trayning, and specially to Courtiers. And yet for all that our maker may not be in all cases restrayned, but that he may both vse and also manifest his arte to his great praise, and need no more be ashamed thereof, than a shomaker to haue made a cleanly shoe or a Carpenter to haue buylt a faire house. Therefore to discusse and make this point somewhat cleerer, to weete, where arte ought to appeare, and where not, and when the naturall is more commendable than the artificiall in any humane action or workmanship, we wil examine it further by this distinction.

In some cases we say arte is an ayde and coadiutor to nature, and a furtherer of her actions to good effect, or peradventure a meane to supply her wants, by reinforcing the causes wherein shee is impotent and defectiue, as doth the arte of phisicke, by helping the naturall concoction, retention, distribution, expulsion, and other vertues, in a weake and vnhealthie bodie. Or as the good gardiner seasons his soyle by sundrie sorts of compost: as mucke or marle, clay or sande, and many times by bloud, or lees of oyle or wine, or stale, or perchaunce with more costly drugs: and waters his plants, and weedes his herbes and floures, and prunes his branches, and vnleaves his boughes to let in the sunne: and twentie other waies cherisheth them, and cureth their infirmities, and so makes that neuer, or very seldome any of them miscarry, but bring forth their flours and fruites in season. And in both these cases it is no smal praise for the Phisition & Gardiner to be called good and cunning artificers.

In another respect arte is not only an aide and coadiutor to nature in all her actions, but an alterer of them, and in some sort a surmounter of her skill, so as by meanes of it her owne effects shall appeare more beautifull or straunge and miraculous, as in both cases before remembred. The Phisition by the cordials hee will geue his patient, shall be able not onely to restore the decayed spirites of man and render him health, but also to prolong the terme of his life many yeares ouer and aboue the stint of his first and naturall constitution. And the Gardiner by his arte will not onely make an herbe, or flowr, or fruite, come forth in his season without impediment, but also will embellish the same in vertue, shape, odour and taste, that nature of her selfe woulde neuer haue done: as to make the single gillifloure, or marigold, or daisie, double: and the white rose, redde, yellow, or carnation, a bitter mellon sweete; a sweete apple, soure; a plumme or cherrie without a stone; a peare without core or kernell, a goord or coucumber like to a horne, or any other figure hee will: any of which things nature could not doe without mans help and arte. These actions also are most singular, when they be most artificiall.

In another respect, we say arte is neither an aider nor a surmounter, but onely a bare immitatour of natures works, following and counterfeyting her actions and effects, as the Marmesot doth many countenances and gestures of man, of which sorte are the artes of painting and keruing, whereof one represents the naturall by light colour and shadow in the superficiall or flat, the other in body massife expressing the full and emptie, euen, extant, rabbated, hollow, or whatsoever other figure and passion of quantitie. So also the Alchymist counterfeits gold, siluer, and all other mettals, the Lapidarie pearles and pretious stones by glasse and other substances falsified, and sophisticate by arte. These men also be praised for their craft, and their credit is nothing empayred, to say that their conclusions and effects are very artificiall. Finally in another respect arte is as it were an encounter and contrary to nature, producing effects neither like to hers, nor by participation with her operations, nor by imitation of her paternes, but makes things and produceth effects altogether strange and diuerse, & of such forme & qualitie (nature alwaies supplying stufte) as she neuer would nor could haue done of her selfe, as the carpenter that builds a house, the ioyner that makes a table or a bedstead, the tailor a garment, the Smith a locke or a key, and a number of like, in which case the workman gaineth reputation by his arte, and praise when it is best expressed & most apparant, & most studiously. Man also in all his actions that be not altogether naturall, but are gotten by study & discipline or exercise, as to daunce by measures, to sing by note, to play on the lute, and such like, it is a praise to be said an artificiall dauncer, singer, & player on instruments, because they be not exactly knowne or done, but by rules & precepts or teaching of schoolemasters. But in such actions as be so naturall & proper to man, as he may become excellent therein without any arte or imitation at all, (custome and exercise excepted, which are requisite to euery action not numbred among the vitall or animal) and wherein nature should seeme to do amisse, and man suffer reproch to be found destitute of them: in those to shew himselfe rather artificiall then naturall, were no lesse to be laughed at, then for one that can see well inough, to vse a paire of spectacles, or not to heare but by a trunke put to

his eare, nor feele without a paire of ennealed glooues, which things in deed helpe an infirme sence, but annoy the perfit, and therefore shewing a disabilitie naturall moouie rather to scorne then commendation, and to pitie sooner then to prayse. But what else is language and vtterance, and discourse & persuasion, and argument in man, then the vertues of a well constitute body and minde, little lesse naturall then his very sensuall actions, sauing that the one is perfit by nature at once, the other not without exercise & iteration? Peradventure also it wil be granted, that a man sees better and discernes more brimly his collours, and heares and feeles more exactly by vse and often hearing and feeling and seing, & though it be better to see with spectacles then not to see at all, yet is their praise not egall nor in any mans iudgement comparable: no more is that which a Poet makes by arte and precepts rather then by naturall instinct: and that which he doth by long meditation rather then by a suddaine inspiration, or with great pleasure and facillitie then hardly (and as they are woont to say) in spite of Nature or Minerua, then which nothing can be more irksome or ridiculous.

And yet I am not ignorant that there be artes and methods both to speake and to perswade and also to dispute, and by which the naturall is in some sorte relieued, as th'eye by his spectacle, I say relieued in his imperfection, but not made more perfit then the naturall, in which respect I call those artes of Grammer, Logicke, and Rhetorick not bare imitations, as the painter or keruers craft and worke in a forraine subiect viz. a liuely purtraite in his table of wood, but by long and studious obseruation rather a repetition or reminiscens naturall, reduced into perfection, and made prompt by use and exercise. And so whatsoever a man speakes or perswades he doth it not by imitation artificially, but by obseruation naturally (though one follow another) because it is both the same and the like that nature doth suggest: but if a poppingay speake, she doth it by imitation of mans voyce artificially and not naturally being the like, but not the same that nature doth suggest to man. But now because our maker or Poet is to play many parts and not one alone, as first to deuise his plat or subiect, then to fashion his poeme, thirdly to vse his metricall proportions, and last of all to vtter with pleasure and delight, which restes in his maner of language and stile as hath bene said, whereof the many moodes and straunge phrases are called figures, it is not altogether with him as with the crafts man, nor altogether otherwise then with the crafts man, for in that he vseth his metricall proportions by appointed and harmonicall measures and distaunces, he is like the Carpenter or Ioyner, for borrowing their tymbre and stuffe of nature, they appoint and order it by art otherwise then nature would doe, and worke effects in apparance contrary to hers. Also in that which the Poet speakes or reports of another mans tale or doings, as Homer of Priamus or Vlisses, he is as the painter or keruer that worke by imitation and representation in a forrein subiect, in that he speakes figuratiuely, or argues subtillie, or perswades copiously and vehemently, he doth as the cunning gardiner that vsing nature as a coadiutor, furdurs her conclusions & many times makes her effectes more absolute and straunge. But for that in our maker or Poet, which restes onely in deuise and issues from an excellent sharpe and quick inuention, holpen by a cleare and bright phantasie and imagination, he is not as the painter to counterfaite the naturall by the like effects and not the same, nor as the gardiner aiding nature to worke both the same and the like, nor as the Carpenter to worke effects vtterly vnlike, but euen as nature her selfe working by her owne peculiar vertue and proper instinct and not by example or meditation or exercise as all other artificers do, is then most admired when he is most naturall and least artificiall. And in the feates of his language and vtterance, because they hold as well of nature to be suggested and vttered as by arte to be polished and reformed. Therefore shall our Poet receaue prayse for both, but more by knowing of his arte then by vnseasonable vsing it, and be more commended for his naturall eloquence then for his artificiall, and more for his artificiall well desembled, then for the same ouermuch affected and grossely or vndiscretly bewrayed, as many makers and Oratours do.

The Conclusion.

And with this (my most gracious soueraigne Lady) I make an end, humbly beseeching your pardon, in that I haue presumed to hold your eares so long annoyed with a tedious trifle so as vnlesse it preecede more of your owne Princely and naturall mansuetude then of my merite. I feare greatly least you may thinck of me as the Philosopher Plato did of Anueris an inhabitant of the Citie Cirene, who being in troth a very actiue and artificiall man in driuing of a Princes Charriot or Coche (as your Maiestie might be) and knowing it himselfe well enough, comming one day into Platos schoole, and hauing heard him largely dispute in matters Philosophicall, I pray you (quoth he) geue me leaue also to say somewhat of myne arte, and in deede shewed so many trickes of his cunning how to lanche forth and stay, and chaunge pace, and turne and winde his Coche, this way and that way, vphill downe hill, and also in euen or rough ground, that he made the whole assemblie wonder at him. Quoth Plato being a graue personage,

verely in myne opinion this man should be vtterly vnfit for any seruice of greater importance then to driue a Coche. It is great pitie that so prettie a fellow, had not occupied his braynes in studies of more consequence. Now I pray God it be not thought so of me in describing the toyes of this our vulgar art. But when I consider how euery thing hath his estimation by oportunitie, and that it was but the studie of my yonger yeares in which vanitie raigned. Also that I write to the pleasure of a Lady and a most gracious Queene, and neither to Priestes nor to Prophetes or Philosophers. Besides finding by experience, that many times idlenesse is lesse harmefull then vnprofitable occupation, dayly seeing how these great aspiring myndes and ambitious heads of the world seriously searching to deale in matters of state, be often times so busie and earnest that they were better be vnoccupied and peradventure althgether idle, I presume so much vpon your Maiesties most milde and gracious iudgement howsoever you conceiue of myne abilitie to any better or greater seruice, that yet in this attempt ye wil allow of my loyall and good intent alwayes endeououring to do your Maiestie the best and greatest of those seruices I can.

A Table of the Chapters in this booke, and euery thing in them conteyned.

| | |
|---|--------|
| What a Poet and Poesie is, and who may be said the most excellent Poet in our time. | fol. 1 |
| Whether there may be an arte of our English or vulgar Poesie. | 3 |
| How Poets were the first Priests, the first Prophets, the first Legis-lators and Polititiens in the world. | 3 |
| How Poets were the first Philosophers, the first Astronomeers, and Historiographers, and Orators, and Musicians in the world. | 5 |
| How euery wilde and sauadge people vse a kind of natural Poesie in versiete and rime, as our vulgar is. | 7 |
| Whence the riming Poesie came first to the Greekes and Latines, and how it had altered, and almost spilt their maner of Poesie. | 7 |
| How in the time of Charlemaynes raigne and many yeares after him, the Latine Poets wrote in rime. | 8 |
| In what reputation Poets and Poesie were in the old time with Princes, and otherwise generally, & how they be now become contemptible, and for what causes. | 11 |
| How Poesie shoulde not be employed vpon vaine conceits, nor specially those that bee vicious or infamous. | 18 |
| The subiect or matter of Poesie, what it is. | 18 |
| Of Poems and their sundrie sortes, and how thereby the auncient Poets receaued Surnames. | 19 |
| In what forms of Poesie the gods of the gentils were praysed and honored. | 21 |
| In what forme of Poesie vice, & the common abases of mans life were reprehended. | 24 |
| How the Poesie for reprehension of vice, was reformed by two manner of Poems, more euill than the first. | 25 |
| In what forme of Poesie the euill and outrageous behaiours of Princes were reprehended. | 25 |
| In what forme of Poesie the great Princes and dominators of the world were praised and honoured. | 27 |
| Of the places where in auncient time their enterludes and other Poemes drammaticke were represented vnto the people. | 28 |

Of the shepherds or pastorall poesie called Egologue, and to what purpose it was first inuented and deuised. 30

Of historicall Poesie, by which the famous acts of princes and the vertuous and worthy liues of our forefathers were reported. 31

In what forms of poesie vertue in the inferior sort was commended. 34

The forme wherein honest & profitable arts and sciences were treated. 35

In what forme of poesie the amarous affections and entertainments were vttered. 36

The forme of poeticall reiocings. 36

The forme of poeticall lamentations. 37

The solemne reioysings at the birth and natiuitie of princes children. 40

The manner of reioysing at weddings and marriages, specially of great Ladies and Gentlewomen and Dames of honour. 40

The manner of poesie by which they vttered their bitter tauntes or priuy nippes, and witty scoffes and other merry conceits. 43

What manner of poeme they vsed for memorial of the dead. 45

An auncient forme of poesie by which men did vse to reproch their enimies. 46

Of the short poeme called with vs posie. 47

Who in any age have beene the most commended writers in our English poesie, and the Authors censure giuen vpon them. 48

The Table of the second booke.

Of proportion poeticall. fol. 53

Of proportion in Staff. 54

Of proportion in Measure. 55

How many sortes of measures we use in our vulgar. 58

Of the distinctions of mans voice and pauses allowed to our speech, & of the first pause called Cezure. 61

Of proportion in concord called Rime. 63

Of accent, stirre and time, evidently perceyued in the distinction of mans voice, and in that which maketh the flowing of a Meetre. 64

Of your Cadences in which the meeter is made Symphonically, & when they be most sweet and solemne.
65

How the good maker will not wrench his word to helpe his rime, either by falsifying his accent or his Ortographie.
67

Of concord in long and short measures, & by neare or farre distances, and which of them is most commendable.
68

Of proportion by situation. 69

Of proportion in figure. 75

How if all manner of suddaine innouations were not very scandalous, specially in the lawes of any language, the use of the Greeke and Latine feet might be brought into our vulgar poesie & with good grace inough.
85

A more particular declaration of the Metricall feete of the Greekes and Latines, and of your feete of two times.
91

Of the feet of three times, and what vse we may haue of them in our vulgar. 103

Of all the other of three times besides the Dactill. 106

Of your halfe foote in a verse & those verses which they called perfect and defective. 107

Of the breaking of your wordes of many sillables, & when & how it is to be vsed. 108

The Table of the third booke.

Of ornament poetically and that it resteth in figures. 114

How our writing & speeches publique ought to be figurative, and if they be not doo greatly disgrace the cause and purpose of the speaker and writer. 115

How ornament poetically is of two sortes according to the double nature and efficacy of figures. 119

Of language and what speech our maker ought to vse. 119

Of stile, and that it is of three kindes, loftie, meane, and low according to the nature of the subiect. 123

Of the loftie, meane, and low subiect. 127

Of figures and figurative speeches. 128

Six points set downe by our learned forefathers for a generall rule or regiment of all good vtterance, be it by mouth or by writing. 129

How the Greekes first and afterwarde the Latines inuented new names for euery figure, which this Author is also enforced to do in his vulgar arte. 130

A diuision of figures and how they serue in exornation of language. 131

Of Auricular figures apperteyning to single words and working by their diuers sounds and audible tunes, alteration to the eare onely and not to the minde. 134

Of Auricular figures perteyning to clawses of speech, and by them working no little alteration to the eare. 135

Of Auricular figures working by disorder. 140

Of Auricular figures working by surplusage. 141

Of Auricular figures working by exchange. 142

Of Auricular figures that serue to make the meetre tuneable and melodious, but not by defect nor surplusage, disorder nor exchange. 145

The names of your figures Auricular.

Eclipsis, or the figure of default. 136 Zeugma, or the single supply. 136 Prozeugma, or the ringleader. 137 Mezozeugma, or the middlemarcher. 137 Hypozeugma, or the rerewarder. 137 Sillepsis, or the double supply. 137 Hypozeuxis, or the substitute. 138 Aposiopesis, or the figure of silence, otherwise called the figure of interruption. 139 Prolepsis, or the propounder. 139 Hiperbaton, or the trespasser. 140 Parenthesis, or the insertour. 140 Histeron proteron, or the preposterous. 141 Enallage, or figure of exchange. 142 Hipallage, or the changeling. 143 Omoioteleton, or the figure of likeloose. 144 Patimion, or figure of like letter. 145 Asindeton, or figure of lose language. 145 Polisindeton, or the coople clause. 146 Irmus, or the long lose. 146 Epitheton, or the qualifier. 147 Endiades, or the figure of twinnes. 147

Of the figures which we call Sensable, because they alter and affect the minde by alteration of sense and first in single words. 148 Metaphora, or the figure of transport. 149 Catacresis, or the figure of abuse. 150 Metonymia, or the misnamer. 150 Antonomasia, or the surnamer. 151 Onomatopeia, or the newnamer. 151 Epitheton, or figure of attribution, otherwise called the qualifier. 152 Metalepsis, or the far-set. 152 Liptote, or the moderator. 153 Paradiastole, or the curriffauel, otherwise called the soother. 154 Meiosis, or the disabler. 154 Tapinosis, or the abbaser. 154 Synecdoche, or the figure of quick conceit. 154 Of sensible figures appertaining to whole speeches, and by them affecting and altering the minde by force of sence and intendment. 155 Allegoria, or figure of faire semblance. 155 Enigma, or the riddle. 157 Parimia, or the prouerbe. 157 Ironia, or the drie mock. 157 Sarcasmus, or the bitter taunt. 158 Asteismus, the merry scoffe, or ciuill iest. 158 Micterismus, or the fleering frumpe. 158 Antiphrasis, or the broad floute. 159 Charientismus, or the priuie nippe. 159 Hyperbole, or the loud lier, otherwise called the ouerreacher. 159 Periphrasis, or the figure of ambage. 161 Synecdoche, or the figure of quick conceit. 162 Of figures sententious, otherwise called rhetorical. 163 Anaphora, or the figure of report. 165 Antistrophe, or the counterturne. 165 Simploche, or figure of reiteration. 166 Anadiplosis, or the redouble. 167 Epanalepsis, or the slow returne, otherwise called the Echo sound. 167 Epizeuxis, or the vnderlay, otherwise called the Cuckow spell. 167 Ploche, or the doubler, otherwise called the swift repeate. 168 Paranomasia, or the nicknamer. 168 Traductio, or the tranlater. 170 Antipophora, or the figure of responce. 170 Sineciosis, or the crossecoople. 172 Atanaclasis, or the rebound. 173 Clymax, or the marching figure. 173 Antimetauole, or the counterchainge. 174 Insultatio, or the disdainfull. 175 Antitheton, or the quareller, otherwise called the ouerthwart or rencounter. 175 Erotema, or the questioner. 176 Echphonisis, or the outcrie. 177 Brachiologia, or the cutted comma. 178 Parison, or the figure of euen. 178 Sinonimya, or the figure of store. 179 Metanoia, or the penitent, otherwise called the figure of repentance. 179 Antenagoge, or the recompencer. 180 Epiphonema, or the close. 181 Auxesis, or the auancer. 182 Meiosis, or the disabler. 183 Dialisis, or the dismembrer. 185 Merismus, or the distributor. 185 Epimone, or the loueburden.

188 Paradoxon, or the wonderer. 189 Aporia, or the doubtfull. 189 Epitropi, or the figure
 of reference, otherwise called the figure of submission. 189 Parrisia, or the licentious. 190
 Anachmosis, or the importuner. 190 Paramologia, or figure of admittance. 190 Etiologia, or the
 tell-cause, otherwise called the reason render. 191 Dicheologia, or the figure of excuse. 192
 Noema, or the figure of close conceit. 193 Orismus, or the definer by difference. 193 Procatalepsis,
 or the presumptuous. 194 Paralepsis, or the passenger. 194 Commoratio, or figure of aboade.
 194 Metastasis, or figure of remoue, otherwise called the flutter. 194 Parecuasis, or the straggler,
 otherwise called the figure of digression. 195 Expeditio, or the dispatcher. 195 Diologismus,
 or the right reasoner. 196 Gnome, or the director, otherwise called the sagesayer. 197
 Sinathrismus, or the heaping figure. 197 Apostrophe, or the turne tale. 198 Hipotiposis, or the
 counterfait, otherwise called the figure of representation. 199 Prosopographia, or the counterfet
 countenance. 199 Prosopopeia, or the false impersonation. 200 Chronographia, or the counterfait of
 time. 200 Topographia, or counterteit of place. 200 Pragmatographia, or counterfait of action.
 203 Omoiosis, or the figure of resemblance. 203 Icon, or resemblance by portrait, and ymagerie. 204
 Parabola, or resemblance misticall. 205 Paradigma, or resemblance by example. 205 Exargasia,
 or the gorgious, otherwise called the bewtifull. 206 Of the vices and deformitie in speech principally
 noted by ancient Poets. 208 How some vices in speeches are alwaies intollerable, some others now
 and then borne withal by licence of approued authors. 209 Barbarismus, or barbarous speech. 209
 Solecismus, or false speech. 210 Cacozeria, or fonde affectation. 210 Soraismus, or the vice
 called the mingle-mangle. 211 Cacosinthon, or the misplacer. 212 Cacemphaton, or foule speech.
 212 Tautologia, or selfe saying. 213 Acyron, or the vncouth. 214 Pleonasmus, or fault of
 full speech. 215 Macrologia, or long language. 215 Periergia, or ouerlabor, otherwise called the
 curious. 216 Tapinosis, or the abbaser. 216 Bomphiologia, or pompous speech. 217
 Amphibologia, or the ambiguous. 217 What it is that generally makes our speech vertuous or vicious, &
 of that which the Latines call decorum. 218 Of decencie in behaiour and action, which also belongs to the
 consideration of a Poet or maker. 231 How the good poet or maker ought to dissemble his arte, and in
 what cases the artificiall is more commended then the naturall and contrariwise. 250 The conclusion.
 257

FINIS.

6. 17th Century: John Donne. *Songs and Sonnets*

Song I

Go, and catch a falling star,
Get with child a mandrake root,
Tell me where all past years are,
Or who cleft the Devil's foot;

5

Teach me to hear mermaids singing,
Or to keep off envy's stinging,
And find
What wind
Serves to advance an honest mind.

10

If thou be'est born to strange sights,
Things invisible to see,
Ride ten thousand days and nights
Till age snow white hairs on thee;
Thou, when thou return'st, wilt tell me

15

All strange wonders that befell thee,
And swear
No where
Lives a woman true, and fair.

If thou find'st one, let me know;

20

Such a pilgrimage were sweet.
Yet do not; I would not go,
Though at next door we might meet,
Though she were true, when you met her,
And last, till you write your letter,

25

Yet she
Will be
False, ere I come, to two, or three.

Song II

Sweetest love, I do not go,
For weariness of thee,
Nor in hope the world can show
A fitter love for me;

5

But since that I
Must die at last, 'tis best,
To use my self in jest
Thus by feigned deaths to die.

Yesternight the sun went hence,

10

And yet is here today,
He hath no desire nor sense,
Nor half so short a way:
Then fear not me,
But believe that I shall make

15

Speedier journeys, since I take
More wings and spurs than he.

O how feeble is man's power,
That if good fortune fall,
Cannot add another hour,

20

Nor a lost hour recall!
But come bad chance,
And we join to it our strength,
And we teach it art and length,
Itself o'er us to'advance.

25

When thou sigh'st, thou sigh'st not wind,
But sigh'st my soul away;
When thou weep'st, unkindly kind,
My life's blood doth decay.
It cannot be

30

That thou lov'st me, as thou say'st,
If in thine my life thou waste,
Thou art the best of me.

Let not thy divining heart
Forethink me any ill;

35

Destiny may take thy part,

And may thy fears fulfil;
But think that we
Are but turned aside to sleep;
They who one another keep

40
Alive, ne'er parted be.

The Good Morrow.

I wonder, by my troth, what thou and I
Did, till we loved? were we not weaned till then,
But sucked on country pleasures, childishly?
Or snorted we in the seven sleepers' den?

5
'Twas so; but this, all pleasures fancies be.
If ever any beauty I did see,
Which I desired, and got, 'twas but a dream of thee.

And now good morrow to our waking souls,
Which watch not one another out of fear;

10
For love, all love of other sights controls,
And makes one little room an every where.
Let sea-discoverers to new worlds have gone,
Let maps to others, worlds on worlds have shown,
Let us possess our world, each hath one, and is one.

15
My face in thine eye, thine in mine appears,
And true plain hearts do in the faces rest;
Where can we find two better hemispheres
Without sharp north, without declining west?
What ever dies, was not mixed equally;

20
If our two loves be one, or, thou and I
Love so alike, that none do slacken, none can die.

Woman's Constancy.

Now thou hast loved me one whole day,
Tomorrow, when thou leav'st, what wilt thou say?
Wilt thou then antedate some new-made vow?
Or say that now

5
We are not just those persons which we were?

Or that oaths made in reverential fear
Of Love, and his wrath, any may forswear?
Or, as true deaths, true marriages untie,
So lovers' contracts, images of those,

10
Bind but till sleep, death's image, them unloose?
Or, your own end to justify,
For having purposed change, and falsehood, you
Can have no way but falsehood to be true?
Vain lunatic, against these 'scapes I could

15
Dispute, and conquer, if I would,
Which I abstain to do,
For by tomorrow, I may think so too.

The Sun Rising.

Busy old fool, unruly sun,
Why dost thou thus,
Through windows, and through curtains, call on us?
Must to thy motions lovers' seasons run?

5
Saucy pedantic wretch, go chide
Late school-boys, and sour 'prentices,
Go tell court-huntsmen, that the King will ride,
Call country ants to harvest offices;
Love, all alike, no season knows, nor clime,

10
Nor hours, days, months, which are the rags of time.

Thy beams, so reverend and strong
Why shouldst thou think?
I could eclipse and cloud them with a wink,
But that I would not lose her sight so long:

15
If her eyes have not blinded thine,
Look, and tomorrow late, tell me,
Whether both th' Indias of spice and mine
Be where thou left'st them, or lie here with me.
Ask for those kings whom thou saw'st yesterday,

20
And thou shalt hear, All here in one bed lay.

She's all states, and all princes, I;
Nothing else is.
Princes do but play us; compared to this,

All honour's mimic; all wealth alchemy.

25

Thou, sun art half as happy as we,
In that the world's contracted thus;
Thine age asks ease, and since thy duties be
To warm the world, that's done in warming us.
Shine here to us, and thou art everywhere;

30

This bed thy centre is, these walls, thy sphere.

The Indifferent.

I can love both fair and brown,
Her whom abundance melts, and her whom want
betrays,
Her who loves loneliness best, and her who masks and
plays,
Her whom the country formed, and whom the town,

5

Her who believes, and her who tries,
Her who still weeps with spongy eyes,
And her who is dry cork, and never cries;
I can love her, and her, and you, and you,
I can love any, so she be not true.

10

Will no other vice content you?
Will it not serve your turn to do as did your mothers?
Or have you old vices spent, and now would find out
others?
Or doth a fear, that men are true, torment you?
Oh we are not, be not you so;

15

Let me, and do you, twenty know.
Rob me, but bind me not, and let me go.
Must I, who came to travel thorough you,
Grow your fixed subject, because you are true?

Venus heard me sigh this song,

20

And by Love's sweetest part, variety, she swore
She heard not this till now; and that it should be so no
more.
She went, examined, and returned ere long,
And said, «Alas, some two or three
Poor heretics in love there be,

25

Which think to 'stablish dangerous constancy.
But I have told them, since you will be true,
You shall be true to them who're false to you.»

Love's Usury.

For every hour that thou wilt spare me now

I will allow,
Usurious God of Love, twenty to thee,
When with my brown, my gray hairs equal be;

5

Till then, Love, let my body reign, and let
Me travel, sojourn, snatch, plot, have, forget,
Resume my last year's relict: think that yet
We had never met.

Let me think any rival's letter mine,

10

And at next nine
Keep midnight's promise; mistake by the way
The maid, and tell the Lady of that delay;
Only let me love none, no, not the sport;
>>>>>>From country grass, to comfitures of Court,

15

Or city's quelque-choses, let report
My mind transport.

This bargain's good; if when I am old, I be
Inflamed by thee,
If thine own honour, or my shame, or pain,

20

Thou covet, most at that age thou shalt gain.
Do thy will then, then subject and degree,
And fruit of love, Love I submit to thee,
Spare me till then, I'll bear it, though she be
One that loves me.

The Canonization.

For God's sake hold your tongue, and let me love,

Or chide my palsy, or my gout,
My five grey hairs, or ruined fortune flout;
With wealth your state, your mind with arts
improve;

5

Take you a course, get you a place,
Observe his Honour, or his Grace,
Or the King's real, or his stamped face
Contemplate; what you will, approve,
So you will let me love.

10

Alas, alas, who's injured by my love?
What merchant's ships have my sighs drowned?
Who says my tears have overflowed his ground?
When did my colds a forward spring remove?
When did the heats which my veins fill

15

Add one more to the plaguy bill?
Soldiers find wars, and lawyers find out still
Litigious men, which quarrels move,
Though she and I do love.

Call us what you will, we are made such by love;

20

Call her one, me another fly;
We are tapers too, and at our own cost die;
And we in us find the eagle and the dove,
The phoenix riddle hath more wit
By us, we two being one, are it.

25

So to one neutral thing both sexes fit:
We die and rise the same, and prove
Mysterious by his love.

We can die by it, if not live by love,
And if unfit for tombs and hearse

30

Our legend be, it will be fit for verse;
And if no piece of chronicle we prove,
We'll build in sonnets pretty rooms;
As well a well wrought urne becomes
The greatest ashes, as half-acre tombs;

35

And by these hymns all shall approve
Us canonized for love:
And thus invoke us: «You whom reverend love
Made one another's hermitage;
You, to whom love was peace, that now is rage;

40

Who did the whole world's soul contract, and drove
Into the glasses of your eyes
(So made such mirrors, and such spies,
That they did all to you epitomize,)
Countries, towns, courts: beg from above

45

A pattern of your love!»

The Triple Fool.

I am two fools, I know,
For loving, and for saying so
In whining poetry;
But where's that wiseman that would not be I,

5

If she would not deny?
Then, as th' earth's inward narrow crooked lanes
Do purge sea water's fretful salt away,
I thought, if I could draw my pains
Through rhyme's vexation, I should them allay.

10

Grief brought to numbers cannot be so fierce,
For, he tames it, that fetters it in verse.

But when I have done so,
Some man, his art and voice to show,
Doth set and sing my pain,

15

And, by delighting many, frees again
Grief, which verse did restrain.
To love and grief tribute of verse belongs,
But not of such as pleases when 'tis read;
Both are increased by such songs:

20

For both their triumphs so are published;
And I, which was two fools, do so grow three;
Who are a little wise, the best fools be.

Lovers' Infiniteness.

If yet I have not all thy love,
Dear, I shall never have it all,
I cannot breathe one other sigh, to move,
Nor can intreat one other tear to fall.

5
And all my treasure, which should purchase thee,
Sighs, tears, and oaths, and letters I have spent,
Yet no more can be due to me,
Than at the bargain made was meant.
If then thy gift of love were partial,

10
That some to me, some should to others fall,
Dear, I shall never have thee all.

Or if then thou gavest me all,
All was but all, which thou hadst then;
But if in thy heart, since, there be or shall

15
New love created be, by other men,
Which have their stocks entire, and can in tears,
In sighs, in oaths, and letters, outbid me,
This new love may beget new fears,
For, this love was not vowed by thee.

20
And yet it was, thy gift being general,
The ground, thy heart, is mine; whatever shall
Grow there, dear, I should have it all.

Yet I would not have all yet,
He that hath all can have no more;

25
And since my love doth every day admit
New growth, thou shouldst have new rewards in
store;
Thou canst not every day give me thy heart,
If thou canst give it, then thou never gav'st it:
Love's riddles are, that though thy heart depart,

30
It stays at home, and thou with losing sav'st it:
But we will have a way more liberal,
Than changing hearts, to join them, so we shall
Be one, and one another's all.

Air and Angels.

Twice or thrice had I loved thee,
Before I knew thy face or name;
So in a voice, so in a shapeless flame,
Angels affect us oft, and worshipped be;

5

Still when, to where thou wert, I came,
Some lovely glorious nothing I did see,
But since my soul, whose child love is,
Takes limbs of flesh, and else could nothing do,
More subtle than the parent is

10
Love must not be, but take a body too,
And therefore what thou wert, and who
I bid love ask, and now
That it assume thy body, I allow,
And fix itself in thy lip, eye, and brow.

15
Whilst thus to ballast love, I thought,
And so more steadily to have gone,
With wares which would sink admiration,
I saw, I had love's pinnace overfraught,
Every thy hair for love to work upon

20
Is much too much, some fitter must be sought;
For, nor in nothing, nor in things
Extreme, and scatt'ring bright, can love inhere;
Then as an angel, face and wings
Of air, not pure as it, yet pure doth wear,

25
So thy love may be my love's sphere;
Just such disparity
As is 'twixt air and angels' purity,
'Twixt women's love, and men's will ever be.

Break of Day.

'Tis true, 'tis day; what though it be?
O wilt thou therefore rise from me?
Why should we rise, because 'tis light?
Did we lie down, because 'twas night?

5
Love which in spite of darkness brought us hither,
Should in despite of light keep us together.

Light hath no tongue, but is all eye;
If it could speak as well as spy,
This were the worst, that it could say,

10
That being well, I fain would stay,
And that I loved my heart and honour so,

That I would not from her, that had them, go.

Must business thee from hence remove?
Oh, that's the worst disease of love,

15

The poor, the foul, the false, love can
Admit but not the busied man.
He which hath business, and makes love, doth do
Such wrong, as when a married man doth woo.

Confined Love.

Some man unworthy to be possessor
Of old or new love, himself being false or weak,
Thought his pain and shame would be lesser
If on womankind he might his anger wreak,

5

And thence a law did grow,
One should but one man know;
But are other creatures so?

Are sun, moon, or stars by law forbidden,
To smile where they list, or lend away their light?

10

Are birds divorced, or are they chidden
If they leave their mate, or lie abroad a-night?
Beasts do no jointures lose
Though they new lovers choose,
But we are made worse than those.

15

Who e'er rigged fair ship to lie in harbours
And not to seek new lands, or not to deal withal?
Or built fair houses, set trees, and arbours,
Only to lock up, or else to let them fall?
Good is not good, unless

20

A thousand it possess,
But dost waste with greediness.

The Dream.

Dear love, for nothing less than thee
Would I have broke this happy dream,
It was a theme
For reason, much too strong for phantasy:

5

Therefore thou waked'st me wisely; yet
My dream thou brok'st not, but continued'st it;
Thou art so true, that thoughts of thee suffice,
To make dreams truths, and fables histories;
Enter these arms, for since thou thought'st it best,

10

Not to dream all my dream, let's act the rest.

As lightning or a taper's light,
Thine eyes, and not thy noise, waked me;
Yet I thought thee
(For thou lov'st truth) an angel, at first sight,

15

But when I saw thou saw'st my heart,
And knew'st my thoughts, beyond an angel's art,
When thou knew'st what I dreamed, when thou
knew'st when
Excess of joy would wake me, and cam'st then,
I must confess, it could not choose but be

20

Profane, to think thee anything but thee.

Coming and staying showed thee, thee,
But rising makes me doubt, that now
Thou art not thou.
That love is weak, where fear's as strong as he;

25

'Tis not all spirit, pure, and brave,
If mixture it of fear, shame, honour, have.
Perchance as torches which must ready be,
Men light and put out, so thou deal'st with me,
Thou cam'st to kindle, goest to come; then I

30

Will dream that hope again, but else would die.

A Valediction: Of Weeping.

Let me pour forth
My tears before thy face, whilst I stay here,
For thy face coins them, and thy stamp they bear,
And by this mintage they are something worth,

5

For thus they be
Pregnant of thee;

Fruits of much grief they are, emblems of more;
When a tear falls, that thou falls which it bore,
So thou and I are nothing then, when on a divers
shore.

10
On a round ball
A workman that hath copies by, can lay
An Europe, Afric, and an Asia,
And quickly make that, which was nothing, all;
So doth each tear,

15
Which thee doth wear,
A globe, yea world by that impression grow,
Till thy tears mixed with mine do overflow
This world, by waters sent from thee, my heaven
dissolved so.

O more than moon,

20
Draw not up seas to drown me in thy sphere,
Weep me not dead, in thine arms, but forbear
To teach the sea, what it may do too soon;
Let not the wind
Example find,

25
To do me more harm, than it purposeth;
Since thou and I sigh one another's breath,
Whoe'er sighs most, is cruellest, and hastes the
other's death.

Love's Alchemy.

Some that have deeper digged love's mine than I,
Say, where his centric happiness doth lie:
I have loved, and got, and told,
But should I love, get, tell, till I were old,

5
I should not find that hidden mystery;
Oh, 'tis imposture all:
And as no chemic yet the elixir got,
But glorifies his pregnant pot,
If by the way to him befall

10
Some odoriferous thing, or medicinal,
So, lovers dream a rich and long delight,

But get a winter-seeming summer's night.

Our ease, our thrift, our honour, and our day,
Shall we, for this vain bubble's shadow pay?

15
Ends love in this, that my man,
Can be as happy'as I can; if he can
Endure the short scorn of a bridegroom's play?
That loving wretch that swears,
'Tis not the bodies marry, but the minds,

20
Which he in her angelic finds,
Would swear as justly, that he hears,
In that day's rude hoarse minstrelsy, the spheres.
Hope not for mind in women; at their best
Sweetness and wit, they are but mummy,
possessed.

The Flea.

Mark but this flea, and mark in this,
How little that which thou deny'st me is;
Me it sucked first, and now sucks thee,
And in this flea, our two bloods mingled be;

5
Confess it, this cannot be said
A sin, or shame, or loss of maidenhead,
Yet this enjoys before it woo,
And pampered swells with one blood made of two,
And this, alas, is more than we would do.

10
Oh stay, three lives in one flea spare,
Where we almost, nay more than married are.
This flea is you and I, and this
Our marriage bed, and marriage temple is;
Though parents grudge, and you, we're met,

15
And cloistered in these living walls of jet.
Though use make you apt to kill me,
Let not to this, self murder added be,
And sacrilege, three sins in killing three.

Cruel and sudden, hast thou since

20
Purpled thy nail, in blood of innocence?

In what could this flea guilty be,
Except in that drop which it sucked from thee?
Yet thou triumph'st, and say'st that thou
Find'st not thyself, nor me the weaker now;

25

'Tis true, then learn how false fears be;
Just so much honour, when thou yield'st to me,
Will waste, as this flea's death took life from thee.

A Nocturnal upon St. Lucy's Day,
being the shortest day.

'Tis the year's midnight, and it is the day's,
Lucy's, who scarce seven hours herself unmasks;
The sun is spent, and now his flasks
Send forth light squibs, no constant rays;

5

The world's whole sap is sunk:
The general balm th' hydroptic earth hath drunk,
Whither, as to the bed's-feet, life is shrunk,
Dead and interred; yet all these seem to laugh,
Compared with me, who am their epitaph.

10

Study me then, you who shall lovers be
At the next world, that is, at the next spring:
For I am every dead thing,
In whom love wrought new alchemy.
For his art did express

15

A quintessence even from nothingness,
>>>>>From dull privations, and lean emptiness;
He ruined me, and I am re-begot
Of absence, darkness, death; things which are not.

All others, from all things, draw all that's good,

20

Life, soul, form, spirit, whence they being have;
I, by love's limbeck, am the grave
Of all that's nothing. Oft a flood
Have we two wept, and so
Drowned the whole world, us two; oft did we grow

25

To be two chaoses, when we did show
Care to aught else; and often absences
Withdrew our souls, and made us carcasses.

But I am by her death (which word wrongs her)
Of the first nothing the elixir grown;

30

Were I a man, that I were one
I needs must know; I should prefer,
If I were any beast,
Some ends, some means; yea plants, yea stones
detest,
And love; all, all some properties invest;

35

If I an ordinary nothing were,
As shadow, a light, and body must be here.

But I am none; nor will my sun renew.
You lovers, for whose sake, the lesser sun
At this time to the Goat is run

40

To fetch new lust, and give it you,
Enjoy your summer all;
Since she enjoys her long night's festival,
Let me prepare towards her, and let me call
This hour her vigil, and her eve, since this

45

Both the year's, and the day's deep midnight is.

The Bait.

Come live with me, and be my love,
And we will some new pleasures prove
Of golden sands, and crystal brooks,
With silken lines, and silver hooks.

5

There will the river whispering run
Warmed by thy eyes, more than the sun.
And there the enamoured fish will stay,
Beggings themselves they may betray.

When thou wilt swim in that live bath

10

Each fish, which every channel hath,
Will amorously to thee swim,
Gladder to catch thee, than thou him.

If thou to be so seen be'st loth

By sun or moon, thou darkenest both,

15

And if myself have leave to see,
I need not their light, having thee.

Let others freeze with angling reeds,
And cut their legs with shells and weeds,
Or treacherously poor fish beset

20

With strangling snare, or windowy net:

Let coarse bold hands from slimy nest
The bedded fish in banks out-wrest,
Or curious traitors, sleeve-silk flies
Bewitch poor fishes' wandering eyes.

25

For thee, thou need'st no such deceit,
For thou thyself art thine own bait;
That fish that is not caught thereby,
Alas, is wiser far than I.

The Apparition.

When by thy scorn, O murderess, I am dead,
And that thou think'st thee free
>>>>>From all sollicitation from me,
Then shall my ghost come to thy bed,

5

And thee, feigned vestal, in worse arms shall see;
Then thy sick taper will begin to wink,
And he, whose thou art then, being tired before,
Will, if thou stir, or pinch to wake him, think
Thou call'st for more,

10

And in false sleep will from thee shrink,
And then, poor aspen wretch, neglected thou
Bathed in a cold quicksilver sweat wilt lie
A verier ghost than I;
What I will say, I will not tell thee now,

15

Lest that preserve thee; and since my love is spent,
I had rather thou shouldst painfully repent,
Than by my threatenings rest still innocent.

A Valediction: forbidding Mourning.

As virtuous men pass mildly away,

And whisper to their souls, to go,
Whilst some of their sad friends do say,
The breath goes now, and some say, no:

5

So let us melt, and make no noise,
No tear-floods, nor sigh-tempests move,
'Twere profanation of our joys
To tell the laity our love.

Moving of th' earth brings harms and fears,

10

Men reckon what it did and meant;
But trepidation of the spheres,
Though greater far, is innocent.

Dull sublunary lovers' love

(Whose soul is sense) cannot admit

15

Absence, because it doth remove
Those things which elemented it.

But we by a love so much refined,

That ourselves know not what it is,
Inter-assured of the mind,

20

Care less, eyes, lips, and hands to miss.

Our two souls therefore, which are one,

Though I must go, endure not yet
A breach, but an expansion,
Like gold to aery thinness beat.

25

If they be two, they are two so
As stiff twin compasses are two,
Thy soul, the fixed foot, makes no show
To move, but doth, if the'other do.

And though it in the centre sit,

30

Yet when the other far doth roam,
It leans, and hearkens after it,
And grows erect, as that comes home.

Such wilt thou be to me, who must
Like th' other foot, obliquely run;

35

Thy firmness makes my circle just,
And makes me end, where I begun.

The Ecstasy.

Where, like a pillow on a bed,
A pregnant bank swelled up, to rest
The violet's reclining head,
Sat we two, one another's best;

5

Our hands were firmly cemented
With a fast balm, which thence did spring,
Our eye-beams twisted, and did thread
Our eyes, upon one double string;

So to' intergraft our hands, as yet

10

Was all the means to make us one,
And pictures in our eyes to get
Was all our propagation.

As 'twixt two equal armies, Fate
Suspends uncertain victory,

15

Our souls, (which to advance their state
Were gone out), hung 'twixt her, and me.

And whilst our souls negotiate there,
We like sepulchral statues lay;
All day, the same our postures were,

20

And we said nothing, all the day.

If any, so by love refined,
That he soul's language understood,
And by good love were grown all mind,
Within convenient distance stood,

25

He (though he knew not which soul spake,
Because both meant, both spake the same)

Might thence a new concoction take,
And part far purer than he came.

This ecstasy doth unperplex

30

(We said) and tell us what we love,
We see by this, it was not sex,
We see, we saw not what did move:

But as all several souls contain
Mixture of things, they know not what,

35

Love, these mixed souls doth mix again,
And makes both one, each this and that.

A single violet transplant,
The strength, the colour, and the size,
(All which before was poor, and scant,)

40

Redoubles still, and multiplies.

When love, with one another so
Interinanimates two souls,
That abler soul, which thence doth flow,
Defects of loneliness controls.

45

We then, who are this new soul, know,
Of what we are composed and made,
For, th' atomies of which we grow,
Are souls, whom no change can invade.

But O alas, so long, so far

50

Our bodies why do we forbear?
They are ours, though they are not we, we are
The intelligences, they the sphere.

We owe them thanks, because they thus,
Did us, to us, at first convey,

55

Yielded their forces, sense, to us,
Nor are dross to us, but allay.

On man heavens' influence works not so,
But that it first imprints the air,
So soul into the soul may flow,

60

Though it to body first repair.

As our blood labours to beget
Spirits, as like souls as it can,
Because such fingers need to knit
That subtle knot, which makes us man:

65

So must pure lovers' souls descend
T' affections, and to faculties,
Which sense may reach and apprehend,
Else a great prince in prison lies.

To our bodies turn we then, that so

70

Weak men on love revealed may look;
Love's mysteries in souls do grow,
But yet the body is his book.

And if some lover, such as we,
Have heard this dialogue of one,

75

Let him still mark us, he shall see
Small change, when we're to bodies gone.

Love's Deity.

I long to talk with some old lover's ghost,
Who died before the god of love was born:
I cannot think that he, who then loved most,
Sunk so low, as to love one which did scorn.

5

But since this god produced a destiny,
And that vice-nature, custom, lets it be;
I must love her, that loves not me.

Sure, they which made him god, meant not so much,
Nor he in his young godhead practised it.

10

But when an even flame two hearts did touch,
His office was indulgently to fit
Actives to passives. Correspondency
Only his subject was; it cannot be
Love, till I love her, that loves me.

15

But every modern god will now extend
His vast prerogative, as far as Jove.
To rage, to lust, to write to, to commend,
All is the purlieu of the god of love.
Oh were we wakened by this tyranny

20

To ungod this child again, it could not be
I should love her, who loves not me.

Rebel and atheist too, why murmur I,
As though I felt the worst that love could do?
Love might make me leave loving, or might try

25

A deeper plague, to make her love me too;
Which, since she loves before, I am loth to see.
Falsehood is worse than hate; and that must be,
If she whom I love, should love me.

The Funeral.

Whoever comes to shroud me, do not harm
Nor question much
That subtle wreath of hair about mine arm;
The mystery, the sign you must not touch,

5

For 'tis my outward soul,
Viceroy to that which, unto heav'n being gone,
Will leave this to control
And keep these limbs, her provinces, from
dissolution.

For if the sinewy thread my brain lets fall

10

Through every part
Can tie those parts, and make me one of all,
Those hairs, which upward grew, and strength and art
Have from a better brain,
Can better do't: expect she meant that I

15

By this should know my pain,
As prisoners then are manacled, when they're
condemn'd to die.

Whate'er she meant by 't, bury it with me,
For since I am

Love's martyr, it might breed idolatry

20

If into other hands these reliques came.

As 'twas humility

T' afford to it all that a soul can do,

So 'tis some bravery

That, since you would have none of me, I bury some
of you.

The Primrose.

Upon this primrose hill,

Where, if heaven would distil

A shower of rain, each several drop might go

To his own primrose, and grow manna so;

5

And where their form and their infinity

Make a terrestrial galaxy,

As the small stars do in the sky:

I walk to find a true love; and I see

That 'tis not a mere woman, that is she,

10

But must, or more, or less than woman be.

Yet know I not, which flower

I wish; a six, or four;

For should my true love less than woman be

She were scarce anything; and then, should she

15

Be more than woman, she would get above

All thought of sex, and think to move

My heart to study her, and not to love;

Both these were monsters; since there must reside

Falsehood in woman, I could more abide,

20

She were by art than nature falsified.

Live primrose then, and thrive

With thy true number, five;

And woman, whom this flower doth represent,

With this mysterious number be content;

25

Ten is the farthest number; if half ten

Belong unto each woman, then

Each woman may take half us men;

Or if this will not serve their turn, since all

Numbers are odd, or even, and they fall

30

First into this, five, woman may take us all.

The Relic.

When my grave is broke up again

Some second guest to entertain,

(For graves have learned that woman-head

To be to more than one a bed)

5

And he that digs it, spies

A bracelet of bright hair about the bone,

Will he not let us alone,

And think that there a loving couple lies,

Who thought that this device might be some way

10

To make their souls, at the last busy day,

Meet at this grave, and make a little stay?

If this fall in a time, or land,

Where mis-devotion doth command,

Then he, that digs us up, will bring

15

Us to the Bishop, and the King,

To make us relics; then

Thou shalt be a Mary Magdalen, and I

A something else thereby;

All women shall adore us, and some men;

20

And since at such time miracles are sought,

I would have that age by this paper taught

What miracles we harmless lovers wrought.

First, we loved well and faithfully,

Yet knew not what we loved, nor why,

25

Difference of sex no more we knew,

Than our guardian angels do;

Coming and going, we

Perchance might kiss, but not between those meals;

Our hands ne'er touched the seals,

30

Which nature, injured by late law, sets free:

These miracles we did; but now alas,

All measure, and all language, I should pass,
Should I tell what a miracle she was.

The Damp.

When I am dead, and doctors know not why,
And my friends' curiosity
Will have me cut up to survey each part,
When they shall find your picture in my heart,

5

You think a sudden damp of love
Will through all their senses move,
And work on them as me, and so prefer
Your murder, to the name of massacre.

Poor victories; but if you dare be brave,

10

And pleasure in your conquest have,
First kill th' enormous giant, your Disdain,
And let th' enchantress Honour next be slain,
And like a Goth and Vandal rise,
Deface records, and histories

15

Of your own arts and triumphs over men,
And without such advantage kill me then.

For I could muster up as well as you
My giants, and my witches too,
Which are vast Constancy, and Secretness,

20

But these I neither look for, nor profess;
Kill me as woman, let me die
As a mere man; do you but try
Your passive valour, and you shall find then,
Naked you have odds enough of any man.

The Dissolution.

She's dead; and all which die
To their first elements resolve;
And we were mutual elements to us,
And made of one another.

5

My body then doth hers involve,
And those things whereof I consist, hereby
In me abundant grow, and burdensome,

And nourish not, but smother.
My fire of passion, sighs of air,

10

Water of tears, and earthy sad despair,
Which my materials be,
But near worn out by love's security,
She, to my loss, doth by her death repair,
And I might live long wretched so

15

But that my fire doth with my fuel grow.
Now as those active kings
Whose foreign conquest treasure brings,
Receive more, and spend more, and soonest break:
This (which I am amazed that I can speak)

20

This death, hath with my store
My use increased.
And so my soul more earnestly released,
Will outstrip hers; as bullets flown before
A latter bullet may o'ertake, the powder being more.

The Prohibition.

Take heed of loving me,
At least remember, I forbade it thee;
Not that I shall repair my unthrifty waste
Of breath and blood, upon thy sighs and tears,

5

By being to thee then what to me thou wast;
But, so great joy, our life at once outwears,
Then, lest thy love, by my death, frustrate be,
If thou love me, take heed of loving me.

Take heed of hating me,

10

Or too much triumph in the victory.
Not that I shall be mine own officer,
And hate with hate again retaliate;
But thou wilt lose the style of conqueror,
If I, thy conquest, perish by thy hate.

15

Then, lest my being nothing lessen thee,
If thou hate me, take heed of hating me.

Yet, love and hate me too,
So, these extremes shall neither's office do;

Love me, that I may die the gentler way;

20

Hate me, because thy love's too great for me;
Or let these two, themselves, not me decay;
So shall I live thy stage, not triumph be;
Lest thou thy love and hate and me undo,
To let me live, Oh love and hate me too.

A Lecture upon the Shadow.

Stand still, and I will read to thee
A lecture, love, in love's philosophy.
These three hours that we have spent,
Walking here, two shadows went

5

Along with us, which we ourselves produced;
But, now the sun is just above our head,
We do those shadows tread;
And to brave clearness all things are reduced.
So whilst our infant loves did grow,

10

Disguises did, and shadows, flow,
From us, and our cares; but now 'tis not so.

That love has not attained the high'st degree,
Which is still diligent lest others see.

Except our loves at this noon stay,

15

We shall new shadows make the other way.
As the first were made to blind
Others; these which come behind
Will work upon ourselves, and blind our eyes.
If our loves faint, and westwardly decline;

20

To me thou, falsely, thine,
And I to thee mine actions shall disguise.
The morning shadows wear away,
But these grow longer all the day;
But oh, love's day is short, if love decay.

25

Love is a growing, or full constant light;
And his first minute, after noon, is night.

Self Love.

He that cannot choose but love,
And strives against it still,
Never shall my fancy move;
For he loves 'gainst his will;

5

Nor he which is all his own,
And can at pleasure choose,
When I am caught he can be gone,
And when he list refuse.

Nor he that loves none but fair,

10

For such by all are sought;
Nor he that can for foul ones care,
For his judgement then is naught:

Nor he that hath wit, for he
Will make me his jest or slave;

15

Nor a fool, for when others . . .
He can neither

Nor he that still his mistress pays,
For she is thrall'd therefore:
Nor he that pays not, for he says

20

Within she's worth no more.

Is there then no kind of men
Whom I may freely prove?
I will vent that humour then
In mine own self love.

Chapter 3.

Late Modernity

1. Samuel Johnson. *Preface to a Dictionary of the English Languages*

It is the fate of those who toil at the lower employments of life, to be rather driven by the fear of evil, than attracted by the prospect of good; to be exposed to censure, without hope of praise; to be disgraced by miscarriage, or punished for neglect, where success would have been without applause, and diligence without reward. Among these unhappy mortals is the writer of dictionaries; whom mankind have considered, not as the pupil, but the slave of science, the pionier of literature, doomed only to remove rubbish and clear obstructions from the paths through which Learning and Genius press forward to conquest and glory, without bestowing a smile on the humble drudge that facilitates their progress. Every other authour may aspire to praise; the lexicographer can only hope to escape reproach, and even this negative recompense has been yet granted to very few. I have, notwithstanding this discouragement, attempted a dictionary of the English language, which, while it was employed in the cultivation of every species of literature, has itself been hitherto neglected; suffered to spread, under the direction of chance, into wild exuberance; resigned to the tyranny of time and fashion; and exposed to the corruptions of ignorance, and caprices of innovation. When I took the first survey of my undertaking, I found our speech copious without order, and energetick without rules: wherever I turned my view, there was perplexity to be disentangled, and confusion to be regulated; choice was to be made out of boundless variety, without any established principle of selection; adulterations were to be detected, without a settled test of purity; and modes of expression to be rejected or received, without the suffrages of any writers of classical reputation or acknowledged authority. Having therefore no assistance but from general grammar, I applied myself to the perusal of our writers; and noting whatever might be of use to ascertain or illustrate any word or phrase, accumulated in time the materials of a dictionary, which, by degrees, I reduced to method, establishing to myself, in the progress of the work, such rules as experience and analogy suggested to me; experience, which practice and observation were continually increasing; and analogy, which, though in some words obscure, was evident in others. In adjusting the ORTHOGRAPHY, which has been to this time unsettled and fortuitous, I found it necessary to distinguish those irregularities that are inherent in our tongue, and perhaps coeval with it, from others which the ignorance or negligence of later writers has produced. Every language has its anomalies, which, though inconvenient, and in themselves once unnecessary, must be tolerated among the imperfections of human things, and which require only to be registered, that they may not be increased, and ascertained, that they may not be confounded: but every language has likewise its improprieties and absurdities, which it is the duty of the lexicographer to correct or proscribe. As language was at its beginning merely oral, all words of necessary or common use were spoken before they were written; and while they were unfixed by any visible signs, must have been spoken with great diversity, as we now observe those who cannot read catch sounds imperfectly, and utter them negligently. When this wild and barbarous jargon was first reduced to an alphabet, every penman endeavoured to express, as he could, the sounds which he was accustomed to pronounce or to receive, and vitiated in writing such words as were already vitiated in speech. The powers of the letters, when they were applied to a new language, must have been vague and unsettled, and therefore different hands would exhibit the same sound by different combinations. >>>From this uncertain pronunciation arise in a great part the various dialects of the same country, which will always be observed to grow fewer, and less different, as books are multiplied; and from this arbitrary representation of sounds by letters, proceeds that diversity of spelling observable in the Saxon remains, and I suppose in the first books of every nation, which perplexes or destroys analogy, and produces anomalous formations, that, being once incorporated, can never be afterward dismissed or reformed. Of this kind are the derivatives length from long, strength from strong, darling from dear, breadth from broad, from dry, drought, and from high, height, which Milton, in zeal for analogy, writes highth; Quid te exempta juvat spinis de pluribus una [Horace, Epistles, II. ii. 212]; to change all would be too much, and to change one is nothing. This uncertainty is most frequent in the vowels, which are so capriciously pronounced, and so differently modified, by accident or affectation, not only in every province, but in every mouth, that to them, as is well known to etymologists, little regard is to be shewn in the deduction of one language from another. Such defects are not errors in orthography, but spots of barbarity impressed so deep in the English language, that criticism can never wash them away: these, therefore, must be permitted to remain untouched; but many words have likewise been altered by accident, or depraved by ignorance, as the pronunciation of the vulgar has been weakly followed; and some still continue to be variously written, as authours differ in their care or skill: of these it was proper to enquire

the true orthography, which I have always considered as depending on their derivation, and have therefore referred them to their original languages: thus I write *enchant*, *enchantment*, *enchanter*, after the French and *incantation* after the Latin; thus *entire* is chosen rather than *intire*, because it passed to us not from the Latin *integer*, but from the French *entier*. Of many words it is difficult to say whether they were immediately received from the Latin or the French, since at the time when we had dominions in France, we had Latin service in our churches. It is, however, my opinion, that the French generally supplied us; for we have few Latin words, among the terms of domestick use, which are not French; but many French, which are very remote from Latin. Even in words of which the derivation is apparent, I have been often obliged to sacrifice uniformity to custom; thus I write, in compliance with a numberless majority, *convey* and *inveigh*, *deceit* and *receipt*, *fancy* and *phantom*; sometimes the derivative varies from the primitive, as *explain* and *explanation*, *repeat* and *repetition*. Some combinations of letters having the same power are used indifferently without any discoverable reason of choice, as in *choak*, *choke*; *soap*, *sope*; *jewel*, *fuel*, and many others; which I have sometimes inserted twice, that those who search for them under either form, may not search in vain. In examining the orthography of any doubtful word, the mode of spelling by which it is inserted in the series of the dictionary, is to be considered as that to which I give, perhaps not often rashly, the preference. I have left, in the examples, to every authour his own practice unmolested, that the reader may balance suffrages, and judge between us: but this question is not always to be determined by reputed or by real learning; some men, intent upon greater things, have thought little on sounds and derivations; some, knowing in the ancient tongues, have neglected those in which our words are commonly to be sought. Thus Hammond writes *fecibleness* for *feasibleness*, because I suppose he imagined it derived immediately from the Latin; and some words, such as *dependant*, *dependent*, *dependence*, vary their final syllable, as one or another language is present to the writer. In this part of the work, where caprice has long wanted without controul, and vanity sought praise by petty reformation, I have endeavoured to proceed with a scholar's reverence for antiquity, and a grammarian's regard to the genius of our tongue. I have attempted few alterations, and among those few, perhaps the greater part is from the modern to the ancient practice; and I hope I may be allowed to recommend to those, whose thoughts have been perhaps employed too anxiously on verbal singularities, not to disturb, upon narrow views, or for minute propriety, the orthography of their fathers. It has been asserted, that for the law to be KNOWN, is of more importance than to be RIGHT. Change, says Hooker, is not made without inconvenience, even from worse to better. There is in constancy and stability a general and lasting advantage, which will always overbalance the slow improvements of gradual correction. Much less ought our written language to comply with the corruptions of oral utterance, or copy that which every variation of time or place makes different from itself, and imitate those changes, which will again be changed, while imitation is employed in observing them. This recommendation of steadiness and uniformity does not proceed from an opinion, that particular combinations of letters have much influence on human happiness; or that truth may not be successfully taught by modes of spelling fanciful and erroneous: I am not yet so lost in lexicography, as to I forget that WORDS ARE THE DAUGHTERS OF EARTH, AND THAT THINGS ARE THE SONS OF HEAVEN. Language is only the instrument of science, and words are but the signs of ideas: I wish, however, that the instrument might be less apt to decay, and that signs might be permanent, like the things which they denote. In settling the orthography, I have not wholly neglected the pronunciation, which I have directed, by printing an accent upon the acute or elevated syllable. It will sometimes be found, that the accent is placed by the authour quoted, on a different syllable from that marked in the alphabetical series; it is then to be understood, that custom has varied, or that the authour has, in my opinion, pronounced wrong. Short directions are sometimes given where the sound of letters is irregular; and if they are sometimes omitted, defect in such minute observations will be more easily excused, than superfluity. In the investigation both of the orthography and signification of words, their ETYMOLOGY was necessarily to be considered, and they were therefore to be divided into primitives and derivatives. A primitive word, is that which can be traced no further to any English root; thus *circumspect*, *circumvent*, *circumstance*, *delude*, *concave* and *complicate*, though compounds in the Latin, are to us primitives. Derivatives are all those that can be referred to any word in English of greater simplicity. The derivatives I have referred to their primitives, with an accuracy sometimes needless; for who does not see that remoteness comes from remote, lovely from love, concavity from concave, and demonstrative from demonstrate? but this grammatical exuberance the scheme of my work did not allow me to repress. It is of great importance in examining the general fabrick of a language, to trace one word from another, by noting the usual modes of derivation and inflection; and uniformity must be preserved in systematical works, though sometimes at the expence of particular propriety. Among other derivatives I have been careful to insert and elucidate the anomalous plurals of nouns and preterites of verbs, which in the Teutonick dialects are very frequent, and though familiar to those who have always used them, interrupt and embarrass the learners of our language. The two languages from which our primitives have been derived are the Roman and Teutonick: under the Roman I comprehend the French and provincial tongues; and under the Teutonick range the Saxon, German, and all their kindred dialects. Most of our polysyllables are Roman, and our

words of one syllable are very often Teutonic. In assigning the Roman original, it has perhaps sometimes happened that I have mentioned only the Latin, when the word was borrowed from the French, and considering myself as employed only in the illustration of my own language, I have not been very careful to observe whether the Latin word be pure or barbarous, or the French elegant or obsolete. For the Teutonic etymologies, I am commonly indebted to Junius and Skinner, the only names which I have forbore to quote when I copied their books; not that I might appropriate their labours or usurp their honours, but that I might spare a perpetual repetition by one general acknowledgment. Of these, whom I ought not to mention but with the reverence due to instructors and benefactors, Junius appears to have excelled in extent of learning, and Skinner in rectitude of understanding. Junius was accurately skilled in all the northern languages. Skinner probably examined the ancient and remoter dialects only by occasional inspection into dictionaries; but the learning of Junius is often of no other use than to show him a track by which he may deviate from his purpose, to which Skinner always presses forward by the shortest way. Skinner is often ignorant, but never ridiculous: Junius is always full of knowledge; but his variety distracts his judgment, and his learning is very frequently disgraced by his absurdities. The votaries of the northern muses will not perhaps easily restrain their indignation, when they find the name of Junius thus degraded by a disadvantageous comparison; but whatever reverence is due to his diligence, or his attainments, it can be no criminal degree of censoriousness to charge that etymologist with want of judgment, who can seriously derive dream from drama, because life is a drama, and a drama is a dream? and who declares with a tone of defiance, that no man can fail to derive moan from [in Greek], monos, single or solitary, who considers that grief naturally loves to be alone. [Footnote: That I may not appear to have spoken too irreverently of Junius, I have here subjoined a few Specimens of his etymological extravagance. BANISH. religare, ex banno vel territorio exigere, in exilium agere. G. bannir. It. bandire, bandeggiare. H. bandir. B. bannen. A. Evi medii s criptores bannire dicebant. V. Spelm. in Bannum & in Banleuga. Quoniam vero regionum urbiumq; limites arduis plerumq; montibus, altis fluminibus, longis deniq; flexuosis; angustissimarum viarum anfractibus includebantur, fieri potest id genus limites ban did ab eo quod [word in Greek] & [word in Greek] Tarentinis olim, sicuti tradit Hesychius, vocabantur [words in Greek], "obliquae ac minime in rectum tendentes viae." Ac fortasse quoque huc facit quod [word in Greek], eodem Hesychio teste, dicebant [words in Greek] montes arduos. EMPTY, emtie, vacuus, inanis. A. S. AEmtiz. Nescio an sint ab [word in Greek] vel [word in Greek]. Vomo, evomo, vomitu evacuo. Videtur interim etymologiam hanc non obscure firmare codex Rush. Mat. xii. 22. ubi antique scriptum invenimus [unknown language]. "Invenit cam vacantem." HILL, mons, collis. A. S. hyll. Quod videri potest abscissum ex [word in Greek] vel [word in Greek]. Collis, tumulus, locus in plano editor. Hom. II. b. v. 811, [words in Greek]. Ubi auctori brevium scholiorum [words in Greek]. NAP, to take a nap. Dormire, condormiscere. Cym. heppian. A. S. hnaeppan. Quod postremum videri potest desumptum ex [word in Greek], obscuritas, tenebrae: nihil enim aequae solet conciliare somnum, quam caliginosa profundae noctis obscuritas. STAMMERER, Balbus, blaesus. Goth. STAMMS. A. S. stamer, stamur. D. stam. B. stameler. Su. stamma. Isl. stamr. Sunt a [word in Greek] vel [word in Greek] nimia loquacitate alios offendere; quod impedit loquentes libentissime garrere soleant; vel quod aliis nimii semper videantur, etiam parcissime loquentes.] Our knowledge of the northern literature is so scanty, that of words undoubtedly Teutonic the original is not always to be found in any ancient language; and I have therefore inserted Dutch or German substitutes, which I consider not as radical but parallel, not as the parents, but sisters of the English. The words which are represented as thus related by descent or cognation, do not always agree in sense; for it is incident to words, as to their authors, to degenerate from their ancestors, and to change their manners when they change their country. It is sufficient, in etymological enquiries, if the senses of kindred words be found such as may easily pass into each other, or such as may both be referred to one general idea. The etymology, so far as it is yet known, was easily found in the volumes where it is particularly and professedly delivered; and, by proper attention to the rules of derivation, the orthography was soon adjusted. But to COLLECT the WORDS of our language was a task of greater difficulty: the deficiency of dictionaries was immediately apparent; and when they were exhausted, what was yet wanting must be sought by fortuitous and unguided excursions into books, and gleaned as industry should find, or chance should offer it, in the boundless chaos of a living speech. My search, however, has been either skilful or lucky; for I have much augmented the vocabulary. As my design was a dictionary, common or appellative, I have omitted all words which have relation to proper names; such as Arian, Socinian, Calvinist, Benedictine, Mahometan; but have retained those of a more general nature, as Heathen, Pagan. Of the terms of art I have received such as could be found either in books of science or technical dictionaries; and have often inserted, from philosophical writers, words which are supported perhaps only by a single authority, and which being not admitted into general use, stand yet as candidates or probationers, and must depend for their adoption on the suffrage of futurity. The words which our authors have introduced by their knowledge of foreign languages, or ignorance of their own, by vanity or wantonness, by compliance with fashion or lust of innovation, I have registred as they occurred, though commonly only to censure them, and warn others against the folly of naturalizing useless foreigners to the injury of the natives. I have not

rejected any by design, merely because they were unnecessary or exuberant; but have received those which by different writers have been differently formed, as viscid, and viscosity, viscous, and viscosity. Compounded or double words I have seldom noted, except when they obtain a signification different from that which the components have in their simple state. Thus highwayman, woodman, and horsecourser, require an explanation; but of thieflike or coachdriver no notice was needed, because the primitives contain the meaning of the compounds. Words arbitrarily formed by a constant and settled analogy, like diminutive adjectives in ish, as greenish, bluish, adverbs in ly, as dully, openly, substantives in ness, as vileness, faultiness, were less diligently sought, and sometimes have been omitted, when I had no authority that invited me to insert them; not that they are not genuine and regular offsprings of English roots, but because their relation to the primitive being always the same, their signification cannot be mistaken. The verbal nouns in ing, such as the keeping of the castle, the leading of the army, are always neglected, or placed only to illustrate the sense of the verb, except when they signify things as well as actions, and have therefore a plural number, as dwelling, living; or have an absolute and abstract signification, as colouring, painting, learning. The participles are likewise omitted, unless, by signifying rather habit or quality than action, they take the nature of adjectives; as a thinking man, a man of prudence; a pacing horse, a horse that can pace: these I have ventured to call participial adjectives. But neither are these always inserted, because they are commonly to be understood, without any danger of mistake, by consulting the verb. Obsolete words are admitted, when they are found in authours not obsolete, or when they have any force or beauty that may deserve revival. As composition is one of the chief characteristics of a language, I have endeavoured to make some reparation for the universal negligence of my predecessors, by inserting great numbers of compounded words, as may be found under after, fore, new, night, fair, and many more. These, numerous as they are, might be multiplied, but that use and curiosity are here satisfied, and the frame of our language and modes of our combination amply discovered. Of some forms of composition, such as that by which re is prefixed to note repetition, and un to signify contrariety or privation, all the examples cannot be accumulated, because the use of these particles, if not wholly arbitrary, is so little limited, that they are hourly affixed to new words as occasion requires, or is imagined to require them. There is another kind of composition more frequent in our language than perhaps in any other, from which arises to foreigners the greatest difficulty. We modify the signification of many verbs by a particle subjoined; as to come off, to escape by a fetch; to fall on, to attack; to fall off, to apostatize; to break off, to stop abruptly; to bear out, to justify; to fall in, to comply; to give over, to cease; to set off, to embellish; to set in, to begin a continual tenour; to set out, to begin a course or journey; to take off, to copy; with innumerable expressions of the same kind, of which some appear wildly irregular, being so far distant from the sense of the simple words, that no sagacity will be able to trace the steps by which they arrived at the present use. These I have noted with great care; and though I cannot flatter myself that the collection is complete, I believe I have so far assisted the students of our language, that this kind of phraseology will be no longer insuperable; and the combinations of verbs and particles, by chance omitted, will be easily explained by comparison with those that may be found. Many words yet stand supported only by the name of Bailey, Ainsworth, Philips, or the contracted Dict. for Dictionaries subjoined; of these I am not always certain that they are read in any book but the works of lexicographers. Of such I have omitted many, because I had never read them; and many I have inserted, because they may perhaps exist, though they have escaped my notice: they are, however, to be yet considered as resting only upon the credit of former dictionaries. Others, which I considered as useful, or know to be proper, though I could not at present support them by authorities, I have suffered to stand upon my own attestation, claiming the same privilege with my predecessors of being sometimes credited without proof. The words, thus selected and disposed, are grammatically considered; they are referred to the different parts of speech; traced, when they are irregularly inflected, through their various terminations; and illustrated by observations, not indeed of great or striking importance, separately considered, but necessary to the elucidation of our language, and hitherto neglected or forgotten by English grammarians. That part of my work on which I expect malignity most frequently to fasten, is the explanation; in which I cannot hope to satisfy those, who are perhaps not inclined to be pleased, since I have not always been able to satisfy myself. To interpret a language by itself is very difficult; many words cannot be explained by synonymes, because the idea signified by them has not more than one appellation; nor by paraphrase, because simple ideas cannot be described. When the nature of things is unknown, or the notion unsettled and indefinite, and various in various minds, the words by which such notions are conveyed, or such things denoted, will be ambiguous and perplexed. And such is the fate of hapless lexicography, that not only darkness, but light, impedes and distresses it; things may be not only too little, but too much known, to be happily illustrated. To explain, requires the use of terms less abstruse than that which is to be explained, and such terms cannot always be found; for as nothing can be proved but by supposing something intuitively known, and evident without proof, so nothing can be defined but by the use of words too plain to admit a definition. Other words there are, of which the sense is too subtle and evanescent to be fixed in a paraphrase; such are all those which are by the grammarians termed expletives, and, in dead languages, are suffered to pass for empty

sounds, of no other use than to fill a verse, or to modulate a period, but which are easily perceived in living tongues to have power and emphasis, though it be sometimes such as no other form of expression can convey. My labour has likewise been much increased by a class of verbs too frequent in the English language, of which the signification is so loose and general, the use so vague and indeterminate, and the senses detorted so widely from the first idea, that it is hard to trace them through the maze of variation, to catch them on the brink of utter inanity, to circumscribe them by any limitations, or interpret them by any words of distinct and settled meaning; such are bear, break, come, cast, full, get, give, do, put, set, go, run, make, take, turn, throw. If of these the whole power is not accurately delivered, it must be remembered, that while our language is yet living, and variable by the caprice of every one that speaks it, these words are hourly shifting their relations, and can no more be ascertained in a dictionary, than a grove, in the agitation of a storm, can be accurately delineated from its picture in the water. The particles are among all nations applied with so great latitude, that they are not easily reducible under any regular scheme of explication: this difficulty is not less, nor perhaps greater, in English, than in other languages. I have laboured them with diligence, I hope with success; such at least as can be expected in a task, which no man, however learned or sagacious, has yet been able to perform. Some words there are which I cannot explain, because I do not understand them; these might have been omitted very often with little inconvenience, but I would not so far indulge my vanity as to decline this confession: for when Tully owns himself ignorant whether *lessus*, in the twelve tables, means a funeral song, or mourning garment; and Aristotle doubts whether [word in Greek] in the Iliad, signifies a mule, or muleteer, I may surely, without shame, leave some obscurities to happier industry, or future information. The rigour of interpretative lexicography requires that the explanation, and the word explained, should always be reciprocal; this I have always endeavoured, but could not always attain. Words are seldom exactly synonymous; a new term was not introduced, but because the former was thought inadequate: names, therefore, have often many ideas, but few ideas have many names. It was then necessary to use the proximate word, for the deficiency of single terms can very seldom be supplied by circumlocution; nor is the inconvenience great of such mutilated interpretations, because the sense may easily be collected entire from the examples. In every word of extensive use, it was requisite to mark the progress of its meaning, and show by what gradations of intermediate sense it has passed from its primitive to its remote and accidental signification; so that every foregoing explanation should tend to that which follows, and the series be regularly concatenated from the first notion to the last. This is specious, but not always practicable; kindred senses may be so interwoven, that the perplexity cannot be disentangled, nor any reason be assigned why one should be ranged before the other. When the radical idea branches out into parallel ramifications, how can a consecutive series be formed of senses in their nature collateral? The shades of meaning sometimes pass imperceptibly into each other; so that though on one side they apparently differ, yet it is impossible to mark the point of contact. Ideas of the same race, though not exactly alike, are sometimes so little different, that no words can express the dissimilitude, though the mind easily perceives it, when they are exhibited together; and sometimes there is such a confusion of acceptations, that discernment is wearied, and distinction puzzled, and perseverance herself hurries to an end, by crowding together what she cannot separate. These complaints of difficulty will, by those that have never considered words beyond their popular use, be thought only the jargon of a man willing to magnify his labours, and procure veneration to his studies by involution and obscurity. But every art is obscure to those that have not learned it: this uncertainty of terms, and commixture of ideas, is well known to those who have joined philosophy with grammar; and if I have not expressed them very clearly, it must be remembered that I am speaking of that which words are insufficient to explain. The original sense of words is often driven out of use by their metaphorical acceptations, yet must be inserted for the sake of a regular origination. Thus I know not whether *ardour* is used for material heat, or whether *flagrant*, in English, ever signifies the same with *burning*; yet such are the primitive ideas of these words, which are therefore set first, though without examples, that the figurative senses may be commodiously deduced. Such is the exuberance of signification which many words have obtained, that it was scarcely possible to collect all their senses; sometimes the meaning of derivatives must be sought in the mother term, and sometimes deficient explanations of the primitive may be supplied in the train of derivation. In any case of doubt or difficulty, it will be always proper to examine all the words of the same race; for some words are slightly passed over to avoid repetition, some admitted easier and clearer explanation than others, and all will be better understood, as they are considered in greater variety of structures and relations. All the interpretations of words are not written with the same skill, or the same happiness: things equally easy in themselves, are not all equally easy to any single mind. Every writer of a long work commits errors, where there appears neither ambiguity to mislead, nor obscurity to confound him; and in a search like this, many felicities of expression will be casually overlooked, many convenient parallels will be forgotten, and many particulars will admit improvement from a mind utterly unequal to the whole performance. But many seeming faults are to be imputed rather to the nature of the undertaking, than the negligence of the performer. Thus some explanations are unavoidably reciprocal or circular, as *hind*, the female of the stag; *stag*, the male of the hind: sometimes easier words are changed into harder, as *burial*

into sepulture or interment, drier into desiccative, dryness into siccity or aridity, fit into paroxysm; for the easiest word, whatever it be, can never be translated into one more easy. But easiness and difficulty are merely relative, and if the present prevalence of our language should invite foreigners to this dictionary, many will be assisted by those words which now seem only to increase or produce obscurity. For this reason I have endeavoured frequently to join a Teutonick and Roman interpretation, as to cheer, to gladden, or exhilarate, that every learner of English may be assisted by his own tongue. The solution of all difficulties, and the supply of all defects, must be sought in the examples, subjoined to the various senses of each word, and ranged according to the time of their authours. When first I collected these authorities, I was desirous that every quotation should be useful to some other end than the illustration of a word; I therefore extracted from philosophers principles of science; from historians remarkable facts; from chymists complete processes; from divines striking exhortations; and from poets beautiful descriptions. Such is design, while it is yet at a distance from execution. When the time called upon me to range this accumulation of elegance and wisdom into an alphabetical series, I soon discovered that the bulk of my volumes would fright away the student, and was forced to depart from my scheme of including all that was pleasing or useful in English literature, and reduce my transcripts very often to clusters of words, in which scarcely any meaning is retained; thus to the weariness of copying, I was condemned to add the vexation of expunging. Some passages I have yet spared, which may relieve the labour of verbal searches, and intersperse with verdure and flowers the dusty deserts of barren philology. The examples, thus mutilated, are no longer to be considered as conveying the sentiments or doctrine of their authours; the word for the sake of which they are inserted, with all its appendant clauses, has been carefully preserved; but it may sometimes happen, by hasty detraction, that the general tendency of the sentence may be changed: the divine may desert his tenets, or the philosopher his system. Some of the examples have been taken from writers who were never mentioned as masters of elegance or models of stile; but words must be sought where they are used; and in what pages, eminent for purity, can terms of manufacture or agriculture be found? Many quotations serve no other purpose, than that of proving the bare existence of words, and are therefore selected with less scrupulousness than those which are to teach their structures and relations. My purpose was to admit no testimony of living authours, that I might not be misled by partiality, and that none of my cotemporaries might have reason to complain; nor have I departed from this resolution, but when some performance of uncommon excellence excited my veneration, when my memory supplied me, from late books, with an example that was wanting, or when my heart, in the tenderness of friendship, solicited admission for a favourite name. So far have I been from any care to grace my pages with modern decorations, that I have studiously endeavoured to collect examples and authorities from the writers before the restoration, whose works I regard as the wells of English undefiled, as the pure sources of genuine diction. Our language, for almost a century, has, by the concurrence of many causes, been gradually departing from its original Teutonick character, and deviating towards a Gallick structure and phraseology, from which it ought to be our endeavour to recal it, by making our ancient volumes the ground-work of stile, admitting among the additions of later times, only such as may supply real deficiencies, such as are readily adopted by the genius of our tongue, and incorporate easily with our native idioms. But as every language has a time of rudeness antecedent to perfection, as well as of false refinement and declension, I have been cautious lest my zeal for antiquity might drive me into times too remote, and crowd my book with words now no longer understood. I have fixed Sidney's work for the boundary, beyond which I make few excursions. From the authours which rose in the time of Elizabeth, a speech might be formed adequate to all the purposes of use and elegance. If the language of theology were extracted from Hooker and the translation of the Bible; the terms of natural knowledge from Bacon; the phrases of policy, war, and navigation from Raleigh; the dialect of poetry and fiction from Spenser and Sidney; and the diction of common life from Shakespeare, few ideas would be lost to mankind, for want of English words, in which they might be expressed. It is not sufficient that a word is found, unless it be so combined as that its meaning is apparently determined by the tract and tenour of the sentence; such passages I have therefore chosen, and when it happened that any authour gave a definition of a term, or such an explanation as is equivalent to a definition, I have placed his authority as a supplement to my own, without regard to the chronological order, that is otherwise observed. Some words, indeed, stand unsupported by any authority, but they are commonly derivative nouns or adverbs, formed from their primitives by regular and constant analogy, or names of things seldom occurring in books, or words of which I have reason to doubt the existence. There is more danger of censure from the multiplicity than paucity of examples; authorities will sometimes seem to have been accumulated without necessity or use, and perhaps some will be found, which might, without loss, have been omitted. But a work of this kind is not hastily to be charged with superfluities: those quotations, which to careless or unskilful perusers appear only to repeat the same sense, will often exhibit, to a more accurate examiner, diversities of signification, or, at least, afford different shades of the same meaning: one will shew the word applied to persons, another to things; one will express an ill, another a good, and a third a neutral sense; one will prove the expression genuine from an ancient authour; another will shew it elegant from a modern: a doubtful authority is corroborated by another of more credit; an

ambiguous sentence is ascertained by a passage clear and determinate; the word, how often soever repeated, appears with new associates and in different combinations, and every quotation contributes something to the stability or enlargement of the language. When words are used equivocally, I receive them in either sense; when they are metaphorical, I adopt them in their primitive acceptation. I have sometimes, though rarely, yielded to the temptation of exhibiting a genealogy of sentiments, by shewing how one authour copied the thoughts and diction of another: such quotations are indeed little more than repetitions, which might justly be censured, did they not gratify the mind, by affording a kind of intellectual history. The various syntactical structures occurring in the examples have been carefully noted; the licence or negligence with which many words have been hitherto used, has made our stile capricious and indeterminate; when the different combinations of the same word are exhibited together, the preference is readily given to propriety, and I have often endeavoured to direct the choice. Thus have I laboured by settling the orthography, displaying the analogy, regulating the structures, and ascertaining the signification of English words, to perform all the parts of a faithful lexicographer: but I have not always executed my own scheme, or satisfied my own expectations. The work, whatever proofs of diligence and attention it may exhibit, is yet capable of many improvements: the orthography which I recommend is still controvertible, the etymology which I adopt is uncertain, and perhaps frequently erroneous; the explanations are sometimes too much contracted, and sometimes too much diffused, the significations are distinguished rather with subtilty than skill, and the attention is harrassed with unnecessary minuteness. The examples are too often injudiciously truncated, and perhaps sometimes, I hope very rarely, alleged in a mistaken sense; for in making this collection I trusted more to memory, than, in a state of disquiet and embarrassment, memory can contain, and purposed to supply at the review what was left incomplete in the first transcription. Many terms appropriated to particular occupations, though necessary and significant, are undoubtedly omitted; and of the words most studiously considered and exemplified, many senses have escaped observation. Yet these failures, however frequent, may admit extenuation and apology. To have attempted much is always laudable, even when the enterprize is above the strength that undertakes it: To rest below his own aim is incident to every one whose fancy is active, and whose views are comprehensive; nor is any man satisfied with himself because he has done much, but because he can conceive little. When first I engaged in this work, I resolved to leave neither words nor things unexamined, and pleased myself with a prospect of the hours which I should revel away in feasts of literature, with the obscure recesses of northern learning, which I should enter and ransack; the treasures with which I expected every search into those neglected mines to reward my labour, and the triumph with which I should display my acquisitions to mankind. When I had thus enquired into the original of words, I resolved to show likewise my attention to things; to pierce deep into every science, to enquire the nature of every substance of which I inserted the name, to limit every idea by a definition strictly logical, and exhibit every production of art or nature in an accurate description, that my book might be in place of all other dictionaries whether appellative or technical. But these were the dreams of a poet doomed at last to wake a lexicographer. I soon found that it is too late to look for instruments, when the work calls for execution, and that whatever abilities I had brought to my task, with those I must finally perform it. To deliberate whenever I doubted, to enquire whenever I was ignorant, would have protracted the undertaking without end, and, perhaps, without much improvement; for I did not find by my first experiments, that that I had not of my own was easily to be obtained: I saw that one enquiry only gave occasion to another, that book referred to book, that to search was not always to find, and to find was not always to be informed; and that thus to persue perfection, was, like the first inhabitants of Arcadia, to chace the sun, which, when they had reached the hill where he seemed to rest, was still beheld at the same distance from them. I then contracted my design, determining to confide in myself, and no longer to solicit auxiliaries, which produced more incumbrance than assistance: by this I obtained at least one advantage, that I set limits to my work, which would in time be ended, though not completed. Despondency has never so far prevailed as to depress me to negligence; some faults will at last appear to be the effects of anxious diligence and persevering activity. The nice and subtle ramifications of meaning were not easily avoided by a mind intent upon accuracy, and convinced of the necessity of disentangling combinations, and separating similitudes. Many of the distinctions which to common readers appear useless and idle, will be found real and important by men versed in the school philosophy, without which no dictionary shall ever be accurately compiled, or skilfully examined. Some senses however there are, which, though not the same, are yet so nearly allied, that they are often confounded. Most men think indistinctly, and therefore cannot speak with exactness; and consequently some examples might be indifferently put to either signification: this uncertainty is not to be imputed to me, who do not form, but register the language; who do not teach men how they should think, but relate how they have hitherto expressed their thoughts. The imperfect sense of some examples I lamented, but could not remedy, and hope they will be compensated by innumerable passages selected with propriety, and preserved with exactness; some shining with sparks of imagination, and some replete with treasures of wisdom. The orthography and etymology, though imperfect, are not imperfect for want of care, but because care will not always be successful, and recollection or information come too late for use. That many terms of art and manufacture are

omitted, must be frankly acknowledged; but for this defect I may boldly allege that it was unavoidable: I could not visit caverns to learn the miner's language, nor take a voyage to perfect my skill in the dialect of navigation, nor visit the warehouses of merchants, and shops of artificers, to gain the names of wares, tools and operations, of which no mention is found in books; what favourable accident, or easy enquiry brought within my reach, has not been neglected; but it had been a hopeless labour to glean up words, by courting living information, and contesting with the sullenness of one, and the roughness of another. To furnish the academicians della Crusca with words of this kind, a series of comedies called *la Fiera*, or the Fair, was professedly written by Buonaroti; but I had no such assistant, and therefore was content to want what they must have wanted likewise, had they not luckily been so supplied. Nor are all words which are not found in the vocabulary, to be lamented as omissions. Of the laborious and mercantile part of the people, the diction is in a great measure casual and mutable; many of their terms are formed for some temporary or local convenience, and though current at certain times and places, are in others utterly unknown. This fugitive cant, which is always in a state of increase or decay, cannot be regarded as any part of the durable materials of a language, and therefore must be suffered to perish with other things unworthy of preservation. Care will sometimes betray to the appearance of negligence. He that is catching opportunities which seldom occur, will suffer those to pass by unregarded, which he expects hourly to return; he that is searching for rare and remote things, will neglect those that are obvious and familiar: thus many of the most common and cursory words have been inserted with little illustration, because in gathering the authorities, I forbore to copy those which I thought likely to occur whenever they were wanted. It is remarkable that, in reviewing my collection, I found the word sea unexemplified. Thus it happens, that in things difficult there is danger from ignorance, and in things easy from confidence; the mind, afraid of greatness, and disdainful of littleness, hastily withdraws herself from painful searches, and passes with scornful rapidity over tasks not adequate to her powers, sometimes too secure for caution, and again too anxious for vigorous effort; sometimes idle in a plain path, and sometimes distracted in labyrinths, and dissipated by different intentions. A large work is difficult because it is large, even though all its parts might singly be performed with facility; where there are many things to be done, each must be allowed its share of time and labour, in the proportion only which it bears to the whole; nor can it be expected, that the stones which form the dome of a temple, should be squared and polished like the diamond of a ring. Of the event of this work, for which, having laboured it with so much application, I cannot but have some degree of parental fondness, it is natural to form conjectures. Those who have been persuaded to think well of my design, will require that it should fix our language, and put a stop to those alterations which time and chance have hitherto been suffered to make in it without opposition. With this consequence I will confess that I flattered myself for a while; but now begin to fear that I have indulged expectation which neither reason nor experience can justify. When we see men grow old and die at a certain time one after another, from century to century, we laugh at the elixir that promises to prolong life to a thousand years; and with equal justice may the lexicographer be derided, who being able to produce no example of a nation that has preserved their words and phrases from mutability, shall imagine that his dictionary can embalm his language, and secure it from corruption and decay, that it is in his power to change sublunary nature, and clear the world at once from folly, vanity, and affectation. With this hope, however, academies have been instituted, to guard the avenues of their languages, to retain fugitives, and repulse intruders; but their vigilance and activity have hitherto been vain; sounds are too volatile and subtle for legal restraints; to enchain syllables, and to lash the wind, are equally the undertakings of pride, unwilling to measure its desires by its strength. The French language has visibly changed under the inspection of the academy; the stile of Amelot's translation of Father Paul is observed by Le Courayer to be *un peu passe*; and no Italian will maintain that the diction of any modern writer is not perceptibly different from that of Boccace, Machiavel, or Caro. Total and sudden transformations of a language seldom happen; conquests and migrations are now very rare: but there are other causes of change, which, though slow in their operation, and invisible in their progress, are perhaps as much superiour to human resistance, as the revolutions of the sky, or intumescence of the tide. Commerce, however necessary, however lucrative, as it depraves the manners, corrupts the language; they that have frequent intercourse with strangers, to whom they endeavour to accommodate themselves, must in time learn a mingled dialect, like the jargon which serves the traffickers on the Mediterranean and Indian coasts. This will not always be confined to the exchange, the warehouse, or the port, but will be communicated by degrees to other ranks of the people, and be at last incorporated with the current speech. There are likewise internal causes equally forcible. The language most likely to continue long without alteration, would be that of a nation raised a little, and but a little above barbarity, secluded from strangers, and totally employed in procuring the conveniencies of life; either without books, or, like some of the Mahometan countries, with very few: men thus busied and unlearned, having only such words as common use requires, would perhaps long continue to express the same notions by the same signs. But no such constancy can be expected in a people polished by arts, and classed by subordination, where one part of the community is sustained and accommodated by the labour of the other. Those who have much leisure to think, will always be enlarging the stock of ideas, and every increase of

knowledge, whether real or fancied, will produce new words, or combinations of words. When the mind is unchained from necessity, it will range after convenience; when it is left at large in the fields of speculation, it will shift opinions; as any custom is disused, the words that expressed it must perish with it; as any opinion grows popular, it will innovate speech in the same proportion as it alters practice. As by the cultivation of various sciences, a language is amplified, it will be more furnished with words deflected from original sense; the geometrician will talk of a courtier's zenith, or the excentrick virtue of a wild hero, and the physician of sanguine expectations and phlegmatick delays. Copiousness of speech will give opportunities to capricious choice, by which some words will be preferred, and others degraded; vicissitudes of fashion will enforce the use of new, or extend the signification of known terms. The tropes of poetry will make hourly encroachments, and the metaphorical will become the current sense: pronunciation will be varied by levity or ignorance, and the pen must at length comply with the tongue; illiterate writers will at one time or other, by publick infatuation, rise into renown, who, not knowing the original import of words, will use them with colloquial licentiousness, confound distinction, and forget propriety. As politeness increases, some expressions will be considered as too gross and vulgar for the delicate, others as too formal and ceremonious for the gay and airy; new phrases are therefore adopted, which must, for the same reasons, be in time dismissed. Swift, in his petty treatise on the English language, allows that new words must sometimes be introduced, but proposes that none should be suffered to become obsolete. But what makes a word obsolete, more than general agreement to forbear it? and how shall it be continued, when it conveys an offensive idea, or recalled again into the mouths of mankind, when it has once become unfamiliar by disuse, and displeasing by unfamiliarity? There is another cause of alteration more prevalent than any other, which yet in the present state of the world cannot be obviated. A mixture of two languages will produce a third distinct from both, and they will always be mixed, where the chief part of education, and the most conspicuous accomplishment, is skill in ancient or in foreign tongues. He that has long cultivated another language, will find its words and combinations crowd upon his memory; and haste and negligence, refinement and affectation, will obtrude borrowed terms and exotick expressions. The great pest of speech is frequency of translation. No book was ever turned from one language into another, without imparting something of its native idiom; this is the most mischievous and comprehensive innovation; single words may enter by thousands, and the fabrick of the tongue continue the same, but new phraseology changes much at once; it alters not the single stones of the building, but the order of the columns. If an academy should be established for the cultivation of our stile, which I, who can never wish to see dependance multiplied, hope the spirit of English liberty will hinder or destroy, let them, instead of compiling grammars and dictionaries, endeavour, with all their influence, to stop the licence of translatours, whose idleness and ignorance, if it be suffered to proceed, will reduce us to babble a dialect of France. If the changes that we fear be thus irresistible, what remains but to acquiesce with silence, as in the other insurmountable distresses of humanity? It remains that we retard what we cannot repel, that we palliate what we cannot cure. Life may be lengthened by care, though death cannot be ultimately defeated: tongues, like governments, have a natural tendency to degeneration; we have long preserved our constitution, let us make some struggles for our language. In hope of giving longevity to that which its own nature forbids to be immortal, I have devoted this book, the labour of years, to the honour of my country, that we may no longer yield the palm of philology, without a contest, to the nations of the continent. The chief glory of every people arises from its authours: whether I shall add any thing by my own writings to the reputation of English literature, must be left to time: much of my life has been lost under the pressures of disease; much has been trifled away; and much has always been spent in provision for the day that was passing over me; but I shall not think my employment useless or ignoble, if by my assistance foreign nations, and distant ages, gain access to the propagators of knowledge, and understand the teachers of truth; if my labours afford light to the repositories of science, and add celebrity to Bacon, to Hooker, to Milton, and to Boyle. When I am animated by this wish, I look with pleasure on my book, however defective, and deliver it to the world with the spirit of a man that has endeavoured well. That it will immediately become popular I have not promised to myself: a few wild blunders, and risible absurdities, from which no work of such multiplicity was ever free, may for a time furnish folly with laughter, and harden ignorance in contempt; but useful diligence will at last prevail, and there never can be wanting some who distinguish desert; who will consider that no dictionary of a living tongue ever can be perfect, since while it is hastening to publication, some words are budding, and some falling away; that a whole life cannot be spent upon syntax and etymology, and that even a whole life would not be sufficient; that he, whose design includes whatever language can express, must often speak of what he does not understand; that a writer will sometimes be hurried by eagerness to the end, and sometimes faint with weariness under a task, which Scaliger compares to the labours of the anvil and the mine; that what is obvious is not always known, and what is known is not always present; that sudden fits of inadvertency will surprize vigilance, slight avocations will seduce attention, and casual eclipses of the mind will darken learning; and that the writer shall often in vain trace his memory at the moment of need, for that which yesterday he knew with intuitive readiness, and which will come uncalled into his thoughts tomorrow. In this work, when it shall be found that much

is omitted, let it not be forgotten that much likewise is performed; and though no book was ever spared out of tenderness to the authour, and the world is little solicitous to know whence proceeded the faults of that which it condemns; yet it may gratify curiosity to inform it, that the English Dictionary was written with little assistance of the learned, and without any patronage of the great; not in the soft obscurities of retirement, or under the shelter of academick bowers, but amidst inconvenience and distraction, in sickness and in sorrow. It may repress the triumph of malignant criticism to observe, that if our language is not here fully displayed, I have only failed in an attempt which no human powers have hitherto completed. If the lexicons of ancient tongues, now immutably fixed, and comprised in a few volumes, be yet, after the toil of successive ages, inadequate and delusive; if the aggregated knowledge, and co-operating diligence of the Italian academicians, did not secure them from the censure of Beni; if the embodied criticks of France, when fifty years had been spent upon their work, were obliged to change its oeconomy, and give their second edition another form, I may surely be contented without the praise of perfection, which, if I could obtain, in this gloom of solitude, what would it avail me? I have protracted my work till most of those whom I wished to please have sunk into the grave, and success and miscarriage are empty sounds: I therefore dismiss it with frigid tranquillity, having little to fear or hope from censure or from praise.

THE END

2. 18th Century: Jonathan Swift. *A Modest Proposal*

It is a melancholy object to those, who walk through this great town, or travel in the country, when they see the streets, the roads and cabin-doors crowded with beggars of the female sex, followed by three, four, or six children, all in rags, and importuning every passenger for an alms. These mothers instead of being able to work for their honest livelihood, are forced to employ all their time in strolling to beg sustenance for their helpless infants who, as they grow up, either turn thieves for want of work, or leave their dear native country, to fight for the Pretender in Spain, or sell themselves to the Barbadoes. I think it is agreed by all parties, that this prodigious number of children in the arms, or on the backs, or at the heels of their mothers, and frequently of their fathers, is in the present deplorable state of the kingdom, a very great additional grievance; and therefore whoever could find out a fair, cheap and easy method of making these children sound and useful members of the common-wealth, would deserve so well of the publick, as to have his statue set up for a preserver of the nation.

But my intention is very far from being confined to provide only for the children of professed beggars: it is of a much greater extent, and shall take in the whole number of infants at a certain age, who are born of parents in effect as little able to support them, as those who demand our charity in the streets. As to my own part, having turned my thoughts for many years, upon this important subject, and maturely weighed the several schemes of our projectors, I have always found them grossly mistaken in their computation. It is true, a child just dropt from its dam, may be supported by her milk, for a solar year, with little other nourishment: at most not above the value of two shillings, which the mother may certainly get, or the value in scraps, by her lawful occupation of begging; and it is exactly at one year old that I propose to provide for them in such a manner, as, instead of being a charge upon their parents, or the parish, or wanting food and raiment for the rest of their lives, they shall, on the contrary, contribute to the feeding, and partly to the cloathing of many thousands. There is likewise another great advantage in my scheme, that it will prevent those voluntary abortions, and that horrid practice of women murdering their bastard children, alas! too frequent among us, sacrificing the poor innocent babes, I doubt, more to avoid the expence than the shame, which would move tears and pity in the most savage and inhuman breast.

The number of souls in this kingdom being usually reckoned one million and a half, of these I calculate there may be about two hundred thousand couple whose wives are breeders; from which number I subtract thirty thousand couple, who are able to maintain their own children, (although I apprehend there cannot be so many, under the present distresses of the kingdom) but this being granted, there will remain an hundred and seventy thousand breeders. I again subtract fifty thousand, for those women who miscarry, or whose children die by accident or disease within the year. There only remain an hundred and twenty thousand children of poor parents annually born. The question therefore is, How this number shall be reared, and provided for? which, as I have already said, under the present situation of affairs, is utterly impossible by all the methods hitherto proposed. For we can neither employ them in handicraft or agriculture; we neither build houses, (I mean in the country) nor cultivate land: they can very seldom pick up a livelihood by stealing till they arrive at six years old; except where they are of towardly parts, although I confess they learn the rudiments much earlier; during which time they can however be properly looked upon only as probationers: As I have been informed by a principal gentleman in the county of Cavan, who protested to me, that he never knew above one or two instances under the age of six, even in a part of the kingdom so renowned for the quickest proficiency in that art.

I am assured by our merchants, that a boy or a girl before twelve years old, is no saleable commodity, and even when they come to this age, they will not yield above three pounds, or three pounds and half a crown at most, on the exchange; which cannot turn to account either to the parents or kingdom, the charge of nutriments and rags having been at least four times that value.

I shall now therefore humbly propose my own thoughts, which I hope will not be liable to the least objection. I have been assured by a very knowing American of my acquaintance in London, that a young healthy child well nursed, is, at a year old, a most delicious nourishing and wholesome food, whether stewed, roasted, baked, or boiled; and I make no doubt that it will equally serve in a fricasie, or a ragout.

I do therefore humbly offer it to publick consideration, that of the hundred and twenty thousand children, already computed, twenty thousand may be reserved for breed, whereof only one fourth part to be males; which is more than we allow to sheep, black cattle, or swine, and my reason is, that these children are seldom the fruits of marriage, a

circumstance not much regarded by our savages, therefore, one male will be sufficient to serve four females. That the remaining hundred thousand may, at a year old, be offered in sale to the persons of quality and fortune, through the kingdom, always advising the mother to let them suck plentifully in the last month, so as to render them plump, and fat for a good table. A child will make two dishes at an entertainment for friends, and when the family dines alone, the fore or hind quarter will make a reasonable dish, and seasoned with a little pepper or salt, will be very good boiled on the fourth day, especially in winter.

I have reckoned upon a medium, that a child just born will weigh 12 pounds, and in a solar year, if tolerably nursed, increaseth to 28 pounds. I grant this food will be somewhat dear, and therefore very proper for landlords, who, as they have already devoured most of the parents, seem to have the best title to the children. Infant's flesh will be in season throughout the year, but more plentiful in March, and a little before and after; for we are told by a grave author, an eminent French physician, that fish being a prolific dyet, there are more children born in Roman Catholick countries about nine months after Lent, the markets will be more glutted than usual, because the number of Popish infants, is at least three to one in this kingdom, and therefore it will have one other collateral advantage, by lessening the number of Papists among us.

I have already computed the charge of nursing a beggar's child (in which list I reckon all cottagers, labourers, and four-fifths of the farmers) to be about two shillings per annum, rags included; and I believe no gentleman would repine to give ten shillings for the carcass of a good fat child, which, as I have said, will make four dishes of excellent nutritive meat, when he hath only some particular friend, or his own family to dine with him. Thus the squire will learn to be a good landlord, and grow popular among his tenants, the mother will have eight shillings neat profit, and be fit for work till she produces another child. Those who are more thrifty (as I must confess the times require) may flea the carcass; the skin of which, artificially dressed, will make admirable gloves for ladies, and summer boots for fine gentlemen.

As to our City of Dublin, shambles may be appointed for this purpose, in the most convenient parts of it, and butchers we may be assured will not be wanting; although I rather recommend buying the children alive, and dressing them hot from the knife, as we do roasting pigs. A very worthy person, a true lover of his country, and whose virtues I highly esteem, was lately pleased, in discoursing on this matter, to offer a refinement upon my scheme. He said, that many gentlemen of this kingdom, having of late destroyed their deer, he conceived that the want of venison might be well supply'd by the bodies of young lads and maidens, not exceeding fourteen years of age, nor under twelve; so great a number of both sexes in every country being now ready to starve for want of work and service: And these to be disposed of by their parents if alive, or otherwise by their nearest relations. But with due deference to so excellent a friend, and so deserving a patriot, I cannot be altogether in his sentiments; for as to the males, my American acquaintance assured me from frequent experience, that their flesh was generally tough and lean, like that of our school-boys, by continual exercise, and their taste disagreeable, and to fatten them would not answer the charge. Then as to the females, it would, I think, with humble submission, be a loss to the publick, because they soon would become breeders themselves: And besides, it is not improbable that some scrupulous people might be apt to censure such a practice, (although indeed very unjustly) as a little bordering upon cruelty, which, I confess, hath always been with me the strongest objection against any project, how well soever intended.

But in order to justify my friend, he confessed, that this expedient was put into his head by the famous Salmanaazor, a native of the island Formosa, who came from thence to London, above twenty years ago, and in conversation told my friend, that in his country, when any young person happened to be put to death, the executioner sold the carcass to persons of quality, as a prime dainty; and that, in his time, the body of a plump girl of fifteen, who was crucified for an attempt to poison the Emperor, was sold to his imperial majesty's prime minister of state, and other great mandarins of the court in joints from the gibbet, at four hundred crowns. Neither indeed can I deny, that if the same use were made of several plump young girls in this town, who without one single groat to their fortunes, cannot stir abroad without a chair, and appear at a play-house and assemblies in foreign fineries which they never will pay for; the kingdom would not be the worse.

Some persons of a desponding spirit are in great concern about that vast number of poor people, who are aged, diseased, or maimed; and I have been desired to employ my thoughts what course may be taken, to ease the nation of so grievous an incumbrance. But I am not in the least pain upon that matter, because it is very well known, that

they are every day dying, and rotting, by cold and famine, and filth, and vermin, as fast as can be reasonably expected. And as to the young labourers, they are now in almost as hopeful a condition. They cannot get work, and consequently pine away from want of nourishment, to a degree, that if at any time they are accidentally hired to common labour, they have not strength to perform it, and thus the country and themselves are happily delivered from the evils to come.

I have too long digressed, and therefore shall return to my subject. I think the advantages by the proposal which I have made are obvious and many, as well as of the highest importance. For first, as I have already observed, it would greatly lessen the number of Papists, with whom we are yearly over-run, being the principal breeders of the nation, as well as our most dangerous enemies, and who stay at home on purpose with a design to deliver the kingdom to the Pretender, hoping to take their advantage by the absence of so many good Protestants, who have chosen rather to leave their country, than stay at home and pay tithes against their conscience to an episcopal curate. Secondly, The poorer tenants will have something valuable of their own, which by law may be made liable to a distress, and help to pay their landlord's rent, their corn and cattle being already seized, and money a thing unknown. Thirdly, Whereas the maintainance of an hundred thousand children, from two years old, and upwards, cannot be computed at less than ten shillings a piece per annum, the nation's stock will be thereby increased fifty thousand pounds per annum, besides the profit of a new dish, introduced to the tables of all gentlemen of fortune in the kingdom, who have any refinement in taste. And the money will circulate among our selves, the goods being entirely of our own growth and manufacture.

Fourthly, The constant breeders, besides the gain of eight shillings sterling per annum by the sale of their children, will be rid of the charge of maintaining them after the first year. Fifthly, This food would likewise bring great custom to taverns, where the vintners will certainly be so prudent as to procure the best receipts for dressing it to perfection; and consequently have their houses frequented by all the fine gentlemen, who justly value themselves upon their knowledge in good eating; and a skilful cook, who understands how to oblige his guests, will contrive to make it as expensive as they please. Sixthly, This would be a great inducement to marriage, which all wise nations have either encouraged by rewards, or enforced by laws and penalties. It would increase the care and tenderness of mothers towards their children, when they were sure of a settlement for life to the poor babes, provided in some sort by the publick, to their annual profit instead of expence. We should soon see an honest emulation among the married women, which of them could bring the fattest child to the market. Men would become as fond of their wives, during the time of their pregnancy, as they are now of their mares in foal, their cows in calf, or sow when they are ready to farrow; nor offer to beat or kick them (as is too frequent a practice) for fear of a miscarriage.

Many other advantages might be enumerated. For instance, the addition of some thousand carcasses in our exportation of barrel'd beef: the propagation of swine's flesh, and improvement in the art of making good bacon, so much wanted among us by the great destruction of pigs, too frequent at our tables; which are no way comparable in taste or magnificence to a well grown, fat yearly child, which roasted whole will make a considerable figure at a Lord Mayor's feast, or any other publick entertainment. But this, and many others, I omit, being studious of brevity. Supposing that one thousand families in this city, would be constant customers for infants flesh, besides others who might have it at merry meetings, particularly at weddings and christenings, I compute that Dublin would take off annually about twenty thousand carcasses; and the rest of the kingdom (where probably they will be sold somewhat cheaper) the remaining eighty thousand. I can think of no one objection, that will possibly be raised against this proposal, unless it should be urged, that the number of people will be thereby much lessened in the kingdom. This I freely own, and 'twas indeed one principal design in offering it to the world. I desire the reader will observe, that I calculate my remedy for this one individual Kingdom of Ireland, and for no other that ever was, is, or, I think, ever can be upon Earth. Therefore let no man talk to me of other expedients: Of taxing our absentees at five shillings a pound: Of using neither cloaths, nor household furniture, except what is of our own growth and manufacture: Of utterly rejecting the materials and instruments that promote foreign luxury: Of curing the expensiveness of pride, vanity, idleness, and gaming in our women: Of introducing a vein of parsimony, prudence and temperance: Of learning to love our country, wherein we differ even from Laplanders, and the inhabitants of Topinamboo: Of quitting our animosities and factions, nor acting any longer like the Jews, who were murdering one another at the very moment their city was taken: Of being a little cautious not to sell our country and consciences for nothing: Of teaching landlords to have at least one degree of mercy towards their tenants. Lastly, of putting a spirit of honesty, industry, and skill into our shop-keepers, who, if a resolution could now be taken to buy only our native goods,

would immediately unite to cheat and exact upon us in the price, the measure, and the goodness, nor could ever yet be brought to make one fair proposal of just dealing, though often and earnestly invited to it.

Therefore I repeat, let no man talk to me of these and the like expedients, 'till he hath at least some glimpse of hope, that there will ever be some hearty and sincere attempt to put them into practice. But, as to my self, having been wearied out for many years with offering vain, idle, visionary thoughts, and at length utterly despairing of success, I fortunately fell upon this proposal, which, as it is wholly new, so it hath something solid and real, of no expence and little trouble, full in our own power, and whereby we can incur no danger in disobliging England. For this kind of commodity will not bear exportation, and flesh being of too tender a consistence, to admit a long continuance in salt, although perhaps I could name a country, which would be glad to eat up our whole nation without it.

After all, I am not so violently bent upon my own opinion, as to reject any offer, proposed by wise men, which shall be found equally innocent, cheap, easy, and effectual. But before something of that kind shall be advanced in contradiction to my scheme, and offering a better, I desire the author or authors will be pleased maturely to consider two points. First, As things now stand, how they will be able to find food and raiment for a hundred thousand useless mouths and backs. And secondly, There being a round million of creatures in humane figure throughout this kingdom, whose whole subsistence put into a common stock, would leave them in debt two million of pounds sterling, adding those who are beggars by profession, to the bulk of farmers, cottagers and labourers, with their wives and children, who are beggars in effect; I desire those politicians who dislike my overture, and may perhaps be so bold to attempt an answer, that they will first ask the parents of these mortals, whether they would not at this day think it a great happiness to have been sold for food at a year old, in the manner I prescribe, and thereby have avoided such a perpetual scene of misfortunes, as they have since gone through, by the oppression of landlords, the impossibility of paying rent without money or trade, the want of common sustenance, with neither house nor cloaths to cover them from the inclemencies of the weather, and the most inevitable prospect of intailing the like, or greater miseries, upon their breed for ever.

I profess, in the sincerity of my heart, that I have not the least personal interest in endeavouring to promote this necessary work, having no other motive than the publick good of my country, by advancing our trade, providing for infants, relieving the poor, and giving some pleasure to the rich. I have no children, by which I can propose to get a single penny; the youngest being nine years old, and my wife past child-bearing.

3. 19th Century: Thomas Robert Malthus. *An Essay on the Principle of Population*

Chapter 1

Question stated - Little prospect of a determination of it, from the enmity of the opposing parties - The principal argument against the perfectibility of man and of society has never been fairly answered - Nature of the difficulty arising from population - Outline of the principal argument of the Essay.

Chapter 2

The different ratio in which population and food increase - The necessary effects of these different ratios of increase - Oscillation produced by them in the condition of the lower classes of society - Reasons why this oscillation has not been so much observed as might be expected - Three propositions on which the general argument of the Essay depends - The different states in which mankind have been known to exist proposed to be examined with reference to these three propositions.

Chapter 3

The savage or hunter state shortly reviewed - The shepherd state, or the tribes of barbarians that overran the Roman Empire - The superiority of the power of population to the means of subsistence - the cause of the great tide of Northern Emigration.

Chapter 4

State of civilized nations - Probability that Europe is much more populous now than in the time of Julius Caesar - Best criterion of population - Probable error of Hume in one the criterions that he proposes as assisting in an estimate of Population - Slow increase of population at present in most of the states of Europe - The two principal checks to population - The first, or preventive check examined with regard to England.

Chapter 5

The second, or positive check to population examined, in England - The true cause why the immense sum collected in England for the poor does not better their condition - The powerful tendency of the poor laws to defeat their own purpose - Palliative of the distresses of the poor proposed - The absolute impossibility, from the fixed laws of our nature, that the pressure of want can ever be completely removed from the lower classes of society - All the checks to population may be resolved into misery or vice.

Chapter 6

New colonies - Reasons for their rapid increase - North American Colonies - Extraordinary instance of increase in the back settlements - Rapidity with which even old states recover the ravages of war, pestilence, famine, or the convulsions of nature.

Chapter 7

A probable cause of epidemics - Extracts from Mr. Suessmilch's tables - Periodical returns of sickly seasons to be expected in certain cases - Proportion of births to burials for short periods in any country an inadequate criterion of the real average increase of population - Best criterion of a permanent increase of population - Great frugality of living one of the causes of the famines of China and Indostan - Evil tendency of one of the clauses in Mr. Pitt's Poor Bill - Only one proper way of encouraging population - Causes of the Happiness of nations - Famine, the last and most dreadful mode by which nature represses a redundant population - The three propositions considered as established.

Chapter 8

Mr. Wallace - Error of supposing that the difficulty arising from population is at a great distance - Mr. Condorcet's sketch of the progress of the human mind - Period when the oscillation, mentioned by Mr. Condorcet, ought to be applied to the human race.

Chapter 9

Mr. Condorcet's conjecture concerning the organic perfectibility of man, and the indefinite prolongation of human life - Fallacy of the argument, which infers an unlimited progress from a partial improvement, the limit of which cannot be ascertained, illustrated in the breeding of animals, and the cultivation of plants.

Chapter 10

Mr. Godwin's system of equality - Error of attributing all the vices of mankind to human institutions - Mr. Godwin's first answer to the difficulty arising from population totally insufficient - Mr. Godwin's beautiful system of equality supposed to be realized - In utter destruction simply from the principle of population in so short a time as thirty years.

Chapter 11

Mr. Godwin's conjecture concerning the future extinction of the passion between the sexes - Little apparent grounds for such a conjecture - Passion of love not inconsistent either with reason or virtue.

Chapter 12

Mr. Godwin's conjecture concerning the indefinite prolongation of human life - Improper inference drawn from the effects of mental stimulants on the human frame, illustrated in various instances - Conjectures not founded on any indications in the past not to be considered as philosophical conjectures - Mr. Godwin's and Mr. Condorcet's conjecture respecting the approach of man towards immortality on earth, a curious instance of the inconsistency of scepticism.

Chapter 13

Error of Mr. Godwin in considering man too much in the light of a being merely rational - In the compound being, man, the passions will always act as disturbing forces in the decisions of the understanding - Reasonings of Mr. Godwin on the subject of coercion - Some truths of a nature not to be communicated from one man to another.

Chapter 14

Mr. Godwin's five propositions respecting political truth, on which his whole work hinges, not established - Reasons we have for supposing, from the distress occasioned by the principle of population, that the vices and moral weakness of man can never be wholly eradicated - Perfectibility, in the sense in which Mr. Godwin uses the term, not applicable to man - Nature of the real perfectibility of man illustrated.

Chapter 15

Models too perfect may sometimes rather impede than promote improvement - Mr. Godwin's essay on 'Avarice and Profusion' - Impossibility of dividing the necessary labour of a society amicably among all - Invectives against labour may produce present evil, with little or no chance of producing future good - An accession to the mass of agricultural labour must always be an advantage to the labourer.

Chapter 16

Probable error of Dr Adam Smith in representing every increase of the revenue or stock of a society as an increase in the funds for the maintenance of labour - Instances where an increase of wealth can have no tendency to better the condition of the labouring poor - England has increased in riches without a proportional increase in the funds for the maintenance of labour - The state of the poor in China would not be improved by an increase of wealth from manufactures.

Chapter 17

Question of the proper definition of the wealth of a state - Reason given by the French economists for considering all manufacturers as unproductive labourers, not the true reason - The labour of artificers and manufacturers sufficiently productive to individuals, though not to the state - A remarkable passage in Dr Price's two volumes of Observations - Error of Dr Price in attributing the happiness and rapid population of America, chiefly, to its peculiar state of civilization - No advantage can be expected from shutting our eyes to the difficulties in the way to the improvement of society.

Chapter 18

The constant pressure of distress on man, from the principle of population, seems to direct our hopes to the future - State of trial inconsistent with our ideas of the foreknowledge of God - The world, probably, a mighty process for awakening matter into mind - Theory of the formation of mind - Excitements from the wants of the body - Excitements from the operation of general laws - Excitements from the difficulties of life arising from the principle of population.

Chapter 19

The sorrows of life necessary to soften and humanize the heart - The excitement of social sympathy often produce characters of a higher order than the mere possessors of talents - Moral evil probably necessary to the production of moral excellence - Excitements from intellectual wants continually kept up by the infinite variety of nature, and the obscurity that involves metaphysical subjects - The difficulties in revelation to be accounted for upon this principle - The degree of evidence which the scriptures contain, probably, best suited to the improvements of the human faculties, and the moral amelioration of mankind - The idea that mind is created by excitements seems to account for the existence of natural and moral evil.

4. 19th Century: Walter Bagehot. *The English Constitution*

No. I.

Introduction to the Second Edition.

There is a great difficulty in the way of a writer who attempts to sketch a living Constitution--a Constitution that is in actual work and power. The difficulty is that the object is in constant change. An historical writer does not feel this difficulty: he deals only with the past; he can say definitely, the Constitution worked in such and such a manner in the year at which he begins, and in a manner in such and such respects different in the year at which he ends; he begins with a definite point of time and ends with one also. But a contemporary writer who tries to paint what is before him is puzzled and a perplexed: what he sees is changing daily. He must paint it as it stood at some one time, or else he will be putting side by side in his representations things which never were contemporaneous in reality. The difficulty is the greater because a writer who deals with a living Government naturally compares it with the most important other living Governments, and these are changing too; what he illustrates are altered in one way, and his sources of illustration are altered probably in a different way. This difficulty has been constantly in my way in preparing a second edition of this book. It describes the English Constitution as it stood in the years 1865 and 1866. Roughly speaking, it describes its working as it was in the time of Lord Palmerston; and since that time there have been many changes, some of spirit and some of detail. In so short a period there have rarely been more changes. If I had given a sketch of the Palmerston time as a sketch of the present time, it would have been in many points untrue; and if I had tried to change the sketch of seven years since into a sketch of the present time, I should probably have blurred the picture and have given something equally unlike both. The best plan in such a case is, I think, to keep the original sketch in all essentials as it was at first written, and to describe shortly such changes either in the Constitution itself, or in the Constitutions compared with it, as seem material. There are in this book various expressions which allude to persons who were living and to events which were happening when it first appeared; and I have carefully preserved these. They will serve to warn the reader what time he is reading about, and to prevent his mistaking the date at which the likeness was attempted to be taken. I proceed to speak of the changes which have taken place either in the Constitution itself or in the competing institutions which illustrate it.

It is too soon as yet to attempt to estimate the effect of the Reform Act of 1867. The people enfranchised under it do not yet know their own power; a single election, so far from teaching us how they will use that power, has not been even enough to explain to them that they have such power. The Reform Act of 1832 did not for many years disclose its real consequences; a writer in 1836, whether he approved or disapproved of them, whether he thought too little of or whether he exaggerated them, would have been sure to be mistaken in them. A new Constitution does not produce its full effect as long as all its subjects were reared under an old Constitution, as long as its statesmen were trained by that old Constitution. It is not really tested till it comes to be worked by statesmen and among a people neither of whom are guided by a different experience. In one respect we are indeed particularly likely to be mistaken as to the effect of the last Reform Bill. Undeniably there has lately been a great change in our politics. It is commonly said that "there is not a brick of the Palmerston House standing". The change since 1865 is a change not in one point but in a thousand points; it is a change not of particular details but of pervading spirit. We are now quarrelling as to the minor details of an Education Act; in Lord Palmerston's time no such Act could have passed. In Lord Palmerston's time Sir George Grey said that the disestablishment of the Irish Church would be an "act of Revolution"; it has now been disestablished by great majorities, with Sir George Grey himself assenting. A new world has arisen which is not as the old world; and we naturally ascribe the change to the Reform Act. But this is a complete mistake. If there had been no Reform Act at all there would, nevertheless, have been a great change in English politics. There has been a change of the sort which, above all, generates other changes--a change of generation. Generally one generation in politics succeeds another almost silently; at every moment men of all ages between thirty and seventy have considerable influence; each year removes many old men, makes all others older, brings in many new. The transition is so gradual that we hardly perceive it. The board of directors of the political company has a few slight changes every year, and therefore the shareholders are conscious of no abrupt change. But sometimes there IS an abrupt change. It occasionally happens that several ruling directors who are about the same age live on for many years, manage the company all through those years, and then go off the scene almost together. In that case the affairs of the company are apt to alter much, for good or for evil; sometimes it becomes more successful, sometimes it is ruined, but it hardly ever stays as it was. Something like this happened before 1865. All through the period between 1832 and 1865, the pre-'32 statesmen--if I may so call them--Lord Derby, Lord Russell, Lord Palmerston, retained

great power. Lord Palmerston to the last retained great prohibitive power. Though in some ways always young, he had not a particle of sympathy with the younger generation; he brought forward no young men; he obstructed all that young men wished. In consequence, at his death a new generation all at once started into life; the pre-'32 all at once died out. Most of the new politicians were men who might well have been Lord Palmerston's grandchildren. He came into Parliament in 1806, they entered it after 1856. Such an enormous change in the age of the workers necessarily caused a great change in the kind of work attempted and the way in which it was done. What we call the "spirit" of politics is more surely changed by a change of generation in the men than by any other change whatever. Even if there had been no Reform Act, this single cause would have effected grave alterations. The mere settlement of the Reform question made a great change too. If it could have been settled by any other change, or even without any change, the instant effect of the settlement would still have been immense. New questions would have appeared at once. A political country is like an American forest; you have only to cut down the old trees, and immediately new trees come up to replace them; the seeds were waiting in the ground, and they began to grow as soon as the withdrawal of the old ones brought in light and air. These new questions of themselves would have made a new atmosphere, new parties, new debates. Of course I am not arguing that so important an innovation as the Reform Act of 1867 will not have very great effects. It must, in all likelihood, have many great ones. I am only saying that as yet we do not know what those effects are; that the great evident change since 1865 is certainly not strictly due to it; probably is not even in a principal measure due to it; that we have still to conjecture what it will cause and what it will not cause.

The principal question arises most naturally from a main doctrine of these essays. I have said that Cabinet government is possible in England because England was a deferential country. I meant that the nominal constituency was not the real constituency; that the mass of the "ten-pound" house-holders did not really form their own opinions, and did not exact of their representatives an obedience to those opinions; that they were in fact guided in their judgment by the better educated classes; that they preferred representatives from those classes, and gave those representatives much licence. If a hundred small shopkeepers had by miracle been added to any of the '32 Parliaments, they would have felt outcasts there. Nothing could be more unlike those Parliaments than the average mass of the constituency from which they were chosen. I do not of course mean that the ten-pound householders were great admirers of intellect or good judges of refinement. We all know that, for the most part, they were not so at all; very few Englishmen are. They were not influenced by ideas, but by facts; not by things impalpable, but by things palpable. Not to put too fine a point upon it, they were influenced by rank and wealth. No doubt the better sort of them believed that those who were superior to them in these indisputable respects were superior also in the more intangible qualities of sense and knowledge. But the mass of the old electors did not analyse very much: they liked to have one of their "betters" to represent them; if he was rich they respected him much; and if he was a lord, they liked him the better. The issue put before these electors was, Which of two rich people will you choose? And each of those rich people was put forward by great parties whose notions were the notions of the rich--whose plans were their plans. The electors only selected one or two wealthy men to carry out the schemes of one or two wealthy associations. So fully was this so, that the class to whom the great body of the ten-pound householders belonged--the lower middle class--was above all classes the one most hardly treated in the imposition of the taxes. A small shopkeeper, or a clerk who just, and only just, was rich enough to pay income tax, was perhaps the only severely taxed man in the country. He paid the rates, the tea, sugar, tobacco, malt, and spirit taxes, as well as the income tax, but his means were exceedingly small.

Curiously enough the class which in theory was omnipotent, was the only class financially ill-treated. Throughout the history of our former Parliaments the constituency could no more have originated the policy which those Parliaments selected than they could have made the solar system. As I have endeavoured to show in this volume, the deference of the old electors to their betters was the only way in which our old system could be maintained. No doubt countries can be imagined in which the mass of the electors would be thoroughly competent to form good opinions; approximations to that state happily exist. But such was not the state of the minor English shopkeepers. They were just competent to make a selection between two sets of superior ideas; or rather--for the conceptions of such people are more personal than abstract--between two opposing parties, each professing a creed of such ideas. But they could do no more. Their own notions, if they had been cross-examined upon them, would have been found always most confused and often most foolish. They were competent to decide an issue selected by the higher classes, but they were incompetent to do more. The grave question now is, How far will this peculiar old system continue and how far will it be altered? I am afraid I must put aside at once the idea that it will be altered entirely

and altered for the better. I cannot expect that the new class of voters will be at all more able to form sound opinions on complex questions than the old voters. There was indeed an idea--a very prevalent idea when the first edition of this book was published--that there then was an unrepresented class of skilled artisans who could form superior opinions on national matters, and ought to have the means of expressing them. We used to frame elaborate schemes to give them such means. But the Reform Act of 1867 did not stop at skilled labour; it enfranchised unskilled labour too. And no one will contend that the ordinary working man who has no special skill, and who is only rated because he has a house, can judge much of intellectual matters. The messenger in an office is not more intelligent than the clerks, not better educated, but worse; and yet the messenger is probably a very superior specimen of the newly enfranchised classes. The average can only earn very scanty wages by coarse labour. They have no time to improve themselves, for they are labouring the whole day through; and their early education was so small that in most cases it is dubious whether even if they had much time, they could use it to good purpose. We have not enfranchised a class less needing to be guided by their betters than the old class; on the contrary, the new class need it more than the old.

The real question is, Will they submit to it, will they defer in the same way to wealth and rank, and to the higher qualities of which these are the rough symbols and the common accompaniments? There is a peculiar difficulty in answering this question. Generally, the debates upon the passing of an Act contain much valuable instruction as to what may be expected of it. But the debates on the Reform Act of 1867 hardly tell anything. They are taken up with technicalities as to the ratepayers and the compound householder. Nobody in the country knew what was being done. I happened at the time to visit a purely agricultural and Conservative county, and I asked the local Tories, "Do you understand this Reform Bill? Do you know that your Conservative Government has brought in a Bill far more Radical than any former Bill, and that it is very likely to be passed?" The answer I got was, "What stuff you talk! How can it be a Radical Reform Bill? Why, BRIGHT opposes it!" There was no answering that in a way which a "common jury" could understand. The Bill was supported by the Times and opposed by Mr. Bright; and therefore the mass of the Conservatives and of common moderate people, without distinction of party, had no conception of the effect. They said it was "London nonsense" if you tried to explain it to them. The nation indeed generally looks to the discussions in Parliament to enlighten it as to the effect of Bills. But in this case neither party, as a party, could speak out. Many, perhaps most of the intelligent Conservatives, were fearful of the consequences of the proposal; but as it was made by the heads of their own party, they did not like to oppose it, and the discipline of party carried them with it. On the other side, many, probably most of the intelligent Liberals, were in consternation at the Bill; they had been in the habit for years of proposing Reform Bills; they knew the points of difference between each Bill, and perceived that this was by far the most sweeping which had ever been proposed by any Ministry. But they were almost all unwilling to say so. They would have offended a large section in their constituencies if they had resisted a Tory Bill because it was too democratic; the extreme partisans of democracy would have said, "The enemies of the people have confidence enough in the people to entrust them with this power, but you, a 'Liberal,' and a professed friend of the people, have not that confidence; if that is so, we will never vote for you again". Many Radical members who had been asking for years for household suffrage were much more surprised than pleased at the near chance of obtaining it; they had asked for it as bargainers ask for the highest possible price, but they never expected to get it.

Altogether the Liberals, or at least the extreme Liberals, were much like a man who has been pushing hard against an opposing door, till, on a sudden, the door opens, the resistance ceases, and he is thrown violently forward. Persons in such an unpleasant predicament can scarcely criticise effectually, and certainly the Liberals did not so criticise. We have had no such previous discussions as should guide our expectations from the Reform Bill, nor such as under ordinary circumstances we should have had. Nor does the experience of the last election much help us. The circumstances were too exceptional. In the first place, Mr. Gladstone's personal popularity was such as has not been seen since the time of Mr. Pitt, and such as may never be seen again. Certainly it will very rarely be seen. A bad speaker is said to have been asked how he got on as a candidate. "Oh," he answered, "when I do not know what to say, I say 'Gladstone,' and then they are sure to cheer, and I have time to think." In fact, that popularity acted as a guide both to constituencies and to members. The candidates only said they would vote with Mr. Gladstone, and the constituencies only chose those who said so. Even the minority could only be described as anti-Gladstone, just as the majority could only be described as pro-Gladstone. The remains, too, of the old electoral organisation were exceedingly powerful; the old voters voted as they had been told, and the new voters mostly voted with them. In extremely few cases was there any new and contrary organisation. At the last election, the trial of the new system

hardly began, and, as far as it did begin, it was favoured by a peculiar guidance. In the meantime our statesmen have the greatest opportunities they have had for many years, and likewise the greatest duty. They have to guide the new voters in the exercise of the franchise; to guide them quietly, and without saying what they are doing, but still to guide them. The leading statesmen in a free country have great momentary power. They settle the conversation of mankind. It is they who, by a great speech or two, determine what shall be said and what shall be written for long after. They, in conjunction with their counsellors, settle the programme of their party--the "platform," as the Americans call it, on which they and those associated with them are to take their stand for the political campaign. It is by that programme, by a comparison of the programmes of different statesmen, that the world forms its judgment. The common ordinary mind is quite unfit to fix for itself what political question it shall attend to; it is as much as it can do to judge decently of the questions which drift down to it, and are brought before it; it almost never settles its topics; it can only decide upon the issues of those topics.

And in settling what these questions shall be, statesmen have now especially a great responsibility if they raise questions which will excite the lower orders of mankind; if they raise questions on which those orders are likely to be wrong; if they raise questions on which the interest of those orders is not identical with, or is antagonistic to, the whole interest of the State, they will have done the greatest harm they can do. The future of this country depends on the happy working of a delicate experiment, and they will have done all they could to vitiate that experiment. Just when it is desirable that ignorant men, new to politics, should have good issues, and only good issues, put before them, these statesmen will have suggested bad issues. They will have suggested topics which will bind the poor as a class together; topics which will excite them against the rich; topics the discussion of which in the only form in which that discussion reaches their ear will be to make them think that some new law can make them comfortable--that it is the present law which makes them uncomfortable--that Government has at its disposal an inexhaustible fund out of which it can give to those who now want without also creating elsewhere other and greater wants. If the first work of the poor voters is to try to create a "poor man's paradise," as poor men are apt to fancy that Paradise, and as they are apt to think they can create it, the great political trial now beginning will simply fail. The wide gift of the elective franchise will be a great calamity to the whole nation, and to those who gain it as great a calamity as to any. I do not of course mean that statesmen can choose with absolute freedom what topics they will deal with and what they will not. I am of course aware that they choose under stringent conditions. In excited states of the public mind they have scarcely a discretion at all; the tendency of the public perturbation determines what shall and what shall not be dealt with. But, upon the other hand, in quiet times statesmen have great power; when there is no fire lighted, they can settle what fire shall be lit. And as the new suffrage is happily to be tried in a quiet time, the responsibility of our statesmen is great because their power is great too. And the mode in which the questions dealt with are discussed is almost as important as the selection of these questions. It is for our principal statesmen to lead the public, and not to let the public lead them.

No doubt when statesmen live by public favour, as ours do, this is a hard saying, and it requires to be carefully limited. I do not mean that our statesmen should assume a pedantic and doctrinaire tone with the English people; if there is anything which English people thoroughly detest, it is that tone exactly. And they are right in detesting it; if a man cannot give guidance and communicate instruction formally without telling his audience "I am better than you; I have studied this as you have not," then he is not fit for a guide or an instructor. A statesman who should show that gaucherie would exhibit a defect of imagination, and expose an incapacity for dealing with men which would be a great hindrance to him in his calling. But much argument is not required to guide the public, still less a formal exposition of that argument. What is mostly needed is the manly utterance of clear conclusions; if a statesman gives these in a felicitous way (and if with a few light and humorous illustrations, so much the better), he has done his part. He will have given the text, the scribes in the newspapers will write the sermon. A statesman ought to show his own nature, and talk in a palpable way what is to him important truth. And so he will both guide and benefit the nation. But if, especially at a time when great ignorance has an unusual power in public affairs, he chooses to accept and reiterate the decisions of that ignorance, he is only the hireling of the nation, and does little save hurt it. I shall be told that this is very obvious, and that everybody knows that 2 and 2 make 4, and that there is no use in inculcating it. But I answer that the lesson is not observed in fact; people do not so do their political sums. Of all our political dangers, the greatest I conceive is that they will neglect the lesson. In plain English, what I fear is that both our political parties will bid for the support of the working man; that both of them will promise to do as he likes if he will only tell them what it is; that, as he now holds the casting vote in our affairs, both parties will beg and pray him to give that vote to them. I can conceive of nothing more corrupting or worse for a set of poor ignorant

people than that two combinations of well-taught and rich men should constantly offer to defer to their decision, and compete for the office of executing it. Vox populi will be Vox diaboli if it is worked in that manner. And, on the other hand, my imagination conjures up a contrary danger.

I can conceive that questions BEING raised which, if continually agitated, would combine the working men as a class together, the higher orders might have to consider whether they would concede the measure that would settle such questions, or whether they would risk the effect of the working men's combination. No doubt the question cannot be easily discussed in the abstract; much must depend on the nature of the measures in each particular case; on the evil they would cause if conceded; on the attractiveness of their idea to the working classes if refused. But in all cases it must be remembered that a political combination of the lower classes, as such and for their own objects, is an evil of the first magnitude; that a permanent combination of them would make them (now that so many of them have the suffrage) supreme in the country; and that their supremacy, in the state they now are, means the supremacy of ignorance over instruction and of numbers over knowledge. So long as they are not taught to act together, there is a chance of this being averted, and it can only be averted by the greatest wisdom and the greatest foresight in the higher classes. They must avoid, not only every evil, but every appearance of evil; while they have still the power they must remove, not only every actual grievance, but, where it is possible, every seeming grievance too; they must willingly concede every claim which they can safely concede, in order that they may not have to concede unwillingly some claim which would impair the safety of the country. This advice, too, will be said to be obvious; but I have the greatest fear that, when the time comes, it will be cast aside as timid and cowardly. So strong are the combative propensities of man that he would rather fight a losing battle than not fight at all. It is most difficult to persuade people that by fighting they may strengthen the enemy, yet that would be so here; since a losing battle--especially a long and well-fought one--would have thoroughly taught the lower orders to combine, and would have left the higher orders face to face with an irritated, organised, and superior voting power. The courage which strengthens an enemy and which so loses, not only the present battle, but many after battles, is a heavy curse to men and nations.

In one minor respect, indeed, I think we may see with distinctness the effect of the Reform Bill of 1867. I think it has completed one change which the Act of 1832 began; it has completed the change which that Act made in the relation of the House of Lords to the House of Commons. As I have endeavoured in this book to explain, the literary theory of the English Constitution is on this point quite wrong as usual. According to that theory, the two Houses are two branches of the legislature, perfectly equal and perfectly distinct. But before the Act of 1832 they were not so distinct; there was a very large and a very strong common element. By their commanding influence in many boroughs and counties the Lords nominated a considerable part of the Commons; the majority of the other part were the richer gentry--men in most respects like the Lords, and sympathising with the Lords. Under the Constitution as it then was the two Houses were not in their essence distinct; they were in their essence similar; they were, in the main, not Houses of contrasted origin, but Houses of like origin. The predominant part of both was taken from the same class--from the English gentry, titled and untitled. By the Act of 1832 this was much altered. The aristocracy and the gentry lost their predominance in the House of Commons; that predominance passed to the middle class. The two Houses then became distinct, but then they ceased to be co-equal. The Duke of Wellington, in a most remarkable paper, has explained what pains he took to induce the Lords to submit to their new position, and to submit, time after time, their will to the will of the Commons. The Reform Act of 1867 has, I think, unmistakably completed the effect which the Act of 1832 began, but left unfinished. The middle class element has gained greatly by the second change, and the aristocratic element has lost greatly. If you examine carefully the lists of members, especially of the most prominent members, of either side of the House, you will not find that they are in general aristocratic names. Considering the power and position of the titled aristocracy, you will perhaps be astonished at the small degree in which it contributes to the active part of our governing assembly.

The spirit of our present House of Commons is plutocratic, not aristocratic; its most prominent statesmen are not men of ancient descent or of great hereditary estate; they are men mostly of substantial means, but they are mostly, too, connected more or less closely with the new trading wealth. The spirit of the two Assemblies has become far more contrasted than it ever was. The full effect of the Reform Act of 1832 was indeed postponed by the cause which I mentioned just now. The statesmen who worked the system which was put up had themselves been educated under the system which was pulled down. Strangely enough, their predominant guidance lasted as long as the system which they created. Lord Palmerston, Lord Russell, Lord Derby, died or else lost their influence within a

year or two of 1867. The complete consequences of the Act of 1832 upon the House of Lords could not be seen while the Commons were subject to such aristocratic guidance. Much of the change which might have been expected from the Act of 1832 was held in suspense, and did not begin till that measure had been followed by another of similar and greater power. The work which the Duke of Wellington in part performed has now, therefore, to be completed also. He met the half difficulty; we have to surmount the whole one. We have to frame such tacit rules, to establish such ruling but unenacted customs, as will make the House of Lords yield to the Commons when and as often as our new Constitution requires that it should yield. I shall be asked, How often is that, and what is the test by which you know it? I answer that the House of Lords must yield whenever the opinion of the Commons is also the opinion of the nation, and when it is clear that the nation has made up its mind. Whether or not the nation has made up its mind is a question to be decided by all the circumstances of the case, and in the common way in which all practical questions are decided. There are some people who lay down a sort of mechanical test; they say the House of Lords should be at liberty to reject a measure passed by the Commons once or more, and then if the Commons send it up again and again, infer that the nation is determined. But no important practical question in real life can be uniformly settled by a fixed and formal rule in this way. This rule would prove that the Lords might have rejected the Reform Act of 1832. Whenever the nation was both excited and determined, such a rule would be an acute and dangerous political poison. It would teach the House of Lords that it might shut its eyes to all the facts of real life and decide simply by an abstract formula. If in 1832 the Lords had so acted, there would have been a revolution. Undoubtedly there is a general truth in the rule. Whether a bill has come up once only, or whether it has come up several times, is one important fact in judging whether the nation is determined to have that measure enacted; it is an indication, but it is only one of the indications. There are others equally decisive. The unanimous voice of the people may be so strong, and may be conveyed through so many organs, that it may be assumed to be lasting.

Englishmen are so very miscellaneous, that that which has REALLY convinced a great and varied majority of them for the present may fairly be assumed to be likely to continue permanently to convince them. One sort might easily fall into a temporary and erroneous fanaticism, but all sorts simultaneously are very unlikely to do so. I should venture so far as to lay down for an approximate rule, that the House of Lords ought, on a first-class subject, to be slow?-- very slow--in rejecting a Bill passed even once by a large majority of the House of Commons. I would not of course lay this down as an unvarying rule; as I have said, I have for practical purposes no belief in unvarying rules. Majorities may be either genuine or fictitious, and if they are not genuine, if they do not embody the opinion of the representative as well as the opinion of the constituency, no one would wish to have any attention paid to them. But if the opinion of the nation be strong and be universal, if it be really believed by members of Parliament, as well as by those who send them to Parliament, in my judgment the Lords should yield at once, and should not resist it. My main reason is one which has not been much urged. As a theoretical writer I can venture to say, what no elected member of Parliament, Conservative or Liberal, can venture to say, that I am exceedingly afraid of the ignorant multitude of the new constituencies. I wish to have as great and as compact a power as possible to resist it. But a dissension between the Lords and Commons divides that resisting power; as I have explained, the House of Commons still mainly represents the plutocracy, the Lords represent the aristocracy. The main interest of both these classes is now identical, which is to prevent or to mitigate the rule of uneducated numbers. But to prevent it effectually, they must not quarrel among themselves; they must not bid one against the other for the aid of their common opponent. And this is precisely the effect of a division between Lords and Commons. The two great bodies of the educated rich go to the constituencies to decide between them, and the majority of the constituencies now consist of the uneducated poor.

This cannot be for the advantage of any one. In doing so besides the aristocracy forfeit their natural position?--that by which they would gain most power, and in which they would do most good. They ought to be the heads of the plutocracy. In all countries new wealth is ready to worship old wealth, if old wealth will only let it, and I need not say that in England new wealth is eager in its worship. Satirist after satirist has told us how quick, how willing, how anxious are the newly-made rich to associate with the ancient rich. Rank probably in no country whatever has so much "market" value as it has in England just now. Of course there have been many countries in which certain old families, whether rich or poor, were worshipped by whole populations with a more intense and poetic homage; but I doubt if there has ever been any in which all old families and all titled families received more ready observance from those who were their equals, perhaps their superiors, in wealth, their equals in culture, and their inferiors only in descent and rank. The possessors of the "material" distinctions of life, as a political economist would class them,

rush to worship those who possess the IMmaterial distinctions. Nothing can be more politically useful than such homage, if it be skilfully used; no folly can be idler than to repel and reject it. The worship is the more politically important because it is the worship of the political superior for the political inferior. At an election the non-titled are much more powerful than the titled. Certain individual peers have, from their great possessions, great electioneering influence, but, as a whole, the House of Peers is not a principal electioneering force. It has so many poor men inside it, and so many rich men outside it, that its electioneering value is impaired. Besides, it is in the nature of the curious influence of rank to work much more on men singly than on men collectively; it is an influence which most men--at least most Englishmen--feel very much, but of which most Englishmen are somewhat ashamed. Accordingly, when any number of men are collected together, each of whom worships rank in his heart, the whole body will patiently hear--in many cases will cheer and approve--some rather strong speeches against rank. Each man is a little afraid that his "sneaking kindness for a lord," as Mr. Gladstone put it, be found out; he is not sure how far that weakness is shared by those around him. And thus Englishmen easily find themselves committed to anti- aristocratic sentiments which are the direct opposite of their real feeling, and their collective action may be bitterly hostile to rank while the secret sentiment of each separately is especially favourable to rank.

In 1832 the close boroughs, which were largely held by peers, and were still more largely supposed to be held by them, were swept away with a tumult of delight; and in another similar time of great excitement, the Lords themselves, if they deserve it, might pass away. The democratic passions gain by fomenting a diffused excitement, and by massing men in concourses; the aristocratic sentiments gain by calm and quiet, and act most on men by themselves, in their families, and when female influence is not absent. The overt electioneering power of the Lords does not at all equal its real social power. The English plutocracy, as is often said of something yet coarser, must be "humoured, not drove"; they may easily be impelled against the aristocracy, though they respect it very much; and as they are much stronger than the aristocracy, they might, if angered, even destroy it; though in order to destroy it, they must help to arouse a wild excitement among the ignorant poor, which, if once roused, may not be easily calmed, and which may be fatal to far more than its beginners intend. This is the explanation of the anomaly which puzzles many clever lords. They think, if they do not say, "Why are we pinned up here? Why are we not in the Commons where we could have so much more power? Why is this nominal rank given us, at the price of substantial influence? If we prefer real weight to unreal prestige, why may we not have it?" The reply is, that the whole body of the Lords have an incalculably greater influence over society while there is still a House of Lords, than they would have if the House of Lords were abolished; and that though one or two clever young peers might do better in the Commons, the old order of peers, young and old, clever and not clever, is much better where it is. The selfish instinct of the mass of peers on this point is a keener and more exact judge of the real world than the fine intelligence of one or two of them. If the House of Peers ever goes, it will go in a storm, and the storm will not leave all else as it is. It will not destroy the House of Peers and leave the rich young peers, with their wealth and their titles, to sit in the Commons.

It would probably sweep all titles before it--at least all legal titles--and somehow or other it would break up the curious system by which the estates of great families all go to the eldest son. That system is a very artificial one; you may make a fine argument for it, but you cannot make a loud argument, an argument which would reach and rule the multitude. The thing looks like injustice, and in a time of popular passion it would not stand. Much short of the compulsory equal division of the Code Napoleon, stringent clauses might be provided to obstruct and prevent these great aggregations of property. Few things certainly are less likely than a violent tempest like this to destroy large and hereditary estates. But then, too, few things are less likely than an outbreak to destroy the House of Lords--my point is, that a catastrophe which levels one will not spare the other. I conceive, therefore, that the great power of the House of Lords should be exercised very timidly and very cautiously. For the sake of keeping the headship of the plutocracy, and through that of the nation, they should not offend the plutocracy; the points upon which they have to yield are mostly very minor ones, and they should yield many great points rather than risk the bottom of their power. They should give large donations out of income, if by so doing they keep, as they would keep, their capital intact. The Duke of Wellington guided the House of Lords in this manner for years, and nothing could prosper better for them or for the country, and the Lords have only to go back to the good path in which he directed them. The events of 1870 caused much discussion upon life peerages, and we have gained this great step, that whereas the former leader of the Tory party in the Lords--Lord Lyndhurst--defeated the last proposal to make life peers, Lord Derby, when leader of that party, desired to create them. As I have given in this book what seemed to me good reasons for making them, I need not repeat those reasons here; I need only say how the notion stands in my

judgment now. I cannot look on life peerages in the way in which some of their strongest advocates regard them; I cannot think of them as a mode in which a permanent opposition or a contrast between the Houses of Lords and Commons is to be remedied. To be effectual in that way, life peerages must be very numerous. Now the House of Lords will never consent to a very numerous life peerage without a storm; they must be in terror to do it, or they will not do it. And if the storm blows strongly enough to do so much, in all likelihood it will blow strongly enough to do much more. If the revolution is powerful enough and eager enough to make an immense number of life peers, probably it will sweep away the hereditary principle in the Upper Chamber entirely. Of course one may fancy it to be otherwise; we may conceive of a political storm just going to a life-peerage limit, and then stopping suddenly. But in politics we must not trouble ourselves with exceedingly exceptional accidents; it is quite difficult enough to count on and provide for the regular and plain probabilities.

To speak mathematically, we may easily miss the permanent course of the political curve if we engross our minds with its cusps and conjugate points. Nor, on the other hand, can I sympathise with the objection to life peerages which some of the Radical party take and feel. They think it will strengthen the Lords, and so make them better able to oppose the Commons; they think, if they do not say: "The House of Lords is our enemy and that of all Liberals; happily the mass of it is not intellectual; a few clever men are born there which we cannot help, but we will not 'vaccinate' it with genius; we will not put in a set of clever men for their lives who may as likely as not turn against us". This objection assumes that clever peers are just as likely to oppose the Commons as stupid peers. But this I deny. Most clever men who are in such a good place as the House of Lords plainly is, will be very unwilling to lose it if they can help it; at the clear call of a great duty they might lose it, but only at such a call. And it does not take a clever man to see that systematic opposition of the Commons is the only thing which can endanger the Lords, or which will make an individual peer cease to be a peer. The greater you make the SENSE of the Lords, the more they will see that their plain interest is to make friends of the plutocracy, and to be the chiefs of it, and not to wish to oppose the Commons where that plutocracy rules. It is true that a completely new House of Lords, mainly composed of men of ability, selected because they were able, might very likely attempt to make ability the predominant power in the State, and to rival, if not conquer, the House of Commons, where the standard of intelligence is not much above the common English average. But in the present English world such a House of Lords would soon lose all influence. People would say, "it was too clever by half," and in an Englishman's mouth that means a very severe censure. The English people would think it grossly anomalous if their elected assembly of rich men were thwarted by a nominated assembly of talkers and writers. Sensible men of substantial means are what we wish to be ruled by, and a peerage of genius would not compare with it in power. It is true, too, that at present some of the cleverest peers are not so ready as some others to agree with the Commons. But it is not unnatural that persons of high rank and of great ability should be unwilling to bend to persons of lower rank, and of certainly not greater ability. A few of such peers (for they are very few) might say, "We had rather not have our peerage if we are to buy it at the price of yielding". But a life peer who had fought his way up to the peers, would never think so. Young men who are born to rank may risk it, not middle-aged or old men who have earned their rank.

A moderate number of life peers would almost always counsel moderation to the Lords, and would almost always be right in counselling it. Recent discussions have also brought into curious prominence another part of the Constitution. I said in this book that it would very much surprise people if they were only told how many things the Queen could do without consulting Parliament, and it certainly has so proved, for when the Queen abolished Purchase in the Army by an act of prerogative (after the Lords had rejected the bill for doing so), there was a great and general astonishment. But this is nothing to what the Queen can by law do without consulting Parliament. Not to mention other things, she could disband the army (by law she cannot engage more than a certain number of men, but she is not obliged to engage any men); she could dismiss all the officers, from the General Commanding-in-Chief downwards; she could dismiss all the sailors too; she could sell off all our ships of war and all our naval stores; she could make a peace by the sacrifice of Cornwall, and begin a war for the conquest of Brittany. She could make every citizen in the United Kingdom, male or female, a peer; she could make every parish in the United Kingdom a "university"; she could dismiss most of the civil servants; she could pardon all offenders. In a word, the Queen could by prerogative upset all the action of civil government within the Government, could disgrace the nation by a bad war or peace, and could, by disbanding our forces, whether land or sea, leave us defenceless against foreign nations. Why do we not fear that she would do this, or any approach to it? Because there are two checks--one ancient and coarse, the other modern and delicate. The first is the check of impeachment. Any Minister who advised the Queen so to use her prerogative as to endanger the safety of the realm, might be impeached for high

treason, and would be so. Such a Minister would, in our technical law, be said to have levied, or aided to levy, "war against the Queen". This counsel to her so to use her prerogative would by the Judge be declared to be an act of violence against herself, and in that peculiar but effectual way the offender could be condemned and executed. Against all gross excesses of the prerogative this is a sufficient protection. But it would be no protection against minor mistakes; any error of judgment committed bona fide, and only entailing consequences which one person might say were good, and another say were bad, could not be so punished. It would be possible to impeach any Minister who disbanded the Queen's army, and it would be done for certain.

But suppose a Minister were to reduce the army or the navy much below the contemplated strength--suppose he were only to spend upon them one-third of the amount which Parliament had permitted him to spend--suppose a Minister of Lord Palmerston's principles were suddenly and while in office converted to the principles of Mr. Bright and Mr. Cobden, and were to act on those principles, he could not be impeached. The law of treason neither could nor ought to be enforced against an act which was an error of judgment, not of intention--which was in good faith intended not to impair the well-being of the State, but to promote and augment it. Against such misuses of the prerogative our remedy is a change of Ministry. And in general this works very well. Every Minister looks long before he incurs that penalty, and no one incurs it wantonly. But, nevertheless, there are two defects in it. The first is that it may not be a remedy at all; it may be only a punishment. A Minister may risk his dismissal; he may do some act difficult to undo, and then all which may be left will be to remove and censure him. And the second is that it is only one House of Parliament which has much to say to this remedy, such as it is; the House of Commons only can remove a Minister by a vote of censure. Most of the Ministries for thirty years have never possessed the confidence of the Lords, and in such cases a vote of censure by the Lords could therefore have but little weight; it would be simply the particular expression of a general political disapproval. It would be like a vote of censure on a Liberal Government by the Carlton, or on a Tory Government by the Reform Club. And in no case has an adverse vote by the Lords the same decisive effect as a vote of the Commons; the Lower House is the ruling and the choosing House, and if a Government really possesses that, it thoroughly possesses nine-tenths of what it requires. The support of the Lords is an aid and a luxury; that of the Commons is a strict and indispensable necessary. These difficulties are particularly raised by questions of foreign policy. On most domestic subjects, either custom or legislation has limited the use of the prerogative. The mode of governing the country, according to the existing laws, is mostly worn into a rut, and most administrations move in it because it is easier to move there than anywhere else. Most political crises--the decisive votes, which determine the fate of Government--are generally either on questions of foreign policy or of new laws; and the questions of foreign policy come out generally in this way, that the Government has already done something, and that it is for the one part of the legislature alone--for the House of Commons, and not for the House of Lords--to say whether they have or have not forfeited their place by the treaty they have made.

I think every one must admit that this is not an arrangement which seems right on the face of it. Treaties are quite as important as most laws, and to require the elaborate assent of representative assemblies to every word of the law, and not to consult them even as to the essence of the treaty, is *prima facie* ludicrous. In the older forms of the English Constitution, this may have been quite right; the power was then really lodged in the Crown, and because Parliament met very seldom, and for other reasons, it was then necessary that, on a multitude of points, the Crown should have much more power than is amply sufficient for it at present. But now the real power is not in the Sovereign, it is in the Prime Minister and in the Cabinet--that is, in the hands of a committee appointed by Parliament, and of the chairman of that committee. Now, beforehand, no one would have ventured to suggest that a committee of Parliament on foreign relations should be able to commit the country to the greatest international obligations without consulting either Parliament or the country. No other select committee has any comparable power; and considering how carefully we have fettered and limited the powers of all other subordinate authorities, our allowing so much discretionary power on matters peculiarly dangerous and peculiarly delicate to rest in the sole charge of one secret committee is exceedingly strange. No doubt it may be beneficial; many seeming anomalies are so, but at first sight it does not look right. I confess that I should see no advantage in it if our two Chambers were sufficiently homogeneous and sufficiently harmonious. On the contrary, if those two Chambers were as they ought to be, I should believe it to be a great defect. If the administration had in both Houses a majority--not a mechanical majority ready to accept anything, but a fair and reasonable one, predisposed to think the Government right, but not ready to find it to be so in the face of facts and in opposition to whatever might occur; if a good Government were thus placed, I should think it decidedly better that the agreements of the administration with foreign powers should

be submitted to Parliament. They would then receive that which is best for all arrangements of business, an understanding and sympathising criticism, but still a criticism. The majority of the legislature, being well disposed to the Government, would not "find" against it except it had really committed some big and plain mistake. But if the Government had made such a mistake, certainly the majority of the legislature would find against it. In a country fit for Parliamentary institutions, the partisanship of members of the legislature never comes in manifest opposition to the plain interest of the nation; if it did, the nation being (as are all nations capable of Parliamentary institutions) constantly attentive to public affairs, would inflict on them the maximum Parliamentary penalty at the next election and at many future elections. It would break their career.

No English majority dare vote for an exceedingly bad treaty; it would rather desert its own leader than ensure its own ruin. And an English minority, inheriting a long experience of Parliamentary affairs, would not be exceedingly ready to reject a treaty made with a foreign Government. The leaders of an English Opposition are very conversant with the school-boy maxim, "Two can play at that fun". They know that the next time they are in office the same sort of sharp practice may be used against them, and therefore they will not use it. So strong is this predisposition, that not long since a subordinate member of the Opposition declared that the "front benches" of the two sides of the House--that is, the leaders of the Government and the leaders of the Opposition--were in constant tacit league to suppress the objections of independent members. And what he said is often quite true. There are often seeming objections which are not real objections; at least, which are, in the particular cases, outweighed by counter-considerations; and these "independent members," having no real responsibility, not being likely to be hurt themselves if they make a mistake, are sure to blurt out, and to want to act upon. But the responsible heads of the party who may have to decide similar things, or even the same things themselves, will not permit it. They refuse, out of interest as well as out of patriotism, to engage the country in a permanent foreign scrape, to secure for themselves and their party a momentary home advantage. Accordingly, a Government which negotiated a treaty would feel that its treaty would be subject certainly to a scrutiny, but still to a candid and lenient scrutiny; that it would go before judges, of whom the majority were favourable, and among whom the most influential part of the minority were in this case much opposed to excessive antagonism. And this seems to be the best position in which negotiators can be placed, namely, that they should be sure to have to account to considerate and fair persons, but not to have to account to inconsiderate and unfair ones. At present the Government which negotiates a treaty can hardly be said to be accountable to any one. It is sure to be subjected to vague censure. Benjamin Franklin said, "I have never known a peace made, even the most advantageous, that was not censured as inadequate, and the makers condemned as injudicious or corrupt. 'Blessed are the peace-makers' is, I suppose, to be understood in the other world, for in this they are frequently cursed." And this is very often the view taken now in England of treaties.

There being nothing practical in the Opposition--nothing likely to hamper them hereafter--the leaders of Opposition are nearly sure to suggest every objection. The thing is done and cannot be undone, and the most natural wish of the Opposition leaders is to prove that if they had been in office, and it therefore had been theirs to do it, they could have done it much better. On the other hand, it is quite possible that there may be no real criticism on a treaty at all; or the treaty has been made by the Government, and as it cannot be unmade by any one, the Opposition may not think it worth while to say much about it. The Government, therefore, is never certain of any criticism; on the contrary, it has a good chance of escaping criticism; but if there be any criticism the Government must expect it to be bitter, sharp, and captious--made as an irresponsible objector would make it, and not as a responsible statesman, who may have to deal with a difficulty if he make it, and therefore will be cautious how he says anything which may make it. This is what happens in common cases; and in the uncommon--the ninety-ninth case in a hundred--in which the Opposition hoped to turn out the Government because of the alleged badness of the treaty they have made, the criticism is sure to be of the most undesirable character, and to say what is most offensive to foreign nations. All the practised acumen of anti-Government writers and speakers is sure to be engaged in proving that England has been imposed upon--that, as was said in one case, "The moral and the intellectual qualities have been divided; that our negotiation had the moral, and the negotiation on the other side the intellectual," and so on. The whole pitch of party malice is then expended, because there is nothing to check the party in opposition. The treaty has been made, and though it may be censured, and the party which made it ousted, yet the difficulty it was meant to cure is cured, and the opposing party, if it takes office, will not have that difficulty to deal with. In abstract theory these defects in our present practice would seem exceedingly great, but in practice they are not so. English statesmen and English parties have really a great patriotism; they can rarely be persuaded even by their passions or their

interest to do anything contrary to the real interest of England, or anything which would lower England in the eyes of foreign nations. And they would seriously hurt themselves if they did.

But still these are the real tendencies of our present practice, and these are only prevented by qualities in the nation and qualities in our statesmen, which will just as much exist if we change our practice. It certainly would be in many ways advantageous to change it. If we require that in some form the assent of Parliament shall be given to such treaties, we should have a real discussion prior to the making of such treaties. We should have the reasons for the treaty plainly stated, and also the reasons against it. At present, as we have seen, the discussion is unreal. The thing is done and cannot be altered; and what is said often ought not to be said because it is captious, and what is not said ought as often to be said because it is material. We should have a manlier and plainer way of dealing with foreign policy, if Ministers were obliged to explain clearly their foreign contracts before they were valid, just as they have to explain their domestic proposals before they can become laws. The objections to this are, as far as I know, three, and three only. First, that it would not be always desirable for Ministers to state clearly the motives which induced them to agree to foreign compacts. "Treaties," it is said, "are in one great respect different from laws, they concern not only the Government which binds, the nation so bound, but a third party too--a foreign country--and the feelings of that country are to be considered as well as our own. And that foreign country will, probably, in the present state of the world be a despotic one, where discussion is not practised, where it is not understood, where the expressions of different speakers are not accurately weighed, where undue offence may easily be given." This objection might be easily avoided by requiring that the discussion upon treaties in Parliament like that discussion in the American Senate should be "in secret session," and that no report should be published of it. But I should, for my own part, be rather disposed to risk a public debate. Despotic nations now cannot understand England; it is to them an anomaly "chartered by Providence"; they have been time out of mind puzzled by its institutions, vexed at its statesmen, and angry at its newspapers. A little more of such perplexity and such vexation does not seem to me a great evil. And if it be meant, as it often is meant, that the whole truth as to treaties cannot be spoken out, I answer, that neither can the whole truth as to laws.

All important laws affect large "vested interests"; they touch great sources of political strength; and these great interests require to be treated as delicately, and with as nice a manipulation of language, as the feelings of any foreign country. A Parliamentary Minister is a man trained by elaborate practice not to blurt out crude things, and an English Parliament is an assembly which particularly dislikes anything gauche or anything imprudent. They would still more dislike it if it hurt themselves and the country as well as the speaker. I am, too, disposed to deny entirely that there can be any treaty for which adequate reasons cannot be given to the English people, which the English people ought to make. A great deal of the reticence of diplomacy had, I think history shows, much better be spoken out. The worst families are those in which the members never really speak their minds to one another; they maintain an atmosphere of unreality, and every one always lives in an atmosphere of suppressed ill-feeling. It is the same with nations. The parties concerned would almost always be better for hearing the substantial reasons which induced the negotiators to make the treaty, and the negotiators would do their work much better, for half the ambiguities in treaties are caused by the negotiators not liking the fact or not taking the pains to put their own meaning distinctly before their own minds. And they would be obliged to make it plain if they had to defend it and argue on it before a great assembly. Secondly, it may be objected to the change suggested that Parliament is not always sitting, and that if treaties required its assent, it might have to be sometimes summoned out of season, or the treaties would have to be delayed. And this is as far as it goes a just objection, but I do not imagine that it goes far. The great bulk of treaties could wait a little without harm, and in the very few cases when urgent haste is necessary, an autumn session of Parliament could well be justified, for the occasion must be of grave and critical importance. Thirdly, it may be said that if we required the consent of both Houses of Parliament to foreign treaties before they were valid we should much augment the power of the House of Lords. And this is also, I think, a just objection as far as it goes. The House of Lords, as it cannot turn out the Ministry for making treaties, has in no case a decisive weight in foreign policy, though its debates on them are often excellent; and there is a real danger at present in giving it such weight. They are not under the same guidance as the House of Commons.

In the House of Commons, of necessity, the Ministry has a majority, and the majority will agree to the treaties the leaders have made if they fairly can. They will not be anxious to disagree with them. But the majority of the House of Lords may always be, and has lately been generally an opposition majority, and therefore the treaty may be submitted to critics exactly pledged to opposite views. It might be like submitting the design of an architect known

to hold "mediaeval principles" to a committee wedded to "classical principles". Still, upon the whole, I think the augmentation of the power of the peers might be risked without real fear of serious harm. Our present practice, as has been explained, only works because of the good sense of those by whom it is worked, and the new practice would have to rely on a similar good sense and practicality too. The House of Lords must deal with the assent to treaties as they do with the assent to laws; they must defer to the voice of the country and the authority of the Commons even in cases where their own judgment might guide them otherwise. In very vital treaties probably, being Englishmen, they would be of the same mind as the rest of Englishmen. If in such cases they showed a reluctance to act as the people wished, they would have the same lesson taught them as on vital and exciting questions of domestic legislation, and the case is not so likely to happen, for on these internal and organic questions the interest and the feeling of the peers is often presumably opposed to that of other classes--they may be anxious not to relinquish the very power which other classes are anxious to acquire; but in foreign policy there is no similar antagonism of interest--a peer and a non-peer have presumably in that matter the same interest and the same wishes. Probably, if it were considered to be desirable to give to Parliament a more direct control over questions of foreign policy than it possesses now, the better way would be not to require a formal vote to the treaty clause by clause. This would entail too much time, and would lead to unnecessary changes in minor details. It would be enough to let the treaty be laid upon the table of both Houses, say for fourteen days, and to acquire validity unless objected to by one House or other before that interval had expired. II. This is all which I think I need say on the domestic events which have changed, or suggested changes, in the English Constitution since this book was written. But there are also some foreign events which have illustrated it, and of these I should like to say a few words. Naturally, the most striking of these illustrative changes comes from France. Since 1789 France has always been trying political experiments, from which others may profit much, though as yet she herself has profited little. She is now trying one singularly illustrative of the English Constitution. When the first edition of this book was published I had great difficulty in persuading many people that it was possible in a non-monarchical State, for the real chief of the practical executive--the Premier as we should call him--to be nominated and to be removable by the vote of the National Assembly.

The United States and its copies were the only present and familiar Republics, and in these the system was exactly opposite. The executive was there appointed by the people as the legislature was too. No conspicuous example of any other sort of Republic then existed. But now France has given an example--M. Thiers is (with one exception) just the *chef du pouvoir executif* that I endeavoured more than once in this book to describe. He is appointed by and is removable by the Assembly. He comes down and speaks in it just as our Premier does; he is responsible for managing it just as our Premier is. No one can any longer doubt the possibility of a republic in which the executive and the legislative authorities were united and fixed; no one can assert such union to be the incommunicable attribute of a Constitutional Monarchy. But, unfortunately, we can as yet only infer from this experiment that such a Constitution is possible; we cannot as yet say whether it will be bad or good. The circumstances are very peculiar, and that in three ways. First, the trial of a specially Parliamentary Republic, of a Republic where Parliament appoints the Minister, is made in a nation which has, to say the least of it, no peculiar aptitude for Parliamentary Government; which has possibly a peculiar inaptitude for it. In the last but one of these essays I have tried to describe one of the mental conditions of Parliamentary Government, which I call "rationality," by which I do not mean reasoning power, but rather the power of hearing the reasons of others, of comparing them quietly with one's own reasons, and then being guided by the result. But a French Assembly is not easy to reason with. Every assembly is divided into parties and into sections of parties, and in France each party, almost every section of a party, begins not to clamour but to scream, and to scream as only Frenchmen can, as soon as it hears anything which it particularly dislikes. With an Assembly in this temper, real discussion is impossible, and Parliamentary government is impossible too, because the Parliament can neither choose men nor measures. The French assemblies under the Restored Monarchy seem to have been quieter, probably because being elected from a limited constituency they did not contain so many sections of opinion; they had fewer irritants and fewer species of irritability. But the assemblies of the '48 Republic were disorderly in the extreme. I saw the last myself, and can certify that steady discussion upon a critical point was not possible in it. There was not an audience willing to hear.

The Assembly now sitting at Versailles is undoubtedly also, at times, most tumultuous, and a Parliamentary government in which it governs must be under a peculiar difficulty, because as a sovereign it is unstable, capricious, and unruly. The difficulty is the greater because there is no check, or little, from the French nation upon the Assembly. The French, as a nation, do not care for or appreciate Parliamentary government. I have endeavoured to

explain how difficult it is for inexperienced mankind to take to such a government; how much more natural, that is, how much more easy to uneducated men is loyalty to a monarch. A nation which does not expect good from a Parliament, cannot check or punish a Parliament. France expects, I fear, too little from her Parliaments ever to get what she ought. Now that the suffrage is universal, the average intellect and the average culture of the constituent bodies are excessively low; and even such mind and culture as there is has long been enslaved to authority; the French peasant cares more for standing well with his present prefect than for anything else whatever; he is far too ignorant to check and watch his Parliament, and far too timid to think of doing either if the executive authority nearest to him does not like it. The experiment of a strictly Parliamentary Republic--of a Republic where the Parliament appoints the executive--is being tried in France at an extreme disadvantage, because in France a Parliament is unusually likely to be bad, and unusually likely also to be free enough to show its badness. Secondly, the present polity of France is not a copy of the whole effective part of the British Constitution, but only a part of it. By our Constitution nominally the Queen, but really the Prime Minister, has the power of dissolving the Assembly. But M. Thiers has no such power; and therefore, under ordinary circumstances, I believe, the policy would soon become unmanageable. The result would be, as I have tried to explain, that the Assembly would be always changing its Ministry, that having no reason to fear the penalty which that change so often brings in England, they would be ready to make it once a month. Caprice is the characteristic vice of miscellaneous assemblies, and without some check their selection would be unceasingly mutable. This peculiar danger of the present Constitution of France has however been prevented by its peculiar circumstances. The Assembly have not been inclined to remove M. Thiers, because in their lamentable present position they could not replace M. Thiers.

He has a monopoly of the necessary reputation. It is the Empire--the Empire which he always opposed--that has done him this kindness. For twenty years no great political reputation could arise in France. The Emperor governed and no one member could show a capacity for government. M. Rouher, though of vast real ability, was in the popular idea only the Emperor's agent; and even had it been otherwise, M. Rouher, the one great man of Imperialism, could not have been selected as a head of the Government, at a moment of the greatest reaction against the Empire. Of the chiefs before the twenty years' silence, of the eminent men known to be able to handle Parliaments and to govern Parliaments, M. Thiers was the only one still physically able to begin again to do so. The miracle is, that at seventy-four even he should still be able. As no other great chief of the Parliament regime existed, M. Thiers is not only the best choice, but the only choice. If he were taken away, it would be most difficult to make any other choice, and that difficulty keeps him where he is. At every crisis the Assembly feels that after M. Thiers "the deluge," and he lives upon that feeling. A change of the President, though legally simple, is in practice all but impossible; because all know that such a change might be a change, not only of the President, but of much more too: that very probably it might be a change of the polity--that it might bring in a Monarchy or an Empire. Lastly, by a natural consequence of the position, M. Thiers does not govern as a Parliamentary Premier governs. He is not, he boasts that he is not, the head of a party. On the contrary, being the one person essential to all parties, he selects Ministers from all parties, he constructs a Cabinet in which no one Minister agrees with any other in anything, and with all the members of which he himself frequently disagrees. The selection is quite in his hand. Ordinarily a Parliamentary Premier cannot choose; he is brought in by a party; he is maintained in office by a party; and that party requires that as they aid him, he shall aid them; that as they give him the very best thing in the State, he shall give them the next best things. But M. Thiers is under no such restriction. He can choose as he likes, and does choose. Neither in the selection of his Cabinet nor in the management of the Chamber, is M. Thiers guided as a similar person in common circumstances would have to be guided. He is the exception of a moment; he is not the example of a lasting condition.

For these reasons, though we may use the present Constitution of France as a useful aid to our imaginations, in conceiving of a purely Parliamentary Republic, of a monarchy minus the monarch, we must not think of it as much more. It is too singular in its nature and too peculiar in its accidents to be a guide to anything except itself. In this essay I made many remarks on the American Constitution, in comparison with the English; and as to the American Constitution we have had a whole world of experience since I first wrote. My great object was to contrast the office of President as an executive officer and to compare it with that of a Prime Minister; and I devoted much space to showing that in one principal respect the English system is by far the best. The English Premier being appointed by the selection, and being removable at the pleasure, of the preponderant Legislative Assembly, is sure to be able to rely on that Assembly. If he wants legislation to aid his policy he can obtain that legislation; he can carry out that policy. But the American President has no similar security. He is elected in one way, at one time, and Congress (no

matter which House) is elected in another way, at another time. The two have nothing to bind them together, and in matter of fact, they continually disagree. This was written in the time of Mr. Lincoln, when Congress, the President, and all the North were united as one man in the war against the South. There was then no patent instance of mere disunion. But between the time when the essays were first written in the Fortnightly, and their subsequent junction into a book, Mr. Lincoln was assassinated, and Mr. Johnson, the Vice-President, became President, and so continued for nearly four years. At such a time the characteristic evils of the Presidential system were shown most conspicuously. The President and the Assembly, so far from being (as it is essential to good government that they should be) on terms of close union, were not on terms of common courtesy. So far from being capable of a continuous and concerted co-operation they were all the while trying to thwart one another. He had one plan for the pacification of the South and they another; they would have nothing to say to his plans, and he vetoed their plans as long as the Constitution permitted, and when they were, in spite of him, carried, he, as far as he could (and this was very much), embarrassed them in action.

The quarrel in most countries would have gone beyond the law, and come to blows; even in America, the most law-loving of countries, it went as far as possible within the law. Mr. Johnson described the most popular branch of the legislature-- the House of Representatives--as a body "hanging on the verge of government"; and that House impeached him criminally, in the hope that in that way they might get rid of him civilly. Nothing could be so conclusive against the American Constitution, as a Constitution, as that incident. A hostile legislature and a hostile executive were so tied together, that the legislature tried, and tried in vain, to rid itself of the executive by accusing it of illegal practices. The legislature was so afraid of the President's legal power that it unfairly accused him of acting beyond the law. And the blame thus cast on the American Constitution is so much praise to be given to the American political character. Few nations, perhaps scarcely any nation, could have borne such a trial so easily and so perfectly. This was the most striking instance of disunion between the President and the Congress that has ever yet occurred, and which probably will ever occur. Probably for very many years the United States will have great and painful reason to remember that at the moment of all their history, when it was most important to them to collect and concentrate all the strength and wisdom of their policy on the pacification of the South, that policy was divided by a strife in the last degree unseemly and degrading. But it will be for a competent historian hereafter to trace out this accurately and in detail; the time is yet too recent, and I cannot pretend that I know enough to do so. I cannot venture myself to draw the full lessons from these events; I can only predict that when they are drawn, those lessons will be most important, and most interesting. There is, however, one series of events which have happened in America since the beginning of the Civil War, and since the first publication of these essays, on which I should wish to say something in detail--I mean the financial events. These lie within the scope of my peculiar studies, and it is comparatively easy to judge of them, since whatever may be the case with refined statistical reasoning, the great results of money matters speak to and interest all mankind. And every incident in this part of American financial history exemplifies the contrast between a Parliamentary and Presidential government.

The distinguishing quality of Parliamentary government is, that in each stage of a public transaction there is a discussion; that the public assist at this discussion; that it can, through Parliament, turn out an administration which is not doing as it likes, and can put in an administration which will do as it likes. But the characteristic of a Presidential government is, in a multitude of cases, that there is no such discussion; that when there is a discussion the fate of Government does not turn upon it, and, therefore, the people do not attend to it; that upon the whole the administration itself is pretty much doing as it likes, and neglecting as it likes, subject always to the check that it must not too much offend the mass of the nation. The nation commonly does not attend, but if by gigantic blunders you make it attend, it will remember it and turn you out when its time comes; it will show you that your power is short, and so on the instant weaken that power; it will make your present life in office unbearable and uncomfortable by the hundred modes in which a free people can, without ceasing, act upon the rulers which it elected yesterday, and will have to reject or re-elect to-morrow. In finance the most striking effect in America has, on the first view of it, certainly been good. It has enabled the Government to obtain and to keep a vast surplus of revenue over expenditure. Even before the Civil War it did this--from 1837 to 1857. Mr. Wells tells us that, strange as it may seem, "there was not a single year in which the unexpended balance in the National Treasury--derived from various sources--at the end of the year, was not in excess of the total expenditure of the preceding year; while in not a few years the unexpended balance was absolutely greater than the sum of the entire expenditure of the twelve months preceding". But this history before the war is nothing to what has happened since. The following are the surpluses of revenue over expenditure since the end of the Civil War:--

Year ending June 30. Surplus. (pounds)

| | |
|----------------|------------|
| 1866 | 5,593,000 |
| 1867 | 21,586,000 |
| 1868 | 4,242,000 |
| 1869 | 7,418,000 |
| 1870 | 18,627,000 |
| 1871 | 16,712,000 |

No one who knows anything of the working of Parliamentary government, will for a moment imagine that any Parliament would have allowed any executive to keep a surplus of this magnitude. In England, after the French war, the Government of that day, which had brought it to a happy end, which had the glory of Waterloo, which was in consequence exceedingly strong, which had besides elements of strength from close boroughs and Treasury influence such as certainly no Government has ever had since, and such perhaps as no Government ever had before-- that Government proposed to keep a moderate surplus and to apply it to the reduction of the debt, but even this the English Parliament would not endure. The administration with all its power derived both from good and evil had to yield; the income tax was abolished, with it went the surplus, and with the surplus all chance of any considerable reduction of the debt for that time. In truth taxation is so painful that in a sensitive community which has strong organs of expression and action, the maintenance of a great surplus is excessively difficult. The Opposition will always say that it is unnecessary, is uncalled for, is injudicious; the cry will be echoed in every constituency; there will be a series of large meetings in the great cities; even in the smaller constituencies there will mostly be smaller meetings; every member of Parliament will be pressed upon by those who elect him; upon this point there will be no distinction between town and country, the country gentleman and the farmer disliking high taxes as much as any in the towns. To maintain a great surplus by heavy taxes to pay off debt has never yet in this country been possible, and to maintain a surplus of the American magnitude would be plainly impossible.

Some part of the difference between England and America arises undoubtedly not from political causes but from economical. America is not a country sensitive to taxes; no great country has perhaps ever been so unsensitive in this respect; certainly she is far less sensitive than England. In reality America is too rich; daily industry there is too common, too skilful, and too productive, for her to care much for fiscal burdens. She is applying all the resources of science and skill and trained labour, which have been in long ages painfully acquired in old countries, to develop with great speed the richest soil and the richest mines of new countries; and the result is untold wealth. Even under a Parliamentary government such a community could and would bear taxation much more easily than Englishmen ever would. But difference of physical character in this respect is of little moment in comparison with difference of political constitution. If America was under a Parliamentary government, she would soon be convinced that in maintaining this great surplus and in paying this high taxation she would be doing herself great harm. She is not performing a great duty, but perpetrating a great injustice. She is injuring posterity by crippling and displacing industry, far more than she is aiding it by reducing the taxes it will have to pay. In the first place, the maintenance of the present high taxation compels the retention of many taxes which are contrary to the maxims of free-trade. Enormous customs duties are necessary, and it would be all but impossible to impose equal excise duties even if the Americans desired it. In consequence, besides what the Americans pay to the Government, they are paying a great deal to some of their own citizens, and so are rearing a set of industries which never ought to have existed, which are bad speculations at present because other industries would have paid better, and which may cause a great loss out of pocket hereafter when the debt is paid off and the fostering tax withdrawn. Then probably industry will return to its natural channel, the artificial trade will be first depressed, then discontinued, and the fixed capital employed in the trade will all be depreciated and much of it be worthless. Secondly, all taxes on trade and manufacture are injurious in various ways to them.

You cannot put on a great series of such duties without cramping trade in a hundred ways and without diminishing their productiveness exceedingly. America is now working in heavy fetters, and it would probably be better for her to lighten those fetters even though a generation or two should have to pay rather higher taxes. Those generations would really benefit, because they would be so much richer that the slightly increased cost of government would never be perceived. At any rate, under a Parliamentary government this doctrine would have been incessantly

inculcated; a whole party would have made it their business to preach it, would have made incessant small motions in Parliament about it, which is the way to popularise their view. And in the end I do not doubt that they would have prevailed. They would have had to teach a lesson both pleasant and true, and such lessons are soon learned. On the whole, therefore, the result of the comparison is that a Presidential government makes it much easier than the Parliamentary to maintain a great surplus of income over expenditure, but that it does not give the same facility for examining whether it be good or not good to maintain a surplus, and, therefore, that it works blindly, maintaining surpluses when they do extreme harm just as much as when they are very beneficial. In this point the contrast of Presidential with Parliamentary government is mixed; one of the defects of Parliamentary government probably is the difficulty under it of maintaining a surplus revenue to discharge debt, and this defect Presidential government escapes, though at the cost of being likely to maintain that surplus upon inexpedient occasions as well as upon expedient. But in all other respects a Parliamentary government has in finance an unmixed advantage over the Presidential in the incessant discussion. Though in one single case it produces evil as well as good, in most cases it produces good only. And three of these cases are illustrated by recent American experience. First, as Mr. Goldwin Smith--no unfavourable judge of anything American--justly said some years since, the capital error made by the United States Government was the "Legal Tender Act," as it is called, by which it made inconvertible paper notes issued by the Treasury the sole circulating medium of the country. The temptation to do this was very great, because it gave at once a great war fund when it was needed, and with no pain to any one. If the notes of a Government supersede the metallic currency medium of a country to the extent of \$80,000,000, this is equivalent to a recent loan of \$80,000,000 to the Government for all purposes within the country.

Whenever the precious metals are not required, and for domestic purposes in such a case they are not required, notes will buy what the Government want, and it can buy to the extent of its issue. But, like all easy expedients out of a great difficulty, it is accompanied by the greatest evils; if it had not been so, it would have been the regular device in such cases, and the difficulty would have been no difficulty at all; there would have been a known easy way out of it. As is well known, inconvertible paper issued by Government is sure to be issued in great quantities, as the American currency soon was; it is sure to be depreciated as against coin; it is sure to disturb values and to derange markets; it is certain to defraud the lender; it is certain to give the borrower more than he ought to have. In the case of America there was a further evil. Being a new country, she ought in her times of financial want to borrow of old countries; but the old countries were frightened by the probable issue of unlimited inconvertible paper, and they would not lend a shilling. Much more than the mercantile credit of America was thus lost. The great commercial houses in England are the most natural and most effectual conveyers of intelligence from other countries to Europe. If they had been financially interested in giving in a sound report as to the progress of the war, a sound report we should have had. But as the Northern States raised no loans in Lombard Street (and could raise none because of their vicious paper money), Lombard Street did not care about them, and England was very imperfectly informed of the progress of the civil struggle, and on the whole matter, which was then new and very complex, England had to judge without having her usual materials for judgment, and (since the guidance of the "City" on political matter is very quietly and imperceptibly given) without knowing she had not those materials. Of course, this error might have been committed, and perhaps would have been committed under a Parliamentary government. But if it had, its effects would ere long have been thoroughly searched into and effectually frustrated. The whole force of the greatest inquiring machine and the greatest discussing machine which the world has ever known would have been directed to this subject. In a year or two the American public would have had it forced upon them in every form till they must have comprehended it.

But under the Presidential form of government, and owing to the inferior power of generating discussion, the information given to the American people has been imperfect in the extreme. And in consequence, after nearly ten years of painful experience, they do not now understand how much they have suffered from their inconvertible currency. But the mode in which the Presidential government of America managed its taxation during the Civil War, is even a more striking example of its defects. Mr. Wells tells us:-- "In the outset all direct or internal taxation was avoided, there having been apparently an apprehension on the part of Congress, that inasmuch as the people had never been accustomed to it, and as all machinery for assessment and collection was wholly wanting, its adoption would create discontent, and thereby interfere with a vigorous prosecution of hostilities. Congress, therefore, confined itself at first to the enactment of measures looking to an increase of revenue from the increase of indirect taxes upon imports; and it was not until four months after the actual outbreak of hostilities that a direct tax of \$20,000,000 per annum was apportioned among the States, and an income tax of 3 per cent. on the excess of all

incomes over \$800 was provided for; the first being made to take effect practically eight, and the second ten months after date of enactment. Such laws of course took effect, and became immediately operative in the loyal States only, and produced but comparatively little revenue; and although the range of taxation was soon extended, the whole receipts from all sources by the Government for the second year of the war, from excise, income, stamp, and all other internal taxes, were less than \$42,000,000; and that, too, at a time when the expenditures were in excess \$60,000,000 per month, or at the rate of over \$700,000,000 per annum. And as showing how novel was this whole subject of direct and internal taxation to the people, and how completely the Government officials were lacking in all experience in respect to it, the following incident may be noted. The Secretary of the Treasury, in his report for 1863, stated that, with a view of determining his resources, he employed a very competent person, with the aid of practical men, to estimate the probable amount of revenue to be derived from each department of internal taxation for the previous year. The estimate arrived at was \$85,000,000, but the actual receipts were only \$37,000,000." Now, no doubt, this might have happened under a Parliamentary government.

But, then, many members of Parliament, the entire Opposition in Parliament, would have been active to unravel the matter. All the principles of finance would have been worked and propounded. The light would have come from above, not from below--it would have come from Parliament to the nation instead of from the nation to Parliament. But exactly the reverse happened in America. Mr. Wells goes on to say:-- "The people of the loyal States were, however, more determined and in earnest in respect to this matter of taxation than were their rulers; and before long the popular discontent at the existing state of things was openly manifest. Every where the opinion was expressed that taxation in all possible forms should immediately, and to the largest extent, be made effective and imperative; and Congress spurred up, and right fully relying on public sentiment to sustain their action, at last took up the matter resolutely and in earnest, and devised and inaugurated a system of internal and direct taxation, which for its universality and peculiarities has probably no parallel in anything which has heretofore been recorded in civil history, or is likely to be experienced hereafter. The one necessity of the situation was revenue, and to obtain it speedily and in large amounts through taxation the only principle recognised--if it can be called a principle--was akin to that recommended to the traditionary Irishman on his visit to Donnybrook Fair, 'Wherever you see a head hit it'. Wherever you find an article, a product, a trade, a profession, or a source of income, tax it! And so an edict went forth to this effect, and the people cheerfully submitted. Incomes under \$5,000 were taxed 5 per cent., with an exemption of \$600 and house rent actually paid; these exemptions being allowed on this ground, that they represented an amount sufficient at the time to enable a small family to procure the bare necessities of life, and thus take out from the operation of the law all those who were dependent upon each day's earnings to supply each day's needs. Incomes in excess of \$5,000 and not in excess of \$10,000 were taxed 2 1/2 per cent. in addition; and incomes over \$10,000 5 per cent. additional, without any abeyance or exemptions whatever." Now this is all contrary to and worse than what would have happened under a Parliamentary government. The delay to tax would not have occurred under it: the movement by the country to get taxation would never have been necessary under it. The excessive taxation accordingly imposed would not have been permitted under it. The last point I think I need not labour at length. The evils of a bad tax are quite sure to be pressed upon the ears of Parliament in season and out of season; the few persons who have to pay it are thoroughly certain to make themselves heard. The sort of taxation tried in America, that of taxing everything, and seeing what every thing would yield, could not have been tried under a Government delicately and quickly sensitive to public opinion. I do not apologise for dwelling at length upon these points, for the subject is one of transcendent importance.

The practical choice of first-rate nations is between the Presidential government and the Parliamentary; no State can be first-rate which has not a government by discussion, and those are the only two existing species of that government. It is between them that a nation which has to choose its government must choose. And nothing therefore can be more important than to compare the two, and to decide upon the testimony of experience, and by facts, which of them is the better. THE POPLARS, WIMBLEDON: June 20, 1872. NO. II. THE CABINET. "On all great subjects," says Mr. Mill, "much remains to be said," and of none is this more true than of the English Constitution. The literature which has accumulated upon it is huge. But an observer who looks at the living reality will wonder at the contrast to the paper description. He will see in the life much which is not in the books; and he will not find in the rough practice many refinements of the literary theory. It was natural--perhaps inevitable--that such an under growth of irrelevant ideas should gather round the British Constitution. Language is the tradition of nations; each generation describes what it sees, but it uses words transmitted from the past. When a great entity like the British Constitution has continued in connected outward sameness, but hidden inner change, for many ages,

every generation inherits a series of inapt words--of maxims once true, but of which the truth is ceasing or has ceased. As a man's family go on muttering in his maturity incorrect phrases derived from a just observation of his early youth, so, in the full activity of an historical constitution, its subjects repeat phrases true in the time of their fathers, and inculcated by those fathers, but now true no longer. Or, if I may say so, an ancient and ever-altering constitution is like an old man who still wears with attached fondness clothes in the fashion of his youth: what you see of him is the same; what you do not see is wholly altered.

There are two descriptions of the English Constitution which have exercised immense influence, but which are erroneous. First, it is laid down as a principle of the English polity, that in it the legislative, the executive, and the judicial powers are quite divided--that each is entrusted to a separate person or set of persons--that no one of these can at all interfere with the work of the other. There has been much eloquence expended in explaining how the rough genius of the English people, even in the middle ages, when it was especially rude, carried into life and practice that elaborate division of functions which philosophers had suggested on paper, but which they had hardly hoped to see except on paper. Secondly, it is insisted that the peculiar excellence of the British Constitution lies in a balanced union of three powers. It is said that the monarchical element, the aristocratic element, and the democratic element, have each a share in the supreme sovereignty, and that the assent of all three is necessary to the action of that sovereignty. Kings, lords, and commons, by this theory, are alleged to be not only the outward form, but the inner moving essence, the vitality of the Constitution. A great theory, called the theory of "Checks and Balances," pervades an immense part of political literature, and much of it is collected from or supported by English experience. Monarchy, it is said, has some faults, some bad tendencies, aristocracy others, democracy, again, others; but England has shown that a Government can be constructed in which these evil tendencies exactly check, balance, and destroy one another--in which a good whole is constructed not simply in spite of, but by means of, the counteracting defects of the constituent parts. Accordingly, it is believed that the principal characteristics of the English Constitution are inapplicable in countries where the materials for a monarchy or an aristocracy do not exist. That Constitution is conceived to be the best imaginable use of the political elements which the great majority of States in modern Europe inherited from the mediaeval period. It is believed that out of these materials nothing better can be made than the English Constitution; but it is also believed that the essential parts of the English Constitution cannot be made except from these materials. Now these elements are the accidents of a period and a region; they belong only to one or two centuries in human history, and to a few countries.

The United States could not have become monarchical, even if the Constitutional Convention had decreed it, even if the component States had ratified it. The mystic reverence, the religious allegiance, which are essential to a true monarchy, are imaginative sentiments that no legislature can manufacture in any people. These semi-filial feelings in Government are inherited just as the true filial feelings in common life. You might as well adopt a father as make a monarchy: the special sentiment of longing to the one is as incapable of voluntary creation as the peculiar affection belonging to the other. If the practical part of the English Constitution could only be made out of a curious accumulation of mediaeval materials, its interest would be half historical, and its imitability very confined. No one can approach to an understanding of the English institutions, or of others, which, being the growth of many centuries, exercise a wide sway over mixed populations, unless he divide them into two classes. In such constitutions there are two parts (not indeed separable with microscopic accuracy, for the genius of great affairs abhors nicety of division): first, those which excite and preserve the reverence of the population--the DIGNIFIED parts, if I may so call them; and next, the EFFICIENT parts--those by which it, in fact, works and rules. There are two great objects which every constitution must attain to be successful, which every old and celebrated one must have wonderfully achieved: every constitution must first GAIN authority, and then USE authority; it must first win the loyalty and confidence of mankind, and then employ that homage in the work of government. There are indeed practical men who reject the dignified parts of Government. They say, we want only to attain results, to do business: a constitution is a collection of political means for political ends, and if you admit that any part of a constitution does no business, or that a simpler machine would do equally well what it does, you admit that this part of the constitution, however dignified or awful it may be, is nevertheless in truth useless. And other reasoners, who distrust this bare philosophy, have propounded subtle arguments to prove that these dignified parts of old Governments are cardinal components of the essential apparatus, great pivots of substantial utility; and so they manufactured fallacies which the plainer school have well exposed.

But both schools are in error. The dignified parts of Government are those which bring it force--which attract its motive power. The efficient parts only employ that power. The comely parts of a Government HAVE need, for they are those upon which its vital strength depends. They may not do anything definite that a simpler polity would not do better; but they are the preliminaries, the needful prerequisites of ALL work. They raise the army, though they do not win the battle. Doubtless, if all subjects of the same Government only thought of what was useful to them, and if they all thought the same thing useful, and all thought that same thing could be attained in the same way, the efficient members of a constitution would suffice, and no impressive adjuncts would be needed. But the world in which we live is organised far otherwise. The most strange fact, though the most certain in nature, is the unequal development of the human race. If we look back to the early ages of mankind, such as we seem in the faint distance to see them-- if we call up the image of those dismal tribes in lake villages, or on wretched beaches--scarcely equal to the commonest material needs, cutting down trees slowly and painfully with stone tools, hardly resisting the attacks of huge, fierce animals--without culture, without leisure, without poetry, almost without thought--destitute of morality, with only a sort of magic for religion; and if we compare that imagined life with the actual life of Europe now, we are overwhelmed at the wide contrast--we can scarcely conceive ourselves to be of the same race as those in the far distance. There used to be a notion--not so much widely asserted as deeply implanted, rather pervadingly latent than commonly apparent in political philosophy--that in a little while, perhaps ten years or so, all human beings might, without extraordinary appliances, be brought to the same level. But now, when we see by the painful history of mankind at what point we began, by what slow toil, what favourable circumstances, what accumulated achievements, civilised man has become at all worthy in any degree so to call himself--when we realise the tedium of history and the painfulness of results--our perceptions are sharpened as to the relative steps of our long and gradual progress. We have in a great community like England crowds of people scarcely more civilised than the majority of two thousand years ago; we have others, even more numerous, such as the best people were a thousand years since. The lower orders, the middle orders, are still, when tried by what is the standard of the educated "ten thousand," narrow-minded, unintelligent, incurious. It is useless to pile up abstract words.

Those who doubt should go out into their kitchens. Let an accomplished man try what seems to him most obvious, most certain, most palpable in intellectual matters, upon the housemaid and the footman, and he will find that what he says seems unintelligible, confused, and erroneous--that his audience think him mad and wild when he is speaking what is in his own sphere of thought the dullest platitude of cautious soberness. Great communities are like great mountains--they have in them the primary, secondary, and tertiary strata of human progress; the characteristics of the lower regions resemble the life of old times rather than the present life of the higher regions. And a philosophy which does not ceaselessly remember, which does not continually obtrude, the palpable differences of the various parts, will be a theory radically false, because it has omitted a capital reality-- will be a theory essentially misleading, because it will lead men to expect what does not exist, and not to anticipate that which they will find. Every one knows these plain facts, but by no means every one has traced their political importance. When a State is constituted thus, it is not true that the lower classes will be wholly absorbed in the useful; on the contrary, they do not like anything so poor. No orator ever made an impression by appealing to men as to their plainest physical wants, except when he could allege that those wants were caused by some one's tyranny. But thousands have made the greatest impression by appealing to some vague dream of glory, or empire, or nationality. The ruder sort of men--that is, men at ONE stage of rudeness--will sacrifice all they hope for, all they have, THEMSELVES, for what is called an idea--for some attraction which seems to transcend reality, which aspires to elevate men by an interest higher, deeper, wider than that of ordinary life. But this order of men are uninterested in the plain, palpable ends of government; they do not prize them; they do not in the least comprehend how they should be attained. It is very natural, therefore, that the most useful parts of the structure of government should by no means be those which excite the most reverence. The elements which excite the most easy reverence will be the THEATRICAL elements--those which appeal to the senses, which claim to be embodiments of the greatest human ideas, which boast in some cases of far more than human origin.

That which is mystic in its claims; that which is occult in its mode of action; that which is brilliant to the eye; that which is seen vividly for a moment, and then is seen no more; that which is hidden and unhidden; that which is specious, and yet interesting, palpable in its seeming, and yet professing to be more than palpable in its results; this, howsoever its form may change, or however we may define it or describe it, is the sort of thing--the only sort--which yet comes home to the mass of men. So far from the dignified parts of a constitution being necessarily the most useful, they are likely, according to outside presumption, to be the least so; for they are likely to be adjusted to the

lowest orders--those likely to care least and judge worst about what is useful. There is another reason which, in an old constitution like that of England, is hardly less important. The most intellectual of men are moved quite as much by the circumstances which they are used to as by their own will. The active voluntary part of a man is very small, and if it were not economised by a sleepy kind of habit, its results would be null. We could not do every day out of our own heads all we have to do. We should accomplish nothing, for all our energies would be frittered away in minor attempts at petty improvement. One man, too, would go off from the known track in one direction, and one in another; so that when a crisis came requiring massed combination, no two men would be near enough to act together. It is the dull traditional habit of mankind that guides most men's actions, and is the steady frame in which each new artist must set the picture that he paints. And all this traditional part of human nature is, *ex vi termini*, most easily impressed and acted on by that which is handed down. Other things being equal, yesterday's institutions are by far the best for to-day; they are the most ready, the most influential, the most easy to get obeyed, the most likely to retain the reverence which they alone inherit, and which every other must win. The most imposing institutions of mankind are the oldest; and yet so changing is the world, so fluctuating are its needs, so apt to lose inward force, though retaining outward strength, are its best instruments, that we must not expect the oldest institutions to be now the most efficient. We must expect what is venerable to acquire influence because of its inherent dignity; but we must not expect it to use that influence so well as new creations apt for the modern world, instinct with its spirit, and fitting closely to its life.

The brief description of the characteristic merit of the English Constitution is, that its dignified parts are very complicated and somewhat imposing, very old and rather venerable; while its efficient part, at least when in great and critical action, is decidedly simple and rather modern. We have made, or rather stumbled on, a constitution which--though full of every species of incidental defect, though of the worst workmanship in all out-of-the-way matters of any constitution in the world--yet has two capital merits: it contains a simple efficient part which, on occasion, and when wanted, can work more simply and easily, and better, than any instrument of government that has yet been tried; and it contains likewise historical, complex, august, theatrical parts, which it has inherited from a long past--which take the multitude--which guide by an insensible but an omnipotent influence the associations of its subjects. Its essence is strong with the strength of modern simplicity; its exterior is august with the Gothic grandeur of a more imposing age. Its simple essence may, *mutatis mutandis*, be transplanted to many very various countries, but its august outside--what most men think it is--is narrowly confined to nations with an analogous history and similar political materials. The efficient secret of the English Constitution may be described as the close union, the nearly complete fusion, of the executive and legislative powers. No doubt by the traditional theory, as it exists in all the books, the goodness of our constitution consists in the entire separation of the legislative and executive authorities, but in truth its merit consists in their singular approximation. The connecting link is the Cabinet. By that new word we mean a committee of the legislative body selected to be the executive body. The legislature has many committees, but this is its greatest. It chooses for this, its main committee, the men in whom it has most confidence. It does not, it is true, choose them directly; but it is nearly omnipotent in choosing them indirectly. A century ago the Crown had a real choice of Ministers, though it had no longer a choice in policy. During the long reign of Sir R. Walpole he was obliged not only to manage Parliament but to manage the palace. He was obliged to take care that some court intrigue did not expel him from his place. The nation then selected the English policy, but the Crown chose the English Ministers.

They were not only in name, as now, but in fact, the Queen's servants. Remnants, important remnants, of this great prerogative still remain. The discriminating favour of William IV. made Lord Melbourne head of the Whig party when he was only one of several rivals. At the death of Lord Palmerston it is very likely that the Queen may have the opportunity of fairly choosing between two, if not three statesmen. But, as a rule, the nominal Prime Minister is chosen by the legislature, and the real Prime Minister for most purposes--the leader of the House of Commons--almost without exception is so. There is nearly always some one man plainly selected by the voice of the predominant party in the predominant house of the legislature to head that party, and consequently to rule the nation. We have in England an elective first magistrate as truly as the Americans have an elective first magistrate. The Queen is only at the head of the dignified part of the Constitution. The Prime Minister is at the head of the efficient part. The Crown is, according to the saying, the "fountain of honour"; but the Treasury is the spring of business. Nevertheless, our first magistrate differs from the American. He is not elected directly by the people; he is elected by the representatives of the people. He is an example of "double election". The legislature chosen, in name, to make laws, in fact finds its principal business in making and in keeping an executive. The leading Minister so selected has

to choose his associates, but he only chooses among a charmed circle. The position of most men in Parliament forbids their being invited to the Cabinet; the position of a few men ensures their being invited. Between the compulsory list whom he must take, and the impossible list whom he cannot take, a Prime Minister's independent choice in the formation of a Cabinet is not very large; it extends rather to the division of the Cabinet offices than to the choice of Cabinet Ministers. Parliament and the nation have pretty well settled who shall have the first places; but they have not discriminated with the same accuracy which man shall have which place. The highest patronage of a Prime Minister is, of course, a considerable power, though it is exercised under close and imperative restrictions--though it is far less than it seems to be when stated in theory, or looked at from a distance. The Cabinet, in a word, is a board of control chosen by the legislature, out of persons whom it trusts and knows, to rule the nation. The particular mode in which the English Ministers are selected; the fiction that they are, in any political sense, the Queen's servants; the rule which limits the choice of the Cabinet to the members of the legislature--are accidents unessential to its definition--historical incidents separable from its nature. Its characteristic is that it should be chosen by the legislature out of persons agreeable to and trusted by the legislature.

Naturally these are principally its own members--but they need not be exclusively so. A Cabinet which included persons not members of the legislative assembly might still perform all useful duties. Indeed the peers, who constitute a large element in modern Cabinets, are members, now- a-days, only of a subordinate assembly. The House of Lords still exercises several useful functions; but the ruling influence--the deciding faculty--has passed to what, using the language of old times, we still call the lower house--to an assembly which, though inferior as a dignified institution, is superior as an efficient institution. A principal advantage of the House of Lords in the present age indeed consists in its thus acting as a reservoir of Cabinet Ministers. Unless the composition of the House of Commons were improved, or unless the rules requiring Cabinet Ministers to be members of the legislature were relaxed, it would undoubtedly be difficult to find, without the lords, a sufficient supply of chief Ministers. But the detail of the composition of a Cabinet, and the precise method of its choice, are not to the purpose now. The first and cardinal consideration is the definition of a Cabinet. We must not bewilder ourselves with the inseparable accidents until we know the necessary essence. A Cabinet is a combining committee--a hyphen which joins, a buckle which fastens, the legislative part of the State to the executive part of the State. In its origin it belongs to the one, in its functions it belongs to the other. The most curious point about the Cabinet is that so very little is known about it. The meetings are not only secret in theory, but secret in reality. By the present practice, no official minute in all ordinary cases is kept of them. Even a private note is discouraged and disliked. The House of Commons, even in its most inquisitive and turbulent moments, would scarcely permit a note of a Cabinet meeting to be read. No Minister who respected the fundamental usages of political practice would attempt to read such a note. The committee which unites the law-making power to the law- executing power--which, by virtue of that combination, is, while it lasts and holds together, the most powerful body in the State--is a committee wholly secret. No description of it, at once graphic and authentic, has ever been given. It is said to be sometimes like a rather disorderly board of directors, where many speak and few listen--though no one knows. [Footnote: It is said that at the end of the Cabinet which agreed to propose a fixed duty on corn, Lord Melbourne put his back to the door and said, "Now is it to lower the price of corn or isn't it? It is not much matter which we say, but mind, we must all say THE SAME." This is the most graphic story of a Cabinet I ever heard, but I cannot vouch for its truth Lord Melbourne's is a character about which men make stories.]

But a Cabinet, though it is a committee of the legislative assembly, is a committee with a power which no assembly would--unless for historical accidents, and after happy experience--have been persuaded to entrust to any committee. It is a committee which can dissolve the assembly which appointed it; it is a committee with a suspensive veto--a committee with a power of appeal. Though appointed by one Parliament, it can appeal if it chooses to the next. Theoretically, indeed, the power to dissolve Parliament is entrusted to the sovereign only; and there are vestiges of doubt whether in ALL cases a sovereign is bound to dissolve Parliament when the Cabinet asks him to do so. But neglecting such small and dubious exceptions, the Cabinet which was chosen by one House of Commons has an appeal to the next House of Commons. The chief committee of the legislature has the power of dissolving the predominant part of that legislature--that which at a crisis is the supreme legislature. The English system, therefore, is not an absorption of the executive power by the legislative power; it is a fusion of the two. Either the Cabinet legislates and acts, or else it can dissolve. It is a creature, but it has the power of destroying its creators. It is an executive which can annihilate the legislature, as well as an executive which is the nominee of the legislature. It was made, but it can unmake; it was derivative in its origin, but it is destructive in its action. This fusion of the legislative

and executive functions may, to those who have not much considered it, seem but a dry and small matter to be the latent essence and effectual secret of the English Constitution; but we can only judge of its real importance by looking at a few of its principal effects, and contrasting it very shortly with its great competitor, which seems likely, unless care be taken, to outstrip it in the progress of the world. That competitor is the Presidential system. The characteristic of it is that the President is elected from the people by one process, and the House of Representatives by another. The independence of the legislative and executive powers is the specific quality of Presidential government, just as their fusion and combination is the precise principle of Cabinet government. First, compare the two in quiet times. The essence of a civilised age is, that administration requires the continued aid of legislation. One principal and necessary kind of legislation is taxation. The expense of civilised government is continually varying. It must vary if the Government does its duty. The miscellaneous estimates of the English Government contain an inevitable medley of changing items. Education, prison discipline, art, science, civil contingencies of a hundred kinds, require more money one year and less another. The expense of defence--the naval and military estimates--vary still more as the danger of attack seems more or less imminent, as the means of retarding such danger become more or less costly. If the persons who have to do the work are not the same as those who have to make the laws, there will be a controversy between the two sets of persons. The tax-imposers are sure to quarrel with the tax-requirers.

The executive is crippled by not getting the laws it needs, and the legislature is spoiled by having to act without responsibility: the executive becomes unfit for its name, since it cannot execute what it decides on; the legislature is demoralised by liberty, by taking decisions of which others (and not itself) will suffer the effects. In America so much has this difficulty been felt that a semi-connection has grown up between the legislature and the executive. When the Secretary of the Treasury of the Federal Government wants a tax he consults upon it with the chairman of the Financial Committee of Congress. He cannot go down to Congress himself and propose what he wants; he can only write a letter and send it. But he tries to get a chairman of the Finance Committee who likes his tax;--through that chairman he tries to persuade the committee to recommend such tax; by that committee he tries to induce the house to adopt that tax. But such a chain of communications is liable to continual interruptions; it may suffice for a single tax on a fortunate occasion, but will scarcely pass a complicated budget--we do not say in a war or a rebellion--we are now comparing the Cabinet system and the Presidential system in quiet times--but in times of financial difficulty. Two clever men never exactly agreed about a budget. We have by present practice an Indian Chancellor of the Exchequer talking English finance at Calcutta, and an English one talking Indian finance in England. But the figures are never the same, and the views of policy are rarely the same. One most angry controversy has amused the world, and probably others scarcely less interesting are hidden in the copious stores of our Anglo-Indian correspondence. But relations something like these must subsist between the head of a finance committee in the legislature, and a finance Minister in the executive. [Footnote: It is worth observing that even during the short existence of the Confederate Government these evils distinctly showed themselves. Almost the last incident at the Richmond Congress was an angry financial correspondence with Jefferson Davis.] They are sure to quarrel, and the result is sure to satisfy neither.

And when the taxes do not yield as they were expected to yield, who is responsible? Very likely the Secretary of the Treasury could not persuade the chairman--very likely the chairman could not persuade his committee--very likely the committee could not persuade the assembly. Whom, then, can you punish--whom can you abolish--when your taxes run short? There is nobody save the legislature, a vast miscellaneous body difficult to punish, and the very persons to inflict the punishment. Nor is the financial part of administration the only one which requires in a civilised age the constant support and accompaniment of facilitating legislation. All administration does so. In England, on a vital occasion, the Cabinet can compel legislation by the threat of resignation, and the threat of dissolution; but neither of these can be used in a Presidential State. There the legislature cannot be dissolved by the executive Government; and it does not heed a resignation, for it has not to find the successor. Accordingly, when a difference of opinion arises, the legislature is forced to fight the executive, and the executive is forced to fight the legislative; and so very likely they contend to the conclusion of their respective terms. [Footnote: I leave this passage to stand as it was written, just after the assassination of Mr. Lincoln, and when every one said Mr. Johnson would be very hostile to the South.] There is, indeed, one condition of things in which this description, though still approximately true, is, nevertheless, not exactly true; and that is, when there is nothing to fight about. Before the rebellion in America, owing to the vast distance of other States, and the favourable economic condition of the country, there were very few considerable objects of contention; but if that government had been tried by English

legislation of the last thirty years, the discordant action of the two powers, whose constant cooperation is essential to the best government, would have shown itself much more distinctly. Nor is this the worst. Cabinet government educates the nation; the Presidential does not educate it, and may corrupt it. It has been said that England invented the phrase, "Her Majesty's Opposition"; that it was the first Government which made a criticism of administration as much a part of the polity as administration itself. This critical opposition is the consequence of Cabinet government. The great scene of debate, the great engine of popular instruction and political controversy, is the legislative assembly. A speech there by an eminent statesman, a party movement by a great political combination, are the best means yet known for arousing, enlivening, and teaching a people.

The Cabinet system ensures such debates, for it makes them the means by which statesmen advertise themselves for future and confirm themselves in present Governments. It brings forward men eager to speak, and gives them occasions to speak. The deciding catastrophes of Cabinet governments are critical divisions preceded by fine discussions. Everything which is worth saying, everything which ought to be said, most certainly WILL be said. Conscientious men think they ought to persuade others; selfish men think they would like to obtrude themselves. The nation is forced to hear two sides--all the sides, perhaps, of that which most concerns it. And it likes to hear--it is eager to know. Human nature despises long arguments which come to nothing--heavy speeches which precede no motion--abstract disquisitions which leave visible things where they were. But all men heed great results, and a change of Government is a great result. It has a hundred ramifications; it runs through society; it gives hope to many, and it takes away hope from many. It is one of those marked events which, by its magnitude and its melodrama, impress men even too much. And debates which have this catastrophe at the end of them--or may so have it--are sure to be listened to, and sure to sink deep into the national mind. Travellers even in the Northern States of America, the greatest and best of Presidential countries, have noticed that the nation was "not specially addicted to politics"; that they have not a public opinion finished and chastened as that of the English has been finished and chastened. A great many hasty writers have charged this defect on the "Yankee race," on the Anglo-American character; but English people, if they had no motive to attend to politics, certainly would not attend to politics. At present there is BUSINESS in their attention. They assist at the determining crisis; they arrest or help it. Whether the Government will go out or remain is determined by the debate, and by the division in Parliament. And the opinion out of doors, the secret pervading disposition of society, has a great influence on that division. The nation feels that its judgment is important, and it strives to judge. It succeeds in deciding because the debates and the discussions give it the facts and the arguments. But under a Presidential government, a nation has, except at the electing moment, no influence; it has not the ballot-box before it; its virtue is gone, and it must wait till its instant of despotism again returns. It is not incited to form an opinion like a nation under a Cabinet government; nor is it instructed like such a nation. There are doubtless debates in the legislature, but they are prologues without a play. There is nothing of a catastrophe about them; you can not turn out the Government.

The prize of power is not in the gift of the legislature, and no one cares for the legislature. The executive, the great centre of power and place, sticks irremovable; you cannot change it in any event. The teaching apparatus which has educated our public mind, which prepares our resolutions, which shapes our opinions, does not exist. No Presidential country needs to form daily delicate opinions, or is helped in forming them. It might be thought that the discussions in the press would supply the deficiencies in the Constitution; that by a reading people especially, the conduct of their Government would be as carefully watched, that their opinions about it would be as consistent, as accurate, as well considered, under a Presidential as under a Cabinet polity. But the same difficulty oppresses the press which oppresses the legislature. It can DO NOTHING. It cannot change the administration; the executive was elected for such and such years, and for such and such years it must last. People wonder that so literary a people as the Americans--a people who read more than any people who ever lived, who read so many newspapers--should have such bad newspapers. The papers are not so good as the English, because they have not the same motive to be good as the English papers. At a political "crisis," as we say--that is, when the fate of an administration is unfixed, when it depends on a few votes yet unsettled, upon a wavering and veering opinion--effective articles in great journals become of essential moment. The Times has made many ministries. When, as of late, there has been a long continuance of divided Parliaments, of Governments which were without "brute voting power," and which depended on intellectual strength, the support of the most influential organ of English opinion has been of critical moment. If a Washington newspaper could have turned out Mr. Lincoln, there would have been good writing and fine argument in the Washington newspapers. But the Washington newspapers can no more remove a President during his term of place than the Times can remove a lord mayor during his year of office. Nobody cares for a debate in Congress

which "comes to nothing," and no one reads long articles which have no influence on events. The Americans glance at the heads of news, and through the paper. They do not enter upon a discussion. They do not think of entering upon a discussion which would be useless.

After saying that the division of the legislature and the executive in Presidential governments weakens the legislative power, it may seem a contradiction to say that it also weakens the executive power. But it is not a contradiction. The division weakens the whole aggregate force of Government--the entire imperial power; and therefore it weakens both its halves. The executive is weakened in a very plain way. In England a strong Cabinet can obtain the concurrence of the legislature in all acts which facilitate its administration; it is itself, so to say, the legislature. But a President may be hampered by the Parliament, and is likely to be hampered. The natural tendency of the members of every legislature is to make themselves conspicuous. They wish to gratify an ambition laudable or blamable; they wish to promote the measures they think best for the public welfare; they wish to make their WILL felt in great affairs. All these mixed motives urge them to oppose the executive. They are embodying the purposes of others if they aid; they are advancing their own opinions if they defeat: they are first if they vanquish; they are auxiliaries if they support. The weakness of the American executive used to be the great theme of all critics before the Confederate rebellion. Congress and committees of Congress of course impeded the executive when there was no coercive public sentiment to check and rule them. But the Presidential system not only gives the executive power an antagonist in the legislative power, and so makes it weaker; it also enfeebles it by impairing its intrinsic quality. A Cabinet is elected by a legislature; and when that legislature is composed of fit persons, that mode of electing the executive is the very best. It is a case of secondary election, under the only conditions in which secondary election is preferable to primary. Generally speaking, in an electioneering country (I mean in a country full of political life, and used to the manipulation of popular institutions), the election of candidates to elect candidates is a farce. The Electoral College of America is so. It was intended that the deputies when assembled should exercise a real discretion, and by independent choice select the President. But the primary electors take too much interest. They only elect a deputy to vote for Mr. Lincoln or Mr. Breckenridge, and the deputy only takes a ticket, and drops that ticket in an urn. He never chooses or thinks of choosing. He is but a messenger--a transmitter; the real decision is in those who choose him--who chose him because they knew what he would do. It is true that the British House of Commons is subject to the same influences. Members are mostly, perhaps, elected because they will vote for a particular Ministry, rather than for purely legislative reasons.

But--and here is the capital distinction--the functions of the House of Commons are important and CONTINUOUS. It does not, like the Electoral College in the United States, separate when it has elected its ruler; it watches, legislates, seats and unseats ministries, from day to day. Accordingly it is a REAL electoral body. The Parliament of 1857, which, more than any other Parliament of late years, was a Parliament elected to support a particular premier--which was chosen, as Americans might say, upon the "Palmerston ticket"--before it had been in existence two years, dethroned Lord Palmerston. Though selected in the interest of a particular Ministry, it in fact destroyed that Ministry. A good Parliament, too, is a capital choosing body. If it is fit to make laws for a country, its majority ought to represent the general average intelligence of that country; its various members ought to represent the various special interests, special opinions, special prejudices, to be found in that community. There ought to be an advocate for every particular sect, and a vast neutral body of no sect--homogeneous and judicial, like the nation itself. Such a body, when possible, is the best selector of executives that can be imagined. It is full of political activity; it is close to political life; it feels the responsibility of affairs which are brought as it were to its threshold; it has as much intelligence as the society in question chances to contain. It is, what Washington and Hamilton strove to create, an electoral college of the picked men of the nation. The best mode of appreciating its advantages is to look at the alternative. The competing constituency is the nation itself, and this is, according to theory and experience, in all but the rarest cases, a bad constituency. Mr. Lincoln, at his second election, being elected when all the Federal States had set their united hearts on one single object, was voluntarily reelected by an actually choosing nation. He embodied the object in which every one was absorbed. But this is almost the only Presidential election of which so much can be said. In almost all cases the President is chosen by a machinery of caucuses and combinations too complicated to be perfectly known, and too familiar to require description. He is not the choice of the nation, he is the choice of the wire-pullers. A very large constituency in quiet times is the necessary, almost the legitimate, subject of electioneering management: a man cannot know that he does not throw his vote away except he votes as part of some great organisation; and if he votes as a part, he abdicates his electoral function in favour of the managers of that association. The nation, even if it chose for itself, would, in some degree, be an unskilled body; but

when it does not choose for itself, but only as latent agitators wish, it is like a large, lazy man, with a small vicious mind,--it moves slowly and heavily, but it moves at the bidding of a bad intention; it "means LITTLE, but it means that little ILL."

And, as the nation is less able to choose than a Parliament, so it has worse people to choose out of. The American legislators of the last century have been much blamed for not permitting the Ministers of the President to be members of the assembly; but, with reference to the specific end which they had in view, they saw clearly and decided wisely. They wished to keep "the legislative branch absolutely distinct from the executive branch"; they believed such a separation to be essential to a good constitution; they believed such a separation to exist in the English, which the wisest of them thought the best Constitution. And, to the effectual maintenance of such a separation, the exclusion of the President's Ministers from the legislature is essential. If they are not excluded they become the executive, they eclipse the President himself. A legislative chamber is greedy and covetous; it acquires as much, it concedes as little as possible. The passions of its members are its rulers; the law-making faculty, the most comprehensive of the imperial faculties, is its instrument; it will take the administration if it can take it. Tried by their own aims, the founders of the United States were wise in excluding the Ministers from Congress. But though this exclusion is essential to the Presidential system of government, it is not for that reason a small evil. It causes the degradation of public life. Unless a member of the legislature be sure of something more than speech, unless he is incited by the hope of action, and chastened by the chance of responsibility, a first-rate man will not care to take the place, and will not do much if he does take it. To belong to a debating society adhering to an executive (and this is no inapt description of a congress under a Presidential Constitution) is not an object to stir a noble ambition, and is a position to encourage idleness. The members of a Parliament excluded from office can never be comparable, much less equal, to those of a Parliament not excluded from office. The Presidential Government, by its nature, divides political life into two halves, an executive half and a legislative half; and, by so dividing it, makes neither half worth a man's having--worth his making it a continuous career--worthy to absorb, as Cabinet government absorbs, his whole soul. The statesmen from whom a nation chooses under a Presidential system are much inferior to those from whom it chooses under a Cabinet system, while the selecting apparatus is also far less discerning. All these differences are more important at critical periods, because government itself is more important. A formed public opinion, a respectable, able, and disciplined legislature, a well-chosen executive, a Parliament and an administration not thwarting each other, but co-operating with each other, are of greater consequence when great affairs are in progress than when small affairs are in progress--when there is much to do than when there is little to do. But in addition to this, a Parliamentary or Cabinet Constitution possesses an additional and special advantage in very dangerous times. It has what we may call a reserve of power fit for and needed by extreme exigencies. The principle of popular government is that the supreme power, the determining efficacy in matters political, resides in the people-- not necessarily or commonly in the whole people, in the numerical majority, but in a CHOSEN people, a picked and selected people. It is so in England; it is so in all free countries. Under a Cabinet Constitution at a sudden emergency this people can choose a ruler for the occasion. It is quite possible and even likely that he would not be ruler before the occasion. The great qualities, the imperious will, the rapid energy, the eager nature fit for a great crisis are not required--are impediments--in common times; A Lord Liverpool is better in everyday politics than a Chatham--a Louis Philippe far better than a Napoleon.

By the structure of the world we often want, at the sudden occurrence of a grave tempest, to change the helmsman - to replace the pilot of the calm by the pilot of the storm. In England we have had so few catastrophes since our Constitution attained maturity, that we hardly appreciate this latent excellence. We have not needed a Cavour to rule a revolution--a representative man above all men fit for a great occasion, and by a natural legal mode brought in to rule. But even in England, at what was the nearest to a great sudden crisis which we have had of late years--at the Crimean difficulty--we used this inherent power. We abolished the Aberdeen Cabinet, the ablest we have had, perhaps, since the Reform Act--a Cabinet not only adapted, but eminently adapted, for every sort of difficulty save the one it had to meet--which abounded in pacific discretion, and was wanting only in the "daemonic element"; we chose a statesman, who had the sort of merit then wanted, who, when he feels the steady power of England behind him, will advance without reluctance, and will strike without restraint. As was said at the time, "We turned out the Quaker, and put in the pugilist". But under a Presidential government you can do nothing of the kind. The American Government calls itself a Government of the supreme people; but at a quick crisis, the time when a sovereign power is most needed, you cannot FIND the supreme people. You have got a Congress elected for one fixed period, going out perhaps by fixed instalments, which cannot be accelerated or retarded--you have a President chosen for a fixed

period, and immovable during that period: all the arrangements are for STATED times. There is no ELASTIC element, everything is rigid, specified, dated. Come what may, you can quicken nothing, and can retard nothing. You have bespoken your Government in advance, and whether it suits you or not, whether it works well or works ill, whether it is what you want or not, by law you must keep it. In a country of complex foreign relations it would mostly happen that the first and most critical year of every war would be managed by a peace Premier, and the first and most critical years of peace by a war Premier. In each case the period of transition would be irrevocably governed by a man selected not for what he was to introduce, but what he was to change--for the policy he was to abandon, not for the policy he was to administer. The whole history of the American Civil War--a history which has thrown an intense light on the working of a Presidential government at the time when government is most important--is but a vast continuous commentary on these reflections. It would, indeed, be absurd to press against Presidential government AS SUCH the singular defect by which Vice-President Johnson has become President--by which a man elected to a sinecure is fixed in what is for the moment the most important administrative part in the political world.

This defect, though most characteristic of the expectations [Footnote: The framers of the Constitution expected that the vice-president would be elected by the Electoral College as the second wisest man in the country. The vice-presidency being a sinecure, a second-rate man agreeable to the wire-pullers is always smuggled in. The chance of succession to the presidency is too distant to be thought of.] of the framers of the Constitution and of its working, is but an accident of this particular case of Presidential government, and no necessary ingredient in that government itself. But the first election of Mr. Lincoln is liable to no such objection. It was a characteristic instance of the natural working of such a government upon a great occasion. And what was that working? It may be summed up--it was government by an UNKNOWN QUANTITY. Hardly any one in America had any living idea what Mr. Lincoln was like, or any definite notion what he would do. The leading statesmen under the system of Cabinet government are not only household words, but household IDEAS. A conception, not, perhaps, in all respects a true but a most vivid conception of what Mr. Gladstone is like, or what Lord Palmerston is like, runs through society. We have simply no notion what it would be to be left with the visible sovereignty in the hands of an unknown man. The notion of employing a man of unknown smallness at a crisis of unknown greatness is to our minds simply ludicrous. Mr. Lincoln, it is true, happened to be a man, if not of eminent ability, yet of eminent justness. There was an inner depth of Puritan nature which came out under suffering, and was very attractive. But success in a lottery is no argument for lotteries. What were the chances against a person of Lincoln's antecedents, elected as he was, proving to be what he was? Such an incident is, however, natural to a Presidential government. The President is elected by processes which forbid the election of known men, except at peculiar conjunctures, and in moments when public opinion is excited and despotic; and consequently if a crisis comes upon us soon after he is elected, inevitably we have government by an unknown quantity--the superintendence of that crisis by what our great satirist would have called "Statesman X". Even in quiet times, government by a President, is, for the several various reasons which have been stated, inferior to government by a Cabinet; but the difficulty of quiet times is nothing as compared with the difficulty of unquiet times. The comparative deficiencies of the regular, common operation of a Presidential government are far less than the comparative deficiencies in time of sudden trouble--the want of elasticity, the impossibility of a dictatorship, the total absence of a REVOLUTIONARY RESERVE. This contrast explains why the characteristic quality of Cabinet Governments--the fusion of the executive power with the legislative power--is of such cardinal importance. I shall proceed to show under what form and with what adjuncts it exists in England.

NO. III.

THE MONARCHY.

I.

The use of the Queen, in a dignified capacity, is incalculable. Without her in England, the present English Government would fail and pass away. Most people when they read that the Queen walked on the slopes at Windsor--that the Prince of Wales went to the Derby-- have imagined that too much thought and prominence were given to little things. But they have been in error; and it is nice to trace how the actions of a retired widow and an unemployed youth become of such importance. The best reason why Monarchy is a strong government is, that it is an intelligible government. The mass of mankind understand it, and they hardly anywhere in the world understand any other. It is often said that men are ruled by their imaginations; but it would be truer to say they are governed by the weakness of their imaginations. The nature of a constitution, the action of an assembly, the play of parties, the

unseen formation of a guiding opinion, are complex facts, difficult to know and easy to mistake. But the action of a single will, the fiat of a single mind, are easy ideas: anybody can make them out, and no one can ever forget them. When you put before the mass of mankind the question, "Will you be governed by a king, or will you be governed by a constitution?" the inquiry comes out thus--" Will you be governed in a way you understand, or will you be governed in a way you do not understand?" The issue was put to the French people; they were asked, "Will you be governed by Louis Napoleon, or will you be governed by an assembly?" The French people said, "We will be governed by the one man we can imagine, and not by the many people we cannot imagine".

The best mode of comprehending the nature of the two Governments, is to look at a country in which the two have within a comparatively short space of years succeeded each other. "The political condition," says Mr. Grote, "which Grecian legend everywhere presents to us, is in its principal features strikingly different from that which had become universally prevalent among the Greeks in the time of the Peloponnesian War. Historical oligarchy, as well as democracy, agreed in requiring a certain established system of government, comprising the three elements of specialised functions, temporary functionaries, and ultimate responsibility (under some forms or other) to the mass of qualified citizens-- either a Senate or an Ecclesia, or both. There were, of course, many and capital distinctions between one Government and another, in respect to the qualification of the citizen, the attributes and efficiency of the general assembly, the admissibility to power, etc.; and men might often be dissatisfied with the way in which these questions were determined in their own city. But in the mind of every man, some determining rule or system-- something like what in modern times is called a CONSTITUTION--was indispensable to any Government entitled to be called legitimate, or capable of creating in the mind of a Greek a feeling of moral obligation to obey it. The functionaries who exercise authority under it might be more or less competent or popular; but his personal feelings towards them were commonly lost in his attachment or aversion to the general system. If any energetic man could by audacity or craft break down the Constitution, and render himself permanent ruler according to his own will and pleasure, even though he might govern well, he could never inspire the people with any sentiment of duty towards him: his sceptre was illegitimate from the beginning, and even the taking of his life, far from being interdicted by that moral feeling which condemned the shedding of blood in other cases, was considered meritorious: he could not even be mentioned in the language except by a name ([word in Greek], despot) which branded him as an object of mingled fear and dislike. "If we carry our eyes back from historical to legendary Greece, we find a picture the reverse of what has been here sketched. We discern a government in which there is little or no scheme or system, still less any idea of responsibility to the governed, but in which the mainspring of obedience on the part of the people consists in their personal feeling and reverence towards the chief. We remark, first and foremost, the King; next, a limited number of subordinate kings or chiefs; afterwards, the mass of armed freemen, husbandmen, artisans, freebooters, &c.; lowest of all, the free labourers for hire and the bought slaves. The King is not distinguished by any broad, or impassable boundary from the other chiefs, to each of whom the title Basileus is applicable as well as to himself: his supremacy has been inherited from his ancestors, and passes by inheritance, as a general rule, to his eldest son, having been conferred upon the family as a privilege by the favour of Zeus. In war, he is the leader, foremost in personal prowess, and directing all military movements; in peace, he is the general protector of the injured and oppressed; he offers up moreover those public prayers and sacrifices which are intended to obtain for the whole people the favour of the gods. An ample domain is assigned to him as an appurtenance of his lofty position, and the produce of his fields and his cattle is consecrated in part to an abundant, though rude hospitality. Moreover he receives frequent presents, to avert his enmity, to conciliate his favour, or to buy off his exactions; and when plunder is taken from the enemy, a large previous share, comprising probably the most alluring female captive, is reserved for him apart from the general distribution. "Such is the position of the King in the heroic times of Greece--the only person (if we except the herald, and priests, each both special and subordinate) who is then presented to us as clothed with any individual authority--the person by whom all the executive functions, then few in number, which the society requires, are either performed or directed. His personal ascendancy--derived from Divine countenance bestowed both upon himself individually and upon his race, and probably from accredited Divine descent--is the salient feature in the picture: the people hearken to his voice, embrace his propositions, and obey his orders: not merely resistance, but even criticism upon his acts, is generally exhibited in an odious point of view, and is indeed never heard of except from some one or more of the subordinate princes."

The characteristic of the English Monarchy is that it retains the feelings by which the heroic kings governed their rude age, and has added the feelings by which the Constitutions of later Greece ruled in more refined ages. We are a more mixed people than the Athenians, or probably than any political Greeks. We have progressed more unequally.

The slaves in ancient times were a separate order; not ruled by the same laws, or thoughts, as other men. It was not necessary to think of them in making a constitution: it was not necessary to improve them in order to make a constitution possible. The Greek legislator had not to combine in his polity men like the labourers of Somersetshire, and men like Mr. Grote. He had not to deal with a community in which primitive barbarism lay as a recognised basis to acquired civilisation. WE HAVE. We have no slaves to keep down by special terrors and independent legislation. But we have whole classes unable to comprehend the idea of a constitution--unable to feel the least attachment to impersonal laws. Most do indeed vaguely know that there are some other institutions besides the Queen, and some rules by which she governs. But a vast number like their minds to dwell more upon her than upon anything else, and therefore she is inestimable. A republic has only difficult ideas in government; a Constitutional Monarchy has an easy idea too; it has a comprehensible element for the vacant many, as well as complex laws and notions for the inquiring few. A FAMILY on the throne is an interesting idea also. It brings down the pride of sovereignty to the level of petty life. No feeling could seem more childish than the enthusiasm of the English at the marriage of the Prince of Wales. They treated as a great political event, what, looked at as a matter of pure business, was very small indeed. But no feeling could be more like common human nature as it is, and as it is likely to be. The women--one half the human race at least--care fifty times more for a marriage than a ministry. All but a few cynics like to see a pretty novel touching for a moment the dry scenes of the grave world. A princely marriage is the brilliant edition of a universal fact, and, as such, it rivets mankind. We smile at the Court Circular; but remember how many people read the Court Circular! Its use is not in what it says, but in those to whom it speaks. They say that the Americans were more pleased at the Queen's letter to Mrs. Lincoln, than at any act of the English Government. It was a spontaneous act of intelligible feeling in the midst of confused and tiresome business. Just so a royal family sweetens politics by the seasonable addition of nice and pretty events. It introduces irrelevant facts into the business of government, but they are facts which speak to "men's bosoms" and employ their thoughts.

To state the matter shortly, royalty is a government in which the attention of the nation is concentrated on one person doing interesting actions. A Republic is a government in which that attention is divided between many, who are all doing uninteresting actions. Accordingly, so long as the human heart is strong and the human reason weak, royalty will be strong because it appeals to diffused feeling, and Republics weak because they appeal to the understanding. Secondly. The English Monarchy strengthens our Government with the strength of religion. It is not easy to say why it should be so. Every instructed theologian would say that it was the duty of a person born under a Republic as much to obey that Republic as it is the duty of one born under a Monarchy to obey the monarch. But the mass of the English people do not think so; they agree with the oath of allegiance; they say it is their duty to obey the "Queen," and they have but hazy notions as to obeying laws without a queen. In former times, when our Constitution was incomplete, this notion of local holiness in one part was mischievous. All parts were struggling, and it was necessary each should have its full growth. But superstition said one should grow where it would, and no other part should grow without its leave. The whole cavalier party said it was their duty to obey the king, whatever the king did. There was to be "passive obedience" to him, and there was no religious obedience due to any one else. He was the "Lord's anointed," and no one else had been anointed at all. The Parliament, the laws, the press were human institutions; but the Monarchy was a Divine institution. An undue advantage was given to a part of the Constitution, and therefore the progress of the whole was stayed. After the Revolution this mischievous sentiment was much weaker. The change of the line of sovereigns was at first conclusive, If there was a mystic right in any one, that right was plainly in James II.; if it was an English duty to obey any one whatever he did, he was the person to be so obeyed; if there was an inherent inherited claim in any king, it was in the Stuart king to whom the crown had come by descent, and not in the Revolution king to whom it had come by vote of Parliament. All through the reign of William III. there was (in common speech) one king whom man had made, and another king whom God had made. The king who ruled had no consecrated loyalty to build upon; although he ruled in fact, according to sacred theory there was a king in France who ought to rule. But it was very hard for the English people, with their plain sense and slow imagination, to keep up a strong sentiment of veneration for a foreign adventurer. He lived under the protection of a French king; what he did was commonly stupid, and what he left undone was very often wise. As soon as Queen Anne began to reign there was a change of feeling; the old sacred sentiment began to cohere about her. There were indeed difficulties which would have baffled most people; but an Englishman whose heart is in a matter is not easily baffled.

Queen Anne had a brother living and a father living, and by every rule of descent, their right was better than hers. But many people evaded both claims. They said James II. had "run away," and so abdicated, though he only ran

away because he was in duress and was frightened, and though he claimed the allegiance of his subjects day by day. The Pretender, it was said, was not legitimate, though the birth was proved by evidence which any Court of Justice would have accepted. The English people were "out of" a sacred monarch, and so they tried very hard to make a new one. Events, however, were too strong for them. They were ready and eager to take Queen Anne as the stock of a new dynasty; they were ready to ignore the claims of her father and the claims of her brother, but they could not ignore the fact that at the critical period she had no children. She had once had thirteen, but they all died in her lifetime, and it was necessary either to revert to the Stuarts or to make a new king by Act of Parliament. According to the Act of Settlement passed by the Whigs, the crown was settled on the descendants of the "Princess Sophia" of Hanover, a younger daughter of a daughter of James I. There were before her James II., his son, the descendants of a daughter of Charles I., and elder children of her own mother. But the Whigs passed these over because they were Catholics, and selected the Princess Sophia, who, if she was anything, was a Protestant. Certainly this selection was statesmanlike, but it could not be very popular. It was quite impossible to say that it was the duty of the English people to obey the House of Hanover upon any principles which do not concede the right of the people to choose their rulers, and which do not degrade monarchy from its solitary pinnacle of majestic reverence, and make it one only among many expedient institutions. If a king is a useful public functionary who may be changed, and in whose place you may make another, you cannot regard him with mystic awe and wonder; and if you are bound to worship him, of course you cannot change him. Accordingly, during the whole reigns of George I. and George II. the sentiment of religious loyalty altogether ceased to support the Crown. The prerogative of the king had no strong party to support it; the Tories, who naturally would support it, disliked the actual king; and the Whigs, according to their creed, disliked the king's office. Until the accession of George III. the most vigorous opponents of the Crown were the country gentlemen, its natural friends, and the representatives of quiet rural districts, where loyalty is mostly to be found, if anywhere. But after the accession of George III. the common feeling came back to the same point as in Queen Anne's time. The English were ready to take the new young prince as the beginning of a sacred line of sovereigns, just as they had been willing to take an old lady, who was the second cousin of his great-great-grandmother. So it is now. If you ask the immense majority of the Queen's subjects by what right she rules, they would never tell you that she rules by Parliamentary right, by virtue of 6 Anne, c. 7. They will say she rules by "God's grace"; they believe that they have a mystic obligation to obey her. When her family came to the Crown it was a sort of treason to maintain the inalienable right of lineal sovereignty, for it was equivalent to saying that the claim of another family was better than hers: but now, in the strange course of human events, that very sentiment has become her surest and best support.

But it would be a great mistake to believe that at the accession of George III. the instinctive sentiment of hereditary loyalty at once became as useful as now. It began to be powerful, but it hardly began to be useful. There was so much harm done by it as well as so much good, that it is quite capable of being argued whether on the whole it was beneficial or hurtful. Throughout the greater part of his life George III. was a kind of "consecrated obstruction". Whatever he did had a sanctity different from what any one else did, and it perversely happened that he was commonly wrong. He had as good intentions as any one need have, and he attended to the business of his country, as a clerk with his bread to get attends to the business of his office. But his mind was small, his education limited, and he lived in a changing time. Accordingly, he was always resisting what ought to be, and prolonging what ought not to be. He was the sinister but sacred assailant of half his ministries; and when the French Revolution excited the horror of the world, and proved democracy to be "impious," the piety of England concentrated upon him, and gave him tenfold strength. The Monarchy by its religious sanction now confirms all our political order; in George III.'s time it confirmed little except itself. It gives now a vast strength to the entire Constitution, by enlisting on its behalf the credulous obedience of enormous masses; then it lived aloof, absorbed all the holiness into itself, and turned over all the rest of the polity to the coarse justification of bare expediency. A principal reason why the Monarchy so well consecrates our whole state is to be sought in the peculiarity many Americans and many utilitarians smile at. They laugh at this "extra," as the Yankee called it, at the solitary transcendent element. They quote Napoleon's saying, "that he did not wish to be fatted in idleness," when he refused to be grand elector in Sieyes' Constitution, which was an office copied, and M. Thiers says, well copied, from constitutional monarchy. But such objections are wholly wrong. No doubt it was absurd enough in the Abbe Sieyes to propose that a new institution, inheriting no reverence, and made holy by no religion, should be created to fill the sort of post occupied by a constitutional king in nations of monarchical history. Such an institution, far from being so august as to spread reverence around it, is too novel and artificial to get reverence for itself; if, too, the absurdity could anyhow be augmented, it was so by offering an office of inactive uselessness and pretended sanctity to Napoleon, the most active man in France, with

the greatest genius for business, only not sacred, and exclusively fit for action. But the blunder of Sieyes brings the excellence of real monarchy to the best light. When a monarch can bless, it is best that he should not be touched. It should be evident that he does no wrong. He should not be brought too closely to real measurement.

He should be aloof and solitary. As the functions of English royalty are for the most part latent, it fulfils this condition. It seems to order, but it never seems to struggle. It is commonly hidden like a mystery, and sometimes paraded like a pageant, but in neither case is it contentious. The nation is divided into parties, but the crown is of no party. Its apparent separation from business is that which removes it both from enmities and from desecration, which preserves its mystery, which enables it to combine the affection of conflicting parties--to be a visible symbol of unity to those still so imperfectly educated as to need a symbol. Thirdly. The Queen is the head of our society. If she did not exist the Prime Minister would be the first person in the country. He and his wife would have to receive foreign ministers, and occasionally foreign princes, to give the first parties in the country; he and she would be at the head of the pageant of life; they would represent England in the eyes of foreign nations; they would represent the Government of England in the eyes of the English. It is very easy to imagine a world in which this change would not be a great evil. In a country where people did not care for the outward show of life, where the genius of the people was untheatrical, and they exclusively regarded the substance of things, this matter would be trifling. Whether Lord and Lady Derby received the foreign ministers, or Lord and Lady Palmerston, would be a matter of indifference; whether they gave the nicest parties would be important only to the persons at those parties. A nation of unimpressible philosophers would not care at all how the externals of life were managed. Who is the showman is not material unless you care about the show. But of all nations in the world the English are perhaps the least a nation of pure philosophers. It would be a very serious matter to us to change every four or five years the visible head of our world. We are not now remarkable for the highest sort of ambition; but we are remarkable for having a great deal of the lower sort of ambition and envy. The House of Commons is thronged with people who get there merely for "social purposes," as the phrase goes; that is, that they and their families may go to parties else impossible. Members of Parliament are envied by thousands merely for this frivolous glory, as a thinker calls it. If the highest post in conspicuous life were thrown open to public competition, this low sort of ambition and envy would be fearfully increased. Politics would offer a prize too dazzling for mankind; clever base people would strive for it, and stupid base people would envy it. Even now a dangerous distinction is given by what is exclusively called public life.

The newspapers describe daily and incessantly a certain conspicuous existence; they comment on its characters, recount its details, investigate its motives, anticipate its course. They give a precedent and a dignity to that world which they do not give to any other. The literary world, the scientific world, the philosophic world, not only are not comparable in dignity to the political world, but in comparison are hardly worlds at all. The newspaper makes no mention of them, and could not mention them. As are the papers, so are the readers; they, by irresistible sequence and association, believe that those people who constantly figure in the papers are cleverer, abler, or at any rate, somehow higher, than other people. "I wrote books," we heard of a man saying, "for twenty years, and I was nobody; I got into Parliament, and before I had taken my seat I had become somebody." English politicians are the men who fill the thoughts of the English public: they are the actors on the scene, and it is hard for the admiring spectators not to believe that the admired actor is greater than themselves. In this present age and country it would be very dangerous to give the slightest addition to a force already perilously great. If the highest social rank was to be scrambled for in the House of Commons, the number of social adventurers there would be incalculably more numerous, and indefinitely more eager.

5. 19th Century: John Henry Newman. The Idea of a University.

John Henry Newman

The Idea of a University

Introductory Note

John Henry Newman was born in London, February 21, 1801. Going up to Oxford at sixteen, he gained a scholarship at Trinity College, and after graduation became fellow and tutor of Oriel, then the most alive, intellectually, of the Oxford colleges. He took orders, and in 1828 was appointed vicar of St. Mary's, the university church. In 1832 he had to resign his tutorship on account of a difference of opinion with the head of the college as to his duties and responsibilities, Newman regarding his function as one of a "substantially religious nature." Returning to Oxford the next year from a journey on the Continent, he began, in cooperation with R. H. Froude and others, the publication of the "Tracts for the Times," a series of pamphlets which gave a name to the "Tractarian" or "Oxford" movement for the defence of the "doctrine of apostolical succession and the integrity of the Prayer-Book." After several years of agitation, during which Newman came to exercise an extraordinary influence in Oxford, the movement and its leader fell under the official ban of the university and of the Anglican bishops, and Newman withdrew from Oxford, feeling that the Anglican Church had herself destroyed the defences which he had sought to build for her. In October, 1845, he was received into the Roman Church. The next year he went to Rome, and on his return introduced into England the institute of the Oratory. In 1854 he went to Dublin for four years as rector of the new Catholic university, and while there wrote his volume on the "Idea of a University," in which he expounds with wonderful clearness of thought and beauty of language his view of the aim of education. In 1879 he was created cardinal in recognition of his services to the cause of religion in England, and in 1890 he died. Of the history of Newman's religious opinions and influence no hint can be given here. The essays which follow do, indeed, imply important and fundamental elements of his system of belief; but they can be taken in detachment as the exposition of a view of the nature and value of culture by a man who was himself the fine flower of English university training and a master of English prose.

The Idea of a University

I. What is a University?

If I were asked to describe as briefly and popularly as I could, what a University was, I should draw my answer from its ancient designation of a *Studium Generale*, or "School of Universal Learning." This description implies the assemblage of strangers from all parts in one spot;-- from all parts; else, how will you find professors and students for every department of knowledge? and in one spot; else, how can there be any school at all? Accordingly, in its simple and rudimental form, it is a school of knowledge of every kind, consisting of teachers and learners from every quarter. Many things are requisite to complete and satisfy the idea embodied in this description; but such as this a University seems to be in its essence, a place for the communication and circulation of thought, by means of personal intercourse, through a wide extent of country. There is nothing far-fetched or unreasonable in the idea thus presented to us; and if this be a University, then a University does but contemplate a necessity of our nature, and is but one specimen in a particular medium, out of many which might be adduced in others, of a provision for that necessity. Mutual education, in a large sense of the word, is one of the great and incessant occupations of human society, carried on partly with set purpose, and partly not. One generation forms another; and the existing generation is ever acting and reacting upon itself in the persons of its individual members. Now, in this process, books, I need scarcely say, that is, the *littera scripta*, are one special instrument. It is true; and emphatically so in this age. Considering the prodigious powers of the press, and how they are developed at this time in the never-intermitting issue of periodicals, tracts, pamphlets, works in series, and light literature, we must allow there never was a time which promised fairer for dispensing with every other means of information and instruction. What can we want more, you will say, for the intellectual education of the whole man, and for every man, than so exuberant and

diversified and persistent a promulgation of all kinds of knowledge? Why, you will ask, need we go up to knowledge, when knowledge comes down to us? The Sibyl wrote her prophecies upon the leaves of the forest, and wasted them; but here such careless profusion might be prudently indulged, for it can be afforded without loss, in consequence of the almost fabulous fecundity of the instrument which these latter ages have invented. We have sermons in stones, and books in the running brooks; works larger and more comprehensive than those which have gained for ancients an immortality, issue forth every morning, and are projected onwards to the ends of the earth at the rate of hundreds of miles a day. Our seats are strewed, our pavements are powdered, with swarms of little tracts; and the very bricks of our city walls preach wisdom, by informing us by their placards where we can at once cheaply purchase it. I allow all this, and much more; such certainly is our popular education, and its effects are remarkable. Nevertheless, after all, even in this age, whenever men are really serious about getting what, in the language of trade, is called "a good article," when they aim at something precise, something refined, something really luminous, something really large, something choice, they go to another market; they avail themselves, in some shape or other, of the rival method, the ancient method, of oral instruction, of present communication between man and man, of teachers instead of learning, of the personal influence of a master, and the humble initiation of a disciple, and, in consequence, of great centres of pilgrimage and throng, which such a method of education necessarily involves. This, I think, will be found to hold good in all those departments or aspects of society, which possess an interest sufficient to bind men together, or to constitute what is called "a world." It holds in the political world, and in the high world, and in the religious world; and it holds also in the literary and scientific world. If the actions of men may be taken as any test of their convictions, then we have reason for saying this, viz.:--that the province and the inestimable benefit of the *litera scripta* is that of being a record of truth, and an authority of appeal, and an instrument of teaching in the hands of a teacher; but that, if we wish to become exact and fully furnished in any branch of knowledge which is diversified and complicated, we must consult the living man and listen to his living voice. I am not bound to investigate the cause of this, and anything I may say will, I am conscious, be short of its full analysis;--perhaps we may suggest, that no books can get through the number of minute questions which it is possible to ask on any extended subject, or can hit upon the very difficulties which are severally felt by each reader in succession. Or again, that no book can convey the special spirit and delicate peculiarities of its subject with that rapidity and certainty which attend on the sympathy of mind with mind, through the eyes, the look, the accent, and the manner, in casual expressions thrown off at the moment, and the unstudied turns of familiar conversation. But I am already dwelling too long on what is but an incidental portion of my main subject. Whatever be the cause, the fact is undeniable. The general principles of any study you may learn by books at home; but the detail, the colour, the tone, the air, the life which makes it live in us, you must catch all these from those in whom it lives already. You must imitate the student in French or German, who is not content with his grammar, but goes to Paris or Dresden: you must take example from the young artist, who aspires to visit the great Masters in Florence and in Rome. Till we have discovered some intellectual daguerreotype, which takes off the course of thought, and the form, lineaments, and features of truth, as completely and minutely, as the optical instrument reproduces the sensible object; we must come to the teachers of wisdom to learn wisdom, we must repair to the fountain, and drink there. Portions of it may go from thence to the ends of the earth by means of books; but the fulness is in one place alone. It is in such assemblages and congregations of intellect that books themselves, the masterpieces of human genius, are written, or at least originated. The principle on which I have been insisting is so obvious, and instances in point are so ready, that I should think it tiresome to proceed with the subject, except that one or two illustrations may serve to explain my own language about it, which may not have done justice to the doctrine which it has been intended to enforce. For instance, the polished manners and high-bred bearing which are so difficult of attainment, and so strictly personal when attained,--which are so much admired in society, from society are acquired. All that goes to constitute a gentleman,--the carriage, gait, address, gestures, voice; the ease, the self-possession, the courtesy, the power of conversing, the talent of not offending; the lofty principle, the delicacy of thought, the happiness of expression, the taste and propriety, the generosity and forbearance, the candour and consideration, the openness of hand;--these qualities, some of them come by nature, some of them may be found in any rank, some of them are a direct precept of Christianity; but the full assemblage of them, bound up in the unity of an individual character, do we expect they can be learned from books? are they not necessarily acquired, where they are to be found, in high society? The very nature of the case leads us to say so; you cannot fence without an antagonist, nor challenge all comers in disputation before you have supported a thesis; and in like manner, it stands to reason, you cannot learn to converse till you have the world to converse with; you cannot unlearn your natural bashfulness, or awkwardness, or stiffness, or other besetting deformity, till you serve your time in some school of manners. Well, and is it not so in matter of fact? The metropolis, the court, the great houses of the land, are the centres to which at stated times the country comes up, as to shrines of refinement and good taste; and then in due time the country goes back again home, enriched with a portion of the social accomplishments, which those very visits serve to call out and heighten in the gracious

dispensers of them. We are unable to conceive how the "gentlemanlike" can otherwise be maintained; and maintained in this way it is. And now a second instance: and here too I am going to speak without personal experience of the subject I am introducing. I admit I have not been in Parliament, any more than I have figured in the *_beau monde_*; yet I cannot but think that statesmanship, as well as high breeding, is learned, not by books, but in certain centres of education. If it be not presumption to say so, Parliament puts a clever man *_au courant_* with politics and affairs of state in a way surprising to himself. A member of the Legislature, if tolerably observant, begins to see things with new eyes, even though his views undergo no change. Words have a meaning now, and ideas a reality, such as they had not before. He hears a vast deal in public speeches and private conversation, which is never put into print. The bearings of measures and events, the action of parties, and the persons of friends and enemies, are brought out to the man who is in the midst of them with a distinctness, which the most diligent perusal of newspapers will fail to impart to them. It is access to the fountain-heads of political wisdom and experience, it is daily intercourse, of one kind or another, with the multitude who go up to them, it is familiarity with business, it is access to the contributions of fact and opinion thrown together by many witnesses from many quarters, which does this for him. However, I need not account for a fact, to which it is sufficient to appeal; that the Houses of Parliament and the atmosphere around them are a sort of University of politics. As regards the world of science, we find a remarkable instance of the principle which I am illustrating, in the periodical meetings for its advance, which have arisen in the course of the last twenty years, such as the British Association. Such gatherings would to many persons appear at first sight simply preposterous. Above all subjects of study, Science is conveyed, is propagated, by books, or by private teaching; experiments and investigations are conducted in silence; discoveries are made in solitude. What have philosophers to do with festive celebrities, and panegyric solemnities with mathematical and physical truth? Yet on a closer attention to the subject, it is found that not even scientific thought can dispense with the suggestions, the instruction, the stimulus, the sympathy, the intercourse with mankind on a large scale, which such meetings secure. A fine time of year is chosen, when days are long, skies are bright, the earth smiles, and all nature rejoices; a city or town is taken by turns, of ancient name or modern opulence, where buildings are spacious and hospitality hearty. The novelty of place and circumstance, the excitement of strange, or the refreshment of well-known faces, the majesty of rank or of genius, the amiable charities of men pleased both with themselves and with each other; the elevated spirits, the circulation of thought, the curiosity; the morning sections, the outdoor exercise, the well-furnished, well-earned board, the not ungraceful hilarity, the evening circle; the brilliant lecture, the discussions or collisions or guesses of great men one with another, the narratives of scientific processes, of hopes, disappointments, conflicts, and successes, the splendid eulogistic orations; these and the like constituents of the annual celebration, are considered to do something real and substantial for the advance of knowledge which can be done in no other way. Of course they can but be occasional; they answer to the annual Act, or Commencement, or Commemoration of a University, not to its ordinary condition; but they are of a University nature; and I can well believe in their utility. They issue in the promotion of a certain living and, as it were, bodily communication of knowledge from one to another, of a general interchange of ideas, and a comparison and adjustment of science with science, of an enlargement of mind, intellectual and social, of an ardent love of the particular study, which may be chosen by each individual, and a noble devotion to its interests. Such meetings, I repeat, are but periodical, and only partially represent the idea of a University. The bustle and whirl which are their usual concomitants, are in ill keeping with the order and gravity of earnest intellectual education. We desiderate means of instruction which involve no interruption of our ordinary habits; nor need we seek it long, for the natural course of things brings it about, while we debate over it. In every great country, the metropolis itself becomes a sort of necessary University, whether we will or no. As the chief city is the seat of the court, of high society, of politics, and of law, so as a matter of course is it the seat of letters also; and at this time, for a long term of years, London and Paris are in fact and in operation Universities, though in Paris its famous University is no more, and in London a University scarcely exists except as a board of administration. The newspapers, magazines, reviews, journals, and periodicals of all kinds, the publishing trade, the libraries, museums, and academies there found, the learned and scientific societies, necessarily invest it with the functions of a University; and that atmosphere of intellect, which in a former age hung over Oxford or Bologna or Salamanca, has, with the change of times, moved away to the centre of civil government. Thither come up youths from all parts of the country, the students of law, medicine, and the fine arts, and the *_employés_* and *_attachés_* of literature. There they live, as chance determines; and they are satisfied with their temporary home, for they find in it all that was promised to them there. They have not come in vain, as far as their own object in coming is concerned. They have not learned any particular religion, but they have learned their own particular profession well. They have, moreover, become acquainted with the habits, manners, and opinions of their place of sojourn, and done their part in maintaining the tradition of them. We cannot then be without virtual Universities; a metropolis is such: the simple question is, whether the education sought and given should be based on principle, formed upon rule, directed to the highest ends, or left to the random succession of masters and schools, one after another, with a

melancholy waste of thought and an extreme hazard of truth. Religious teaching itself affords us an illustration of our subject to a certain point. It does not indeed seat itself merely in centres of the world; this is impossible from the nature of the case. It is intended for the many, not the few; its subject matter is truth necessary for us, not truth recondite and rare; but it concurs in the principle of a University so far as this, that its great instrument, or rather organ, has ever been that which nature prescribes in all education, the personal presence of a teacher, or, in theological language, Oral Tradition. It is the living voice, the breathing form, the expressive countenance, which preaches, which catechises. Truth, a subtle, invisible, manifold spirit, is poured into the mind of the scholar by his eyes and ears, through his affections, imagination, and reason; it is poured into his mind and is sealed up there in perpetuity, by propounding and repeating it, by questioning and requestioning, by correcting and explaining, by progressing and then recurring to first principles, by all those ways which are implied in the word "catechising." In the first ages, it was a work of long time; months, sometimes years, were devoted to the arduous task of disabusing the mind of the incipient Christian of its pagan errors, and of moulding it upon the Christian faith. The Scriptures indeed were at hand for the study of those who could avail themselves of them; but St. Irenaeus does not hesitate to speak of whole races, who had been converted to Christianity, without being able to read them. To be unable to read or write was in those times no evidence of want of learning: the hermits of the deserts were, in this sense of the word, illiterate; yet the great St. Anthony, though he knew not letters, was a match in disputation for the learned philosophers who came to try him. Didymus again, the great Alexandrian theologian, was blind. The ancient discipline, called the *Disciplina Arcani*, involved the same principle. The more sacred doctrines of Revelation were not committed to books but passed on by successive tradition. The teaching on the Blessed Trinity and the Eucharist appears to have been so handed down for some hundred years; and when at length reduced to writing, it has filled many folios, yet has not been exhausted. But I have said more than enough in illustration; I end as I began;--a University is a place of concourse, whither students come from every quarter for every kind of knowledge. You cannot have the best of every kind everywhere; you must go to some great city or emporium for it. There you have all the choicest productions of nature and art all together, which you find each in its own separate place elsewhere. All the riches of the land, and of the earth, are carried up thither; there are the best markets, and there the best workmen. It is the centre of trade, the supreme court of fashion, the umpire of rival talents, and the standard of things rare and precious. It is the place for seeing galleries of first-rate pictures, and for hearing wonderful voices and performers of transcendent skill. It is the place for great preachers, great orators, great nobles, great statesmen. In the nature of things, greatness and unity go together; excellence implies a centre. And such, for the third or fourth time, is a University; I hope I do not weary out the reader by repeating it. It is the place to which a thousand schools make contributions; in which the intellect may safely range and speculate, sure to find its equal in some antagonist activity, and its judge in the tribunal of truth. It is a place where inquiry is pushed forward, and discoveries verified and perfected, and rashness rendered innocuous, and error exposed, by the collision of mind with mind, and knowledge with knowledge. It is the place where the professor becomes eloquent, and is a missionary and a preacher, displaying his science in its most complete and most winning form, pouring it forth with the zeal of enthusiasm, and lighting up his own love of it in the breasts of his hearers. It is the place where the catechist makes good his ground as he goes, treading in the truth day by day into the ready memory, and wedging and tightening it into the expanding reason. It is a place which wins the admiration of the young by its celebrity, kindles the affections of the middle-aged by its beauty, and rivets the fidelity of the old by its associations. It is a seat of wisdom, a light of the world, a minister of the faith, an Alma Mater of the rising generation. It is this and a great deal more, and demands a somewhat better head and hand than mine to describe it well. Such is a University in its idea and in its purpose; such in good measure has it before now been in fact. Shall it ever be again? We are going forward in the strength of the Cross, under the patronage of the Blessed Virgin, in the name of St. Patrick, to attempt it.

II Site of a University

If we would know what a University is, considered in its elementary idea, we must betake ourselves to the first and most celebrated home of European literature and source of European civilization, to the bright and beautiful Athens,--Athens, whose schools drew to her bosom, and then sent back again to the business of life, the youth of the Western World for a long thousand years. Seated on the verge of the continent, the city seemed hardly suited for the duties of a central metropolis of knowledge; yet, what it lost in convenience of approach, it gained in its neighbourhood to the traditions of the mysterious East, and in the loveliness of the region in which it lay. Hither, then, as to a sort of ideal land, where all archetypes of the great and the fair were found in substantial being, and all departments of truth explored, and all diversities of intellectual power exhibited, where taste and philosophy were

majestically enthroned as in a royal court, where there was no sovereignty but that of mind, and no nobility but that of genius, where professors were rulers, and princes did homage, hither flocked continually from the very corners of the *_orbis terrarum_*, the many-tongued generation, just rising, or just risen into manhood, in order to gain wisdom. Pisistratus had in an early age discovered and nursed the infant genius of his people, and Cimon, after the Persian war, had given it a home. That war had established the naval supremacy of Athens; she had become an imperial state; and the Ionians, bound to her by the double chain of kindred and of subjection, were importing into her both their merchandize and their civilization. The arts and philosophy of the Asiatic coast were easily carried across the sea, and there was Cimon, as I have said, with his ample fortune, ready to receive them with due honours. Not content with patronizing their professors, he built the first of those noble porticos, of which we hear so much in Athens, and he formed the groves, which in process of time became the celebrated Academy. Planting is one of the most graceful, as in Athens it was one of the most beneficent, of employments. Cimon took in hand the wild wood, pruned and dressed it, and laid it out with handsome walks and welcome fountains. Nor, while hospitable to the authors of the city's civilization, was he ungrateful to the instruments of her prosperity. His trees extended their cool, umbrageous branches over the merchants, who assembled in the Agora, for many generations. Those merchants certainly had deserved that act of bounty; for all the while their ships had been carrying forth the intellectual fame of Athens to the western world. Then commenced what may be called her University existence. Pericles, who succeeded Cimon both in the government and in the patronage of art, is said by Plutarch to have entertained the idea of making Athens the capital of federated Greece: in this he failed, but his encouragement of such men as Phidias and Anaxagoras led the way to her acquiring a far more lasting sovereignty over a far wider empire. Little understanding the sources of her own greatness, Athens would go to war: peace is the interest of a seat of commerce and the arts; but to war she went; yet to her, whether peace or war, it mattered not. The political power of Athens waned and disappeared; kingdoms rose and fell; centuries rolled away,--they did but bring fresh triumphs to the city of the poet and the sage. There at length the swarthy Moor and Spaniard were seen to meet the blue-eyed Gaul; and the Cappadocian, late subject of Mithridates, gazed without alarm at the haughty conquering Roman. Revolution after revolution passed over the face of Europe, as well as of Greece, but still she was there,--Athens, the city of mind,--as radiant, as splendid, as delicate, as young, as ever she had been. Many a more fruitful coast or isle is washed by the blue Aegean, many a spot is there more beautiful or sublime to see, many a territory more ample; but there was one charm in Attica, which in the same perfection was nowhere else. The deep pastures of Arcadia, the plain of Argos, the Thessalian vale, these had not the gift; Boeotia, which lay to its immediate north, was notorious for its very want of it. The heavy atmosphere of that Boeotia might be good for vegetation, but it was associated in popular belief with the dulness of the Boeotian intellect: on the contrary, the special purity, elasticity, clearness, and salubrity of the air of Attica, fit concomitant and emblem of its genius, did that for it which earth did not;--it brought out every bright hue and tender shade of the landscape over which it was spread, and would have illuminated the face even of a more bare and rugged country. A confined triangle, perhaps fifty miles its greatest length, and thirty its greatest breadth; two elevated rocky barriers, meeting at an angle; three prominent mountains, commanding the plain,--Parnes, Pentelicus, and Hymettus; an unsatisfactory soil; some streams, not always full;--such is about the report which the agent of a London company would have made of Attica. He would report that the climate was mild; the hills were limestone; there was plenty of good marble; more pasture land than at first survey might have been expected, sufficient certainly for sheep and goats; fisheries productive; silver mines once, but long since worked out; figs fair; oil first-rate; olives in profusion. But what he would not think of noting down, was, that that olive tree was so choice in nature and so noble in shape, that it excited a religious veneration; and that it took so kindly to the light soil, as to expand into woods upon the open plain, and to climb up and fringe the hills. He would not think of writing word to his employers, how that clear air, of which I have spoken, brought out, yet blended and subdued the colours on the marble, till they had a softness and harmony, for all their richness, which in a picture looks exaggerated, yet is after all within the truth. He would not tell, how that same delicate and brilliant atmosphere freshened up the pale olive, till the olive forgot its monotony, and its cheek glowed like the arbutus or beech of the Umbrian hills. He would say nothing of the thyme and thousand fragrant herbs which carpeted Hymettus; he would hear nothing of the hum of its bees; nor take much account of the rare flavour of its honey, since Gozo and Minorca were sufficient for the English demand. He would look over the Aegean from the height he had ascended; he would follow with his eye the chain of islands, which, starting from the Simian headland, seemed to offer the fabled divinities of Attica, when they would visit their Ionian cousins, a sort of viaduct thereto across the sea; but that fancy would not occur to him, nor any admiration of the dark violet billows with their white edges down below; nor of those graceful, fan-like jets of silver upon the rocks, which slowly rise aloft like water spirits from the deep, then shiver, and break, and spread, and shroud themselves, and disappear, in a soft mist of foam; nor of the gentle, incessant heaving and panting of the whole liquid plain; nor of the long waves, keeping steady time, like a line of soldiery, as they resound upon the hollow shore,--he would not deign to notice that restless living element at all,

except to bless his stars that he was not upon it. Nor the distinct detail, nor the refined colouring, nor the graceful outline and roseate golden hue of the jutting crags, nor the bold shadows cast from Otus or Laurium by the declining sun;--our agent of a mercantile firm would not value these matters even at a low figure. Rather we must turn for the sympathy we seek to yon pilgrim student come from a semi-barbarous land to that small corner of the earth, as to a shrine, where he might take his fill of gazing on those emblems and coruscations of invisible unoriginate perfection. It was the stranger from a remote province, from Britain or from Mauritania, who in a scene so different from that of his chilly, woody swamps, or of his fiery choking sands, learned at once what a real University must be, by coming to understand the sort of country, which was its suitable home. Nor was this all that a University required, and found in Athens. No one, even there, could live on poetry. If the students at that famous place had nothing better than bright hues and soothing sounds, they would not have been able or disposed to turn their residence there to much account. Of course they must have the means of living, nay, in a certain sense, of enjoyment; if Athens was to be an Alma Mater at the time, or to remain afterwards a pleasant thought in their memory. And so they had: be it recollected Athens was a port, and a mart of trade, perhaps the first in Greece; and this was very much to the point, when a number of strangers were ever flocking to it, whose combat was to be with intellectual, not physical difficulties, and who claimed to have their bodily wants supplied, that they might be at leisure to set about furnishing their minds. Now, barren as was the soil of Attica, and bare the face of the country, yet it had only too many resources for an elegant, nay luxurious abode there. So abundant were the imports of the place, that it was a common saying, that the productions, which were found singly elsewhere, were brought all together in Athens. Corn and wine, the staple of subsistence in such a climate, came from the isles of the Aegean; fine wool and carpeting from Asia Minor; slaves, as, now, from the Euxine, and timber too; and iron and brass from the coasts of the Mediterranean. The Athenian did not condescend to manufactures himself, but encouraged them in others; and a population of foreigners caught at the lucrative occupation both for home consumption and for exportation. Their cloth, and other textures for dress and furniture, and their hardware--for instance, armour--were in great request. Labour was cheap; stone and marble in plenty; and the taste and skill, which at first were devoted to public buildings, as temples and porticos, were in course of time applied to the mansions of public men. If nature did much for Athens, it is undeniable that art did much more. Here some one will interrupt me with the remark: "By the bye, where are we, and whither are we going?--what has all this to do with a University? at least what has it to do with education? It is instructive doubtless; but still how much has it to do with your subject?" Now I beg to assure the reader that I am most conscientiously employed upon my subject; and I should have thought every one would have seen this: however, since the objection is made, I may be allowed to pause awhile, and show distinctly the drift of what I have been saying, before I go farther. What has this to do with my subject! why, the question of the site is the very first that comes into consideration, when a Stadium Generale is contemplated; for that site should be a liberal and noble one; who will deny it? All authorities agree in this, and very little reflection will be sufficient to make it clear. I recollect a conversation I once had on this very subject with a very eminent man. I was a youth of eighteen, and was leaving my University for the Long Vacation, when I found myself in company in a public conveyance with a middle-aged person, whose face was strange to me. However, it was the great academical luminary of the day, whom afterwards I knew very well. Luckily for me, I did not suspect it; and luckily too, it was a fancy of his, as his friends knew, to make himself on easy terms especially with stage-coach companions. So, what with my flippancy and his condescension, I managed to hear many things which were novel to me at the time; and one point which he was strong upon, and was evidently fond of urging, was the material pomp and circumstance which should environ a great seat of learning. He considered it was worth the consideration of the government, whether Oxford should not stand in a domain of its own. An ample range, say four miles in diameter, should be turned into wood and meadow, and the University should be approached on all sides by a magnificent park, with fine trees in groups and groves and avenues, and with glimpses and views of the fair city, as the traveller drew near it. There is nothing surely absurd in the idea, though it would cost a round sum to realise it. What has a better claim to the purest and fairest possessions of nature, than the seat of wisdom? So thought my coach companion; and he did but express the tradition of ages and the instinct of mankind. For instance, take the great University of Paris. That famous school engrossed as its territory the whole south bank of the Seine, and occupied one half, and that the pleasanter half, of the city. King Louis had the island pretty well as his own,--it was scarcely more than a fortification; and the north of the river was given over to the nobles and citizens to do what they could with its marshes; but the eligible south, rising from the stream, which swept around its base, to the fair summit of St. Genevieve, with its broad meadows, its vineyards and its gardens, and with the sacred elevation of Montmartre confronting it, all this was the inheritance of the University. There was that pleasant Pratum, stretching along the river's bank, in which the students for centuries took their recreation, which Alcuin seems to mention in his farewell verses to Paris, and which has given a name to the great Abbey of St. Germain-des-Prés. For long years it was devoted to the purposes of innocent and healthy enjoyment; but evil times came on the University; disorder arose within its precincts, and the fair meadow became the scene of

party brawls; heresy stalked through Europe, and Germany and England no longer sending their contingent of students, a heavy debt was the consequence to the academical body. To let their land was the only resource left to them: buildings rose upon it, and spread along the green sod, and the country at length became town. Great was the grief and indignation of the doctors and masters, when this catastrophe occurred. "A wretched sight," said the Proctor of the German nation, "a wretched sight, to witness the sale of that ancient manor, whither the Muses were wont to wander for retirement and pleasure. Whither shall the youthful student now betake himself, what relief will he find for his eyes, wearied with intense reading, now that the pleasant stream is taken from him?" Two centuries and more have passed since this complaint was uttered; and time has shown that the outward calamity, which it recorded, was but the emblem of the great moral revolution, which was to follow; till the institution itself has followed its green meadows, into the region of things which once were and now are not. And in like manner, when they were first contemplating a University in Belgium, some centuries ago, "Many," says Lipsius, "suggested Mechlin, as an abode salubrious and clean, but Louvain was preferred, as for other reasons, so because no city seemed from the disposition of place and people, more suitable for learned leisure. Who will not approve the decision? Can a site be healthier or more pleasant? The atmosphere pure and cheerful; the spaces open and delightful; meadows, fields, vines, groves, nay, I may say, a *_rus in urbe_*. Ascend and walk round the walls; what do you look down upon? Does not the wonderful and delightful variety smooth the brow and soothe the mind? You have corn, and apples, and grapes; sheep and oxen; and birds chirping or singing. Now carry your feet or your eyes beyond the walls; there are streamlets, the river meandering along; country-houses, convents, the superb fortress; copses or woods fill up the scene, and spots for simple enjoyment." And then he breaks out into poetry:

Salvete Athenae nostrae, Athens Belgicae,
Te Gallus, te Germanus, et te Sarmata
Invisit, et Britannus, et te duplilis
Hispaniae alumnus, etc.

Extravagant, then, and wayward as might be the thought of my learned coach companion, when, in the nineteenth century, he imagined, Norman-wise, to turn a score of villages into a park or pleasance, still, the waywardness of his fancy is excused by the justness of his principle; for certainly, such as he would have made it, a University ought to be. Old Antony-a-Wood, discoursing on the demands of a University, had expressed the same sentiment long before him; as Horace in ancient times, with reference to Athens itself, when he spoke of seeking truth "in the *_groves_* of Academe." And to Athens, as will be seen, Wood himself appeals, when he would discourse of Oxford. Among "those things which are required to make a University," he puts down,-- "First, a good and pleasant site, where there is a wholesome and temperate constitution of the air; composed with waters, springs or wells, woods and pleasant fields; which being obtained, those commodities are enough to invite students to stay and abide there. As the Athenians in ancient times were happy for their conveniences, so also were the Britons, when by a remnant of the Grecians that came amongst them, they or their successors selected such a place in Britain to plant a school or schools therein, which for its pleasant situation was afterwards called Bellositum or Bellosite, now Oxford, privileged with all those conveniences before mentioned." By others the local advantages of that University have been more philosophically analyzed;--for instance, with a reference to its position in the middle of southern England; its situation on several islands in a broad plain, through which many streams flowed; the surrounding marshes, which, in times when it was needed, protected the city from invaders; its own strength as a military position; its easy communication with London, nay with the sea, by means of the Thames; while the London fortifications hindered pirates from ascending the stream, which all the time was so ready and convenient for a descent. Alas! for centuries past that city has lost its prime honour and boast, as a servant and soldier of the Truth. Once named the second school of the Church, second only to Paris, the foster-mother of St. Edmund, St. Richard, St. Thomas Cantilupe, the theatre of great intellects, of Scotus the subtle Doctor, of Hales the irrefragable, of Occam the special, of Bacon the admirable, of Middleton the solid, and of Bradwardine the profound, Oxford has now lapsed to that level of mere human loveliness, which in its highest perfection we admire in Athens. Nor would it have a place, now or hereafter, in these pages, nor would it occur to me to speak its name, except that, even in its sorrowful deprivation, it still retains so much of that outward lustre, which, like the brightness on the prophet's face, ought to be a ray from an illumination within, as to afford me an illustration of the point on which I am engaged, viz., what should be the material dwelling-place and appearance, the local circumstances, and the secular concomitants of a great University. Pictures are drawn in tales of romance, of spirits seemingly too beautiful in their fall to be really fallen, and the holy Pope at Rome, Gregory, in fact, and not in fiction, looked upon the blue eyes and golden hair of the fierce Saxon youth in the slave market, and pronounced them Angels, not Angles; and the spell which this once loyal daughter of the Church still exercises upon the foreign visitor, even now when her true glory is departed,

suggests to us how far more majestic and more touching, how brimful of indescribable influence would be the presence of a University, which was planted within, not without Jerusalem,—an influence, potent as her truth is strong, wide as her sway is world-wide, and growing, not lessening, by the extent of space over which its attraction would be exerted. Let the reader then listen to the words of the last learned German, who has treated of Oxford, and judge for himself if they do not bear me out, in what I have said of the fascination which the very face and smile of a University possess over those who come within its range. "There is scarce a spot in the world," says Huber, "that bears an historical stamp so deep and varied as Oxford; where so many noble memorials of moral and material power coöperating to an honourable end, meet the eye all at once. He who can be proof against the strong emotions which the whole aspect and genius of the place tend to inspire, must be dull, thoughtless, uneducated, or of very perverted views. Others will bear us witness, that, even side by side with the Eternal Rome, the Alma Mater of Oxford may be fitly named, as producing a deep, a lasting, and peculiar impression. "In one of the most fertile districts of the Queen of the Seas, whom nature has so richly blessed, whom for centuries past no footstep of foreign armies has desecrated, lies a broad green vale, where the Cherwell and the Isis mingle their full, clear waters. Here and there primeval elms and oaks overshadow them; while in their various windings they encircle gardens, meadows, and fields, villages, cottages, farm-houses, and country-seats, in motley mixture. In the midst rises a mass of mighty buildings, the general character of which varies between convent, palace, and castle. Some few Gothic church-towers and Romaic domes, it is true, break through the horizontal lines; yet the general impression at a distance and at first sight, is essentially different from that of any of the towns of the middle ages. The outlines are far from being so sharp, so angular, so irregular, so fantastical; a certain softness, a peculiar repose, reigns in those broader, terrace-like rising masses. Only in the creations of Claude Lorraine or Poussin could we expect to find a spot to compare with the prevailing character of this picture, especially when lit up by a favourable light. The principal masses consist of Colleges, the University buildings, and the city churches; and by the side of these the city itself is lost on distant view. But on entering the streets, we find around us all the signs of an active and prosperous trade. Rich and elegant shops in profusion afford a sight to be found nowhere but in England; but with all this glitter and show, they sink into a modest, and, as it were, a menial attitude, by the side of the grandly severe memorials of the higher intellectual life, memorials which have been growing out of that life from almost the beginning of Christianity itself. Those rich and elegant shops are, as it were, the domestic offices of these palaces of learning, which ever rivet the eye of the observer, while all besides seems perforce to be subservient to them. Each of the larger and more ancient Colleges looks like a separate whole—an entire town, whose walls and monuments proclaim the vigorous growth of many centuries; and the town itself has happily escaped the lot of modern beautifying, and in this respect harmonizes with the Colleges." There are those who, having felt the influence of this ancient School, and being smitten with its splendour and its sweetness, ask wistfully, if never again it is to be Catholic, or whether at least some footing for Catholicity may not be found there. All honour and merit to the charitable and zealous hearts who so inquire! Nor can we dare to tell what in time to come may be the inscrutable purposes of that grace, which is ever more comprehensive than human hope and aspiration. But for me, from the day I left its walls, I never, for good or bad, have had anticipation of its future; and never for a moment have I had a wish to see again a place, which I have never ceased to love, and where I lived for nearly thirty years. Nay, looking at the general state of things at this day, I desiderate for a School of the Church, if an additional School is to be granted to us, a more central position than Oxford has to show. Since the age of Alfred and of the first Henry, the world has grown, from the west and south of Europe, into four or five continents; and I look for a city less inland than that old sanctuary, and a country closer upon the highway of the seas. I look towards a land both old and young; old in its Christianity, young in the promise of its future; a nation, which received grace before the Saxon came to Britain, and which has never quenched it; a Church, which comprehends in its history the rise and fall of Canterbury and York, which Augustine and Paulinus found, and Pole and Fisher left behind them. I contemplate a people which has had a long night, and will have an inevitable day. I am turning my eyes towards a hundred years to come, and I dimly see the island I am gazing on, become the road of passage and union between two hemispheres, and the centre of the world. I see its inhabitants rival Belgium in populousness, France in vigour, and Spain in enthusiasm; and I see England taught by advancing years to exercise in its behalf that good sense which is her characteristic towards every one else. The capital of that prosperous and hopeful land is situated in a beautiful bay and near a romantic region; and in it I see a flourishing University, which for a while had to struggle with fortune, but which, when its first founders and servants were dead and gone, had successes far exceeding their anxieties. Thither, as to a sacred soil, the home of their fathers, and the fountain-head of their Christianity, students are flocking from East, West, and South, from America and Australia and India, from Egypt and Asia Minor, with the ease and rapidity of a locomotion not yet discovered, and last, though not least, from England,—all speaking one tongue, all owning one faith, all eager for one large true wisdom; and thence, when their stay is over, going back again to carry over all the earth "peace to men of good will."

III. University Life at Athens

However apposite may have been the digression into which I was led when I had got about half through the foregoing Chapter, it has had the inconvenience of what may be called running me off the rails; and now that I wish to proceed from the point at which it took place, I shall find some trouble, if I may continue the metaphor, in getting up the steam again, or if I may change it, in getting into the swing of my subject. It has been my desire, were I able, to bring before the reader what Athens may have been, viewed as what we have since called a University; and to do this, not with any purpose of writing a panegyric on a heathen city, or of denying its many deformities, or of concealing what was morally base in what was intellectually great, but just the contrary, of representing things as they really were; so far, that is, as to enable him to see what a University is, in the very constitution of society and in its own idea, what is its nature and object, and what it needs of aid and support external to itself to complete that nature and to secure that object. So now let us fancy our Scythian, or Armenian, or African, or Italian, or Gallic student, after tossing on the Saronic waves, which would be his more ordinary course to Athens, at last casting anchor at Piraeus. He is of any condition or rank of life you please, and may be made to order, from a prince to a peasant. Perhaps he is some Cleanthes, who has been a boxer in the public games. How did it ever cross his brain to betake himself to Athens in search of wisdom? or, if he came thither by accident, how did the love of it ever touch his heart? But so it was, to Athens he came with three drachms in his girdle, and he got his livelihood by drawing water, carrying loads, and the like servile occupations. He attached himself, of all philosophers, to Zeno the Stoic,--to Zeno, the most high-minded, the most haughty of speculators; and out of his daily earnings the poor scholar brought his master the daily sum of an obolus, in payment for attending his lectures. Such progress did he make, that on Zeno's death he actually was his successor in his school; and, if my memory does not play me false, he is the author of a hymn to the Supreme Being, which is one of the noblest effusions of the kind in classical poetry. Yet, even when he was the head of a school, he continued in his illiberal toil as if he had been a monk; and, it is said, that once, when the wind took his pallium, and blew it aside, he was discovered to have no other garment at all;--something like the German student who came up to Heidelberg with nothing upon him but a great coat and a pair of pistols. Or it is another disciple of the Porch,--Stoic by nature, earlier than by profession,--who is entering the city; but in what different fashion he comes! It is no other than Marcus, Emperor of Rome and philosopher. Professors long since were summoned from Athens for his service, when he was a youth, and now he comes, after his victories in the battle field, to make his acknowledgments at the end of life, to the city of wisdom, and to submit himself to an initiation into the Eleusinian mysteries. Or it is a young man of great promise as an orator, were it not for his weakness of chest, which renders it necessary that he should acquire the art of speaking without over-exertion, and should adopt a delivery sufficient for the display of his rhetorical talents on the one hand, yet merciful to his physical resources on the other. He is called Cicero; he will stop but a short time, and will pass over to Asia Minor and its cities, before he returns to continue a career which will render his name immortal; and he will like his short sojourn at Athens so well, that he will take good care to send his son thither at an earlier age than he visited it himself. But see where comes from Alexandria (for we need not be very solicitous about anachronisms), a young man from twenty to twenty-two, who has narrowly escaped drowning on his voyage, and is to remain at Athens as many as eight or ten years, yet in the course of that time will not learn a line of Latin, thinking it enough to become accomplished in Greek composition, and in that he will succeed. He is a grave person, and difficult to make out; some say he is a Christian, something or other in the Christian line his father is for certain. His name is Gregory, he is by country a Cappadocian, and will in time become preëminently a theologian, and one of the principal Doctors of the Greek Church. Or it is one Horace, a youth of low stature and black hair, whose father has given him an education at Rome above his rank in life, and now is sending him to finish it at Athens; he is said to have a turn for poetry: a hero he is not, and it were well if he knew it; but he is caught by the enthusiasm of the hour, and goes off campaigning with Brutus and Cassius, and will leave his shield behind him on the field of Philippi. Or it is a mere boy of fifteen: his name Eunapius; though the voyage was not long, sea sickness, or confinement, or bad living on board the vessel, threw him into a fever, and, when the passengers landed in the evening at Piraeus, he could not stand. His countrymen who accompanied him, took him up among them and carried him to the house of the great teacher of the day, Proaeresius, who was a friend of the captain's, and whose fame it was which drew the enthusiastic youth to Athens. His companions understand the sort of place they are in, and, with the license of academic students, they break into the philosopher's house, though he appears to have retired for the night, and proceed to make themselves free of it, with an absence of ceremony, which is only not impudence, because Proaeresius takes it so easily. Strange introduction for our stranger to a seat of learning, but not out of keeping with Athens; for what could you expect of a place where there was a mob of youths and not even the pretence of control;

where the poorer lived any how, and got on as they could, and the teachers themselves had no protection from the humours and caprices of the students who filled their lecture-halls? However, as to this Eunapius, Proaeresius took a fancy to the boy, and told him curious stories about Athenian life. He himself had come up to the University with one Hephaestion, and they were even worse off than Cleanthes the Stoic; for they had only one cloak between them, and nothing whatever besides, except some old bedding; so when Proaeresius went abroad, Hephaestion lay in bed, and practised himself in oratory; and then Hephaestion put on the cloak, and Proaeresius crept under the coverlet. At another time there was so fierce a feud between what would be called "town and gown" in an English University, that the Professors did not dare lecture in public, for fear of ill treatment. But a freshman like Eunapius soon got experience for himself of the ways and manners prevalent in Athens. Such a one as he had hardly entered the city, when he was caught hold of by a party of the academic youth, who proceeded to practise on his awkwardness and his ignorance. At first sight one wonders at their childishness; but the like conduct obtained in the medieval Universities; and not many months have passed away since the journals have told us of sober Englishmen, given to matter-of-fact calculations, and to the anxieties of money-making, pelting each other with snowballs on their own sacred territory, and defying the magistracy, when they would interfere with their privilege of becoming boys. So I suppose we must attribute it to something or other in human nature. Meanwhile, there stands the new-comer, surrounded by a circle of his new associates, who forthwith proceed to frighten, and to banter, and to make a fool of him, to the extent of their wit. Some address him with mock politeness, others with fierceness; and so they conduct him in solemn procession across the Agora to the Baths; and as they approach, they dance about him like madmen. But this was to be the end of his trial, for the Bath was a sort of initiation; he thereupon received the pallium, or University gown, and was suffered by his tormentors to depart in peace. One alone is recorded as having been exempted from this persecution; it was a youth graver and loftier than even St. Gregory himself: but it was not from his force of character, but at the instance of Gregory, that he escaped. Gregory was his bosom-friend, and was ready in Athens to shelter him when he came. It was another Saint and Doctor; the great Basil, then, (it would appear,) as Gregory, but a catechumen of the Church. But to return to our freshman. His troubles are not at an end, though he has got his gown upon him. Where is he to lodge? whom is he to attend? He finds himself seized, before he well knows where he is, by another party of men, or three or four parties at once, like foreign porters at a landing, who seize on the baggage of the perplexed stranger, and thrust half a dozen cards into his unwilling hands. Our youth is plied by the hangers-on of professor this, or sophist that, each of whom wishes the fame or the profit of having a houseful. We will say that he escapes from their hands,--but then he will have to choose for himself where he will put up; and, to tell the truth, with all the praise I have already given, and the praise I shall have to give, to the city of mind, nevertheless, between ourselves, the brick and wood which formed it, the actual tenements, where flesh and blood had to lodge (always excepting the mansions of great men of the place), do not seem to have been much better than those of Greek or Turkish towns, which are at this moment a topic of interest and ridicule in the public prints. A lively picture has lately been set before us of Gallipoli. Take, says the writer, a multitude of the dilapidated outhouses found in farm-yards in England, of the rickety old wooden tenements, the cracked, shutterless structures of planks and tiles, the sheds and stalls, which our bye lanes, or fish-markets, or river-sides can supply; tumble them down on the declivity of a bare bald hill; let the spaces between house and house, thus accidentally determined, be understood to form streets, winding of course for no reason, and with no meaning, up and down the town; the roadway always narrow, the breadth never uniform, the separate houses bulging or retiring below, as circumstances may have determined, and leaning forward till they meet overhead;--and you have a good idea of Gallipoli. I question whether this picture would not nearly correspond to the special seat of the Muses in ancient times. Learned writers assure us distinctly that the houses of Athens were for the most part small and mean; that the streets were crooked and narrow; that the upper stories projected over the roadway; and that staircases, balustrades, and doors that opened outwards, obstructed it;--a remarkable coincidence of description. I do not doubt at all, though history is silent, that that roadway was jolting to carriages, and all but impassable; and that it was traversed by drains, as freely as any Turkish town now. Athens seems in these respects to have been below the average cities of its time. "A stranger," says an ancient, "might doubt, on the sudden view, if really he saw Athens." I grant all this, and much more, if you will; but, recollect, Athens was the home of the intellectual, and beautiful; not of low mechanical contrivances, and material organization. Why stop within your lodgings counting the rents in your wall or the holes in your tiling, when nature and art call you away? You must put up with such a chamber, and a table, and a stool, and a sleeping board, any where else in the three continents; one place does not differ from another indoors; your magalia in Africa, or your grottos in Syria are not perfection. I suppose you did not come to Athens to swarm up a ladder, or to grope about a closet: you came to see and to hear, what hear and see you could not elsewhere. What food for the intellect is it possible to procure indoors, that you stay there looking about you? do you think to read there? where are your books? do you expect to purchase books at Athens--you are much out in your calculations. True it is, we at this day, who live in the nineteenth century, have the books of Greece as a perpetual memorial; and

copies there have been, since the time that they were written; but you need not go to Athens to procure them, nor would you find them in Athens. Strange to say, strange to the nineteenth century, that in the age of Plato and Thucydides, there was not, it is said, a bookshop in the whole place: nor was the book trade in existence till the very time of Augustus. Libraries, I suspect, were the bright invention of Attalus or the Ptolemies; I doubt whether Athens had a library till the reign of Hadrian. It was what the student gazed on, what he heard, what he caught by the magic of sympathy, not what he read, which was the education furnished by Athens. He leaves his narrow lodging early in the morning; and not till night, if even then, will he return. It is but a crib or kennel,--in which he sleeps when the weather is inclement or the ground damp; in no respect a home. And he goes out of doors, not to read the day's newspaper, or to buy the gay shilling volume, but to imbibe the invisible atmosphere of genius, and to learn by heart the oral traditions of taste. Out he goes; and, leaving the tumble-down town behind him, he mounts the Acropolis to the right, or he turns to the Areopagus on the left. He goes to the Parthenon to study the sculptures of Phidias; to the temple of the Dioscuri to see the paintings of Polygnotus. We indeed take our Sophocles or Aeschylus out of our coat-pocket; but, if our sojourner at Athens would understand how a tragic poet can write, he must betake himself to the theatre on the south, and see and hear the drama literally in action. Or let him go westward to the Agora, and there he will hear Lysias or Andocides pleading, or Demosthenes haranguing. He goes farther west still, along the shade of those noble planes, which Cimon has planted there; and he looks around him at the statues and porticos and vestibules, each by itself a work of genius and skill, enough to be the making of another city. He passes through the city gate, and then he is at the famous Ceramicus; here are the tombs of the mighty dead; and here, we will suppose, is Pericles himself, the most elevated, the most thrilling of orators, converting a funeral oration over the slain into a philosophical panegyric of the living. Onwards he proceeds still; and now he has come to that still more celebrated Academe, which has bestowed its own name on Universities down to this day; and there he sees a sight which will be graven on his memory till he dies. Many are the beauties of the place, the groves, and the statues, and the temple, and the stream of the Cephissus flowing by; many are the lessons which will be taught him day after day by teacher or by companion; but his eye is just now arrested by one object; it is the very presence of Plato. He does not hear a word that he says; he does not care to hear; he asks neither for discourse nor disputation; what he sees is a whole, complete in itself, not to be increased by addition, and greater than anything else. It will be a point in the history of his life; a stay for his memory to rest on, a burning thought in his heart, a bond of union with men of like mind, ever afterwards. Such is the spell which the living man exerts on his fellows, for good or for evil. How nature impels us to lean upon others, making virtue, or genius, or name, the qualification for our doing so! A Spaniard is said to have travelled to Italy, simply to see Livy; he had his fill of gazing, and then went back again home. Had our young stranger got nothing by his voyage but the sight of the breathing and moving Plato, had he entered no lecture-room to hear, no gymnasium to converse, he had got some measure of education, and something to tell of to his grandchildren. But Plato is not the only sage, nor the sight of him the only lesson to be learned in this wonderful suburb. It is the region and the realm of philosophy. Colleges were the inventions of many centuries later; and they imply a sort of cloistered life, or at least a life of rule, scarcely natural to an Athenian. It was the boast of the philosophic statesman of Athens, that his countrymen achieved by the mere force of nature and the love of the noble and the great, what other people aimed at by laborious discipline; and all who came among them were submitted to the same method of education. We have traced our student on his wanderings from the Acropolis to the Sacred Way; and now he is in the region of the schools. No awful arch, no window of many-coloured lights marks the seats of learning there or elsewhere; philosophy lives out of doors. No close atmosphere oppresses the brain or inflames the eyelid; no long session stiffens the limbs. Epicurus is reclining in his garden; Zeno looks like a divinity in his porch; the restless Aristotle, on the other side of the city, as if in antagonism to Plato, is walking his pupils off their legs in his Lyceum by the Ilyssus. Our student has determined on entering himself as a disciple of Theophrastus, a teacher of marvellous popularity, who has brought together two thousand pupils from all parts of the world. He himself is of Lesbos; for masters, as well as students, come hither from all regions of the earth,--as befits a University. How could Athens have collected hearers in such numbers, unless she had selected teachers of such power? it was the range of territory, which the notion of a University implies, which furnished both the quantity of the one, and the quality of the other. Anaxagoras was from Ionia, Carneades from Africa, Zeno from Cyprus, Protagoras from Thrace, and Gorgias from Sicily. Andromachus was a Syrian, Proaeresius an Armenian, Hilarius a Bithynian, Philiscus a Thessalian, Hadrian a Syrian. Rome is celebrated for her liberality in civil matters; Athens was as liberal in intellectual. There was no narrow jealousy, directed against a Professor, because he was not an Athenian; genius and talent were the qualifications; and to bring them to Athens, was to do homage to it as a University. There was a brotherhood and a citizenship of mind. Mind came first, and was the foundation of the academical polity; but it soon brought along with it, and gathered round itself, the gifts of fortune and the prizes of life. As time went on, wisdom was not always sentenced to the bare cloak of Cleanthes; but beginning in rags, it ended in fine linen. The Professors became honourable and rich; and the students ranged themselves under their names, and were proud of calling

themselves their countrymen. The University was divided into four great nations, as the medieval antiquarian would style them; and in the middle of the fourth century, Proaeresius was the leader or proctor of the Attic, Hephaestion of the Oriental, Epiphanius of the Arabic, and Diophantus of the Pontic. Thus the Professors were both patrons of clients, and hosts and proxeni of strangers and visitors, as well as masters of the schools: and the Cappadocian, Syrian, or Sicilian youth who came to one or other of them, would be encouraged to study by his protection, and to aspire by his example. Even Plato, when the schools of Athens were not a hundred years old, was in circumstances to enjoy the otium cum dignitate. He had a villa out at Heraclea; and he left his patrimony to his school, in whose hands it remained, not only safe, but fructifying, a marvellous phenomenon in tumultuous Greece, for the long space of eight hundred years. Epicurus too had the property of the Gardens where he lectured; and these too became the property of his sect. But in Roman times the chairs of grammar, rhetoric, politics, and the four philosophies, were handsomely endowed by the State; some of the Professors were themselves statesmen or high functionaries, and brought to their favourite study senatorial rank or Asiatic opulence. Patrons such as these can compensate to the freshman, in whom we have interested ourselves, for the poorness of his lodging and the turbulence of his companions. In every thing there is a better side and a worse; in every place a disreputable set and a respectable, and the one is hardly known at all to the other. Men come away from the same University at this day, with contradictory impressions and contradictory statements, according to the society they have found there; if you believe the one, nothing goes on there as it should be: if you believe the other, nothing goes on as it should not. Virtue, however, and decency are at least in the minority everywhere, and under some sort of a cloud or disadvantage; and this being the case, it is so much gain whenever an Herodes Atticus is found, to throw the influence of wealth and station on the side even of a decorous philosophy. A consular man, and the heir of an ample fortune, this Herod was content to devote his life to a professorship, and his fortune to the patronage of literature. He gave the sophist Polemo about eight thousand pounds, as the sum is calculated, for three declamations. He built at Athens a stadium six hundred feet long, entirely of white marble, and capable of admitting the whole population. His theatre, erected to the memory of his wife, was made of cedar wood curiously carved. He had two villas, one at Marathon, the place of his birth, about ten miles from Athens, the other at Cephissia, at the distance of six; and thither he drew to him the élite, and at times the whole body of the students. Long arcades, groves of trees, clear pools for the bath, delighted and recruited the summer visitor. Never was so brilliant a lecture-room as his evening banqueting-hall; highly connected students from Rome mixed with the sharp-witted provincial of Greece or Asia Minor; and the flippant sciolist, and the nondescript visitor, half philosopher, half tramp, met with a reception, courteous always, but suitable to his deserts. Herod was noted for his repartees; and we have instances on record of his setting down, according to the emergency, both the one and the other. A higher line, though a rarer one, was that allotted to the youthful Basil. He was one of those men who seem by a sort of fascination to draw others around them even without wishing it. One might have deemed that his gravity and his reserve would have kept them at a distance; but, almost in spite of himself, he was the centre of a knot of youths, who, pagans as most of them were, used Athens honestly for the purpose for which they professed to seek it; and, disappointed and displeased with the place himself, he seems nevertheless to have been the means of their profiting by its advantages. One of these was Sophronius, who afterwards held a high office in the State: Eusebius was another, at that time the bosom-friend of Sophronius, and afterwards a Bishop. Celsus too is named, who afterwards was raised to the government of Cilicia by the Emperor Julian. Julian himself, in the sequel of unhappy memory, was then at Athens, and known at least to St. Gregory. Another Julian is also mentioned, who was afterwards commissioner of the land tax. Here we have a glimpse of the better kind of society among the students of Athens; and it is to the credit of the parties composing it, that such young men as Gregory and Basil, men as intimately connected with Christianity, as they were well known in the world, should hold so high a place in their esteem and love. When the two saints were departing, their companions came around them with the hope of changing their purpose. Basil persevered; but Gregory relented, and turned back to Athens for a season.

6. 19th Century: Edward Everett Hale. *The South American Editor*

Edward Everett Hale

The South American Editor

[I am tempted to include this little burlesque in this collection simply in memory of the Boston Miscellany, the magazine in which it was published, which won for itself a brilliant reputation in its short career. There was not a large staff of writers for the Miscellany, but many of the names then unknown have since won distinction. To quote them in the accidental order in which I find them in the table of contents, where they are arranged by the alphabetical order of the several papers, the Miscellany contributors were Edward Everett, George Lunt, Nathan Hale, Jr., Nathaniel Hawthorne, N.P. Willis, W.W. Story, J.R. Lowell, C.N. Emerson, Alexander H. Everett, Sarah P. Hale, W.A. Jones, Cornelius Matthews, Mrs. Kirkland, J.W. Ingraham, H.T. Tuckerman, Evert A. Duyckinck, Francis A. Durivage, Mrs. J. Webb, Charles F. Powell, Charles W. Storey, Lucretia P. Hale, Charles F. Briggs, William E. Channing, Charles Lanman, G.H. Hastings, and Elizabeth B. Barrett, now Mrs. Browning, some of whose earliest poems were published in this magazine. These are all the contributors whose names appear, excepting the writers of a few verses. They furnished nine tenths of the contents of the magazine. The two Everetts, Powell, William Story, and my brother, who was the editor, were the principal contributors. And I am tempted to say that I think they all put some of their best work upon this magazine. The misfortune of the Miscellany, I suppose, was that its publishers had no capital. They had to resort to the claptraps of fashion-plates and other engravings, in the hope of forcing an immediate sale upon persons who, caring for fashion-plates, did not care for the literary character of the enterprise. It gave a very happy escape-pipe, however, for the high spirits of some of us who had just left college, and, through my brother's kindness, I was sometimes permitted to contribute to the journal. In memory of those early days of authorship, I select "The South American Editor" to publish here. For the benefit of the New York Observer, I will state that the story is not true. And lest any should complain that it advocates elopements, I beg to observe, in the seriousness of mature life, that the proposed elopement did not succeed, and that the parties who proposed it are represented as having no guardians or keepers but themselves. The article was first published in 1842.]

* * * * *

It is now more than six years since I received the following letter from an old classmate of mine, Harry Barry, who had been studying divinity, and was then a settled minister. It was an answer to a communication I had sent him the week before.

"TOPSHAM, R.I. January 22, 1836.

"To say the truth, my dear George, your letter startled me a little. To think that I, scarcely six months settled in the profession, should be admitted so far into the romance of it as to unite forever two young runaways like yourself and Miss Julia What's-her-name is at least curious. But, to give you your due, you have made a strong case of it, and as Miss ---- (what is her name, I have not yours at hand) is not under any real guardianship, I do not see but I am perfectly justified in complying with your rather odd request. You see I make a conscientious matter of it.

"Write me word when it shall be, and I will be sure to be ready. Jane is of course in my counsels, and she will make your little wife feel as much at home as in her father's parlor. Trust us for secrecy.

"I met her last week--"

But the rest of the letter has nothing to do with the story.

The elopement alluded to in it (if the little transaction deserves so high-sounding a name) was, in every sense of the words, strictly necessary. Julia Wentworth had resided for years with her grandfather, a pragmatic old gentleman, to whom from pure affection she had long yielded an obedience which he would have had no right to extort, and which he was sometimes disposed to abuse. He had declared in the most ingenuous manner that she should never marry with his consent any man of less fortune than her own would be; and on his consent rested the prospect of her inheriting his property. Julia and I, however, care little for money now, we cared still less then; and her own little property and my own little salary made us esteem ourselves entirely independent of the old gentleman and his will.

His intention respecting the poor girl's marriage was thundered in her ears at least once a week, so that we both knew that I had no need to make court to him, indeed, I had never seen him, always having met her in walking, or in the evening at party, spectacle, concert, or lecture. He had lately been more domineering than usual, and I had but little difficulty in persuading the dear girl to let me write to Harry Barry, to make the arrangement to which he assented in the letter which I have copied above. The reasoning which I pressed upon her is obvious. We loved each other,--the old gentleman could not help that; and as he managed to make us very uncomfortable in Boston, in the existing state of affairs, we naturally came to the conclusion that the sooner we changed that state the better. Our excursion to Topsham would, we supposed, prove a very disagreeable business to him; but we knew it would result very agreeably for us, and so, though with a good deal of maidenly compunction and granddaughterly compassion on Julia's part, we outvoted him.

I have said that I had no fortune to enable me to come near the old gentleman's beau ideal of a grandson-in-law. I was then living on my salary as a South American editor. Does the reader know what that is? The South American editor of a newspaper has the uncontrolled charge of its South American news. Read any important commercial paper for a month, and at the end of it tell me if you have any clear conception of the condition of the various republics (!) of South America. If you have, it is because that journal employs an individual for the sole purpose of setting them in the clearest order before you, and that individual is its South American editor. The general-news editor of the paper will keep the run of all the details of all the histories of all the rest of the world, but he hardly attempts this in addition. If he does, he fails. It is therefore necessary, from the most cogent reasons, that any American news office which has a strong regard for the consistency or truth of its South American intelligence shall employ some person competent to take the charge which I held in the establishment of the Boston Daily Argus at the time of which I am speaking. Before that enterprising paper was sold, I was its "South American man"; this being my only employment, excepting that by a special agreement, in consideration of an addition to my salary, I was engaged to attend to the news from St. Domingo, Guatemala, and Mexico.[F]

Monday afternoon, just a fortnight after I received Harry Barry's letter, in taking my afternoon walk round the Common, I happened to meet Julia. I always walked in the same direction when I was alone. Julia always preferred to go the other way; it was the only thing in which we differed. When we were together I always went her way of course, and liked it best.

I had told her, long before, all about Harry's letter, and the dear girl in this walk, after a little blushing and sighing, and half faltering and half hesitating and feeling uncertain, yielded to my last and warmest persuasions, and agreed to go to Mrs. Pollexfen's ball that evening, ready to leave it with me in my buggy sleigh, for a three hours' ride to Topsham, where we both knew Harry would be waiting for us. I do not know how she managed to get through tea that evening with her lion of a grandfather, for she could not then cover her tearful eyes with a veil as she did through the last half of our walk together. I know that I got through my tea and such like ordinary affairs by skipping them. I made all my arrangements, bade Gage and Streeter be ready with the sleigh at my lodgings (fortunately only two doors from Mrs. Pollexfen's) at half-past nine o'clock, and was the highest spirited of men when, on returning to those lodgings myself at eight o'clock, I found the following missives from the Argus office, which had been accumulating through the afternoon.

No. 1.

"4 o'clock, P.M.

"DEAR SIR:--The southern mail, just in, brings Buenos Ayres papers six days later, by the Medora, at Baltimore.

"In haste, J.C."

(Mr. C. was the gentleman who opened the newspapers, and arranged the deaths and marriages; he always kindly sent for me when I was out of the way.)

No. 2.

"5 o'clock, P.M.

"DEAR SIR:--The U.S. ship Preble is in at Portsmouth; latest from Valparaiso. The mail is not sorted.

"Yours, J.D."

(Mr. D. arranged the ship news for the Argus.)

No. 3.

"6 o'clock, p.m.

"DEAR SIR:--I boarded, this morning, off Cape Cod, the Blunderhead, from Carthagen, and have a week's later papers.

"Truly yours, J.E."

(Mr. E. was the enterprising commodore of our news-boats.)

No. 4.

"6-1/4 o'clock, P.M.

"DEAR SIR:--I have just opened accidentally the enclosed letter, from our correspondent at Panama. You will see that it bears a New Orleans post-mark. I hope it may prove exclusive.

"Yours, J.F."

(Mr. F. was general editor of the Argus.)

No. 5.

"6-1/2 o'clock, P.M.

"DEAR SIR:--A seaman, who appears to be an intelligent man, has arrived this morning at New Bedford, and says he has later news of the rebellion in Ecuador than any published. The Rosina (his vessel) brought no papers. I bade him call at your room at eight o'clock, which he promised to do.

"Truly yours, J.G."

(Mr. G. was clerk in the Argus counting-room.)

No 6.

"7-1/2 o'clock, P.M.

"Dear Sir:--The papers by the Ville de Lyon, from Havre, which I have just received, mention the reported escape of M. Bonpland from Paraguay, the presumed death of Dr. Francia, the probable overthrow of the government, the possible establishment of a republic, and a great deal more than I understand in the least.

"These papers had not come to hand when I wrote you this afternoon. I have left them on your desk at the office.

"In haste, J.F."

I was taken all aback by this mass of odd-looking little notes. I had spent the afternoon in drilling Singelton, the kindest of friends, as to what he should do in any probable contingency of news of the next forty-eight hours, for I did not intend to be absent on a wedding tour even longer than that time; but I felt that Singleton was entirely unequal to such a storm of intelligence as this; and, as I hurried down to the office, my chief sensation was that of gratitude that the cloud had broken before I was out of the way; for I knew I could do a great deal in an hour, and I had faith that I might slur over my digest as quickly as possible, and be at Mrs. Pollexfen's within the time arranged.

I rushed into the office in that state of zeal in which a man may do anything in almost no time. But first, I had to go into the conversation-room, and get the oral news from my sailor; then Mr. H.; from one of the little news-boats, came to me in high glee, with some

Venezuela Gazettes, which he had just extorted from a skipper, who, with great plausibility, told him that he knew his vessel had brought no news, for she never had before. (N.B. In this instance she was the only vessel to sail, after a three months' blockade.) And then I had handed to me by Mr. J., one of the commercial gentlemen, a private letter from Rio Janeiro, which had been lent him. After these delays, with full

materials, I sprang to work--read, read, read; wonder, wonder, wonder; guess, guess, guess; scratch, scratch, scratch; and scribble, scribble, scribble, make the only transcript I can give of the operations which followed. At first, several of the other gentlemen in the room sat around me; but soon Mr. C., having settled the deaths and marriages, and the police and municipal reporters immediately after him, screwed out their lamps and went home; then the editor himself, then the legislative reporters, then the commercial editors, then the ship-news conductor, and left me alone.

I envied them that they got through so much earlier than usual, but scratched on, only interrupted by the compositors coming in for the pages of my copy as I finished them; and finally, having made my last translation from the last Boletin Extraordinario, sprang up, shouting, "Now for Mrs. P.'s," and looked at my watch. It was half past one! [G] I thought of course it had stopped,--no; and my last manuscript page was numbered twenty-eight! Had I been writing there five hours? Yes!

Reader, when you are an editor, with a continent's explosions to describe, you will understand how one may be unconscious of the passage of time.

I walked home, sad at heart. There was no light in all Mr. Wentworth's house; there was none in any of Mrs. Pollexfen's windows;[H] and the last carriage of her last relation had left her door. I stumbled up stairs in the dark, and threw myself on my bed. What should I say, what could I say, to Julia? Thus pondering, I fell asleep.

If I were writing a novel, I should say that, at a late hour the next day, I listlessly drew aside the azure curtains of my couch, and languidly rang a silver bell which stood on my dressing-table, and received from a page dressed in an Oriental costume the notes and letters which had been left for me since morning, and the newspapers of the day.

I am not writing a novel.

The next morning, about ten o'clock, I arose and went down to breakfast. As I sat at the littered table which every one else had left, dreading to attack my cold coffee and toast, I caught sight of the morning papers, and received some little consolation from them. There was the Argus with its three columns and a half of "Important from South America," while none of the other papers had a square of any intelligibility excepting what they had copied from the Argus the day before. I felt a grim smile creeping over my face as I observed this signal triumph of our paper, and ventured to take a sip of the black broth as I glanced down my own article to see if there were any glaring misprints in it. Before I took the second sip, however, a loud peal at the door-bell announced a stranger, and, immediately after, a note was brought in for me which I knew was in Julia's hand-writing.

"DEAR GEORGE:--Don't be angry; it was not my fault, really it was not. Grandfather came home just as I was leaving last night, and was so angry, and said I should not go to the party, and I had to sit with him all the evening. Do write to me or let me see you; do something--"

What a load that note took off my mind! And yet, what must the poor girl have suffered! Could the old man suspect? Singleton was true to me as steel, I knew. He could not have whispered,--nor Barry; out that Jane, Barry's wife. O woman! woman! what newsmongers they are! Here were Julia and I, made miserable for life, perhaps, merely that Jane Barry might have a good story to tell. What right had Barry to a wife? Not four years out of college, and hardly settled in his parish. To think that I had been fool enough to trust even him with the particulars of my all-important secret! But here I was again interrupted, coffee-cup still full, toast still untasted, by another missive.

"Tuesday morning.

"SIR:--I wish to see you this morning. Will you call upon me, or appoint a time and place where I may meet you?

"Yours, JEDEDIAH WENTWORTH."

"Send word by the bearer."

"Tell Mr. Wentworth I will call at his house at eleven o'clock."

The cat was certainly out; Mrs. Barry had told, or some one else had, who I did not know and hardly cared. The scene was to come now, and I was almost glad of it. Poor Julia! what a time she must have had with the old bear!

* * * * *

At eleven o'clock I was ushered into Mr. Wentworth's sitting-room. Julia was there, but before I had even spoken to her the old gentleman came bustling across the room, with his "Mr. Hackmatack, I suppose"; and then followed a formal introduction between me and her, which both of us bore with the most praiseworthy fortitude and composure, neither evincing, even by a glance, that we had ever seen or heard of each other before. Here was another weight off my mind and Julia's. I had wronged poor Mrs. Barry. The secret was not out--what could he want? It very soon appeared.

After a minute's discussion of the weather, the snow, and the thermometer, the old gentleman drew up his chair to mine, with "I think, sir, you are connected with the Argus office?"

"Yes, sir; I am its South American editor."

"Yes!" roared the old man, in a sudden rage. "Sir, I wish South America was sunk in the depths of the sea!"

"I am sure I do, sir," replied I, glancing at Julia, who did not, however, understand me. I had not fully passed out of my last night's distress.

My sympathizing zeal soothed the old gentleman a little, and he said more coolly, in an undertone: "Well, sir, you are well informed, no doubt; tell me, in strict secrecy, sir, between you and me, do you—do you place full credit--entire confidence in the intelligence in this morning's paper?"

"Excuse me, sir; what paper do you allude to? Ah! the Argus, I see. Certainly, sir; I have not the least doubt that it is perfectly correct."

"No doubt, sir! Do you mean to insult me?--Julia, I told you so; he says there is no doubt it is true. Tell me again there is some mistake, will you?" The poor girl had been trying to soothe him with the constant remark of uninformed people, that the newspapers are always in the wrong. He turned from her, and rose from his chair in a positive rage.

She was half crying. I never saw her more distressed. What did all this mean? Were one, two, or all of us crazy?

It soon appeared. After pacing the length of the room once or twice, Wentworth came up to me again, and, attempting to appear cool, said between his closed lips: "Do you say you have no doubt that Rio Janeiro is strictly blockaded?"

"Not the slightest in the world," said I, trying to seem unconcerned.

"Not the slightest, sir? What are you so impudent and cool about it for? Do you think you are talking of the opening of a rose-bud or the death of a mosquito? Have you no sympathy with the sufferings of a fellow-creature? Why, sir!" and the old man's teeth chattered as he spoke, "I have five cargoes of flour on their way to Rio, and their captains will--Damn it, sir, I shall lose the whole venture."

The secret was out. The old fool had been sending flour to Rio, knowing as little of the state of affairs there as a child.

"And do you really mean, sir," continued the old man, "that there is an embargo in force in Monte Video?"

"Certainly, sir; but I'm very sorry for it."

"Sorry for it! of course you are;--and that all foreigners are sent out of Buenos Ayres?"

"Undoubtedly, sir. I wish--"

"Who does not wish so? Why, sir, my corresponding friends there are half across the sea by this time. I wish Rosas was in--and that the Indians have risen near Maranham?"

"Undoubtedly, sir."

"Undoubtedly! I tell you, sir, I have two vessels waiting for cargoes of India-rubbers there, under a blunder-headed captain, who will do nothing he has not been bidden to,--obey his orders if he breaks his owners. You smile, sir? Why, I should have made thirty thousand dollars this winter, sir, by my India-rubbers, if we had not had this devilish mild, open weather, you and Miss Julia there have been praising so. But next winter must be a severe one, and with those India-rubbers I should have made--But now those Indians,--pshaw! And a revolution in Chili?"

"Yes, sir."

"No trade there! And in Venezuela?"

"Yes, sir"

"Yes, sir; yes, sir; yes, sir; yes, sir! Sir, I am ruined. Say 'Yes, sir,' to that. I have thirteen vessels at this moment in the South American trade, sir; say 'Yes, sir,' to that. Half of them will be taken by the piratical scoundrels; say 'Yes, sir,' to that. Their insurance will not cover them; say 'Yes, sir,' to that. The other half will forfeit their cargoes, or sell them for next to nothing; say 'Yes, sir,' to that. I tell you I am a ruined man, and I wish the South America, and your daily Argus, and you--"

Here the old gentleman's old-school breeding got the better of his rage, and he sank down in his arm-chair, and, bursting into tears, said: "Excuse me, sir,--excuse me, sir,--I am too warm." We all sat for a few moments in silence, but then I took my share of the conversation. I wish you could have seen the old man's face light up little by little, as I showed him that to a person who understood the politics and condition of the mercurial country with which he had ignorantly attempted to trade, his condition was not near so bad as he thought it; that though one port was blockaded, another was opened; that though one revolution thwarted him, a few weeks would show another which would favor him; that the goods which, as he saw, would be worthless at the port to which he had sent them, would be valuable elsewhere; that the vessels which would fail in securing the cargoes he had ordered could secure others; that the very revolutions and wars which troubled him would require in some instances large government purchases, perhaps large contracts for freight, possibly even for passage,--his vessels might be used for transports; that the very excitement of some districts might be made to turn to our advantage; that, in short, there were a thousand chances open to him which skilful agents could readily improve. I reminded him that a quick run in a clipper schooner could carry directions to half these skippers of his, to whom, with an infatuation which I could not and cannot conceive, he had left no discretion, and who indeed were to be pardoned if they could use none, seeing the tumult as they did with only half an eye. I talked to him for half an hour, and went into details to show that my plans were not impracticable. The old gentleman grew brighter and brighter, and Julia, as I saw, whenever I stole a glance across the room, felt happier and happier. The poor girl had had a hard time since he had first heard this news whispered the evening before. His difficulties were not over, however; for when I talked to him of the necessity of sending out one or two skilful agents immediately to take the personal superintendence of his complicated affairs, the old man sighed, and said he had no skilful agents to send. With his customary suspicion, he had no partners, and had never intrusted his clerks with any general insight into his business. Besides, he considered them all, like his captains, blunder-headed to the last degree. I believe it was an idea of Julia's, communicated to me in an eager, entreating glance, which induced me to propose myself as one of these confidential agents, and to be responsible for the other. I thought, as I spoke, of Singleton, to whom I knew I could explain my plans in full, and whose mercantile experience would make him a valuable coadjutor. The old gentleman accepted my offer eagerly. I told him that twenty-four hours were all I wanted to prepare myself. He immediately took measures for the charter of two little clipper schooners which lay in port then; and before two days were past, Singleton and I were on our voyage to South America. Imagine, if you can, how these two days were spent. Then, as now, I could prepare for any journey in twenty minutes, and of course I had no little time at my disposal for last words with Mr. and--Miss Wentworth. How I won on the old gentleman's heart in those two days! How he praised me to Julia, and then, in as natural affection, how he praised her to me! And how Julia and I smiled through our tears, when, in the last good-bys, he said he was too old to write or read any but business letters, and charged me and her to keep up a close correspondence, which on one side should tell all that I saw and did, and on the other hand remind me of all at home.

* * * * *

I have neither time nor room to give the details of that South American expedition. I have no right to. There were revolutions accomplished in those days without any object in the world's eyes; and, even in mine, only serving to sell certain cargoes of long cloths and flour. The details of those outbreaks now told would make some patriotic presidents tremble in their seats; and I have no right to betray confidence at whatever rate I purchased it. Usually, indeed, my feats and Singleton's were only obtaining the best information and communicating the most speedy instructions to Mr. Wentworth's vessels, which were made to move from port to port with a rapidity and intricacy of movement which none besides us two understood in the least. It was in that expedition that I travelled almost alone across the continent. I was, I think, the first white man who ever passed through the mountain path of Xamaulipas, now so famous in all the Chilian picturesque annuals. I was carrying directions for some vessels which had gone round the Cape; and what a time Burrows and Wheatland and I had a week after, when we rode into the public square of Valparaiso shouting, "Muera la Constitucion,--Viva Libertad!" by our own unassisted lungs actually raising a rebellion, and, which was of more importance, a prohibition on foreign flour, while Bahamarra and his army were within a hundred miles of us. How those vessels came up the harbor, and how we unloaded them, knowing that at best our revolution could only last five days! But as I said, I must be careful, or I shall be telling other people's secrets. The result of that expedition was that those thirteen vessels all made good outward voyages, and all but one or two eventually made profitable home voyages. When I returned home, the old gentleman received me with open arms. I had rescued, as he said, a large share of that fortune which he valued so highly. To say the truth, I felt and feel that he had planned his voyages so blindly, that, without some wiser head than his, they would never have resulted in anything. They were his last, as they were almost his first, South American ventures. He

returned to his old course of more methodical trading for the few remaining years of his life. They were, thank Heaven, the only taste of mercantile business which I ever had. Living as I did, in the very sunshine of Mr. Wentworth's favor, I went through the amusing farce of paying my addresses to Julia in approved form, and in due time received the old gentleman's cordial assent to our union, and his blessing upon it. In six months after my return, we were married; the old man as happy as a king. He would have preferred a little that the ceremony should have been performed by Mr. B----, his friend and pastor, but readily assented to my wishes to call upon a dear and early friend of my own. Harry Barry came from Topsham and performed the ceremony, "assisted by Rev. Mr. B."

G.H.

ARGUS COTTAGE, April 1, 1842.

7. 20th Century: Susan Glaspell. One of Those Impossible Americans

Susan Glaspell

One of Those Impossible Americans

"N'avez-vous pas--" she was bravely demanding of the clerk when she saw that the bulky American who was standing there helplessly dangling two flaming red silk stockings which a copiously coiffured young woman assured him were bien chic was edging nearer her. She was never so conscious of the truly American quality of her French as when a countryman was at hand. The French themselves had an air of "How marvellously you speak!" but fellow Americans listened superciliously in an "I can do better than that myself" manner which quite untied the Gallic twist in one's tongue. And so, feeling her French was being compared, not with mere French itself, but with an arrogant new American brand thereof, she moved a little around the corner of the counter and began again in lower voice: "Mais, n'avez--" "Say, Young Lady," a voice which adequately represented the figure broke in, "you, aren't French, are you?" She looked up with what was designed for a haughty stare. But what is a haughty stare to do in the face of a broad grin? And because it was such a long time since a grin like that had been grinned at her it happened that the stare gave way to a dimple, and the dimple to a laughing: "Is it so bad as that?" "Oh, not your French," he assured her. "You talk it just like the rest of them. In fact, I should say, if anything--a little more so. But do you know,"--confidentially--"I can just spot an American girl every time!" "How?" she could not resist asking, and the modest black hose she was thinking of purchasing dangled against his gorgeous red ones in friendliest fashion. "Well, Sir--I don't know. I don't think it can be the clothes,"--judicially surveying her. "The clothes," murmured Virginia, "were bought in Paris." "Well, you've got me. Maybe it's the way you wear 'em. Maybe it's 'cause you look as if you used to play tag with your brother. Something--anyhow--gives a fellow that 'By jove there's an American girl!' feeling when he sees you coming round the corner." "But why--?" "Lord--don't begin on why. You can say why to anything. Why don't the French talk English? Why didn't they lay Paris out at right angles? Now look here, Young Lady, for that matter--why can't you help me buy some presents for my wife? There'd be nothing wrong about it," he hastened to assure her, "because my wife's a mighty fine woman." The very small American looked at the very large one. Now Virginia was a well brought up young woman. Her conversations with strange men had been confined to such things as, "Will you please tell me the nearest way to--?" but preposterously enough--she could not for the life of her have told why--frowning upon this huge American--fat was the literal word--who stood there with puckered-up face swinging the flaming hose would seem in the same shameful class with snubbing the little boy who confidently asked her what kind of ribbon to buy for his mother. "Was it for your wife you were thinking of buying these red stockings?" she ventured. "Sure. What do you think of 'em? Look as if they came from Paris all right, don't they?" "Oh, they look as though they came from Paris, all right," Virginia repeated, a bit grimly. "But do you know"--this quite as to that little boy who might be buying the ribbon--"American women don't always care for all the things that look as if they came from Paris. Is your wife--does she care especially for red stockings?" "Don't believe she ever had a pair in her life. That's why I thought it might please her." Virginia looked down and away. There were times when dimples made things hard for one. Then she said, with gentle gravity: "There are quite a number of women in America who don't care much for red stockings. It would seem too bad, wouldn't it, if after you got these clear home your wife should turn out to be one of those people? Now, I think these grey stockings are lovely. I'm sure any woman would love them. She could wear them with grey suede slippers and they would be so soft and pretty." "Um--not very lively looking, are they? You see I want something to cheer her up. She--well she's not been very well lately and I thought something--oh something with a lot of dash in it, you know, would just fill the bill. But look here. We'll take both. Sure--that's the way out of it. If she don't like the red, she'll like the grey, and if she don't like the--You like the grey ones, don't you? Then here"--picking up two pairs of the handsomely embroidered grey stockings and handing them to the clerk--"One," holding up his thumb to denote one--"me,"--a vigorous pounding of the chest signifying me. "One"--holding up his forefinger and pointing to the girl--"mademoiselle." "Oh no--no--no!" cried Virginia, her face instantly the colour of the condemned stockings. Then, standing straight: "Certainly not." "No? Just as you say," he replied good humouredly. "Like to have you have 'em. Seems as if strangers in a strange land oughtn't to stand on ceremony." The clerk was bending forward holding up the stockings alluringly. "Pour mademoiselle, n'est-ce-pas?" "Mais--non!" pronounced Virginia, with emphasis. There followed an untranslatable gesture. "How droll!" shoulder and outstretched hands were saying. "If the kind gentleman wishes to give mademoiselle the joli bas --!" His face had puckered up again. Then suddenly it unpuckered. "Tell you what you might do," he solved it. "Just take 'em along and send them to your mother. Now your mother might be real glad to have 'em." Virginia stared. And then an awful thing happened. What she was thinking about was the letter she could send with the

stockings. "Mother dear," she would write, "as I stood at the counter buying myself some stockings to-day along came a nice man--a stranger to me, but very kind and jolly--and gave me--" There it was that the awful thing happened. Her dimple was showing--and at thought of its showing she could not keep it from showing! And how could she explain why it was showing without its going on showing? And how--? But at that moment her gaze fell upon the clerk, who had taken the dimple as signal to begin putting the stockings in a box. The Frenchwoman's eyebrows soon put that dimple in its proper place. "And so the petite Americaine was not too--oh, not too--" those French eyebrows were saying. All in an instant Virginia was something quite different from a little girl with a dimple. "You are very kind," she was saying, and her mother herself could have done it no better, "but I am sure our little joke had gone quite far enough. I bid you good-morning". And with that she walked regally over to the glove counter, leaving red and grey and black hosiery to their own destinies. "I loathe them when their eyebrows go up," she fumed. "Now his weren't going up--not even in his mind." She could not keep from worrying about him. "They'll just 'do' him," she was sure. "And then laugh at him in the bargain. A man like that has no business to be let loose in a store all by himself." And sure enough, a half hour later she came upon him up in the dress department. Three of them had gathered round to "do" him. They were making rapid headway, their smiling deference scantily concealing their amused contempt. The spectacle infuriated Virginia. "They just think they can work us!" she stormed. "They think we're easy. I suppose they think he's a fool. I just wish they could get him in a business deal! I just wish--!" "I can assure you, sir," the English-speaking manager of the department was saying, "that this garment is a wonderful value. We are able to let you have it at so absurdly low a figure because--" Virginia did not catch why it was they were able to let him have it at so absurdly low a figure, but she did see him wipe his brow and look helplessly around. "Poor thing," she murmured, almost tenderly, "he doesn't know what to do. He just does need somebody to look after him." She stood there looking at his back. He had a back a good deal like the back of her chum's father at home. Indeed there were various things about him suggested "home." Did one want one's own jeered at? One might see crudities one's self, but was one going to have supercilious outsiders coughing those sham coughs behind their hypocritical hands? "For seven hundred francs," she heard the suave voice saying. Seven hundred francs! Virginia's national pride, or, more accurately, her national rage, was lashed into action. It was with very red cheeks that the small American stepped stormily to the rescue of her countryman. "Seven hundred francs for that?" she jeered, right in the face of the enraged manager and stiffening clerks. "Seven hundred francs--indeed! Last year's model--a hideous colour, and "--picking it up, running it through her fingers and tossing it contemptuously aside--"abominable stuff!" "Gee, but I'm grateful to you!" he breathed, again wiping his brow. "You know, I was a little leery of it myself." The manager, quivering with rage and glaring uglily, stepped up to Virginia. "May I ask--?" But the fat man stepped in between--he was well qualified for that position. "Cut it out, partner. The young lady's a friend of mine--see? She's looking out for me--not you. I don't want your stuff, anyway." And taking Virginia serenely by the arm he walked away. "This was no place to buy dresses," said she crossly. "Well, I wish I knew where the places were to buy things," he replied, humbly, forlornly. "Well, what do you want to buy?" demanded she, still crossly. "Why, I want to buy some nice things for my wife. Something the real thing from Paris, you know. I came over from London on purpose. But Lord,"--again wiping his brow--"a fellow doesn't know where to go." "Oh well," sighed Virginia, long-sufferingly, "I see I'll just have to take you. There doesn't seem any way out of it. It's evident you can't go alone. Seven hundred francs!" "I suppose it was too much," he conceded meekly. "I tell you I will be grateful if you'll just stay by me a little while. I never felt so up against it in all my life." "Now, a very nice thing to take one's wife from Paris," began Virginia didactically, when they reached the sidewalk, "is lace." "L--ace? Um! Y--es, I suppose lace is all right. Still it never struck me there was anything so very lively looking about lace." "'Lively looking' is not the final word in wearing apparel," pronounced Virginia in teacher-to-pupil manner. "Lace is always in good taste, never goes out of style, and all women care for it. I will take you to one of the lace shops." "Very well," acquiesced he, truly chastened. "Here, let's get in this cab." Virginia rode across the Seine looking like one pondering the destinies of nations. Her companion turned several times to address her, but it would have been as easy for a soldier to slap a general on the back. Finally she turned to him. "Now when we get there," she instructed, "don't seem at all interested in things. Act--oh, bored, you know, and seeming to want to get me away. And when they tell the price, no matter what they say, just--well sort of groan and hold your head and act as though you are absolutely overcome at the thought of such an outrage." "U--m. You have to do that here to get--lace?" "You have to do that here to get anything ---at the price you should get it. You, and people who go shopping the way you do, bring discredit upon the entire American nation." "That so? Sorry. Never meant to do that. All right, Young Lady, I'll do the best I can. Never did act that way, but suppose I can, if the rest of them do." "Groan and hold my head," she heard him murmuring as they entered the shop. He proved an apt pupil. It may indeed be set down that his aptitude was their undoing. They had no sooner entered the shop than he pulled out his watch and uttered an exclamation of horror at the sight of the time. Virginia could scarcely look at the lace, so insistently did he keep waving the watch before her. His contempt for everything shown was open and emphatic. It

was also articulate. Virginia grew nervous, seeing the real red showing through in the Frenchwoman's cheeks. And when the price was at last named--a price which made Virginia jubilant--there burst upon her outraged ears something between a jeer and a howl of rage, the whole of it terrifyingly done in the form of a groan; she looked at her companion to see him holding up his hands and wobbling his head as though it had been suddenly loosened from his spine, cast one look at the Frenchwoman--then fled, followed by her groaning compatriot. "I didn't mean you to act like that!" she stormed. "Why, I did just what you told me to! Seemed to me I was following directions to the letter. Don't think for a minute I'm going to bring discredit on the American nation! Not a bad scheme--taking out my watch that way, was it?" "Oh, beautiful scheme. I presume you notice, however, that we have no lace." They walked half a block in silence. "Now I'll take you to another shop," she then volunteered, in a turning the other cheek fashion, "and here please do nothing at all. Please just--sit." "Sort of as if I was feeble-minded, eh?" "Oh, don't try to look feeble-minded," she begged, alarmed at seeming to suggest any more parts; "just sit there--as if you were thinking of something very far away." "Say, Young Lady, look here; this is very nice, being put on to the tricks of the trade, but the money end of it isn't cutting much ice, and isn't there any way you can just buy things--the way you do in Cincinnati? Can't you get their stuff without making a comic opera out of it?" "No, you can't," spoke relentless Virginia; "not unless you want them to laugh and say 'Aren't Americans fools?' the minute the door is shut." "Fools--eh? I'll show them a thing or two!" "Oh, please show them nothing here! Please just--sit." While employing her wiles to get for three hundred and fifty francs a yoke and scarf aggregating four hundred, she chanced to look at her American friend. Then she walked rapidly to the rear of the shop, buried her face in her handkerchief, and seemed making heroic efforts to sneeze. Once more he was following directions to the letter. Chin resting on hands, hands resting on stick, the huge American had taken on the beatific expression of a seventeen-year-old girl thinking of something "very far away." Virginia was long in mastering the sneeze. On the sidewalk she presented him with the package of lace and also with what she regarded the proper thing in the way of farewell speech. She supposed it was hard for a man to go shopping alone; she could see how hard it would be for her own father; indeed it was seeing how difficult it would be for her father had impelled her to go with him, a stranger. She trusted his wife would like the lace; she thought it very nice, and a bargain. She was glad to have been of service to a fellow countryman who seemed in so difficult a position. But he did not look as impressed as one to whom a farewell speech was being made should look. In fact, he did not seem to be hearing it. Once more, and in earnest this time, he appeared to be thinking of something very far away. Then all at once he came back, and it was in anything but a far-away voice he began, briskly: "Now look here, Young Lady, I don't doubt but this lace is great stuff. You say so, and I haven't seen man, woman or child on this side of the Atlantic knows as much as you do. I'm mighty grateful for the lace--don't you forget that, but just the same--well, now I'll tell you. I have a very special reason for wanting something a little livelier than lace. Something that seems to have Paris written on it in red letters--see? Now, where do you get the kind of hats you see some folks wearing, and where do you get the dresses--well, it's hard to describe 'em, but the kind they have in pictures marked 'Breezes from Paris'? You see--S-ay! --what do you think of that?" "That" was in a window across the street. It was an opera cloak. He walked toward it, Virginia following. "Now there," he turned to her, his large round face all aglow, "is what I want." It was yellow; it was long; it was billowy; it was insistently and recklessly regal. "That's the ticket!" he gloated. "Of course," began Virginia, "I don't know anything about it. I am in a very strange position, not knowing what your wife likes or--or has. This is the kind of thing everything has to go with or one wouldn't--one couldn't--" "Sure! Good idea. We'll just get everything to go with it." "It's the sort of thing one doesn't see worn much outside of Paris--or New York. If one is--now my mother wouldn't care for that coat at all." Virginia took no little pride in that tactful finish. "Can't sidetrack me!" he beamed. "I want it. Very thing I'm after, Young Lady." "Well, of course you will have no difficulty in buying the coat without me," said she, as a dignified version of "I wash my hands of you." "You can do here as you said you wished to do, simply go in and pay what they ask. There would be no use trying to get it cheap. They would know that anyone who wanted it would"--she wanted to say "have more money than they knew what to do with," but contented herself with, "be able to pay for it." But when she had finished she looked at him; at first she thought she wanted to laugh, and then it seemed that wasn't what she wanted to do after all. It was like saying to a small boy who was one beam over finding a tin horn: "Oh well, take the horn if you want to, but you can't haul your little red waggon while you're blowing the horn." There seemed something peculiarly inhuman about taking the waggon just when he had found the horn. Now if the waggon were broken, then to take away the horn would leave the luxury of grief. But let not shadows fall upon joyful moments. With the full ardour of her femininity she entered into the purchasing of the yellow opera cloak. They paid for that decorative garment the sum of two thousand five hundred francs. It seemed it was embroidered, and the lining was--anyway, they paid it. And they took it with them. He was going to "take no chances on losing it." He was leaving Paris that night and held that during his stay he had been none too impressed with either Parisian speed or Parisian veracity. Then they bought some "Breezes from Paris," a dress that would "go with" the coat. It was violet velvet, and contributed to the sense of doing one's uttermost; and

hats--"the kind you see some folks wearing." One was the rainbow done into flowers, and the other the kind of black hat to outdo any rainbow. "If you could just give me some idea what type your wife is," Virginia was saying, from beneath the willow plumes. "Now you see this hat quite overpowers me. Do you think it will overpower her?" "Guess not. Anyway, if it don't look right on her head she may enjoy having it around to look at." Virginia stared out at him. The oddest man! As if a hat were any good at all if it didn't look right on one's head! Upon investigation--though yielding to his taste she was still vigilant as to his interests--Virginia discovered a flaw in one of the plumes. The sylph in the trailing gown held volubly that it did not fait rien; the man with the open purse said he couldn't see that it figured much, but the small American held firm. That must be replaced by a perfect plume or they would not take the hat. And when she saw who was in command the sylph as volubly acquiesced that naturellement it must be tout a fait perfect. She would send out and get one that would be oh! so, so, so perfect. It would take half an hour. "Tell you what we'll do," Virginia's friend proposed, opera cloak tight under one arm, velvet gown as tight under the other, "I'm tired--hungry--thirsty; feel like a ham sandwich--and something. I'm playing you out, too. Let's go out and get a bite and come back for the so, so, so perfect hat." She hesitated. But he had the door open, and if he stood holding it that way much longer he was bound to drop the violet velvet gown. She did not want him to drop the velvet gown and furthermore, she would like a cup of tea. There came into her mind a fortifying thought about the relative deaths of sheep and lambs. If to be killed for the sheep were indeed no worse than being killed for the lamb, and if a cup of tea went with the sheep and nothing at all with the lamb--? So she agreed. "There's a nice little tea-shop right round the corner. We girls often go there." "Tea? Like tea? All right, then"--and he started manfully on. But as she entered the tea-shop she was filled with keen sense of the desirableness of being slain for the lesser animal. For, cosily installed in their favourite corner, were "the girls." Virginia had explained to these friends some three hours before that she could not go with them that afternoon as she must attend a musicale some friends of her mother's were giving. Being friends of her mother's, she expatiated, she would have to go. Recollecting this, also for the first time remembering the musicale, she bowed with the hauteur of self-consciousness. Right there her friend contributed to the tragedy of a sheep's death by dropping the yellow opera cloak. While he was stooping to pick it up the violet velvet gown slid backward and Virginia had to steady it until he could regain position. The staring in the corner gave way to tittering--and no dying sheep had ever held its head more haughtily. The death of this particular sheep proved long and painful. The legs of Virginia's friend and the legs of the tea-table did not seem well adapted to each other. He towered like a human mountain over the dainty thing, twisting now this way and now that. It seemed Providence--or at least so much of it as was represented by the management of that shop--had never meant fat people to drink tea. The table was rendered further out of proportion by having a large box piled on either side of it. Expansively, and not softly, he discoursed of these things. What did they think a fellow was to do with his knees? Didn't they sell tea enough to afford any decent chairs? Did all these women pretend to really like tea? Virginia's sense of humour rallied somewhat as she viewed him eating the sandwiches. Once she had called them doll-baby sandwiches; now that seemed literal: tea-cups, petit gateau, the whole service gave the fancy of his sitting down to a tea-party given by a little girl for her dollies. But after a time he fell silent, looking around the room. And when he broke that pause his voice was different. "These women here, all dressed so fine, nothing to do but sit around and eat this folderol, they have it easy--don't they?" The bitterness in it, and a faint note of wistfulness, puzzled her. Certainly he had money. "And the husbands of these women," he went on; "lots of 'em, I suppose, didn't always have so much. Maybe some of these women helped out in the early days when things weren't so easy. Wonder if the men ever think how lucky they are to be able to get it back at 'em?" She grew more bewildered. Wasn't he "getting it back?" The money he had been spending that day! "Young Lady," he said abruptly, "you must think I'm a queer one." She murmured feeble protest. "Yes, you must. Must wonder what I want with all this stuff, don't you?" "Why, it's for your wife, isn't it?" she asked, startled. "Oh yes, but you must wonder. You're a shrewd one, Young Lady; judging the thing by me, you must wonder." Virginia was glad she was not compelled to state her theory. Loud and common and impossible were terms which had presented themselves, terms which she had fought with kind and good-natured and generous. Their purchases she had decided were to be used, not for a knock, but as a crashing pound at the door of the society of his town. For her part, Virginia hoped the door would come down. "And if you knew that probably this stuff would never be worn at all, that ten to one it would never do anything more than lie round on chairs--then you would think I was queer, wouldn't you?" She was forced to admit that that would seem rather strange. "Young Lady, I believe I'll tell you about it. Never do talk about it to hardly anybody, but I feel as if you and I were pretty well acquainted--we've been through so much together." She smiled at him warmly; there was something so real about him when he talked that way. But his look then frightened her. It seemed for an instant as though he would brush the tiny table aside and seize some invisible thing by the throat. Then he said, cutting off each word short: "Young Lady, what do you think of this? I'm worth more 'an a million dollars--and my wife gets up at five o'clock every morning to do washing and scrubbing." "Oh, it's not that she has to," he answered her look, "but she thinks she has to. See? Once we were poor. For twenty

years we were poor as dirt. Then she did have to do things like that. Then I struck it. Or rather, it struck me. Oil. Oil on a bit of land I had. I had just sense enough to make the most of it; one thing led to another--well, you're not interested in that end of it. But the fact is that now we're rich. Now she could have all the things that these women have--Lord A'mighty she could lay abed every day till noon if she wanted to! But--you see?--it got her--those hard, lonely, grinding years took her. She's"--he shrunk from the terrible word and faltered out--"her mind's not--" There was a sobbing little flutter in Virginia's throat. In a dim way she was glad to see that the girls were going. She could not have them laughing at him--now. "Well, you can about figure out how it makes me feel," he continued, and looking into his face now it was as though the spirit redeemed the flesh. "You're smart. You can see it without my callin' your attention to it. Last time I went to see her I had just made fifty thousand on a deal. And I found her down on her knees thinking she was scrubbing the floor!" Unconsciously Virginia's hand went out, following the rush of sympathy and understanding. "But can't they--restrain her?" she murmured. "Makes her worse. Says she's got it to do--frets her to think she's not getting it done." "But isn't there some way?" she whispered. "Some way to make her know?" He pointed to the large boxes. "That," he said simply, "is the meaning of those. It's been seven years--but I keep on trying." She was silent, the tears too close for words. And she had thought it cheap ambition!--vulgar aspiration--silly show--vanity! "Suppose you thought I was a queer one, talking about lively looking things. But you see now? Thought it might attract her attention, thought something real gorgeous like this might impress money on her. Though I don't know,"--he seemed to grow weary as he told it; "I got her a lot of diamonds, thinking they might interest her, and she thought she'd stolen 'em, and they had to take them away." Still the girl did not speak. Her hand was shading her eyes. "But there's nothing like trying. Nothing like keeping right on trying. And anyhow--a fellow likes to think he's taking his wife something from Paris." They passed before her in their heartbreaking folly, their tragic uselessness, their lovable absurdity and stinging irony--those things they had bought that afternoon: an opera cloak --a velvet dress -- those hats -- red silk stockings . The mockery of them wrung her heart. Right there in the tea-shop Virginia was softly crying. "Oh, now that's too bad," he expostulated clumsily. "Why, look here, Young Lady, I didn't mean you to take it so hard." When she had recovered herself he told her much of the story. And the thing which revealed him--glorified him--was less the grief he gave to it than the way he saw it. "It's the cursed unfairness of it," he concluded. "When you consider it's all because she did those things--when you think of her bein' bound to 'em for life just because she was too faithful doin' 'em --when you think that now--when I could give her everything these women have got!--she's got to go right on worrying about baking the bread and washing the dishes--did it for me when I was poor--and now with me rich she can't get out of it--and I can't reach her--oh, it's rotten! I tell you it's rotten! Sometimes I can just hear my money laugh at me! Sometimes I get to going round and round in a circle about it till it seems I'm going crazy myself." "I think you are a--a noble man," choked Virginia. That disconcerted him. "Oh Lord--don't think that. No, Young Lady, don't try to make any plaster saint out of me . My life goes on. I've got to eat, drink and be merry. I'm built that way. But just the same my heart on the inside's pretty sore, Young Lady. I want to tell you that the whole inside of my heart is sore as a boil!" They were returning for the hats. Suddenly Virginia stopped, and it was a soft-eyed and gentle Virginia who turned to him after the pause. "There are lovely things to be bought in Paris for women who aren't well. Such soft, lovely things to wear in your room. Not but what I think these other things are all right. As you say, they may--interest her. But they aren't things she can use just now, and wouldn't you like her to have some of those soft lovely things she could actually wear? They might help most of all. To wake in the morning and find herself in something so beautiful--" "Where do you get 'em?" he demanded promptly. And so they went to one of those shops which have, more than all the others, enshrined Paris in feminine hearts. And never was lingerie selected with more loving care than that which Virginia picked out that afternoon. A tear fell on one particularly lovely robe de nuit -- so soothingly soft, so caressingly luxurious, it seemed that surely it might help bring release from the bondage of those crushing years. As they were leaving they were given two packages. "Just the kimona thing you liked," he said, "and a trinket or two. Now that we're such good friends, you won't feel like you did this morning." "And if I don't want them myself, I might send them to my mother," Virginia replied, a quiver in her laugh at her own little joke. He had put her in her cab; he had tried to tell her how much he thanked her; they had said good-bye and the cocher had cracked his whip when he came running after her. "Why, Young Lady," he called out, "we don't know each other's names ." She laughed and gave hers. "Mine's William P. Johnson," he said. "Part French and part Italian. But now look here, Young Lady--or I mean, Miss Clayton. A fellow at the hotel was telling me something last night that made me sick . He said American girls sometimes got awfully up against it here. He said one actually starved last year. Now, I don't like that kind of business. Look here, Young Lady, I want you to promise that if you--you or any of your gang--get up against it you'll cable William P. Johnson, of Cincinnati, Ohio." The twilight grey had stolen upon Paris. And there was a mist which the street lights only penetrated a little way--as sometimes one's knowledge of life may only penetrate life a very little way. Her cab stopped by a blockade, she watched the burly back of William P. Johnson disappearing into the mist. The red box which held the yellow opera cloak she

could see longer than all else. "You never can tell," murmured Virginia. "It just goes to show that you never can tell." And whatever it was you never could tell had brought to Virginia's girlish face the tender knowingness of the face of a woman.

8. 20th Century: Bertrand Russell. *On Denoting*

By a 'denoting phrase' I mean a phrase such as any one of the following: a man, some man, any man, every man, all men, the present King of England, the present King of France, the center of mass of the solar system at the first instant of the twentieth century, the revolution of the earth round the sun, the revolution of the sun round the earth. Thus a phrase is denoting solely in virtue of its form. We may distinguish three cases: (1) A phrase may be denoting, and yet not denote anything; e.g., 'the present King of France'. (2) A phrase may denote one definite object; e.g., 'the present King of England' denotes a certain man. (3) A phrase may denote ambiguously; e.g. 'a man' denotes not many men, but an ambiguous man. The interpretation of such phrases is a matter of considerable difficulty; indeed, it is very hard to frame any theory not susceptible of formal refutation. All the difficulties with which I am acquainted are met, so far as I can discover, by the theory which I am about to explain.

The subject of denoting is of very great importance, not only in logic and mathematics, but also in the theory of knowledge. For example, we know that the center of mass of the solar system at a definite instant is some definite point, and we can affirm a number of propositions about it; but we have no immediate acquaintance with this point, which is only known to us by description. The distinction between acquaintance and knowledge about is the distinction between the things we have presentations of, and the things we only reach by means of denoting phrases. It often happens that we know that a certain phrase denotes unambiguously, although we have no acquaintance with what it denotes; this occurs in the above case of the center of mass. In perception we have acquaintance with objects of perception, and in thought we have acquaintance with objects of a more abstract logical character; but we do not necessarily have acquaintance with the objects denoted by phrases composed of words with whose meanings we are acquainted. To take a very important instance: there seems no reason to believe that we are ever acquainted with other people's minds, seeing that these are not directly perceived; hence what we know about them is obtained through denoting. All thinking has to start from acquaintance; but it succeeds in thinking about many things with which we have no acquaintance. The course of my argument will be as follows. I shall begin by stating the theory I intend to advocate 1); I shall then discuss the theories of Frege and Meinong, showing why neither of them satisfies me; then I shall give the grounds in favor of my theory; and finally I shall briefly indicate the philosophical consequences of my theory.

My theory, briefly, is as follows. I take the notion of the variable as fundamental; I use 'C(x)' to mean a proposition 2) in which x is a constituent, where x, the variable, is essentially and wholly undetermined. Then we can consider the two notions 'C(x) is always true' and 'C(x) is sometimes true' 3). Then everything and nothing and something (which are the most primitive of denoting phrases) are to be interpreted as follows:

C(everything) means 'C(x) is always true';

C(nothing) means "'C(x) is false" is always true';

C(something) means 'It is false that "C(x) is false" is always true.' 4)

Here the notion 'C(x) is always true' is taken as ultimate and undefinable, and the others are defined by means of it. Everything, nothing, and something are not assumed to have any meaning in isolation, but a meaning is assigned to every proposition in which they occur. This is the principle of the theory of denoting I wish to advocate: that denoting phrases never have any meaning in themselves, but that every proposition in whose verbal expression they occur has a meaning. The difficulties concerning denoting are, I believe, all the result of a wrong analysis of propositions whose verbal expressions contain denoting phrases. The proper analysis, if I am not mistaken, may be further set forth as follows.

Suppose now we wish to interpret the proposition, 'I met a man'. If this is true, I met some definite man; but that is not what I affirm. What I affirm is, according to the theory I advocate:

' "I met x, and x is human" is not always false'.

Generally, defining the class of men as the class of objects having the predicate human, we say that:

'C(a man)' means "'C(x) and x is human" is not always false'.

This leaves 'a man', by itself, wholly destitute of meaning, but gives a meaning to every proposition in whose verbal expression 'a man' occurs.

Consider next the proposition 'all men are mortal'. This proposition is really hypothetical 5) and states that if anything is a man, it is mortal. That is, it states that if x is a man, x is mortal, whatever x may be. Hence, substituting ' x is human' for ' x is a man', we find:

'All men are mortal' means ' "If x is human, x is mortal" is always true.'

This is what is expressed in symbolic logic by saying that 'all men are mortal' means " x is human" implies " x is mortal" for all values of x '. More generally, we say:

'C(all men)' means "'If x is human, then $C(x)$ is true" is always true'.

Similarly

'C(no men)' means "'If x is human, then $C(x)$ is false" is always true'.

'C(some men)' will mean the same as 'C(a man)', and

'C(a man 6))' means 'It is false that " $C(x)$ and x is human" is always false'.

'C(every man)' will mean the same as 'C(all men)'.

It remains to interpret phrases containing the. These are by far the most interesting and difficult of denoting phrases. Take as an instance 'the father of Charles II was executed'. This asserts that there was an x who was the father of Charles II and was executed. Now the, when it is strictly used, involves uniqueness; we do, it is true, speak of 'the son of So-and-so' even when So-and-so has several sons, but it would be more correct to say 'a son of So-and-so'. Thus for our purposes we take the as involving uniqueness. Thus when we say ' x was the father of Charles II' we not only assert that x had a certain relation to Charles II, but also that nothing else had this relation. The relation in question, without the assumption of uniqueness, and without any denoting phrases, is expressed by ' x begat Charles II'. To get an equivalent of ' x was the father of Charles II', we must add 'If y is other than x , y did not beget Charles II', or, what is equivalent, 'If y begat Charles II, y is identical with x '. Hence ' x is the father of Charles II' becomes: ' x begat Charles II; and "If y begat Charles II, y is identical with x " is always true of y '.

Thus 'the father of Charles II was executed' becomes: 'It is not always false of x that x begat Charles II and that x was executed and that "if y begat Charles II, y is identical with x " is always true of y '. This may seem a somewhat incredible interpretation; but I am not at present giving reasons, I am merely stating the theory. To interpret 'C(the father of Charles II)', where C stands for any statement about him, we have only to substitute $C(x)$ for ' x was executed' in the above. Observe that, according to the above interpretation, whatever statement C may be, 'C(the father of Charles II)' implies: 'It is not always false of x that "if y begat Charles II, y is identical with x " is always true of y ', which is what is expressed in common language by 'Charles II had one father and no more'. Consequently if this condition fails, every proposition of the form 'C(the father of Charles II)' is false. Thus e.g. every proposition of the form 'C(the present King of France)' is false. This is a great advantage to the present theory. I shall show later that it is not contrary to the law of contradiction, as might be at first supposed. The above gives a reduction of all propositions in which denoting phrases occur to forms in which no such phrases occur. Why it is imperative to effect such a reduction, the subsequent discussion will endeavor to show.

The evidence for the above theory is derived from the difficulties which seem unavoidable if we regard denoting phrases as standing for genuine constituents of the propositions in whose verbal expressions they occur. Of the possible theories which admit such constituents the simplest is that of Meinong 7). This theory regards any grammatically correct denoting phrase as standing for an object. Thus 'the present King of France', 'the round square', etc., are supposed to be genuine objects. It is admitted that such objects do not subsist, but nevertheless they are supposed to be objects. This is in itself a difficult view; but the chief objection is that such objects, admittedly, are apt to infringe the law of contradiction. It is contended, for example, that the present King of France exists, and also does not exist; that the round square is round, and also not round, etc. But this is intolerable; and if any theory can be found to avoid this result, it is surely to be preferred.

The above breach of the law of contradiction is avoided by Frege's theory. He distinguishes, in a denoting phrase, two elements, which we may call the meaning and the denotation 8). Thus 'the center of mass of the solar system at the beginning of the twentieth century' is highly complex in meaning, but its denotation is a certain point, which is simple. The solar system, the twentieth century, etc., are constituents of the meaning; but the denotation has no constituents at all 9). One advantage of this distinction is that it shows why it is often worth while to assert identity. If we say 'Scott is the author of Waverley,' we assert an identity of denotation with a difference of meaning. I shall, however, not repeat the grounds in favor of this theory, as I have urged its claims elsewhere (*loc. cit.*), and am now concerned to dispute those claims.

One of the first difficulties that confront us, when we adopt the view that denoting phrases express a meaning and denote a denotation 10), concerns the cases in which the denotation appears to be absent. If we say 'the King of England is bald', that is, it would seem, not a statement about the complex meaning 'the King of England', but about the actual man denoted by the meaning. But now consider 'the king of France is bald'. By parity of form, this also ought to be about the denotation of the phrase 'the King of France'. But this phrase, though it has a meaning provided 'the King of England' has a meaning, has certainly no denotation, at least in any obvious sense. Hence one would suppose that 'the King of France is bald' ought to be nonsense; but it is not nonsense, since it is plainly false. Or again consider such a proposition as the following: 'If u is a class which has only one member, then that one member is a member of u', or as we may state it, 'If u is a unit class, the u is a u'. This proposition ought to be always true, since the conclusion is true whenever the hypothesis is true. But 'the u' is a denoting phrase, and it is the denotation, not the meaning, that is said to be a u. Now u is not a unit class, 'the u' seems to denote nothing; hence our proposition would seem to become nonsense as soon as u is not a unit class.

Now it is plain that such propositions do not become nonsense merely because their hypotheses are false. The King in *The Tempest* might say, 'If Ferdinand is not drowned, Ferdinand is my only son.' Now 'my only son' is a denoting phrase, which, on the face of it, has a denotation when, and only when, I have exactly one son. But the above statement would nevertheless have remained true if Ferdinand had been in fact drowned. Thus we must either provide a denotation in cases in which it is at first sight absent, or we must abandon the view that denotation is what is concerned in propositions which contain denoting phrases. The latter is the course that I advocate. The former course may be taken, as Meinong, by admitting objects which do not subsist, and denying that they obey the law of contradiction; this, however, is to be avoided if possible. Another way of taking the same course (so far as our present alternative is concerned) is adopted by Frege, who provides by definition some purely conventional denotation for the cases in which otherwise there would be none. Thus 'the King of France', is to denote the null-class; 'the only son of Mr. So-and-so' (who has a fine family of ten), is to denote the class of all his sons; and so on. But this procedure, though it may not lead to actual logical error, is plainly artificial, and does not give an exact analysis of the matter. Thus if we allow that denoting phrases, in general, have the two sides of meaning and denotation, the cases where there seems to be no denotation cause difficulties both on the assumption that there really is a denotation and on the assumption that there really is none.

A logical theory may be tested by its capacity for dealing with puzzles, and it is a wholesome plan, in thinking about logic, to stock the mind with as many puzzles as possible, since these serve much the same purpose as is served by experiments in physical science. I shall therefore state three puzzles which a theory as to denoting ought to be able to solve; and I shall show later that my theory solves them.

(1) If a is identical with b, whatever is true of the one is true of the other, and either may be substituted for the other in any proposition without altering the truth or falsehood of that proposition. Now George IV wished to know whether Scott was the author of *Waverley*; and in fact Scott was the author of *Waverley*. Hence we may substitute Scott for the author of '*Waverley*', and thereby prove that George IV wished to know whether Scott was Scott. Yet an interest in the law of identity can hardly be attributed to the first gentleman of Europe.

(2) By the law of the excluded middle, either 'A is B' or 'A is not B' must be true. Hence either 'the present King of France is bald' or 'the present King of France is not bald' must be true. Yet if we enumerated the things that are bald, and then the things that are not bald, we should not find the present King of France in either list. Hegelians, who love a synthesis, will probably conclude that he wears a wig.

(3) Consider the proposition 'A differs from B'. If this is true, there is a difference between A and B, which fact may be expressed in the form 'the difference between A and B subsists'. But if it is false that A differs from B, then there is no difference between A and B, which fact may be expressed in the form 'the difference between A and B does not subsist'. But how can a non-entity be the subject of a proposition? 'I think, therefore I am' is no more evident than 'I am the subject of a proposition, therefore I am'; provided 'I am' is taken to assert subsistence or being (1), not existence. Hence, it would appear, it must always be self-contradictory to deny the being of anything; but we have seen, in connexion with Meinong, that to admit being also sometimes leads to contradictions. Thus if A and B do not differ, to suppose either that there is, or that there is not, such an object as 'the difference between A and B' seems equally impossible.

The relation of the meaning to the denotation involves certain rather curious difficulties, which seem in themselves sufficient to prove that the theory which leads to such difficulties must be wrong.

When we wish to speak about the meaning of a denoting phrase, as opposed to its denotation, the natural mode of doing so is by inverted commas. Thus we say:

The center of mass of the solar system is a point, not a denoting complex;
'The center of mass of the solar system' is a denoting complex, not a point.

Or again,

The first line of Gray's Elegy states a proposition.
'The first line of Gray's Elegy' does not state a proposition.

Thus taking any denoting phrase, say C, we wish to consider the relation between C and 'C', where the difference of the two is of the kind exemplified in the above two instances.

We say, to begin with, that when C occurs it is the denotation that we are speaking about; but when 'C' occurs, it is the meaning. Now the relation of meaning and denotation is not merely linguistic through the phrase: there must be a logical relation involved, which we express by saying that the meaning denotes the denotation. But the difficulty which confronts us is that we cannot succeed in both preserving the connexion of meaning and denotation and preventing them from being one and the same; also that the meaning cannot be got at except by means of denoting phrases. This happens as follows. The one phrase C was to have both meaning and denotation. But if we speak of 'the meaning of C', that gives us the meaning (if any) of the denotation. 'The meaning of the first line of Gray's Elegy' is the same as 'The meaning of "The curfew tolls the knell of parting day"', and is not the same as 'The meaning of "the first line of Gray's Elegy"'. Thus in order to get the meaning we want, we must speak not of 'the meaning of C', but 'the meaning of "C"', which is the same as 'C' by itself. Similarly 'the denotation of C' does not mean the denotation we want, but means something which, if it denotes at all, denotes what is denoted by the denotation we want. For example, let 'C' be 'the denoting complex occurring in the second of the above instances'. Then

C = 'the first line of Gray's Elegy', and

the denotation of C = The curfew tolls the knell of parting day. But what we meant to have as the denotation was 'the first line of Gray's Elegy'. Thus we have failed to get what we wanted.

The difficulty in speaking of the meaning of a denoting complex may be stated thus: The moment we put the complex in a proposition, the proposition is about the denotation; and if we make a proposition in which the subject is 'the meaning of C', then the subject is the meaning (if any) of the denotation, which was not intended. This leads us to say that, when we distinguish meaning and denotation, we must be dealing with the meaning: the meaning has denotation and is a complex, and there is not something other than the meaning, which can be called the complex, and be said to have both meaning and denotation. The right phrase, on the view in question, is that some meanings have denotations.

But this only makes our difficulty in speaking of meanings more evident. For suppose that C is our complex; then we are to say that C is the meaning of the complex. Nevertheless, whenever C occurs without inverted commas, what is said is not true of the meaning, but only of the denotation, as when we say: The center of mass of the solar system is a point. Thus to speak of C itself, i.e. to make a proposition about the meaning, our subject must not be C, but something which denotes C. Thus 'C', which is what we use when we want to speak of the meaning, must not be the meaning, but must be something which denotes the meaning. And C must not be a constituent of this complex (as it is of 'the meaning of C'); for if C occurs in the complex, it will be its denotation, not its meaning, that will occur, and there is no backward road from denotations to meaning, because every object can be denoted by an infinite number of different denoting phrases.

Thus it would seem that 'C' and C are different entities, such that 'C' denotes C; but this cannot be an explanation, because the relation of 'C' to C remains wholly mysterious; and where are we to find the denoting complex 'C' which is to denote C? Moreover, when C occurs in a proposition, it is not only the denotation that occurs (as we shall see in the next paragraph); yet, on the view in question, C is only the denotation, the meaning being wholly relegated to 'C'. This is an inextricable tangle, and seems to prove that the whole distinction between meaning and denotation has been wrongly conceived.

That the meaning is relevant when a denoting phrase occurs in a proposition is formally proved by the puzzle about the author of Waverley. The proposition 'Scott was the author of Waverley' has a property not possessed by 'Scott was Scott', namely the property that George IV wished to know whether it was true. Thus the two are not identical propositions; hence the meaning of 'the author of Waverley' must be relevant as well as the denotation, if we adhere to the point of view to which this distinction belongs. Yet, as we have just seen, so long as we adhere to this point of view, we are compelled to hold that only the denotation is relevant. Thus the point of view in question must be abandoned.

It remains to show how all the puzzles we have been considering are solved by the theory explained at the beginning of this article.

According to the view which I advocate, a denoting phrase is essentially part of a sentence, and does not, like most single words, have any significance on its own account. If I say 'Scott was a man', that is a statement of the form 'x was a man', and it has 'Scott' for its subject. But if I say 'the author of Waverley was a man', that is not a statement of the form 'x was a man', and does not have 'the author of Waverley' for its subject. Abbreviating the statement made at the beginning of this article, we may put, in place of 'the author of Waverley was a man', the following: 'One and only one entity wrote Waverley, and that one was a man'. (this is not so strictly what is meant as what was said earlier; but it is easier to follow.) And speaking generally, suppose we wish to say that the author of Waverley had property f, what we wish to say is equivalent to 'One and only one entity wrote Waverley, and that one had the property f'.

The explanation of denotation is now as follows. Every proposition in which 'the author of Waverley' occurs being explained as above, the proposition 'Scott was the author of Waverley' (i.e. 'Scott was identical with the author of Waverley') becomes 'One and only one entity wrote Waverley, and Scott was identical with that one'; or, reverting to the wholly explicit form: 'It is not always false of x that x wrote Waverley, that it is always true of y that if y wrote Waverley y is identical with x, and that Scott is identical with x.' Thus if 'C' is a denoting phrase, it may happen that there is one entity x (there cannot be more than one) for which the proposition 'x is identical with C' is true, this proposition being interpreted as above. We may then say that the entity x is the denotation of the phrase 'C'. Thus Scott is the denotation of 'the author of Waverley'. The 'C' in inverted commas will be merely the phrase, not anything that can be called the meaning. The phrase per se has no meaning, because in any proposition in which it occurs the proposition, fully expressed, does not contain the phrase, which has been broken up.

The puzzle about George IV's curiosity is now seen to have a very simple solution. The proposition 'Scott was the author of Waverley', which was written out in its unabbreviated form in the preceding paragraph, does not contain any constituent 'the author of Waverley' for which we could substitute 'Scott'. This does not interfere with the truth of inferences resulting from making what is verbally the substitution of 'Scott' for 'the author of Waverley',

so long as 'the author of Waverley' has what I call a primary occurrence in the proposition considered. The difference of primary and secondary occurrences of denoting phrases is as follows: When we say: 'George IV wished to know whether so-and-so', or when we say 'So-and-so is surprising' or 'So-and-so is true', etc., the 'so-and-so' must be a proposition. Suppose now that 'so-and-so' contains a denoting phrase. We may either eliminate this denoting phrase from the subordinate proposition 'so-and-so', or from the whole proposition in which 'so-and-so' is a mere constituent. Different propositions result according to which we do. I have heard of a touchy owner of a yacht to whom a guest, on first seeing it, remarked, 'I thought your yacht was larger than it is'; and the owner replied, 'No, my yacht is not larger than it is'. What the guest meant was, 'The size that I thought your yacht was is greater than the size your yacht is'; the meaning attributed to him is, 'I thought the size of your yacht was greater than the size of your yacht'. To return to George IV and Waverley, when we say 'George IV wished to know whether Scott was the author of Waverley' we normally mean 'George IV wished to know whether one and only one man wrote Waverley and Scott was that man'; but we may also mean: 'One and only one man wrote Waverley, and George IV wished to know whether Scott was that man'. In the latter, 'the author of Waverley' has a primary occurrence; in the former, a secondary. The latter might be expressed by 'George IV wished to know, concerning the man who in fact wrote Waverley, whether he was Scott'. This would be true, for example, if George IV had seen Scott at a distance, and had asked 'Is that Scott?'. A secondary occurrence of a denoting phrase may be defined as one in which the phrase occurs in a proposition *p* which is a mere constituent of the proposition we are considering, and the substitution for the denoting phrase is to be effected in *p*, and not in the whole proposition concerned. The ambiguity as between primary and secondary occurrences is hard to avoid in language; but it does no harm if we are on our guard against it. In symbolic logic it is of course easily avoided.

The distinction of primary and secondary occurrences also enables us to deal with the question whether the present King of France is bald or not bald, and general with the logical status of denoting phrases that denote nothing. If 'C' is a denoting phrase, say 'the term having the property F', then

'C has property f' means 'one and only one term has the property F, and that one has the property f'. 12)

If now the property F belongs to no terms, or to several, it follows that 'C has property f' is false for all values of f. Thus 'the present King of France is not bald' is false if it means

'There is an entity which is now King of France and is not bald',

but is true if it means

'It is false that there is an entity which is now King of France and is bald'.

That is, 'the King of France is not bald' is false if the occurrence of 'the King of France' is primary, and true if it is secondary. Thus all propositions in which 'the King of France' has a primary occurrence are false: the denials of such propositions are true, but in them 'the King of France' has a secondary occurrence. Thus we escape the conclusion that the King of France has a wig.

We can now see also how to deny that there is such an object as the difference between A and B in the case when A and B do not differ. If A and B do differ, there is only and only one entity *x* such that '*x* is the difference between A and B' is a true proposition; if A and B do not differ, there is no such entity *x*. Thus according to the meaning of denotation lately explained, 'the difference between A and B' has a denotation when A and B differ, but not otherwise. This difference applies to true and false propositions generally. If '*a R b*' stands for '*a* has the relation R to *b*', then when *a R b* is true, there is such an entity as the relation R between *a* and *b*; when *a R b* is false, there is no such entity. Thus out of any proposition we can make a denoting phrase, which denotes an entity if the proposition is true, but does not denote an entity if the proposition is false. E.g., it is true (at least we will suppose so) that the earth revolves round the sun, and false that the sun revolves round the earth; hence 'the revolution of the earth round the sun' denotes an entity, while 'the revolution of the sun round the earth' does not denote an entity 13).

The whole realm of non-entities, such as 'the round square', 'the even prime other than 2', 'Apollo', 'Hamlet', etc., can now be satisfactorily dealt with. All these are denoting phrases which do not denote anything. A proposition

about Apollo means what we get by substituting what the classical dictionary tells us is meant by Apollo, say 'the sun-god'. All propositions in which Apollo occurs are to be interpreted by the above rules for denoting phrases. If 'Apollo' has a primary occurrence, the proposition containing the occurrence is false; if the occurrence is secondary, the proposition may be true. So again 'the round square is round' means 'there is one and only one entity x which is round and square, and that entity is round', which is a false proposition, not, as Meinong maintains, a true one. 'The most perfect Being has all perfections; existence is a perfection; therefore the most perfect Being exists' becomes:

'There is one and only one entity x which is most perfect; that one has all perfections; existence is a perfection; therefore that one exists.'

As a proof, this fails for want of a proof of the premiss 'there is one and only one entity x which is most perfect' 14).

Mr. MacColl (*Mind*, N.S., No. 54, and again No. 55, page 401) regards individuals as of two sorts, real and unreal; hence he defines the null-class as the class consisting of all unreal individuals. This assumes that such phrases as 'the present King of France', which do not denote a real individual, do, nevertheless, denote an individual, but an unreal one. This is essentially Meinong's theory, which we have seen reason to reject because it conflicts with the law of contradiction. With our theory of denoting, we are able to hold that there are no unreal individuals; so that the null-class is the class containing no members, not the class containing as members all unreal individuals.

It is important to observe the effect of our theory on the interpretation of definitions which proceed by means of denoting phrases. Most mathematical definitions are of this sort; for example ' $m-n$ means the number which, added to n , gives m '. Thus $m-n$ is defined as meaning the same as a certain denoting phrase; but we agreed that denoting phrases have no meaning in isolation. Thus what the definition really ought to be is: 'Any proposition containing $m-n$ is to mean the proposition which results from substituting for " $m-n$ " "the number which, added to n , gives m ".' The resulting proposition is interpreted according to the rules already given for interpreting propositions whose verbal expression contains a denoting phrase. In the case where m and n are such that there is one and only one number x which, added to n , gives m , there is a number x which can be substituted for $m-n$ in any proposition contain $m-n$ without altering the truth or falsehood of the proposition. But in other cases, all propositions in which ' $m-n$ ' has a primary occurrence are false.

The usefulness of identity is explained by the above theory. No one outside of a logic-book ever wishes to say ' x is x ', and yet assertions of identity are often made in such forms as 'Scott was the author of *Waverley*' or 'thou art the man'. The meaning of such propositions cannot be stated without the notion of identity, although they are not simply statements that Scott is identical with another term, the author of *Waverley*, or that thou art identical with another term, the man. The shortest statement of 'Scott is the author of *Waverley*' seems to be 'Scott wrote *Waverley* 15); and it is always true of y that if y wrote *Waverley*, y is identical with Scott'. It is in this way that identity enters into 'Scott is the author of *Waverley*'; and it is owing to such uses that identity is worth affirming.

One interesting result of the above theory of denoting is this: when there is an anything with which we do not have immediate acquaintance, but only definition by denoting phrases, then the propositions in which this thing is introduced by means of a denoting phrase do not really contain this thing as a constituent, but contain instead the constituents expressed by the several words of the denoting phrase. Thus in every proposition that we can apprehend (i.e. not only in those whose truth or falsehood we can judge of, but in all that we can think about), all the constituents are really entities with which we have immediate acquaintance. Now such things as matter (in the sense in which matter occurs in physics) and the minds of other people are known to us only by denoting phrases, i.e. we are not acquainted with them, but we know them as what has such and such properties. Hence, although we can form propositional functions $C(x)$ which must hold of such and such a material particle, or of So-and-so's mind, yet we are not acquainted with the propositions which affirm these things that we know must be true, because we cannot apprehend the actual entities concerned. What we know is 'So-and-so has a mind which has such and such properties' but we do not know 'A has such and such properties', where A is the mind in question. In such a case, we know the properties of a thing without having acquaintance with the thing itself, and without, consequently, knowing any single proposition of which the thing itself is a constituent.

Of the many other consequences of the view I have been advocating, I will say nothing. I will only beg the reader not to make up his mind against the view - as he might be tempted to do, on account of its apparently excessive complication - until he has attempted to construct a theory of his own on the subject of denotation. This attempt, I believe, will convince him that, whatever the true theory may be, it cannot have such a simplicity as one might have expected beforehand.

1)

I have discussed this subject in Principles of Mathematics, Chap. V, and sect. 476. The theory there advocated is very nearly the same as Frege's, and is quite different from the theory to be advocated in what follows.

2)

More exactly, a propositional function.

3)

The second of these can be defined by means of the first, if we take it to mean, 'It is not true that "C(x) is false" is always true'.

4)

I shall sometimes use, instead of this complicated phrase, the phrase 'C(x) is not always false', or 'C(x) is sometimes true', supposed defined to mean the same as the complicated phrase.

5)

As has been ably argued in Mr. Bradley's Logic, Book I, Chap. II.

6)

Psychologically, 'C(a man)' has a suggestion of only one, and 'C(some men)' has a suggestion of more than one; but we may neglect these suggestions in a preliminary sketch.

7)

See "Untersuchungen zur Gegenstandstheorie und Psychologie" (Leipzig, 1904) the first three articles (by Meinong, Ameseder and Mally respectively).

8)

See his "Über Sinn und Bedeutung," Zeitschrift für Phil. und Phil. Kritik, Vol. 100.

9)

Frege distinguishes the two elements of meaning and denotation everywhere, and not only in complex denoting phrases. Thus it is the meanings of the constituents of a denoting complex that enter into its meaning, not their denotation. In the proposition 'Mont Blanc is over 1,000 meters high', it is, according to him, the meaning of 'Mont Blanc', not the actual mountain, that is a constituent of the meaning of the proposition.

10)

In this theory, we shall say that the denoting phrase expresses a meaning; and we shall say both of the phrase and of the meaning that they denote a denotation. In the other theory, which I advocate, there is no meaning, and only sometimes a denotation.

11)

I use these as synonyms.

12)

This is the abbreviated, not the stricter, interpretation.

13)

The propositions from which such entities are derived are not identical either with these entities or with the propositions that these entities have being.

14)

The argument can be made to prove validly that all members of the class of most perfect Beings exist; it can also be proved formally that this class cannot have more than one member; but, taking the definition of perfection as possession of all positive predicates, it can be proved almost equally formally that the class does not have even one member.

15)

I quote Robert Charles Marsh's introduction to this paper in "Logic and Knowledge":

G. E. Moore has pointed out that Russell's 'shortest statement' at the close of the paper is faulty because of the ambiguity of the verb 'to write'. 'Scott is the author of Waverley' does not, therefore, have the same meaning as 'Scott wrote Waverley', since Scott (like blind Milton) may be the author of the work without being the person who literally wrote it for the first time. Russell has accepted this correction 'with equanimity'. The right to feel patronizing about this slip is reserved by law to those who have done as much for philosophy as Russell and Moore.

Chapter I

THE AIM

At the beginning a misconception must be removed from the path. Many people, if not most, look on literary taste as an elegant accomplishment, by acquiring which they will complete themselves, and make themselves finally fit as members of a correct society. They are secretly ashamed of their ignorance of literature, in the same way as they would be ashamed of their ignorance of etiquette at a high entertainment, or of their inability to ride a horse if suddenly called upon to do so. There are certain things that a man ought to know, or to know about, and literature is one of them: such is their idea. They have learnt to dress themselves with propriety, and to behave with propriety on all occasions; they are fairly "up" in the questions of the day; by industry and enterprise they are succeeding in their vocations; it behoves them, then, not to forget that an acquaintance with literature is an indispensable part of a self-respecting man's personal baggage. Painting doesn't matter; music doesn't matter very much. But "everyone is supposed to know" about literature. Then, literature is such a charming distraction! Literary taste thus serves two purposes: as a certificate of correct culture and as a private pastime. A young professor of mathematics, immense at mathematics and games, dangerous at chess, capable of Haydn on the violin, once said to me, after listening to some chat on books, "Yes, I must take up literature." As though saying: "I was rather forgetting literature. However, I've polished off all these other things. I'll have a shy at literature now." This attitude, or any attitude which resembles it, is wrong. To him who really comprehends what literature is, and what the function of literature is, this attitude is simply ludicrous. It is also fatal to the formation of literary taste. People who regard literary taste simply as an accomplishment, and literature simply as a distraction, will never truly succeed either in acquiring the accomplishment or in using it half-acquired as a distraction; though the one is the most perfect of distractions, and though the other is unsurpassed by any other accomplishment in elegance or in power to impress the universal snobbery of civilised mankind. Literature, instead of being an accessory, is the fundamental *sine qua non* of complete living. I am extremely anxious to avoid rhetorical exaggerations. I do not think I am guilty of one in asserting that he who has not been "presented to the freedom" of literature has not wakened up out of his prenatal sleep. He is merely not born. He can't see; he can't hear; he can't feel, in any full sense. He can only eat his dinner. What more than anything else annoys people who know the true function of literature, and have profited thereby, is

the spectacle of so many thousands of individuals going about under the delusion that they are alive, when, as a fact, they are no nearer being alive than a bear in winter. I will tell you what literature is! No--I only wish I could. But I can't. No one can. Gleams can be thrown on the secret, inklings given, but no more. I will try to give you an inkling. And, to do so, I will take you back into your own history, or forward into it. That evening when you went for a walk with your faithful friend, the friend from whom you hid nothing-- or almost nothing...! You were, in truth, somewhat inclined to hide from him the particular matter which monopolised your mind that evening, but somehow you contrived to get on to it, drawn by an overpowering fascination. And as your faithful friend was sympathetic and discreet, and flattered you by a respectful curiosity, you proceeded further and further into the said matter, growing more and more confidential, until at last you cried out, in a terrific whisper: "My boy, she is simply miraculous!" At that moment you were in the domain of literature. Let me explain. Of course, in the ordinary acceptation of the word, she was not miraculous. Your faithful friend had never noticed that she was miraculous, nor had about forty thousand other fairly keen observers. She was just a girl. Troy had not been burnt for her. A girl cannot be called a miracle. If a girl is to be called a miracle, then you might call pretty nearly anything a miracle.... That is just it: you might. You can. You ought. Amid all the miracles of the universe you had just wakened up to one. You were full of your discovery. You were under a divine impulsion to impart that discovery. You had a strong sense of the marvellous beauty of something, and you had to share it. You were in a passion about something, and you had to vent yourself on somebody. You were drawn towards the whole of the rest of the human race. Mark the effect of your mood and utterance on your faithful friend. He knew that she was not a miracle. No other person could have made him believe that she was a miracle. But you, by the force and sincerity of your own vision of her, and by the fervour of your desire to make him participate in your vision, did for quite a long time cause him to feel that he had been blind to the miracle of that girl. You were producing literature. You were alive. Your eyes were unlidged, your ears were unstopped, to some part of the beauty and the strangeness of the world; and a strong instinct within you forced you to tell someone. It was not enough for you that you saw and heard. Others had to see and hear. Others had to be wakened up. And they were! It is quite possible--I am not quite sure-- that your faithful friend the very next day, or the next month, looked at some other girl, and suddenly saw that she, too, was miraculous! The influence of literature! The makers of literature are those who have seen and felt the miraculous interestingness of the universe. And the greatest makers of literature are those whose vision has been the widest, and whose feeling has been the most intense. Your own fragment of insight was accidental, and perhaps temporary. *Their* lives are one long ecstasy of denying that the world is a dull place. Is it nothing to you to learn to understand that the world is not a dull place? Is it nothing to you to be led out of the tunnel on to the hill-side, to have all your senses quickened, to be invigorated by the true savour of life, to feel your heart beating under that correct necktie of yours? These makers of literature render you their equals. The aim of literary study is not to amuse the hours of leisure; it is to awake oneself, it is to be alive, to intensify one's capacity for pleasure, for sympathy, and for comprehension. It is not to affect one hour, but twenty-four hours. It is to change utterly one's relations with the world. An understanding appreciation of literature means an understanding appreciation of the world, and it means nothing else. Not isolated and unconnected parts of life, but all of life, brought together and correlated in a synthetic map! The spirit of literature is unifying; it joins the candle and the star, and by the magic of an image shows that the beauty of the greater is in the less. And, not content with the disclosure of beauty and the bringing together of all things whatever within its focus, it enforces a moral wisdom by the tracing everywhere of cause and effect. It consoles doubly-- by the revelation of unsuspected loveliness, and by the proof that our lot is the common lot. It is the supreme cry of the discoverer, offering sympathy and asking for it in a single gesture. In attending a University Extension Lecture on the sources of Shakespeare's plots, or in studying the researches of George Saintsbury into the origins of English prosody, or in weighing the evidence for and against the assertion that Rousseau was a scoundrel, one is apt to forget what literature really is and is for. It is well to remind ourselves that literature is first and last a means of life, and that the enterprise of forming one's literary taste is an enterprise of learning how best to use this means of life. People who don't want to live, people who would sooner hibernate than feel intensely, will be wise to eschew literature. They had better, to quote from the finest passage in a fine poem, "sit around and eat blackberries." The sight of a "common bush afire with God" might upset their nerves.

Chapter II

YOUR PARTICULAR CASE

The attitude of the average decent person towards the classics of his own tongue is one of distrust--I had almost said, of fear. I will not take the case of Shakespeare, for Shakespeare is "taught" in schools; that is to say, the Board of

Education and all authorities pedagogic bind themselves together in a determined effort to make every boy in the land a lifelong enemy of Shakespeare. (It is a mercy they don't "teach" Blake.) I will take, for an example, Sir Thomas Browne, as to whom the average person has no offensive juvenile memories. He is bound to have read somewhere that the style of Sir Thomas Browne is unsurpassed by anything in English literature. One day he sees the **Religio Medici** in a shop-window (or, rather, outside a shop-window, for he would hesitate about entering a bookshop), and he buys it, by way of a mild experiment. He does not expect to be enchanted by it; a profound instinct tells him that Sir Thomas Browne is "not in his line"; and in the result he is even less enchanted than he expected to be. He reads the introduction, and he glances at the first page or two of the work. He sees nothing but words. The work makes no appeal to him whatever. He is surrounded by trees, and cannot perceive the forest. He puts the book away. If Sir Thomas Browne is mentioned, he will say, "Yes, very fine!" with a feeling of pride that he has at any rate bought and inspected Sir Thomas Browne. Deep in his heart is a suspicion that people who get enthusiastic about Sir Thomas Browne are vain and conceited **poseurs**. After a year or so, when he has recovered from the discouragement caused by Sir Thomas Browne, he may, if he is young and hopeful, repeat the experiment with Congreve or Addison. Same sequel! And so on for perhaps a decade, until his commerce with the classics finally expires! That, magazines and newish fiction apart, is the literary history of the average decent person. And even your case, though you are genuinely preoccupied with thoughts of literature, bears certain disturbing resemblances to the drab case of the average person. You do not approach the classics with gusto-- anyhow, not with the same gusto as you would approach a new novel by a modern author who had taken your fancy. You never murmured to yourself, when reading Gibbon's **Decline and Fall** in bed: "Well, I really must read one more chapter before I go to sleep!" Speaking generally, the classics do not afford you a pleasure commensurate with their renown. You peruse them with a sense of duty, a sense of doing the right thing, a sense of "improving yourself," rather than with a sense of gladness. You do not smack your lips; you say: "That is good for me." You make little plans for reading, and then you invent excuses for breaking the plans. Something new, something which is not a classic, will surely draw you away from a classic. It is all very well for you to pretend to agree with the verdict of the elect that **Clarissa Harlowe** is one of the greatest novels in the world--a new Kipling, or even a new number of a magazine, will cause you to neglect **Clarissa Harlowe**, just as though Kipling, etc., could not be kept for a few days without turning sour! So that you have to ordain rules for yourself, as: "I will not read anything else until I have read Richardson, or Gibbon, for an hour each day." Thus proving that you regard a classic as a pill, the swallowing of which merits jam! And the more modern a classic is, the more it resembles the stuff of the year and the less it resembles the classics of the centuries, the more easy and enticing do you find that classic. Hence you are glad that George Eliot, the Brontës, Thackeray, are considered as classics, because you really **do** enjoy them. Your sentiments concerning them approach your sentiments concerning a "rattling good story" in a magazine. I may have exaggerated--or, on the other hand, I may have understated-- the unsatisfactory characteristics of your particular case, but it is probable that in the mirror I hold up you recognise the rough outlines of your likeness. You do not care to admit it; but it is so. You are not content with yourself. The desire to be more truly literary persists in you. You feel that there is something wrong in you, but you cannot put your finger on the spot. Further, you feel that you are a bit of a sham. Something within you continually forces you to exhibit for the classics an enthusiasm which you do not sincerely feel. You even try to persuade yourself that you are enjoying a book, when the next moment you drop it in the middle and forget to resume it. You occasionally buy classical works, and do not read them at all; you practically decide that it is enough to possess them, and that the mere possession of them gives you a **cachet**. The truth is, you are a sham. And your soul is a sea of uneasy remorse. You reflect: "According to what Matthew Arnold says, I ought to be perfectly mad about Wordsworth's **Prelude**. And I am not. Why am I not? Have I got to be learned, to undertake a vast course of study, in order to be perfectly mad about Wordsworth's **Prelude**? Or am I born without the faculty of pure taste in literature, despite my vague longings? I do wish I could smack my lips over Wordsworth's **Prelude** as I did over that splendid story by H. G. Wells, **The Country of the Blind**, in the **Strand Magazine**!"... Yes, I am convinced that in your dissatisfied, your diviner moments, you address yourself in these terms. I am convinced that I have diagnosed your symptoms. Now the enterprise of forming one's literary taste is an agreeable one; if it is not agreeable it cannot succeed. But this does not imply that it is an easy or a brief one. The enterprise of beating Colonel Bogey at golf is an agreeable one, but it means honest and regular work. A fact to be borne in mind always! You are certainly not going to realise your ambition--and so great, so influential an ambition!--by spasmodic and half-hearted effort. You must begin by making up your mind adequately. You must rise to the height of the affair. You must approach a grand undertaking in the grand manner. You ought to mark the day in the calendar as a solemnity. Human nature is weak, and has need of tricky aids, even in the pursuit of happiness. Time will be necessary to you, and time regularly and sacredly set apart. Many people affirm that they cannot be regular, that regularity numbs them. I think this is true of a very few people, and that in the rest the objection to regularity is merely an attempt to excuse idleness. I am inclined to think that you personally are capable

of regularity. And I am sure that if you firmly and constantly devote certain specific hours on certain specific days of the week to this business of forming your literary taste, you will arrive at the goal much sooner. The simple act of resolution will help you. This is the first preliminary. The second preliminary is to surround yourself with books, to create for yourself a bookish atmosphere. The merely physical side of books is important--more important than it may seem to the inexperienced. Theoretically (save for works of reference), a student has need for but one book at a time. Theoretically, an amateur of literature might develop his taste by expending sixpence a week, or a penny a day, in one sixpenny edition of a classic after another sixpenny edition of a classic, and he might store his library in a hat-box or a biscuit-tin. But in practice he would have to be a monster of resolution to succeed in such conditions. The eye must be flattered; the hand must be flattered; the sense of owning must be flattered. Sacrifices must be made for the acquisition of literature. That which has cost a sacrifice is always endeared. A detailed scheme of buying books will come later, in the light of further knowledge. For the present, buy--buy whatever has received the *imprimatur* of critical authority. Buy without any immediate reference to what you will read. Buy! Surround yourself with volumes, as handsome as you can afford. And for reading, all that I will now particularly enjoin is a general and inclusive tasting, in order to attain a sort of familiarity with the look of "literature in all its branches." A turning over of the pages of a volume of Chambers's *Cyclopædia of English Literature*, the third for preference, may be suggested as an admirable and a diverting exercise. You might mark the authors that flash an appeal to you.

Chapter III

WHY A CLASSIC IS A CLASSIC

The large majority of our fellow-citizens care as much about literature as they care about aeroplanes or the programme of the Legislature. They do not ignore it; they are not quite indifferent to it. But their interest in it is faint and perfunctory; or, if their interest happens to be violent, it is spasmodic. Ask the two hundred thousand persons whose enthusiasm made the vogue of a popular novel ten years ago what they think of that novel now, and you will gather that they have utterly forgotten it, and that they would no more dream of reading it again than of reading Bishop Stubbs's *Select Charters*. Probably if they did read it again they would not enjoy it--not because the said novel is a whit worse now than it was ten years ago; not because their taste has improved--but because they have not had sufficient practice to be able to rely on their taste as a means of permanent pleasure. They simply don't know from one day to the next what will please them. In the face of this one may ask: Why does the great and universal fame of classical authors continue? The answer is that the fame of classical authors is entirely independent of the majority. Do you suppose that if the fame of Shakespeare depended on the man in the street it would survive a fortnight? The fame of classical authors is originally made, and it is maintained, by a passionate few. Even when a first-class author has enjoyed immense success during his lifetime, the majority have never appreciated him so sincerely as they have appreciated second-rate men. He has always been reinforced by the ardour of the passionate few. And in the case of an author who has emerged into glory after his death the happy sequel has been due solely to the obstinate perseverance of the few. They could not leave him alone; they would not. They kept on savouring him, and talking about him, and buying him, and they generally behaved with such eager zeal, and they were so authoritative and sure of themselves, that at last the majority grew accustomed to the sound of his name and placidly agreed to the proposition that he was a genius; the majority really did not care very much either way. And it is by the passionate few that the renown of genius is kept alive from one generation to another. These few are always at work. They are always rediscovering genius. Their curiosity and enthusiasm are exhaustless, so that there is little chance of genius being ignored. And, moreover, they are always working either for or against the verdicts of the majority. The majority can make a reputation, but it is too careless to maintain it. If, by accident, the passionate few agree with the majority in a particular instance, they will frequently remind the majority that such and such a reputation has been made, and the majority will idly concur: "Ah, yes. By the way, we must not forget that such and such a reputation exists." Without that persistent memory-jogging the reputation would quickly fall into the oblivion which is death. The passionate few only have their way by reason of the fact that they are genuinely interested in literature, that literature matters to them. They conquer by their obstinacy alone, by their eternal repetition of the same statements. Do you suppose they could prove to the man in the street that Shakespeare was a great artist? The said man would not even understand the terms they employed. But when he is told ten thousand times, and generation after generation, that Shakespeare was a great artist, the said man believes--not by reason, but by faith. And he too repeats that Shakespeare was a great artist, and he buys the complete works of Shakespeare and puts them on his shelves, and he goes to see the marvellous stage-effects which accompany *King Lear* or *Hamlet*, and comes back religiously convinced that Shakespeare was a great artist. All because the passionate few could not keep their admiration of Shakespeare to themselves. This is not cynicism; but truth. And it is important that those

who wish to form their literary taste should grasp it. What causes the passionate few to make such a fuss about literature? There can be only one reply. They find a keen and lasting pleasure in literature. They enjoy literature as some men enjoy beer. The recurrence of this pleasure naturally keeps their interest in literature very much alive. They are for ever making new researches, for ever practising on themselves. They learn to understand themselves. They learn to know what they want. Their taste becomes surer and surer as their experience lengthens. They do not enjoy to-day what will seem tedious to them to-morrow. When they find a book tedious, no amount of popular clatter will persuade them that it is pleasurable; and when they find it pleasurable no chill silence of the street-crowds will affect their conviction that the book is good and permanent. They have faith in themselves. What are the qualities in a book which give keen and lasting pleasure to the passionate few? This is a question so difficult that it has never yet been completely answered. You may talk lightly about truth, insight, knowledge, wisdom, humour, and beauty. But these comfortable words do not really carry you very far, for each of them has to be defined, especially the first and last. It is all very well for Keats in his airy manner to assert that beauty is truth, truth beauty, and that that is all he knows or needs to know. I, for one, need to know a lot more. And I never shall know. Nobody, not even Hazlitt nor Sainte-Beuve, has ever finally explained why he thought a book beautiful. I take the first fine lines that come to hand--

The woods of Arcady are dead,
And over is their antique joy--

and I say that those lines are beautiful, because they give me pleasure. But why? No answer! I only know that the passionate few will, broadly, agree with me in deriving this mysterious pleasure from those lines. I am only convinced that the liveliness of our pleasure in those and many other lines by the same author will ultimately cause the majority to believe, by faith, that W. B. Yeats is a genius. The one reassuring aspect of the literary affair is that the passionate few are passionate about the same things. A continuance of interest does, in actual practice, lead ultimately to the same judgments. There is only the difference in width of interest. Some of the passionate few lack catholicity, or, rather, the whole of their interest is confined to one narrow channel; they have none left over. These men help specially to vitalise the reputations of the narrower geniuses: such as Crashaw. But their active predilections never contradict the general verdict of the passionate few; rather they reinforce it. A classic is a work which gives pleasure to the minority which is intensely and permanently interested in literature. It lives on because the minority, eager to renew the sensation of pleasure, is eternally curious and is therefore engaged in an eternal process of rediscovery. A classic does not survive for any ethical reason. It does not survive because it conforms to certain canons, or because neglect would not kill it. It survives because it is a source of pleasure, and because the passionate few can no more neglect it than a bee can neglect a flower. The passionate few do not read "the right things" because they are right. That is to put the cart before the horse. "The right things" are the right things solely because the passionate few *like* reading them. Hence--and I now arrive at my point-- the one primary essential to literary taste is a hot interest in literature. If you have that, all the rest will come. It matters nothing that at present you fail to find pleasure in certain classics. The driving impulse of your interest will force you to acquire experience, and experience will teach you the use of the means of pleasure. You do not know the secret ways of yourself: that is all. A continuance of interest must inevitably bring you to the keenest joys. But, of course, experience may be acquired judiciously or injudiciously, just as Putney may be reached *via* Walham Green or *via* St. Petersburg.

Chapter IV

WHERE TO BEGIN

I wish particularly that my readers should not be intimidated by the apparent vastness and complexity of this enterprise of forming the literary taste. It is not so vast nor so complex as it looks. There is no need whatever for the inexperienced enthusiast to confuse and frighten himself with thoughts of "literature in all its branches." Experts and pedagogues (chiefly pedagogues) have, for the purpose of convenience, split literature up into divisions and subdivisions-- such as prose and poetry; or imaginative, philosophic, historical; or elegiac, heroic, lyric; or religious and profane, etc., *ad infinitum*. But the greater truth is that literature is all one--and indivisible. The idea of the unity of literature should be well planted and fostered in the head. All literature is the expression of feeling, of passion, of emotion, caused by a sensation of the interestingness of life. What drives a historian to write history? Nothing but the overwhelming impression made upon him by the survey of past times. He is forced into an attempt to reconstitute the picture for others. If hitherto you have failed to perceive that a historian is a being in strong emotion, trying to convey his emotion to others, read the passage in the *Memoirs* of Gibbon, in which he describes how he

finished the **Decline and Fall**. You will probably never again look upon the **Decline and Fall** as a "dry" work. What applies to history applies to the other "dry" branches. Even Johnson's Dictionary is packed with emotion. Read the last paragraph of the preface to it: "In this work, when it shall be found that much is omitted, let it not be forgotten that much likewise is performed.... It may repress the triumph of malignant criticism to observe that if our language is not here fully displayed, I have only failed in an attempt which no human powers have hitherto completed...." And so on to the close: "I have protracted my work till most of those whom I wish to please have sunk into the grave, and success and miscarriage are empty sounds: I therefore dismiss it with frigid tranquillity, having little to fear or hope from censure or from praise." Yes, tranquillity; but not frigid! The whole passage, one of the finest in English prose, is marked by the heat of emotion. You may discover the same quality in such books as Spencer's **First Principles**. You may discover it everywhere in literature, from the cold fire of Pope's irony to the blasting temperatures of Swinburne. Literature does not begin till emotion has begun. There is even no essential, definable difference between those two great branches, prose and poetry. For prose may have rhythm. All that can be said is that verse will scan, while prose will not. The difference is purely formal. Very few poets have succeeded in being so poetical as Isaiah, Sir Thomas Browne, and Ruskin have been in prose. It can only be stated that, as a rule, writers have shown an instinctive tendency to choose verse for the expression of the very highest emotion. The supreme literature is in verse, but the finest achievements in prose approach so nearly to the finest achievements in verse that it is ill work deciding between them. In the sense in which poetry is best understood, all literature is poetry-- or is, at any rate, poetical in quality. Macaulay's ill-informed and unjust denunciations live because his genuine emotion made them into poetry, while his **Lays of Ancient Rome** are dead because they are not the expression of a genuine emotion. As the literary taste develops, this quality of emotion, restrained or loosed, will be more and more widely perceived at large in literature. It is the quality that must be looked for. It is the quality that unifies literature (and all the arts). It is not merely useless, it is harmful, for you to map out literature into divisions and branches, with different laws, rules, or canons. The first thing is to obtain some possession of literature. When you have actually felt some of the emotion which great writers have striven to impart to you, and when your emotions become so numerous and puzzling that you feel the need of arranging them and calling them by names, then--and not before--you can begin to study what has been attempted in the way of classifying and ticketing literature. Manuals and treatises are excellent things in their kind, but they are simply dead weight at the start. You can only acquire really useful general ideas by first acquiring particular ideas, and putting those particular ideas together. You cannot make bricks without straw. Do not worry about literature in the abstract, about theories as to literature. Get at it. Get hold of literature in the concrete as a dog gets hold of a bone. If you ask me where you ought to begin, I shall gaze at you as I might gaze at the faithful animal if he inquired which end of the bone he ought to attack. It doesn't matter in the slightest degree where you begin. Begin wherever the fancy takes you to begin. Literature is a whole. There is only one restriction for you. You must begin with an acknowledged classic; you must eschew modern works. The reason for this does not imply any depreciation of the present age at the expense of past ages. Indeed, it is important, if you wish ultimately to have a wide, catholic taste, to guard against the too common assumption that nothing modern will stand comparison with the classics. In every age there have been people to sigh: "Ah, yes. Fifty years ago we had a few great writers. But they are all dead, and no young ones are arising to take their place." This attitude of mind is deplorable, if not silly, and is a certain proof of narrow taste. It is a surety that in 1959 gloomy and egregious persons will be saying: "Ah, yes. At the beginning of the century there were great poets like Swinburne, Meredith, Francis Thompson, and Yeats. Great novelists like Hardy and Conrad. Great historians like Stubbs and Maitland, etc., etc. But they are all dead now, and whom have we to take their place?" It is not until an age has receded into history, and all its mediocrity has dropped away from it, that we can see it as it is-- as a group of men of genius. We forget the immense amount of twaddle that the great epochs produced. The total amount of fine literature created in a given period of time differs from epoch to epoch, but it does not differ much. And we may be perfectly sure that our own age will make a favourable impression upon that excellent judge, posterity. Therefore, beware of disparaging the present in your own mind. While temporarily ignoring it, dwell upon the idea that its chaff contains about as much wheat as any similar quantity of chaff has contained wheat. The reason why you must avoid modern works at the beginning is simply that you are not in a position to choose among modern works. Nobody at all is quite in a position to choose with certainty among modern works. To sift the wheat from the chaff is a process that takes an exceedingly long time. Modern works have to pass before the bar of the taste of successive generations. Whereas, with classics, which have been through the ordeal, almost the reverse is the case. **Your taste has to pass before the bar of the classics.** That is the point. If you differ with a classic, it is you who are wrong, and not the book. If you differ with a modern work, you may be wrong or you may be right, but no judge is authoritative enough to decide. Your taste is unformed. It needs guidance, and it needs authoritative guidance. Into the business of forming literary taste faith enters. You probably will not specially care for a particular classic at first. If you did care for it at first, your taste, so far as that classic is concerned, would be formed, and our

hypothesis is that your taste is not formed. How are you to arrive at the stage of caring for it? Chiefly, of course, by examining it and honestly trying to understand it. But this process is materially helped by an act of faith, by the frame of mind which says: "I know on the highest authority that this thing is fine, that it is capable of giving me pleasure. Hence I am determined to find pleasure in it." Believe me that faith counts enormously in the development of that wide taste which is the instrument of wide pleasures. But it must be faith founded on unassailable authority.

Chapter V

HOW TO READ A CLASSIC

Let us begin experimental reading with Charles Lamb. I choose Lamb for various reasons: He is a great writer, wide in his appeal, of a highly sympathetic temperament; and his finest achievements are simple and very short. Moreover, he may usefully lead to other and more complex matters, as will appear later. Now, your natural tendency will be to think of Charles Lamb as a book, because he has arrived at the stage of being a classic. Charles Lamb was a man, not a book. It is extremely important that the beginner in literary study should always form an idea of the man behind the book. The book is nothing but the expression of the man. The book is nothing but the man trying to talk to you, trying to impart to you some of his feelings. An experienced student will divine the man from the book, will understand the man by the book, as is, of course, logically proper. But the beginner will do well to aid himself in understanding the book by means of independent information about the man. He will thus at once relate the book to something human, and strengthen in his mind the essential notion of the connection between literature and life. The earliest literature was delivered orally direct by the artist to the recipient. In some respects this arrangement was ideal. Changes in the constitution of society have rendered it impossible. Nevertheless, we can still, by the exercise of the imagination, hear mentally the accents of the artist speaking to us. We must so exercise our imagination as to feel the man behind the book. Some biographical information about Lamb should be acquired. There are excellent short biographies of him by Canon Ainger in the **Dictionary of National Biography**, in Chambers's **Encyclopædia**, and in Chambers's **Cyclopædia of English Literature**. If you have none of these (but you ought to have the last), there are Mr. E. V. Lucas's exhaustive **Life** (Methuen, 7s. 6d.), and, cheaper, Mr. Walter Jerrold's **Lamb** (Bell and Sons, 1s.); also introductory studies prefixed to various editions of Lamb's works. Indeed, the facilities for collecting materials for a picture of Charles Lamb as a human being are prodigious. When you have made for yourself such a picture, read the **Essays of Elia** by the light of it. I will choose one of the most celebrated, **Dream Children: A Reverie**. At this point, kindly put my book down, and read **Dream Children**. Do not say to yourself that you will read it later, but read it now. When you have read it, you may proceed to my next paragraph. You are to consider **Dream Children** as a human document. Lamb was nearing fifty when he wrote it. You can see, especially from the last line, that the death of his elder brother, John Lamb, was fresh and heavy on his mind. You will recollect that in youth he had had a disappointing love-affair with a girl named Ann Simmons, who afterwards married a man named Bartrum. You will know that one of the influences of his childhood was his grandmother Field, housekeeper of Blakesware House, in Hertfordshire, at which mansion he sometimes spent his holidays. You will know that he was a bachelor, living with his sister Mary, who was subject to homicidal mania. And you will see in this essay, primarily, a supreme expression of the increasing loneliness of his life. He constructed all that preliminary tableau of paternal pleasure in order to bring home to you in the most poignant way his feeling of the solitude of his existence, his sense of all that he had missed and lost in the world. The key of the essay is one of profound sadness. But note that he makes his sadness beautiful; or, rather, he shows the beauty that resides in sadness. You watch him sitting there in his "bachelor arm-chair," and you say to yourself: "Yes, it was sad, but it was somehow beautiful." When you have said that to yourself, Charles Lamb, so far as you are concerned, has accomplished his chief aim in writing the essay. How exactly he produces his effect can never be fully explained. But one reason of his success is certainly his regard for truth. He does not falsely idealise his brother, nor the relations between them. He does not say, as a sentimentalist would have said, "Not the slightest cloud ever darkened our relations;" nor does he exaggerate his solitude. Being a sane man, he has too much common-sense to assemble all his woes at once. He might have told you that Bridget was a homicidal maniac; what he does tell you is that she was faithful. Another reason of his success is his continual regard for beautiful things and fine actions, as illustrated in the major characteristics of his grandmother and his brother, and in the detailed description of Blakesware House and the gardens thereof. Then, subordinate to the main purpose, part of the machinery of the main purpose, is the picture of the children--real children until the moment when they fade away. The traits of childhood are accurately and humorously put in again and again: "Here John smiled, as much as to say, 'That would be foolish indeed.'" "Here little Alice spread her hands." "Here Alice's little right foot played an involuntary

movement, till, upon my looking grave, it desisted." "Here John expanded all his eyebrows, and tried to look courageous." "Here John slyly deposited back upon the plate a bunch of grapes." "Here the children fell a-crying...and prayed me to tell them some stories about their pretty dead mother." And the exquisite: "Here Alice put out one of her dear mother's looks, too tender to be upbraiding." Incidentally, while preparing his ultimate solemn effect, Lamb has inspired you with a new, intensified vision of the wistful beauty of children--their imitativeness, their facile and generous emotions, their anxiety to be correct, their ingenuous haste to escape from grief into joy. You can see these children almost as clearly and as tenderly as Lamb saw them. For days afterwards you will not be able to look upon a child without recalling Lamb's portrayal of the grace of childhood. He will have shared with you his perception of beauty. If you possess children, he will have renewed for you the charm which custom does very decidedly stale. It is further to be noticed that the measure of his success in picturing the children is the measure of his success in his main effect. The more real they seem, the more touching is the revelation of the fact that they do not exist, and never have existed. And if you were moved by the reference to their "pretty dead mother," you will be still more moved when you learn that the girl who would have been their mother is not dead and is not Lamb's. As, having read the essay, you reflect upon it, you will see how its emotional power over you has sprung from the sincere and unexaggerated expression of actual emotions exactly remembered by someone who had an eye always open for beauty, who was, indeed, obsessed by beauty. The beauty of old houses and gardens and aged virtuous characters, the beauty of children, the beauty of companionships, the softening beauty of dreams in an arm-chair--all these are brought together and mingled with the grief and regret which were the origin of the mood. Why is **Dream Children** a classic? It is a classic because it transmits to you, as to generations before you, distinguished emotion, because it makes you respond to the throb of life more intensely, more justly, and more nobly. And it is capable of doing this because Charles Lamb had a very distinguished, a very sensitive, and a very honest mind. His emotions were noble. He felt so keenly that he was obliged to find relief in imparting his emotions. And his mental processes were so sincere that he could neither exaggerate nor diminish the truth. If he had lacked any one of these three qualities, his appeal would have been narrowed and weakened, and he would not have become a classic. Either his feelings would have been deficient in supreme beauty, and therefore less worthy to be imparted, or he would not have had sufficient force to impart them; or his honesty would not have been equal to the strain of imparting them accurately. In any case, he would not have set up in you that vibration which we call pleasure, and which is supereminently caused by vitalising participation in high emotion. As Lamb sat in his bachelor arm-chair, with his brother in the grave, and the faithful homicidal maniac by his side, he really did think to himself, "This is beautiful. Sorrow is beautiful. Disappointment is beautiful. Life is beautiful. **I must tell them.** I must make them understand." Because he still makes you understand he is a classic. And now I seem to hear you say, "But what about Lamb's famous literary style? Where does that come in?"

Chapter VI

THE QUESTION OF STYLE

In discussing the value of particular books, I have heard people say-- people who were timid about expressing their views of literature in the presence of literary men: "It may be bad from a literary point of view, but there are very good things in it." Or: "I dare say the style is very bad, but really the book is very interesting and suggestive." Or: "I'm not an expert, and so I never bother my head about good style. All I ask for is good matter. And when I have got it, critics may say what they like about the book." And many other similar remarks, all showing that in the minds of the speakers there existed a notion that style is something supplementary to, and distinguishable from, matter; a sort of notion that a writer who wanted to be classical had first to find and arrange his matter, and then dress it up elegantly in a costume of style, in order to please beings called literary critics. This is a misapprehension. Style cannot be distinguished from matter. When a writer conceives an idea he conceives it in a form of words. That form of words constitutes his style, and it is absolutely governed by the idea. The idea can only exist in words, and it can only exist in one form of words. You cannot say exactly the same thing in two different ways. Slightly alter the expression, and you slightly alter the idea. Surely it is obvious that the expression cannot be altered without altering the thing expressed! A writer, having conceived and expressed an idea, may, and probably will, "polish it up." But what does he polish up? To say that he polishes up his style is merely to say that he is polishing up his idea, that he has discovered faults or imperfections in his idea, and is perfecting it. An idea exists in proportion as it is expressed; it exists when it is expressed, and not before. It expresses itself. A clear idea is expressed clearly, and a vague idea vaguely. You need but take your own case and your own speech. For just as science is the development of common-sense, so is literature the development of common daily speech. The difference between science and common-sense

is simply one of degree; similarly with speech and literature. Well, when you "know what you think," you succeed in saying what you think, in making yourself understood. When you "don't know what to think," your expressive tongue halts. And note how in daily life the characteristics of your style follow your mood; how tender it is when you are tender, how violent when you are violent. You have said to yourself in moments of emotion: "If only I could write--," etc. You were wrong. You ought to have said: "If only I could *think*-- on this high plane." When you have thought clearly you have never had any difficulty in saying what you thought, though you may occasionally have had some difficulty in keeping it to yourself. And when you cannot express yourself, depend upon it that you have nothing precise to express, and that what incommodes you is not the vain desire to express, but the vain desire to *think* more clearly. All this just to illustrate how style and matter are co-existent, and inseparable, and alike. You cannot have good matter with bad style. Examine the point more closely. A man wishes to convey a fine idea to you. He employs a form of words. That form of words is his style. Having read, you say: "Yes, this idea is fine." The writer has therefore achieved his end. But in what imaginable circumstances can you say: "Yes, this idea is fine, but the style is not fine"? The sole medium of communication between you and the author has been the form of words. The fine idea has reached you. How? In the words, by the words. Hence the fineness must be in the words. You may say, superiorly: "He has expressed himself clumsily, but I can *see* what he means." By what light? By something in the words, in the style. That something is fine. Moreover, if the style is clumsy, are you sure that you can see what he means? You cannot be quite sure. And at any rate, you cannot see distinctly. The "matter" is what actually reaches you, and it must necessarily be affected by the style. Still further to comprehend what style is, let me ask you to think of a writer's style exactly as you would think of the gestures and manners of an acquaintance. You know the man whose demeanour is "always calm," but whose passions are strong. How do you know that his passions are strong? Because he "gives them away" by some small, but important, part of his demeanour, such as the twitching of a lip or the whitening of the knuckles caused by clenching the hand. In other words, his demeanour, fundamentally, is not calm. You know the man who is always "smoothly polite and agreeable," but who affects you unpleasantly. Why does he affect you unpleasantly? Because he is tedious, and therefore disagreeable, and because his politeness is not real politeness. You know the man who is awkward, shy, clumsy, but who, nevertheless, impresses you with a sense of dignity and force. Why? Because mingled with that awkwardness and so forth *is* dignity. You know the blunt, rough fellow whom you instinctively guess to be affectionate-- because there is "something in his tone" or "something in his eyes." In every instance the demeanour, while perhaps seeming to be contrary to the character, is really in accord with it. The demeanour never contradicts the character. It is one part of the character that contradicts another part of the character. For, after all, the blunt man *is* blunt, and the awkward man *is* awkward, and these characteristics are defects. The demeanour merely expresses them. The two men would be better if, while conserving their good qualities, they had the superficial attributes of smoothness and agreeableness possessed by the gentleman who is unpleasant to you. And as regards this latter, it is not his superficial attributes which are unpleasant to you; but his other qualities. In the end the character is shown in the demeanour; and the demeanour is a consequence of the character and resembles the character. So with style and matter. You may argue that the blunt, rough man's demeanour is unfair to his tenderness. I do not think so. For his churlishness is really very trying and painful, even to the man's wife, though a moment's tenderness will make her and you forget it. The man really is churlish, and much more often than he is tender. His demeanour is merely just to his character. So, when a writer annoys you for ten pages and then enchants you for ten lines, you must not explode against his style. You must not say that his style won't let his matter "come out." You must remember the churlish, tender man. The more you reflect, the more clearly you will see that faults and excellences of style are faults and excellences of matter itself. One of the most striking illustrations of this neglected truth is Thomas Carlyle. How often has it been said that Carlyle's matter is marred by the harshness and the eccentricities of his style? But Carlyle's matter is harsh and eccentric to precisely the same degree as his style is harsh and eccentric. Carlyle was harsh and eccentric. His behaviour was frequently ridiculous, if it were not abominable. His judgments were often extremely bizarre. When you read one of Carlyle's fierce diatribes, you say to yourself: "This is splendid. The man's enthusiasm for justice and truth is glorious." But you also say: "He is a little unjust and a little untruthful. He goes too far. He lashes too hard." These things are not the style; they are the matter. And when, as in his greatest moments, he is emotional and restrained at once, you say: "This is the real Carlyle." Kindly notice how perfect the style has become! No harshnesses or eccentricities now! And if that particular matter is the "real" Carlyle, then that particular style is Carlyle's "real" style. But when you say "real" you would more properly say "best." "This is the best Carlyle." If Carlyle had always been at his best he would have counted among the supreme geniuses of the world. But he was a mixture. His style is the expression of the mixture. The faults are only in the style because they are in the matter. You will find that, in classical literature, the style always follows the mood of the matter. Thus, Charles Lamb's essay on *Dream Children* begins quite simply, in a calm, narrative manner, enlivened by a certain quippishness concerning the children. The style is grave when great-grandmother Field is the subject, and when the

author passes to a rather elaborate impression of the picturesque old mansion it becomes as if it were consciously beautiful. This beauty is intensified in the description of the still more beautiful garden. But the real dividing point of the essay occurs when Lamb approaches his elder brother. He unmistakably marks the point with the phrase: "Then, in somewhat a more heightened tone," I told how," etc. Henceforward the style increases in fervour and in solemnity until the culmination of the essay is reached: "And while I stood gazing, both the children gradually grew fainter to my view, receding and still receding till nothing at last but two mournful features were seen in the uttermost distance, which, without speech, strangely impressed upon me the effects of speech...." Throughout, the style is governed by the matter. "Well," you say, "of course it is. It couldn't be otherwise. If it were otherwise it would be ridiculous. A man who made love as though he were preaching a sermon, or a man who preached a sermon as though he were teasing schoolboys, or a man who described a death as though he were describing a practical joke, must necessarily be either an ass or a lunatic." Just so. You have put it in a nutshell. You have disposed of the problem of style so far as it can be disposed of. But what do those people mean who say: "I read such and such an author for the beauty of his style alone"? Personally, I do not clearly know what they mean (and I have never been able to get them to explain), unless they mean that they read for the beauty of sound alone. When you read a book there are only three things of which you may be conscious: (1) The significance of the words, which is inseparably bound up with the thought. (2) The look of the printed words on the page--I do not suppose that anybody reads any author for the visual beauty of the words on the page. (3) The sound of the words, either actually uttered or imagined by the brain to be uttered. Now it is indubitable that words differ in beauty of sound. To my mind one of the most beautiful words in the English language is "pavement." Enunciate it, study its sound, and see what you think. It is also indubitable that certain combinations of words have a more beautiful sound than certain other combinations. Thus Tennyson held that the most beautiful line he ever wrote was: The mellow ouzel fluting in the elm. Perhaps, as sound, it was. Assuredly it makes a beautiful succession of sounds, and recalls the bird-sounds which it is intended to describe. But does it live in the memory as one of the rare great Tennysonian lines? It does not. It has charm, but the charm is merely curious or pretty. A whole poem composed of lines with no better recommendation than that line has would remain merely curious or pretty. It would not permanently interest. It would be as insipid as a pretty woman who had nothing behind her prettiness. It would not live. One may remark in this connection how the merely verbal felicities of Tennyson have lost our esteem. Who will now proclaim the *Idylls of the King* as a masterpiece? Of the thousands of lines written by him which please the ear, only those survive of which the matter is charged with emotion. No! As regards the man who professes to read an author "for his style alone," I am inclined to think either that he will soon get sick of that author, or that he is deceiving himself and means the author's general temperament--not the author's verbal style, but a peculiar quality which runs through all the matter written by the author. Just as one may like a man for something which is always coming out of him, which one cannot define, and which is of the very essence of the man. In judging the style of an author, you must employ the same canons as you use in judging men. If you do this you will not be tempted to attach importance to trifles that are negligible. There can be no lasting friendship without respect. If an author's style is such that you cannot *respect* it, then you may be sure that, despite any present pleasure which you may obtain from that author, there is something wrong with his matter, and that the pleasure will soon cloy. You must examine your sentiments towards an author. If when you have read an author you are pleased, without being conscious of aught but his mellifluousness, just conceive what your feelings would be after spending a month's holiday with a merely mellifluous man. If an author's style has pleased you, but done nothing except make you giggle, then reflect upon the ultimate tediousness of the man who can do nothing but jest. On the other hand, if you are impressed by what an author has said to you, but are aware of verbal clumsinesses in his work, you need worry about his "bad style" exactly as much and exactly as little as you would worry about the manners of a kindhearted, keen-brained friend who was dangerous to carpets with a tea-cup in his hand. The friend's antics in a drawing-room are somewhat regrettable, but you would not say of him that his manners were bad. Again, if an author's style dazzles you instantly and blinds you to everything except its brilliant self, ask your soul, before you begin to admire his matter, what would be your final opinion of a man who at the first meeting fired his personality into you like a broadside. Reflect that, as a rule, the people whom you have come to esteem communicated themselves to you gradually, that they did not begin the entertainment with fireworks. In short, look at literature as you would look at life, and you cannot fail to perceive that, essentially, the style is the man. Decidedly you will never assert that you care nothing for style, that your enjoyment of an author's matter is unaffected by his style. And you will never assert, either, that style alone suffices for you. If you are undecided upon a question of style, whether leaning to the favourable or to the unfavourable, the most prudent course is to forget that literary style exists. For, indeed, as style is understood by most people who have not analysed their impressions under the influence of literature, there *is* no such thing as literary style. You cannot divide literature into two elements and say: This is matter and that style. Further, the significance and the worth of literature are to be comprehended and assessed in the same way as the significance and the worth of any other phenomenon: by the

exercise of common-sense. Common-sense will tell you that nobody, not even a genius, can be simultaneously vulgar and distinguished, or beautiful and ugly, or precise and vague, or tender and harsh. And common-sense will therefore tell you that to try to set up vital contradictions between matter and style is absurd. When there is a superficial contradiction, one of the two mutually-contradicting qualities is of far less importance than the other. If you refer literature to the standards of life, common-sense will at once decide which quality should count heaviest in your esteem. You will be in no danger of weighing a mere maladroitness of manner against a fine trait of character, or of letting a graceful deportment blind you to a fundamental vacuity. When in doubt, ignore style, and think of the matter as you would think of an individual.

Chapter VII

WRESTLING WITH AN AUTHOR

Having disposed, so far as is possible and necessary, of that formidable question of style, let us now return to Charles Lamb, whose essay on **Dream Children** was the originating cause of our inquiry into style. As we have made a beginning of Lamb, it will be well to make an end of him. In the preliminary stages of literary culture, nothing is more helpful, in the way of kindling an interest and keeping it well alight, than to specialise for a time on one author, and particularly on an author so frankly and curiously "human" as Lamb is. I do not mean that you should imprison yourself with Lamb's complete works for three months, and read nothing else. I mean that you should regularly devote a proportion of your learned leisure to the study of Lamb until you are acquainted with all that is important in his work and about his work. (You may buy the complete works in prose and verse of Charles and Mary Lamb, edited by that unsurpassed expert Mr. Thomas Hutchison, and published by the Oxford University Press, in two volumes for four shillings the pair!) There is no reason why you should not become a modest specialist in Lamb. He is the very man for you; neither voluminous, nor difficult, nor uncomfortably lofty; always either amusing or touching; and--most important-- himself passionately addicted to literature. You cannot like Lamb without liking literature in general. And you cannot read Lamb without learning about literature in general; for books were his hobby, and he was a critic of the first rank. His letters are full of literariness. You will naturally read his letters; you should not only be infinitely diverted by them (there are no better epistles), but you should receive from them much light on the works. It is a course of study that I am suggesting to you. It means a certain amount of sustained effort. It means slightly more resolution, more pertinacity, and more expenditure of brain-tissue than are required for reading a newspaper. It means, in fact, "work." Perhaps you did not bargain for work when you joined me. But I do not think that the literary taste can be satisfactorily formed unless one is prepared to put one's back into the affair. And I may prophesy to you, by way of encouragement, that, in addition to the advantages of familiarity with masterpieces, of increased literary knowledge, and of a wide introduction to the true bookish atmosphere and "feel" of things, which you will derive from a comprehensive study of Charles Lamb, you will also be conscious of a moral advantage--the very important and very inspiring advantage of really "knowing something about something." You will have achieved a definite step; you will be proudly aware that you have put yourself in a position to judge as an expert whatever you may hear or read in the future concerning Charles Lamb. This legitimate pride and sense of accomplishment will stimulate you to go on further; it will generate steam. I consider that this indirect moral advantage even outweighs, for the moment, the direct literary advantages. Now, I shall not shut my eyes to a possible result of your diligent intercourse with Charles Lamb. It is possible that you may be disappointed with him. It is--shall I say?-- almost probable that you will be disappointed with him, at any rate partially. You will have expected more joy in him than you have received. I have referred in a previous chapter to the feeling of disappointment which often comes from first contacts with the classics. The neophyte is apt to find them--I may as well out with the word--dull. You may have found Lamb less diverting, less interesting, than you hoped. You may have had to whip yourself up again and again to the effort of reading him. In brief, Lamb has not, for you, justified his terrific reputation. If a classic is a classic because it gives **pleasure** to succeeding generations of the people who are most keenly interested in literature, and if Lamb frequently strikes you as dull, then evidently there is something wrong. The difficulty must be fairly fronted, and the fronting of it brings us to the very core of the business of actually forming the taste. If your taste were classical you would discover in Lamb a continual fascination; whereas what you in fact do discover in Lamb is a not unpleasant flatness, enlivened by a vague humour and an occasional pathos. You ought, according to theory, to be enthusiastic; but you are apathetic, or, at best, half-hearted. There is a gulf. How to cross it? To cross it needs time and needs trouble. The following considerations may aid. In the first place, we have to remember that, in coming into the society of the classics in general and of Charles Lamb in particular, we are coming into the society of a mental superior. What happens usually in such a

case? We can judge by recalling what happens when we are in the society of a mental inferior. We say things of which he misses the import; we joke, and he does not smile; what makes him laugh loudly seems to us horseplay or childish; he is blind to beauties which ravish us; he is ecstatic over what strikes us as crude; and his profound truths are for us trite commonplaces. His perceptions are relatively coarse; our perceptions are relatively subtle. We try to make him understand, to make him see, and if he is aware of his inferiority we may have some success. But if he is not aware of his inferiority, we soon hold our tongues and leave him alone in his self-satisfaction, convinced that there is nothing to be done with him. Every one of us has been through this experience with a mental inferior, for there is always a mental inferior handy, just as there is always a being more unhappy than we are. In approaching a classic, the true wisdom is to place ourselves in the position of the mental inferior, aware of mental inferiority, humbly stripping off all conceit, anxious to rise out of that inferiority. Recollect that we always regard as quite hopeless the mental inferior who does not suspect his own inferiority. Our attitude towards Lamb must be: "Charles Lamb was a greater man than I am, cleverer, sharper, subtler, finer, intellectually more powerful, and with keener eyes for beauty. I must brace myself to follow his lead." Our attitude must resemble that of one who cocks his ear and listens with all his soul for a distant sound. To catch the sound we really must listen. That is to say, we must read carefully, with our faculties on the watch. We must read slowly and perseveringly. A classic has to be wooed and is worth the wooing. Further, we must disdain no assistance. I am not in favour of studying criticism of classics before the classics themselves. My notion is to study the work and the biography of a classical writer together, and then to read criticism afterwards. I think that in reprints of the classics the customary "critical introduction" ought to be put at the end, and not at the beginning, of the book. The classic should be allowed to make his own impression, however faint, on the virginal mind of the reader. But afterwards let explanatory criticism be read as much as you please. Explanatory criticism is very useful; nearly as useful as pondering for oneself on what one has read! Explanatory criticism may throw one single gleam that lights up the entire subject. My second consideration (in aid of crossing the gulf) touches the quality of the pleasure to be derived from a classic. It is never a violent pleasure. It is subtle, and it will wax in intensity, but the idea of violence is foreign to it. The artistic pleasures of an uncultivated mind are generally violent. They proceed from exaggeration in treatment, from a lack of balance, from attaching too great an importance to one aspect (usually superficial), while quite ignoring another. They are gross, like the joy of Worcester sauce on the palate. Now, if there is one point common to all classics, it is the absence of exaggeration. The balanced sanity of a great mind makes impossible exaggeration, and, therefore, distortion. The beauty of a classic is not at all apt to knock you down. It will steal over you, rather. Many serious students are, I am convinced, discouraged in the early stages because they are expecting a wrong kind of pleasure. They have abandoned Worcester sauce, and they miss it. They miss the coarse *tang*. They must realise that indulgence in the *tang* means the sure and total loss of sensitiveness--sensitiveness even to the *tang* itself. They cannot have crudeness and fineness together. They must choose, remembering that while crudeness kills pleasure, fineness ever intensifies it.

Chapter VIII

SYSTEM IN READING

You have now definitely set sail on the sea of literature. You are afloat, and your anchor is up. I think I have given adequate warning of the dangers and disappointments which await the unwary and the sanguine. The enterprise in which you are engaged is not facile, nor is it short. I think I have sufficiently predicted that you will have your hours of woe, during which you may be inclined to send to perdition all writers, together with the inventor of printing. But if you have become really friendly with Lamb; if you know Lamb, or even half of him; if you have formed an image of him in your mind, and can, as it were, hear him brilliantly stuttering while you read his essays or letters, then certainly you are in a fit condition to proceed and you want to know in which direction you are to proceed. Yes, I have caught your terrified and protesting whisper: "I hope to heaven he isn't going to prescribe a Course of English Literature, because I feel I shall never be able to do it!" I am not. If your object in life was to be a University Extension Lecturer in English literature, then I should prescribe something drastic and desolating. But as your object, so far as I am concerned, is simply to obtain the highest and most tonic form of artistic pleasure of which you are capable, I shall not prescribe any regular course. Nay, I shall venture to dissuade you from any regular course. No man, and assuredly no beginner, can possibly pursue a historical course of literature without wasting a lot of weary time in acquiring mere knowledge which will yield neither pleasure nor advantage. In the choice of reading the individual must count; caprice must count, for caprice is often the truest index to the individuality. Stand defiantly on your own feet, and do not excuse yourself to yourself. You do not exist in order to honour literature by

becoming an encyclopædia of literature. Literature exists for your service. Wherever you happen to be, that, for you, is the centre of literature. Still, for your own sake you must confine yourself for a long time to recognised classics, for reasons already explained. And though you should not follow a course, you must have a system or principle. Your native sagacity will tell you that caprice, left quite unfettered, will end by being quite ridiculous. The system which I recommend is embodied in this counsel: Let one thing lead to another. In the sea of literature every part communicates with every other part; there are no land-locked lakes. It was with an eye to this system that I originally recommended you to start with Lamb. Lamb, if you are his intimate, has already brought you into relations with a number of other prominent writers with whom you can in turn be intimate, and who will be particularly useful to you. Among these are Wordsworth, Coleridge, Southey, Hazlitt, and Leigh Hunt. You cannot know Lamb without knowing these men, and some of them are of the highest importance. From the circle of Lamb's own work you may go off at a tangent at various points, according to your inclination. If, for instance, you are drawn towards poetry, you cannot, in all English literature, make a better start than with Wordsworth. And Wordsworth will send you backwards to a comprehension of the poets against whose influence Wordsworth fought. When you have understood Wordsworth's and Coleridge's **Lyrical Ballads**, and Wordsworth's defence of them, you will be in a position to judge poetry in general. If, again, your mind hankers after an earlier and more romantic literature, Lamb's **Specimens of English Dramatic Poets Contemporary with Shakspeare** has already, in an enchanting fashion, piloted you into a vast gulf of "the sea which is Shakspeare." Again, in Hazlitt and Leigh Hunt you will discover essayists inferior only to Lamb himself, and critics perhaps not inferior. Hazlitt is unsurpassed as a critic. His judgments are convincing and his enthusiasm of the most catching nature. Having arrived at Hazlitt or Leigh Hunt, you can branch off once more at any one of ten thousand points into still wider circles. And thus you may continue up and down the centuries as far as you like, yea, even to Chaucer. If you chance to read Hazlitt on **Chaucer and Spenser**, you will probably put your hat on instantly and go out and buy these authors; such is his communicating fire! I need not particularise further. Commencing with Lamb, and allowing one thing to lead to another, you cannot fail to be more and more impressed by the peculiar suitability to your needs of the Lamb entourage and the Lamb period. For Lamb lived in a time of universal rebirth in English literature. Wordsworth and Coleridge were re-creating poetry; Scott was re-creating the novel; Lamb was re-creating the human document; and Hazlitt, Coleridge, Leigh Hunt, and others were re-creating criticism. Sparks are flying all about the place, and it will be not less than a miracle if something combustible and indestructible in you does not take fire. I have only one cautionary word to utter. You may be saying to yourself: "So long as I stick to classics I cannot go wrong." You can go wrong. You can, while reading naught but very fine stuff, commit the grave error of reading too much of one kind of stuff. Now there are two kinds, and only two kinds. These two kinds are not prose and poetry, nor are they divided the one from the other by any differences of form or of subject. They are the inspiring kind and the informing kind. No other genuine division exists in literature. Emerson, I think, first clearly stated it. His terms were the literature of "power" and the literature of "knowledge." In nearly all great literature the two qualities are to be found in company, but one usually predominates over the other. An example of the exclusively inspiring kind is Coleridge's **Kubla Khan**. I cannot recall any first-class example of the purely informing kind. The nearest approach to it that I can name is Spencer's **First Principles**, which, however, is at least once highly inspiring. An example in which the inspiring quality predominates is **Ivanhoe**; and an example in which the informing quality predominates is Hazlitt's essays on Shakespeare's characters. You must avoid giving undue preference to the kind in which the inspiring quality predominates or to the kind in which the informing quality predominates. Too much of the one is enervating; too much of the other is desiccating. If you stick exclusively to the one you may become a mere debauchee of the emotions; if you stick exclusively to the other you may cease to live in any full sense. I do not say that you should hold the balance exactly even between the two kinds. Your taste will come into the scale. What I say is that neither kind must be neglected. Lamb is an instance of a great writer whom anybody can understand and whom a majority of those who interest themselves in literature can more or less appreciate. He makes no excessive demand either on the intellect or on the faculty of sympathetic emotion. On both sides of Lamb, however, there lie literatures more difficult, more recondite. The "knowledge" side need not detain us here; it can be mastered by concentration and perseverance. But the "power" side, which comprises the supreme productions of genius, demands special consideration. You may have arrived at the point of keenly enjoying Lamb and yet be entirely unable to "see anything in" such writings as **Kubla Khan** or Milton's **Comus**; and as for **Hamlet** you may see nothing in it but a sanguinary tale "full of quotations." Nevertheless it is the supreme productions which are capable of yielding the supreme pleasures, and which **will** yield the supreme pleasures when the pass-key to them has been acquired. This pass-key is a comprehension of the nature of poetry.

VERSE

There is a word, a "name of fear," which rouses terror in the heart of the vast educated majority of the English-speaking race. The most valiant will fly at the mere utterance of that word. The most broad-minded will put their backs up against it. The most rash will not dare to affront it. I myself have seen it empty buildings that had been full; and I know that it will scatter a crowd more quickly than a hose-pipe, hornets, or the rumour of plague. Even to murmur it is to incur solitude, probably disdain, and possibly starvation, as historical examples show. That word is "poetry." The profound objection of the average man to poetry can scarcely be exaggerated. And when I say the average man, I do not mean the "average sensual man"--any man who gets on to the top of the omnibus; I mean the average lettered man, the average man who does care a little for books and enjoys reading, and knows the classics by name and the popular writers by having read them. I am convinced that not one man in ten who reads, reads poetry--at any rate, knowingly. I am convinced, further, that not one man in ten who goes so far as knowingly to *buy* poetry ever reads it. You will find everywhere men who read very widely in prose, but who will say quite callously, "No, I never read poetry." If the sales of modern poetry, distinctly labelled as such, were to cease entirely to-morrow not a publisher would fail; scarcely a publisher would be affected; and not a poet would die--for I do not believe that a single modern English poet is living to-day on the current proceeds of his verse. For a country which possesses the greatest poetical literature in the world this condition of affairs is at least odd. What makes it odder is that, occasionally, very occasionally, the average lettered man will have a fit of idolatry for a fine poet, buying his books in tens of thousands, and bestowing upon him immense riches. As with Tennyson. And what makes it odder still is that, after all, the average lettered man does not truly dislike poetry; he only dislikes it when it takes a certain form. He will read poetry and enjoy it, provided he is not aware that it is poetry. Poetry can exist authentically either in prose or in verse. Give him poetry concealed in prose and there is a chance that, taken off his guard, he will appreciate it. But show him a page of verse, and he will be ready to send for a policeman. The reason of this is that, though poetry may come to pass either in prose or in verse, it does actually happen far more frequently in verse than in prose; nearly all the very greatest poetry is in verse; verse is identified with the very greatest poetry, and the very greatest poetry can only be understood and savoured by people who have put themselves through a considerable mental discipline. To others it is an exasperating weariness. Hence chiefly the fearful prejudice of the average lettered man against the mere form of verse. The formation of literary taste cannot be completed until that prejudice has been conquered. My very difficult task is to suggest a method of conquering it. I address myself exclusively to the large class of people who, if they are honest, will declare that, while they enjoy novels, essays, and history, they cannot "stand" verse. The case is extremely delicate, like all nervous cases. It is useless to employ the arts of reasoning, for the matter has got beyond logic; it is instinctive. Perfectly futile to assure you that verse will yield a higher percentage of pleasure than prose! You will reply: "We believe you, but that doesn't help us." Therefore I shall not argue. I shall venture to prescribe a curative treatment (doctors do not argue); and I beg you to follow it exactly, keeping your nerve and your calm. Loss of self-control might lead to panic, and panic would be fatal. First: Forget as completely as you can all your present notions about the nature of verse and poetry. Take a sponge and wipe the slate of your mind. In particular, do not harass yourself by thoughts of metre and verse forms. Second: Read William Hazlitt's essay "On Poetry in General." This essay is the first in the book entitled *Lectures on the English Poets*. It can be bought in various forms. I think the cheapest satisfactory edition is in Routledge's "New Universal Library" (price 1s. net). I might have composed an essay of my own on the real harmless nature of poetry in general, but it could only have been an echo and a deterioration of Hazlitt's. He has put the truth about poetry in a way as interesting, clear, and reassuring as anyone is ever likely to put it. I do not expect, however, that you will instantly gather the full message and enthusiasm of the essay. It will probably seem to you not to "hang together." Still, it will leave bright bits of ideas in your mind. Third: After a week's interval read the essay again. On a second perusal it will appear more persuasive to you. Fourth: Open the Bible and read the fortieth chapter of Isaiah. It is the chapter which begins, "Comfort ye, comfort ye, my people," and ends, "They shall run and not be weary, and they shall walk and not faint." This chapter will doubtless be more or less familiar to you. It cannot fail (whatever your particular *ism*) to impress you, to generate in your mind sensations which you recognise to be of a lofty and unusual order, and which you will admit to be pleasurable. You will probably agree that the result of reading this chapter (even if your particular *ism* is opposed to its authority) is finer than the result of reading a short story in a magazine or even an essay by Charles Lamb. Now the pleasurable sensations induced by the fortieth chapter of Isaiah are among the sensations usually induced by high-class poetry. The writer of it was a very great poet, and what he wrote is a very great poem. Fifth: After having read it, go back to Hazlitt, and see if you can find anything in Hazlitt's lecture which throws light on the psychology of your own emotions upon reading Isaiah. Sixth: The next step is into unmistakable verse. It is to read one of Wordsworth's short narrative poems, *The Brothers*. There are

editions of Wordsworth at a shilling, but I should advise the "Golden Treasury" Wordsworth (2s. 6d. net), because it contains the famous essay by Matthew Arnold, who made the selection. I want you to read this poem aloud. You will probably have to hide yourself somewhere in order to do so, for, of course, you would not, as yet, care to be overheard spouting poetry. Be good enough to forget that **The Brothers** is poetry. **The Brothers** is a short story, with a plain, clear plot. Read it as such. Read it simply for the story. It is very important at this critical stage that you should not embarrass your mind with preoccupations as to the **form** in which Wordsworth has told his story. Wordsworth's object was to tell a story as well as he could: just that. In reading aloud do not pay any more attention to the metre than you feel naturally inclined to pay. After a few lines the metre will present itself to you. Do not worry as to what kind of metre it is. When you have finished the perusal, examine your sensations.... Your sensations after reading this poem, and perhaps one or two other narrative poems of Wordsworth, such as **Michael**, will be different from the sensations produced in you by reading an ordinary, or even a very extraordinary, short story in prose. They may not be so sharp, so clear and piquant, but they will probably be, in their mysteriousness and their vagueness, more impressive. I do not say that they will be diverting. I do not go so far as to say that they will strike you as pleasing sensations. (Be it remembered that I am addressing myself to an imaginary tyro in poetry.) I would qualify them as being "disturbing." Well, to disturb the spirit is one of the greatest aims of art. And a disturbance of spirit is one of the finest pleasures that a highly-organised man can enjoy. But this truth can only be really learnt by the repetitions of experience. As an aid to the more exhaustive examination of your feelings under Wordsworth, in order that you may better understand what he was trying to effect in you, and the means which he employed, I must direct you to Wordsworth himself. Wordsworth, in addition to being a poet, was unsurpassed as a critic of poetry. What Hazlitt does for poetry in the way of creating enthusiasm Wordsworth does in the way of philosophic explanation. And Wordsworth's explanations of the theory and practice of poetry are written for the plain man. They pass the comprehension of nobody, and their direct, unassuming, and calm simplicity is extremely persuasive. Wordsworth's chief essays in throwing light on himself are the "Advertisement," "Preface," and "Appendix" to **Lyrical Ballads**; the letters to Lady Beaumont and "the Friend" and the "Preface" to the Poems dated 1815. All this matter is strangely interesting and of immense educational value. It is the first-class expert talking at ease about his subject. The essays relating to **Lyrical Ballads** will be the most useful for you. You will discover these precious documents in a volume entitled **Wordsworth's Literary Criticism** (published by Henry Frowde, 2s. 6d.), edited by that distinguished Wordsworthian Mr. Nowell C. Smith. It is essential that the student of poetry should become possessed, honestly or dishonestly, either of this volume or of the matter which it contains. There is, by the way, a volume of Wordsworth's prose in the Scott Library (1s.). Those who have not read Wordsworth on poetry can have no idea of the naïve charm and the helpful radiance of his expounding. I feel that I cannot too strongly press Wordsworth's criticism upon you. Between Wordsworth and Hazlitt you will learn all that it behoves you to know of the nature, the aims, and the results of poetry. It is no part of my scheme to dot the "i's" and cross the "t's" of Wordsworth and Hazlitt. I best fulfil my purpose in urgently referring you to them. I have only a single point of my own to make-- a psychological detail. One of the main obstacles to the cultivation of poetry in the average sensible man is an absurdly inflated notion of the ridiculous. At the bottom of that man's mind is the idea that poetry is "silly." He also finds it exaggerated and artificial; but these two accusations against poetry can be satisfactorily answered. The charge of silliness, of being ridiculous, however, cannot be refuted by argument. There is no logical answer to a guffaw. This sense of the ridiculous is merely a bad, infantile habit, in itself grotesquely ridiculous. You may see it particularly in the theatre. Not the greatest dramatist, not the greatest composer, not the greatest actor can prevent an audience from laughing uproariously at a tragic moment if a cat walks across the stage. But why ruin the scene by laughter? Simply because the majority of any audience is artistically childish. This sense of the ridiculous can only be crushed by the exercise of moral force. It can only be cowed. If you are inclined to laugh when a poet expresses himself more powerfully than you express yourself, when a poet talks about feelings which are not usually mentioned in daily papers, when a poet uses words and images which lie outside your vocabulary and range of thought, then you had better take yourself in hand. You have to decide whether you will be on the side of the angels or on the side of the nincompoops. There is no surer sign of imperfect development than the impulse to snigger at what is unusual, naïve, or exuberant. And if you choose to do so, you can detect the cat walking across the stage in the sublimest passages of literature. But more advanced souls will grieve for you. The study of Wordsworth's criticism makes the seventh step in my course of treatment. The eighth is to return to those poems of Wordsworth's which you have already perused, and read them again in the full light of the author's defence and explanation. Read as much Wordsworth as you find you can assimilate, but do not attempt either of his long poems. The time, however, is now come for a long poem. I began by advising narrative poetry for the neophyte, and I shall persevere with the prescription. I mean narrative poetry in the restricted sense; for epic poetry is narrative. **Paradise Lost** is narrative; so is **The Prelude**. I suggest neither of these great works. My choice falls on Elizabeth Browning's **Aurora Leigh**. If you once work yourself "into" this poem, interesting yourself primarily (as

with Wordsworth) in the events of the story, and not allowing yourself to be obsessed by the fact that what you are reading is "poetry"--if you do this, you are not likely to leave it unfinished. And before you reach the end you will have encountered *en route* pretty nearly all the moods of poetry that exist: tragic, humorous, ironic, elegiac, lyric--everything. You will have a comprehensive acquaintance with a poet's mind. I guarantee that you will come safely through if you treat the work as a novel. For a novel it effectively is, and a better one than any written by Charlotte Brontë or George Eliot. In reading, it would be well to mark, or take note of, the passages which give you the most pleasure, and then to compare these passages with the passages selected for praise by some authoritative critic. *Aurora Leigh* can be got in the "Temple Classics" (1s. 6d.), or in the "Canterbury Poets" (1s.). The indispensable biographical information about Mrs. Browning can be obtained from Mr. J. H. Ingram's short Life of her in the "Eminent Women" Series (1s. 6d.), or from *Robert Browning*, by William Sharp ("Great Writers" Series, 1s.). This accomplished, you may begin to choose your poets. Going back to Hazlitt, you will see that he deals with, among others, Chaucer, Spenser, Shakespeare, Milton, Dryden, Pope, Chatterton, Burns, and the Lake School. You might select one of these, and read under his guidance. Said Wordsworth: "I was impressed by the conviction that there were four English poets whom I must have continually before me as examples--Chaucer, Shakespeare, Spenser, and Milton." (A word to the wise!) Wordsworth makes a fifth to these four. Concurrently with the careful, enthusiastic study of one of the undisputed classics, modern verse should be read. (I beg you to accept the following statement: that if the study of classical poetry inspires you with a distaste for modern poetry, then there is something seriously wrong in the method of your development.) You may at this stage (and not before) commence an inquiry into questions of rhythm, verse-structure, and rhyme. There is, I believe, no good, concise, cheap handbook to English prosody; yet such a manual is greatly needed. The only one with which I am acquainted is Tom Hood the younger's *Rules of Rhyme: A Guide to English Versification*. Again, the introduction to Walker's *Rhyming Dictionary* gives a fairly clear elementary account of the subject. Ruskin also has written an excellent essay on verse-rhythms. With a manual in front of you, you can acquire in a couple of hours a knowledge of the formal principles in which the music of English verse is rooted. The business is trifling. But the business of appreciating the inmost spirit of the greatest verse is tremendous and lifelong. It is not something that can be "got up."

Chapter X

BROAD COUNSELS

I have now set down what appear to me to be the necessary considerations, recommendations, exhortations, and dehortations in aid of this delicate and arduous enterprise of forming the literary taste. I have dealt with the theory of literature, with the psychology of the author, and--quite as important--with the psychology of the reader. I have tried to explain the author to the reader and the reader to himself. To go into further detail would be to exceed my original intention, with no hope of ever bringing the constantly-enlarging scheme to a logical conclusion. My aim is not to provide a map, but a compass--two very different instruments. In the way of general advice it remains for me only to put before you three counsels which apply more broadly than any I have yet offered to the business of reading. You have within yourself a touchstone by which finally you can, and you must, test every book that your brain is capable of comprehending. Does the book seem to you to be sincere and true? If it does, then you need not worry about your immediate feelings, or the possible future consequences of the book. You will ultimately like the book, and you will be justified in liking it. Honesty, in literature as in life, is the quality that counts first and counts last. But beware of your immediate feelings. Truth is not always pleasant. The first glimpse of truth is, indeed, usually so disconcerting as to be positively unpleasant, and our impulse is to tell it to go away, for we will have no truck with it. If a book arouses your genuine contempt, you may dismiss it from your mind. Take heed, however, lest you confuse contempt with anger. If a book really moves you to anger, the chances are that it is a good book. Most good books have begun by causing anger which disguised itself as contempt. Demanding honesty from your authors, you must see that you render it yourself. And to be honest with oneself is not so simple as it appears. One's sensations and one's sentiments must be examined with detachment. When you have violently flung down a book, listen whether you can hear a faint voice saying within you: "It's true, though!" And if you catch the whisper, better yield to it as quickly as you can. For sooner or later the voice will win. Similarly, when you are hugging a book, keep your ear cocked for the secret warning: "Yes, but it isn't true." For bad books, by flattering you, by caressing, by appealing to the weak or the base in you, will often persuade you what fine and splendid books they are. (Of course, I use the word "true" in a wide and essential significance. I do not necessarily mean true to literal fact; I mean true to the plane of experience in which the book moves. The truthfulness of *Ivanhoe*, for example, cannot be estimated by the same standards as the truthfulness of Stubbs's *Constitutional History*.) In reading a book, a sincere questioning of oneself, "Is it

true?" and a loyal abiding by the answer, will help more surely than any other process of ratiocination to form the taste. I will not assert that this question and answer are all-sufficient. A true book is not always great. But a great book is never untrue. My second counsel is: In your reading you must have in view some definite aim--some aim other than the wish to derive pleasure. I conceive that to give pleasure is the highest end of any work of art, because the pleasure procured from any art is tonic, and transforms the life into which it enters. But the maximum of pleasure can only be obtained by regular effort, and regular effort implies the organisation of that effort. Open-air walking is a glorious exercise; it is the walking itself which is glorious. Nevertheless, when setting out for walking exercise, the sane man generally has a subsidiary aim in view. He says to himself either that he will reach a given point, or that he will progress at a given speed for a given distance, or that he will remain on his feet for a given time. He organises his effort, partly in order that he may combine some other advantage with the advantage of walking, but principally in order to be sure that the effort shall be an adequate effort. The same with reading. Your paramount aim in poring over literature is to enjoy, but you will not fully achieve that aim unless you have also a subsidiary aim which necessitates the measurement of your energy. Your subsidiary aim may be æsthetic, moral, political, religious, scientific, erudite; you may devote yourself to a man, a topic, an epoch, a nation, a branch of literature, an idea--you have the widest latitude in the choice of an objective; but a definite objective you must have. In my earlier remarks as to method in reading, I advocated, without insisting on, regular hours for study. But I both advocate and insist on the fixing of a date for the accomplishment of an allotted task. As an instance, it is not enough to say: "I will inform myself completely as to the Lake School." It is necessary to say: "I will inform myself completely as to the Lake School before I am a year older." Without this precautionary steeling of the resolution the risk of a humiliating collapse into futility is enormously magnified. My third counsel is: Buy a library. It is obvious that you cannot read unless you have books. I began by urging the constant purchase of books-- any books of approved quality, without reference to their immediate bearing upon your particular case. The moment has now come to inform you plainly that a bookman is, amongst other things, a man who possesses many books. A man who does not possess many books is not a bookman. For years literary authorities have been favouring the literary public with wondrously selected lists of "the best books"--the best novels, the best histories, the best poems, the best works of philosophy--or the hundred best or the fifty best of all sorts. The fatal disadvantage of such lists is that they leave out large quantities of literature which is admittedly first-class. The bookman cannot content himself with a selected library. He wants, as a minimum, a library reasonably complete in all departments. With such a basis acquired, he can afterwards wander into those special byways of book-buying which happen to suit his special predilections. Every Englishman who is interested in any branch of his native literature, and who respects himself, ought to own a comprehensive and inclusive library of English literature, in comely and adequate editions. You may suppose that this counsel is a counsel of perfection. It is not. Mark Pattison laid down a rule that he who desired the name of book-lover must spend five per cent. of his income on books. The proposal does not seem extravagant, but even on a smaller percentage than five the average reader of these pages may become the owner, in a comparatively short space of time, of a reasonably complete English library, by which I mean a library containing the complete works of the supreme geniuses, representative important works of all the first-class men in all departments, and specimen works of all the men of the second rank whose reputation is really a living reputation to-day. The scheme for a library, which I now present, begins before Chaucer and ends with George Gissing, and I am fairly sure that the majority of people will be startled at the total inexpensiveness of it. So far as I am aware, no such scheme has ever been printed before.

Chapter XI

AN ENGLISH LIBRARY: PERIOD I* (*For much counsel and correction in the matter of editions and prices I am indebted to my old and valued friend, Charles Young, head of the firm of Lamley & Co., booksellers, South Kensington.)

For the purposes of book-buying, I divide English literature, not strictly into historical epochs, but into three periods which, while scarcely arbitrary from the historical point of view, have nevertheless been calculated according to the space which they will occupy on the shelves and to the demands which they will make on the purse:

- I. From the beginning to John Dryden, or roughly, to the end of the seventeenth century.
- II. From William Congreve to Jane Austen, or roughly, the eighteenth century.

III. From Sir Walter Scott to the last deceased author who is recognised as a classic, or roughly, the nineteenth century.

Period III. will bulk the largest and cost the most; not necessarily because it contains more absolutely great books than the other periods (though in my opinion it **does**), but because it is nearest to us, and therefore fullest of interest for us.

I have not confined my choice to books of purely literary interest-- that is to say, to works which are primarily works of literary art. Literature is the vehicle of philosophy, science, morals, religion, and history; and a library which aspires to be complete must comprise, in addition to imaginative works, all these branches of intellectual activity. Comprising all these branches, it cannot avoid comprising works of which the purely literary interest is almost nil. On the other hand, I have excluded from consideration:--

i. Works whose sole importance is that they form a link in the chain of development. For example, nearly all the productions of authors between Chaucer and the beginning of the Elizabethan period, such as Gower, Hoccleve, and Skelton, whose works, for sufficient reason, are read only by professors and students who mean to be professors.

ii. Works not originally written in English, such as the works of that very great philosopher Roger Bacon, of whom this isle ought to be prouder than it is. To this rule, however, I have been constrained to make a few exceptions. Sir Thomas More's **Utopia** was written in Latin, but one does not easily conceive a library to be complete without it. And could one exclude Sir Isaac Newton's **Principia**, the masterpiece of the greatest physicist that the world has ever seen? The law of gravity ought to have, and does have, a powerful sentimental interest for us.

iii. Translations from foreign literature into English.

Here, then, are the lists for the first period:

PROSE WRITERS

| | £ | s. | d. |
|---|----|----|----|
| Bede, <i>*Ecclesiastical History:*</i> Temple Classics | 0 | 1 | 6 |
| Sir Thomas Malory, <i>*Morte d'Arthur:*</i> Everyman's Library (4 vols.) | 0 | 4 | 0 |
| Sir Thomas More, <i>*Utopia:*</i> Scott Library | 0 | 1 | 0 |
| George Cavendish, <i>*Life of Cardinal Wolsey:*</i> New Universal Library | 0 | 1 | 0 |
| Richard Hakluyt, <i>*Voyages:*</i> Everyman's Library (8 vols.) | 0 | 8 | 0 |

| | £2 | 1 | 6 |

The principal omission from the above list is **The Paston Letters**, which I should probably have included had the enterprise of publishers been sufficient to put an edition on the market at a cheap price. Other omissions include the works of Caxton and Wyclif, and such books as Camden's **Britannia**, Ascham's **Schoolmaster**, and Fuller's **Worthies**, whose lack of first-rate value as literature is not adequately compensated by their historical interest. As to the Bible, in the first place it is a translation, and in the second I assume that you already possess a copy.

There were a number of brilliant minor writers in the seventeenth century whose best work, often trifling in bulk, either scarcely merits the acquisition of a separate volume for each author, or cannot be obtained at all in a modern edition. Such authors, however, may not be utterly neglected in the formation of a library. It is to meet this difficulty that I have included the last three volumes on the above list. Professor Arber's anthologies are full of rare pieces, and comprise admirable specimens of the verse of Samuel Daniel, Giles Fletcher, Countess of Pembroke, James I., George Peele, Sir Walter Raleigh, Thomas Sackville, Sir Philip Sidney, Drummond of Hawthornden, Thomas Heywood, George Wither, Sir Henry Wotton, Sir William Davenant, Thomas Randolph, Frances Quarles, James Shirley, and other greater and lesser poets. I have included all the important Elizabethan dramatists except John

Marston, all the editions of whose works, according to my researches, are out of print. In the Elizabethan and Jacobean periods talent was so extraordinarily plentiful that the standard of excellence is quite properly raised, and certain authors are thus relegated to the third, or excluded, class who in a less fertile period would have counted as at least second-class.

SUMMARY OF THE FIRST PERIOD.

| | | | £ | s. | d. |
|---------------------|----|-----------------|----|----|----|
| 19 prose authors in | 36 | volumes costing | 2 | 1 | 6 |
| 29 poets in | 36 | " " | 3 | 7 | 6 |
| 48 | 72 | | £5 | 9 | 0 |

In addition, scores of authors of genuine interest are represented in the anthologies.

The prices given are gross, and in many instances there is a 25 per cent. discount to come off. All the volumes can be procured immediately at any bookseller's.

Chapter XII

AN ENGLISH LIBRARY: PERIOD II

After dealing with the formation of a library of authors up to John Dryden, I must logically arrange next a scheme for the period covered roughly by the eighteenth century. There is, however, no reason why the student in quest of a library should follow the chronological order. Indeed, I should advise him to attack the nineteenth century before the eighteenth, for the reason that, unless his taste happens to be peculiarly "Augustan," he will obtain a more immediate satisfaction and profit from his acquisitions in the nineteenth century than in the eighteenth. There is in eighteenth-century literature a considerable proportion of what I may term "unattractive excellence," which one must have for the purposes of completeness, but which may await actual perusal until more pressing and more human books have been read. I have particularly in mind the philosophical authors of the century.

Chapter XIII

AN ENGLISH LIBRARY: PERIOD III

The catalogue of necessary authors of this third and last period being so long, it is convenient to divide the prose writers into Imaginative and Non-imaginative. In the latter half of the period the question of copyright affects our scheme to a certain extent, because it affects prices. Fortunately it is the fact that no single book of recognised first-rate general importance is conspicuously dear. Nevertheless, I have encountered difficulties in the second rank; I have dealt with them in a spirit of compromise. I think I may say that, though I should have included a few more authors had their books been obtainable at a reasonable price, I have omitted none that I consider indispensable to a thoroughly representative collection. No living author is included. Where I do not specify the edition of a book the original copyright edition is meant.

PROSE WRITERS: IMAGINATIVE.

| | | £ | s. | d. |

| F. W. H. Myers, *Wordsworth:* English Men of Letters Series | | 0 | 1 | 0 |
| | | £4 | 10 | 6 |

The following authors are omitted, I think justifiably:--Hallam, Whewell, Grote, Faraday, Herschell, Hamilton, John Wilson, Richard Owen, Stirling Maxwell, Buckle, Oscar Wilde, P. G. Hamerton, F. D. Maurice, Henry Sidgwick, and Richard Jebb. Lastly, here is the list of poets. In the matter of price per volume it is the most expensive of all the lists. This is due to the fact that it contains a larger proportion of copyright works. Where I do not specify the edition of a book, the original copyright edition is meant:

Poets whom I have omitted after hesitation are: Ebenezer Elliott, Thomas Woolner, William Barnes, Gerald Massey, and Charles Jeremiah Wells. On the other hand, I have had no hesitation about omitting David Moir, Felicia Hemans, Aytoun, Sir Edwin Arnold, and Sir Lewis Morris. I have included John Keble in deference to much enlightened opinion, but against my inclination. There are two names in the list which may be somewhat unfamiliar to many readers. James Clarence Mangan is the author of *My Dark Rosaleen*, an acknowledged masterpiece, which every library must contain. T. E. Brown is a great poet, recognised as such by a few hundred people, and assuredly destined to a far wider fame. I have included FitzGerald because *Omar Khayyám* is much less a translation than an original work.

SUMMARY OF THE NINETEENTH CENTURY.

| | | | | |
|----------------------|----------------------|-----|----|-----|
| 83 prose-writers, in | 141 volumes, costing | £ 9 | 10 | 7 |
| 38 poets | " | 46 | " | 5 |
| 121 | | 187 | | £14 |
| | | | | 17 |
| | | | | 7 |

GRAND SUMMARY OF COMPLETE LIBRARY.

| | Authors. | Volumes. | Price. | | |
|-----------------------|----------|----------|--------|----|---|
| 1. To Dryden | 48 | 72 | £ 5 | 9 | 0 |
| 2. Eighteenth Century | 57 | 78 | 6 | 8 | 0 |
| 3. Nineteenth Century | 121 | 187 | £14 | 17 | 7 |
| | 226 | 337 | £26 | 14 | 7 |

I think it will be agreed that the total cost of this library is surprisingly small. By laying out the sum of sixpence a day for three years you may become the possessor of a collection of books which, for range and completeness in all branches of literature, will bear comparison with libraries far more imposing, more numerous, and more expensive. I have mentioned the question of discount. The discount which you will obtain (even from a bookseller in a small town) will be more than sufficient to pay for Chambers's *Cyclopædia of English Literature*, three volumes, price 30s. net. This work is indispensable to a bookman. Personally, I owe it much. When you have read, wholly or in part, a majority of these three hundred and thirty-five volumes, *with enjoyment*, you may begin to whisper to

yourself that your literary taste is formed; and you may pronounce judgment on modern works which come before the bar of your opinion in the calm assurance that, though to err is human, you do at any rate know what you are talking about.

Chapter XIV

MENTAL STOCKTAKING

Great books do not spring from something accidental in the great men who wrote them. They are the effluence of their very core, the expression of the life itself of the authors. And literature cannot be said to have served its true purpose until it has been translated into the actual life of him who reads. It does not succeed until it becomes the vehicle of the vital. Progress is the gradual result of the unending battle between human reason and human instinct, in which the former slowly but surely wins. The most powerful engine in this battle is literature. It is the vast reservoir of true ideas and high emotions--and life is constituted of ideas and emotions. In a world deprived of literature, the intellectual and emotional activity of all but a few exceptionally gifted men would quickly sink and retract to a narrow circle. The broad, the noble, the generous would tend to disappear for want of accessible storage. And life would be correspondingly degraded, because the fallacious idea and the petty emotion would never feel the upward pull of the ideas and emotions of genius. Only by conceiving a society without literature can it be clearly realised that the function of literature is to raise the plain towards the top level of the peaks. Literature exists so that where one man has lived finely ten thousand may afterwards live finely. It is a means of life; it concerns the living essence. Of course, literature has a minor function, that of passing the time in an agreeable and harmless fashion, by giving momentary faint pleasure. Vast multitudes of people (among whom may be numbered not a few habitual readers) utilise only this minor function of literature; by implication they class it with golf, bridge, or soporifics. Literary genius, however, had no intention of competing with these devices for fleeting the empty hours; and all such use of literature may be left out of account. You, O serious student of many volumes, believe that you have a sincere passion for reading. You hold literature in honour, and your last wish would be to debase it to a paltry end. You are not of those who read because the clock has just struck nine and one can't go to bed till eleven. You are animated by a real desire to get out of literature all that literature will give. And in that aim you keep on reading, year after year, and the grey hairs come. But amid all this steady tapping of the reservoir, do you ever take stock of what you have acquired? Do you ever pause to make a valuation, in terms of your own life, of that which you are daily absorbing, or imagine you are absorbing? Do you ever satisfy yourself by proof that you are absorbing anything at all, that the living waters, instead of vitalising you, are not running off you as though you were a duck in a storm? Because, if you omit this mere business precaution, it may well be that you, too, without knowing it, are little by little joining the triflers who read only because eternity is so long. It may well be that even your alleged sacred passion is, after all, simply a sort of drug-habit. The suggestion disturbs and worries you. You dismiss it impatiently; but it returns.

How (you ask, unwillingly) can a man perform a mental stocktaking?

How can he put a value on what he gets from books? How can he effectively test, in cold blood, whether he is receiving from literature all that literature has to give him?

The test is not so vague, nor so difficult, as might appear.

If a man is not thrilled by intimate contact with nature: with the sun, with the earth, which is his origin and the arouser of his acutest emotions--

If he is not troubled by the sight of beauty in many forms--

If he is devoid of curiosity concerning his fellow-men and his fellow-animals--

If he does not have glimpses of the unity of all things in an orderly progress--

If he is chronically "querulous, dejected, and envious"--

If he is pessimistic--

If he is of those who talk about "this age of shams," "this age without ideals," "this hysterical age," and this heaven-knows-what-age--

Then that man, though he reads undisputed classics for twenty hours a day, though he has a memory of steel, though he rivals Porson in scholarship and Sainte-Beuve in judgment, is not receiving from literature what literature has to give. Indeed, he is chiefly wasting his time. Unless he can read differently, it were better for him if he sold all his books, gave to the poor, and played croquet. He fails because he has not assimilated into his existence the vital essences which genius put into the books that have merely passed before his eyes; because genius has offered him faith, courage, vision, noble passion, curiosity, love, a thirst for beauty, and he has not taken the gift; because genius has offered him the chance of living fully, and he is only half alive, for it is only in the stress of fine ideas and emotions that a man may be truly said to live. This is not a moral invention, but a simple fact, which will be attested by all who know what that stress is.

What! You talk learnedly about Shakespeare's sonnets! Have you heard Shakespeare's terrific shout:

Full many a glorious morning have I seen
Flatter the mountain-tops with sovereign eye,
Kissing with golden face the meadows green,
Gilding pale streams with heavenly alchemy.

And yet, can you see the sun over the viaduct at Loughborough Junction of a morning, and catch its rays in the Thames off Dewar's whisky monument, and not shake with the joy of life? If so, you and Shakespeare are not yet in communication. What! You pride yourself on your beautiful edition of Casaubon's translation of *Marcus Aurelius*, and you savour the cadences of the famous:

This day I shall have to do with an idle, curious man, with an unthankful man, a railer, a crafty, false, or an envious man. All these ill qualities have happened unto him, through ignorance of that which is truly good and truly bad. But I that understand the nature of that which is good, that it only is to be desired, and of that which is bad, that it only is truly odious and shameful: who know, moreover, that this transgressor, whosoever he be, is my kinsman, not by the same blood and seed, but by participation of the same reason and of the same divine particle-- how can I be hurt?... And with these cadences in your ears you go and quarrel with a cabman!

You would be ashamed of your literary self to be caught in ignorance of Whitman, who wrote:

Now understand me well--it is provided in the essence of things that from any fruition of success, no matter what, shall come forth something to make a greater struggle necessary.

And yet, having achieved a motor-car, you lose your temper when it breaks down half-way up a hill!

You know your Wordsworth, who has been trying to teach you about:

The Upholder of the tranquil soul
That tolerates the indignities of Time
And, from the centre of Eternity
All finite motions over-ruling, lives
In glory immutable.

But you are capable of being seriously unhappy when your suburban train selects a tunnel for its repose!

And the A. V. of the Bible, which you now read, not as your forefathers read it, but with an æsthetic delight, especially in the Apocrypha! You remember:

Whatsoever is brought upon thee, take cheerfully, and be patient when thou art changed to a low estate. For gold is tried in the fire and acceptable men in the furnace of adversity.

And yet you are ready to lie down and die because a woman has scorned you!
Go to!

You think some of my instances approach the ludicrous? They do. They are meant to do so. But they are no more ludicrous than life itself. And they illustrate in the most workaday fashion how you can test whether your literature fulfils its function of informing and transforming your existence.

I say that if daily events and scenes do not constantly recall and utilise the ideas and emotions contained in the books which you have read or are reading; if the memory of these books does not quicken the perception of beauty, wherever you happen to be, does not help you to correlate the particular trifle with the universal, does not smooth out irritation and give dignity to sorrow--then you are, consciously or not, unworthy of your high vocation as a bookman. You may say that I am preaching a sermon. The fact is, I am. My mood is a severely moral mood. For when I reflect upon the difference between what books have to offer and what even relatively earnest readers take the trouble to accept from them, I am appalled (or should be appalled, did I not know that the world is moving) by the sheer inefficiency, the bland, complacent failure of the earnest reader. I am like yourself, the spectacle of inefficiency rouses my holy ire.

Before you begin upon another masterpiece, set out in a row the masterpieces which you are proud of having read during the past year. Take the first on the list, that book which you perused in all the zeal of your New Year resolutions for systematic study. Examine the compartments of your mind. Search for the ideas and emotions which you have garnered from that book. Think, and recollect when last something from that book recurred to your memory apropos of your own daily commerce with humanity. Is it history--when did it throw a light for you on modern politics? Is it science--when did it show you order in apparent disorder, and help you to put two and two together into an inseparable four? Is it ethics-- when did it influence your conduct in a twopenny-halfpenny affair between man and man? Is it a novel--when did it help you to "understand all and forgive all"? Is it poetry--when was it a magnifying glass to disclose beauty to you, or a fire to warm your cooling faith? If you can answer these questions satisfactorily, your stocktaking as regards the fruit of your traffic with that book may be reckoned satisfactory. If you cannot answer them satisfactorily, then either you chose the book badly or your impression that you *read* it is a mistaken one. When the result of this stocktaking forces you to the conclusion that your riches are not so vast as you thought them to be, it is necessary to look about for the causes of the misfortune. The causes may be several. You may have been reading worthless books. This, however, I should say at once, is extremely unlikely. Habitual and confirmed readers, unless they happen to be reviewers, seldom read worthless books. In the first place, they are so busy with books of proved value that they have only a small margin of leisure left for very modern works, and generally, before they can catch up with the age, Time or the critic has definitely threshed for them the wheat from the chaff. No! Mediocrity has not much chance of hoodwinking the serious student. It is less improbable that the serious student has been choosing his books badly. He may do this in two ways--absolutely and relatively. Every reader of long standing has been through the singular experience of suddenly *seeing* a book with which his eyes have been familiar for years. He reads a book with a reputation and thinks: "Yes, this is a good book. This book gives me pleasure." And then after an interval, perhaps after half a lifetime, something mysterious happens to his mental sight. He picks up the book again, and sees a new and profound significance in every sentence, and he says: "I was perfectly blind to this book before." Yet he is no cleverer than he used to be. Only something has happened to him. Let a gold watch be discovered by a supposititious man who has never heard of watches. He has a sense of beauty. He admires the watch, and takes pleasure in it. He says: "This is a beautiful piece of bric-à-brac; I fully appreciate this delightful trinket." Then imagine his feelings when someone comes along with the key; imagine the light flooding his brain. Similar incidents occur in the eventful life of the constant reader. He has no key, and never suspects that there exists such a thing as a key. That is what I call a choice absolutely bad. The choice is relatively bad when, spreading over a number of books, it pursues no order, and thus results in a muddle of faint impressions each blurring the rest. Books must be allowed to help one another; they must be skilfully called in to each other's aid. And that this may be accomplished some guiding principle is necessary. "And what," you demand, "should that guiding principle be?" How do I know? Nobody, fortunately, can make your principles for you. You have to make them for yourself. But I will venture upon this general observation: that in the mental world what counts is not numbers but co-ordination. As regards facts and ideas, the great mistake made by

the average well-intentioned reader is that he is content with the names of things instead of occupying himself with the causes of things. He seeks answers to the question What? instead of to the question Why? He studies history, and never guesses that all history is caused by the facts of geography. He is a botanical expert, and can take you to where the **Sibthorpia europæa** grows, and never troubles to wonder what the earth would be without its cloak of plants. He wanders forth of starlit evenings and will name you with unction all the constellations from Andromeda to the Scorpion; but if you ask him why Venus can never be seen at midnight, he will tell you that he has not bothered with the scientific details. He has not learned that names are nothing, and the satisfaction of the lust of the eye a trifle compared to the imaginative vision of which scientific "details" are the indispensable basis. Most reading, I am convinced, is unphilosophical; that is to say, it lacks the element which more than anything else quickens the poetry of life. Unless and until a man has formed a scheme of knowledge, be it a mere skeleton, his reading must necessarily be unphilosophical. He must have attained to some notion of the inter-relations of the various branches of knowledge before he can properly comprehend the branch in which he specialises. If he has not drawn an outline map upon which he can fill in whatever knowledge comes to him, as it comes, and on which he can trace the affinity of every part with every other part, he is assuredly frittering away a large percentage of his efforts. There are certain philosophical works which, once they are mastered, seem to have performed an operation for cataract, so that he who was blind, having read them, henceforward sees cause and effect working in and out everywhere. To use another figure, they leave stamped on the brain a chart of the entire province of knowledge. Such a work is Spencer's **First Principles**. I know that it is nearly useless to advise people to read **First Principles**. They are intimidated by the sound of it; and it costs as much as a dress-circle seat at the theatre. But if they would, what brilliant stocktakings there might be in a few years! Why, if they would only read such detached essays as that on "Manners and Fashion," or "The Genesis of Science" (in a sixpenny volume of Spencer's **Essays**, published by Watts and Co.), the magic illumination, the necessary power of "synthetising" things, might be vouchsafed to them. In any case, the lack of some such disciplinary, co-ordinating measure will amply explain many disastrous stocktakings. The manner in which one single ray of light, one single precious hint, will clarify and energise the whole mental life of him who receives it, is among the most wonderful and heavenly of intellectual phenomena. Some men search for that light and never find it. But most men never search for it. The superlative cause of disastrous stocktakings remains, and it is much more simple than the one with which I have just dealt. It consists in the absence of meditation. People read, and read, and read, blandly unconscious of their effrontery in assuming that they can assimilate without any further effort the vital essence which the author has breathed into them. They cannot. And the proof that they do not is shown all the time in their lives. I say that if a man does not spend at least as much time in actively and definitely thinking about what he has read as he has spent in reading, he is simply insulting his author. If he does not submit himself to intellectual and emotional fatigue in classifying the communicated ideas, and in emphasising on his spirit the imprint of the communicated emotions--then reading with him is a pleasant pastime and nothing else. This is a distressing fact. But it is a fact. It is distressing, for the reason that meditation is not a popular exercise. If a friend asks you what you did last night, you may answer, "I was reading," and he will be impressed and you will be proud. But if you answer, "I was meditating," he will have a tendency to smile and you will have a tendency to blush. I know this. I feel it myself. (I cannot offer any explanation.) But it does not shake my conviction that the absence of meditation is the main origin of disappointing stocktakings.

Chapter 4.

The History of English Literature

1. Henry A. Beers. *Brief History of English and American Literature*

Henry A. Beers

Brief History of English and American Literature

INTRODUCTION.

At the request of the publishers the undersigned has prepared this Introduction and two Supplementary Chapters on the Religious and Theological Literature of Great Britain and the United States. To the preacher in his preparation for the pulpit, and also to the general reader and student of religious history, the pursuit of the study of literature is a necessity. The sermon itself is a part of literature, must have its literary finish and proportions, and should give ample proof of a familiarity with the masterpieces of the English tongue. The world of letters presents to even the casual reader a rich and varied profusion of fascinating and luscious fruit. But to the earnest student who explores with thorough research and sympathetic mind the intellectual products of countries and times other than his own, the infinite variety, so strikingly apparent to the superficial observer, resolves itself into a beautiful and harmonious unity. Literature is the record of the struggles and aspirations of man in the boundless universe of thought. As in physics the correlation and conservation of force bind all the material sciences together into one, so in the world of intellect all the diverse departments of mental life and action find their common bond in literature. Even the {4} signs and formulas of the mathematician and the chemist are but abbreviated forms of writing--the stenography of those exact sciences. The simple chronicles of the annalist, the flowing verses of the poet, clothing his thought with winged words, the abstruse propositions of the philosopher, the smiting protests of the bold reformer, either in Church or State, the impassioned appeal of the advocate at the bar of justice, the argument of the legislator on behalf of his measures, the very cry of inarticulate pain of those who suffer under the oppression of cruelty, all have their literature. The minister of the Gospel, whose mission is to man in his highest and holiest relations, must know the best that human thought has produced if he would successfully reach and influence the thoughtful and inquiring. Perhaps our best service here will be to suggest a method of pursuing a course of study in literature, both English and American. The following work of Professor Beers touches but lightly and scarcely more than opens these broad and inviting fields, which are ever growing richer and more fascinating. While man continues to think he will weave the fabric of the mental loom into infinitely varied and beautiful designs. In the general outlines of a plan of literary study which is to cover the entire history of English and American literature, the following directions, it is hoped, will be of value. 1. Fix the great landmarks, the general periods--each {5} marked by some towering leader, around whom other contemporary writers may be grouped. In Great Britain the several and successive periods might thus be well designated by such authors as Geoffrey Chaucer or John Wiclif, Thomas More or Henry Howard, Edmund Spenser or Sir Walter Raleigh, William Shakspeare or Francis Bacon, John Milton or Jeremy Taylor, John Dryden or John Locke, Joseph Addison or Joseph Butler, Samuel Johnson or Oliver Goldsmith, William Cowper or John Wesley, Walter Scott or Samuel Taylor Coleridge, William Wordsworth or Thomas Chalmers, Alfred Tennyson, Thomas Carlyle, or William Makepeace Thackeray. A similar list for American literature would place as leaders in letters: Thomas Hooker or Thomas Shepard, Cotton Mather, Jonathan Edwards, Benjamin Franklin, Philip Freneau, Noah Webster or James Kent, James Fenimore Cooper or Washington Irving, Ralph Waldo Emerson or Edward Everett, Joseph Addison Alexander or William Ellery Channing, Henry Wadsworth Longfellow, James Russell Lowell, or Nathaniel Hawthorne. 2. The prosecution of the study might be carried on in one or more of several ways, according either to the purpose in view or the tastes of the student. Attention might profitably be concentrated on the literature of a given period and worked out in detail by taking up individual authors, or by classifying all the writers of the period {6} on the basis of the character of their writings, such as poetry, history, belles-lettres, theology, essays, and the like. 3. Again, the literature of a period might be studied with reference to its influence on the religious, commercial, political, or social life of the people among whom it has circulated; or as the result of certain forces which have preceded its production. It is well worth the time and effort to trace the influence of one

author upon another or many others, who, while maintaining their individuality, have been either in style or method of production unconsciously molded by their *_confrères_* of the pen. The divisions of writers may, again, be made with reference to their opinions and associations in the different departments of life where they have wrought their active labors, such as in politics, religion, moral reform, or educational questions. The influence of the great writers in the languages of the Continent upon the literature of England and America affords another theme of absorbing interest, and has its peculiarly good results in bringing the student into close brotherhood with the fruitful and cultured minds of every land. In fact, the possible applications of the study of literature are so many and varied that the ingenuity of any earnest student may devise such as the exigencies of his own work may require.

JOHN F. HURST,

Washington.

PREFACE.

In so brief a history of so rich a literature, the problem is how to get room enough to give, not an adequate impression--that is impossible--but any impression at all of the subject. To do this I have crowded out everything but *_belles-lettres_*. Books in philosophy, history, science, etc., however important in the history of English thought, receive the merest incidental mention, or even no mention at all. Again, I have omitted the literature of the Anglo-Saxon period, which is written in a language nearly as hard for a modern Englishman to read as German is, or Dutch. Caedmon and Cynewulf are no more a part of English literature than Vergil and Horace are of Italian. I have also left out {8} the vernacular literature of the Scotch before the time of Burns. Up to the date of the union Scotland was a separate kingdom, and its literature had a development independent of the English, though parallel with it. In dividing the history into periods, I have followed, with some modifications, the divisions made by Mr. Stopford Brooke in his excellent little *_Primer of English Literature_*. A short reading course is appended to each chapter.

HENRY A. BEERS.

OUTLINE SKETCH

OF

ENGLISH LITERATURE.

CHAPTER I.

FROM THE CONQUEST TO CHAUCER.

1066-1400.

The Norman conquest of England, in the 11th century, made a break in the natural growth of the English language and literature. The old English or Anglo-Saxon had been a purely Germanic speech, with a complicated grammar and a full set of inflections. For three hundred years following the battle of Hastings this native tongue was driven from the king's court and the courts of law, from parliament, school, and university. During all this time there were two languages spoken in England. Norman French was the birth-tongue of the upper classes and English of the lower. When the latter finally got the better in the struggle, and became, about the middle of the 14th century, the national speech of all England, it was no longer the English of King Alfred. It was a new language, a grammarless tongue, almost wholly {12} stripped of its inflections. It had lost a half of its old words, and had filled their places with French equivalents. The Norman lawyers had introduced legal terms; the ladies and courtiers, words of dress and courtesy. The knight had imported the vocabulary of war and of the chase. The master-builders of the Norman castles and cathedrals contributed technical expressions proper to the architect and the mason. The art of cooking

was French. The naming of the living animals, *ox*, *swine*, *sheep*, *deer*, was left to the Saxon churl who had the herding of them, while the dressed meats, *beef*, *pork*, *mutton*, *venison*, received their baptism from the table-talk of his Norman master. The four orders of begging friars, and especially the Franciscans or Gray Friars, introduced into England in 1224, became intermediaries between the high and the low. They went about preaching to the poor, and in their sermons they intermingled French with English. In their hands, too, was almost all the science of the day; their *medicine*, *botany*, and *astronomy* displaced the old nomenclature of *leechdom*, *wort-cunning*, and *star-craft*. And, finally, the translators of French poems often found it easier to transfer a foreign word bodily than to seek out a native synonym, particularly when the former supplied them with a rhyme. But the innovation reached even to the commonest words in every-day use, so that *voice* drove out *steven*, *poor* drove out *earm*, and *color*, *use*, and *place* made good their footing beside *hue*, {13} *wont*, and *stead*. A great part of the English words that were left were so changed in spelling and pronunciation as to be practically new. Chaucer stands, in date, midway between King Alfred and Alfred Tennyson, but his English differs vastly more from the former's than from the latter's. To Chaucer Anglo-Saxon was as much a dead language as it is to us. The classical Anglo-Saxon, moreover, had been the Wessex dialect, spoken and written at Alfred's capital, Winchester. When the French had displaced this as the language of culture, there was no longer a "king's English" or any literary standard. The sources of modern standard English are to be found in the East Midland, spoken in Lincoln, Norfolk, Suffolk, Cambridge, and neighboring shires. Here the old Anglian had been corrupted by the Danish settlers, and rapidly threw off its inflections when it became a spoken and no longer a written language, after the Conquest. The West Saxon, clinging more tenaciously to ancient forms, sunk into the position of a local dialect; while the East Midland, spreading to London, Oxford, and Cambridge, became the literary English in which Chaucer wrote. The Normans brought in also new intellectual influences and new forms of literature. They were a cosmopolitan people, and they connected England with the continent. Lanfranc and Anselm, the first two Norman archbishops of Canterbury, were learned and splendid prelates of a {14} type quite unknown to the Anglo-Saxons. They introduced the scholastic philosophy taught at the University of Paris, and the reformed discipline of the Norman abbeys. They bound the English Church more closely to Rome, and officered it with Normans. English bishops were deprived of their sees for illiteracy, and French abbots were set over monasteries of Saxon monks. Down to the middle of the 14th century the learned literature of England was mostly in Latin, and the polite literature in French. English did not at any time altogether cease to be a written language, but the extant remains of the period from 1066 to 1200 are few and, with one exception, unimportant. After 1200 English came more and more into written use, but mainly in translations, paraphrases, and imitations of French works. The native genius was at school, and followed awkwardly the copy set by its master. The Anglo-Saxon poetry, for example, had been rhythmical and alliterative. It was commonly written in lines containing four rhythmical accents and with three of the accented syllables alliterating.

*R_este hine thâ_r_úm-heort; _r_éced hlifade
_G_eáp and _g_óld-fâh, gäst inne swäf.*

Rested him then the great-hearted; the hall towered
Roomy and gold-bright, the guest slept within.

This rude energetic verse the Saxon *scôp* had sung to his harp or *glee-beam*, dwelling on the {15} emphatic syllables, passing swiftly over the others which were of undetermined number and position in the line. It was now displaced by the smooth metrical verse with rhymed endings, which the French introduced and which our modern poets use, a verse fitted to be recited rather than sung. The old English alliterative verse continued, indeed, in occasional use to the 16th century. But it was linked to a forgotten literature and an obsolete dialect, and was doomed to give way. Chaucer lent his great authority to the more modern verse system, and his own literary models and inspirers were all foreign, French or Italian. Literature in England began to be once more English and truly national in the hands of Chaucer and his contemporaries, but it was the literature of a nation cut off from its own past by three centuries of foreign rule. The most noteworthy English document of the 11th and 12th centuries was the continuation of the Anglo-Saxon chronicle. Copies of these annals, differing somewhat among themselves, had been kept at the monasteries in Winchester, Abingdon, Worcester, and elsewhere. The yearly entries were mostly brief, dry records of passing events, though occasionally they become full and animated. The fen country of Cambridge and Lincolnshire was a region of monasteries. Here were the great abbeys of Peterborough and Croyland and Ely minster. One of the earliest English songs tells how the savage heart of the Danish {16} king Cnut was softened by the singing of the monks in Ely.

Merie sungen muneches binnen Ely
Tha Cnut chyning reu ther by;
Roweth, cnihtes, noer the land,
And here we thes muneches sang.

It was among the dikes and marshes of this fen country that the bold outlaw Hereward, "the last of the English," held out for some years against the conqueror. And it was here, in the rich abbey of Burch or Peterborough, the ancient Medeshamstede (meadow-homestead) that the chronicle was continued for nearly a century after the Conquest, breaking off abruptly in 1154, the date of King Stephen's death. Peterborough had received a new Norman abbot, Turol, "a very stern man," and the entry in the chronicle for 1170 tells how Hereward and his gang, with his Danish backers, thereupon plundered the abbey of its treasures, which were first removed to Ely, and then carried off by the Danish fleet and sunk, lost, or squandered. The English in the later portions of this Peterborough chronicle becomes gradually more modern, and falls away more and more from the strict grammatical standards of the classical Anglo-Saxon. It is a most valuable historical monument, and some passages of it are written with great vividness, notably the sketch of William the Conqueror put down in the year of his death (1086) by one who had "looked upon him and at another time dwelt in his court." {17} "He who was before a rich king, and lord of many a land, he had not then of all his land but a piece of seven feet. . . . Likewise he was a very stark man and a terrible, so that one durst do nothing against his will. . . . Among other things is not to be forgotten the good peace that he made in this land, so that a man might fare over his kingdom with his bosom full of gold unhurt. He set up a great deer preserve, and he laid laws therewith that whoso should slay hart or hind, he should be blinded. As greatly did he love the tall deer as if he were their father." With the discontinuance of the Peterborough annals, English history written in English prose ceased for three hundred years. The thread of the nation's story was kept up in Latin chronicles, compiled by writers partly of English and partly of Norman descent. The earliest of these, such as Ordericus Vitalis, Simeon of Durham, Henry of Huntingdon, and William of Malmesbury, were contemporary with the later entries of the Saxon chronicle. The last of them, Matthew of Westminster, finished his work in 1273. About 1300 Robert, a monk of Gloucester, composed a chronicle in English verse, following in the main the authority of the Latin chronicles, and he was succeeded by other rhyming chroniclers in the 14th century. In the hands of these the true history of the Saxon times was overlaid with an ever-increasing mass of fable and legend. All real knowledge of the period {18} dwindled away until in Capgrave's *Chronicle of England*, written in prose in 1463-64, hardly any thing of it is left. In history as in literature the English had forgotten their past, and had turned to foreign sources. It is noteworthy that Shakspeare, who borrowed his subjects and his heroes sometimes from authentic English history, sometimes from the legendary history of ancient Britain, Denmark, and Scotland, as in *Lear*, *Hamlet*, and *Macbeth*, ignores the Saxon period altogether. And Spenser, who gives in his second book of the *Faerie Queene*, a *resumé* of the reigns of fabulous British kings--the supposed ancestors of Queen Elizabeth, his royal patron--has nothing to say of the real kings of early England. So completely had the true record faded away that it made no appeal to the imaginations of our most patriotic poets. The Saxon Alfred had been dethroned by the British Arthur, and the conquered Welsh had imposed their fictitious genealogies upon the dynasty of the conquerors. In the *Roman de Rou*, a verse chronicle of the dukes of Normandy, written by the Norman Wace, it is related that at the battle of Hastings the French *jongleur*, Taillefer, spurred out before the van of William's army, tossing his lance in the air and chanting of "Charlemagne and of Roland, of Oliver and the peers who died at Roncesvals." This incident is prophetic of the victory which Norman song, no less than Norman arms, was to win over England. The lines which Taillefer {19} sang were from the *Chanson de Roland*, the oldest and best of the French hero sagas. The heathen Northmen, who had ravaged the coasts of France in the 10th century, had become in the course of one hundred and fifty years, completely identified with the French. They had accepted Christianity, intermarried with the native women, and forgotten their own Norse tongue. The race thus formed was the most brilliant in Europe. The warlike, adventurous spirit of the vikings mingled in its blood with the French nimbleness of wit and fondness for display. The Normans were a nation of knights-errant, with a passion for prowess and for courtesy. Their architecture was at once strong and graceful. Their women were skilled in embroidery, a splendid sample of which is preserved in the famous Bayeux tapestry, in which the conqueror's wife, Matilda, and the ladies of her court wrought the history of the Conquest. This national taste for decoration expressed itself not only in the ceremonious pomp of feast and chase and tourney, but likewise in literature. The most characteristic contribution of the Normans to English poetry were the metrical romances or chivalry tales. These were sung or recited by the minstrels, who were among the retainers of every great feudal baron, or by the *jongleurs*, who wandered from court to castle. There is a whole literature of these *romans d' aventure* in the Anglo-Norman dialect of French. Many of them are {20} very long--often thirty, forty, or fifty thousand lines--written sometimes in a strophic form, sometimes in long Alexandrines, but commonly in the short, eight-syllabled rhyming couplet. Numbers of them were turned into English verse in the 13th, 14th, and

15th centuries. The translations were usually inferior to the originals. The French *trouvere* (finder or poet) told his story in a straight-forward, prosaic fashion, omitting no details in the action and unrolling endless descriptions of dresses, trappings, gardens, etc. He invented plots and situations full of fine possibilities by which later poets have profited, but his own handling of them was feeble and prolix. Yet there was a simplicity about the old French language and a certain elegance and delicacy in the diction of the *trouveres* which the rude, unformed English failed to catch. The heroes of these romances were of various climes: Guy of Warwick, and Richard the Lion Heart of England, Havelok the Dane, Sir Troilus of Troy, Charlemagne, and Alexander. But, strangely enough, the favorite hero of English romance was that mythical Arthur of Britain, whom Welsh legend had celebrated as the most formidable enemy of the Sassenach invaders and their victor in twelve great battles. The language and literature of the ancient Cymry or Welsh had made no impression on their Anglo-Saxon conquerors. There are a few Welsh borrowings in the English speech, such as *bard* and *druid*; but in the old Anglo-Saxon literature there are {21} no more traces of British song and story than if the two races had been sundered by the ocean instead of being borderers for over six hundred years. But the Welsh had their own national traditions, and after the Norman Conquest these were set free from the isolation of their Celtic tongue and, in an indirect form, entered into the general literature of Europe. The French came into contact with the old British literature in two places: in the Welsh marches in England and in the province of Brittany in France, where the population is of Cymric race and spoke, and still to some extent speaks, a Cymric dialect akin to the Welsh. About 1140 Geoffrey of Monmouth, a Benedictine monk, seemingly of Welsh descent, who lived at the court of Henry the First and became afterward bishop of St. Asaph, produced in Latin a so-called *Historia Britonum* in which it was told how Brutus, the great grandson of Aeneas, came to Britain, and founded there his kingdom called after him, and his city of New Troy (Troynovant) on the site of the later London. An air of historic gravity was given to this tissue of Welsh legends by an exact chronology and the genealogy of the British kings, and the author referred, as his authority, to an imaginary Welsh book given him, as he said, by a certain Walter, archdeacon of Oxford. Here appeared that line of fabulous British princes which has become so familiar to modern readers in the plays of Shakspeare and the poems of Tennyson: Lear and his {22} three daughters; Cymbeline, Gorboduc, the subject of the earliest regular English tragedy, composed by Sackville and acted in 1562; Loqrine and his Queen Gwendolen, and his daughter Sabrina, who gave her name to the river Severn, was made immortal by an exquisite song in Milton's *Comus*, and became the heroine of the tragedy of *Loqrine*, once attributed to Shakspeare; and above all, Arthur, the son of Uther Pendragon, and the founder of the Table Round. In 1155 Wace, the author of the *Roman de Rou*, turned Geoffrey's work into a French poem entitled *Brut d' Angleterre*, "brut" being a Welsh word meaning chronicle. About the year 1200 Wace's poem was Englished by Layamon, a priest of Arley Regis, on the border stream of Severn. Layamon's *Brut* is in thirty thousand lines, partly alliterative and partly rhymed, but written in pure Saxon English with hardly any French words. The style is rude but vigorous, and, at times, highly imaginative. Wace had amplified Geoffrey's chronicle somewhat, but Layamon made much larger additions, derived, no doubt, from legends current on the Welsh border. In particular the story of Arthur grew in his hands into something like fullness. He tells of the enchantments of Merlin, the wizard; of the unfaithfulness of Arthur's queen, Guenever; and the treachery of his nephew, Modred. His narration of the last great battle between Arthur and Modred; of the wounding of the king--"fifteen fiendly wounds he had, one might in the least {23} three gloves thrust--"; and of the little boat with "two women therein, wonderly dight," which came to bear him away to Avalun and the Queen Argante, "sheenest of all elves," whence he shall come again, according to Merlin's prophecy, to rule the Britons; all this left little, in essentials, for Tennyson to add in his *Death of Arthur*. This new material for fiction was eagerly seized upon by the Norman romancers. The story of Arthur drew to itself other stories which were afloat. Walter Map, a gentleman of the Court of Henry II., in two French prose romances, connected with it the church legend of the Sangreal, or holy cup, from which Christ had drunk at his last supper, and which Joseph of Arimathea had afterward brought to England. Then it miraculously disappeared and became thenceforth the occasion of knightly quest, the mystic symbol of the object of the soul's desire, an adventure only to be achieved by the maiden knight, Galahad, the son of the great Launcelot, who in the romances had taken the place of Modred in Geoffrey's history, as the paramour of Queen Guenever. In like manner the love-story of Tristan and Isolde was joined by other romancers to the Arthur-Saga. This came probably from Brittany or Cornwall. Thus there grew up a great epic cycle of Arthurian romance, with a fixed shape and a unity and vitality which have prolonged it to our own day and rendered it capable of a deeper and more spiritual treatment and a more artistic {24} handling by such modern English poets as Tennyson in his *Idyls of the King*, by Matthew Arnold, Swinburne, and many others. There were innumerable Arthur romances in prose and verse, in Anglo-Norman and continental French dialects, in English, in German, and in other tongues. But the final form which the Saga took in mediaeval England was the prose *Morte Dartur* of Sir Thomas Malory, composed at the close of the 15th century. This was a digest of the earlier romances and is Tennyson's main authority. Beside the literature of the knight was the literature of the cloister. There is a

considerable body of religious writing in early English, consisting of homilies in prose and verse, books of devotion, like the *Ancren Riwe* (Rule of Anchoresses), 1225; the *Ayenbite of Inwyt* (Remorse of Conscience), 1340, both in prose; the *Handlyng Sinne*, 1303; the *Cursor Mundi*, 1320; and the *Pricke of Conscience*, 1340, in verse; metrical renderings of the Psalter, the Pater Noster, the Creed, and the Ten Commandments, the Gospels for the Day, such as the *Ormulum*, or Book of Orm, 1205; legends and miracles of saints; poems in praise of virginity, on the contempt of the world, on the five joys of the Virgin, the five wounds of Christ, the eleven pains of hell, the seven deadly sins, the fifteen tokens of the coming judgment, and dialogues between the soul and the body. These were the work not only of the monks, but also of the begging friars, and in {25} smaller part of the secular or parish clergy. They are full of the ascetic piety and superstition of the Middle Age, the childish belief in the marvelous, the allegorical interpretation of Scripture texts, the grotesque material horrors of hell with its grisly fiends, the vileness of the human body and the loathsome details of its corruption after death. Now and then a single poem rises above the tedious and hideous barbarism of the general level of this monkish literature, either from a more intensely personal feeling in the poet, or from an occasional grace or beauty in his verse. A poem so distinguished is, for example, *A Luve Ron* (A Love Counsel) by the Minorite friar, Thomas de Hales, one stanza of which recalls the French poet Villon's *Balade of Dead Ladies*, with its refrain.

"Mais ou sont les neiges d'antan?"

"Where are the snows of yester year?

Where is Paris and Heleyne

That weren so bright and fair of blee[1]

Amadas, Tristan, and Idéyne

Yseudē and allē the,[2]

Hector with his sharpē main,

And Caesar rich in worldēs fee?

They beth ygliden out of the reign[3]

As the shaft is of the dee." [4]

A few early English poems on secular subjects are also worthy of mention, among others, *The Owl and the Nightingale*, generally assigned to the reign of Henry III. (1216-1272), an *Estrif*, {26} or dispute, in which the owl represents the ascetic and the nightingale the aesthetic view of life. The debate is conducted with much animation and a spirited use of proverbial wisdom. *The Land of Cokaygne* is an amusing little poem of some two hundred lines, belonging to the class of *fabliaux*, short humorous tales or satirical pieces in verse. It describes a lubber-land, or fool's paradise, where the geese fly down all roasted on the spit, bringing garlic in the bills for their dressing, and where there is a nunnery upon a river of sweet milk, and an abbey of white monks and gray, whose walls, like the hall of little King Pepin, are "of pie-crust and pastry crust," with flouren cakes for the shingles and fat puddings for the pins. There are a few songs dating from about 1300, and mostly found in a single collection (Harl, MS., 2253), which are almost the only English verse before Chaucer that has any sweetness to a modern ear. They are written in French strophic forms in the southern dialect, and sometimes have an intermixture of French and Latin lines. They are musical, fresh, simple, and many of them very pretty. They celebrate the gladness of spring with its cuckoos and throstle-cocks, its daisies and woodruff.

"When the nightingalē sings the woodēs waxen green

Leaf and grass and blossom spring in Averil, I ween,

And love is to my hertē gone with a spear so keen,

Night and day my blood it drinks my hertē doth me tene."[5]

{27} Others are love plaints to "Alysoun" or some other lady whose "name is in a note of the nightingale;" whose eyes are as gray as glass, and her skin as "red as rose on ris." [6] Some employ a burden or refrain.

"Blow, northern wind,

Blow thou me, my sweeting.

Blow, northern wind, blow, blow, blow!"

Others are touched with a light melancholy at the coming of winter.

"Winter wakeneth all my care
Now these leavēs waxeth bare.
Oft I sigh and mournē sare
When it cometh in my thought
Of this worldes joy, how it goeth all to nought"

Some of these poems are love songs to Christ or the Virgin, composed in the warm language of earthly passion. The sentiment of chivalry united with the ecstatic reveries of the cloister had produced Mariolatry and the imagery of the Song of Solomon, in which Christ woos the soul, had made this feeling of divine love familiar. Toward the end of the 13th century a collection of lives of saints, a sort of English *Golden Legend*, was prepared at the great abbey of Gloucester for use on saints' days. The legends were chosen partly from the hagiology of the Church Catholic, as the lives of Margaret, Christopher, and Michael; partly from the calendar of the English Church, as the {28} lives of St. Thomas of Canterbury, of the Anglo-Saxons, Dunstan, Swithin--who is mentioned by Shakspeare--and Kenelm, whose life is quoted by Chaucer in the *Nonne Presto's Tale*. The verse was clumsy and the style monotonous, but an imaginative touch here and there has furnished a hint to later poets. Thus the legend of St. Brandan's search for the earthly paradise has been treated by Matthew Arnold and William Morris. About the middle of the 14th century there was a revival of the Old English alliterative verse in romances like *William and the Werewolf*, and *Sir Gawayne*, and in religious pieces such as *Clannesse* (purity), *Patience*, and *The Perle*, the last named a mystical poem of much beauty, in which a bereaved father sees a vision of his daughter among the glorified. Some of these employed rhyme as well as alliteration. They are in the West Midland dialect, although Chaucer implies that alliteration was most common in the north. "I am a sotherne man," says the parson in the *Canterbury Tales*. "I cannot geste rom, ram, ruf, by my letter." But the most important of the alliterative poems was the *Vision of William concerning Piers the Plowman*. In the second half of the 14th century French had ceased to be the mother-tongue of any considerable part of the population of England. By a statute of Edward III., in 1362, it was displaced from the law courts. By 1386 English had taken its place in the schools. The {29} Anglo-Norman dialect had grown corrupt, and Chaucer contrasts the French of Paris with the provincial French spoken by his prioress, "after the scole of Stratford-atte-Bowe." The native English genius was also beginning to assert itself, roused in part, perhaps, by the English victories in the wars of Edward III. against the French. It was the bows of the English yeomanry that won the fight at Crecy, fully as much as the prowess of the Norman baronage. But at home the times were bad. Heavy taxes and the repeated visitations of the pestilence, or Black Death, pressed upon the poor and wasted the land. The Church was corrupt; the mendicant orders had grown enormously wealthy, and the country was eaten up by a swarm of begging friars, pardoners, and apparitors. The social discontent was fermenting among the lower classes, which finally issued in the communistic uprising of the peasantry, under Wat Tyler and Jack Straw. This state of things is reflected in the *Vision of Piers Plowman*, written as early as 1362, by William Langland, a tonsured clerk of the west country. It is in form an allegory, and bears some resemblance to the later and more famous allegory of the *Pilgrim's Progress*. The poet falls asleep on the Malvern Hills, in Worcestershire, and has a vision of a "fair field full of folk," representing the world with its various conditions of men. There were pilgrims and palmers; hermits with hooked staves, who went to Walsingham--and {30} their wenches after them--great lubbers and long that were loth to work: friars glossing the Gospel for their own profit; pardoners cheating the people with relics and indulgences; parish priests who forsook their parishes--that had been poor since the pestilence time--and went to London to sing there for simony; bishops, archbishops, and deacons, who got themselves fat clerkships in the Exchequer, or King's Bench; in short, all manner of lazy and corrupt ecclesiastics. A lady, who represents holy Church, then appears to the dreamer, explains to him the meaning of his vision, and reads him a sermon the text of which is, "When all treasure is tried, truth is the best." A number of other allegorical figures are next introduced, Conscience, Reason, Meed, Simony, Falsehood, etc., and after a series of speeches and adventures, a second vision begins in which the seven deadly sins pass before the poet in a succession of graphic impersonations, and finally all the characters set out on a pilgrimage in search of St. Truth, finding no guide to direct them save Piers the Plowman, who stands for the simple, pious laboring man, the sound heart of the English common folk. The poem was originally in eight divisions or "passus," to which was added a continuation in three parts, *Vita Do Wel*, *Do Bet*, and *Do Best*. About 1377 the whole was greatly enlarged by the author. *Piers Plowman* was the first extended literary work after the Conquest which was purely English in character. It owed nothing to France but the {31} allegorical cast which the *Roman de la Rose* had made fashionable in both countries. But even here such personified abstractions as Langland's Fair-speech and Work-when-time-is, remind us less of the Fraunchise, Bel-amour, and Fals-semblaunt of the French courtly allegories than of Bunyan's Mr. Worldly Wiseman, and even of such Puritan names as Praise-God Barebones, and Zeal-of-the-land Busy. The poem is full of English moral

seriousness, of shrewd humor, the hatred of a lie, the homely English love for reality. It has little unity of plan, but is rather a series of episodes, discourses, parables, and scenes. It is all astir with the actual life of the time. We see the gossips gathered in the ale-house of Betun the brewster, and the pastry cooks in the London streets crying "Hote pies, hote! Good gees and gryes. Go we dine, go we!" Had Langland not linked his literary fortunes with an uncouth and obsolescent verse, and had he possessed a finer artistic sense and a higher poetic imagination, his book might have been, like Chaucer's, among the lasting glories of our tongue. As it is, it is forgotten by all but professional students of literature and history. Its popularity in its own day is shown by the number of MSS. which are extant, and by imitations, such as *Piers the Plowman's Crede* (1394), and the *Plowman's Tale*, for a long time wrongly inserted in the *Canterbury Tales*. Piers became a kind of typical figure, like the French peasant, *Jacques Bonhomme*, and was {32} appealed to as such by the Protestant reformers of the 16th century. The attack upon the growing corruptions of the Church was made more systematically, and from the stand-point of a theologian rather than of a popular moralist and satirist, by John Wyclif, the rector of Lutterworth and professor of Divinity in Baliol College, Oxford. In a series of Latin and English tracts he made war against indulgences, pilgrimages, images, oblations, the friars, the pope, and the doctrine of transubstantiation. But his greatest service to England was his translation of the Bible, the first complete version in the mother tongue. This he made about 1380, with the help of Nicholas Hereford, and a revision of it was made by another disciple, Purvey, some ten years later. There was no knowledge of Hebrew or Greek in England at that time, and the Wiclifite versions were made not from the original tongues, but from the Latin Vulgate. In his anxiety to make his rendering close, and mindful, perhaps, of the warning in the Apocalypse, "If any man shall take away from the words of the book of this prophecy, God shall take away his part out of the book of life," Wiclif followed the Latin order of construction so literally as to make rather awkward English, translating, for example, *Quid sibi vult hoc somnium?* by *What to itself wole this sweven?* Purvey's revision was somewhat freer and more idiomatic. In the reigns of Henry IV. and V. it was forbidden to read or to have any {33} of Wiclif's writings. Such of them as could be seized were publicly burned. In spite of this, copies of his Bible circulated secretly in great numbers. Forshall and Madden, in their great edition (1850), enumerate one hundred and fifty MSS. which had been consulted by them. Later translators, like Tyndale and the makers of the Authorized Version, or "King James' Bible" (1611), followed Wiclif's language in many instances; so that he was, in truth, the first author of our biblical dialect and the founder of that great monument of noble English which has been the main conservative influence in the mother-tongue, holding it fast to many strong, pithy words and idioms that would else have been lost. In 1415; some thirty years after Wiclif's death, by decree of the Council of Constance, his bones were dug up from the soil of Lutterworth chancel and burned, and the ashes cast into the Swift. "The brook," says Thomas Fuller, in his *Church History*, "did convey his ashes into Avon; Avon into Severn; Severn into the narrow seas; they into the main ocean. And thus the ashes of Wiclif are the emblem of his doctrine, which now is dispersed all the world over." Although the writings thus far mentioned are of very high interest to the student of the English language, and the historian of English manners and culture, they cannot be said to have much importance as mere literature. But in Geoffrey Chaucer (died 1400) we meet with a poet of the first rank, whose works are increasingly read and {34} will always continue to be a source of delight and refreshment to the general reader as well as a "well of English undefiled" to the professional man of letters. With the exception of Dante, Chaucer was the greatest of the poets of mediaeval Europe, and he remains one of the greatest of English poets, and certainly the foremost of English story-tellers in verse. He was the son of a London vintner, and was in his youth in the service of Lionel, Duke of Clarence, one of the sons of Edward III. He made a campaign in France in 1359-60, when he was taken prisoner. Afterward he was attached to the court and received numerous favors and appointments. He was sent on several diplomatic missions by the king, three of them to Italy, where, in all probability, he made the acquaintance of the new Italian literature, the writings of Dante, Petrarch, and Boccaccio. He was appointed at different times Comptroller of the Wool Customs, Comptroller of Petty Customs, and Clerk of the Works. He sat for Kent in Parliament, and he received pensions from three successive kings. He was a man of business as well as books, and he loved men and nature no less than study. He knew his world; he "saw life steadily and saw it whole." Living at the center of English social and political life, and resorting to the court of Edward III., then the most brilliant in Europe, Chaucer was an eye-witness of those feudal pomps which fill the high-colored pages of his contemporary, the French chronicler, {35} Froissart. His description of a tournament in the *Knight's Tale* is unexcelled for spirit and detail. He was familiar with dances, feasts, and state ceremonies, and all the life of the baronial castle, in bower and hall, the "trompes with the loude minstralcie," the heralds, the ladies, and the squires, "What hawkës sitten on the perch above, What houndës liggen on the floor adown." But his sympathy reached no less the life of the lowly, the poor widow in her narrow cottage, and that "trewe swynkere and a good," the plowman whom Langland had made the hero of his vision. He is, more than all English poets, the poet of the lusty spring, of "Aprille with her showres sweet" and the "foulës song," of "May with all her floures and her greenë," of the new leaves in the wood, and the meadows new powdered with the daisy, the mystic Marguerite of his

Legend of Good Women. A fresh vernal air blows through all his pages. In Chaucer's earlier works, such as the translation of the Romaunt of the Rose (if that be his), the Boke of the Duchesse, the Parlament of Foules, the Hous of Fame, as well as in the Legend of Good Women, which was later, the inspiration of the French court poetry of the 13th and 14th centuries is manifest. He retains in them the mediaeval machinery of allegories and dreams, the elaborate descriptions of palaces, {36} temples, portraitures, etc., which had been made fashionable in France by such poems as Guillaume de Lorris's Roman de la Rose, and Jean Machault's La Fontaine Amoureuse. In some of these the influence of Italian poetry is also perceptible. There are suggestions from Dante, for example, in the Parlament of Foules and the Hous of Fame, and Troilus and Cresseide is a free handling rather than a translation of Boccaccio's Filostrato. In all of these there are passages of great beauty and force. Had Chaucer written nothing else, he would still have been remembered as the most accomplished English poet of his time, but he would not have risen to the rank which he now occupies, as one of the greatest English poets of all time. This position he owes to his masterpiece, the Canterbury Tales. Here he abandoned the imitation of foreign models and the artificial literary fashions of his age, and wrote of real life from his own ripe knowledge of men and things. The Canterbury Tales are a collection of stories written at different times, but put together, probably, toward the close of his life. The frame-work into which they are fitted is one of the happiest ever devised. A number of pilgrims who are going on horseback to the shrine of St. Thomas à Becket, at Canterbury, meet at the Tabard Inn, in Southwark, a suburb of London. The jolly host of the Tabard, Harry Bailey, proposes that on their way to Canterbury, each of the company shall tell two tales, and two more on their way back, and {37} that the one who tells the best shall have a supper at the cost of the rest when they return to the inn. He himself accompanies them as judge and "reporter." In the setting of the stories there is thus a constant feeling of movement and the air of all outdoors. The little "head-links" and "end-links" which bind them together, give incidents of the journey and glimpses of the talk of the pilgrims, sometimes amounting, as in the prologue of the Wife of Bath, to full and almost dramatic character-sketches. The stories, too, are dramatically suited to the narrators. The general prologue is a series of such character-sketches, the most perfect in English poetry. The portraits of the pilgrims are illuminated with the soft brilliancy and the minute loving fidelity of the miniatures in the old missals, and with the same quaint precision in traits of expression and in costume. The pilgrims are not all such as one would meet nowadays at an English inn. The presence of a knight, a squire, a yeoman archer, and especially of so many kinds of ecclesiastics, a nun, a friar, a monk, a pardoner, and a sompnour or apparitor, reminds us that the England of that day must have been less like Protestant England, as we know it, than like the Italy of some thirty years ago. But however the outward face of society may have changed, the Canterbury pilgrims remain, in Chaucer's description, living and universal types of human nature. The Canterbury Tales are twenty-four in number. There were {38} thirty-two pilgrims, so that if finished as designed the whole collection would have numbered one hundred and twenty-eight stories. Chaucer is the bright consummate flower of the English Middle Age. Like many another great poet, he put the final touch to the various literary forms that he found in cultivation. Thus his Knight's Tale, based upon Boccaccio's Teseide, is the best of English mediaeval romances. And yet the Rime of Sir Thopas, who goes seeking an elf queen for his mate, and is encountered by the giant Sir Olifaunt, burlesques these same romances with their impossible adventures and their tedious rambling descriptions. The tales of the prioress and the second nun are saints' legends. The Monk's Tale is a set of dry, moral apologues in the manner of his contemporary, the "moral Gower." The stories told by the reeve, miller, friar, sompnour, shipman, and merchant, belong to the class of fabliaux, a few of which existed in English, such as Dame Siriz, the Lay of the Ash, and the Land of Cokaygne, already mentioned. The Nonne Prestre's Tale, likewise, which Dryden modernized with admirable humor, was of the class of fabliaux, and was suggested by a little poem in forty lines, Dou Coc et Werpil, by Marie de France, a Norman poetess of the 13th century. It belonged, like the early English poem of The Fox and the Wolf, to the popular animal-saga of Reynard the Fox. The Franklin's Tale, whose scene is Brittany, and the Wife of Bath's {39} Tale, which is laid in the time of the British Arthur, belong to the class of French lais, serious metrical tales shorter than the romance and of Breton origin, the best representatives of which are the elegant and graceful lais of Marie de France. Chaucer was our first great master of laughter and of tears. His serious poetry is full of the tenderest pathos. His loosest tales are delightfully humorous and life-like. He is the kindest of satirists. The knavery, greed, and hypocrisy of the begging friars and the sellers of indulgences are exposed by him as pitilessly as by Langland and Wiclif, though his mood is not like theirs, one of stern, moral indignation, but rather the good-natured scorn of a man of the world. His charity is broad enough to cover even the corrupt sompnour of whom he says, "And yet in sooth he was a good felawe." Whether he shared Wiclif's opinions is unknown, but John of Gaunt, the Duke of Lancaster and father of Henry IV., who was Chaucer's life-long patron, was likewise Wiclif's great upholder against the persecution of the bishops. It is, perhaps, not without significance that the poor parson in the Canterbury Tales, the only one of his ecclesiastical pilgrims whom Chaucer treats with respect, is suspected by the host of the Tabard to be a "loller," that is, a Lollard, or disciple of Wiclif, and that because he objects to the

jovial inn-keeper's swearing "by Goddes bones." {40} Chaucer's English is nearly as easy for a modern reader as Shakspeare's, and few of his words have become obsolete. His verse, when rightly read, is correct and melodious. The early English was, in some respects, more "sweet upon the tongue" than the modern language. The vowels had their broad Italian sounds, and the speech was full of soft gutturals and vocalic syllables, like the endings *ën*, *ës*, and *ë*, which made feminine rhymes and kept the consonants from coming harshly together. Great poet as Chaucer was, he was not quite free from the literary weakness of his time. He relapses sometimes into the babbling style of the old chroniclers and legend writers; cites "auctours" and gives long catalogues of names and objects with a *naïve* display of learning; and introduces vulgar details in his most exquisite passages. There is something childish about almost all the thought and art of the Middle Ages--at least outside of Italy, where classical models and traditions never quite lost their hold. But Chaucer's artlessness is half the secret of his wonderful ease in story-telling, and is so engaging that, like a child's sweet unconsciousness, one would not wish it otherwise. The *Canterbury Tales* had shown of what high uses the English language was capable, but the curiously trilingual condition of literature still continued. French was spoken in the proceedings of Parliament as late as the reign of Henry {41} VI. (1422-1471). Chaucer's contemporary, John Gower, wrote his *Vox Clamantis* in Latin, his *Speculum Meditantis* (a lost poem), and a number of *ballades* in Parisian French, and his *Confessio Amantis* (1393) in English. The last named is a dreary, pedantic work, in some 15,000 smooth, monotonous, eight-syllabled couplets, in which Grande Amour instructs the lover how to get the love of Bel Pucell.

CHAPTER II.

FROM CHAUCER TO SPENSER.

1400-1599.

The 15th century was a barren period in English literary history. It was nearly two hundred years after Chaucer's death before any poet came, whose name can be written in the same line with his. He was followed at once by a number of imitators who caught the trick of his language and verse, but lacked the genius to make any fine use of them. The manner of a true poet may be learned, but his style, in the high sense of the word, remains his own secret. Some of the poems which have been attributed to Chaucer and printed in editions of his works, as the *Court of Love*, the *Flower and the Leaf*, the *Cuckow and the Nightingale*, are now regarded by many scholars as the work of later writers. If not Chaucer's, they are of Chaucer's school, and the first two, at least, are very pretty poems after the fashion of his minor pieces, such as the *Boke of the Duchesse* and the *Parlament of Foules*. Among his professed disciples was Thomas Occleve, a dull rhymmer, who, in his *Governail of Princes*, a didactic poem translated from the Latin {43} about 1413, drew, or caused to be drawn, on the margin of his MS. a colored portrait of his "maister dere and fader reverent,"

"This londes verray tresour and richesse,
Dethe by thy dethe hath harm irreparable
Unto us done; hir vengeable duresse
Dispoiled hath this londe of the swetnesse
Of Rhetoryk."

Another versifier of this same generation was John Lydgate, a Benedictine monk, of the Abbey of Bury St. Edmunds, in Suffolk, a very prolix writer, who composed, among other things, the *Story of Thebes*, as an addition to the *Canterbury Tales*. His ballad of *London Lyckpenny*, recounting the adventures of a countryman who goes to the law courts at Westminster in search of justice, "But for lack of mony I could not speede," is of interest for the glimpse that it gives us of London street life. Chaucer's influence wrought more fruitfully in Scotland, whither it was carried by James I., who had been captured by the English when a boy of eleven, and brought up at Windsor as a prisoner of State. There he wrote during the reign of Henry V. (1413-1422) a poem in six cantos, entitled the *King's Quhair* (*King's Book*), in Chaucer's seven lined stanza which had been employed by Lydgate in his *Falls of Princes* (from Boccaccio), and which was afterward called {44} the "rime royal," from its use by King James. The *King's Quhair* tells how the poet, on a May morning, looks from the window of his prison chamber into the castle garden full of alleys, hawthorn hedges, and fair arbors set with "The sharpë, greenë, sweetë juniper." He was listening to "the little sweetë nightingale," when suddenly casting down his eyes he saw a lady walking in the garden, and at once his "heart became her thrall." The incident is precisely like Palamon's first sight of Emily in Chaucer's *Knight's Tale*, and almost in the very words of Palamon, the poet addresses his lady:

"Ah, sweet, are ye a worldly crëature
Or heavenly thing in likeness of natüre?
Or are ye very Nature, the goddëss,
That have depainted with your heavenly hand
This garden full of flowrës as they stand?"

Then, after a vision in the taste of the age, in which the royal prisoner is transported in turn to the courts of *Venus*, *Minerva*, and *Fortune*, and receives their instruction in the duties belonging to Love's service, he wakes from sleep and a white turtle-dove brings to his window a spray of red gillyflowers, whose leaves are inscribed, in golden letters, with a message of encouragement. James I. may be reckoned among the English poets. He mentions Chaucer, Gower, and Lydgate as his masters. His education was English, and so was the dialect of his poem, although the {45} unique MS. of it is in the Scotch spelling. The *King's Quhair* is somewhat overladen with ornament and with the fashionable allegorical devices, but it is, upon the whole, a rich and tender love song, the best specimen of court poetry between the time of Chaucer and the time of Spenser. The lady who walked in the garden on that May morning was Jane Beaufort, niece to Henry IV. She was married to her poet after his release from captivity and became Queen of Scotland in 1424. Twelve years later James was murdered by Sir Robert Graham and his Highlanders, and his wife, who strove to defend him, was wounded by the assassins. The story of the murder has been told of late by D. G. Rossetti, in his ballad, *The King's Tragedy*. The whole life of this princely singer was, like his poem, in the very spirit of romance. The effect of all this imitation of Chaucer was to fix a standard of literary style, and to confirm the authority of the East-Midland English in which he had written. Though the poets of the 15th century were not overburdened with genius, they had, at least, a definite model to follow. As in the 14th

century, metrical romances continued to be translated from the French, homilies and saints' legends and rhyming chronicles were still manufactured. But the poems of Occleve and Lydgate and James I. had helped to polish and refine the tongue and to prolong the Chaucerian tradition. The literary English never again slipped {46} back into the chaos of dialects which had prevailed before Chaucer. In the history of every literature the development of prose is later than that of verse. The latter being, by its very form, artificial, is cultivated as a fine art, and its records preserved in an early stage of society, when prose is simply the talk of men, and not thought worthy of being written and kept. English prose labored under the added disadvantage of competing with Latin, which was the cosmopolitan tongue and the medium of communication between scholars of all countries. Latin was the language of the Church, and in the Middle Ages churchman and scholar were convertible terms. The word clerk meant either priest or scholar. Two of the Canterbury Tales are in prose, as is also the Testament of Love, formerly ascribed to Chaucer, and the style of all these is so feeble, wandering, and unformed that it is hard to believe that they were written by the same man who wrote the Knight's Tale and the story of Griselda. The Voiage and Travaile of Sir John Maundeville--the forerunner of that great library of Oriental travel which has enriched our modern literature--was written, according to its author, first in Latin, then in French, and, lastly, in the year 1356, translated into English for the behoof of "lordes and knyghtes and othere noble and worthi men, that conne not Latyn but litylle." The author professed to have spent over thirty years in Eastern travel, to have penetrated as far {47} as Farther India and the "iles that ben abouten Indi," to have been in the service of the Sultan of Babylon in his wars against the Bedouins, and, at another time, in the employ of the Great Khan of Tartary. But there is no copy of the Latin version of his travels extant; the French seems to be much later than 1356, and the English MS. to belong to the early years of the fifteenth century, and to have been made by another hand. Recent investigations make it probable that Maundeville borrowed his descriptions of the remoter East from many sources, and particularly from the narrative of Odoric, a Minorite friar of Lombardy, who wrote about 1330. Some doubt is even cast upon the existence of any such person as Maundeville. Whoever wrote the book that passes under his name, however, would seem to have visited the Holy Land, and the part of the "voiage" that describes Palestine and the Levant is fairly close to the truth. The rest of the work, so far as it is not taken from the tales of other travelers, is a diverting tissue of fables about gryfouns that fly away with yokes of oxen, tribes of one-legged Ethiopians who shelter themselves from the sun by using their monstrous feet as umbrellas, etc. During the 15th century English prose was gradually being brought into a shape fitting it for more serious uses. In the controversy between the Church and the Lollards Latin was still mainly employed, but Wiclif had written some of his tracts in English, and, in 1449, Reginald Peacock, Bishop of {48} St. Asaph, contributed, in English, to the same controversy, The Represser of Overmuch Blaming of the Clergy. Sir John Fortescue, who was chief-justice of the king's bench from 1442-1460, wrote during the reign of Edward IV. a book on the Difference between Absolute and Limited Monarchy, which may be regarded as the first treatise on political philosophy and constitutional law in the language. But these works hardly belong to pure literature, and are remarkable only as early, though not very good, examples of English prose in a barren time. The 15th century was an era of decay and change. The Middle Age was dying, Church and State were slowly disintegrating under the new intellectual influences that were working secretly under ground. In England the civil wars of the Red and White Roses were breaking up the old feudal society by decimating and impoverishing the baronage, thus preparing the way for the centralized monarchy of the Tudors. Toward the close of that century, and early in the next, happened the four great events, or series of events, which freed and widened men's minds, and, in a succession of shocks, overthrew the mediaeval system of life and thought. These were the invention of printing, the Renaissance, or revival of classical learning, the discovery of America, and the Protestant Reformation. William Caxton, the first English printer, learned the art in Cologne. In 1476 he set up his press and sign, a red pole, in the Almonry at Westminster. Just before the introduction of printing the demand {49} for MS. copies had grown very active, stimulated, perhaps, by the coming into general use of linen paper instead of the more costly parchment. The scriptoria of the monasteries were the places where the transcribing and illuminating of MSS. went on, professional copyists resorting to Westminster Abbey, for example, to make their copies of books belonging to the monastic library. Caxton's choice of a spot was, therefore, significant. His new art for multiplying copies began to supersede the old method of transcription at the very head-quarters of the MS. makers. The first book that bears his Westminster imprint was the Dictes and Sayings of the Philosophers, translated from the French by Anthony Woodville, Lord Rivers, a brother-in-law of Edward IV. The list of books printed by Caxton is interesting, as showing the taste of the time, as he naturally selected what was most in demand. The list shows that manuals of devotion and chivalry were still in chief request, books like the Order of Chivalry, Faits of Arms, and the Golden Legend, which last Caxton translated himself, as well as Reynard the Fox, and a French version of the Aeneid. He also printed, with continuations of his own, revisions of several early chronicles, and editions of Chaucer, Gower, and Lydgate. A translation of Cicero on Friendship, made directly from the Latin, by Thomas Tiptoft, Earl of Worcester, was printed by Caxton, but no edition of a classical author in the original. The new

learning of the Renaissance had not, as {50} yet, taken much hold in England. Upon the whole, the productions of Caxton's press were mostly of a kind that may be described as mediaeval, and the most important of them, if we except his edition of Chaucer, was that "noble and joyous book," as Caxton called it, *Le Morte Darthur*, written by Sir Thomas Malory in 1469, and printed by Caxton in 1485. This was a compilation from French Arthur romances, and was by far the best English prose that had yet been written. It may be doubted, indeed, whether, for purposes of simple story telling, the picturesque charm of Malory's style has been improved upon. The episode which lends its name to the whole romance, the death of Arthur, is most impressively told, and Tennyson has followed Malory's narrative closely, even to such details of the scene as the little chapel by the sea, the moonlight, and the answer which Sir Bedivere made the wounded king, when bidden to throw Excalibur into the water, "What saw thou there?" said the king. 'Sir,' he said, 'I saw nothing but the waters wap and the waves wan.'

"I heard the ripple washing in the reeds

And the wild water lapping on the crag."

And very touching and beautiful is the oft-quoted lament of Sir Ector over Launcelot, in Malory's final chapter: "Ah, Launcelot,' he said, 'thou were head of all Christian knights; and now I dare say,' said Sir Ector, 'thou, Sir Launcelot, there thou liest, that thou were never matched of earthly {51} knight's hand; and thou were the courtiest knight that ever bare shield; and thou were the truest friend to thy lover that ever bestrode horse; and thou were the truest lover of a sinful man that ever loved woman; and thou were the kindest man that ever strake with sword; and thou were the goodliest person ever came among press of knights; and thou were the meekest man and the gentlest that ever ate in hall among ladies; and thou were the sternest knight to thy mortal foe that ever put spear in the rest.'" Equally good, as an example of English prose narrative, was the translation made by John Bourchier, Lord Berners, of that most brilliant of the French chroniclers, Chaucer's contemporary, Sir John Froissart. Lord Berners was the English governor of Calais, and his version of Froissart's *Chronicles* was made in 1523-25, at the request of Henry VIII. In these two books English chivalry spoke its last genuine word. In Sir Philip Sidney the character of the knight was merged into that of the modern gentleman. And although tournaments were still held in the reign of Elizabeth, and Spenser cast his *Faery Queene* into the form of a chivalry romance, these were but a ceremonial survival and literary tradition from an order of things that had passed away. How antagonistic the new classical culture was to the vanished ideal of the Middle Age may be read in *Toxophilus*, a treatise on archery published in 1545, by Roger Ascham, a Greek lecturer in Cambridge, and the {52} tutor of the Princess Elizabeth and of Lady Jane Grey. "In our forefathers' time, when Papistry as a standing pool covered and overflowed all England, few books were read in our tongue saving certain books of chivalry, as they said, for pastime and pleasure, which, as some say, were made in monasteries by idle monks or wanton canons: as one, for example, *Morte Arthure*, the whole pleasure of which book standeth in two special points, in open manslaughter and bold bawdry. This is good stuff for wise men to laugh at or honest men to take pleasure at. Yet I know when God's Bible was banished the Court, and *Morte Arthure* received into the prince's chamber." The fashionable school of courtly allegory, first introduced into England by the translation of the *Romaunt of the Rose*, reached its extremity in Stephen Hawes's *Passetyme of Pleasure*, printed by Caxton's successor, Wynkyn de Worde, in 1517. This was a dreary and pedantic poem, in which it is told how Graunde Amoure, after a long series of adventures and instructions among such shadowy personages as Verite, Observaunce, Falshed, and Good Operacion, finally won the love of La Belle Pucel. Hawes was the last English poet of note whose culture was exclusively mediaeval. His contemporary, John Skelton, mingled the old fashions with the new classical learning. In his *Bowge of Courte* (Court Entertainment or Dole), and in others of his earlier pieces, he used, like Hawes, Chaucer's seven-lined stanza. But his later {53} poems were mostly written in a verse of his own invention, called after him *Skeltonical*. This was a sort of glorified doggerel, in short, swift, ragged lines, with occasional intermixture of French and Latin. "Her beautye to augment.

Dame Nature hath her lent
A warte upon her cheke,
Who so lyst to seke
In her vyságe a skar,
That semyth from afar
Lyke to the radyant star,
All with favour fret,
So properly it is set.
She is the vyolet,
The daysy delectáble,

The columbine commendable,
The jelofer amyable;
For this most goodly floure,
This blossom of fressh colour,
So Jupiter me succour,
She florysheth new and new
In beaute and vertew;
_Hac claritate gemina,
O gloriosa femina, etc._"

Skelton was a rude railing rhymers, a singular mixture of a true and original poet with a buffoon; coarse as Rabelais, whimsical, obscure, but always vivacious. He was the rector of Diss, in Norfolk, but his profane and scurrilous wit seems rather out of keeping with his clerical character. His *Tunnyng of Elynoure Rummyng* is a study of very low life, reminding one slightly of Burns's *Jolly {54} Beggars*. His *Phyllyp Sparowe* is a sportive, pretty, fantastic elegy on the death of a pet bird belonging to Mistress Joanna Scroupe, of Carowe, and has been compared to the Latin poet Catullus's elegy on Lesbia's sparrow. In *Speke*, *Parrot*, and *Why Come ye not to Courte?* he assailed the powerful Cardinal Wolsey with the most ferocious satire, and was, in consequence, obliged to take sanctuary at Westminster, where he died in 1529. Skelton was a classical scholar, and at one time tutor to Henry VIII. The great humanist, Erasmus, spoke of him as the "one light and ornament of British letters." Caxton asserts that he had read Virgil, Ovid, and Tully, and quaintly adds, "I suppose he hath dronken of Elycon's well." In refreshing contrast with the artificial court poetry of the 15th and first three quarters of the 16th century, was the folk-poetry, the popular ballad literature which was handed down by oral tradition. The English and Scotch ballads were narrative songs, written in a variety of meters, but chiefly in what is known as the ballad stanza.

"In somer, when the shawes[1] be sheyne,[2]
And leves be large and longe,
Hit is full merry in feyre forést
To here the foulys song.

"To se the dere draw to the dale,
And leve the hilles hee,[3]
And shadow them in the leves grene,
Under the grene-wode tree."

[55]

It is not possible to assign a definite date to these ballads. They lived on the lips of the people, and were seldom reduced to writing till many years after they were first composed and sung. Meanwhile they underwent repeated changes, so that we have numerous versions of the same story. They belonged to no particular author, but, like all folk-lore, were handled freely by the unknown poets, minstrels, and ballad reciters, who modernized their language, added to them, or corrupted them, and passed them along. Coming out of an uncertain past, based on some dark legend of heart-break or bloodshed, they bear no poet's name, but are *ferae naturae*, and have the flavor of wild game. In the forms in which they are preserved few of them are older than the 17th century, or the latter part of the 16th century, though many, in their original shape, are, doubtless, much older. A very few of the Robin Hood ballads go back to the 15th century, and to the same period is assigned the charming ballad of the *Nut Brown Maid* and the famous border ballad of *Chevy Chase*, which describes a battle between the retainers of the two great houses of Douglas and Percy. It was this song of which Sir Philip Sidney wrote, "I never heard the old song of Percy and Douglas but I found myself more moved than by a trumpet; and yet it is sung but by some blind crouder, [4] with no rougher voice than rude style." But the style of the ballads was not always rude. {56} In their compressed energy of expression, in the impassioned abrupt, yet indirect way in which they tell their tale of grief and horror, there reside often a tragic power and art superior to any English poetry that had been written since Chaucer, superior even to Chaucer in the quality of intensity. The true home of the ballad literature was "the north country," and especially the Scotch border, where the constant forays of moss-troopers and the raids and private warfare of the lords of the marches supplied many traditions of heroism, like those celebrated in the old poem of the *Battle of Otterbourne*, and in the *Hunting of the Cheviot*, or *Chevy Chase*, already mentioned. Some of these

are Scotch and others English; the dialect of Lowland Scotland did not, in effect, differ much from that of Northumberland and Yorkshire, both descended alike from the old Northumbrian of Anglo-Saxon times. Other ballads were shortened, popular versions of the chivalry romances which were passing out of fashion among educated readers in the 16th century, and now fell into the hands of the ballad makers. Others preserved the memory of local countryside tales, family feuds, and tragic incidents, partly historical and partly legendary, associated often with particular spots. Such are, for example, *The Dowie Dens of Yarrow*, *Fair Helen of Kirkconnell*, *The Forsaken Bride*, and *The Twa Corbies*. Others, again, have a coloring of popular superstition, like the beautiful ballad concerning {57} *Thomas of Eryldoune*, who goes in at Eldon Hill with an Elf queen and spends seven years in fairy land. But the most popular of all the ballads were those which cluster about the name of that good outlaw, Robin Hood, who, with his merry men, hunted the forest of merry Sherwood, where he killed the king's deer and waylaid rich travelers, but was kind to poor knights and honest workmen. Robin Hood is the true ballad hero, the darling of the common people, as Arthur was of the nobles. The names of his Confessor, Friar Tuck; his mistress, Maid Marian; his companions, Little John, Scathelock, and Much, the Miller's son, were as familiar as household words. Langland, in the 14th century, mentions "rimes of Robin Hood," and efforts have been made to identify him with some actual personage, as with one of the dispossessed barons who had been adherents of Simon de Montfort in his war against Henry III. But there seems to be nothing historical about Robin Hood. He was a creation of the popular fancy. The game laws under the Norman kings were very oppressive, and there were, doubtless, dim memories still cherished among the Saxon masses of Hereward and Edric the Wild, who had defied the power of the Conqueror, as well as of later freebooters, who had taken to the woods and lived by plunder. Robin Hood was a thoroughly national character. He had the English love of fair-play, the English readiness to shake hands and {58} make up, and keep no malice when worsted in a square fight. He beat and plundered the rich bishops and abbots, who had more than their share of wealth, but he was generous and hospitable to the distressed, and lived a free and careless life in the good green wood. He was a mighty archer, with those national weapons, the long-bow and the cloth-yard-shaft. He tricked and baffled legal authority in the person of the proud sheriff of Nottingham, thereby appealing to that secret sympathy with lawlessness and adventure which marked the free-born, vigorous yeomanry of England. And finally the scenery of the forest gives a poetic background and a never-failing charm to the exploits of "the old Robin Hood of England" and his merry men. The ballads came, in time, to have certain tricks of style, such as are apt to characterize a body of anonymous folk-poetry. Such is their use of conventional epithets; "the red, red gold," "the good, green wood," "the gray goose wing." Such are certain recurring terms of phrase like, "But out and spak their stepmother." Such is, finally, a kind of sing-song repetition, which doubtless helped the ballad singer to memorize his stock, as, for example,

"She had'na pu'd a double rose,
A rose but only twae."

{59}

Or again,

"And mony ane sings o' grass, o' grass,
And mony ane sings o' corn;
An mony ane sings o' Robin Hood,
Kens little whare he was born.

It was na in the ha', the ha',
Nor in the painted bower;
But it was in the gude green wood,
Among the lily flower."

Copies of some of these old ballads were hawked about in the 16th century, printed in black letter, "broad sides," or single sheets. Wynkyn de Worde printed, in 1489, *A Lytell Geste of Robin Hood*, which is a sort of digest of earlier ballads on the subject. In the 17th century a few of the English popular ballads were collected in miscellanies, called *Garlands*. Early in the 18th century the Scotch poet, Allan Ramsay, published a number of Scotch ballads in the *Evergreen* and *Tea-Table Miscellany*. But no large and important collection was put forth until Percy's *Reliques*, 1765, a book which had a powerful influence upon Wordsworth and Walter Scott. In Scotland some excellent ballads in the ancient manner were written in the 18th century, such as Jane Elliott's *Lament for*

Flodden_, and the fine ballad of Sir Patrick Spence. Walter Scott's *Proud Maisie is in the Wood*_, is a perfect reproduction of the pregnant, indirect method of the old ballad makers. In 1453 Constantinople was taken by the Turks, {60} and many Greek scholars, with their MSS., fled into Italy, where they began teaching their language and literature, and especially the philosophy of Plato. There had been little or no knowledge of Greek in western Europe during the Middle Ages, and only a very imperfect knowledge of the Latin classics. Ovid and Statius were widely read, and so was the late Latin poet, Boethius, whose *De Consolatione Philosophiae*_ had been translated into English by King Alfred and by Chaucer. Little was known of Vergil at first hand, and he was popularly supposed to have been a mighty wizard, who made sundry works of enchantment at Rome, such as a magic mirror and statue. Caxton's so-called translation of the *Aeneid*_ was in reality nothing but a version of a French romance based on Vergil's epic. Of the Roman historians, orators, and moralists, such as Livy, Tacitus, Caesar, Cicero, and Seneca, there was an almost entire ignorance, as also of poets like Horace, Lucretius, Juvenal, and Catullus. The gradual rediscovery of the remains of ancient art and literature which took place in the 15th century, and largely in Italy, worked an immense revolution in the mind of Europe. MSS. were brought out of their hiding places, edited by scholars and spread abroad by means of the printing-press. Statues were dug up and placed in museums, and men became acquainted with a civilization far more mature than that of the Middle Age, and with models of perfect {61} workmanship in letters and the fine arts. In the latter years of the 15th century a number of Englishmen learned Greek in Italy and brought it back with them to England. William Grocyn and Thomas Linacre, who had studied at Florence under the refugee, Demetrius Chalcondylas, began teaching Greek, at Oxford, the former as early as 1491. A little later John Colet, Dean of St. Paul's and the founder of St. Paul's School, and his friend, William Lily, the grammarian and first master of St. Paul's (1500), also studied Greek abroad, Colet in Italy, and Lily at Rhodes and in the city of Rome. Thomas More, afterward the famous chancellor of Henry VIII., was among the pupils of Grocyn and Linacre at Oxford. Thither also, in 1497, came in search of the new knowledge, the Dutchman, Erasmus, who became the foremost scholar of his time. From Oxford the study spread to the sister university, where the first English Grecian of his day, Sir Jno. Cheke, who "taught Cambridge and King Edward Greek," became the incumbent of the new professorship founded about 1540. Among his pupils was Roger Ascham, already mentioned, in whose time St. John's College, Cambridge, was the chief seat of the new learning, of which Thomas Nash testifies that it "was as an universitie within itself; having more candles light in it, every winter morning before four of the clock, than the four of clock bell gave strokes." Greek was not introduced at the universities without violent {62} opposition from the conservative element, who were nicknamed Trojans. The opposition came in part from the priests, who feared that the new study would sow seeds of heresy. Yet many of the most devout churchmen were friends of a more liberal culture, among them Thomas More, whose Catholicism was undoubted and who went to the block for his religion. Cardinal Wolsey, whom More succeeded as chancellor, was also a munificent patron of learning and founded Christ Church College, at Oxford. Popular education at once felt the impulse of the new studies, and over twenty endowed grammar schools were established in England in the first twenty years of the 16th century. Greek became a passion even with English ladies. Ascham in his *Schoolmaster*_, a treatise on education, published in 1570, says, that Queen Elisabeth "readeth here now at Windsor more Greek every day, than some prebendarie of this Church doth read Latin in a whole week." And in the same book he tells how calling once upon Lady Jane Grey, at Brodegate, in Leicestershire, he "found her in her chamber reading *Phaedon Platonis*_ in Greek, and that with as much delite as some gentlemen would read a merry tale in *Bocace*_" and when he asked her why she had not gone hunting with the rest, she answered, "I wisse, all their sport in the park is but a shadow to that pleasure that I find in Plato." Ascham's *Schoolmaster*_, as well as his earlier book, *Toxophilus*_, a Platonic dialogue on archery, bristles with quotations from the Greek and Latin {63} classics, and with that perpetual reference to the authority of antiquity on every topic that he touches, which remained the fashion in all serious prose down to the time of Dryden. One speedy result of the new learning was fresh translations of the Scriptures into English, out of the original tongues. In 1525 William Tyndal printed at Cologne and Worms his version of the New Testament from the Greek. Ten years later Miles Coverdale made, at Zurich, a translation of the whole Bible from the German and the Latin. These were the basis of numerous later translations, and the strong beautiful English of Tyndal's *Testament*_ is preserved for the most part in our Authorized Version (1611). At first it was not safe to make or distribute these early translations in England. Numbers of copies were brought into the country, however, and did much to promote the cause of the Reformation. After Henry VIII. had broken with the Pope the new English Bible circulated freely among the people. Tyndal and Sir Thomas More carried on a vigorous controversy in English upon some of the questions at issue between the Church and the Protestants. Other important contributions to the literature of the Reformation were the homely sermons preached at Westminster and at Paul's Cross by Bishop Hugh Latimer, who was burned at Oxford in the reign of Bloody Mary. The English Book of Common Prayer was compiled in 1549-52. More was, perhaps, the best {64} representative of a group of scholars who wished to enlighten and reform the Church from inside, but who refused to follow Henry VIII. in his breach with Rome. Dean

Colet and John Fisher, Bishop of Rochester, belonged to the same company, and Fisher was beheaded in the same year (1535) with More, and for the same offense, namely, refusing to take the oath to maintain the act confirming the king's divorce from Catherine of Arragon and his marriage with Anne Boleyn. More's philosophy is best reflected in his *Utopia*, the description of an ideal commonwealth, modeled on Plato's Republic, and printed in 1516. The name signifies "no place" (*Outopos*), and has furnished an adjective to the language. The *Utopia* was in Latin, but More's *History of Edward V. and Richard III.*, written in 1513, though not printed till 1557, was in English. It is the first example in the tongue of a history as distinguished from a chronicle; that is, it is a reasoned and artistic presentation of an historic period, and not a mere chronological narrative of events. The first three quarters of the 16th century produced no great original work of literature in England. It was a season of preparation, of education. The storms of the Reformation interrupted and delayed the literary renaissance through the reigns of Henry VIII., Edward VI., and Queen Mary. When Elizabeth came to the throne, in 1558, a more settled order of things began, and a period of great national prosperity and {65} glory. Meanwhile the English mind had been slowly assimilating the new classical culture, which was extended to all classes of readers by the numerous translations of Greek and Latin authors. A fresh poetic impulse came from Italy. In 1557 appeared *Tottel's Miscellany*, containing songs and sonnets by a "new company of courtly makers." Most of the pieces in the volume had been written years before, by gentlemen of Henry VIII.'s court, and circulated in MS. The two chief contributors were Sir Thomas Wiat, at one time English ambassador to Spain, and that brilliant noble, Henry Howard, the Earl of Surrey, who was beheaded in 1547 for quartering the king's arms with his own. Both of them were dead long before their work was printed. The pieces in *Tottel's Miscellany* show very clearly the influence of Italian poetry. We have seen that Chaucer took subjects and something more from Boccaccio and Petrarch. But the sonnet, which Petrarch had brought to great perfection, was first introduced into England by Wiat. There was a great revival of sonneteering in Italy in the 16th century, and a number of Wiat's poems were adaptations of the sonnets and *canzoni* of Petrarch and later poets. Others were imitations of Horace's satires and epistles. Surrey introduced the Italian blank verse into English in his translation of two books of the *Aeneid*. The love poetry of *Tottel's Miscellany* is polished and artificial, like the models which it followed. Dante's {66} Beatrice was a child, and so was Petrarch's Laura. Following their example, Surrey addressed his love complaints, by way of compliment, to a little girl of the noble Irish family of Geraldine. The Amourists, or love sonneters, dwelt on the metaphysics of the passion with a tedious minuteness, and the conventional nature of their sighs and complaints may often be guessed by an experienced reader from the titles of their poems: "Description of the restless state of a lover, with suit to his lady to rue on his dying heart;" "Hell tormenteth not the damned ghosts so sore as unkindness the lover;" "The lover prayeth not to be disdained, refused, mistrusted, nor forsaken," etc. The most genuine utterance of Surrey was his poem written while imprisoned in Windsor--a cage where so many a song-bird has grown vocal. And Wiat's little piece of eight lines, "Of his Return from Spain," is worth reams of his amatory affectations. Nevertheless the writers in *Tottel's Miscellany* were real reformers of English poetry. They introduced new models of style and new metrical forms, and they broke away from the mediaeval traditions which had hitherto obtained. The language had undergone some changes since Chaucer's time, which made his scansion obsolete. The accent of many words of French origin, like *natüre*, *couräge*, *virtüe*, *matère*, had shifted to the first syllable, and the *e* of the final syllables *ës*, *ën*, *äd*, and *ë*, had largely disappeared. But the language of poetry tends {67} to keep up archaisms of this kind, and in Stephen Hawes, who wrote a century after Chaucer, we still find such lines as these:

"But he my strokës might right well endure,
He was so great and huge of puissánce." [5]

Hawes's practice is variable in this respect, and so is his contemporary, Skelton's. But in Wiat and Surrey, who wrote only a few years later, the reader first feels sure that he is reading verse pronounced quite in the modern fashion.

But Chaucer's example still continued potent. Spenser revived many of his obsolete words, both in his pastorals and in his *Faery Queene*, thereby imparting an antique remoteness to his diction, but incurring Ben Jonson's censure, that he "writ no language." A poem that stands midway between Spenser and late mediaeval work of Chaucer's school--such as Hawes's *Passetyme of Pleasure*--was the *Induction* contributed by Thomas Sackville, Lord Buckhurst, in 1563 to a collection of narrative poems called the *Mirroure for Magistrates*. The whole series was the work of many hands, modeled upon Lydgate's *Falls of Princes* (taken from Boccaccio), and was designed as a warning to great men of the fickleness of fortune. The *Induction* is the only noteworthy part of it. It was an allegory, written in Chaucer's seven-lined stanza and described with a somber imaginative power, the figure of Sorrow, her abode {68} in the "griesly lake" of Avernus and her attendants, Remorse, Dread, Old Age, etc. Sackville was the author of the first regular English tragedy, *Gorboduc*, and it was at his request that Ascham

wrote the *Schoolmaster*. Italian poetry also fed the genius of Edmund Spenser (1552-99). While a student at Pembroke Hall, Cambridge, he had translated some of the *Visions of Petrarch*, and the *Visions of Bellay*, a French poet, but it was only in 1579 that the publication of his *Shepherd's Calendar* announced the coming of a great original poet, the first since Chaucer. The *Shepherd's Calendar* was a pastoral in twelve eclogues--one for each month in the year. There had been a great revival of pastoral poetry in Italy and France, but, with one or two insignificant exceptions, Spenser's were the first bucolics in English. Two of his eclogues were paraphrases from Clement Marot, a French Protestant poet, whose psalms were greatly in fashion at the court of Francis I. The pastoral machinery had been used by Vergil and by his modern imitators, not merely to portray the loves of Strephon and Chloe, or the idyllic charms of rustic life; but also as a vehicle of compliment, elegy, satire, and personal allusion of many kinds. Spenser, accordingly, alluded to his friends, Sidney and Harvey, as the shepherds, Astrophel and Hobbinol, paid court to Queen Elizabeth as Cynthia, and introduced, in the form of anagrams, names of the High-Church Bishop of London, Aylmer, {69} and the Low-Church Archbishop Grindal. The conventional pastoral is a somewhat delicate exotic in English poetry, and represents a very unreal Arcadia. Before the end of the 17th century the squeak of the oaten pipe had become a burden, and the only piece of the kind which it is easy to read without some impatience is Milton's wonderful *Lycidas*. The *Shepherd's Calendar*, however, though it belonged to an artificial order of literature, had the unmistakable stamp of genius in its style. There was a broad, easy mastery of the resources of language, a grace, fluency, and music which were new to English poetry. It was written while Spenser was in service with the Earl of Leicester, and enjoying the friendship of his nephew, the all-accomplished Sidney, and was, perhaps, composed at the latter's country seat of Penshurst. In the following year Spenser went to Ireland as private secretary to Arthur Lord Grey of Wilton, who had just been appointed Lord Deputy of that kingdom. After filling several clerkships in the Irish government, Spenser received a grant of the castle and estate of Kilcolman, a part of the forfeited lands of the rebel Earl of Desmond. Here, among landscapes richly wooded, like the scenery of his own fairy land, "under the cool shades of the green alders by the Mulla's shore," Sir Walter Raleigh found him, in 1589, busy upon his *Faery Queene*. In his poem, *Colin Clouts Come Home Again*, Spenser tells, in pastoral language, how "the shepherd of the {70} ocean" persuaded him to go to London, where he presented him to the Queen, under whose patronage the first three books of his great poem were printed, in 1590. A volume of minor poems, entitled *Complaints*, followed in 1591, and the three remaining books of the *Faery Queene* in 1596. In 1595-96 he published also his *Daphnida*, *Prothalamion*, and the four hymns *On Love and Beauty*, and *On Heavenly Love and Heavenly Beauty*. In 1598, in Tyrone's rebellion, Kilcolman Castle was sacked and burned, and Spenser, with his family, fled to London, where he died in January, 1599. The *Faery Queene* reflects, perhaps, more fully than any other English work, the many-sided literary influences of the renaissance. It was the blossom of a richly composite culture. Its immediate models were Ariosto's *Orlando Furioso*, the first forty cantos of which were published in 1515, and Tasso's *Gerusalemme Liberata*, printed in 1581. Both of these were, in subject, romances of chivalry, the first based upon the old Charlemagne epos--Orlando being identical with the hero of the French *Chanson de Roland*--the second upon the history of the first Crusade, and the recovery of the Holy City from the Saracen. But in both of them there was a splendor of diction and a wealth of coloring quite unknown to the rude mediaeval romances. Ariosto and Tasso wrote with the great epics of Homer and Vergil constantly in mind, and all about them was the brilliant light of Italian art, in its early freshness {71} and power. The *Faery Queene*, too, was a tale of knight-errantry. Its hero was King Arthur, and its pages swarm with the familiar adventures and figures of Gothic romance; distressed ladies and their champions, combats with dragons and giants, enchanted castles, magic rings, charmed wells, forest hermitages, etc. But side by side with these appear the fictions of Greek mythology and the personified abstractions of fashionable allegory. Knights, squires, wizards, hamadryads, satyrs, and river gods, Idleness, Gluttony, and Superstition jostle each other in Spenser's fairy land. Descents to the infernal shades, in the manner of Homer and Vergil, alternate with descriptions of the Palace of Pride in the manner of the *Romaunt of the Rose*. But Spenser's imagination was a powerful spirit, and held all these diverse elements in solution. He removed them to an ideal sphere "apart from place, withholding time," where they seem all alike equally real, the dateless conceptions of the poet's dream. The poem was to have been "a continued allegory or dark conceit," in twelve books, the hero of each book representing one of the twelve moral virtues. Only six books and the fragment of a seventh were written. By way of complimenting his patrons and securing contemporary interest, Spenser undertook to make his allegory a double one, personal and historical, as well as moral or abstract. Thus Gloriana, the Queen of Faery, stands not only for Glory but for Elizabeth, {72} to whom the poem was dedicated. Prince Arthur is Leicester, as well as Magnificence. Duessa is Falsehood, but also Mary Queen of Scots. Grantorto is Philip II. of Spain. Sir Artegall is Justice, but likewise he is Arthur Grey de Wilton. Other characters shadow forth Sir Walter Raleigh, Sir Philip Sidney, Henry IV. of France, etc.; and such public events as the revolt of the Spanish Netherlands, the Irish rebellion, the execution of Mary Stuart, and the rising of the northern Catholic houses against Elizabeth are told in parable. In this way the

poem reflects the spiritual struggle of the time, the warfare of young England against Popery and Spain. The allegory is not always easy to follow. It is kept up most carefully in the first two books, but it sat rather lightly on Spenser's conscience, and is not of the essence of the poem. It is an ornament put on from the outside and detachable at pleasure. The "Spenserian stanza," in which the *Faery Queene* was written, was adapted from the *ottava rima* of Ariosto. Spenser changed somewhat the order of the rimes in the first eight lines and added a ninth line of twelve syllables, thus affording more space to the copious luxuriance of his style and the long-drawn sweetness of his verse. It was his instinct to dilate and elaborate every image to the utmost, and his similes, especially--each of which usually fills a whole stanza--have the pictorial amplitude of Homer's. Spenser was, in fact, a great painter. His poetry {73} is almost purely sensuous. The personages in the *Faery Queene* are not characters, but richly colored figures, moving to the accompaniment of delicious music, in an atmosphere of serene remoteness from the earth. Charles Lamb said that he was the poet's poet, that is, he appealed wholly to the artistic sense and to the love of beauty. Not until Keats did another English poet appear so filled with the passion for all outward shapes of beauty, so exquisitely alive to all impressions of the senses. Spenser was, in some respects, more an Italian than an English poet. It is said that the Venetian gondoliers still sing the stanzas of Tasso's *Gerusalemme Liberata*. It is not easy to imagine the Thames bargees chanting passages from the *Faery Queene*. Those English poets who have taken strongest hold upon their public have done so by their profound interpretation of our common life. But Spenser escaped altogether from reality into a region of pure imagination. His aerial creations resemble the blossoms of the epiphytic orchids, which have no root in the soil, but draw their nourishment from the moisture of the air.

"_Their_ birth was of the womb of morning dew,
And their conception of the glorious prime."

Among the minor poems of Spenser the most delightful were his *Prothalamion* and *Epithalamion*. The first was a "spousal verse," made for the double wedding of the Ladies Catherine and {74} Elizabeth Somerset, whom the poet figures as two white swans that come swimming down the Thames, whose surface the nymphs strew with lilies, till it appears "like a bride's chamber-floor." "Sweet Thames, run softly till I end my song," is the burden of each stanza. The *Epithalamion* was Spenser's own marriage song, written to crown his series of *Amoretti*, or love sonnets, and is the most splendid hymn of triumphant love in the language. Hardly less beautiful than these was *Muiopotmos*; or, the *Fate of the Butterfly*, an addition to the classical myth of Arachne, the spider. The four hymns in praise of *Love* and *Beauty*, *Heavenly Love* and *Heavenly Beauty*, are also stately and noble poems, but by reason of their abstractness and the Platonic mysticism which they express, are less generally pleasing than the others mentioned. Allegory and mysticism had no natural affiliation with Spenser's genius. He was a seer of visions, of *images* full, brilliant, and distinct, and not like Bunyan, Dante, or Hawthorne, a projector into bodily shapes of *ideas*, typical and emblematic, the shadows which haunt the conscience and the mind.

CHAPTER III.

THE AGE OF SHAKSPERE.

1564-1616.

The great age of English poetry opened with the publication of Spenser's *_Shepherd's Calendar_*, in 1579, and closed with the printing of Milton's *_Samson Agonistes_*, in 1671. Within this period of little less than a century English thought passed through many changes, and there were several successive phases of style in our imaginative literature. Milton, who acknowledged Spenser as his master, and who was a boy of eight years at Shakspeare's death, lived long enough to witness the establishment of an entirely new school of poets, in the persons of Dryden and his contemporaries. But, roughly speaking, the dates above given mark the limits of one literary epoch, which may not improperly be called the Elizabethan. In strictness the Elizabethan age ended with the queen's death, in 1603. But the poets of the succeeding reigns inherited much of the glow and splendor which marked the diction of their forerunners; and "the spacious times of great Elizabeth" have been, by courtesy, prolonged to the year of the Restoration (1660). There is a certain likeness {77} in the intellectual products of the whole period, a largeness of utterance, and a high imaginative cast of thought which stamp them all alike with the queen's seal. Nor is it by any undue stretch of the royal prerogative that the name of the monarch has attached itself to the literature of her reign and of the reigns succeeding hers. The expression "Victorian poetry" has a rather absurd sound when one considers how little Victoria counts for in the literature of her time. But in Elizabethan poetry the maiden queen is really the central figure. She is Cynthia, she is Thetis, great queen of shepherds and of the sea; she is Spenser's Gloriana, and even Shakspeare, the most impersonal of poets, paid tribute to her in *_Henry VIII_*, and, in a more delicate and indirect way, in the little allegory introduced into *_Midsummer Night's Dream_*.

"That very time I marked--but thou could'st not--
Flying between the cold moon and the earth,
Cupid all armed. A certain aim he took
At a fair vestal throned by the west,
And loosed his love-shaft smartly from his bow
As he would pierce a hundred thousand hearts.
But I might see young Cupid's fiery dart
Quenched in the chaste beams of the watery moon,
And the imperial votaress passed on
In maiden meditation, fancy free"--

an allusion to Leicester's unsuccessful suit for Elisabeth's hand.

The praises of the queen, which sound through {78} all the poetry of her time, seem somewhat overdone to a modern reader. But they were not merely the insipid language of courtly compliment. England had never before had a female sovereign, except in the instance of the gloomy and bigoted Mary. When she was succeeded by her more brilliant sister, the gallantry of a gallant and fantastic age was poured at the latter's feet, the sentiment of chivalry mingling itself with loyalty to the crown. The poets idealized Elisabeth. She was to Spenser, to Sidney, and to Raleigh, not merely a woman and a virgin queen, but the champion of Protestantism, the lady of young England, the heroine of the conflict against popery and Spain. Moreover Elisabeth was a great woman. In spite of the vanity, caprice, and ingratitude which disfigured her character, and the vacillating, tortuous policy which often

distinguished her government, she was at bottom a sovereign of large views, strong will, and dauntless courage. Like her father, she "loved a _man_," and she had the magnificent tastes of the Tudors. She was a patron of the arts, passionately fond of shows and spectacles, and sensible to poetic flattery. In her royal progresses through the kingdom, the universities and the nobles and the cities vied with one another in receiving her with plays, revels, masques, and triumphs, in the mythological taste of the day. "When the queen paraded through a country town," says Warton, the historian of English poetry, "almost every {79} pageant was a pantheon. When she paid a visit at the house of any of her nobility, at entering the hall she was saluted by the Penates. In the afternoon, when she condescended to walk in the garden, the lake was covered with tritons and nereids; the pages of the family were converted into wood-nymphs, who peeped from every bower; and the footmen gamboled over the lawns in the figure of satyrs. When her majesty hunted in the park she was met by Diana who, pronouncing our royal prude to be the brightest paragon of unspotted chastity, invited her to groves free from the intrusions of Acteon." The most elaborate of these entertainments of which we have any notice, were, perhaps, the games celebrated in her honor by the Earl of Leicester, when she visited him at Kenilworth, in 1575. An account of these was published by a contemporary poet, George Gascoigne, *The Princely Pleasures at the Court of Kenilworth*, and Walter Scott has made them familiar to modern readers in his novel of *Kenilworth*. Sidney was present on this occasion, and, perhaps, Shakspeare, then a boy of eleven, and living at Stratford, not far off, may have been taken to see the spectacle, may have seen Neptune, riding on the back of a huge dolphin in the castle lake, speak the copy of verses in which he offered his trident to the empress of the sea, and may have

"heard a mermaid on a dolphin's back,
Utter such dulcet and harmonious breath,
That the rude sea grew civil at the sound."

{80} But in considering the literature of Elisabeth's reign it will be convenient to speak first of the prose. While following up Spenser's career to its close (1599), we have, for the sake of unity of treatment, anticipated somewhat the literary history of the twenty years preceding. In 1579 appeared a book which had a remarkable influence on English prose. This was John Lyly's *Euphues, the Anatomy of Wit*. It was in form a romance, the history of a young Athenian who went to Naples to see the world and get an education; but it is in substance nothing but a series of dialogues on love, friendship, religion, etc., written in language which, from the title of the book, has received the name of *Euphuism*. This new English became very fashionable among the ladies, and "that beauty in court which could not parley Euphuism," says a writer of 1632, "was as little regarded as she which now there speaks not French." Walter Scott introduced a Euphuist into his novel the *Monastery*, but the peculiar jargon which Sir Piercie Shafton is made to talk is not at all like the real Euphuism. That consisted of antithesis, alliteration, and the profuse illustration of every thought by metaphors borrowed from a kind of fabulous natural history. "Descend into thine own conscience and consider with thyself the great difference between staring and stark-blind, wit and wisdom, love and lust; be merry, but with modesty; be sober, but not too sullen; {81} be valiant, but not too venturesome." "I see now that, as the fish *Scolopidus* in the flood *Araxes* at the waxing of the moon is as white as the driven snow, and at the waning as black as the burnt coal; so Euphues, which at the first increasing of our familiarity was very zealous, is now at the last cast become most faithless." Besides the fish *Scolopidus*, the favorite animals of Lyly's menagerie are such as the chameleon, which, "though he have most guts draweth least breath;" the bird *Piralis*, "which sitting upon white cloth is white, upon green, green;" and the serpent *Porphyrus*, which, "though he be full of poison, yet having no teeth, hurteth none but himself." Lyly's style was pithy and sententious, and his sentences have the air of proverbs or epigrams. The vice of Euphuism was its monotony. On every page of the book there was something pungent, something quotable; but many pages of such writing became tiresome. Yet it did much to form the hitherto loose structure of English prose, by lending it point and polish. His carefully balanced periods were valuable lessons in rhetoric, and his book became a manual of polite conversation and introduced that fashion of witty repartee, which is evident enough in Shakspeare's comic dialogue. In 1580 appeared the second part, *Euphues and his England*, and six editions of the whole work were printed before 1598. Lyly had many imitators. In Stephen Gosson's *School {82} of Abuse*, a tract directed against the stage and published about four months later than the first part of *Euphues*, the language is distinctly Euphuistic. The dramatist, Robert Greene, published, in 1587, his *Menaphon; Camilla's Alarum to Slumbering Euphues*, and his *Euphues's Censure to Philautus*. His brother dramatist, Thomas Lodge, published; in 1590, *Rosalynde; Euphues's Golden Legacy*, from which Shakspeare took the plot of *As You Like It*. Shakspeare and Ben Jonson both quote from *Euphues* in their plays, and Shakspeare was really writing Euphuism, when he wrote such a sentence as "Tis true, 'tis pity; pity 'tis 'tis true." That knightly gentleman, Philip Sidney, was a true type of the lofty aspiration and

manifold activity of Elizabethan England. He was scholar, poet, courtier, diplomatist, statesman, soldier, all in one. Educated at Oxford and then introduced at court by his uncle, the Earl of Leicester, he had been sent to France when a lad of eighteen, with the embassy which went to treat of the queen's proposed marriage to the Duke of Alencon, and was in Paris at the time of the Massacre of St. Bartholomew, in 1572. Afterward he had traveled through Germany, Italy, and the Netherlands, had gone as ambassador to the Emperor's Court, and every-where won golden opinions. In 1580, while visiting his sister Mary, Countess of Pembroke, at Wilton, he wrote, for her pleasure, the *Countess of Pembroke's Arcadia*, which {83} remained in MS. till 1590. This was a pastoral romance, after the manner of the Italian *Arcadia* of Sanazzaro, and the *Diana Enamorada* of Montemayor, a Portuguese author. It was in prose, but intermixed with songs and sonnets, and Sidney finished only two books and a portion of a third. It describes the adventures of two cousins, Musidorus and Pyrocles, who are wrecked on the coast of Sparta. The plot is very involved and is full of the stock episodes of romance: disguises, surprises, love intrigues, battles, jousts and single combats. Although the insurrection of the Helots against the Spartans forms a part of the story, the *Arcadia* is not the real *Arcadia* of the Hellenic Peloponnesus, but the fanciful country of pastoral romance, an unreal clime, like the Faery Land of Spenser. Sidney was our first writer of poetic prose. The poet Drayton says that he

"did first reduce

Our tongue from Lyly's writing, then in use,
Talking of stones, stars, plants, of fishes, flies,
Playing with words and idle similes."

Sidney was certainly no Euphuist, but his style was as "Italianated" as Lyly's, though in a different way. His English was too pretty for prose. His "Sidneian showers of sweet discourse" sowed every page of the *Arcadia* with those flowers of conceit, those sugared fancies which his contemporaries loved, but which the taste of a severer {84} age finds insipid. This splendid vice of the Elisabethan writers appears in Sidney, chiefly in the form of an excessive personification. If he describes a field full of roses, he makes "the roses add such a ruddy show unto it, as though the field were bashful at his own beauty." If he describes ladies bathing in a stream, he makes the water break into twenty bubbles, as "not content to have the picture of their face in large upon him, but he would in each of those bubbles set forth the miniature of them." And even a passage which should be tragic, such as the death of his heroine, Parthenia, he embroiders with conceits like these: "For her exceeding fair eyes having with continued weeping got a little redness about them, her round sweetly swelling lips a little trembling, as though they kissed their neighbor Death; in her cheeks the whiteness striving by little and little to get upon the rosiness of them; her neck, a neck indeed of alabaster, displaying the wound which with most dainty blood labored to drown his own beauties; so as here was a river of purest red, there an island of perfectest white," etc. The *Arcadia*, like *Euphues*, was a lady's book. It was the favorite court romance of its day, but it surfeits a modern reader with its sweetness, and confuses him with its tangle of adventures. The lady for whom it was written was the mother of that William Herbert, Earl of Pembroke, to whom Shakspeare's sonnets are thought to have been {85} dedicated. And she was the subject of Ben Jonson's famous epitaph.

"Underneath this sable herse
Lies the subject of all verse,
Sidney's sister, Pembroke's mother;
Death, ere thou hast slain another
Learn'd and fair and good as she,
Time shall throw a dart at thee."

Sidney's *Defense of Poesy*, composed in 1581, but not printed till 1595, was written in manlier English than the *Arcadia*, and is one of the very few books of criticism belonging to a creative and uncritical time. He was also the author of a series of love sonnets, *Astrophel and Stella*, in which he paid Platonic court to the Lady Penelope Rich (with whom he was not at all in love), according to the conventional usage of the amourists. Sidney died in 1586, from a wound received in a cavalry charge at Zutphen, where he was an officer in the English contingent, sent to help the Dutch against Spain. The story has often been told of his giving his cup of water to a wounded soldier with the words, "Thy necessity is yet greater than mine." Sidney was England's darling, and there was hardly a poet in the land from whom his death did not obtain "the meed of some melodious tear." Spenser's *Ruins of Time* were among the number of these funeral songs; but the best of them all was by one Matthew Royden, concerning whom little is known. {86} Another typical Englishman of Elisabeth's reign was Walter Raleigh, who was even more versatile than Sidney, and more representative of the restless spirit of romantic adventure, mixed with cool, practical

enterprise that marked the times. He fought against the Queen's enemies by land and sea in many quarters of the globe; in the Netherlands and in Ireland against Spain, with the Huguenot Army against the League in France. Raleigh was from Devonshire, the great nursery of English seamen. He was half-brother to the famous navigator, Sir Humphrey Gilbert, and cousin to another great captain, Sir Richard Grenville. He sailed with Gilbert on one of his voyages against the Spanish treasure fleet, and in 1591 he published a report of the fight, near the Azores, between Grenville's ship, the *Revenue*, and fifteen great ships of Spain, an action, said Francis Bacon, "memorable even beyond credit, and to the height of some heroical fable." Raleigh was active in raising a fleet against the Spanish Armada of 1588. He was present in 1596 at the brilliant action in which the Earl of Essex "sing'd the Spanish king's beard," in the harbor of Cadiz. The year before he had sailed to Guiana, in search of the fabled El Dorado, destroying on the way the Spanish town of San José, in the West Indies; and on his return he published his *Discovery of the Empire of Guiana*. In 1597 he captured the town of Fayal, in the Azores. He took a prominent part in colonizing {87} Virginia, and he introduced tobacco and the potato plant into Europe. America was still a land of wonder and romance, full of rumors, nightmares, and enchantments. In 1580, when Francis Drake, "the Devonshire Skipper," had dropped anchor in Plymouth harbor, after his voyage around the world, the enthusiasm of England had been mightily stirred. These narratives of Raleigh, and the similar accounts of the exploits of the bold sailors, Davis, Hawkins, Frobisher, Gilbert, and Drake; but especially the great cyclopedia of nautical travel, published by Richard Hakluyt, in 1589, *The Principal Navigations, Voyages, and Discoveries made by the English Nation*, worked powerfully on the imaginations of the poets. We see the influence of this literature of travel in the *Tempest*, written undoubtedly after Shakspeare had been reading the narrative of Sir George Somers's shipwreck on the Bermudas or "Isles of Devils." Raleigh was not in favor with Elizabeth's successor, James I. He was sentenced to death on a trumped-up charge of high treason. The sentence hung over him until 1618, when it was revived against him and he was beheaded. Meanwhile, during his twelve years' imprisonment in the Tower, he had written his *magnum opus*, the *History of the World*. This is not a history, in the modern sense, but a series of learned dissertations on law, government, theology, magic, war, etc. A chapter with such a caption as the following {88} would hardly be found in a universal history nowadays: "Of their opinion which make Paradise as high as the moon; and of others which make it higher than the middle region of the air." The preface and conclusion are noble examples of Elizabethan prose, and the book ends with an oft-quoted apostrophe to Death. "O eloquent, just: and mighty Death! Whom none could advise, thou has persuaded; what none hath dared, thou hast done; and whom all the world hath flattered, thou only hast cast out of the world and despised; thou hast drawn together all the far-fetched greatness, all the pride, cruelty, and ambition of man, and covered it all over with these two narrow words, *hic jacet*." Although so busy a man, Raleigh found time to be a poet. Spenser calls him "the summer's nightingale," and George Puttenham, in his *Art of English Poesy* (1589), finds his "vein most lofty, insolent, and passionate." Puttenham used *insolent* in its old sense, *uncommon*; but this description is hardly less true, if we accept the word in its modern meaning. Raleigh's most notable verses, *The Lie*, are a challenge to the world, inspired by indignant pride and the weariness of life--the *sæva indignatio* of Swift. The same grave and caustic melancholy, the same disillusion marks his quaint poem, *The Pilgrimage*. It is remarkable how many of the verses among his few poetical remains are asserted in the MSS. or by tradition to have been "made by Sir Walter {89} Raleigh the night before he was beheaded." Of one such poem the assertion is probably true, namely, the lines "found in his Bible in the gate-house at Westminster."

"Even such is Time, that takes in trust,
 Our youth, our joys, our all we have,
 And pays as but with earth and dust;
 Who in the dark and silent grave,
 When we have wandered all our ways,
 Shuts up the story of our days;
 But from this earth, this grave, this dust,
 My God shall raise me up, I trust!"

The strictly *literary* prose of the Elizabethan period bore a small proportion to the verse. Many entire departments of prose literature were as yet undeveloped. Fiction was represented--outside of the *Arcadia* and *Euphues* already mentioned--chiefly by tales translated or imitated from Italian *novelle*. George Turberville's *Tragical Tales* (1566) was a collection of such stories, and William Paynter's *Palace of Pleasure* (1576-1577) a similar collection from Boccaccio's *Decameron* and the novels of Bandello. These translations are mainly of interest, as having furnished plots to the English dramatists. Lodge's *Rosalind* and Robert Greene's *Pandosto*, the sources

respectively of Shakspeare's *As You Like It* and *Winter's Tale*, are short pastoral romances, not without prettiness in their artificial way. The satirical pamphlets of Thomas Nash and his fellows, against "Martin Marprelate," an anonymous writer, or {90} company of writers, who attacked the bishops, are not wanting in wit, but are so cumbered with fantastic whimsicalities, and so bound up with personal quarrels, that oblivion has covered them. The most noteworthy of them were Nash's *Piers Penniless's Supplication to the Devil*, Lyly's *Pap with a Hatchet*, and Greene's *Groat's Worth of Wit*. Of books which were not so much literature as the material of literature, mention may be made of the *Chronicle of England*, compiled by Ralph Holinshed in 1577. This was Shakspeare's English history, and its strong Lancastrian bias influenced Shakspeare in his representation of Richard III. and other characters in his historical plays. In his Roman tragedies Shakspeare followed closely Sir Thomas North's translation of Plutarch's *Lives*, made in 1579 from the French version of Jacques Amyot. Of books belonging to other departments than pure literature, the most important was Richard Hooker's *Ecclesiastical Polity*, the first four books of which appeared in 1594. This was a work on the philosophy of law and a defense, as against the Presbyterians, of the government of the English Church by bishops. No work of equal dignity and scope had yet been published in English prose. It was written in sonorous, stately and somewhat involved periods, in a Latin rather than an English idiom, and it influenced strongly the diction of later writers, such as Milton and Sir Thomas Browne. Had the *Ecclesiastical Polity* been written one hundred, or perhaps even fifty, {91} years earlier, it would doubtless have been written in Latin. The life of Francis Bacon, "the father of inductive philosophy," as he has been called--better, the founder of inductive logic--belongs to English history, and the bulk of his writings, in Latin and English, to the history of English philosophy. But his volume of *Essays* was a contribution to general literature. In their completed form they belong to the year 1625, but the first edition was printed in 1597 and contained only ten short essays, each of them rather a string of pregnant maxims--the text for an essay--than that developed treatment of a subject which we now understand by the word essay. They were, said their author, "as grains of salt that will rather give you an appetite than offend you with satiety." They were the first essays so-called in the language. "The word," said Bacon, "is late, but the thing is ancient." The word he took from the French *essais* of Montaigne, the first two books of which had been published in 1592. Bacon testified that his essays were the most popular of his writings because they "came home to men's business and bosoms." Their alternate title explains their character: *Counsels Civil and Moral*, that is, pieces of advice touching the conduct of life, "of a nature whereof men shall find much in experience, little in books." The essays contain the quintessence of Bacon's practical wisdom, his wide knowledge of the world of {92} men. The truth and depth of his sayings, and the extent of ground which they cover, as well as the weighty compactness of his style, have given many of them the currency of proverbs. "Revenge is a kind of wild justice." "He that hath wife and children hath given hostages to fortune." "There is no excellent beauty that hath not some strangeness in the proportion." Bacon's reason was illuminated by a powerful imagination, and his noble English rises now and then, as in his essay *On Death*, into eloquence--the eloquence of pure thought, touched gravely and afar off by emotion. In general, the atmosphere of his intellect is that *lumen siccum* which he loved to commend, "not drenched or bloodied by the affections." Dr. Johnson said that the wine of Bacon's writings was a dry wine. A popular class of books in the 17th century were "characters" or "witty descriptions of the properties of sundry persons," such as the *Good Schoolmaster*, the *Clown*, the *Country Magistrate*; much as in some modern *Heads of the People* where Douglas Jerrold or Leigh Hunt sketches the *Medical Student*, the *Monthly Nurse*, etc. A still more modern instance of the kind is George Eliot's *Impressions of Theophrastus Such*, which derives its title from the Greek philosopher, Theophrastus, whose character-sketches were the original models of this kind of literature. The most popular character-book in Europe in the 17th century was La Bruyère's *Caractères*. But {93} this was not published till 1588. In England the fashion had been set in 1614, by the *Characters* of Sir Thomas Overbury, who died by poison the year before his book was printed. One of Overbury's sketches--the *Fair and Happy Milkmaid*--is justly celebrated for its old-world sweetness and quaintness. "Her breath is her own, which scents all the year long of June, like a new-made hay-cock. She makes her hand hard with labor, and her heart soft with pity; and when winter evenings fall early, sitting at her merry wheel, she sings defiance to the giddy wheel of fortune. She bestows her year's wages at next fair, and, in choosing her garments, counts no bravery in the world like decency. The garden and bee-hive are all her physic and surgery, and she lives the longer for it. She dares go alone and unfold sheep in the night, and fears no manner of ill, because she means none; yet to say truth, she is never alone, but is still accompanied with old songs, honest thoughts and prayers, but short ones. Thus lives she, and all her care is she may die in the spring-time, to have store of flowers stuck upon her winding-sheet." England was still merry England in the times of good Queen Bess, and rang with old songs, such as kept this milkmaid company; songs, said Bishop Joseph Hall, which were "sung to the wheel and sung unto the pail." Shakspeare loved their simple minstrelsy; he put some of them into the mouth of Ophelia, and scattered snatches of {94} them through his plays, and wrote others like them himself:

"Now, good Cesario, but that piece of song,
 That old and antique song we heard last night,
 Methinks it did relieve my passion much,
 More than light airs and recollected terms
 Of these most brisk and giddy-paced times.
 Mark it, Cesario, it is old and plain.
 The knitters and the spinners in the sun
 And the free maids that weave their threads with bones
 Do use to chant it; it is silly sooth
 And dallies with the innocence of love
 Like the old age."

Many of these songs, so natural, fresh, and spontaneous, together with sonnets and other more elaborate forms of lyrical verse, were printed in miscellanies, such as the *Passionate Pilgrim*, *England's Helicon*, and Davison's *Poetical Rhapsody*. Some were anonymous, or were by poets of whom little more is known than their names. Others were by well-known writers, and others, again, were strewn through the plays of Lyly, Shakspeare, Jonson, Beaumont, Fletcher, and other dramatists. Series of love sonnets, like Spenser's *Amoretti* and Sidney's *Astrophel and Stella*, were written by Shakspeare, Daniel, Drayton, Drummond, Constable, Watson, and others, all dedicated to some mistress real or imaginary. Pastorals, too, were written in great number, such as William Browne's *Britannia's Pastorals* and *Shepherd's Pipe* (1613-1616) and Marlowe's charmingly rococo little idyl, {95} *The Passionate Shepherd to his Love*, which Shakspeare quoted in the *Merry Wives of Windsor*, and to which Sir Walter Raleigh wrote a reply. There were love stories in verse, like Arthur Brooke's *Romeo and Juliet* (the source of Shakspeare's tragedy), Marlowe's fragment, *Hero and Leander*, and Shakspeare's *Venus and Adonis*, and *Rape of Lucrece*, the first of these on an Italian and the other three on classical subjects, though handled in any thing but a classical manner. Wordsworth said finely of Shakspeare, that he "could not have written an epic: he would have died of a plethora of thought." Shakspeare's two narrative poems, indeed, are by no means models of their kind. The current of the story is choked at every turn, though it be with golden sand. It is significant of his dramatic habit of mind that dialogue and soliloquy usurp the place of narration, and that, in the *Rape of Lucrece* especially, the poet lingers over the analysis of motives and feelings, instead of hastening on with the action, as Chaucer, or any born story-teller, would have done. In Marlowe's poem there is the same spendthrift fancy, although not the same subtlety. In the first two divisions of the poem the story does, in some sort, get forward; but in the continuation, by George Chapman (who wrote the last four "sestiaids"), the path is utterly lost, "with woodbine and the gadding vine o'ergrown." One is reminded that modern poetry, if it has {96} lost in richness, has gained in directness, when one compares any passage in Marlowe and Chapman's *Hero and Leander* with Byron's ringing lines:

"The wind is high on Helle's wave,
 As on that night of stormy water,
 When Love, who sent, forgot to save
 The young, the beautiful, the brave,
 The lonely hope of Sestos' daughter."

Marlowe's continuator, Chapman, wrote a number of plays, but he is best remembered by his royal translation of Homer, issued in parts from 1598-1615. This was not so much a literal translation of the Greek, as a great Elizabethan poem, inspired by Homer. It has Homer's fire, but not his simplicity; the energy of Chapman's fancy kindling him to run beyond his text into all manner of figures and conceits. It was written, as has been said, as Homer would have written if he had been an Englishman of Chapman's time. Certainly all later versions--Pope's and Cowper's and Lord Derby's and Bryant's--seem pale against the glowing exuberance of Chapman's English. His verse was not the heroic line of ten syllables, chosen by most of the standard translators, but the long fourteen-syllabled measure, which degenerates easily into sing-song in the hands of a feeble metrist. In Chapman it is often harsh, but seldom tame, and in many passages it reproduces wonderfully the ocean-like roll of Homer's hexameters. {97}

"From his bright helm and shield did burn a most unwearied fire,
 Like rich Autumnus' golden lamp, whose brightness men admire,
 Past all the other host of stars when, with his cheerful face,
 Fresh washed in lofty ocean waves, he doth the sky enchase."

Keats's fine ode, *On First Looking into Chapman's Homer*, is well-known. Fairfax's version of Tasso's *Jerusalem Delivered* (1600) is one of the best metrical translations in the language. The national pride in the achievements of Englishmen, by land and sea, found expression, not only in prose chronicles and in books, like Stow's *Survey of London*, and Harrison's *Description of England* (prefixed to Holinshed's *Chronicle*), but in long historical and descriptive poems, like William Warner's *Albion's England*, 1586; Samuel Daniel's *History of the Civil Wars*, 1595-1602; Michael Drayton's *Baron's Wars*, 1596, *England's Heroical Epistles*, 1598, and *Polyolbion*, 1613. The very plan of these works was fatal to their success. It is not easy to digest history and geography into poetry. Drayton was the most considerable poet of the three, but his *Polyolbion* was nothing more than "a gazeteer in rime," a topographical survey of England and Wales, with tedious personifications of rivers, mountains, and valleys, in thirty books and nearly one hundred thousand lines. It was Drayton who said of Marlowe, that he "had in him those brave translunary things that the first poets had;" and there are brave {98} things in Drayton, but they are only occasional passages, oases among dreary wastes of sand. His *Agincourt* is a spirited war-song, and his *Nymphidia*; or, *Court of Faery*, is not unworthy of comparison with Drake's *Culprit Fay*, and is interesting as bringing in Oberon and Robin Goodfellow, and the popular fairy lore of Shakspeare's *Midsummer Night's Dream*. The "well-linguaged Daniel," of whom Ben Jonson said that he was "a good honest man, but no poet," wrote, however, one fine meditative piece, his *Epistle to the Countess of Cumberland*, a sermon apparently on the text of the Roman poet Lucretius's famous passage in praise of philosophy, "Suave mari magno, turbantibus aequora ventis," etc.

But the Elizabethan genius found its fullest and truest expression in the drama. It is a common phenomenon in the history of literature that some old literary form or mold will run along for centuries without having any thing poured into it worth keeping, until the moment comes when the genius of the time seizes it and makes it the vehicle of immortal thought and passion. Such was in England the fortune of the stage play. At a time when Chaucer was writing character-sketches that were really dramatic, the formal drama consisted of rude miracle plays that had no literary quality whatever. These were taken from the Bible and acted at first by the priests as illustrations of Scripture history and additions to the {99} church service on feasts and saints' days. Afterward the town guilds, or incorporated trades, took hold of them and produced them annually on scaffolds in the open air. In some English cities, as Coventry and Chester, they continued to be performed almost to the close of the 16th century. And in the celebrated Passion Play, at Oberammergau, in Bavaria, we have an instance of a miracle play that has survived to our own day. These were followed by the moral plays, in which allegorical characters, such as Clergy, Lusty Juventus, Riches, Folly, and Good Demeanance, were the persons of the drama. The comic character in the miracle plays had been the Devil, and he was retained in some of the moralities side by side with the abstract vice, who became the clown or fool of Shaksperian comedy. The "formal Vice, Iniquity," as Shakspeare calls him, had it for his business to belabor the roaring Devil with his wooden sword

. . "with his dagger of lath
 In his rage and his wrath
 Cries 'Aha!' to the Devil,
 'Pare your nails, Goodman Evil!'"

He survives also in the harlequin of the pantomimes, and in Mr. Punch, of the puppet shows, who kills the Devil and carries him off on his back, when the latter is sent to fetch him to hell for his crimes.

Masques and interludes--the latter a species of {100} short farce--were popular at the Court of Henry VIII. Elisabeth was often entertained at the universities or at the inns of court with Latin plays, or with translations from Seneca, Euripides, and Ariosto. Original comedies and tragedies began to be written, modeled upon Terence, and Seneca, and chronicle histories founded on the annals of English kings. There was a Master of the Revels at court, whose duty it was to select plays to be performed before the queen, and these were acted by the children of the Royal Chapel, or by the choir boys of St. Paul's Cathedral. These early plays are of interest to students of the history of the drama, and throw much light upon the construction of later plays, like Shakspeare's; but they are rude and inartistic, and without any literary quality. There were also private companies of actors maintained by wealthy noblemen, like the Earl of Leicester, and bands of strolling players, who acted in inn-yards and bear-gardens. It was not until stationary theaters were built and stock companies of actors regularly licensed and established, that any plays were produced which deserve the name of literature. In 1576 the first play-house was built in London. This was the *Black Friars*, which was located within the liberties of the dissolved monastery of the Black Friars, in order to be

outside of the jurisdiction of the Mayor and Corporation, who were Puritan, and determined in their opposition to the stage. For the same reason the {101} _Theater_ and the _Curtain_ were built in the same year, outside the city walls in Shoreditch. Later the _Rose_, the _Globe_, and the _Swan_, were erected on the Bankside, across the Thames, and play-goers resorting to them were accustomed to "take boat." These early theaters were of the rudest construction. The six-penny spectators, or "groundlings," stood in the yard, or pit, which had neither floor nor roof. The shilling spectators sat on the stage, where they were accommodated with stools and tobacco pipes, and whence they chaffed the actors or the "opposed rascality" in the yard. There was no scenery, and the female parts were taken by boys. Plays were acted in the afternoon. A placard, with the letters "Venice," or "Rome," or whatever, indicated the place of the action. With such rude appliances must Shakspeare bring before his audience the midnight battlements of Elsinore and the moonlit garden of the Capulets. The dramatists had to throw themselves upon the imagination of their public, and it says much for the imaginative temper of the public of that day, that it responded to the appeal. It suffered the poet to transport it over wide intervals of space and time, and "with aid of some few foot and half-foot words, fight over York and Lancaster's long jars." Pedantry undertook, even at the very beginnings of the Elisabethan drama, to shackle it with the so-called rules of Aristotle, or classical unities of time and place, {102} to make it keep violent action off the stage and comedy distinct from tragedy. But the playwrights appealed from the critics to the truer sympathies of the audience, and they decided for freedom and action, rather than restraint and recitation. Hence our national drama is of Shakspeare, and not of Racine. By 1603 there were twelve play-houses in London in full blast, although the city then numbered only one hundred and fifty thousand inhabitants. Fresh plays were produced every year. The theater was more to the Englishman of that time than it has ever been before or since. It was his club, his novel, his newspaper all in one. No great drama has ever flourished apart from a living stage, and it was fortunate that the Elisabethan dramatists were, almost all of them, actors and familiar with stage effect. Even the few exceptions, like Beaumont and Fletcher, who were young men of good birth and fortune, and not dependent on their pens, were probably intimate with the actors, lived in a theatrical atmosphere, and knew practically how plays should be put on. It had now become possible to earn a livelihood as an actor and playwright. Richard Burbage and Edward Alleyn, the leading actors of their generation, made large fortunes. Shakspeare himself made enough from his share in the profits of the _Globe_ to retire with a competence, some seven years before his death, and purchase a handsome {103} property in his native Stratford. Accordingly, shortly after 1580, a number of men of real talent began to write for the stage as a career. These were young graduates of the universities, Marlowe, Greene, Peele, Kyd, Lyly, Lodge, and others, who came up to town and led a Bohemian life as actors and playwrights. Most of them were wild and dissipated, and ended in wretchedness. Peele died of a disease brought on by his evil courses; Greene, in extreme destitution, from a surfeit of Rhenish wine and pickled herring; and Marlowe was stabbed in a tavern brawl. The Euphuist Lyly produced eight plays from 1584 to 1601. They were written for court entertainments, in prose and mostly on mythological subjects. They have little dramatic power, but the dialogue is brisk and vivacious, and there are several pretty songs in them. All the characters talk Euphuism. The best of these was _Alexander and Campaspe_, the plot of which is briefly as follows. Alexander has fallen in love with his beautiful captive, Campaspe, and employs the artist Apelles to paint her portrait. During the sittings, Apelles becomes enamored of his subject and declares his passion, which is returned. Alexander discovers their secret, but magnanimously forgives the treason and joins the lovers' hands. The situation is a good one, and capable of strong treatment in the hands of a real dramatist. But Lyly slips smoothly over the crisis of the action and, in place of passionate scenes, gives {104} us clever discourses and soliloquies, or, at best, a light interchange of question and answer, full of conceits, repartees, and double meanings. For example:

"_Apel_. Whom do you love best in the world?"

"_Camp_. He that made me last in the world.

"_Apel_. That was a God.

"_Camp_. I had thought it had been a man," etc.

Lyly's service to the drama consisted in his introduction of an easy and sparkling prose as the language of high comedy, and Shakspeare's indebtedness to the fashion thus set is seen in such passages as the wit combats between Benedict and Beatrice in _Much Ado about Nothing_, greatly superior as they are to any thing of the kind in Lyly. The most important of the dramatists, who were Shakspeare's forerunners, or early contemporaries, was Christopher or--as he was familiarly called--Kit Marlowe. Born in the same year with Shakspeare (1564), he died in 1593, at

which date his great successor is thought to have written no original plays, except the *Comedy of Errors* and *Love's Labour's Lost*. Marlowe first popularized blank verse as the language of tragedy in his *Tamburlaine*, written before 1587, and in subsequent plays he brought it to a degree of strength and flexibility which left little for Shakspeare to do but to take it as he found it. *Tamburlaine* was a crude, violent piece, full of exaggeration and bombast, but with passages here and there of splendid {105} declamation, justifying Ben Jonson's phrase, "Marlowe's mighty line." Jonson, however, ridiculed, in his *Discoveries*, the "scenical strutting and furious vociferation" of Marlowe's hero; and Shakspeare put a quotation from *Tamburlaine* into the mouth of his ranting Pistol. Marlowe's *Edward II.* was the most regularly constructed and evenly written of his plays. It was the best historical drama on the stage before Shakspeare, and not undeserving of the comparison which it has provoked with the latter's *Richard II.* But the most interesting of Marlowe's plays, to a modern reader, is the *Tragical History of Doctor Faustus*. The subject is the same as in Goethe's *Faust*, and Goethe, who knew the English play, spoke of it as greatly planned. The opening of Marlowe's *Faustus* is very similar to Goethe's. His hero, wearied with unprofitable studies, and filled with a mighty lust for knowledge and the enjoyment of life, sells his soul to the Devil in return for a few years of supernatural power. The tragic irony of the story might seem to lie in the frivolous use which Faustus makes of his dearly bought power, wasting it in practical jokes and feats of legerdemain; but of this Marlowe was probably unconscious. The love story of Margaret, which is the central point of Goethe's drama, is entirely wanting in Marlowe's, and so is the subtle conception of Goethe's Mephistophiles. Marlowe's handling of the supernatural is materialistic and downright, as befitted an age which believed in witchcraft. The {106} greatest part of the English *Faustus* is the last scene, in which the agony and terror of suspense with which the magician awaits the stroke of the clock that signals his doom are powerfully drawn.

"O lente, lente currile, noctis equi!
The stars move still, time runs, the clock will strike.
O soul, be changed into little water-drops,
And fall into the ocean, ne'er be found!"

Marlowe's genius was passionate and irregular. He had no humor, and the comic portions of *Faustus* are scenes of low buffoonery.

George Peele's masterpiece, *David and Bethsabe*, was also, in many respects, a fine play, though its beauties were poetic rather than dramatic, consisting not in the characterization--which is feeble--but in the eastern luxuriance of the imagery. There is one noble chorus--

"O proud revolt of a presumptuous man," etc.

which reminds one of passages in Milton's *Samson Agonistes*, and occasionally Peele rises to such high Aeschylean audacities as this:

"At him the thunder shall discharge his bolt,
And his fair spouse, with bright and fiery wings,
Sit ever burning on his hateful bones."

Robert Greene was a very unequal writer. His plays are slovenly and careless in construction, and he puts classical allusions into the mouths of milkmaids and serving boys, with the grotesque pedantry and want of keeping common among the {107} playwrights of the early stage. He has, notwithstanding, in his comedy parts, more natural lightness and grace than either Marlowe or Peele. In his *Friar Bacon and Friar Bungay*, and his *Pinner of Wakefield*, there is a fresh breath, as of the green English country, in such passages as the description of Oxford, the scene at Harleston Fair, and the picture of the dairy in the keeper's lodge at merry Fressingfield. In all these ante-Shaksperian dramatists there was a defect of art proper to the first comers in a new literary departure. As compared not only with Shakspeare, but with later writers, who had the inestimable advantage of his example, their work was full of imperfection, hesitation, experiment. Marlowe was probably, in native genius, the equal at least of Fletcher or Webster, but his plays, as a whole, are certainly not equal to theirs. They wrote in a more developed state of the art. But the work of this early school settled the shape which the English drama was to take. It fixed the practice and traditions of the national theater. It decided that the drama was to deal with the whole of life, the real and the ideal, tragedy and comedy, prose and verse, in the same play, without limitations of time, place, and action. It decided that

the English play was to be an action, and not a dialogue, bringing boldly upon the mimic scene feasts, dances, processions, hangings, riots, plays within plays, drunken revels, beatings, battle, murder, and sudden death. It established blank verse, {108} with occasional riming couplets at the close of a scene or of a long speech, as the language of the tragedy and high comedy parts, and prose as the language of the low comedy and "business" parts. And it introduced songs, a feature of which Shakspeare made exquisite use. Shakspeare, indeed, like all great poets, invented no new form of literature, but touched old forms to finer purposes, refining every thing, discarding nothing. Even the old chorus and dumb show he employed, though sparingly, as also the old jig, or comic song, which the clown used to give between the acts. Of the life of William Shakspeare, the greatest dramatic poet of the world, so little is known that it has been possible for ingenious persons to construct a theory--and support it with some show of reason--that the plays which pass under his name were really written by Bacon or some one else. There is no danger of this paradox ever making serious headway, for the historical evidence that Shakspeare wrote Shakspeare's plays, though not overwhelming, is sufficient. But it is startling to think that the greatest creative genius of his day, or perhaps of all time, was suffered to slip out of life so quietly that his title to his own works could even be questioned only two hundred and fifty years after the event. That the single authorship of the Homeric poems should be doubted is not so strange, for Homer is almost prehistoric. But Shakspeare was a modern Englishman, and at the time of his death the first English colony in {109} America was already nine years old. The important known facts of his life can be told almost in a sentence. He was born at Stratford-on-Avon in 1564, married when he was eighteen, went to London probably in 1587, and became an actor, playwright, and stockholder in the company which owned the Blackfriars and the Globe Theaters. He seemingly prospered in his calling and retired about 1609 to Stratford, where he lived in the house that he had bought some years before, and where he died in 1616. His *Venus and Adonis* was printed in 1593, the *Rape of Lucrece* in 1594, and his *Sonnets* in 1609. So far as is known, only eighteen of the thirty-seven plays generally attributed to Shakspeare were printed during his life-time. These were printed singly, in quarto shape, and were little more than stage books, or librettos. The first collected edition of his works was the so-called "First Folio" of 1623, published by his fellow-actors, Heming and Condell. No contemporary of Shakspeare thought it worth while to write a life of the stage-player. There are a number of references to him in the literature of the time; some generous, as in Ben Jonson's well-known verses; others singularly unappreciative, like Webster's mention of "the right happy and copious industry of Master Shakspeare." But all these together do not begin to amount to the sum of what was said about Spenser, or Sidney, or Raleigh, or Ben Jonson. There is, indeed, nothing to show that his contemporaries understood what a man they had {110} among them in the person of "Our English Terence, Mr. Will Shakespeare!" The age, for the rest, was not a self-conscious one, nor greatly given to review writing and literary biography. Nor is there enough of self-revelation in Shakspeare's plays to aid the reader in forming a notion of the man. He lost his identity completely in the characters of his plays, as it is the duty of a dramatic writer to do. His sonnets have been examined carefully in search of internal evidence as to his character and life, but the speculations founded upon them have been more ingenious than convincing. Shakspeare probably began by touching up old plays. *Henry VI.* and the bloody tragedy of *Titus Andronicus*, if Shakspeare's at all, are doubtless only his revision of pieces already on the stage. The *Taming of the Shrew* seems to be an old play worked over by Shakspeare and some other dramatist, and traces of another hand are thought to be visible in parts of *Henry VIII.*, *Pericles*, and *Timon of Athens*. Such partnerships were common among the Elizabethan dramatists, the most illustrious example being the long association of Beaumont and Fletcher. The plays in the First Folio were divided into histories, comedies, and tragedies, and it will be convenient to notice them briefly in that order. It was a stirring time when the young adventurer came to London to try his fortune. Elisabeth had finally thrown down the gage of battle to Catholic Europe, by the execution of Mary Stuart, in 1587. {111} The following year saw the destruction of the colossal Armada, which Spain had sent to revenge Mary's death, and hard upon these events followed the gallant exploits of Grenville, Essex, and Raleigh. That Shakspeare shared the exultant patriotism of the times, and the sense of their aloofness from the continent of Europe, which was now born in the breasts of Englishmen, is evident from many a passage in his plays.

"This happy breed of men, this little world,
This precious stone set in a silver sea,
This blessed plot, this earth, this realm, this England,
This land of such dear souls, this dear, dear land,
England, bound in with the triumphant sea!"

His English histories are ten in number. Of these *King John* and *Henry VIII.* are isolated plays. The others form a consecutive series, in the following order: *Richard III.*, the two parts of *Henry IV.*, *Henry V.*, the three

parts of Henry VI., and Richard III. This series may be divided into two, each forming a tetralogy, or group of four plays. In the first the subject is the rise of the house of Lancaster. But the power of the Red Rose was founded in usurpation. In the second group, accordingly, comes the Nemesis, in the civil wars of the Roses, reaching their catastrophe in the downfall of both Lancaster and York, and the tyranny of Gloucester. The happy conclusion is finally reached in the last play of the series, when this new usurper is overthrown in turn, and Henry {112} VII., the first Tudor sovereign, ascends the throne, and restores the Lancastrian inheritance, purified, by bloody atonement, from the stain of Richard II.'s murder. These eight plays are, as it were, the eight acts of one great drama; and if such a thing were possible, they should be represented on successive nights, like the parts of a Greek trilogy. In order of composition, the second group came first. Henry VI. is strikingly inferior to the others. Richard III. is a good acting play, and its popularity has been sustained by a series of great tragedians, who have taken the part of the king. But, in a literary sense, it is unequal to Richard II., or the two parts of Henry IV. The latter is unquestionably Shakspeare's greatest historical tragedy, and it contains his master-creation in the region of low comedy, the immortal Falstaff. The constructive art with which Shakspeare shaped history into drama is well seen in comparing his King John with the two plays on that subject, which were already on the stage. These, like all the other old "Chronicle histories," such as Thomas Lord Cromwell and the Famous Victories of Henry V., follow a merely chronological, or biographical, order, giving events loosely, as they occurred, without any unity of effect, or any reference to their bearing on the catastrophe. Shakspeare's order was logical. He compressed and selected, disregarding the fact of history oftentimes, in favor of the higher truth of fiction; bringing together a crime and its punishment, as cause and effect, even {113} though they had no such relation in the chronicle, and were separated, perhaps, by many years. Shakspeare's first two comedies were experiments. Love's Labour's Lost was a play of manners, with hardly any plot. It brought together a number of humors, that is, oddities and affectations of various sorts, and played them off on one another, as Ben Jonson afterward did in his comedies of humor. Shakspeare never returned to this type of play, unless, perhaps, in the Taming of the Shrew. There the story turned on a single "humor," Katherine's bad temper, just as the story in Jonson's Silent Woman turned on Morose's hatred of noise. The Taming of the Shrew is, therefore, one of the least Shaksperian of Shakspeare's plays; a bourgeois, domestic comedy, with a very narrow interest. It belongs to the school of French comedy, like Moliere's Malade Imaginaire, not to the romantic comedy of Shakspeare and Fletcher. The Comedy of Errors was an experiment of an exactly opposite kind. It was a play, purely of incident; a farce, in which the main improbability being granted, namely, that the twin Antipholi and twin Dromios are so alike that they cannot be distinguished, all the amusing complications follow naturally enough. There is little character-drawing in the play. Any two pairs of twins, in the same predicament, would be equally droll. The fun lies in the situation. This was a comedy of the Latin school, and resembled the Menaechmi of Plautus. Shakspeare never returned to this type of {114} play, though there is an element of "errors" in Midsummer Night's Dream. In the Two Gentlemen of Verona he finally hit upon that species of romantic comedy which he may be said to have invented or created out of the scattered materials at hand in the works of his predecessors. In this play, as in the Merchant of Venice, Midsummer Night's Dream, Much Ado about Nothing, As You Like It, Twelfth Night, Winters Tale, All's Well that Ends Well, Measure for Measure, and the Tempest, the plan of construction is as follows. There is one main intrigue carried out by the high comedy characters, and a secondary intrigue, or underplot, by the low comedy characters. The former is by no means purely comic, but admits the presentation of the noblest motives, the strongest passions, and the most delicate graces of romantic poetry. In some of the plays it has a prevailing lightness and gayety, as in As You Like It and Twelfth Night. In others, like Measure for Measure, it is barely saved from becoming tragedy by the happy close. Shylock certainly remains a tragic figure, even to the end, and a play like Winter's Tale, in which the painful situation is prolonged for years, is only technically a comedy. Such dramas, indeed, were called, on many of the title-pages of the time, "tragi-comedies." The low comedy interlude, on the other hand, was broadly comic. It was cunningly interwoven with the texture of the play, sometimes loosely, and by way of variety or relief, as in the episode of {115} Touchstone and Audrey, in As You Like It; sometimes closely, as in the case of Dogberry and Verges, in Much Ado about Nothing, where the blundering of the watch is made to bring about the denouement of the main action. The Merry Wives of Windsor is an exception to this plan of construction. It is Shakspeare's only play of contemporary, middle-class English life, and is written almost throughout in prose. It is his only pure comedy, except the Taming of the Shrew. Shakspeare did not abandon comedy when writing tragedy, though he turned it to a new account. The two species graded into one another. Thus Cymbeline is, in its fortunate ending, really as much of a comedy as Winter's Tale--to which its plot bears a resemblance--and is only technically a tragedy, because it contains a violent death. In some of the tragedies, as Macbeth and Julius Caesar, the comedy element is reduced to a minimum. But in others, as Romeo and Juliet, and Hamlet, it heightens the tragic feeling by the irony of contrast. Akin to this is the use to which Shakspeare put the old Vice, or Clown, of the moralities. The Fool in Lear, Touchstone in As You Like It, and Thersites in Troilus and Cressida, are a sort

of parody of the function of the Greek chorus, commenting the action of the drama with scraps of bitter, or half-crazy, philosophy, and wonderful gleams of insight into the depths of man's nature. The earliest of Shakspeare's tragedies, unless *Titus Andronicus* be his, was, doubtless, *Romeo and Juliet*, which is full of the passion and poetry of youth and of first love. It contains a large proportion of riming lines, which is usually a sign in Shakspeare of early work. He dropped rime more and more in his later plays, and his blank verse grew freer and more varied in its pauses and the number of its feet. *Romeo and Juliet* is also unique, among his tragedies, in this respect, that the catastrophe is brought about by a fatality, as in the Greek drama. It was Shakspeare's habit to work out his tragic conclusions from within, through character, rather than through external chances. This is true of all the great tragedies of his middle life, *Hamlet*, *Othello*, *Lear*, *Macbeth*, in every one of which the catastrophe is involved in the character and actions of the hero. This is so, in a special sense, in *Hamlet*, the subtlest of all Shakspeare's plays, and if not his masterpiece, at any rate the one which has most attracted and puzzled the greatest minds. It is observable that in Shakspeare's comedies there is no one central figure, but that, in passing into tragedy, he intensified and concentrated the attention upon a single character. This difference is seen, even in the naming of the plays; the tragedies always take their titles from their heroes, the comedies never. Somewhat later, probably, than the tragedies already mentioned, were the three Roman plays, *Julius Caesar*, *Coriolanus*, and *Antony and Cleopatra*. It is characteristic of Shakspeare that he invented the plot of none of his plays, but took material that he found at hand. In these Roman tragedies, he followed Plutarch closely, and yet, even in so doing, gave, if possible, a greater evidence of real creative power than when he borrowed a mere outline of a story from some Italian novelist. It is most instructive to compare *Julius Caesar* with Ben Jonson's *Catiline and Sejanus*. Jonson was careful not to go beyond his text. In *Catiline* he translates almost literally the whole of Cicero's first oration against Catiline. Sejanus is a mosaic of passages, from Tacitus and Suetonius. There is none of this dead learning in Shakspeare's play. Having grasped the conception of the characters of Brutus, Cassius, and Mark Anthony, as Plutarch gave them, he pushed them out into their consequences in every word and act, so independently of his original, and yet so harmoniously with it, that the reader knows that he is reading history, and needs no further warrant for it than Shakspeare's own. *Timon of Athens* is the least agreeable and most monotonous of Shakspeare's undoubted tragedies, and *Troilus and Cressida*, said Coleridge, is the hardest to characterize. The figures of the old Homeric world fare but hardly under the glaring light of modern standards of morality which Shakspeare turns upon them. Ajax becomes a stupid bully, Ulysses a crafty politician, and swift-footed Achilles a vain and sulky chief of faction. In losing their ideal remoteness, the heroes of the *Iliad* lose their poetic quality, and the lover of Homer experiences an unpleasant disenchantment. It was customary in the 18th century to speak of Shakspeare as a rude though prodigious genius. Even Milton could describe him as "warbling his native wood-notes wild." But a truer criticism, beginning in England with Coleridge, has shown that he was also a profound artist. It is true that he wrote for his audiences, and that his art is not every-where and at all points perfect. But a great artist will contrive, as Shakspeare did, to reconcile practical exigencies, like those of the public stage, with the finer requirements of his art. Strained interpretations have been put upon this or that item in Shakspeare's plays; and yet it is generally true that some deeper reason can be assigned for his method in a given case than that "the audience liked puns," or "the audience liked ghosts." Compare, for example, his delicate management of the supernatural with Marlowe's procedure in *Faustus*. Shakspeare's age believed in witches, elves, and apparitions; and yet there is always something shadowy or allegorical in his use of such machinery. The ghost in *Hamlet* is merely an embodied suspicion. Banquo's wraith, which is invisible to all but Macbeth, is the haunting of an evil conscience. The witches in the same play are but the promptings of ambition, thrown into a human shape, so as to become actors in the drama. In the same way, the fairies in *Midsummer Night's Dream* are the personified caprices of the lovers, and they are unseen by the human characters, whose likes and dislikes they control, save in the instance where Bottom is "translated" (that is, becomes mad) and has sight of the invisible world. So in the *Tempest*, Ariel is the spirit of the air and Caliban of the earth, ministering, with more or less unwillingness, to man's necessities. Shakspeare is the most universal of writers. He touches more men at more points than Homer, or Dante, or Goethe. The deepest wisdom, the sweetest poetry, the widest range of character, are combined in his plays. He made the English language an organ of expression unexcelled in the history of literature. Yet he is not an English poet simply, but a world-poet. Germany has made him her own, and the Latin races, though at first hindered in a true appreciation of him by the canons of classical taste, have at length learned to know him. An ever-growing mass of Shaksperian literature, in the way of comment and interpretation, critical, textual, historical, or illustrative, testifies to the durability and growth of his fame. Above all, his plays still keep, and probably always will keep, the stage. It is common to speak of Shakspeare and the other Elizabethan dramatists as if they stood, in some sense, on a level. But in truth there is an almost measureless distance between him and all his contemporaries. The rest shared with him in the mighty influences of the age. Their plays are touched here and there with the power and splendor of which they were all joint heirs. But, as a whole, they are obsolete. They live in books, but not in the hearts and on the tongues of

men. The {120} most remarkable of the dramatists contemporary with Shakspeare was Ben Jonson, whose robust figure is in striking contrast with the other's gracious impersonality. Jonson was nine years younger than Shakspeare. He was educated at Westminster School, served as a soldier in the low countries, became an actor in Henslowe's company, and was twice imprisoned--once for killing a fellow-actor in a duel, and once for his part in the comedy of *Eastward Hoe*, which gave offense to King James. He lived down to the times of Charles I. (1635), and became the acknowledged arbiter of English letters and the center of convivial wit combats at the *Mermaid*, the *Devil*, and other famous London taverns.

"What things have we seen
Done at the Mermaid; heard words that have been
So nimble and so full of subtle flame,
As if that every one from whom they came
Had meant to put his whole wit in a jest,
And had resolved to live a fool the rest
Of his dull life." [1]

The inscription on his tomb, in Westminster Abbey, is simply

"O rare Ben Jonson!"

Jonson's comedies were modeled upon the *vetus comædia* of Aristophanes, which was satirical in purpose, and they belonged to an entirely different school from Shakspeare's. They were classical and not romantic, and were pure comedies, admitting {121} no admixture of tragic motives. There is hardly one lovely or beautiful character in the entire range of his dramatic creations. They were comedies not of character, in the high sense of the word, but of manners or humors. His design was to lash the follies and vices of the day, and his *dramatis persona* consisted for the most part of gulls, impostors, fops, cowards, swaggering braggarts, and "Pauls men." In his first play, *Every Man in his Humor* (acted in 1598), in *Every Man Out of his Humor*, *Bartholomew Fair*, and indeed, in all of his comedies, his subject was the "spongy humors of the time," that is, the fashionable affectations, the whims, oddities, and eccentric developments of London life. His procedure was to bring together a number of these fantastic humorists, to play them off upon each other, involve them in all manner of comical misadventures, and render them utterly ridiculous and contemptible. There was thus a perishable element in his art, for manners change; and however effective this exposure of contemporary affectations may have been, before an audience of Jonson's day, it is as hard for a modern reader to detect his points as it will be for a reader two hundred years hence to understand the satire upon the aesthetic craze in such pieces of the present day, as *Patience* or the *Colonel*. Nevertheless, a patient reader, with the help of copious foot-notes, can gradually put together for himself an image of that world of obsolete humors in which Jonson's comedy dwells, and can admire the dramatist's solid good {122} sense, his great learning, his skill in construction, and the astonishing fertility of his invention. His characters are not revealed from within, like Shakspeare's, but built up painfully from outside by a succession of minute, laborious particulars. The difference will be plainly manifest if such a character as Slender, in the *Merry Wives of Windsor*, be compared with any one of the inexhaustible variety of idiots in Jonson's plays; with Master Stephen, for example, in *Every Man in his Humor*; or, if Falstaff be put side by side with Captain Bobadil, in the same comedy, perhaps Jonson's masterpiece in the way of comic caricature. *Cynthia's Revels* was a satire on the courtiers and the *Poetaster* on Jonson's literary enemies. The *Alchemist* was an exposure of quackery, and is one of his best comedies, but somewhat overweighted with learning. *Volpone* is the most powerful of all his dramas, but is a harsh and disagreeable piece; and the state of society which it depicts is too revolting for comedy. The *Silent Woman* is, perhaps, the easiest of all Jonson's plays for a modern reader to follow and appreciate. There is a distinct plot to it, the situation is extremely ludicrous, and the emphasis is laid upon single humor or eccentricity, as in some of Moliere's lighter comedies, like *Le Malade Imaginaire*, or *Le Médecin malgré lui*. In spite of his heaviness in drama, Jonson had a light enough touch in lyric poetry. His songs have not the careless sweetness of Shakspeare's, but they have a grace of their own. Such pieces as his {123} *Love's Triumph*, *Hymn to Diana*, *The Noble Mind*, and the adaptation from *Philostratus*, "Drink to me only with thine eyes," and many others entitle their author to rank among the first English lyricists. Some of these occur in his two collections of miscellaneous verse, the *Forest* and *Underwoods*; others in the numerous masques which he composed. These were a species of entertainment, very popular at the court of James I., combining dialogue with music, intricate dances, and costly scenery. Jonson left an unfinished pastoral drama, the *Sad Shepherd*, which, though not equal to Fletcher's *Faithful Shepherdess*, contains passages of great beauty, one, especially, descriptive of the shepherdess "Earine,

Who had her very being and her name With the first buds and breathings of the spring, Born with the primrose and the violet And earliest roses blown."

CHAPTER IV.

THE AGE OF MILTON.

1608-1674.

The Elizabethan age proper closed with the death of the queen, and the accession of James I., in 1603, but the literature of the fifty years following was quite as rich as that of the half-century that had passed since she came to the throne, in 1557. The same qualities of thought and style which had marked the writers of her reign, prolonged themselves in their successors, through the reigns of the first two Stuart kings and the Commonwealth. Yet there was a change in spirit. Literature is only one of the many forms in which the national mind expresses itself. In periods of political revolution, literature, leaving the serene air of fine art, partakes the violent agitation of the times. There were seeds of civil and religious discord in Elizabethan England. As between the two parties in the Church there was a compromise and a truce rather than a final settlement. The Anglican doctrine was partly Calvinistic and partly Arminian. The form of government was Episcopal, but there was a large body of Presbyterians in the Church who desired a change. In {126} the ritual and ceremonies many "rags of popery" had been retained, which the extreme reformers wished to tear away. But Elizabeth was a worldly-minded woman, impatient of theological disputes. Though circumstances had made her the champion of Protestantism in Europe, she kept many Catholic notions, disapproved, for example, of the marriage of priests, and hated sermons. She was jealous of her prerogative in the State, and in the Church she enforced uniformity. The authors of the Martin Marprelate pamphlets against the bishops, were punished by death or imprisonment. While the queen lived things were kept well together and England was at one in face of the common foe. Admiral Howard, who commanded the English naval forces against the Armada, was a Catholic. But during the reigns of James I. (1603-1625) and Charles I. (1625-1649) Puritanism grew stronger through repression. "England," says the historian Green, "became the people of a book, and that book the Bible." The power of the king was used to impose the power of the bishops upon the English and Scotch Churches until religious discontent became also political discontent, and finally overthrew the throne. The writers of this period divided more and more into two hostile camps. On the side of Church and king was the bulk of the learning and genius of the time. But on the side of free religion and the Parliament were the stern conviction, the fiery zeal, the excited imagination of English Puritanism. The {127} spokesman of this movement was Milton, whose great figure dominates the literary history of his generation, as Shakspeare's does of the generation preceding.

The drama went on in the course marked out for it by Shakspeare's example, until the theaters were closed, by Parliament, in 1642. Of the Stuart dramatists, the most important were Beaumont and Fletcher, all of whose plays were produced during the reign of James I. These were fifty-three in number, but only thirteen of them were joint productions. Francis Beaumont was twenty years younger than Shakspeare, and died a few years before him. He was the son of a judge of the Common Pleas. His collaborator, John Fletcher, a son of the bishop of London, was five years older than Beaumont, and survived him nine years. He was much the more prolific of the two and wrote alone some forty plays. Although the life of one of these partners was conterminous with Shakspeare's, their works exhibit a later phase of the dramatic art. The Stuart dramatists followed the lead of Shakspeare rather than of Ben Jonson. Their plays, like the former's, belong to the romantic drama. They present a poetic and idealized version of life, deal with the highest passions and the wildest buffoonery, and introduce a great variety of those daring situations and incidents which we agree to call romantic. But while Shakspeare seldom or never overstepped the modesty of nature, his successors ran into every license. They {128} sought to stimulate the jaded appetite of their audience by exhibiting monstrosities of character, unnatural lusts, subtleties of crime, virtues and vices both in excess. Beaumont and Fletcher's plays are much easier and more agreeable reading than Ben Jonson's. Though often loose in their plots and without that consistency in the development of their characters which distinguished Jonson's more conscientious workmanship, they are full of graceful dialogue and beautiful poetry. Dryden said that after the Restoration two of their plays were acted for one of Shakspeare's or Jonson's throughout the year, and he added, that they "understood and imitated the conversation of gentlemen much better, whose wild debaucheries and quickness of wit in repartees no poet can ever paint as they have done." Wild debauchery was certainly not the mark of a gentleman in Shakspeare, nor was it altogether so in Beaumont and Fletcher. Their gentlemen are gallant and passionate lovers, gay cavaliers, generous, courageous, courteous--according to the fashion of their times--and sensitive on the point of honor. They are far superior to the cold-blooded rakes of Dryden and the Restoration comedy. Still the manners and language in Beaumont and Fletcher's plays are extremely licentious, and it is not hard to sympathize with the objections to the theater expressed by the Puritan writer, William Prynne, who, after denouncing the long hair of the cavaliers in his tract, The {129} Unloveliness of Lovelocks, attacked the stage, in 1633, with Histrio-mastix: the Player's Scourge; an offense for which he was fined, imprisoned, pilloried, and had his ears cropped. Coleridge said that Shakspeare was coarse, but never gross. He had the healthy coarseness of nature herself. But Beaumont and Fletcher's pages are corrupt. Even their chaste women are immodest in language and thought. They use not merely that frankness of speech which was a fashion of the times, but a profusion of obscene imagery which could not proceed from a pure mind. Chastity with them is rather a bodily accident than a virtue of the heart, says Coleridge. Among the best of their light comedies are The Chances, The Scornful Lady, The Spanish Curate, and Rule a Wife and Have a Wife. But far superior to these are their tragedies and tragi-comedies, The Maia's Tragedy, Philaster, A King and No King--all written jointly--and Valentinian and Thierry and Theodoret, written by Fletcher alone, but perhaps, in part, sketched out by Beaumont. The tragic masterpiece of Beaumont and Fletcher is The Maid's Tragedy, a powerful but repulsive play, which sheds a singular light not only upon its authors' dramatic methods, but also upon the attitude toward royalty favored by the doctrine of the divine right of kings, which grew up under the Stuarts. The heroine, Evadne, has been in secret a mistress of the king, who marries her to Amintor, a gentleman of his court, {130} because, as she explains to her bridegroom, on the wedding night,

"I must have one
To father children, and to bear the name
Of husband to me, that my sin may be
More honorable."

This scene is, perhaps, the most affecting and impressive in the whole range of Beaumont and Fletcher's drama. Yet when Evadne names the king as her paramour, Amintor exclaims:

"O thou hast named a word that wipes away
All thoughts revengeful. In that sacred name
'The king' there lies a terror. What frail man
Dares lift his hand against it? Let the gods
Speak to him when they please; till when, let us
Suffer and wait."

And the play ends with the words

"On lustful kings,
Unlooked-for sudden deaths from heaven are sent,
But cursed is he that is their instrument."

Aspatia, in this tragedy, is a good instance of Beaumont and Fletcher's pathetic characters. She is troth-plight wife to Amintor, and after he, by the king's command, has forsaken her for Evadne, she disguises herself as a man, provokes her unfaithful lover to a duel, and dies under his sword, blessing the hand that killed her. This is a common type in Beaumont and Fletcher, and was drawn originally from Shakspeare's *Ophelia*. All their good women have the instinctive fidelity of a dog, and a superhuman patience and devotion, {131} a "gentle forlornness" under wrongs, which is painted with an almost feminine tenderness. In *Philaster, or Love Lies Bleeding*, Euphrasia, conceiving a hopeless passion for Philaster--who is in love with Arethusa--puts on the dress of a page and enters his service. He employs her to carry messages to his lady-love, just as Viola, in *Twelfth Night*, is sent by the Duke to Olivia. Philaster is persuaded by slanderers that his page and his lady have been unfaithful to him, and in his jealous fury he wounds Euphrasia with his sword. Afterward, convinced of the boy's fidelity, he asks forgiveness, whereto Euphrasia replies,

"Alas, my lord, my life is not a thing
Worthy your noble thoughts. 'Tis not a life,
'Tis but a piece of childhood thrown away."

Beaumont and Fletcher's love-lorn maids wear the willow very sweetly, but in all their piteous passages there is nothing equal to the natural pathos--the pathos which arises from the deep springs of character--of that one brief question and answer in *King Lear*.

"*Lear*. So young and so untender?

"*Cordelia*. So young, my lord, and true."

The disguise of a woman in man's apparel is a common incident in the romantic drama; and the fact, that on the Elisabethan stage the female parts were taken by boys, made the deception easier. Viola's situation in *Twelfth Night* is precisely similar to Euphrasia's, but there is a {132} difference in the handling of the device which is characteristic of a distinction between Shakspeare's art and that of his contemporaries. The audience in *Twelfth Night* is taken into confidence and made aware of Viola's real nature from the start, while Euphrasia's *incognito* is preserved till the fifth act, and then disclosed by an accident. This kind of mystification and surprise was a trick below Shakspeare. In this instance, moreover, it involved a departure from dramatic probability. Euphrasia could, at any moment, by revealing her identity, have averted the greatest sufferings and dangers from Philaster, Arethusa, and herself, and the only motive for her keeping silence is represented to have been a feeling of maidenly shame at her position. Such strained and fantastic motives are too often made the pivot of the action in Beaumont and Fletcher's tragi-comedies. Their characters have not the depth and truth of Shakspeare's, nor are they drawn so sharply. One reads their plays with pleasure and remembers here and there a passage of fine poetry, or a noble or lovely trait. But their characters, as wholes, leave a fading impression. Who, even after a single reading or representation, ever forgets Falstaff, or Shylock, or King Lear? The moral inferiority of Beaumont and Fletcher is well seen in such a play as *A King and No King*. Here Arbaces falls in love with his sister, and, after a furious conflict in his own mind, finally succumbs to his guilty passion. He is rescued from {133} the consequences of his weakness by the discovery that Panthea is not, in fact, his sister. But this is to cut the knot and not to untie it. It leaves the *denouement* to chance, and not to those moral forces through which Shakspeare always wrought his conclusions. Arbaces has failed, and the piece of luck which keeps his failure innocent is rejected by every right-feeling spectator. In one of John Ford's tragedies, the situation which in *A King and No King* is only apparent, becomes real, and incest is boldly made the subject of the play. Ford pushed the morbid and unnatural in character and passion into even wilder extremes than Beaumont and Fletcher. His best play, the *Broken Heart*, is a prolonged and unrelieved torture of the feelings. Fletcher's *Faithful Shepherdess* is the best English pastoral drama. Its choral songs are richly and sweetly modulated, and the influence of the whole poem upon Milton is very apparent in his *Comus*. *The Knight of the Burning Pestle*, written by Beaumont and Fletcher jointly, was the first burlesque comedy in the language, and is excellent fooling. Beaumont and Fletcher's blank verse is musical, but

less masculine than Marlowe's or Shakspeare's, by reason of their excessive use of extra syllables and feminine endings. In John Webster the fondness for the abnormal and sensational themes, which beset the Stuart stage, showed itself in the exaggeration of the terrible into the horrible. Fear, in Shakspeare--as in {134} the great murder scene in *Macbeth*--is a pure passion; but in Webster it is mingled with something physically repulsive. Thus his *Duchess of Malfi* is presented in the dark with a dead man's hand, and is told that it is the hand of her murdered husband. She is shown a dance of madmen and, "behind a traverse, the artificial figures of her children, appearing as if dead." Treated in this elaborate fashion, that "terror," which Aristotle said it was one of the objects of tragedy to move, loses half its dignity. Webster's images have the smell of the charnel house about them.

"She would not after the report keep fresh
As long as flowers on graves."
"We are only like dead walls or vaulted graves,
That, ruined, yield no echo.
O this gloomy world!
In what a shadow or deep pit of darkness
Doth womanish and fearful mankind live!"

Webster had an intense and somber genius. In diction he was the most Shaksperian of the Elisabethan dramatists, and there are sudden gleams of beauty among his dark horrors, which light up a whole scene with some abrupt touch of feeling.

"Cover her face; mine eyes dazzle; she died young,"

says the brother of the Duchess, when he has procured her murder and stands before the corpse. *Vittoria Corombona* is described in the old editions as "a night-piece," and it should, indeed, be {135} acted by the shuddering light of torches, and with the cry of the screech-owl to punctuate the speeches. The scene of Webster's two best tragedies was laid, like many of Ford's, Cyril Tourneur's, and Beaumont and Fletcher's, in Italy--the wicked and splendid Italy of the Renaissance, which had such a fascination for the Elisabethan imagination. It was to them the land of the Borgias and the Cenci; of families of proud nobles, luxurious, cultivated, but full of revenges and ferocious cunning; subtle poisoners, who killed with a perfumed glove or fan; parricides, atheists, committers of unnamable crimes, and inventors of strange and delicate varieties of sin. But a very few have here been mentioned of the great host of dramatists who kept the theaters busy through the reigns of Elisabeth, James I., and Charles I. The last of the race was James Shirley, who died in 1666, and whose thirty-eight plays were written during the reign of Charles I. and the Commonwealth. In the miscellaneous prose and poetry of this period there is lacking the free, exulting, creative impulse of the elder generation, but there is a soberer feeling and a certain scholarly choiceness which commend themselves to readers of bookish tastes. Even that quaintness of thought, which is a mark of the Commonwealth writers, is not without its attraction for a nice literary palate. Prose became now of greater relative importance than ever before. Almost every distinguished writer of {136} the time lent his pen to one or the other party in the great theological and political controversy of the time. There were famous theologians, like Hales, Chillingworth, and Baxter; historians and antiquaries, like Selden, Knolles, and Cotton; philosophers, such as Hobbes, Lord Herbert of Cherbury, and More, the Platonist; and writers in rural science--which now entered upon its modern, experimental phase, under the stimulus of Bacon's writings--among whom may be mentioned Wallis, the mathematician; Boyle, the chemist, and Harvey, the discoverer of the circulation of the blood. These are outside of our subject, but in the strictly literary prose of the time, the same spirit of roused inquiry is manifest, and the same disposition to a thorough and exhaustive treatment of a subject which is proper to the scientific attitude of mind. The line between true and false science, however, had not yet been drawn. The age was pedantic, and appealed too much to the authority of antiquity. Hence we have such monuments of perverse and curious erudition as Robert Burton's *Anatomy of Melancholy*, 1621; and Sir Thomas Browne's *Pseudodoxia Epidemica*, or *Inquiries into Vulgar and Common Errors*, 1646. The former of these was the work of an Oxford scholar, an astrologer, who cast his own horoscope, and a victim himself of the atrabilious humor, from which he sought relief in listening to the ribaldry of barge-men, and in compiling this *Anatomy*, in which the causes, symptoms, prognostics, and cures of {137} melancholy are considered in numerous partitions, sections, members, and subsections. The work is a mosaic of quotations. All literature is ransacked for anecdotes and instances, and the book has thus become a mine of out-of-the-way learning, in which later writers have dug. Lawrence Sterne helped himself freely to Burton's treasures, and Dr. Johnson said that the *Anatomy* was the only book that ever took him out of bed two hours sooner than he

wished to rise. The vulgar and common errors which Sir Thomas Browne set himself to refute, were such as these: That dolphins are crooked, that Jews stink, that a man hath one rib less than a woman, that Xerxes's army drank up rivers, that cicades are bred out of cuckoo-spittle, that Hannibal split Alps with vinegar, together with many similar fallacies touching Pope Joan, the Wandering Jew, the decuman or tenth wave, the blackness of negroes, Friar Bacon's brazen head, etc. Another book in which great learning and ingenuity were applied to trifling ends, was the same author's *Garden of Cyrus*; or, the *Quincuncial Lozenge* or *Network Plantations of the Ancients*, in which a mystical meaning is sought in the occurrence throughout nature and art of the figure of the quincunx or lozenge. Browne was a physician of Norwich, where his library, museum, aviary, and botanic garden were thought worthy of a special visit by the Royal Society. He was an antiquary and a naturalist, and deeply read in the schoolmen and the Christian fathers. He was {138} a mystic, and a writer of a rich and peculiar imagination, whose thoughts have impressed themselves upon many kindred minds, like Coleridge, De Quincey, and Emerson. Two of his books belong to literature, *Religio Medici*, published in 1642, and *Hydriotaphia*; or, *Urn Burial*, 1658, a discourse upon rites of burial and incineration, suggested by some Roman funeral urns, dug up in Norfolk. Browne's style, though too highly Latinized, is a good example of Commonwealth prose, that stately, cumbrous, brocaded prose, which had something of the flow and measure of verse, rather than the quicker, colloquial movement of modern writing. Browne stood aloof from the disputes of his time, and in his very subjects there is a calm and meditative remoteness from the daily interests of men. His *Religio Medici* is full of a wise tolerance and a singular elevation of feeling. "At the sight of a cross, or crucifix, I can dispense with my hat, but scarce with the thought or memory of my Saviour." "They only had the advantage of a bold and noble faith, who lived before his coming." "They go the fairest way to heaven, that would serve God without a hell." "All things are artificial, for Nature is the art of God." The last chapter of the *Urn Burial* is an almost rithmical descant on mortality and oblivion. The style kindles slowly into a somber eloquence. It is the most impressive and extraordinary passage in the prose literature of the time. Browne, like Hamlet, loved to "consider too curiously." His subtlety {139} led him to "pose his apprehension with those involved enigmas and riddles of the Trinity--with incarnation and resurrection;" and to start odd inquiries; "what song the Syrens sang, or what name Achilles assumed when he hid himself among women;" or whether, after Lazarus was raised from the dead, "his heir might lawfully detain his inheritance." The quaintness of his phrase appears at every turn. "Charles the Fifth can never hope to live within two Methuselahs of Hector." "Generations pass, while some trees stand, and old families survive not three oaks." "Mummy is become merchandise; Mizraim cures wounds, and Pharaoh is sold for balsams." One of the pleasantest of old English humorists is Thomas Fuller, who was a chaplain in the royal army during the civil war, and wrote, among other things, a *Church History of Britain*; a book of religious meditations, *Good Thoughts in Bad Times*, and a "character" book, *The Holy and Profane State*. His most important work, the *Worthies of England*, was published in 1662, the year after his death. This was a description of every English county; its natural commodities, manufactures, wonders, proverbs, etc., with brief biographies of its memorable persons. Fuller had a well-stored memory, sound piety, and excellent common sense. Wit was his leading intellectual trait, and the quaintness which he shared with his contemporaries appears in his writings in a fondness for puns, droll turns of expressions, and bits of eccentric {140} suggestion. His prose, unlike Browne's, Milton's, and Jeremy Taylor's, is brief, simple, and pithy. His dry vein of humor was imitated by the American Cotton Mather, in his *Magnalia*, and by many of the English and New England divines of the 17th century. Jeremy Taylor was also a chaplain in the king's army, was several times imprisoned for his opinions, and was afterward made, by Charles II., Bishop of Down and Connor. He is a devotional rather than a theological writer, and his *Holy Living* and *Holy Dying* are religious classics. Taylor, like Sidney, was a "warbler of poetic prose." He has been called the prose Spenser, and his English has the opulence, the gentle elaboration, the "linked sweetness long drawn out" of the poet of the *Faery Queene*. In fullness and resonance, Taylor's diction resembles that of the great orators, though it lacks their nervous energy. His pathos is exquisitely tender, and his numerous similes have Spenser's pictorial amplitude. Some of them have become commonplaces for admiration, notably his description of the flight of the skylark, and the sentence in which he compares the gradual awakening of the human faculties to the sunrise, which "first opens a little eye of heaven, and sends away the spirits of darkness, and gives light to a cock, and calls up the lark to matins, and by and by gilds the fringes of a cloud, and peeps over the eastern hills." Perhaps the most impressive single passage of Taylor's is the concluding chapter in {141} *Holy Dying*. From the midst of the sickening paraphernalia of death which he there accumulates, rises that delicate image of the fading rose, one of the most perfect things in its wording, in all our prose literature: "But so have I seen a rose newly springing from the clefts of its hood, and at first it was as fair as the morning, and full with the dew of heaven as a lamb's fleece; but when a ruder breath had forced open its virgin modesty, and dismantled its too youthful and unripe retirements, it began to put on darkness and to decline to softness and the symptoms of a sickly age; it bowed the head and broke its stock; and at night, having lost some of its leaves and all its beauty, it fell into the portion of weeds and outworn faces." With the progress of knowledge and discussion many kinds of prose

literature, which were not absolutely new, now began to receive wider extension. Of this sort are the *Letters from Italy*, and other miscellanies included in the *Reliquiae Wottonianae*, or remains of Sir Henry Wotton, English ambassador at Venice in the reign of James I., and subsequently Provost of Eton College. Also the *Table Talk*--full of incisive remarks--left by John Selden, whom Milton pronounced the first scholar of his age, and who was a distinguished authority in legal antiquities and international law, furnished notes to Drayton's *Polyolbion*, and wrote upon Eastern religions, and upon the Arundel marbles. Literary biography was represented by the charming little *Lives* of good old Izaak Walton, the first {142} edition of whose *Compleat Angler* was printed in 1653. The lives were five in number, of Hooker, Wotton, Donne, Herbert, and Sanderson. Several of these were personal friends of the author, and Sir Henry Wotton was a brother of the angle. The *Compleat Angler*, though not the first piece of sporting literature in English, is unquestionably the most popular, and still remains a favorite with "all that are lovers of virtue, and dare trust in providence, and be quiet, and go a-angling." As in Ascham's *Toxophilus*, the instruction is conveyed in dialogue form, but the technical part of the book is relieved by many delightful digressions. *Piscator* and his pupil *Venator* pursue their talk under a honeysuckle hedge or a sycamore tree during a passing shower. They repair, after the day's fishing, to some honest ale-house, with lavender in the window, and a score of ballads stuck about the wall, where they sing catches--"old-fashioned poetry but choicely good"--composed by the author or his friends, drink barley wine, and eat their trout or chub. They encounter milkmaids, who sing to them and give them a draft of the red cow's milk, and they never cease their praises of the angler's life, of rural contentment among the cowslip meadows, and the quiet streams of Thames, or Lea, or Shawford Brook. The decay of a great literary school is usually signalized by the exaggeration of its characteristic traits. The manner of the Elizabethan poets was {143} pushed into mannerism by their successors. That manner, at its best, was hardly a simple one, but in the Stuart and Commonwealth writers it became mere extravagance. Thus Phineas Fletcher--a cousin of the dramatist--composed a long Spenserian allegory, the *Purple Island*, descriptive of the human body. George Herbert and others made anagrams and verses shaped like an altar, a cross, or a pair of Easter wings. This group of poets was named, by Dr. Johnson, in his life of Cowley, the metaphysical school. Other critics have preferred to call them the fantastic or conceited school, the later Euphuists, or the English Marinists and Gongorists, after the poets Marino and Gongora, who brought this fashion to its extreme in Italy and in Spain. The English *conceptistas* were mainly clergymen of the established Church, Donne, Herbert, Vaughan, Quarles, and Herrick. But Crashaw was a Roman Catholic, and Cowley--the latest of them--a layman. The one who set the fashion was Dr. John Donne. Dean of St. Paul's, whom Dryden pronounced a great wit, but not a great poet, and whom Ben Jonson esteemed the best poet in the world for some things, but likely to be forgotten for want of being understood. Besides satires and epistles in verse, he composed amatory poems in his youth, and divine poems in his age, both kinds distinguished by such subtle obscurity, and far-fetched ingenuities, that they read like a series of puzzles. When this poet has occasion to write a valediction {144} to his mistress upon going into France, he compares their temporary separation to that of a pair of compasses: "Such wilt thou be to me, who must,

Like the other foot obliquely run;
Thy firmness makes my circle just,
And makes me end where I begun."

If he would persuade her to marriage he calls her attention to a flea--

"Me it sucked first and now sucks thee,
And in this flea our two bloods mingled be."

He says that the flea is their marriage-temple, and bids her forbear to kill it lest she thereby commit murder, suicide, and sacrilege all in one. Donne's figures are scholastic and smell of the lamp. He ransacked cosmography, astrology, alchemy, optics, the canon law, and the divinity of the schoolmen for ink-horn terms and similes. He was in verse what Browne was in prose. He loved to play with distinctions, hyperboles, paradoxes, the very casuistry and dialectics of love or devotion.

"Thou canst not every day give me thy heart:
If thou canst give it then thou never gav'st it;
Love's riddles are that though thy heart depart,
It stays at home and thou with losing sav'st it."

Donne's verse is usually as uncouth as his thought. But there is a real passion slumbering under these ashy heaps of conceit, and occasionally {145} a pure flame darts up, as in the justly admired lines:

"Her pure and eloquent blood
Spoke in her cheek and so divinely wrought
That one might almost say her body thought."

This description of Donne is true, with modifications, of all the metaphysical poets. They had the same forced and unnatural style. The ordinary laws of the association of ideas were reversed with them. It was not the nearest, but the remotest, association that was called up. "Their attempts," said Johnson, "were always analytic: they broke every image into fragments." The finest spirit among them was "holy George Herbert," whose *Temple* was published in 1633. The titles in this volume were such as the following: Christmas, Easter, Good Friday, Holy Baptism, The Cross, The Church Porch, Church Music, The Holy Scriptures, Redemption, Faith, Doomsday. Never since, except, perhaps, in Keble's *Christian Year*, have the ecclesiastic ideals of the Anglican Church--the "beauty of holiness"--found such sweet expression in poetry. The verses entitled *Virtue*-- "Sweet day so cool, so calm, so bright," etc. are known to most readers, as well as the line,

"Who sweeps a room, as for thy laws, makes that
and the action fine."

The quaintly named pieces, the *Elixir*, the *Collar*, the *Pulley*, are full of deep thought and spiritual {146} feeling. But Herbert's poetry is constantly disfigured by bad taste. Take this passage from *Whitsunday*,

"Listen, sweet dove, unto my song,
And spread thy golden wings on me,
Hatching my tender heart so long,
Till it get wing and fly away with thee,"

which is almost as ludicrous as the epitaph, written by his contemporary, Carew, on the daughter of Sir Thomas Wentworth, whose soul

... "grew so fast within
It broke the outward shell of sin,
And so was hatched a cherubin."

Another of these Church poets was Henry Vaughan, "the Silurist," or Welshman, whose fine piece, the *Retreat*, has been often compared with Wordsworth's *Ode on the Intimations of Immortality*. Francis Quarles' *Divine Emblems* long remained a favorite book with religious readers, both in Old and New England. Emblem books, in which engravings of a figurative design were accompanied with explanatory letterpress in verse, were a popular class of literature in the 17th century. The most famous of them all were Jacob Catt's Dutch emblems. One of the most delightful of English lyric poets is Robert Herrick, whose *Hesperides*, 1633 has lately received such sympathetic illustration from the pencil of an American artist, Mr. E. A. Abbey. Herrick was a clergyman of the English Church, {147} and was expelled by the Puritans from his living, the vicarage of Dean Prior, in Devonshire. The most quoted of his religious poems is, *How to Keep a True Lent*. But it may be doubted whether his tastes were prevailingly clerical; his poetry certainly was not. He was a disciple of Ben Jonson and his boon companion at

... "those lyric feasts
Made at the Sun,
The Dog, the Triple Tun;
Where we such clusters had
As made us nobly wild, not mad.
And yet each verse of thine
Outdid the meat, outdid the frolic wine."

Herrick's *Noble Numbers* seldom rises above the expression of a cheerful gratitude and contentment. He had not the subtlety and elevation of Herbert, but he surpassed him in the grace, melody, sensuous beauty, and fresh lyrical impulse of his verse. The conceits of the metaphysical school appear in Herrick only in the form of an occasional pretty quaintness. He is the poet of English parish festivals and of English flowers, the primrose, the whitethorn, the daffodil. He sang the praises of the country life, love songs to "Julia," and hymns of thanksgiving for simple blessings. He has been called the English Catullus, but he strikes rather the Horatian note of *Carpe diem*, and regret at the shortness of life and youth in many of his best-known poems, such as {148} *Gather ye Rose-buds while ye may*, and *To Corinna, To Go a Maying*. Abraham Cowley is now less remembered for his poetry than for his pleasant volume of *Essays*, published after the Restoration; but he was thought in his own time a better poet than Milton. His collection of love songs--the *Mistress*--is a mass of cold conceits, in the metaphysical manner; but his elegies on Crashaw and Harvey have much dignity and natural feeling. He introduced the Pindaric ode into English, and wrote an epic poem on a biblical subject--the *Davideis*--now quite unreadable. Cowley was a royalist and followed the exiled court to France. Side by side with the Church poets were the cavaliers--Carew, Waller, Lovelace, Suckling, L'Estrange, and others--gallant courtiers and officers in the royal army, who mingled love and loyalty in their strains. Colonel Richard Lovelace, who lost every thing in the king's service and was several times imprisoned, wrote two famous songs--*To Lucasta on going to the Wars*--in which occur the lines,
"I could not love thee, dear, so much,
Loved I not honor more."

and *To Althaea from Prison*, in which he sings "the sweetness, mercy, majesty, and glories of his king," and declares that "stone walls do not a prison make, nor iron bars a cage." Another of the cavaliers was sir John Suckling, who formed a plot to rescue the Earl of Stratford, raised a troop of horse {149} for Charles I., was impeached by the Parliament and fled to France. He was a man of wit and pleasure, who penned a number of gay trifles, but has been saved from oblivion chiefly by his exquisite *Ballad upon a Wedding*. Thomas Carew and Edmund Waller were poets of the same stamp--graceful and easy, but shallow in feeling. Waller, who followed the court to Paris, was the author of two songs, which are still favorites, *Go, Lovely Rose*, and *On a Girdle*, and he first introduced the smooth correct manner of writing in couplets, which Dryden and Pope carried to perfection. Gallantry rather than love was the inspiration of these courtly singers. In such verses as Carew's *Encouragements to a Lover*, and George Wither's *The Manly Heart*--

"If she be not so to me,
What care I how fair she be?"

we see the revolt against the high, passionate, Sidneian love of the Elizabethan sonneteers, and the note of *persiflage* that was to mark the lyrical verse of the Restoration. But the poetry of the cavaliers reached its high-water mark in one fiery-hearted song by the noble and unfortunate James Graham, Marquis of Montrose, who invaded Scotland in the interest of Charles II., and was taken prisoner and put to death at Edinburgh in 1650.

"My dear and only love, I pray
That little world of thee
Be governed by no other sway
Than purest monarchy."

{150} In language borrowed from the politics of the time, he cautions his mistress against *synods* or *committees* in her heart; swears to make her glorious by his pen and famous by his sword; and with that fine recklessness which distinguished the dashing troopers of Prince Rupert, he adds, in words that have been often quoted,

"He either fears his fate too much,
Or his deserts are small,
That dares not put it to the touch
To gain or lose it all."

John Milton, the greatest English poet except Shakspeare, was born in London in 1608. His father was a scrivener, an educated man, and a musical composer of some merit. At his home Milton was surrounded with all the influences of a refined and well ordered Puritan household of the better class. He inherited his father's musical tastes, and during the latter part of his life, he spent a part of every afternoon in playing the organ. No poet has written more beautifully of music than Milton. One of his sonnets was addressed to Henry Lawes, the composer, who wrote the airs to the songs in *Comus*. Milton's education was most careful and thorough. He spent seven years at Cambridge where, from his personal beauty and fastidious habits, he was called "The lady of Christ's." At Horton, in Buckinghamshire, where his father had a country seat, he passed five years more, perfecting himself in his studies, and then traveled for fifteen months, {151} mainly in Italy, visiting Naples and Rome, but residing at Florence. Here he saw Galileo, a prisoner of the Inquisition "for thinking otherwise in astronomy than his Dominican and Franciscan licensers thought." Milton is the most scholarly and the most truly classical of English poets. His Latin verse, for elegance and correctness, ranks with Addison's; and his Italian poems were the admiration of the Tuscan scholars. But his learning appears in his poetry only in the form of a fine and chastened result, and not in laborious allusion and pedantic citation, as too often in Ben Jonson, for instance. "My father," he wrote, "destined me, while yet a little child, for the study of humane letters." He was also destined for the ministry, but, "coming to some maturity of years and perceiving what tyranny had invaded the Church, . . . I thought it better to prefer a blameless silence, before the sacred office of speaking, bought and begun with servitude and forswearing." Other hands than a bishop's were laid upon his head. "He who would not be frustrate of his hope to write well hereafter," he says, "ought himself to be a true poem." And he adds that his "natural haughtiness" saved him from all impurity of living. Milton had a sublime self-respect. The dignity and earnestness of the Puritan gentleman blended in his training with the culture of the Renaissance. Born into an age of spiritual conflict, he dedicated his gift to the service of Heaven, and he became, like Heine, a valiant soldier in the war for {152} liberation. He was the poet of a cause, and his song was keyed to

"The Dorian mood
Of flutes and soft recorders such as raised
To heighth of noblest temper, heroes old
Arming to battle."

On comparing Milton with Shakspeare, with his universal sympathies and receptive imagination, one perceives a loss in breadth, but a gain in intense personal conviction. He introduced a new note into English poetry, the passion for truth and the feeling of religious sublimity. Milton's was an heroic age, and its song must be lyric rather than dramatic; its singer must be in the fight and of it. Of the verses which he wrote at Cambridge, the most important was his splendid ode *On the Morning of Christ's Nativity*. At Horton he wrote, among other things, the companion pieces, *L'Allegro* and *Il Penseroso*, of a kind quite new in English, giving to the landscape an expression in harmony with two contrasted moods. *Comus*, which belongs to the same period, was the perfection of the Elizabethan court masque, and was presented at Ludlow Castle in 1634, on the occasion of the installation of the Earl of Bridgewater as Lord President of Wales. Under the guise of a skillful addition to the Homeric allegory of Circe, with her cup of enchantment, it was a Puritan song in praise of chastity and temperance. *Lycidas*, in like manner, was the perfection of the Elizabethan {153} pastoral elegy. It was contributed to a volume of memorial verses on the death of Edward King, a Cambridge friend of Milton's, who was drowned in the Irish Channel in 1637. In one stern strain, which is put into the mouth of St. Peter, the author "foretells the ruin of our corrupted clergy, then at their height."

"But that two-handed engine at the door
Stands ready to smite once and smite no more."

This was Milton's last utterance in English verse before the outbreak of the civil war, and it sounds the alarm of the impending struggle. In technical quality *Lycidas* is the most wonderful of all Milton's poems. The cunningly intricate harmony of the verse, the pressed and packed language with its fullness of meaning and allusion make it worthy of the minutest study. In these early poems, Milton, merely as a poet, is at his best. Something of the Elizabethan style still clings to them; but their grave sweetness, their choice wording, their originality in epithet, name, and phrase, were novelties of Milton's own. His English masters were Spenser, Fletcher, and Sylvester, the translator of Du Bartas's *La Sepmaine*, but nothing of Spenser's prolixity, or Fletcher's effeminacy, or Sylvester's quaintness is found in Milton's pure, energetic diction. He inherited their beauties, but his taste had been tempered to a finer edge by his studies in Greek and Hebrew poetry. He was the last of the Elizabethans, and {154} his style was at once the crown of the old and a departure into the new. In masque, elegy, and sonnet, he set the seal to the

Elisabethan poetry, said the last word, and closed one great literary era. In 1639 the breach between Charles I. and his Parliament brought Milton back from Italy. "I thought it base to be traveling at my ease for amusement, while my fellow-countrymen at home were fighting for liberty." For the next twenty years he threw himself into the contest, and poured forth a succession of tracts, in English and Latin, upon the various public questions at issue. As a political thinker, Milton had what Bacon calls "the humor of a scholar." In a country of endowed grammar schools and universities hardly emerged from a mediaeval discipline and curriculum, he wanted to set up Greek gymnasia and philosophical schools, after the fashion of the Porch and the Academy. He would have imposed an Athenian democracy upon a people trained in the traditions of monarchy and episcopacy. At the very moment when England had grown tired of the Protectorate and was preparing to welcome back the Stuarts, he was writing *An Easy and Ready Way to Establish a Free Commonwealth*. Milton acknowledged that in prose he had the use of his left hand only. There are passages of fervid eloquence, where the style swells into a kind of lofty chant, with a rithmical rise and fall to it, as in parts of the English Book of Common Prayer. But in {155} general his sentences are long and involved, full of inventions and latinized constructions. Controversy at that day was conducted on scholastic lines. Each disputant, instead of appealing at once to the arguments of expediency and common sense, began with a formidable display of learning, ransacking Greek and Latin authors and the fathers of the Church for opinions in support of his own position. These authorities he deployed at tedious length and followed them up with heavy scurrilities and "excusations," by way of attack and defense. The dispute between Milton and Salmasius over the execution of Charles I. was like a duel between two knights in full armor striking at each other with ponderous maces. The very titles of these pamphlets are enough to frighten off a modern reader: *A Confutation of the Animadversions upon a Defense of a Humble Remonstrance against a Treatise, entitled Of Reformation*. The most interesting of Milton's prose tracts is his *Areopagitica: A Speech for the Liberty of Unlicensed Printing*, 1644. The arguments in this are of permanent force; but if the reader will compare it, or Jeremy Taylor's *Liberty of Prophesying*, with Locke's *Letters on Toleration*, he will see how much clearer and more convincing is the modern method of discussion, introduced by writers like Hobbes and Locke and Dryden. Under the Protectorate Milton was appointed Latin Secretary to the Council of State. In the diplomatic correspondence which was his official duty, and in the composition of his tract, {156} *Defensio pro Populo Anglicano*, he overtasked his eyes, and in 1654 became totally blind. The only poetry of Milton's belonging to the years 1640-1660 are a few sonnets of the pure Italian form, mainly called forth by public occasions. By the Elisabethans the sonnet had been used mainly in love poetry. In Milton's hands, said Wordsworth, "the thing became a trumpet." Some of his were addressed to political leaders, like Fairfax, Cromwell, and Sir Henry Vane; and of these the best is, perhaps, the sonnet written on the massacre of the Vaudois Protestants--"a collect in verse," it has been called--which has the fire of a Hebrew prophet invoking the divine wrath upon the oppressors of Israel. Two were on his own blindness, and in these there is not one selfish repining, but only a regret that the value of his service is impaired--
"Will God exact day labor, light denied?"

After the restoration of the Stuarts, in 1660, Milton was for a while in peril, by reason of the part that he had taken against the king. But

"On evil days though fallen, and evil tongues,
In darkness and with dangers compassed round
And solitude,"

he bated no jot of heart or hope. Henceforth he becomes the most heroic and affecting figure in English literary history. Years before he had planned an epic poem on the subject of King {157} Arthur, and again a sacred tragedy on man's fall and redemption. These experiments finally took shape in *Paradise Lost*, which was given to the world in 1667. This is the epic of English Puritanism and of Protestant Christianity. It was Milton's purpose to

"assert eternal Providence
And justify the ways of God to men,"

or, in other words, to embody his theological system in verse. This gives a doctrinal rigidity and even dryness to parts of the *Paradise Lost*, which injure its effect as a poem. His "God the father turns a school divine:" his Christ, as has been wittily said, is "God's good boy:" the discourses of Raphael to Adam are scholastic lectures: Adam himself is too sophisticated for the state of innocence, and Eve is somewhat insipid. The real protagonist of the poem

is Satan, upon whose mighty figure Milton unconsciously bestowed something of his own nature, and whose words of defiance might almost have come from some Republican leader when the Good Old Cause went down.

"What though the field be lost?
All is not lost, the unconquerable will
And study of revenge, immortal hate,
And courage never to submit or yield."

But when all has been said that can be said in disparagement or qualification, *Paradise Lost* remains the foremost of English poems and the {158} sublimest of all epics. Even in those parts where theology encroaches most upon poetry, the diction, though often heavy, is never languid. Milton's blank verse in itself is enough to bear up the most prosaic theme, and so is his epic English, a style more massive and splendid than Shakspeare's, and comparable, like Tertullian's Latin, to a river of molten gold. Of the countless single beauties that sow his page

"Thick as autumnal leaves that strew the brooks
In Valombrosa,"

there is no room to speak, nor of the astonishing fullness of substance and multitude of thoughts which have caused the *Paradise Lost* to be called the book of universal knowledge. "The heat of Milton's mind," said Dr. Johnson, "might be said to sublimate his learning and throw off into his work the spirit of science, unmingled with its grosser parts." The truth of this remark is clearly seen upon a comparison of Milton's description of the creation, for example, with corresponding passages in Sylvester's *Divine Weeks and Works* (translated from the Huguenot poet, Du Bartas), which was, in some sense, his original. But the most heroic thing in Milton's heroic poem is Milton. There are no strains in *Paradise Lost* so absorbing as those in which the poet breaks the strict epic bounds and speaks directly of himself, as in the majestic lament over his own blindness, and in the invocation to Urania, which open the third and seventh {159} books. Every-where, too, one reads between the lines. We think of the dissolute cavaliers, as Milton himself undoubtedly was thinking of them, when we read of "the sons of Belial flown with insolence and wine," or when the Puritan turns among the sweet landscapes of Eden, to denounce

"court amours
Mixed dance, or wanton mask, or midnight ball,
Or serenade which the starved lover sings
To his proud fair, best quitted with disdain."

And we think of Milton among the triumphant royalists when we read of the Seraph Abdiel "faithful found among the faithless."

"Nor number nor example with him wrought
To swerve from truth or change his constant mind,
Though single. From amidst them forth he passed,
Long way through hostile scorn, which he sustained
Superior, nor of violence feared aught:
And with retorted scorn his back he turned
On those proud towers to swift destruction doomed."

Paradise Regained and *Samson Agonistes* were published in 1671. The first of these treated in four books Christ's temptation in the wilderness, a subject that had already been handled in the Spenserian allegorical manner by Giles Fletcher, a brother of the Purple Islander, in his *Christ's Victory and Triumph*, 1610. The superiority of *Paradise Lost* to its sequel is not without significance. The Puritans were Old Testament men. Their God was the Hebrew Jehovah, whose single divinity the Catholic mythology had overlaid with the {160} figures of the Son, the Virgin Mary, and the saints. They identified themselves in thought with his chosen people, with the militant theocracy of the Jews. Their sword was the sword of the Lord and of Gideon. "To your tents, O Israel," was the cry of the London mob when the bishops were committed to the Tower. And when the fog lifted, on the morning of the battle of Dunbar, Cromwell exclaimed, "Let God arise and let his enemies be scattered: like as the sun riseth, so shalt thou drive them away." *Samson Agonistes*, though Hebrew in theme and in spirit, was in form a Greek tragedy. It had chorus and semi-chorus, and preserved the so-called dramatic unities; that is, the scene was unchanged, and there were no intervals of time between the acts. In accordance with the rules of the Greek theater,

but two speakers appeared upon the stage at once, and there was no violent action. The death of Samson is related by a messenger. Milton's reason for the choice of this subject is obvious. He himself was Samson, shorn of his strength, blind, and alone among enemies; given over

"to the unjust tribunals, under change of times,
And condemnation of the ungrateful multitude."

As Milton grew older he discarded more and more the graces of poetry, and relied purely upon the structure and the thought. In *Paradise Lost*, although there is little resemblance to Elizabethan work—such as one notices in *Comus* and the {161} Christmas hymn—yet the style is rich, especially in the earlier books. But in *Paradise Regained* it is severe to bareness, and in *Samson*, even to ruggedness. Like Michelangelo, with whose genius he had much in common, Milton became impatient of finish or of mere beauty. He blocked out his work in masses, left rough places and surfaces not filled in, and inclined to express his meaning by a symbol, rather than work it out in detail. It was a part of his austerity, his increasing preference for structural over decorative methods, to give up rime for blank verse. His latest poem, *Samson Agonistes*, a metrical study of the highest interest. Milton was not quite alone among the poets of his time in espousing the popular cause. Andrew Marvell, who was his assistant in the Latin secretaryship and sat in Parliament for Hull, after the Restoration, was a good Republican, and wrote a fine *Horatian Ode upon Cromwell's Return from Ireland*. There is also a rare imaginative quality in his *Song of the Exiles in Bermuda*, *Thoughts in a Garden*, and *The Girl Describes her Fawn*. George Wither, who was imprisoned for his satires, also took the side of the Parliament, but there is little that is distinctively Puritan in his poetry.

CHAPTER V.

FROM THE RESTORATION TO THE DEATH OF POPE.

1660-1744.

The Stuart Restoration was a period of descent from poetry to prose, from passion and imagination to wit and understanding. The serious, exalted mood of the Civil War and the Commonwealth had spent itself and issued in disillusion. There followed a generation of wits, logical, skeptical, and prosaic, without earnestness, as without principle. The characteristic literature of such a time is criticism, satire, and burlesque, and such, indeed, continued

to be the course of English literary history for a century after the return of the Stuarts. The age was not a stupid one, but one of active inquiry. The Royal Society, for the cultivation of the natural sciences, was founded in 1662. There were able divines in the pulpit and at the universities--Barrow, Tillotson, Stillingfleet, South, and others: scholars, like Bentley; historians, like Clarendon and Burnet; scientists, like Boyle and Newton; philosophers, like Hobbes and Locke. But of poetry, in any high sense of the word, there was little between the time of Milton and the time of Goldsmith and Gray. {164} The English writers of this period were strongly influenced by the contemporary literature of France, by the comedies of Molière, the tragedies of Corneille and Racine, and the satires, epistles, and versified essays of Boileau. Many of the Restoration writers--Waller, Cowley, Davenant, Wycherley, Villiers, and others--had been in France during the exile, and brought back with them French tastes. John Dryden (1631-1700), who is the great literary figure of his generation, has been called the first of the moderns. From the reign of Charles II., indeed, we may date the beginnings of modern English life. What we call "society" was forming, the town, the London world. "Coffee, which makes the politician wise," had just been introduced, and the ordinaries of Ben Jonson's time gave way to coffee-houses, like Will's and Button's, which became the head-quarters of literary and political gossip. The two great English parties, as we know them to-day, were organized: the words Whig and Tory date from this reign. French etiquette and fashions came in and French phrases of convenience--such as coup de grace, bel esprit, etc.--began to appear in English prose. Literature became intensely urban and partisan. It reflected city life, the disputes of faction, and the personal quarrels of authors. The politics of the Great Rebellion had been of heroic proportions, and found fitting expression in song. Rut in the Revolution of 1688 the issues were constitutional and to be settled by the arguments of lawyers. Measures were in {165} question rather than principles, and there was little inspiration to the poet in Exclusion Bills and Acts of Settlement. Court and society, in the reign of Charles II. and James II., were shockingly dissolute, and in literature, as in life, the reaction against Puritanism went to great extremes. The social life of the time is faithfully reflected in the diary of Samuel Pepys. He was a simple-minded man, the son of a London tailor, and became, himself, secretary to the admiralty. His diary was kept in cipher, and published only in 1825. Being written for his own eye, it is singularly outspoken; and its naïve, gossipy, confidential tone makes it a most diverting book, as it is, historically, a most valuable one. Perhaps the most popular book of its time was Samuel Butler's Hudibras (1663-64), a burlesque romance in ridicule of the Puritans. The king carried a copy of it in his pocket, and Pepys testifies that it was quoted and praised on all sides. Ridicule of the Puritans was nothing new. Zeal-of-the-land Busy, in Ben Jonson's Bartholomew Fair, is an early instance of the kind. There was nothing laughable about the earnestness of men like Cromwell, Milton, Algernon Sidney, and Sir Henry Vane. But even the French Revolution had its humors; and as the English Puritan Revolution gathered head and the extremer sectaries pressed to the front--Quakers, New Lights, Fifth Monarchy Men, Ranters, etc.--its grotesque sides came uppermost. Butler's hero is a Presbyterian Justice of the Peace {166} who sallies forth with his secretary, Ralpho--an Independent and Anabaptist--like Don Quixote with Sancho Panza, to suppress May games and bear-baitings. (Macaulay, it will be remembered, said that the Puritans disapproved of bear-baiting, not because it gave pain to the bear, but because it gave pleasure to the spectators.) The humor of Hudibras is not of the finest. The knight and squire are discomfited in broadly comic adventures, hardly removed from the rough, physical drolleries of a pantomime or a circus. The deep heart-laughter of Cervantes, the pathos on which his humor rests, is, of course, not to be looked for in Butler. But he had wit of a sharp, logical kind, and his style surprises with all manner of verbal antics. He is almost as great a phrase-master as Pope, though in a coarser kind. His verse is a smart doggerel, and his poem has furnished many stock sayings, as, for example,

"'Tis strange what difference there can be
 'Twixt tweedle-dum and tweedle-dee."

Hudibras has had many imitators, not the least successful of whom was the American John Trumbull, in his revolutionary satire M'Fingal, some couplets of which are generally quoted as Butler's, as, for example,

"No man e'er felt the halter draw
 With good opinion of the law."

The rebound against Puritanism is seen no less plainly in the drama of the Restoration, and the {167} stage now took vengeance for its enforced silence under the Protectorate. Two theaters were opened under the patronage, respectively, of the king and of his brother, the Duke of York. The manager of the latter, Sir William Davenant--who had fought on the king's side, been knighted for his services, escaped to France, and was afterward captured and

imprisoned in England for two years--had managed to evade the law against stage plays as early as 1656, by presenting his *Siege of Rhodes* as an "opera," with instrumental music and dialogue in recitative, after a fashion newly sprung up in Italy. This he brought out again in 1661, with the dialogue recast into riming couplets in the French fashion. Movable painted scenery was now introduced from France, and actresses took the female parts formerly played by boys. This last innovation was said to be at the request of the king, one of whose mistresses, the famous Nell Gwynne, was the favorite actress at the King's Theater. Upon the stage, thus reconstructed, the so-called "classical" rules of the French theater were followed, at least in theory. The Louis XIV. writers were not purely creative, like Shakspeare and his contemporaries in England, but critical and self-conscious. The Academy had been formed in 1636, for the preservation of the purity of the French language, and discussion abounded on the principles and methods of literary art. Corneille not only wrote tragedies, but essays on tragedy, and {168} one in particular on the *Three Unities*. Dryden followed his example in his *Essay of Dramatic Poesie* (1667), in which he treated of the unities, and argued for the use of rime in tragedy in preference to blank verse. His own practice varied. Most of his tragedies were written in rime, but in the best of them, *All for Love*, 1678, founded on Shakspeare's *Antony and Cleopatra*, he returned to blank verse. One of the principles of the classical school was to keep comedy and tragedy distinct. The tragic dramatists of the Restoration, Dryden, Howard, Settle, Crowne, Lee, and others, composed what they called "heroic plays," such as the *Indian Emperor*, the *Conquest of Granada*, the *Duke of Lerma*, the *Empress of Morocco*, the *Destruction of Jerusalem*, *Nero*, and the *Rival Queens*. The titles of these pieces indicate their character. Their heroes were great historic personages. Subject and treatment were alike remote from nature and real life. The diction was stilted and artificial, and pompous declamation took the place of action and genuine passion. The tragedies of Racine seem chill to an Englishman brought up on Shakspeare, but to see how great an artist Racine was, in his own somewhat narrow way, one has but to compare his *Phedre*, or *Iphigenie*, with Dryden's ranting tragedy of *Tyrannic Love*. These bombastic heroic plays were made the subject of a capital burlesque, the *Rehearsal*, by George Villiers, Duke of Buckingham, acted in 1671 at the King's Theater. The indebtedness of {169} the English stage to the French did not stop with a general adoption of its dramatic methods, but extended to direct imitation and translation. Dryden's comedy, *An Evening's Love*, was adapted from Thomas Corneille's *Le Feint Astrologue*, and his *Sir Martin Mar-all*, from Molière's *L' Etourdi*. Shadwell borrowed his *Miser* from Molière, and Otway made versions of Racine's *Bérénice* and Molière's *Fourberies de Scapin*. Wycherley's *Country Wife* and *Plain Dealer*, although not translations, were based, in a sense, upon Molière's *Ecole des Femmes* and *Le Misanthrope*. The only one of the tragic dramatists of the Restoration who prolonged the traditions of the Elisabethan stage, was Otway, whose *Venice Preserved*, written in blank verse, still keeps the boards. There are fine passages in Dryden's heroic plays, passages weighty in thought and nobly sonorous in language. There is one great scene (between Antony and Ventidius) in his *All for Love*. And one, at least, of his comedies, the *Spanish Friar*, is skillfully constructed. But his nature was not pliable enough for the drama, and he acknowledged that, in writing for the stage, he "forced his genius." In sharp contrast with these heroic plays was the comic drama of the Restoration, the plays of Wycherley, Killigrew, Etherege, Farquhar, Van Brugh, Congreve, and others; plays like the *Country Wife*, the *Parson's Wedding*, *She Would if She Could*, the *Beaux' Stratagem*, the *Relapse*, and the *Way of the World*. These were in prose, and represented {170} the gay world and the surface of fashionable life. Amorous intrigue was their constantly recurring theme. Some of them were written expressly in ridicule of the Puritans. Such was the *Committee* of Dryden's brother-in-law, Sir Robert Howard, the hero of which is a distressed gentleman, and the villain a London cit, and president of the committee appointed by Parliament to sit upon the sequestration of the estates of royalists. Such were also the *Roundheads* and the *Banished Cavaliers* of Mrs. Aphra Behn, who was a female spy in the service of Charles II., at Antwerp, and one of the coarsest of the Restoration comedians. The profession of piety had become so disagreeable that a shameless cynicism was now considered the mark of a gentleman. The ideal hero of Wycherley or Etherege was the witty young profligate, who had seen life, and learned to disbelieve in virtue. His highest qualities were a contempt for cant, physical courage, a sort of spendthrift generosity, and a good-natured readiness to back up a friend in a quarrel, or an amour. Virtue was *bourgeois*--reserved for London trades-people. A man must be either a rake or a hypocrite. The gentlemen were rakes, the city people were hypocrites. Their wives, however, were all in love with the gentlemen, and it was the proper thing to seduce them, and to borrow their husbands' money. For the first and last time, perhaps, in the history of the English drama, the sympathy of the audience was deliberately sought for the seducer and the rogue, and the laugh {171} turned against the dishonored husband and the honest man. (Contrast this with Shakspeare's *Merry Wives of Windsor*.) The women were represented as worse than the men--scheming, ignorant, and corrupt. The dialogue in the best of these plays was easy, lively, and witty; the situations in some of them audacious almost beyond belief. Under a thin varnish of good breeding, the sentiments and manners were really brutal. The loosest gallants of Beaumont and Fletcher's theater retain a fineness of feeling and that *politesse de coeur*--which marks the gentleman. They are poetic creatures, and

own a capacity for romantic passion. But the Manlys and Homers of the Restoration comedy have a prosaic, cold-blooded profligacy that disgusts. Charles Lamb, in his ingenious essay on "The Artificial Comedy of the Last Century," apologized for the Restoration stage, on the ground that it represented a world of whim and unreality in which the ordinary laws of morality had no application. But Macaulay answered truly, that at no time has the stage been closer in its imitation of real life. The theater of Wycherley and Etherege was but the counterpart of that social condition which we read of in Pepys's *Diary*, and in the *Memoirs* of the Chevalier de Grammont. This prose comedy of manners was not, indeed, "artificial" at all, in the sense in which the contemporary tragedy--the "heroic play"--was artificial. It was, on the contrary, far more natural, and, intellectually, of {172} much higher value. In 1698 Jeremy Collier, a non-juring Jacobite clergyman, published his *Short View of the Immorality and Profaneness of the English Stage*, which did much toward reforming the practice of the dramatists. The formal characteristics, without the immorality, of the Restoration comedy, re-appeared briefly in Goldsmith's *She Stoops to Conquer*, 1772, and Sheridan's *Rival*, *School for Scandal*, and *Critic*, 1775-9, our last strictly "classical" comedies. None of this school of English comedians approached their model, Molière. He excelled his imitators not only in his French urbanity--the polished wit and delicate grace of his style--but in the dexterous unfolding of his plot, and in the wisdom and truth of his criticism of life, and his insight into character. It is a symptom of the false taste of the age that Shakspeare's plays were rewritten for the Restoration stage. Davenant made new versions of *Macbeth* and *Julius Caesar*, substituting rime for blank verse. In conjunction with Dryden, he altered the *Tempest*, complicating the intrigue by the introduction of a male counterpart to Miranda--a youth who had never seen a woman. Shadwell "improved" *Timon of Athens*, and Nahum Tate furnished a new fifth act to *King Lear*, which turned the play into a comedy! In the prologue to his doctored version of *Troilus and Cressida*, Dryden made the ghost of Shakspeare speak of himself as

"Untaught, unpracticed in a barbarous age."

{172} Thomas Rymer, whom Pope pronounced a good critic, was very severe upon Shakspeare in his *Remarks on the Tragedies of the Last Age*; and in his *Short View of Tragedy*, 1693, he said, "In the neighing of a horse or in the growling of a mastiff, there is more humanity than, many times, in the tragical flights of Shakspeare." "To Deptford by water," writes Pepys, in his diary for August 20, 1666, "reading Othello, Moor of Venice; which I ever heretofore esteemed a mighty good play; but, having so lately read the *Adventures of Five Hours*, it seems a mean thing." In undramatic poetry the new school, both in England and in France, took its point of departure in a reform against the extravagances of the Marinists, or conceited poets, specially represented in England by Donne and Cowley. The new poets, both in their theory and practice, insisted upon correctness, clearness, polish, moderation, and good sense. Boileau's *L' Art Poétique*, 1673, inspired by Horace's *Ars Poetica*, was a treatise in verse upon the rules of correct composition, and it gave the law in criticism for over a century, not only in France, but in Germany and England. It gave English poetry a didactic turn and started the fashion of writing critical essays in riming couplets. The Earl of Mulgrave published two "poems" of this kind, an *Essay on Satire*, and an *Essay on Poetry*. The Earl of Roscommon--who, said Addison, "makes even rules a noble poetry"--made a metrical version of Horace's *Ars Poetica*, {174} and wrote an original *Essay on Translated Verse*. Of the same kind were Addison's epistle to Sacheverel, entitled *An Account of the Greatest English Poets*, and Pope's *Essay on Criticism*, 1711, which was nothing more than versified maxims of rhetoric, put with Pope's usual point and brilliancy. The classicism of the 18th century, it has been said, was a classicism in red heels and a periwig. It was Latin rather than Greek; it turned to the least imaginative side of Latin literature and found its models, not in Vergil, Catullus, and Lucretius, but in the satires, epistles, and didactic pieces of Juvenal, Horace, and Persius. The chosen medium of the new poetry was the heroic couplet. This had, of course, been used before by English poets as far back as Chaucer. The greater part of the *Canterbury Tales* was written in heroic couplets. But now a new strength and precision were given to the familiar measure by imprisoning the sense within the limit of the couplet, and by treating each line as also a unit in itself. Edmund Waller had written verse of this kind as early as the reign of Charles I. He, said Dryden, "first showed us to conclude the sense most commonly in distichs, which, in the verse of those before him, runs on for so many lines together that the reader is out of breath to overtake it." Sir John Denham, also, in his *Cooper's Hill*, 1643, had written such verse as this: "O, could I flow like thee, and make thy stream

My great example as it is my theme!

{175}

Though deep yet clear, though gentle yet not dull,
Strong without rage, without o'erflowing full."

Here we have the regular flow, and the nice balance between the first and second member of each couplet, and the first and second part of each line, which characterized the verse of Dryden and Pope.

"Waller was smooth, but Dryden taught to join
The varying verse, the full resounding line,
The long resounding march and energy divine."

Thus wrote Pope, using for the nonce the triplet and alexandrine by which Dryden frequently varied the couplet. Pope himself added a greater neatness and polish to Dryden's verse and brought the system to such monotonous perfection that he "made poetry a mere mechanic art." The lyrical poetry of this generation was almost entirely worthless. The dissolute wits of Charles the Second's court, Sedley, Rochester, Sackville, and the "mob of gentlemen who wrote with ease" threw off a few amatory trifles; but the age was not spontaneous or sincere enough for genuine song. Cowley introduced the Pindaric ode, a highly artificial form of the lyric, in which the language was tortured into a kind of spurious grandeur, and the meter teased into a sound and fury, signifying nothing. Cowley's Pindarics were filled with something which passed for fire, but has now utterly gone out. Nevertheless, the fashion spread, and "he who could do nothing else," said Dr. Johnson, {176} "could write like Pindar." The best of these odes was Dryden's famous *Alexander's Feast*, written for a celebration of St. Cecilia's day by a musical club. To this same fashion, also, we owe Gray's two fine odes, the *Progress of Poesy* and the *Bard*, written a half-century later. Dryden was not so much a great poet, as a solid thinker, with a splendid mastery of expression, who used his energetic verse as a vehicle for political argument and satire. His first noteworthy poem, *Annus Mirabilis*, 1667, was a narrative of the public events of the year 1666, namely: the Dutch war and the great fire of London. The subject of *Absalom and Ahitophel*--the first part of which appeared in 1681--was the alleged plot of the Whig leader, the Earl of Shaftesbury, to defeat the succession of the Duke of York, afterward James II., by securing the throne to Monmouth, a natural son of Charles II. The parallel afforded by the story of Absalom's revolt against David was wrought out by Dryden with admirable ingenuity and keeping. He was at his best in satirical character-sketches, such as the brilliant portraits in this poem of Shaftesbury, as the false counselor, Ahitophel, and of the Duke of Buckingham as Zimri. The latter was Dryden's reply to the *Rehearsal*. *Absalom and Ahitophel* was followed by the *Medal*, a continuation of the same subject, and *Mac Flecknoe*, a personal onslaught on the "true blue Protestant poet," Thomas Shadwell, a political and literary foe of Dryden. Flecknoe, an {177} obscure Irish poetaster, being about to retire from the throne of duncedom, resolved to settle the succession upon his son, Shadwell, whose claims to the inheritance are vigorously asserted.

"The rest to some faint meaning make pretense,
But Shadwell never deviates into sense. . . .
The midwife laid her hand on his thick skull
With this prophetic blessing--Be thou dull."

Dryden is our first great satirist. The formal satire had been written in the reign of Elisabeth by Donne, and by Joseph Hall, Bishop of Exeter, and subsequently by Marston, the dramatist, by Wither, Marvell, and others; but all of these failed through an over violence of language, and a purpose too pronouncedly moral. They had no lightness of touch, no irony and mischief. They bore down too hard, imitated Juvenal, and lashed English society in terms befitting the corruption of Imperial Rome. They denounced, instructed, preached, did every thing but satirize. The satirist must raise a laugh. Donne and Hall abused men in classes: priests were worldly, lawyers greedy, courtiers obsequious, etc. But the easy scorn of Dryden and the delightful malice of Pope gave a pungent personal interest to their sarcasm, infinitely more effective than these commonplaces of satire. Dryden was as happy in controversy as in satire, and is unexcelled in the power to reason in verse. His *Religio Laici*, 1682, was a poem in defense of the {178} English Church. But when James II. came to the throne Dryden turned Catholic and wrote the *Hind and Panther*, 1687, to vindicate his new belief. Dryden had the misfortune to be dependent upon royal patronage and upon a corrupt stage. He sold his pen to the court, and in his comedies he was heavily and deliberately lewd, a sin which he afterward acknowledged and regretted. Milton's "soul was like a star and dwelt apart," but Dryden wrote for the trampling multitude. He had a coarseness of moral fiber, but was not malignant in his satire, being of a large, careless, and forgetting nature. He had that masculine, enduring cast of mind which gathers heat and clearness from motion, and grows better with age. His *Fables*--modernizations from Chaucer and translations from Boccaccio--written the year before he died, are among his best works. Dryden is also our first critic of any importance. His critical essays were mostly written as prefaces or dedications to his poems and plays. But his *Essay on Dramatic Poesie*, which Dr. Johnson called our "first regular and valuable treatise on the art of writing," was in the shape of a

Platonic dialogue. When not misled by the French classicism of his day, Dryden was an admirable critic, full of penetration and sound sense. He was the earliest writer, too, of modern literary prose. If the imitation of French models was an injury to poetry it was a benefit to prose. The best modern prose is French, and it was the essayists of the {179} Gallicised Restoration age--Cowley, Sir William Temple, and, above all, Dryden--who gave modern English prose that simplicity, directness, and colloquial air, which marks it off from the more artificial diction of Milton, Taylor, and Browne. A few books whose shaping influences lay in the past belong by their date to this period. John Bunyan, a poor tinker, whose reading was almost wholly in the Bible and Fox's *Book of Martyrs*, imprisoned for twelve years in Bedford jail for preaching at conventicles, wrote and, in 1678, published his *Pilgrim's Progress*, the greatest of religious allegories. Bunyan's spiritual experiences were so real to him that they took visible concrete shape in his imagination as men, women, cities, landscapes. It is the simplest, the most transparent of allegories. Unlike the *Faery Queene*, the story of *Pilgrim's Progress* has no reason for existing apart from its inner meaning, and yet its reality is so vivid that children read of *Vanity Fair* and the *Slough of Despond* and *Doubting Castle* and the *Valley of the Shadow of Death* with the same belief with which they read of *Crusoe's* cave or *Aladdin's* palace. It is a long step from the Bedford tinker to the cultivated poet of *Paradise Lost*. They represent the poles of the Puritan party. Yet it may admit of a doubt, whether the Puritan epic is, in essentials, as vital and original a work as the Puritan allegory. They both came out quietly and made little noise at first. But the *Pilgrim's Progress* got at once {180} into circulation, and not even a single copy of the first edition remains. Milton, too--who received 10 pounds for the copyright of *Paradise Lost*--seemingly found that "fit audience though few" for which he prayed, as his poem reached its second impression in five years (1672). Dryden visited him in his retirement and asked leave to turn it into rime and put it on the stage as an opera. "Ay," said Milton, good humoredly, "you may tag my verses." And accordingly they appeared, duly tagged, in Dryden's operatic masque, the *State of Innocence*. In this startling conjunction we have the two ages in a nut-shell: the Commonwealth was an epic, the Restoration an opera. The literary period covered by the life of Pope, 1688-1744, is marked off by no distinct line from the generation before it. Taste continued to be governed by the precepts of Boileau and the French classical school. Poetry remained chiefly didactic and satirical, and satire in Pope's hands was more personal even than in Dryden's, and addressed itself less to public issues. The literature of the "Augustan age" of Queen Anne (1702-1714) was still more a literature of the town and of fashionable society than that of the Restoration had been. It was also closely involved with party struggles of Whig and Tory, and the ablest pens on either side were taken into alliance by the political leaders. Swift was in high favor with the Tory ministers, Oxford and Bolingbroke, and his pamphlets, the *Public Spirit of the Whigs* and the {181} *Conduct of the Allies*, were rewarded with the deanery of St. Patrick's, Dublin. Addison became Secretary of State under a Whig government. Prior was in the diplomatic service. Daniel De Foe, the author of *Robinson Crusoe*, 1719, was a prolific political writer, conducted his *Review* in the interest of the Whigs and was imprisoned and pilloried for his ironical pamphlet, *The Shortest Way with the Dissenters*. Steele, who was a violent writer on the Whig side, held various public offices, such as Commissioner of Stamps and Commissioner for Forfeited Estates, and sat in Parliament. After the Revolution of 1688 the manners and morals of English society were somewhat on the mend. The court of William and Mary, and of their successor, Queen Anne, set no such example of open profligacy as that of Charles II. But there was much hard drinking, gambling, dueling, and intrigue in London, and vice was fashionable till Addison partly preached and partly laughed it down in the *Spectator*. The women were mostly frivolous and uneducated, and not unfrequently fast. They are spoken of with systematic disrespect by nearly every writer of the time, except Steele. "Every woman," wrote Pope, "is at heart a rake." The reading public had now become large enough to make letters a profession. Dr. Johnson said that Pope was the first writer in whose case the book-seller took the place of the patron. His translation of Homer, published by subscription, brought him between eight and nine thousand {182} pounds and made him independent. But the activity of the press produced a swarm of poorly-paid hack-writers, penny-a-liners, who lived from hand to mouth and did small literary jobs to order. Many of these inhabited Grub Street, and their lampoons against Pope and others of their more successful rivals called out Pope's *Dunciad*, or epic of the dunces, by way of retaliation. The politics of the time were sordid and consisted mainly of an ignoble scramble for office. The Whigs were fighting to maintain the Act of Succession in favor of the House of Hanover, and the Tories were secretly intriguing with the exiled Stuarts. Many of the leaders, such as the great Whig champion, John Churchill, Duke of Marlborough, were without political principle or even personal honesty. The Church, too, was in a condition of spiritual deadness. Bishoprics and livings were sold and given to political favorites. Clergymen, like Swift and Lawrence Sterne, were worldly in their lives and immoral in their writings, and were practically unbelievers. The growing religious skepticism appeared in the Deist controversy. Numbers of men in high position were Deists; the Earl of Shaftesbury, for example, and Pope's brilliant friend, Henry St. John, Lord Bolingbroke, the head of the Tory ministry, whose political writings had much influence upon his young French acquaintance, Voltaire. Pope was a Roman Catholic, though there is little to show it in his writings, and the underlying thought of

his famous *Essay* {183} on *Man* was furnished him by Bolingbroke. The letters of the cold-hearted Chesterfield to his son were accepted as a manual of conduct, and La Rochefoucauld's cynical maxims were quoted as authority on life and human nature. Said Swift:

"As Rochefoucauld his maxims drew
From nature, I believe them true.
They argue no corrupted mind
In him; the fault is in mankind."

The succession which Dryden had willed to Congreve was taken up by Alexander Pope. He was a man quite unlike Dryden, sickly, deformed, morbidly precocious, and spiteful; nevertheless he joined on to and continued Dryden. He was more careful in his literary workmanship than his great forerunner, and in his *Moral Essays* and *Satires* he brought the Horatian epistle in verse, the formal satire and that species of didactic poem of which Boileau had given the first example, to an exquisite perfection of finish and verbal art. Dryden had translated Vergil, and so Pope translated Homer. The throne of the dunces, which Dryden had conferred upon Shadwell, Pope, in his *Dunciad*, passed on to two of his own literary foes, Theobald and Colley Cibber. There is a great waste of strength in this elaborate squib, and most of the petty writers, whose names it has preserved, as has been said, like flies in amber, are now quite unknown. But, although we have to read it with notes, to get the point of its allusions, it is easy to {184} see what execution it must have done at the time, and it is impossible to withhold admiration from the wit, the wickedness, the triumphant mischief of the thing. The sketch of Addison--who had offended Pope by praising a rival translation of Homer--as "Atticus," is as brilliant as any thing of the kind in Dryden. Pope's very malignity made his sting sharper than Dryden's. He secreted venom, and worked out his revenges deliberately, bringing all the resources of his art to bear upon the question of how to give the most pain most cleverly. Pope's masterpiece is, perhaps, the *Rape of the Lock*, a mock heroic poem, a "dwarf Iliad," recounting, in five cantos, a society quarrel, which arose from Lord Petre's cutting a lock of hair from the head of Mrs. Arabella Fermor. Boileau, in his *Lutrin*, had treated, with the same epic dignity, a dispute over the placing of the reading desk in a parish church. Pope was the Homer of the drawing-room, the boudoir, the tea-urn, the ombre-party, the sedan-chair, the parrot cage, and the lap-dogs. This poem, in its sparkle and airy grace, is the topmost blossom of a highly artificial society, the quintessence of whatever poetry was possible in those

"Teacup times of hood and hoop,
And when the patch was worn,"

with whose decorative features, at least, the recent Queen Anne revival has made this generation familiar. It may be said of it, as Thackeray said of {185} Gay's pastorals: "It is to poetry what charming little Dresden china figures are to sculpture, graceful, minikin, fantastic, with a certain beauty always accompanying them." The *Rape of the Lock*, perhaps, stops short of beauty, but it attains elegance and prettiness in a supreme degree. In imitation of the gods and goddesses in the Iliad, who intermeddle for or against the human characters, Pope introduced the Sylphs of the Rosicrucian philosophy. We may measure the distance between imagination and fancy, if we will compare these little filagree creatures with Shakspeare's elves, whose occupation it was

"To tread the ooze of the salt deep,
Or run upon the sharp wind of the north, . . .
Or on the beached margent of the sea,
To dance their ringlets to the whispering wind."

Very different were the offices of Pope's fays:

"Our humble province is to tend the fair;
Not a less pleasing, though less glorious, care;
To save the powder from too rude a gale,
Nor let the imprisoned essences exhale. . . .
Nay oft in dreams invention we bestow
To change a flounce or add a furbelow."

Pope was not a great poet; it has been doubted whether he was a poet at all. He does not touch the heart, or stimulate the imagination, as the true poet always does. In the poetry of nature, and the poetry of passion, he was altogether impotent. {186} His *Windsor Forest* and his *Pastorals* are artificial and false, not written with "the eye upon the object." His epistle of *Eloisa to Abelard* is declamatory and academic, and leaves the reader cold. The only one of his poems which is at all possessed with feeling is his pathetic *Elegy to the Memory of an Unfortunate Lady*. But he was a great literary artist. Within the cramped and starched regularity of the heroic couplet, which the fashion of the time and his own habit of mind imposed upon him, he secured the largest variety of modulation and emphasis of which that verse was capable. He used antithesis, periphrasis, and climax with great skill. His example dominated English poetry for nearly a century, and even now, when a poet like Dr. Holmes, for example, would write satire or humorous verse of a dignified kind, he turns instinctively to the measure and manner of Pope. He was not a consecutive thinker, like Dryden, and cared less about the truth of his thought than about the pointedness of its expression. His language was closer-grained than Dryden's. His great art was the art of putting things. He is more quoted than any other English poet, but Shakspeare. He struck the average intelligence, the common sense of English readers, and furnished it with neat, portable formulas, so that it no longer needed to "vent its observation in mangled terms," but could pour itself out compactly, artistically, in little, ready-made molds. But his high-wrought brilliancy, this unceasing point, soon fatigue. His {187} poems read like a series of epigrams; and every line has a hit or an effect. >From the reign of Queen Anne date the beginnings of the periodical essay. Newspapers had been published since the time of the Civil War; at first irregularly, and then regularly. But no literature of permanent value appeared in periodical form until Richard Steele started the *Tatler*, in 1709. In this he was soon joined by his friend, Joseph Addison and in its successor the *Spectator*, the first number of which was issued March 1, 1711, Addison's contributions outnumbered Steele's. The *Tatler* was published on three, the *Spectator* on six, days of the week. The *Tatler* gave political news, but each number of the *Spectator* consisted of a single essay. The object of these periodicals was to reflect the passing humors of the time, and to satirize the follies and minor immoralities of the town. "I shall endeavor," wrote Addison, in the tenth paper of the *Spectator*, "to enliven morality with wit, and to temper wit with morality. . . . It was said of Socrates that he brought Philosophy down from Heaven to inhabit among men; and I shall be ambitious to have it said of me that I have brought Philosophy out of closets and libraries, schools and colleges, to dwell in clubs and assemblies, at tea-tables and in coffee-houses." Addison's satire was never personal. He was a moderate man, and did what he could to restrain Steele's intemperate party zeal. His character was dignified and pure, and his strongest emotion seems to have {188} been his religious feeling. One of his contemporaries called him "a parson in a tie wig," and he wrote several excellent hymns. His mission was that of censor of the public taste. Sometimes he lectures and sometimes he preaches, and in his Saturday papers, he brought his wide reading and nice scholarship into service for the instruction of his readers. Such was the series of essays, in which he gave an elaborate review of *Paradise Lost*. Such also was his famous paper, the *Vision of Mirza*, an oriental allegory of human life. The adoption of this slightly pedagogic tone was justified by the prevalent ignorance and frivolity of the age. But the lighter portions of the *Spectator* are those which have worn the best. Their style is at once correct and easy, and it is as a humorist, a sly observer of manners, and above all, a delightful talker, that Addison is best known to posterity. In the personal sketches of the members of the Spectator Club, of Will Honeycomb, Captain Sentry, Sir Andrew Freeport, and, above all, Sir Roger de Coverley, the quaint and honest country gentleman, may be found the nucleus of the modern prose fiction of character. Addison's humor is always a trifle grave. There is no whimsy, no frolic in it, as in Sterne or Lamb. "He thinks justly," said Dr. Johnson, "but he thinks faintly." The *Spectator* had a host of followers, from the somewhat heavy *Rambler* and *Idler* of Johnson, down to the *Salmagundi* papers of our own Irving, who was, perhaps, Addison's latest and {189} best literary descendant. In his own age Addison made some figure as a poet and dramatist. His *Campaign*, celebrating the victory of Blenheim, had one much-admired couplet, in which Marlborough was likened to the angel of tempest, who "Pleased the Almighty's orders to perform,

Rides in the whirlwind and directs the storm."

His stately, classical tragedy, *Cato*, which was acted at Drury Lane Theater in 1712, with immense applause, was pronounced by Dr. Johnson "unquestionably the noblest production of Addison's genius." It is, notwithstanding, cold and tedious, as a whole, though it has some fine declamatory passages--in particular the soliloquy of Cato in the fifth act--

"It must be so: Plato, thou reasonest well," etc.

The greatest of the Queen Anne wits, and one of the most savage and powerful satirists that ever lived, was Jonathan Swift. As secretary in the family of Sir William Temple, and domestic chaplain to the Earl of Berkeley, he had known in youth the bitterness of poverty and dependence. Afterward he wrote himself into influence with the Tory ministry, and was promised a bishopric, but was put off with the deanery of St. Patrick's, and retired to Ireland to "die like a poisoned rat in a hole." His life was made tragical by the forecast of the madness which finally overtook him. "The stage darkened," said Scott, "ere the curtain fell." Insanity {190} deepened into idiocy and a hideous silence, and for three years before his death he spoke hardly ever a word. He had directed that his tombstone should bear the inscription, *Ubi saeva indignatio cor ulterius lacerare nequit*. "So great a man he seems to me," wrote Thackeray, "that thinking of him is like thinking of an empire falling." Swift's first noteworthy publication was his *Tale of a Tub*, 1704, a satire on religious differences. But his great work was *Gulliver's Travels*, 1726, the book in which his hate and scorn of mankind, and the long rage of mortified pride and thwarted ambition found their fullest expression. Children read the voyages to Lilliput and Brobdingnag, to the flying island of Laputa and the country of the Houyhnhnms, as they read *Robinson Crusoe*, as stories of wonderful adventure. Swift had all of De Foe's realism, his power of giving veri-similitude to his narrative by the invention of a vast number of small, exact, consistent details. But underneath its fairy tales, *Gulliver's Travels* is a satire, far more radical than any of Dryden's or Pope's, because directed, not against particular parties or persons, but against human nature. In his account of Lilliput and Brobdingnag, Swift tries to show--looking first through one end of the telescope and then through the other--that human greatness, goodness, beauty disappear if the scale be altered a little. If men were six inches high instead of six feet--such is the logic of his tale--their wars, governments, science, religion--all their institutions, {191} in fine, and all the courage, wisdom, and virtue by which these have been built up, would appear laughable. On the other hand, if they were sixty feet high instead of six, they would become disgusting. The complexion of the finest ladies would show blotches, hairs, excrescences, and an overpowering effluvium would breathe from the pores of the skin. Finally, in his loathsome caricature of mankind, as Yahoos, he contrasts them to their shame with the beasts, and sets instinct above reason. The method of Swift's satire was grave irony. Among his minor writings in this kind are his *Argument against Abolishing Christianity*, his *Modest Proposal* for utilizing the surplus population of Ireland by eating the babies of the poor, and his *Predictions of Isaac Bickerstaff*. In the last he predicted the death of one Partridge, an almanac maker, at a certain day and hour. When the time set was past, he published a minute account of Partridge's last moments; and when the subject of this excellent fooling printed an indignant denial of his own death, Swift answered very temperately, proving that he was dead and remonstrating with him on the violence of his language. "To call a man a fool and villain, an impudent fellow, only for differing from him in a point merely speculative, is, in my humble opinion, a very improper style for a person of his education." Swift wrote verses as well as prose, but their motive was the reverse of poetical. His gross and cynical humor vulgarized whatever it touched. He leaves us no illusions, {192} and not only strips his subject, but flays it and shows the raw muscles beneath the skin. He delighted to dwell upon the lowest bodily functions of human nature. "He saw bloodshot," said Thackeray.

CHAPTER VI.

FROM THE DEATH OF POPE TO THE FRENCH REVOLUTION.

1744-1789.

Pope's example continued potent for fifty years after his death. Especially was this so in satiric and didactic poetry. Not only Dr. Johnson's adaptations from *Juvenal*, London, 1738, and the *Vanity of Human Wishes*, 1749, but Gifford's *Baviad*, 1791, and *Maeviad*, 1795, and Byron's *English Bards and Scotch Reviewers*, 1809, were in the verse and manner of Pope. In Johnson's *Lives of the Poets*, 1781, Dryden and Pope are treated as the two greatest English poets. But long before this a revolution in literary taste had begun, a movement which is variously described as The Return to Nature, or The Rise of the New Romantic School. For nearly a hundred years poetry had dealt with manners and the life of towns, the gay, prosaic life of Congreve or of Pope. The sole concession to the life of nature was the old pastoral, which, in the hands of cockneys, like Pope and Ambrose Philips, who merely repeated stock descriptions at second or third hand, became even more artificial than a *Beggar's Opera* or a *Rape of the Lock*. These, at least, were true to their environment, and were natural, just *because* they were artificial. But the *Seasons* of James Thomson, published in installments from 1726-30, had opened a new field. Their theme was the English landscape, as varied by the changes of the year, and they were written by a true lover and observer of nature. Mark Akenside's *Pleasures of Imagination*, 1744, published the year of Pope's death, was written like the *Seasons*, in blank verse; and although its language had much of the formal, didactic cast of the Queen Anne poets, it pointed unmistakably in the new direction. Thomson had painted the soft beauties of a highly cultivated land--lawns, gardens, forest-preserves, orchards, and sheep-walks. But now a fresh note was struck in the literature, not of England alone, but of Germany and France--romanticism, the chief element in which was a love of the wild. Poets turned from the lameness of modern existence to savage nature and the heroic simplicity of life among primitive tribes. In France, Rousseau introduced the idea of the natural man, following his instincts in disregard of social conventions. In Germany Bodmer published, in 1753, the first edition of the old German epic, the *Nibelungen Lied*. Works of a similar tendency in England were the odes of William Collins and Thomas Gray, published between 1747-57, especially Collins's *Ode on the Superstitions of the Highlands*, and Gray's *Bard*, a pindaric, in which the last survivor of the Welsh bards invokes vengeance on Edward I., the destroyer of his guild. Gray and Mason, his friend and editor, made translations from the ancient Welsh and Norse poetry. Thomas Percy's *Reliques of Ancient English Poetry*, 1765, aroused a taste for old ballads. Richard Hurd's *Letters on Chivalry and Romance*, Thomas Warton's *History of English Poetry*, 1774-78, Tyrwhitt's critical edition of Chaucer, and Horace Walpole's Gothic romance, the *Castle of Otranto*, 1765, stimulated this awakened interest in the picturesque aspects of feudal life, and contributed to the fondness for supernatural and mediaeval subjects. James Beattie's *Minstrel*, 1771, described the educating influence of Scottish mountain scenery upon the genius of a young poet. But the most remarkable instances of this passion for wild nature and the romantic past were the *Poems of Ossian* and Thomas Chatterton's literary forgeries. In 1762 James Macpherson published the first installment of what professed to be a translation of the poems of Ossian, a Gaelic bard, whom tradition placed in the 3d century. Macpherson said that he made his version--including two complete epics, *Fingal* and *Temora*, from Gaelic MSS., which he had collected in the Scottish Highlands. A fierce controversy at once sprang up over the genuineness of these remains. Macpherson was challenged to produce his originals, and when, many years after, he published the Gaelic text, it was asserted that this was nothing but a translation of his own English into modern Gaelic. Of the MSS. which he professed to have found not a scrap remained: the Gaelic text was printed from transcriptions in Macpherson's handwriting or in that of his secretaries. But whether these poems were the work of Ossian or of Macpherson, they made a deep impression upon the time. Napoleon admired them greatly, and Goethe inserted passages from the "Songs of Selma" in his *Sorrows of Werther*. Macpherson composed--or translated--them in an abrupt, rhapsodical prose, resembling the English version of Job or of the prophecies of Isaiah. They filled the minds of their readers with images of vague sublimity and desolation; the mountain torrent, the mist on the hills, the ghosts of heroes half seen by the setting moon, the thistle in the ruined courts of chieftains, the grass whistling on the windy heath, the gray rock by the blue stream of Lutha, and the cliffs of sea-surrounded Gormal. "A tale of the times of old!" "Why, thou wanderer unseen! Thou bender of the thistle of Lora; why, thou breeze of the valley, hast thou left mine ear? I hear no distant roar of streams! No sound of the harp from the rock! Come, thou huntress of Lutha, Malvina, call back his soul to the bard. I look forward to Lochlin of lakes, to the dark billowy bay of U-thorno, where Fingal descends from Ocean, from the roar of winds. Few are the heroes of Morven in a land unknown." Thomas Chatterton, who died by his own hand in 1770, at the age of seventeen, is one of the most wonderful examples of precocity in the history of literature. His father had been sexton of the ancient Church of St.

Mary Redcliff, in Bristol, and the boy's sensitive imagination took the stamp of his surroundings. He taught himself to read from a black-letter Bible. He drew charcoal sketches of churches, castles, knightly tombs, and heraldic blazonry. When only eleven years old, he began the fabrication of documents in prose and verse, which he ascribed to a fictitious Thomas Rowley, a secular priest at Bristol in the 15th century. Chatterton pretended to have found these among the contents of an old chest in the muniment room of St. Mary Redcliff's. The Rowley poems included two tragedies, *Aella* and *Goddwyn*, two cantos of a long poem on the *Battle of Hastings*, and a number of ballads and minor pieces. Chatterton had no precise knowledge of early English, or even of Chaucer. His method of working was as follows: He made himself a manuscript glossary of the words marked as archaic in Bailey's and Kersey's English dictionaries, composed his poems first in modern language, and then turned them into ancient spelling, and substituted here and there the old words in his glossary for their modern equivalents. Naturally he made many mistakes, and though Horace Walpole, to whom he sent some of his pieces, was unable to detect the forgery, his friends, Gray and Mason, to whom he submitted them, at once pronounced them {198} spurious. Nevertheless there was a controversy over Rowley, hardly less obstinate than that over Ossian, a controversy made possible only by the then almost universal ignorance of the forms, scansion, and vocabulary of early English poetry. Chatterton's poems are of little value in themselves, but they are the record of an industry and imitative quickness, marvelous in a mere child, and they show how, with the instinct of genius, he threw himself into the main literary current of his time. Discarding the couplet of Pope, the poets now went back for models to the Elisabethan writers. Thomas Warton published, in 1753, his *Observations on the Faerie Queene*. Beattie's *Minstrel*, Thomson's *Castle of Indolence*, William Shenstone's *Schoolmistress*, and John Dyer's *Fleece*, were all written in the Spenserian stanza. Shenstone gave a partly humorous effect to his poem by imitating Spenser's archaisms, and Thomson reproduced in many passages the copious harmony and luxuriant imagery of the *Faerie Queene*. The *Fleece* was a poem on English wool-growing, after the fashion of Vergil's *Georgics*. The subject was unfortunate, for, as Dr. Johnson said, it is impossible to make poetry out of serges and druggets. Dyer's *Grongar Hill*, which mingles reflection with natural description in the manner of Gray's *Elegy* written in a *Country Churchyard*, was composed in the octosyllabic verse of Milton's *L'Allegro* and *Il Penseroso*. Milton's minor poems, which had hitherto been neglected, {199} exercised a great influence on Collins and Gray. Collins's *Ode to Simplicity* was written in the stanza of Milton's *Nativity*, and his exquisite unrimed *Ode to Evening* was a study in versification, after Milton's translation of Horace's *Ode to Pyrrha*, in the original meters. Shakspeare began to be studied more reverently: numerous critical editions of his plays were issued, and Garrick restored his pure text to the stage. Collins was an enthusiastic student of Shakspeare, and one of his sweetest poems, the *Dirge in Cymbeline*, was inspired by the tragedy of *Cymbeline*. The verse of Gray, Collins, and the Warton brothers, abounds in verbal reminiscences of Shakspeare; but their genius was not allied to his, being exclusively lyrical, and not at all dramatic. The Muse of this romantic school was Fancy rather than Passion. A thoughtful melancholy, a gentle, scholarly pensiveness, the spirit of Milton's *Il Penseroso*, pervades their poetry. Gray was a fastidious scholar, who produced very little, but that little of the finest quality. His famous *Elegy*, expressing a meditative mood in language of the choicest perfection, is the representative poem of the second half of the 18th century, as the *Rape of the Lock* is of the first. The romanticists were quietists, and their scenery is characteristic. They loved solitude and evening, the twilight vale, the mossy hermitage, ruins, glens, and caves. Their style was elegant and academic, retaining a little of the stilted poetic diction of their classical {200} forerunners. Personification and periphrasis were their favorite mannerisms: Collins's Odes were largely addressed to abstractions, such as Fear, Pity, Liberty, Mercy, and Simplicity. A poet in their dialect was always a "bard;" a countryman was "the untutored swain," and a woman was a "nymph" or "the fair," just as in Dryden and Pope. Thomson is perpetually mindful of Vergil, and afraid to speak simply. He uses too many Latin epithets, like *amusive* and *precipitant*, and calls a fish-line "The floating line snatched from the hoary steed." They left much for Cowper and Wordsworth to do in the way of infusing the new blood of a strong, racy English into our exhausted poetic diction. Their poetry is impersonal, bookish, literary. It lacks emotional force, except now and then in Gray's immortal *Elegy*, in his *Ode on a Distant Prospect of Eton College*, in Collins's lines, *On the Death of Thomson*, and his little ode beginning, "How sleep the brave?" The new school did not lack critical expounders of its principles and practice. Joseph Warton published, in 1756, the first volume of his *Essay on the Genius and Writings of Pope*, an elaborate review of Pope's writings *seriatim*, doing him certainly full justice, but ranking him below Shakspeare, Spenser, and Milton. "Wit and satire," wrote Warton, "are transitory and perishable, but nature and passion are eternal. . . . He stuck to {201} describing modern manners; but those manners, because they are familiar, artificial, and polished, are, in their very nature, unfit for any lofty effort of the Muse. Whatever poetical enthusiasm he actually possessed he withheld and stifled. Surely it is no narrow and niggardly encomium to say, he is the great Poet of Reason, the first of Ethical authors in verse." Warton illustrated his critical positions by quoting freely not only from Spenser and Milton, but from recent poets, like Thomson, Gray, Collins, and Dyer. He testified that the Seasons had "been

very instrumental in diffusing a general taste for the beauties of nature and landscape." It was symptomatic of the change in literary taste that the natural or English school of landscape gardening now began to displace the French and Dutch fashion of clipped hedges, regular parterres, etc., and that Gothic architecture came into repute. Horace Walpole was a virtuoso in Gothic art, and in his castle, at Strawberry Hill, he made a collection of ancient armor, illuminated MSS., and bric-a-brac of all kinds. Gray had been Walpole's traveling companion in France and Italy, and the two had quarreled and separated, but were afterward reconciled. From Walpole's private printing-press, at Strawberry Hill, Gray's two "sister odes," the *Bard* and the *Progress of Poesy*, were first printed, in 1757. Both Gray and Walpole were good correspondents, and their printed letters are among the most delightful literature of the kind. {202} The central figure among the English men of letters of that generation was Samuel Johnson (1709-84), whose memory has been preserved less by his own writings than by James Boswell's famous *Life of Johnson*, published in 1791. Boswell was a Scotch laird and advocate, who first met Johnson in London, when the latter was fifty-four years old. Boswell was not a very wise or witty person, but he revered the worth and intellect which shone through his subject's uncouth exterior. He followed him about, note-book in hand, bore all his snubbings patiently, and made the best biography ever written. It is related that the doctor once said that if he thought Boswell meant to write *his* life, he should prevent it by taking *Boswell's*. And yet Johnson's own writings and this biography of him have changed places in relative importance so completely, that Carlyle predicted that the former would soon be reduced to notes on the latter; and Macaulay said that the man who was known to his contemporaries as a great writer was known to posterity as an agreeable companion. Johnson was one of those rugged, eccentric, self-developed characters, so common among the English. He was the son of a Lichfield book-seller, and after a course at Oxford, which was cut short by poverty, and an unsuccessful career as a school-master, he had come up to London, in 1737, where he supported himself for many years as a book-seller's hack. Gradually his great learning {203} and abilities, his ready social wit and powers as a talker, caused his company to be sought at the tables of those whom he called "the great." He was a clubbable man, and he drew about him at the tavern a group of the most distinguished intellects of the time, Edmund Burke, the orator and statesman, Oliver Goldsmith, Sir Joshua Reynolds, the portrait painter, and David Garrick, the great actor, who had been a pupil in Johnson's school, near Lichfield. Johnson was the typical John Bull of the last century. His oddities, virtues, and prejudices were thoroughly English. He hated Frenchmen, Scotchmen, and Americans, and had a cockneyish attachment to London. He was a high Tory, and an orthodox churchman; he loved a lord in the abstract, and yet he asserted a sturdy independence against any lord in particular. He was deeply religious, but had an abiding fear of death. He was burly in person, and slovenly in dress, his shirt-frill always covered with snuff. He was a great diner out, an inordinate tea-drinker, and a voracious and untidy feeder. An inherited scrofula, which often took the form of hypochondria and threatened to affect his brain, deprived him of control over the muscles of his face. Boswell describes how his features worked, how he snorted, grunted, whistled, and rolled about in his chair when getting ready to speak. He records his minutest traits, such as his habit of pocketing the orange peels at the club, and his superstitious way of {204} touching all the posts between his house and the Mitre Tavern, going back to do it, if he skipped one by chance. Though bearish in his manners and arrogant in dispute, especially when talking "for victory," Johnson had a large and tender heart. He loved his ugly, old wife--twenty-one years his senior--and he had his house full of unfortunates--a blind woman, an invalid surgeon, a destitute widow, a negro servant--whom he supported for many years, and bore with all their ill-humors patiently. Among Johnson's numerous writings the ones best entitled to remembrance are, perhaps, his *Dictionary of the English Language*, 1755; his moral tale, *Rasselas*, 1759; the introduction to his *Edition of Shakspeare*, 1765; and his *Lives of the Poets*, 1781. Johnson wrote a sonorous, cadenced prose, full of big Latin words and balanced clauses. Here is a sentence, for example, from his *Visit to the Hebrides*: "We were now treading that illustrious island which was once the luminary of the Caledonian regions, whence savage clans and roving barbarians derived the benefits of knowledge and the blessings of religion. To abstract the mind from all local emotion would be impossible, if it were endeavored, and would be foolish, if it were possible." The difference between his colloquial style and his book style is well illustrated in the instance cited by Macaulay. Speaking of Villier's *Rehearsal*, Johnson said, "It has not wit enough to keep it sweet;" then paused and {205} added--translating English into Johnsonese--"it has not vitality sufficient to preserve it from putrefaction." There is more of this in Johnson's *Rambler* and *Idler* papers than in his latest work, the *Lives of the Poets*. In this he showed himself a sound and judicious critic, though with decided limitations. His understanding was solid, but he was a thorough classicist, and his taste in poetry was formed on Pope. He was unjust to Milton and to his own contemporaries, Gray, Collins, Shenstone, and Dyer. He had no sense of the higher and subtler graces of romantic poetry, and he had a comical indifference to the "beauties of nature." When Boswell once ventured to remark that poor Scotland had, at least, some "noble, wild prospects," the doctor replied that the noblest prospect a Scotchman ever saw was the road that led to London. The English novel of real life had its origin at this time. Books like De Foe's *Robinson Crusoe*, *Captain Singleton*, *Journal of the Plague*, etc., were tales of incident and adventure

rather than novels. The novel deals primarily with character and with the interaction of characters upon one another, as developed by a regular plot. The first English novelist, in the modern sense of the word, was Samuel Richardson, a printer, who began authorship in his fiftieth year with his *Pamela*, the story of a young servant girl, who resisted the seductions of her master, and finally, as the reward of her virtue, became his wife. *Clarissa Harlowe*, {206} 1748, was the tragical history of a high spirited young lady, who being driven from home by her family, because she refused to marry the suitor selected for her, fell into the toils of Lovelace, an accomplished rake. After struggling heroically against every form of artifice and violence, she was at last drugged and ruined. She died of a broken heart, and Lovelace, borne down by remorse, was killed in a duel by a cousin of Clarissa. Sir *Charles Grandison*, 1753, was Richardson's portrait of an ideal fine gentleman, whose stately doings fill eight volumes, but who seems to the modern reader a bore and a prig. All of these novels were written in the form of letters passing between the characters, a method which fitted Richardson's subjective cast of mind. He knew little of life, but he identified himself intensely with his principal character and produced a strong effect by minute, accumulated touches. *Clarissa Harlowe* is his masterpiece, though even in that the situation is painfully prolonged, the heroine's virtue is self-conscious and rhetorical, and there is something almost ludicrously unnatural in the copiousness with which she pours herself out in gushing epistles to her female correspondent at the very moment when she is beset with dangers, persecuted, agonized, and driven nearly mad. In Richardson's novels appears, for the first time, that sentimentalism which now began to infect European literature. *Pamela* was translated into French and German, and fell in with that current {207} of popular feeling which found fullest expression in Rousseau's *Nouvelle Heloise*, 1759, and Goethe's *Leiden des Jungen Werther*, which set all the world a-weeping in 1774. Coleridge said that to pass from Richardson's books to those of Henry Fielding was like going into the fresh air from a close room heated by stoves. Richardson, it has been affirmed, knew *man*, but Fielding knew *men*. The latter's first novel, *Joseph Andrews*, 1742, was begun as a travesty of *Pamela*. The hero, a brother of Pamela, was a young footman in the employ of Lady Booby, from whom his virtue suffered a like assault to that made upon Pamela's by her master. This reversal of the natural situation was in itself full of laughable possibilities, had the book gone on simply as a burlesque. But the exuberance of Fielding's genius led him beyond his original design. This hero, leaving Lady Booby's service, goes traveling with good Parson Adams, and is soon engaged in a series of comical and rather boisterous adventures. Fielding had seen life, and his characters were painted from the life with a bold, free hand. He was a gentleman by birth, and had made acquaintance with society and the town in 1727, when he was a handsome, stalwart young fellow, with high animal spirits and a great appetite for pleasure. He soon ran himself into debt and began writing for the stage; married, and spent his wife's fortune, living for awhile in much splendor as a {208} country gentleman, and afterward in a reduced condition as a rural justice with a salary of 500 pounds of "the dirtiest money on earth." Fielding's masterpiece was *Tom Jones*, 1749, and it remains one of the best of English novels. Its hero is very much after Fielding's own heart, wild, spendthrift, warm-hearted, forgiving, and greatly in need of forgiveness. The same type of character, with the lines deepened, re-appears in Captain Booth, in *Amelia*, 1751, the heroine of which is a portrait of Fielding's wife. With *Tom Jones* is contrasted Blifil, the embodiment of meanness, hypocrisy, and cowardice. Sophia Western, the heroine, is one of Fielding's most admirable creations. For the regulated morality of Richardson, with its somewhat old-grannified air, Fielding substituted instinct. His virtuous characters are virtuous by impulse only, and his ideal of character is manliness. In *Jonathan Wild* the hero is a highwayman. This novel is ironical, a sort of prose mock-heroic, and is one of the strongest, though certainly the least pleasing, of Fielding's writings. Tobias Smollett was an inferior Fielding with a difference. He was a Scotch ship-surgeon and had spent some time in the West Indies. He introduced into fiction the now familiar figure of the British tar, in the persons of Tom Bowling and Commodore Trunnion, as Fielding had introduced, in *Squire Western*, the equally national type of the hard-swearing, deep-drinking, fox-hunting Tory squire. Both Fielding and Smollett were of the {209} hearty British "beef-and-beer" school; their novels are downright, energetic, coarse, and high-blooded; low life, physical life, runs riot through their pages--tavern brawls, the breaking of pates, and the off-hand courtship of country wenches. Smollett's books, such as *Roderick Random*, 1748, *Peregrine Pickle*, 1751, and *Ferdinand Count Fathom*, 1752, were more purely stories of broadly comic adventure than Fielding's. The latter's view of life was by no means idyllic; but with Smollett this English realism ran into vulgarity and a hard Scotch literalness, and character was pushed to caricature. "The generous wine of Fielding," says Taine, "in Smollett's hands becomes brandy of the dram-shop." A partial exception to this is to be found in his last and best novel, *Humphrey Clinker*, 1770. The influence of Cervantes and of the French novelist, Le Sage, who finished his *Adventures of Gil Blas* in 1735, are very perceptible in Smollett. A genius of much finer mold was Lawrence Sterne, the author of *Tristram Shandy*, 1759-67, and the *Sentimental Journey*, 1768. *Tristram Shandy* is hardly a novel: the story merely serves to hold together a number of characters, such as Uncle Toby and Corporal Trim, conceived with rare subtlety and originality. Sterne's chosen province was the whimsical, and his great model was Rabelais. His books are full of digressions, breaks, surprises, innuendoes, double meanings, mystifications, and

all manner of odd turns. {210} Coleridge and Carlyle unite in pronouncing him a great humorist. Thackeray says that he was only a great jester. Humor is the laughter of the heart, and Sterne's pathos is closely interwoven with his humor. He was the foremost of English sentimentalists, and he had that taint of insincerity which distinguishes sentimentalism from genuine sentiment, like Goldsmith's, for example. Sterne, in life, was selfish, heartless, and untrue. A clergyman, his worldliness and vanity and the indecency of his writings were a scandal to the Church, though his sermons were both witty and affecting. He enjoyed the titillation of his own emotions, and he had practiced so long at detecting the latent pathos that lies in the expression of dumb things and of poor, patient animals, that he could summon the tear of sensibility at the thought of a discarded postchaise, a dead donkey, a starling in a cage, or of Uncle Toby putting a house fly out of the window, and saying, "There is room enough in the world for thee and me." It is a high proof of his cleverness that he generally succeeds in raising the desired feeling in his readers even from such trivial occasions. He was a minute philosopher, his philosophy was kindly, and he taught the delicate art of making much out of little. Less coarse than Fielding, he is far more corrupt. Fielding goes bluntly to the point; Sterne lingers among the temptations and suspends the expectation to tease and excite it. Forbidden fruit had a relish for him, and his pages {211} seduce. He is full of good sayings, both tender and witty. It was Sterne, for example, who wrote, "God tempers the wind to the shorn lamb." A very different writer was Oliver Goldsmith, whose *Vicar of Wakefield*, 1766, was the earliest, and is still one of the best, novels of domestic and rural life. The book, like its author, was thoroughly Irish, full of bulls and inconsistencies. Very improbable things happened in it with a cheerful defiance of logic. But its characters are true to nature, drawn with an idyllic sweetness and purity, and with touches of a most loving humor. Its hero, Dr. Primrose, was painted after Goldsmith's father, a poor clergyman of the English Church in Ireland, and the original, likewise, of the country parson in Goldsmith's *Deserted Village*, 1770, who was "passing rich on forty pounds a year." This poem, though written in the fashionable couplet of Pope, and even containing a few verses contributed by Dr. Johnson--so that it was not at all in line with the work of the romanticists--did, perhaps, as much as any thing of Gray or of Collins to recall English poetry to the simplicity and freshness of country life. Except for the comedies of Sheridan and Goldsmith, and, perhaps, a few other plays, the stage had now utterly declined. The novel, which is dramatic in essence, though not in form, began to take its place, and to represent life, though less intensely, yet more minutely, than the theater could do. In the novelists of the 18th century, the life {212} of the people, as distinguished from "society" or the upper classes, began to invade literature. Richardson was distinctly a bourgeois writer, and his contemporaries--Fielding, Smollett, Sterne, and Goldsmith--ranged over a wide variety of ranks and conditions. This is one thing which distinguishes the literature of the second half of the 18th century from that of the first, as well as in some degree from that of all previous centuries. Among the authors of this generation whose writings belonged to other departments of thought than pure literature may be mentioned, in passing, the great historian, Edward Gibbon, whose *Decline and Fall of the Roman Empire* was published from 1776-88, and Edmund Burke, whose political speeches and pamphlets possess a true literary quality. The romantic poets had addressed the imagination rather than the heart. It was reserved for two men--a contrast to one another in almost every respect--to bring once more into British song a strong individual feeling, and with it a new warmth and directness of speech. These were William Cowper (1731-1800) and Robert Burns (1759-96). Cowper spoke out of his own life experience, his agony, his love, his worship and despair; and straightway the varnish that had glittered over all our poetry since the time of Dryden melted away. Cowper had scribbled verses when he was a young law student at the Middle Temple in London, and he had contributed to the *Olney Hymns*, published in 1779 by his friend and pastor, the Rev. John Newton; but {213} he only began to write poetry in earnest when he was nearly fifty years old. In 1782, the date of his first volume, he said, in a letter to a friend, that he had read but one English poet during the past twenty years. Perhaps, therefore, of all English poets of equal culture, Cowper owed the least impulse to books and the most to the need of uttering his inmost thoughts and feelings. Cowper had a most unhappy life. As a child, he was shy, sensitive, and sickly, and suffered much from bullying and fagging at a school whither he was sent after his mother's death. This happened when he was six years old; and in his affecting lines written *On Receipt of My Mother's Picture*, he speaks of himself as a "Wretch even then, life's journey just begun." In 1763 he became insane and was sent to an asylum, where he spent a year. Judicious treatment restored him to sanity, but he came out a broken man and remained for the rest of his life an invalid, unfitted for any active occupation. His disease took the form of religious melancholy. He had two recurrences of madness, and both times made attempts upon his life. At Huntingdon, and afterward at Olney, in Buckinghamshire, he found a home with the Unwin family, whose kindness did all which the most soothing and delicate care could do to heal his wounded spirit. His two poems *To Mary Unwin*, together with the lines on his mother's picture, were almost the first examples of deep {214} and tender sentiment in the lyrical poetry of the last century. Cowper found relief from the black thoughts that beset him only in an ordered round of quiet household occupations. He corresponded indefatigably, took long walks through the neighborhood, read, sang, and conversed with Mrs. Unwin and his friend, Lady Austin; and amused himself with carpentry,

gardening, and raising pets, especially hares, of which gentle animals he grew very fond. All these simple tastes, in which he found for a time a refuge and a sheltered happiness, are reflected in his best poem, *The Task*, 1785. Cowper is the poet of the family affections, of domestic life, and rural retirement; the laureate of the fireside, the tea-table, the evening lamp, the garden, the green-house, and the rabbit-coop. He draws with elegance and precision a chair, a clock, a harpsichord, a barometer, a piece of needle-work. But Cowper was an out-door as well as an in-door man. The Olney landscape was tame, a fat, agricultural region, where the sluggish Ouse wound between plowed fields and the horizon was bounded by low hills. Nevertheless Cowper's natural descriptions are at once more distinct and more imaginative than Thomson's. *The Task* reflects, also, the new philanthropic spirit, the enthusiasm of humanity, the feeling of the brotherhood of men to which Rousseau had given expression in France and which issued in the French Revolution. In England this was the time of Wilberforce, the antislavery agitator; of Whitefield, the eloquent revival preacher; {215} of John and Charles Wesley, and of the Evangelical and Methodist movements which gave new life to the English Church. John Newton, the curate of Olney and the keeper of Cowper's conscience, was one of the leaders of the Evangelicals; and Cowper's first volume of *Table Talk* and other poems, 1782, written under Newton's inspiration, was a series of sermons in verse, somewhat intolerant of all worldly enjoyments, such as hunting, dancing, and theaters. "God made the country and man made the town," he wrote. He was a moralizing poet, and his morality was sometimes that of the invalid and the recluse. Byron called him a "coddled poet." And, indeed, there is a suspicion of gruel and dressing-gowns about him. He lived much among women, and his sufferings had refined him to a feminine delicacy. But there is no sickness in his poetry, and he retained a charming playful humor--displayed in his excellent comic ballad, *John Gilpin*; and Mrs. Browning has sung of him, "How when one by one sweet sounds and wandering lights departed He bore no less a loving face, because so broken-hearted." At the close of the year 1786 a young Scotchman, named Samuel Rose, called upon Cowper at Olney, and left with him a small volume, which had appeared at Edinburgh during the past summer, entitled *Poems chiefly in the Scottish Dialect, by Robert Burns*. Cowper read the book through {216} twice, and, though somewhat bothered by the dialect, pronounced it a "very extraordinary production." This momentary flash, as of an electric spark, marks the contact not only of the two chief British poets of their generation, but of two literatures. Scotch poets, like Thomson and Beattie, had written in Southern English, and, as Carlyle said, *in vacuo*, that is, with nothing specially national in their work. Burns's sweet though rugged Doric first secured the vernacular poetry of his country a hearing beyond the border. He had, to be sure, a whole literature of popular songs and ballads behind him, and his immediate models were Allan Ramsay and Robert Ferguson; but these remained provincial, while Burns became universal. He was born in Ayrshire, on the banks of "bonny Doon," in a clay biggin not far from "Alloway's auld haunted kirk," the scene of the witch dance in *Tam O'Shanter*. His father was a hard-headed, God-fearing tenant farmer, whose life and that of his sons was a harsh struggle with poverty. The crops failed; the landlord pressed for his rent; for weeks at a time the family tasted no meat; yet this life of toil was lightened by love and homely pleasures. In the *Cotter's Saturday Night*, Burns has drawn a beautiful picture of his parents' household, the rest that came at the week's end, and the family worship about the "wee bit ingle, blinkin' bonnily." Robert was handsome, wild, and witty. He was universally susceptible, and his first songs, like his last, were of "the lasses." His head had been {217} stuffed, in boyhood, with "tales and songs concerning devils, ghosts, fairies, brownies, witches, warlocks, spunkies, kelpies, elf-candles, dead-lights," etc., told him by one Jenny Wilson, an old woman who lived in the family. His ear was full of ancient Scottish tunes, and as soon as he fell in love he began to make poetry as naturally as a bird sings. He composed his verses while following the plow or working in the stack-yard; or, at evening, balancing on two legs of his chair and watching the light of a peat fire play over the reeky walls of the cottage. Burns's love songs are in many keys, ranging from strains of the most pure and exalted passion, like *Ae Fond Kiss* and *To Mary in Heaven*, to such loose ditties as *When Januar' Winds* and *Green Grow the Rashes O*. Burns liked a glass almost as well as a lass, and at Mauchline, where he carried on a farm with his brother Gilbert, after their father's death, he began to seek a questionable relief from the pressure of daily toil and unkind fates, in the convivialities of the tavern. There, among the wits of the Mauchline Club, farmers' sons, shepherds from the uplands, and the smugglers who swarmed over the west coast, he would discuss politics and farming, recite his verses, and join in the singing and ranting, while "Bousin o'er the nappy, And gettin' fou and unco happy." To these experiences we owe not only those excellent drinking songs, *John Barleycorn* and *Willie* {218} *Brewed a Peck o' Maut*, but the headlong fun of *Tam O'Shanter*, and the visions, grotesquely terrible, of *Death and Dr. Hornbook*, and the dramatic humor of the *Jolly Beggars*. Cowper had celebrated "the cup which cheers but not inebriates." Burns sang the praises of *Scotch Drink*. Cowper was a stranger to Burns's high animal spirits, and his robust enjoyment of life. He had affections, but no passions. At Mauchline, Burns, whose irregularities did not escape the censure of the kirk, became involved, through his friendship with Gavin Hamilton, in the controversy between the Old Light and New Light clergy. His *Holy Fair*, *Holy Tulzie*, *Two Herds*, *Holy Willie's Prayer*, and *Address to the Unco Gude*, are satires against bigotry and hypocrisy. But in spite of

the rollicking profanity of his language, and the violence of his rebound against the austere religion of Scotland, Burns was at bottom deeply impressible by religious ideas, as may be seen from his *Prayer under the Pressure of Violent Anguish*, and *Prayer in Prospect of Death*. His farm turned out a failure, and he was on the eve of sailing for Jamaica, when the favor with which his volume of poems was received, stayed his departure, and turned his steps to Edinburgh. There the peasant poet was lionized for a winter season by the learned and polite society of the Scotch capital, with results in the end not altogether favorable to Burns's best interests. For when society finally turned the cold shoulder on {219} him, he had to go back to farming again, carrying with him a bitter sense of injustice and neglect. He leased a farm in Ellisland, in 1788, and some friends procured his appointment as exciseman for his district. But poverty, disappointment, irregular habits, and broken health clouded his last years, and brought him to an untimely death at the age of thirty-seven. He continued, however, to pour forth songs of unequalled sweetness and force. "The man sank," said Coleridge, "but the poet was bright to the last." Burns is the best of British song-writers. His songs are singable; they are not merely lyrical poems. They were meant to be sung, and they are sung. They were mostly set to old Scottish airs, and sometimes they were built up from ancient fragments of anonymous, popular poetry, a chorus, or stanza, or even a single line. Such are, for example, *Auld Lang Syne*, *My Heart's in the Highlands*, and *Landlady, Count the Lawin*. Burns had a great, warm heart. His sins were sins of passion, and sprang from the same generous soil that nourished his impulsive virtues. His elementary qualities as a poet were sincerity, a healthy openness to all impressions of the beautiful, and a sympathy which embraced men, animals, and the dumb objects of nature. His tenderness toward flowers and the brute creation may be read in his lines *To a Mountain Daisy*, *To a Mouse*, and *The Auld Farmer's New Year's Morning Salutation to his Auld Mare Maggie*. Next after love and good {220} fellowship, patriotism is the most frequent motive of his song. Of his national anthem, *Scots wha hae wi' Wallace bled*, Carlyle said: "So long as there is warm blood in the heart of Scotchman, or man, it will move in fierce thrills under this war ode." Burns's politics were a singular mixture of sentimental toryism with practical democracy. A romantic glamour was thrown over the fortunes of the exiled Stuarts, and to have been "out" in '45 with the Young Pretender was a popular thing in parts of Scotland. To this purely poetic loyalty may be attributed such Jacobite ballads of Burns as *Over the Water to Charlie*. But his sober convictions were on the side of liberty and human brotherhood, and are expressed in the *Twa Dogs*, the *First Epistle to Davie*, and *A Man's a Man for a' that*. His sympathy with the Revolution led him to send four pieces of ordnance, taken from a captured smuggler, as a present to the French Convention, a piece of bravado which got him into difficulties with his superiors in the excise. The poetry which Burns wrote, not in dialect, but in the classical English, is in the stilted manner of his century, and his prose correspondence betrays his lack of culture by his constant lapse into rhetorical affectation and fine writing.

CHAPTER VII.

FROM THE FRENCH REVOLUTION TO THE DEATH OF SCOTT.

1789-1832.

The burst of creative activity at the opening of the 19th century has but one parallel in English literary history, namely, the somewhat similar flowering out of the national genius in the time of Elisabeth and the first two Stuart kings. The later age gave birth to no supreme poets, like Shakspeare and Milton. It produced no *Hamlet* and no *Paradise Lost*; but it offers a greater number of important writers, a higher average of excellence, and a wider range and variety of literary work than any preceding era. Wordsworth, Coleridge, Scott, Byron, Shelley, and Keats are all great names; while Southey, Landor, Moore, Lamb, and De Quincey would be noteworthy figures at any period, and deserve a fuller mention than can be here accorded them. But in so crowded a generation, selection becomes increasingly needful, and in the present chapter, accordingly, the emphasis will be laid upon the first-named group as not only the most important, but the most representative of the various tendencies of their time. {223} The conditions of literary work in this century have been almost unduly stimulating. The rapid advance in population, wealth, education, and the means of communication has vastly increased the number of readers. Every one who has any thing to say can say it in print, and is sure of some sort of a hearing. A special feature of the time is the multiplication of periodicals. The great London dailies, like the *Times* and the *Morning Post*, which were started during the last quarter of the 18th century, were something quite new in journalism. The first of the modern reviews, the *Edinburgh*, was established in 1802, as the organ of the Whig party in Scotland. This was followed by the *London Quarterly*, in 1808, and by *Blackwood's Magazine*, in 1817, both in the Tory interest. The first editor of the *Edinburgh* was Francis Jeffrey, who assembled about him a distinguished corps of contributors, including the versatile Henry Brougham, afterward a great parliamentary orator and lord-chancellor of England, and the Rev. Sydney Smith, whose witty sayings are still current. The first editor of the *Quarterly* was William Gifford, a satirist, who wrote the *Baviad* and *Maeviad* in ridicule of literary affectations. He was succeeded in 1824 by James Gibson Lockhart, the son-in-law of Walter Scott, and the author of an excellent *Life of Scott*. *Blackwood's* was edited by John Wilson, Professor of Moral Philosophy in the University of Edinburgh, who, under the pen-name of "Christopher North," contributed to his magazine a series {224} of brilliant, imaginary dialogues between famous characters of the day, entitled *Noctes Ambrosianae*, because they were supposed to take place at Ambrose's tavern in Edinburgh. These papers were full of a profuse, headlong eloquence, of humor, literary criticism, and personalities interspersed with songs expressive of a roystering and convivial Toryism and an uproarious contempt for Whigs and cockneys. These reviews and magazines, and others which sprang up beside them, became the *nuclei* about which the wit and scholarship of both parties gathered. Political controversy under the Regency and the reign of George IV. was thus carried on more regularly by permanent organs, and no longer so largely by privateering, in the shape of pamphlets, like Swift's *Public Spirit of the Whigs*, Johnson's *Taxation No Tyranny*, and Burke's *Reflections on the Revolution in France*. Nor did politics by any means usurp the columns of the reviews. Literature, art, science, the whole circle of human effort and achievement passed under review. *Blackwood's*, *Fraser's*, and the other monthlies, published stories, poetry, criticism, and correspondence--every thing, in short, which enters into the make-up of our magazines to-day, except illustrations. Two main influences, of foreign origin, have left their trace in the English writers of the first thirty years of the 19th century, the one communicated by contact with the new German literature of the latter half of the 18th century, and in particular {225} with the writings of Goethe, Schiller, and Kant; the other springing from the events of the French Revolution. The influence of German upon English literature in the 19th century was more intellectual and less formal than that of the Italian in the 16th and of the French in the 18th. In other words, the German writers furnished the English with ideas and ways of feeling rather than with models of style. Goethe and Schiller did not become subjects for

literary imitation as Molière, Racine, and Boileau had become in Pope's time. It was reserved for a later generation and for Thomas Carlyle to domesticate the diction of German prose. But the nature and extent of this influence can, perhaps, best be noted when we come to take up the authors of the time one by one. The excitement caused by the French Revolution was something more obvious and immediate. When the Bastille fell, in 1789, the enthusiasm among the friends of liberty and human progress in England was hardly less intense than in France. It was the dawn of a new day: the shackles were stricken from the slave; all men were free and all men were brothers, and radical young England sent up a shout that echoed the roar of the Paris mob. Wordsworth's lines on the *Fall of the Bastille*, Coleridge's *Fall of Robespierre* and *Ode to France*, and Southey's revolutionary drama, *Wat Tyler*, gave expression to the hopes and aspirations of the English democracy. In after life Wordsworth, looking back regretfully to those years of promise, {226} wrote his poem on the *French Revolution as it appeared to Enthusiasts at its Commencement*.

"Bliss was it in that dawn to be alive,
But to be young was very heaven. Oh times
In which the meager, stale, forbidding ways
Of custom, law, and statute took at once
The attraction of a country in romance."

Those were the days in which Wordsworth, then an under-graduate at Cambridge, spent a college vacation in tramping through France, landing at Calais on the eve of the very day (July 14, 1790) on which Louis XVI. signalized the anniversary of the fall of the Bastille by taking the oath of fidelity to the new Constitution. In the following year Wordsworth revisited France, where he spent thirteen months, forming an intimacy with the republican general, Beauvais, at Orleans, and reaching Paris not long after the September massacres of 1792. Those were the days, too, in which young Southey and young Coleridge, having married sisters at Bristol, were planning a "Pantisocracy," or ideal community, on the banks of the Susquehannah, and denouncing the British government for going to war with the French Republic. This group of poets, who had met one another first in the south of England, came afterward to be called the Lake Poets, from their residence in the mountainous lake country of Westmoreland and Cumberland, with which their names, and that of Wordsworth, especially, are forever associated. The so-called "Lakers" {227} did not, properly speaking, constitute a school of poetry. They differed greatly from one another in mind and art. But they were connected by social ties and by religious and political sympathies. The excesses of the French Revolution, and the usurpation of Napoleon disappointed them, as it did many other English liberals, and drove them into the ranks of the reactionaries. Advancing years brought conservatism, and they became in time loyal Tories and orthodox Churchmen. William Wordsworth (1770-1850), the chief of the three, and, perhaps, on the whole, the greatest English poet since Milton, published his *Lyrical Ballads* in 1798. The volume contained a few pieces by his friend Coleridge--among them the *Ancient Mariner*--and its appearance may fairly be said to mark an epoch in the history of English poetry. Wordsworth regarded himself as a reformer of poetry; and in the preface to the second volume of *Lyrical Ballads*, he defended the theory on which they were composed. His innovations were twofold, in subject-matter, and in diction. "The principal object which I proposed to myself in these poems," he said, "was to choose incidents and situations from common life. Low and rustic life was generally chosen, because, in that condition, the essential passions of the heart find a better soil in which they can attain their maturity . . . and are incorporated with the beautiful and permanent forms of nature." Wordsworth discarded, in theory, the poetic diction of his predecessors, {228} and professed to use "a selection of the real language of men in a state of vivid sensation." He adopted, he said, the language of men in rustic life, "because such men hourly communicate with the best objects from which the best part of language is originally derived." In the matter of poetic diction Wordsworth did not, in his practice, adhere to the doctrine of this preface. Many of his most admired poems, such as the *Lines written near Tintern Abbey*, the great *Ode on the Intimations of Immortality*, the *Sonnets*, and many parts of his longest poems, *The Excursion* and *The Prelude*, deal with philosophic thought and highly intellectualized emotions. In all of these and in many others the language is rich, stately, involved, and as remote from the "real language" of Westmoreland shepherds, as is the epic blank verse of Milton. On the other hand, in those of his poems which were consciously written in illustration of his theory, the affectation of simplicity, coupled with a defective sense of humor, sometimes led him to the selection of vulgar and trivial themes, and the use of language which is bald, childish, or even ludicrous. His simplicity is too often the simplicity of Mother Goose rather than of Chaucer. Instances of this occur in such poems as *Peter Bell*, the *Idiot Boy*, *Goody Blake and Harry Gill*, *Simon Lee*, and the *Wagoner*. But there are multitudes of Wordsworth's ballads and lyrics which are simple without being silly, and which, in their homeliness and clear {229} profundity, in their production of the strongest effects by the fewest strokes, are among the choicest modern examples of *pure*, as distinguished from decorated, art. Such

are (out of many) Ruth, Lucy, A Portrait, To a Highland Girl, The Reverie of Poor Susan, To the Cuckoo, The Reaper, We Are Seven, The Pet Lamb, The Fountain, The Two April Mornings, The Leech Gatherer, The Thorn, and Yarrow Revisited. Wordsworth was something of a Quaker in poetry, and loved the sober drabs and grays of life. Quietism was his literary religion, and the sensational was to him not merely vulgar, but almost wicked. "The human mind," he wrote, "is capable of being excited without the application of gross and violent stimulants." He disliked the far-fetched themes and high-colored style of Scott and Byron. He once told Landor that all of Scott's poetry together was not worth sixpence. From action and passion he turned away to sing the inward life of the soul and the outward life of Nature. He said:

"To me the meanest flower that blows can give
Thoughts that do often lie too deep for tears."

And again:

"Long have I loved what I behold,
The night that calms, the day that cheers;
The common growth of mother earth
Suffices me--her tears, her mirth,
Her humblest mirth and tears."

Wordsworth's life was outwardly uneventful. The companionship of the mountains and of his {230} own thoughts; the sympathy of his household; the lives of the dalesmen and cottagers about him furnished him with all the stimulus that he required.

"Love had he found in huts where poor men lie:
His only teachers had been woods and rills,
The silence that is in the starry sky,
The sleep that is among the lonely hills."

He read little, but reflected much, and made poetry daily, composing, by preference, out of doors, and dictating his verses to some member of his family. His favorite amanuensis was his sister Dorothy, a woman of fine gifts, to whom Wordsworth was indebted for some of his happiest inspirations. She was the subject of the poem beginning "Her eyes are wild," and her charming Memorials of a Tour in the Scottish Highlands records the origin of many of her brother's best poems. Throughout life Wordsworth was remarkably self-centered. The ridicule of the reviewers, against which he gradually made his way to public recognition, never disturbed his serene belief in himself, or in the divine message which he felt himself commissioned to deliver. He was a slow and serious person, a preacher as well as a poet, with a certain rigidity, not to say narrowness, of character. That plastic temperament which we associate with poetic genius Wordsworth either did not possess, or it hardened early. Whole sides of life were beyond the range of his sympathies. He {231} touched life at fewer points than Byron and Scott, but touched it more profoundly. It is to him that we owe the phrase "plain living and high thinking," as also a most noble illustration of it in his own practice. His was the wisest and deepest spirit among the English poets of his generation, though hardly the most poetic. He wrote too much, and, attempting to make every petty incident or reflection the occasion of a poem, he finally reached the point of composing verses On Seeing a Harp in the shape of a Needle Case, and on other themes more worthy of Mrs. Sigourney. In parts of his long blank-verse poems, The Excursion, 1814, and The Prelude--which was printed after his death in 1850, though finished as early as 1806--the poetry wears very thin and its place is taken by prosaic, tedious didacticism. These two poems were designed as portions of a still more extended work, The Recluse, which was never completed. The Excursion consists mainly of philosophical discussions on nature and human life between a school-master, a solitary, and an itinerant peddler. The Prelude describes the development of Wordsworth's own genius. In parts of The Excursion the diction is fairly Shaksperian.

"The good die first,
And they whose hearts are dry as summer dust
Burn to the socket."

A passage not only beautiful in itself, but dramatically true, in the mouth of the bereaved mother {232} who utters it, to that human instinct which generalizes a private sorrow into a universal law. Much of The Prelude can hardly be called poetry at all, yet some of Wordsworth's loftiest poetry is buried among its dreary wastes, and now and then, in the midst of commonplaces, comes a flash of Miltonic splendor--like

"Golden cities ten months' journey deep
Among Tartarian wilds."

Wordsworth is, above all things, the poet of Nature. In this province he was not without forerunners. To say nothing of Burns and Cowper, there was George Crabbe, who had published his Village in 1783--fifteen years before the Lyrical Ballads--and whose last poem, Tales of the Hall, came out in 1819, five years after The Excursion. Byron called Crabbe "Nature's sternest painter, and her best." He was a minutely accurate delineator of the harsher aspects of rural life. He photographs a Gypsy camp; a common, with its geese and donkey; a salt marsh, a shabby village street, or tumble-down manse. But neither Crabbe nor Cowper has the imaginative lift of Wordsworth,

"The light that never was on sea or land
The consecration and the poet's dream."

In a note on a couplet in one of his earliest poems, descriptive of an oak tree standing dark against the sunset, Wordsworth says: "I recollect distinctly the very spot where this struck me. {233} The moment was important in my poetical history, for I date from it my consciousness of the infinite variety of natural appearances which had been unnoticed by the poets of any age or country, and I made a resolution to supply, in some degree, the deficiency." In later life he is said to have been impatient of any thing spoken or written by another about mountains, conceiving himself to have a monopoly of "the power of hills." But Wordsworth did not stop with natural description. Matthew Arnold has said that the office of modern poetry is the "moral interpretation of Nature." Such, at any rate, was Wordsworth's office. To him Nature was alive and divine. He felt, under the veil of phenomena,

"A presence that disturbs me with the joy
Of elevated thought: a sense sublime
Of something far more deeply interfused."

He approached, if he did not actually reach, the view of Pantheism, which identifies God with Nature; and the mysticism of the Idealists, who identify Nature with the soul of man. This tendency was not inspired in Wordsworth by German philosophy. He was no metaphysician. In his rambles with Coleridge about Nether Stowey and Alfoxden, when both were young, they had, indeed, discussed Spinoza. And in the autumn of 1798, after the publication of the Lyrical Ballads, the two friends went together to Germany, where Wordsworth spent half a year. But the literature {234} and philosophy of Germany made little direct impression upon Wordsworth. He disliked Goethe, and he quoted with approval the saying of the poet Klopstock, whom he met at Hamburg, that he placed the romanticist Burger above both Goethe and Schiller. It was through Samuel Taylor Coleridge (1772-1834), who was pre-eminently the thinker among the literary men of his generation, that the new German thought found its way into England. During the fourteen months which he spent in Germany--chiefly at Ratzburg and Göttingen--he had familiarized himself with the transcendental philosophy of Immanuel Kant and of his continuators, Fichte and Schelling, as well as with the general literature of Germany. On his return to England, he published, in 1800, a free translation of Schiller's Wallenstein, and through his writings, and more especially through his conversations, he became the conductor by which German philosophic ideas reached the English literary class. Coleridge described himself as being from boyhood a book-worm and a day-dreamer. He remained through life an omnivorous, though unsystematic, reader. He was helpless in practical affairs, and his native indolence and procrastination were increased by his indulgence in the opium habit. On his return to England, in 1800, he went to reside at Keswick, in the Lake Country, with his brother-in-law, Southey, whose industry supported both families. During his last nineteen {235} years Coleridge found an asylum under the roof of Mr. James Gilman, of Highgate, near London, whither many of the best young men in England were accustomed to resort to listen to Coleridge's wonderful talk. Talk, indeed, was the medium through which he mainly influenced his generation. It cost him an effort to put his thoughts on paper. His Table Talk--crowded with pregnant paragraphs--was taken down from his lips by his nephew, Henry Coleridge. His criticisms of Shakspeare are nothing but notes, made here and there, from a

course of lectures delivered before the Royal Institute, and never fully written out. Though only hints and suggestions, they are, perhaps, the most penetrative and helpful Shaksperian criticism in English. He was always forming projects and abandoning them. He projected a great work on Christian philosophy, which was to have been his magnum opus, but he never wrote it. He projected an epic poem on the fall of Jerusalem. "I schemed it at twenty-five," he said, "but, alas! venturum expectat." What bade fair to be his best poem, Christabel, is a fragment. Another strangely beautiful poem, Kubla Khan--which came to him, he said, in sleep--is even more fragmentary. And the most important of his prose remains, his Biographia Literaria, 1817, a history of his own opinions, breaks off abruptly. It was in his suggestiveness that Coleridge's great service to posterity resided. He was what J. S. Mill called a "seminal mind," and his thought {236} had that power of stimulating thought in others, which is the mark and the privilege of original genius. Many a man has owed to some sentence of Coleridge's, if not the awakening in himself of a new intellectual life, at least the starting of fruitful trains of reflection which have modified his whole view of certain great subjects. On every thing that he left is set the stamp of high mental authority. He was not, perhaps, primarily, he certainly was not exclusively, a poet. In theology, in philosophy, in political thought, and literary criticism, he set currents flowing which are flowing yet. The terminology of criticism, for example, is in his debt for many of those convenient distinctions--such as that between genius and talent, between wit and humor, between fancy and imagination--which are familiar enough now, but which he first introduced, or enforced. His definitions and apothegms we meet every-where. Such are, for example, the sayings: "Every man is born an Aristotelian or a Platonist." "Prose is words in their best order; poetry, the best words in the best order." And among the bits of subtle interpretation, that abound in his writings, may be mentioned his estimate of Wordsworth, in the Biographia Literaria, and his sketch of Hamlet's character--one with which he was personally in strong sympathy--in the Lectures on Shakspeare. The Broad-Church party, in the English Church, among whose most eminent exponents have been Frederic Robertson, Arnold of Rugby, {237} F. D. Maurice, Charles Kingsley, and the late Dean Stanley, traces its intellectual origin to Coleridge's Aids to Reflection; to his writings and conversations in general, and particularly to his ideal of a national Clerisy, as set forth in his essay on Church and State. In politics, as in religion, Coleridge's conservatism represents the reaction against the destructive spirit of the eighteenth century and the French revolution. To this root-and-branch democracy he opposed the view, that every old belief, or institution, such as the throne or the Church, had served some need, and had a rational idea at the bottom of it, to which it might be again recalled, and made once more a benefit to society, instead of a curse and an anachronism. As a poet, Coleridge has a sure, though slender, hold upon immortal fame. No English poet has "sung so wildly well" as the singer of Christabel and the Ancient Mariner. The former of these is, in form, a romance in a variety of meters, and in substance, a tale of supernatural possession, by which a lovely and innocent maiden is brought under the control of a witch. Though unfinished and obscure in intention, it haunts the imagination with a mystic power. Byron had seen Christabel in MS., and urged Coleridge to publish it. He hated all the "Lakers," but when, on parting from Lady Byron, he wrote his song,

"Fare thee well, and if forever,
Still forever fare thee well,"

{238} he prefixed to it the noble lines from Coleridge's poem, beginning

"Alas! they had been friends in youth."

In that weird ballad, the Ancient Mariner, the supernatural is handled with even greater subtlety than in Christabel. The reader is led to feel that amid the loneliness of the tropic sea, the line between the earthly and the unearthly vanishes, and the poet leaves him to discover for himself whether the spectral shapes that the mariner saw were merely the visions of the calenture, or a glimpse of the world of spirits. Coleridge is one of our most perfect metrists. The poet Swinburne--than whom there can be no higher authority on this point (though he is rather given to exaggeration)--pronounces Kubla Khan, "for absolute melody and splendor, the first poem in the language." Robert Southey, the third member of this group, was a diligent worker and one of the most voluminous of English writers. As a poet, he was lacking in inspiration, and his big Oriental epics, Thalaba, 1801, and the Curse of Kehama, 1810, are little better than wax-work. Of his numerous works in prose, the Life of Nelson is, perhaps, the best, and is an excellent biography. Several other authors were more or less closely associated with the Lake Poets by residence or social affiliation. John Wilson, the editor of Blackwood's, lived for some time, when a young man, at Elleray, on the banks of Windermere. He was an {239} athletic man of out-door habits, an enthusiastic sportsman, and a lover of natural scenery. His admiration of Wordsworth was thought to have led him to imitation of the latter, in his Isle of Palms, 1812, and his other poetry. One of Wilson's companions, in his

mountain walks, was Thomas De Quincey, who had been led by his reverence for Wordsworth and Coleridge to take up his residence, in 1808, at Grasmere, where he occupied for many years the cottage from which Wordsworth had removed to Allan Bank. De Quincey was a shy, bookish little man, of erratic, nocturnal habits, who impresses one, personally, as a child of genius, with a child's helplessness and a child's sharp observation. He was, above all things, a magazinist. All his writings, with one exception, appeared first in the shape of contributions to periodicals; and his essays, literary criticisms, and miscellaneous papers are exceedingly rich and varied. The most famous of them was his *Confessions of an English Opium Eater*, published as a serial in the *London Magazine*, in 1821. He had begun to take opium, as a cure for the toothache, when a student at Oxford, where he resided from 1803 to 1808. By 1816 he had risen to eight thousand drops of laudanum a day. For several years after this he experienced the acutest misery, and his will suffered an entire paralysis. In 1821 he succeeded in reducing his dose to a comparatively small allowance, and in shaking off his torpor so as to become capable of literary work. {240} The most impressive effect of the opium habit was seen in his dreams, in the unnatural expansion of space and time, and the infinite repetition of the same objects. His sleep was filled with dim, vast images; measureless cavalcades deploying to the sound of orchestral music; an endless succession of vaulted halls, with staircases climbing to heaven, up which toiled eternally the same solitary figure. "Then came sudden alarms, hurrying to and fro; trepidations of innumerable fugitives; darkness and light; tempest and human faces." Many of De Quincey's papers were autobiographical, but there is always something baffling in these reminiscences. In the interminable wanderings of his pen--for which, perhaps, opium was responsible--he appears to lose all trace of facts or of any continuous story. Every actual experience of his life seems to have been taken up into a realm of dream, and there distorted till the reader sees not the real figures, but the enormous, grotesque shadows of them, executing wild dances on a screen. An instance of this process is described by himself in his *Vision of Sudden Death*. But his unworldliness and faculty of vision-seeing were not inconsistent with the keenness of judgment and the justness and delicacy of perception displayed in his *Biographical Sketches* of Wordsworth, Coleridge, and other contemporaries: in his critical papers on *Pope*, *Milton*, *Lessing*, *Homer* and the *Homeridae*; his essay on *Style*; and his *Brief Appraisal of the Greek Literature*. His curious scholarship is seen in his articles on the *Toilet of a {241} Hebrew Lady*, and the *Casuistry of Roman Meals*; his ironical and somewhat elaborate humor in his essay on *Murder Considered as One of the Fine Arts*. Of his narrative pieces the most remarkable is his *Revolt of the Tartars*, describing the flight of a Kalmuck tribe of six hundred thousand souls from Russia to the Chinese frontier: a great hegira or anabasis, which extended for four thousand miles over desert steppes infested with foes; occupied six months' time, and left nearly half of the tribe dead upon the way. The subject was suited to De Quincey's imagination. It was like one of his own opium visions, and he handled it with a dignity and force which make the history not altogether unworthy of comparison with Thucydides's great chapter on the Sicilian Expedition. An intimate friend of Southey was Walter Savage Landor, a man of kingly nature, of a leonine presence, with a most stormy and unreasonable temper, and yet with the courtliest graces of manner and with--said Emerson--a "wonderful brain, despotic, violent, and inexhaustible." He inherited wealth, and lived a great part of his life at Florence, where he died, in 1864, in his ninetieth year. Dickens, who knew him at Bath, in the latter part of his life, made a kindly caricature of him as Lawrence Boythom, in *Bleak House*, whose "combination of superficial ferocity and inherent tenderness," testifies Henry Crabb Robinson, in his *Diary*, was true to the life. Landor is the most purely classical of English writers. Not merely his themes {242} but his whole way of thinking was pagan and antique. He composed, indifferently, in English or Latin, preferring the latter, if any thing, in obedience to his instinct for compression and exclusiveness. Thus portions of his narrative poem, *Gebir*, 1798, were written originally in Latin, and he added a Latin version, *Gebirius*, to the English edition. In like manner his *Hellenics*, 1847, were mainly translations from his Latin *Idyllia Heroica*, written years before. The Hellenic clearness and repose which were absent from his life, Landor sought in his art. His poems, in their restraint, their objectivity, their aloofness from modern feeling, have something chill and artificial. The verse of poets like Byron and Wordsworth is alive; the blood runs in it. But Landor's polished, clean-cut *intaglios* have been well described as "written in marble." He was a master of fine and solid prose. His *Pericles and Aspasia* consists of a series of letters passing between the great Athenian demagogue, the hetaira, Aspasia, her friend, Cleone of Miletus, Anaxagorus, the philosopher, and Pericles's nephew, Alcibiades. In this masterpiece the intellectual life of Athens, at its period of highest refinement, is brought before the reader with singular vividness, and he is made to breathe an atmosphere of high-bred grace, delicate wit, and thoughtful sentiment, expressed in English "of Attic choice." The *Imaginary Conversations*, 1824-1846, were Platonic dialogues between a great variety of historical characters; between, for example, Dante and Beatrice, Washington {243} and Franklin, Queen Elisabeth and Cecil, Xenophon and Cyrus the Younger, Bonaparte and the President of the Senate. Landor's writings have never been popular; they address an aristocracy of scholars; and Byron--whom Landor disliked and considered vulgar--sneered at the latter as a writer who "cultivated much private renown in the shape of Latin verses." He said of himself that he "never contended with a contemporary, but walked

alone on the far eastern uplands, meditating and remembering." A schoolmate of Coleridge, at Christ's Hospital, and his friend and correspondent through life, was Charles Lamb, one of the most charming of English essayists. He was an old bachelor, who lived alone with his sister Mary a lovable and intellectual woman, but subject to recurring attacks of madness. Lamb was "a notched and cropped scrivener, a votary of the desk," a clerk, that is, in the employ of the East India Company. He was of antiquarian tastes, an ardent play-goer, a lover of whist and of the London streets; and these tastes are reflected in his *Essays of Elia*, contributed to the *London Magazine* and reprinted in book form in 1823. From his mousing among the Elisabethan dramatists and such old humorists as Burton and Fuller, his own style imbibed a peculiar quaintness and pungency. His *Specimens of English Dramatic Poets*, 1808, is admirable for its critical insight. In 1802 he paid a visit to Coleridge at Keswick, in the Lake Country; but he felt or {244} affected a whimsical horror of the mountains, and said, "Fleet Street and the Strand are better places to live in." Among the best of his essays are *Dream Children*, *Poor Relations*, *The Artificial Comedy of the Last Century*, *Old China*, *Roast Pig*, *A Defense of Chimney-sweeps*, *A Complaint of the Decay of Beggars in the Metropolis*, and *The Old Benchers of the Inner Temple*. The romantic movement, preluded by Gray, Collins, Chatterton, Macpherson, and others, culminated in Walter Scott (1771-1832). His passion for the medieval was first excited by reading Percy's *Reliques*, when he was a boy; and in one of his school themes he maintained that Ariosto was a greater poet than Homer. He began early to collect manuscript ballads, suits of armor, pieces of old plate, border-horns, and similar relics. He learned Italian in order to read the romancers--Ariosto, Tasso, Pulci, and Boiardo, preferring them to Dante. He studied Gothic architecture, heraldry, and the art of fortification, and made drawings of famous ruins and battle-fields. In particular he read eagerly every thing that he could lay hands on relating to the history, legends, and antiquities of the Scottish border--the vale of Tweed, Teviotdale, Ettrick Forest, and the Yarrow, of all which land he became the laureate, as Burns had been of Ayrshire and the "West Country." Scott, like Wordsworth, was an out-door poet. He spent much time in the saddle, and was fond of horses, dogs, hunting, and salmon-fishing. He had a keen {245} eye for the beauties of natural scenery, though "more especially," he admits, "when combined with ancient ruins or remains of our forefathers' piety or splendor." He had the historic imagination, and, in creating the historical novel, he was the first to throw a poetic glamour over European annals. In 1803 Wordsworth visited Scott at Lasswade, near Edinburgh; and Scott afterward returned the visit at Grasmere. Wordsworth noted that his guest was "full of anecdote and averse from disquisition." The Englishman was a moralist and much given to "disquisition," while the Scotchman was, above all things, a raconteur, and, perhaps, on the whole, the foremost of British story-tellers. Scott's Toryism, too, was of a different stripe from Wordsworth's, being rather the result of sentiment and imagination than of philosophy and reflection. His mind struck deep root in the past; his local attachments and family pride were intense. Abbotsford was his darling, and the expenses of this domain and of the baronial hospitality which he there extended to all comers were among the causes of his bankruptcy. The enormous toil which he exacted of himself, to pay off the debt of 117,000 pounds, contracted by the failure of his publishers, cost him his life. It is said that he was more gratified when the Prince Regent created him a baronet, in 1820, than by all the public recognition that he acquired as the author of the *Waverley Novels*. Scott was attracted by the romantic side of {246} German literature. His first published poem was a translation made in 1796 from Burger's wild ballad, *Leonora*. He followed this up with versions of the same poet's *Wilde Jäger*, of Goethe's violent drama of feudal life, *Götz Van Berlichingen*, and with other translations from the German, of a similar class. On his horseback trips through the border, where he studied the primitive manners of the Liddesdale people, and took down old ballads from the recitation of ancient dames and cottagers, he amassed the materials for his *Minstrelsy of the Scottish Border*, 1802. But the first of his original poems was the *Lay of the Last Minstrel*, published in 1805, and followed, in quick succession, by *Marmion*, the *Lady of the Lake*, *Rokeby*, the *Lord of the Isles*, and a volume of ballads and lyrical pieces, all issued during the years 1806-1814. The popularity won by this series of metrical romances was immediate and wide-spread. Nothing so fresh, or so brilliant, had appeared in English poetry for nearly two centuries. The reader was hurried along through scenes of rapid action, whose effect was heightened by wild landscapes and picturesque manners. The pleasure was a passive one. There was no deep thinking to perplex, no subtler beauties to pause upon; the feelings were stirred pleasantly, but not deeply; the effect was on the surface. The spell employed was novelty--or, at most, wonder--and the chief emotion aroused was breathless interest in the progress of the story. Carlyle said that Scott's genius was *in extenso*, {247} rather than *in intenso*, and that its great praise was its healthiness. This is true of his verse, but not altogether so of his prose, which exhibits deeper qualities. Some of Scott's most perfect poems, too, are his shorter ballads, like *Jock o' Hazeldean*, and *Proud Maisie is in the Wood*, which have a greater intensity and compression than his metrical tales. >From 1814 to 1831 Scott wrote and published the *Waverley* novels, some thirty in number; if we consider the amount of work done, the speed with which it was done, and the general average of excellence maintained, perhaps the most marvelous literary feat on record. The series was issued anonymously, and takes its name from the first number, *Waverley*, or *'Tis Sixty Years Since*. This was founded upon the rising

of the clans, in 1745, in support of the Young Pretender, Charles Edward Stuart, and it revealed to the English public that almost foreign country which lay just across their threshold, the Scottish Highlands. The *Waverley* novels remain, as a whole, unequalled as historical fiction, although, here and there a single novel, like George Eliot's *Romola*, or Thackeray's *Henry Esmond*, or Kingsley's *Hypatia*, may have attained a place beside the best of them. They were a novelty when they appeared. English prose fiction had somewhat declined since the time of Fielding and Goldsmith. There were truthful, though rather tame, delineations of provincial life, like Jane Austen's *Sense and Sensibility*, 1811, and {248} *Pride and Prejudice*, 1813; or Maria Edgeworth's *Popular Tales*, 1804. On the other hand, there were Gothic romances, like the *Monk* of Matthew Gregory Lewis, to whose *Tales of Wonder* some of Scott's translations from the German had been contributed; or like Anne Radcliffe's *Mysteries of Udolpho*. The great original of this school of fiction was Horace Walpole's *Castle of Otranto*, 1765, an absurd tale of secret trap-doors, subterranean vaults, apparitions of monstrous mailed figures and colossal helmets, pictures that descend from their frames, and hollow voices that proclaim the ruin of ancient families. Scott used the machinery of romance, but he was not merely a romancer, or a historical novelist even, and it is not, as Carlyle implies, the buff-belts and jerkins which principally interest us in his heroes. *Ivanhoe* and *Kenilworth* and the *Talisman* are, indeed, romances pure and simple, and very good romances at that. But, in novels such as *Rob Roy*, the *Antiquary*, the *Heart of Midlothian*, and the *Bride of Lammermoor*, Scott drew from contemporary life, and from his intimate knowledge of Scotch character. The story is there, with its entanglement of plot and its exciting adventures, but there are also, as truly as in Shakspeare, though not in the same degree, the observation of life, the knowledge of men, the power of dramatic creation. No writer awakens in his readers a warmer personal affection than Walter Scott, the brave, honest, kindly gentleman, the noblest {249} figure among the literary men of his generation. Another Scotch poet was Thomas Campbell, whose *Pleasures of Hope*, 1799, was written in Pope's couplet, and in the stilted diction of the eighteenth century. *Gertrude of Wyoming*, 1809, a long narrative poem in Spenserian stanza, is untrue to the scenery and life of Pennsylvania, where its scene is laid. But Campbell turned his rhetorical manner and his clanking, martial verse to fine advantage in such pieces as *Hohenlinden*, *Ye Mariners of England*, and the *Battle of the Baltic*. These have the true lyric fire, and rank among the best English war-songs. When Scott was asked why he had left off writing poetry, he answered, "Byron bet me." George Gordon Byron (1788-1824) was a young man of twenty-four, when, on his return from a two years' sauntering through Portugal, Spain, Albania, Greece, and the Levant, he published, in the first two cantos of *Childe Harold*, 1812, a sort of poetic itinerary of his experiences and impressions. The poem took, rather to its author's surprise, who said that he woke one morning and found himself famous. *Childe Harold* opened a new field to poetry, the romance of travel, the picturesque aspects of foreign scenery, manners, and costumes. It is instructive of the difference between the two ages, in poetic sensibility to such things, to compare Byron's glowing imagery with Addison's tame *Letter from Italy*, written a century before. *Childe* {250} *Harold* was followed by a series of metrical tales, the *Giaour*, the *Bride of Abydos*, the *Corsair*, *Lara*, the *Siege of Corinth*, *Parasina*, and *Prisoner of Chillon*, all written in the years 1813-1816. These poems at once took the place of Scott's in popular interest, dazzling a public that had begun to weary of chivalry romances, with pictures of Eastern life, with incidents as exciting as Scott's, descriptions as highly colored, and a much greater intensity of passion. So far as they depended for this interest upon the novelty of their accessories, the effect was a temporary one. Seraglios, divans, bulbuls, Gulistans, Zuleikas, and other Oriental properties, deluged English poetry for a time, and then subsided; even as the tide of moss-troopers, sorcerers, hermits, and feudal castles had already had its rise and fall. But there was a deeper reason for the impression made by Byron's poetry upon his contemporaries. He laid his finger right on the sore spot in modern life. He had the disease with which the time was sick, the world-weariness, the desperation which proceeded from "passion incapable of being converted into action." We find this tone in much of the literature which followed the failure of the French Revolution and the Napoleonic wars. From the irritations of that period, the disappointment of high hopes for the future of the race, the growing religious disbelief, and the revolt of democracy and free thought against conservative reaction, sprang what Southey called the "Satanic {251} school," which spoke its loudest word in Byron. Titanic is the better word, for the rebellion was not against God, but Jupiter, that is, against the State, Church, and society of Byron's day; against George III., the Tory cabinet of Lord Castlereigh, the Duke of Wellington, the bench of Bishops, London gossip, the British Constitution, and British cant. In these poems of Byron, and in his dramatic experiments, *Manfred* and *Cain*, there is a single figure--the figure of Byron under various masks--and one pervading mood, a restless and sardonic gloom, a weariness of life, a love of solitude, and a melancholy exaltation in the presence of the wilderness and the sea. Byron's hero is always represented as a man originally noble, whom some great wrong, by others, or some mysterious crime of his own, has blasted and embittered, and who carries about the world a seared heart and a somber brow. Harold--who may stand as a type of all his heroes--has run "through sin's labyrinth" and feeling the "fullness of satiety," is drawn abroad to roam, "the wandering exile of his own dark mind." The loss of a capacity for pure, unjaded emotion is the constant burden of

Byron's lament.

"No more, no more, O never more on me
The freshness of the heart shall fall like dew."

and again,

"O could I feel as I have felt--or be what I have been,
Or weep as I could once have wept, o'er many a vanished scene;
{252}
As springs in deserts found seem sweet, all brackish tho' they be,
So, midst the withered waste of life, those tears would flow to me."

This mood was sincere in Byron; but by cultivating it, and posing too long in one attitude, he became self-conscious and theatrical, and much of his serious poetry has a false ring. His example infected the minor poetry of the time, and it was quite natural that Thackeray--who represented a generation that had a very different ideal of the heroic--should be provoked into describing Byron as "a big, sulky dandy." Byron was well fitted by birth and temperament to be the spokesman of this fierce discontent. He inherited from his mother a haughty and violent temper, and profligate tendencies from his father. He was through life a spoiled child, whose main characteristic was willfulness. He liked to shock people by exaggerating his wickedness, or by perversely maintaining the wrong side of a dispute. But he had traits of bravery and generosity. Women loved him, and he made strong friends. There was a careless charm about him which fascinated natures as unlike each other as Shelley and Scott. By the death of the fifth Lord Byron without issue, Byron came into a title and estates at the age of ten. Though a liberal in politics he had aristocratic feelings, and was vain of his rank as he was of his beauty. He was educated at Harrow and at Trinity College, Cambridge, where he was idle and {253} dissipated, but did a great deal of miscellaneous reading. He took some of his Cambridge set--Hobhouse, Matthews, and others--to Newstead Abbey, his ancestral seat, where they filled the ancient cloisters with eccentric orgies. Byron was strikingly handsome. His face had a spiritual paleness and a classic regularity, and his dark hair curled closely to his head. A deformity in one of his feet was a mortification to him, though it did not greatly impair his activity, and he prided himself upon his powers as a swimmer. In 1815, when at the height of his literary and social éclat in London, he married. In February of the following year he was separated from Lady Byron, and left England forever, pursued by the execrations of outraged respectability. In this chorus of abuse there was mingled a share of cant; but Byron got, on the whole, what he deserved. From Switzerland, where he spent a summer by Lake Lemman, with the Shelleys; from Venice, Ravenna, Pisa, and Rome, scandalous reports of his intrigues and his wild debaucheries were wafted back to England, and with these came poem after poem, full of burning genius, pride, scorn, and anguish, and all hurling defiance at English public opinion. The third and fourth cantos of Childe Harold, 1816-1818, were a great advance upon the first two, and contain the best of Byron's serious poetry. He has written his name all over the continent of Europe, and on a hundred memorable spots has made the scenery his own. On the field of Waterloo, on "the castled {254} crag of Drachenfels," "by the blue rushing of the arrowy Rhone," in Venice, on the Bridge of Sighs, in the Coliseum at Rome, and among the "Isles of Greece," the tourist is compelled to see with Byron's eyes and under the associations of his pilgrimage. In his later poems, such as Beppo, 1818, and Don Juan, 1819-1823, he passed into his second manner, a mocking cynicism gaining ground upon the somewhat stagy gloom of his early poetry--Mephistophiles gradually elbowing out Satan. Don Juan, though morally the worst, is intellectually the most vital and representative of Byron's poems. It takes up into itself most fully the life of the time; exhibits most thoroughly the characteristic alternations of Byron's moods and the prodigal resources of wit, passion, and understanding, which--rather than imagination--were his prominent qualities as a poet. The hero, a graceless, amorous, stripling, goes wandering from Spain to the Greek islands and Constantinople, thence to St. Petersburg, and finally to England. Every-where his seductions are successful, and Byron uses him as a means of exposing the weakness of the human heart and the rottenness of society in all countries. In 1823, breaking away from his life of selfish indulgence in Italy, Byron threw himself into the cause of Grecian liberty, which he had sung so gloriously in the Isles of Greece. He died at Missolonghi, in the following year, of a fever contracted by exposure and overwork. Byron was a great poet but not a great literary {255} artist. He wrote negligently and with the ease of assured strength, his mind gathering heat as it moved, and pouring itself forth in reckless profusion. His work is diffuse and imperfect; much of it is melodrama or speech-making rather than true poetry. But on the other hand, much, very much of it, is unexcelled as the direct, strong, sincere utterance of personal feeling. Such is the quality of his best lyrics, like When We Two Parted, the Elegy on Thyrsa, Stanzas to Augusta, She Walks in Beauty, and of

innumerable passages, lyrical and descriptive, in his longer poems. He had not the wisdom of Wordsworth, nor the rich and subtle imagination of Coleridge, Shelley, and Keats when they were at their best. But he had greater body and motive force than any of them. He is the strongest personality among English poets since Milton, though his strength was wasted by want of restraint and self-culture. In Milton the passion was there, but it was held in check by the will and the artistic conscience, made subordinate to good ends, ripened by long reflection, and finally uttered in forms of perfect and harmonious beauty. Byron's love of Nature was quite different in kind from Wordsworth's. Of all English poets he has sung most lyrically of that national theme, the sea, as witness among many other passages, the famous apostrophe to the ocean, which closes *Childe Harold*, and the opening of the third canto in the same poem,

"Once more upon the waters," etc.

{256} He had a passion for night and storm, because they made him forget himself.

"Most glorious night!
Thou wert not sent for slumber! Let me be
A sharer in thy fierce and far delight,
A portion of the tempest and of thee!"

Byron's literary executor and biographer was the Irish poet, Thomas Moore, a born song-writer, whose *Irish Melodies*, set to old native airs, are, like Burns's, genuine, spontaneous, singing, and run naturally to music. Songs such as the *Meeting of the Waters*, *The Harp of Tara*, *Those Evening Bells*, the *Light of Other Days*, *Araby's Daughter*, and the *Last Rose of Summer* were, and still are, popular favorites. Moore's Oriental romance, *Lalla Rookh*, 1817, is overladen with ornament and with a sugary sentiment that clogs the palate. He had the quick Irish wit, sensibility rather than passion, and fancy rather than imagination. Byron's friend, Percy Bysshe Shelley (1792-1822), was also in fiery revolt against all conventions and institutions, though his revolt proceeded not, as in Byron's case, from the turbulence of passions which brooked no restraint, but rather from an intellectual impatience of any kind of control. He was not, like Byron, a sensual man, but temperate and chaste. He was, indeed, in his life and in his poetry, as nearly a disembodied spirit as a human creature can be. The German poet, Heine, said that liberty was the religion of this century, {257} and of this religion Shelley was a worshiper. His rebellion against authority began early. He refused to fag at Eton, and was expelled from Oxford for publishing a tract on the *Necessity of Atheism*. At nineteen, he ran away with Harriet Westbrook, and was married to her in Scotland. Three years later he deserted her for Mary Godwin, with whom he eloped to Switzerland. Two years after this his first wife drowned herself in the Serpentine, and Shelley was then formally wedded to Mary Godwin. All this is rather startling, in the bare statement of it, yet it is not inconsistent with the many testimonies that exist, to Shelley's singular purity and beauty of character, testimonies borne out by the evidence of his own writings. Impulse with him took the place of conscience. Moral law, accompanied by the sanction of power, and imposed by outside authority, he rejected as a form of tyranny. His nature lacked robustness and ballast. Byron, who was at bottom intensely practical, said that Shelley's philosophy was too spiritual and romantic. Hazlitt, himself a Radical, wrote of Shelley: "He has a fire in his eye, a fever in his blood, a maggot in his brain, a hectic flutter in his speech, which mark out the philosophic fanatic. He is sanguine complexioned and shrill voiced." It was, perhaps, with some recollection of this last-mentioned trait of Shelley the man, that Carlyle wrote of Shelley the poet, that "the sound of him was shrieky," and that he had "filled the earth with an inarticulate wailing." {258} His career as a poet began characteristically enough, with the publication, while at Oxford, of a volume of political rimes, entitled *Margaret Nicholson's Remains*, Margaret Nicholson being the crazy woman who tried to stab George III. His boyish poem, *Queen Mab*, was published in 1813; *Alastor* in 1816, and the *Revolt of Islam*--his longest--in 1818, all before he was twenty-one. These were filled with splendid, though unsubstantial, imagery, but they were abstract in subject, and had the faults of incoherence and formlessness which make Shelley's longer poems wearisome and confusing. They sought to embody his social creed of Perfectionism, as well as a certain vague Pantheistic system of belief in a spirit of love in nature and man, whose presence is a constant source of obscurity in Shelley's verse. In 1818 he went to Italy, where the last four years of his life were passed, and where, under the influences of Italian art and poetry, his writing became deeper and stronger. He was fond of yachting, and spent much of his time upon the Mediterranean. In the summer of 1822, his boat was swamped in a squall off the Gulf of Spezzia, and Shelley's drowned body was washed ashore, and burned in the presence of Byron and Leigh Hunt. The ashes were entombed in the Protestant cemetery at Rome, with the epitaph, *Cor cordium*. Shelley's best and maturest work, nearly all of

which was done in Italy, includes his tragedy, *The Cenci*, 1819, and his lyrical drama, *Prometheus Unbound*, 1821. The first of these has a unity, and a definiteness of contour unusual with Shelley, and is, with the exception of some of Robert Browning's, the best English tragedy since Otway. *Prometheus* represented to Shelley's mind the human spirit fighting against divine oppression, and in his portrayal of this figure, he kept in mind not only the *Prometheus* of Aeschylus, but the Satan of *Paradise Lost*. Indeed, in this poem, Shelley came nearer to the sublime than any English poet since Milton. Yet it is in lyrical, rather than in dramatic, quality that *Prometheus Unbound* is great. If Shelley be not, as his latest editor, Mr. Forman, claims him to be, the foremost of English lyrical poets, he is at least the most lyrical of them. He had, in a supreme degree, the "lyric cry." His vibrant nature trembled to every breath of emotion, and his nerves craved ever newer shocks; to pant, to quiver, to thrill, to grow faint in the spasm of intense sensation. The feminine cast observable in Shelley's portrait is borne out by this tremulous sensibility in his verse. It is curious how often he uses the metaphor of wings: of the winged spirit, soaring, like his skylark, till lost in music, rapture, light, and then falling back to earth. Three successive moods--longing, ecstasy, and the revulsion of despair--are expressed in many of his lyrics; as in the *Hymn to the Spirit of Nature*, in *Prometheus*, in the ode *To a Skylark*, and in the *Lines to an Indian Air*--Edgar Poe's favorite. His passionate desire to lose himself in Nature, to become one with that spirit of love and beauty in the universe, which was to him in place of God, is expressed in the *Ode to the West Wind*, his most perfect poem:

"Make me thy lyre, even as the forest is;
 What if my leaves are falling like its own!
 The tumult of thy mighty harmonies
 Will take from both a deep autumnal tone.
 Sweet, though in sadness, be thou, Spirit fierce,
 My spirit! be thou me, impetuous one!"

In the lyrical pieces already mentioned, together with *Adonais*, the lines *Written in the Euganean Hills*, *Epipsychidion*, *Stanzas Written in Dejection near Naples*, *A Dream of the Unknown*, and many others, Shelley's lyrical genius reaches a rarer loveliness and a more faultless art than Byron's ever attained, though it lacks the directness and momentum of Byron. In Shelley's longer poems, intoxicated with the music of his own singing, he abandons himself wholly to the guidance of his imagination, and the verse seems to go on of itself, like the enchanted boat in *Alastor*, with no one at the helm. Vision succeeds vision in glorious but bewildering profusion; ideal landscapes and cities of cloud "pinnacled dim in the intense inane." These poems are like the water-falls in the Yosemite, which, tumbling from a height of several thousand feet, are shattered into foam by the air, and waved about over the valley. Very beautiful is this descending spray, and the rainbow dwells in its bosom; but there is no longer any stream, nothing but an iridescent mist. The word *ethereal*, best expresses the quality of Shelley's genius. His poetry is full of atmospheric effects; of the tricks which light plays with the fluid elements of water and air; of stars, clouds, rain, dew, mist, frost, wind, the foam of seas, the phases of the moon, the green shadows of waves, the shapes of flames, the "golden lightning of the setting sun." Nature, in Shelley, wants homeliness and relief. While poets like Wordsworth and Burns let in an ideal light upon the rough fields of earth, Shelley escapes into a "moonlight-colored" realm of shadows and dreams, among whose abstractions the heart turns cold. One bit of Wordsworth's mountain turf is worth them all. By the death of John Keats (1796-1821), whose elegy Shelley sang in *Adonais*, English poetry suffered an irreparable loss. His *Endymion*, 1818, though disfigured by mawkishness and by some affectations of manner, was rich in promise. Its faults were those of youth, the faults of exuberance and of a tremulous sensibility, which time corrects. *Hyperion*, 1820, promised to be his masterpiece, but he left it unfinished--"a Titanic torso"--because, as he said, "there were too many Miltonic inversions in it." The subject was the displacement, by Phoebus Apollo, of the ancient sun-god, Hyperion, the last of the Titans who retained his dominion. It was a theme of great capabilities, and the poem was begun by Keats, with a strength of conception which leads to the belief that here was once more a really epic genius, had fate suffered it to mature. The fragment, as it stands--"that inlet to severe magnificence"--proves how rapidly Keats's diction was clarifying. He had learned to string up his looser chords. There is nothing maudlin in *Hyperion*; all there is in whole tones and in the grand manner, "as sublime as Aeschylus," said Byron, with the grave, antique simplicity, and something of modern sweetness interfused. Keats's father was a groom in a London livery-stable. The poet was apprenticed at fifteen to a surgeon. At school he had studied Latin, but not Greek. He, who of all English poets had the most purely Hellenic spirit, made acquaintance with Greek literature and art only through the medium of classical dictionaries, translations, and popular mythologies; and later through the marbles and casts in the British Museum. His friend, the artist Haydon, lent him a copy of Chapman's Homer, and the impression that it made upon him he recorded in his sonnet, *On First Looking into Chapman's Homer*. Other poems of the same inspiration are his three sonnets, *To Homer*, *On Seeing the Elgin Marbles*, *On a Picture of Leander*, *Lamia*, and the beautiful *Ode on a Grecian*

Urn. But Keats's art was retrospective and eclectic, the blossom of a double root; and "golden-tongued Romance with serene lute" had her part in him, as well as the classics. In his seventeenth year he {263} had read the *Faery Queene*, and from Spenser he went on to a study of Chaucer, Shakspeare, and Milton. Then he took up Italian and read *Ariosto*. The influence of these studies is seen in his poem, *Isabella, or the Pot of Basil*, taken from a story of Boccaccio; in his wild ballad, *La Belle Dame sans Merci*; and in his love tale, the *Eve of Saint Agnes*, with its wealth of medieval adornment. In the *Ode to Autumn*, and *Ode to a Nightingale*, the Hellenic choiceness is found touched with the warmer hues of romance. There is something deeply tragic in the short story of Keats's life. The seeds of consumption were in him; he felt the stirrings of a potent genius, but knew that he could not wait for it to unfold, but must die

"Before high-piled books, in charactry
Hold like rich garnerers the full-ripened grain."

His disease was aggravated, possibly, by the stupid brutality with which the reviewers had treated *Endymion*; and certainly by the hopeless love which devoured him. "The very thing which I want to live most for," he wrote, "will be a great occasion of my death. If I had any chance of recovery, this passion would kill me." In the autumn of 1820, his disease gaining apace, he went on a sailing vessel to Italy, accompanied by a single friend, a young artist named Severn. The change was of no avail, and he died at Rome a few weeks after, in his twenty-sixth year. {264} Keats was, above all things, the *artist*, with that love of the beautiful and that instinct for its reproduction which are the artist's divinest gifts. He cared little about the politics and philosophy of his day, and he did not make his poetry the vehicle of ideas. It was sensuous poetry, the poetry of youth and gladness. But if he had lived, and if, with wider knowledge of men and deeper experience of life, he had attained to Wordsworth's spiritual insight and to Byron's power of passion and understanding, he would have become a greater poet than either. For he had a style--a "natural magic"--which only needed the chastening touch of a finer culture to make it superior to any thing in modern English poetry and to force us back to Milton or Shakspeare for a comparison. His tombstone, not far from Shelley's, bears the inscription of his own choosing: "Here lies one whose name was writ in water." But it would be within the limits of truth to say that it is written in large characters on most of our contemporary poetry. "Wordsworth," says Lowell, "has influenced most the ideas of succeeding poets; Keats their forms." And he has influenced these out of all proportion to the amount which he left, or to his intellectual range, by virtue of the exquisite quality of his technique.

1. Wordsworth's Poems. Chosen and edited by Matthew Arnold. London, 1879.
 2. Poetry of Byron. Chosen and arranged by Matthew Arnold. London, 1881.
- {265}
3. Shelley. Julian and Maddalo, Prometheus Unbound, The Cenci, Lyrical Pieces.
 4. Landor. Pericles and Aspasia.
 5. Coleridge. Table Talk, Notes on Shakspeare, The Ancient Mariner, Christabel, Love, Ode to France, Ode to the Departing Year, Kubla Khan, Hymn before Sunrise in the Vale of Chamouni, Youth and Age, Frost at Midnight.
 6. De Quincey. Confessions of an English Opium Eater, Flight of a Tartar Tribe, Biographical Sketches.
 7. Scott. Waverley, Heart of Midlothian, Bride of Lammermoor, Rob Roy, Antiquary, Marmion, Lady of the Lake.
 8. Keats. Hyperion, Eve of St. Agnes, Lyrical Pieces.

CHAPTER VIII.

FROM THE DEATH OF SCOTT TO THE PRESENT TIME.

1832-1886.

The literature of the past fifty years is too close to our eyes to enable the critic to pronounce a final judgment, or the literary historian to get a true perspective. Many of the principal writers of the time are still living, and many others have been dead but a few years. This concluding chapter, therefore, will be devoted to the consideration of the few who stand forth, incontestably, as the leaders of literary thought, and who seem likely, under all future changes of fashion and taste, to remain representative of their generation. As regards *form*, the most striking fact in the history of the period under review is the immense preponderance in its imaginative literature of prose fiction, of the novel of real life. The novel has become to the solitary reader of to-day what the stage play was to the audiences of Elisabeth's reign, or the periodical essay, like the *Tatlers* and *Spectators*, to the clubs and breakfast-tables of Queen Anne's. And, if its criticism of life is less concentrated and brilliant than the drama gives, it is far {267} more searching and minute. No period has ever left in its literary records so complete a picture of its whole society as the period which is just closing. At any other time than the present, the names of authors like Charlotte Brontë, Charles Kingsley, and Charles Reade--names which are here merely mentioned in passing--besides many others which want of space forbids us even to mention--would be of capital importance. As it is, we must limit our review to the three acknowledged masters of modern English fiction, Charles Dickens (1812-1870), William Makepeace Thackeray (1811-1863), and "George Eliot" (Mary Ann Evans, 1819-1880). It is sometimes helpful to reduce a great writer to his lowest term, in order to see what the prevailing bent of his genius is. This lowest term may often be found in his early work, before experience of the world has overlaid his original impulse with foreign accretions. Dickens was much more than a humorist, Thackeray than a satirist, and George Eliot than a moralist; but they had their starting-points respectively in humor, in burlesque, and in strong ethical and religious feeling. Dickens began with a broadly comic series of papers, contributed to the *Old Magazine* and the *Evening Chronicle*, and reprinted in book form, in 1836, as *Sketches by Boz*. The success of these suggested to a firm of publishers the preparation of a number of similar sketches of the misadventures of cockney sportsmen, to accompany plates by the {268} comic draughtsman, Mr. R. Seymour. This suggestion resulted in the *Pickwick Papers*, published in monthly installments, in 1836-1837. The series grew, under Dickens's hand, into a continuous, though rather loosely strung narrative of the doings of a set of characters, conceived with such exuberant and novel humor that it took the public by storm, and raised its author at once to fame. *Pickwick* is by no means Dickens's best, but it is his most characteristic, and most popular, book. At the time that he wrote these early sketches he was a reporter for the *Morning Chronicle*. His naturally acute powers of observation had been trained in this pursuit to the utmost efficiency, and there always continued to be about his descriptive writing a reportorial and newspaper air. He had the eye for effect, the sharp fidelity to detail, the instinct for rapidly seizing upon and exaggerating the salient point, which are developed by the requirements of modern journalism. Dickens knew London as no one else has ever known it, and, in particular, he knew its hideous and grotesque recesses, with the strange developments of human nature that abide there; slums like Tom-all-Alone's, in *Bleak House*; the river-side haunts of Rogue Riderhood, in *Our Mutual Friend*; as well as the old inns, like the "White Hart," and the "dusky purlieu of the law." As a man, his favorite occupation was walking the streets, where, as a child, he had picked up the most valuable part of his education. His tramps about London--often after {269} nightfall--sometimes extended to fifteen miles in a day. He knew, too, the shifts of poverty. His father--some traits of whom are preserved in Mr. Micawber--was imprisoned for debt in the Marshalsea prison, where his wife took lodging with him, while Charles, then a boy of ten, was employed at six shillings a week to cover blacking-pots in Warner's blacking warehouse. The hardships and loneliness of this part of his life are told under a thin disguise in Dickens's masterpiece, *David Copperfield*, the most autobiographical of his novels. From these young experiences he gained that insight into the lives of the lower classes, and that sympathy with children and with the poor which shine out in his pathetic sketches of Little Nell, in *The Old Curiosity Shop*, of Paul Dombey, of Poor Jo, in *Bleak House*, of "the Marchioness," and a hundred other figures. In *Oliver Twist*, contributed, during 1837-1838, to *Bentley's Miscellany*, a monthly magazine of which Dickens was editor, he produced his first regular novel. In this story of the criminal classes the author showed a tragic power which he had not hitherto exhibited. Thenceforward his career was a series of dazzling successes. It is impossible here to particularize his numerous novels, sketches, short tales, and "Christmas Stories"--the latter a fashion which he inaugurated, and which has produced a whole literature in itself. In *Nicholas Nickleby*, 1839; *Master Humphrey's Clock*, 1840; *Martin Chuzzlewit*, 1844; *Dombey and Son*, 1848; {270} *David*

Copperfield_, 1850; and Bleak House, 1853, there is no falling off in strength. The last named was, in some respects, and especially in the skillful construction of the plot, his best novel. In some of his latest books, as Great Expectations, 1861, and Our Mutual Friend, 1865, there are signs of a decline. This showed itself in an unnatural exaggeration of characters and motives, and a painful straining after humorous effects; faults, indeed, from which Dickens was never wholly free. There was a histrionic side to him, which came out in his fondness for private theatricals, in which he exhibited remarkable talent, and in the dramatic action which he introduced into the delightful public readings from his works that he gave before vast audiences all over the United Kingdom, and in his two visits to America. It is not surprising, either, to learn that upon the stage his preference was for melodrama and farce. His own serious writing was always dangerously close to the melodramatic, and his humor to the farcical. There is much false art, bad taste, and even vulgarity in Dickens. He was never quite a gentleman, and never succeeded well in drawing gentlemen or ladies. In the region of low comedy he is easily the most original, the most inexhaustible, the most wonderful of modern humorists. Creations such as Mrs. Nickleby, Mr. Micawber, Sam Weller, Sairy Gamp, take rank with Falstaff and Dogberry; while many others, like Dick Swiveller, Stiggins, Chadband, Mrs. Jellyby, and Julia Mills are almost {271} equally good. In the innumerable swarm of minor characters with which he has enriched our comic literature, there is no indistinctness. Indeed, the objection that has been made to him is that his characters are too distinct--that he puts labels on them; that they are often mere personifications of a single trick of speech or manner, which becomes tedious and unnatural by repetition; thus, Grandfather Smallweed is always settling down into his cushion, and having to be shaken up; Mr. Jellyby is always sitting with his head against the wall; Peggotty is always bursting her buttons off, etc., etc. As Dickens's humorous characters tend perpetually to run into caricatures and grotesques, so his sentiment, from the same excess, slops over too frequently into "gush," and into a too deliberate and protracted attack upon the pity. A favorite humorous device in his style is a stately and roundabout way of telling a trivial incident as where, for example, Mr. Roker "muttered certain unpleasant invocations concerning his own eyes, limbs, and circulating fluids;" or where the drunken man who is singing comic songs in the Fleet received from Mr. Smangle "a gentle intimation, through the medium of the water-jug, that his audience were not musically disposed." This manner was original with Dickens, though he may have taken a hint of it from the mock heroic language of Jonathan Wild; but as practiced by a thousand imitators, ever since, it has gradually become a burden. It would not be the whole truth to say that the {272} difference between the humor of Thackeray and Dickens is the same as between that of Shakspeare and Ben Jonson. Yet it is true that the "humors" of Ben Jonson have an analogy with the extremer instances of Dickens's character sketches in this respect, namely: that they are both studies of the eccentric, the abnormal, the whimsical, rather than of the typical and universal--studies of manners, rather than of whole characters. And it is easily conceivable that, at no distant day, the oddities of Captain Cuttle, Deportment Turveydrop, Mark Tapley, and Newman Noggs will seem as far-fetched and impossible as those of Captain Otter, Fastidious Brisk, and Sir Amorous La-Foole. When Dickens was looking about for some one to take Seymour's place as illustrator of Pickwick, Thackeray applied for the job, but without success. He was then a young man of twenty-five, and still hesitating between art and literature. He had begun to draw caricatures with his pencil when a schoolboy at the Charter House, and to scribble them with his pen when a student at Cambridge, editing The Snob, a weekly under-graduate paper, and parodying the prize poem Timbuctoo of his contemporary at the university, Alfred Tennyson. Then he went abroad to study art, passing a season at Weimar, where he met Goethe and filled the albums of the young Saxon ladies with caricatures; afterward living, in the Latin Quarter at Paris, a Bohemian existence, studying art in a desultory way, and seeing men and cities; {273} accumulating portfolios full of sketches, but laying up stores of material to be used afterward to greater advantage when he should settle upon his true medium of expression. By 1837, having lost his fortune of 500 pounds a year in speculation and gambling, he began to contribute to Fraser's, and thereafter to the New Monthly, Cruikshank's Comic Almanac, Punch, and other periodicals, clever burlesques, art criticisms by "Michael Angelo Titmarsh," Yellow Plush Papers, and all manner of skits, satirical character sketches, and humorous tales, like the Great Hoggarty Diamond and the Luck of Barry Lyndon. Some of these were collected in the Paris Sketch-Book, 1840, and the Irish Sketch-Book, 1843; but Thackeray was slow in winning recognition, and it was not until the publication of his first great novel, Vanity Fair, in monthly parts, during 1846-1848, that he achieved any thing like the general reputation which Dickens had reached at a bound. Vanity Fair described itself, on its title-page, as "a novel without a hero." It was also a novel without a plot--in the sense in which Bleak House or Nicholas Nickleby had a plot--and in that respect it set the fashion for the latest school of realistic fiction, being a transcript of life, without necessary beginning or end. Indeed, one of the pleasantest things to a reader of Thackeray is the way which his characters have of re-appearing, as old acquaintances, in his different books; just as, in real life, people drop out of mind and then turn {274} up again in other years and places. Vanity Fair is Thackeray's masterpiece, but it is not the best introduction to his writings. There are no illusions in it, and, to a young reader fresh from Scott's romances or Dickens's sympathetic extravagances, it will seem hard and

repellant. But men who, like Thackeray, have seen life and tasted its bitterness and felt its hollowness, know how to prize it. Thackeray does not merely expose the cant, the emptiness, the self-seeking, the false pretenses, flunkeyism, and snobbery--the "mean admiration of mean things"--in the great world of London society: his keen, unsparing vision detects the base alloy in the purest natures. There are no "heroes" in his books, no perfect characters. Even his good women, such as Helen and Laura Pendennis, are capable of cruel injustice toward less fortunate sisters, like little Fanny; and Amelia Sedley is led, by blind feminine instinct, to snub and tyrannize over poor Dobbin. The shabby miseries of life, the numbing and belittling influences of failure and poverty upon the most generous natures, are the tragic themes which Thackeray handles by preference. He has been called a cynic, but the boyish playfulness of his humor and his kindly spirit are incompatible with cynicism. Charlotte Brontë said that Fielding was the vulture and Thackeray the eagle. The comparison would have been truer if made between Swift and Thackeray. Swift was a cynic; his pen was driven by hate, but Thackeray's by love, and it was not {275} in bitterness but in sadness that the latter laid bare the wickedness of the world. He was himself a thorough man of the world, and he had that dislike for a display of feeling which characterizes the modern Englishman. But behind his satiric mask he concealed the manliest tenderness, and a reverence for every thing in human nature that is good and true. Thackeray's other great novels are Pendennis, 1849; Henry Esmond, 1852; and The Newcomes, 1855--the last of which contains his most lovable character, the pathetic and immortal figure of Colonel Newcome, a creation worthy to stand, in its dignity and its sublime weakness, by the side of Don Quixote. It was alleged against Thackeray that he made all his good characters, like Major Dobbin and Amelia Sedley and Colonel Newcome, intellectually feeble, and his brilliant characters, like Becky Sharp and Lord Steyne and Blanche Amory, morally bad. This is not entirely true, but the other complaint--that his women are inferior to his men--is true in a general way. Somewhat inferior to his other novels were The Virginians, 1858, and The Adventures of Philip, 1862. All of these were stories of contemporary life, except Henry Esmond and its sequel, The Virginians, which, though not precisely historical fictions, introduced historical figures, such as Washington and the Earl of Peterborough. Their period of action was the 18th century, and the dialogue was a cunning imitation of the language of that time. Thackeray was strongly {276} attracted by the 18th century. His literary teachers were Addison, Swift, Steele, Gay, Johnson, Richardson, Goldsmith, Fielding, Smollett, and Sterne, and his special master and model was Fielding. He projected a history of the century, and his studies in this kind took shape in his two charming series of lectures on The English Humorists and The Four Georges. These he delivered in England and in America, to which country he, like Dickens, made two several visits. Thackeray's genius was, perhaps, less astonishing than Dickens's, less fertile, spontaneous, and inventive; but his art is sounder, and his delineation of character more truthful. After one has formed a taste for his books, Dickens's sentiment will seem overdone, and much of his humor will have the air of buffoonery. Thackeray had the advantage in another particular: he described the life of the upper classes, and Dickens of the lower. It may be true that the latter offers richer material to the novelist, in the play of elementary passions and in strong, native developments of character. It is true, also, that Thackeray approached "society" rather to satirize it than to set forth its agreeableness. Yet, after all, it is "the great world" which he describes, that world upon which the broadening and refining processes of a high civilization have done their utmost, and which, consequently, must possess an intellectual interest superior to any thing in the life of London thieves, traveling showmen, and coachees. Thackeray is {277} the equal of Swift as a satirist, of Dickens as a humorist, and of Scott as a novelist. The one element lacking in him--and which Scott had in a high degree---is the poetic imagination. "I have no brains above my eyes," he said; "I describe what I see." Hence there is wanting in his creations that final charm which Shakspeare's have. For what the eyes see is not all. The great woman who wrote under the pen-name of George Eliot was a humorist, too. She had a rich, deep humor of her own, and a wit that crystallized into sayings which are not epigrams, only because their wisdom strikes more than their smartness. But humor was not, as with Thackeray and Dickens, her point of view. A country girl, the daughter of a land agent and surveyor at Nuneaton, in Warwickshire, her early letters and journals exhibit a Calvinistic gravity and moral severity. Later, when her truth to her convictions led her to renounce the Christian belief, she carried into Positivism the same religious earnestness, and wrote the one English hymn of the religion of humanity: "O, let me join the choir invisible," etc. Her first published work was a translation of Strauss's Leben Jesu, 1846. In 1851 she went to London and became one of the editors of the Radical organ, the Westminster Review. Here she formed a connection--a marriage in all but the name--with George Henry Lewes, who was, like {278} herself, a freethinker, and who published, among other things, a Biographical History of Philosophy. Lewes had also written fiction, and it was at his suggestion that his wife undertook story writing. Her Scenes of Clerical Life were contributed to Blackwood's Magazine for 1857, and published in book form in the following year. Adam Bede followed in 1859, the Mill on the Floss in 1860, Silas Marner in 1861, Romola in 1863, Felix Holt in 1866, and Middlemarch in 1872. All of these, except Romola, are tales of provincial, and largely of domestic, life in the midland counties. Romola is a historical novel, the scene of which is Florence, in the 15th century, the Florence of

Macchiavelli and of Savonarola. George Eliot's method was very different from that of Thackeray or Dickens. She did not crowd her canvas with the swarming life of cities. Her figures are comparatively few, and they are selected from the middle-class families of rural parishes or small towns, amid that atmosphere of "fine old leisure," whose disappearance she lamented. Her drama is a still life drama, intensely and profoundly inward. Character is the stuff that she works in, and she deals with it more subtly than Thackeray. With him the tragedy is produced by the pressure of society and its false standards upon the individual; with her, by the malign influence of individuals upon one another. She watches "the stealthy convergence of human fates," the intersection at various angles of the planes of character, the power {279} that the lower nature has to thwart, stupefy, or corrupt the higher, which has become entangled with it in the mesh of destiny. At the bottom of every one of her stories, there is a problem of the conscience or the intellect. In this respect she resembles Hawthorne, though she is not, like him, a romancer, but a realist. There is a melancholy philosophy in her books, most of which are tales of failure or frustration. The *Mill on the Floss* contains a large element of autobiography, and its heroine, Maggie Tulliver, is, perhaps, her idealized self. Her aspirations after a fuller and nobler existence are condemned to struggle against the resistance of a narrow, provincial environment, and the pressure of untoward fates. She is tempted to seek an escape even through a desperate throwing off of moral obligations, and is driven back to her duty only to die by a sudden stroke of destiny. "Life is a bad business," wrote George Eliot, in a letter to a friend, "and we must make the most of it." *Adam Bede* is, in construction, the most perfect of her novels, and Silas Marner of her shorter stories. Her analytic habit gained more and more upon her as she wrote. *Middlemarch*, in some respects her greatest book, lacks the unity of her earlier novels, and the story tends to become subordinate to the working out of character stories and social problems. The philosophic speculations, which she shared with her husband, were seemingly unfavorable to her artistic growth, a circumstance which {280} comes apparent in her last novel, *Daniel Deronda*, 1877. Finally in the *Impressions of Theophrastus Such*, 1879, she abandoned narrative altogether, and recurred to that type of "character" books which we have met, as a flourishing department of literature in the 17th century, represented by such works as Earle's *Microcosmographie* and Fuller's *Holy and Profane State*. The moral of George Eliot's writings is not obtruded. She never made the artistic mistake of writing a novel of purpose, or what the Germans call a *tendenz-roman*; as Dickens did, for example, when he attacked imprisonment for debt, in *Pickwick*; the poor laws, in *Oliver Twist*; the Court of Chancery, in *Bleak House*; and the Circumlocution office, in *Little Dorrit*. Next to the novel, the essay has been the most overflowing literary form used by the writers of this generation--a form, characteristic, it may be, of an age which "lectures, not creates." It is not the essay of Bacon, nor yet of Addison, nor of Lamb, but attempts a complete treatment. Indeed, many longish books, like Carlyle's *Heroes and Hero Worship* and Ruskin's *Modern Painters*, are, in spirit, rather literary essays than formal treatises. The most popular essayist and historian of his time was Thomas Babington Macaulay, (1800-1859), an active and versatile man, who won splendid success in many fields of labor. He was prominent in public life as one of the leading orators and writers of the Whig party. He sat many times in the House of Commons, as member for Calne, for Leeds, and {281} for Edinburgh, and took a distinguished part in the debates on the Reform bill of 1832. He held office in several Whig governments, and during his four years' service in British India, as member of the Supreme Council of Calcutta, he did valuable work in promoting education in that province, and in codifying the Indian penal law. After his return to England, and especially after the publication of his *History of England from The Accession of James II.*, honors and appointments of all kinds were showered upon him. In 1857 he was raised to the peerage as Baron Macaulay of Rothley. Macaulay's equipment, as a writer on historical and biographical subjects, was, in some points, unique. His reading was prodigious, and his memory so tenacious, that it was said, with but little exaggeration, that he never forgot any thing that he had read. He could repeat the whole of *Paradise Lost* by heart, and thought it probable that he could rewrite *Sir Charles Grandison* from memory. In his books, in his speeches in the House of Commons, and in private conversation--for he was an eager and fluent talker, running on often for hours at a stretch--he was never at a loss to fortify and illustrate his positions by citation after citation of dates, names, facts of all kinds, and passages quoted *verbatim* from his multifarious reading. The first of Macaulay's writings to attract general notice was his article on *Milton*, printed in the August number of the *Edinburgh Review*, for 1825. The editor, Lord Jeffrey, in {282} acknowledging the receipt of the MS., wrote to his new contributor, "The more I think, the less I can conceive where you picked up that style." That celebrated style--about which so much has since been written--was an index to the mental character of its owner. Macaulay was of a confident, sanguine, impetuous nature. He had great common sense, and he saw what he saw quickly and clearly, but he did not see very far below the surface. He wrote with the conviction of an advocate, and the easy omniscience of a man whose learning is really nothing more than "general information," raised to a very high power, rather than with the subtle penetration of an original or truly philosophic intellect, like Coleridge's or De Quincey's. He always had at hand explanations of events or of characters, which were admirably easy and simple--too simple, indeed, for the complicated phenomena which they professed to explain. His style was clear, animated, showy, and even its

faults were of an exciting kind. It was his habit to give piquancy to his writing by putting things concretely. Thus, instead of saying, in general terms--as Hume or Gibbon might have done--that the Normans and Saxons began to mingle about 1200, he says: "The great grandsons of those who had fought under William and the great grandsons of those who had fought under Harold began to draw near to each other." Macaulay was a great scene painter, who neglected delicate truths of detail for exaggerated distemper effects. He used the {283} rhetorical machinery of climax and hyperbole for all that it was worth, and he "made points"--as in his essay on Bacon--by creating antithesis. In his History of England, he inaugurated the picturesque method of historical writing. The book was as fascinating as any novel. Macaulay, like Scott, had the historic imagination, though his method of turning history into romance was very different from Scott's. Among his essays, the best are those which, like the ones on Lord Clive, Warren Hastings, and Frederick the Great, deal with historical subjects; or those which deal with literary subjects under their public historic relations, such as the essays on Addison, Bunyan, and The Comic Dramatists of the Restoration. "I have never written a page of criticism on poetry, or the fine arts," wrote Macaulay, "which I would not burn if I had the power." Nevertheless his own Lays of Ancient Rome, 1842, are good, stirring verse of the emphatic and declamatory kind, though their quality may be rather rhetorical than poetic. Our critical time has not forborne to criticize itself, and perhaps the writer who impressed himself most strongly upon his generation was the one who railed most desperately against the "spirit of the age." Thomas Carlyle (1795-1881) was occupied between 1822 and 1830 chiefly in imparting to the British public a knowledge of German literature. He published, among other things, a Life of Schiller, a translation of Goethe's Wilhelm Meister, and two volumes of translations from the German {284} romancers--Tieck, Hoffmann, Richter, and Fouque, and contributed to the Edinburgh and Foreign Review, articles on Goethe, Werner, Novalis, Richter, German playwrights, the Nibelungen Lied, etc. His own diction became more and more tinged with Germanisms. There was something Gothic in his taste, which was attracted by the lawless, the grotesque, and the whimsical in the writings of Jean Paul Richter. His favorite among English humorists was Sterne, who has a share of these same qualities. He spoke disparagingly of "the sensuous literature of the Greeks," and preferred the Norse to the Hellenic mythology. Even in his admirable critical essays on Burns, on Richter, on Scott, Diderot, and Voltaire, which are free from his later mannerism--written in English, and not in Carlylese--his sense of spirit is always more lively than his sense of form. He finally became so impatient of art as to maintain--half-seriously--the paradox that Shakspeare would have done better to write in prose. In three of these early essays--on the Signs of the Times, 1829; on History, 1830; and on Characteristics, 1831--are to be found the germs of all his later writings. The first of these was an arraignment of the mechanical spirit of the age. In every province of thought he discovered too great a reliance upon systems, institutions, machinery, instead of upon men. Thus, in religion, we have Bible Societies, "machines for converting the heathen." "In defect of Raphaels and Angelos and Mozarts, we have royal {285} academies of painting, sculpture, music." In like manner, he complains, government is a machine. "Its duties and faults are not those of a father, but of an active parish-constable." Against the "police theory," as distinguished from the "paternal" theory of government, Carlyle protested with ever-shriller iteration. In Chartism, 1839; Past and Present, 1843; and Latter-day Pamphlets, 1850, he denounced this laissez faire idea. The business of government, he repeated, is to govern; but this view makes it its business to refrain from governing. He fought most fiercely against the conclusions of political economy, "the dismal science," which, he said, affirmed that men were guided exclusively by their stomachs. He protested, too, against the Utilitarians, followers of Bentham and Mill, with their "greatest happiness principle," which reduced virtue to a profit-and-loss account. Carlyle took issue with modern liberalism; he ridiculed the self-gratulation of the time, all the talk about progress of the species, unexampled prosperity, etc. But he was reactionary without being conservative. He had studied the French Revolution, and he saw the fateful, irresistible approach of democracy. He had no faith in government "by counting noses," and he hated talking parliaments; but neither did he put trust in an aristocracy that spent its time in "preserving the game." What he wanted was a great individual ruler, a real king or hero; and this doctrine he set forth afterward most fully in Hero Worship, 1841, and {286} illustrated in his lives of representative heroes, such as his Cromwell's Letters and Speeches, 1845, and his great History of Frederick the Great, 1858-1865. Cromwell and Frederick were well enough; but as Carlyle grew older, his admiration for mere force grew, and his latest hero was none other than that infamous Dr. Francia, the South American dictator, whose career of bloody and crafty crime horrified the civilized world. The essay on History was a protest against the scientific view of history which attempts to explain away and account for the wonderful. "Wonder," he wrote in Sartor Resartus, "is the basis of all worship." He defined history as "the essence of innumerable biographies." "Mr. Carlyle," said the Italian patriot, Mazzini, "comprehends only the individual. The nationality of Italy is, in his eyes, the glory of having produced Dante and Christopher Columbus." This trait comes out in his greatest book, The French Revolution, 1837, which is a mighty tragedy, enacted by a few leading characters, Mirabeau, Danton, Napoleon. He loved to emphasize the superiority of history over fiction as dramatic material. The third of the three essays mentioned was a

Jeremiad on the morbid self-consciousness of the age, which shows itself in religion and philosophy, as skepticism and introspective metaphysics; and in literature, as sentimentalism, and "view-hunting." But Carlyle's epoch-making book was *Sartor Resartus* (The Tailor Retailored), published in *Fraser's* {287} *Magazine* for 1833-1834, and first reprinted in book form in America. This was a satire upon shams, conventions, the disguises which overlie the most spiritual realities of the soul. It purported to be the life and "clothes-philosophy" of a certain Diogenes Teufelsdröckh, Professor der Allerlei Wissenschaft--of things in general--in the University of Weissnichtwo. "Society," said Carlyle, "is founded upon cloth," following the suggestions of Lear's speech to the naked bedlam beggar: "Thou art the thing itself: unaccommodated man is no more but such a poor, bare, forked animal as thou art;" and borrowing also, perhaps, an ironical hint from a paragraph in Swift's *Tale of a Tub*: "A sect was established who held the universe to be a large suit of clothes. . . . If certain ermines or furs be placed in a certain position, we style them a judge; and so an apt conjunction of lawn and black satin we entitle a bishop." In *Sartor Resartus* Carlyle let himself go. It was willful, uncouth, amorphous, titanic. There was something monstrous in the combination, the hot heart of the Scot married to the transcendental dream of Germany. It was not English, said the reviewers; it was not sense; it was disfigured by obscurity and "mysticism." Nevertheless even the thin-witted and the dry-witted had to acknowledge the powerful beauty of many chapters and passages, rich with humor, eloquence, poetry, deep-hearted tenderness, or passionate scorn. Carlyle was a voracious reader, and the plunder {288} of whole literatures is strewn over his pages. He flung about the resources of the language with a giant's strength, and made new words at every turn. The concreteness and the swarming fertility of his mind are evidenced by his enormous vocabulary, computed greatly to exceed Shakspeare's, or any other single writer's in the English tongue. His style lacks the crowning grace of simplicity and repose. It astonishes, but it also fatigues. Carlyle's influence has consisted more in his attitude than in any special truth which he has preached. It has been the influence of a moralist, of a practical, rather than a speculative, philosopher. "The end of man," he wrote, "is an action, not a thought." He has not been able to persuade the time that it is going wrong, but his criticisms have been wholesomely corrective of its self-conceit. In a democratic age he has insisted upon the undemocratic virtues of obedience, silence, and reverence. *Ehrfurcht*--reverence--the text of his address to the students of Edinburgh University, in 1866, is the last word of his philosophy. In 1830 Alfred Tennyson (1809- ----), a young graduate of Cambridge, published a thin duodecimo of 154 pages, entitled *Poems, Chiefly Lyrical*. The pieces in this little volume, like the *Sleeping Beauty*, *Ode to Memory*, and *Recollections of the Arabian Nights*, were full of color, fragrance, melody; but they had a dream-like character, and were without definite theme, resembling an artist's studies, or {289} exercises in music--a few touches of the brush, a few sweet chords, but no aria. A number of them--*Claribel*, *Lilian*, *Adeline*, *Isabel*, *Mariana*, *Madeline*--were sketches of women; not character portraits, like Browning's *Men and Women*, but impressions of temperament, of delicately, differentiated types of feminine beauty. In *Mariana*, expanded from a hint of the forsaken maid, in Shakspeare's *Measure for Measure*, "Mariana at the moated grange," the poet showed an art then peculiar, but since grown familiar, of heightening the central feeling by landscape accessories. The level waste, the stagnant sluices, the neglected garden, the wind in the single poplar, re-enforce, by their monotonous sympathy, the loneliness, the hopeless waiting and weariness of life in the one human figure of the poem. In *Mariana*, the *Ode to Memory*, and the *Dying Swan*, it was the fens of Cambridge and of his native Lincolnshire that furnished Tennyson's scenery.

"Stretched wide and wild, the waste enormous marsh,
Where from the frequent bridge,
Like emblems of infinity,
The trenched waters run from sky to sky."

A second collection, published in 1833, exhibited a greater scope and variety, but was still in his earlier manner. The studies of feminine types were continued in *Margaret*, *Fatima*, *Eleanore*, *Mariana in the South*, and *A Dream of Fair Women*, suggested by Chaucer's *Legend of Good* {290} *Women*. In the *Lady of Shalott*, the poet first touched the Arthurian legends. The subject is the same as that of *Elaine*, in the *Idylls of the King*, but the treatment is shadowy, and even allegorical. In *Oenone* and the *Lotus Eaters*, he handled Homeric subjects, but in a romantic fashion, which contrasts markedly with the style of his later pieces, *Ulysses* and *Tithonus*. These last have the true classic severity, and are among the noblest specimens of weighty and sonorous blank verse in modern poetry. In general, Tennyson's art is unclassical. It is rich, ornate, composite, not statuesque, so much as picturesque. He is a great painter, and the critics complain that in passages calling for movement and action--a battle, a tournament, or the like--his figures stand still as in a tableau; and they contrast such passages unfavorably with scenes of the same kind in Scott, and with Browning's spirited ballad, *How we brought the Good News from Ghent to Aix*. In the *Palace of Art*, these elaborate pictorial effects were combined with allegory; in the *Lotus*

Eaters_, with that expressive treatment of landscape, noted in Mariana; the lotus land, "in which it seemed always afternoon," reflecting and promoting the enchanted indolence of the heroes. Two of the pieces in this 1833 volume, the May Queen and the Miller's Daughter, were Tennyson's first poems of the affections, and as ballads of simple, rustic life, they anticipated his more perfect idyls in blank verse, such as Dora, the Brook, Edwin Morris, and {291} the Gardener's Daughter. The songs in the Miller's Daughter had a more spontaneous, lyrical movement than any thing that he had yet published, and foretold the lovely songs which interlude the divisions of the Princess, the famous Bugle Song, the no-less famous Cradle Song, and the rest. In 1833 Tennyson's friend, Arthur Hallam, died, and the effect of this great sorrow upon the poet was to deepen and strengthen the character of his genius. It turned his mind in upon itself, and set it brooding over questions which his poetry had so far left untouched; the meaning of life and death, the uses of adversity, the future of the race, the immortality of the soul, and the dealings of God with mankind.

"Thou madest Death; and, lo, thy foot
Is on the skull which thou hast made."

His elegy on Hallam, In Memoriam, was not published till 1850. He kept it by him all those years, adding section after section, gathering up into it whatever reflections crystallized about its central theme. It is his most intellectual and most individual work, a great song of sorrow and consolation. In 1842 he published a third collection of poems, among which were Locksley Hall, displaying a new strength of passion; Ulysses, suggested by a passage in Dante: pieces of a speculative cast, like the Two Voices and the Vision of Sin; the song Break, Break, Break, which precluded In Memoriam; and, lastly, some additional {292} gropings toward the subject of the Arthurian romance, such as Sir Galahad, Sir Launcelot and Queen Guinevere and Morte d' Arthur. The last was in blank verse, and, as afterward incorporated in the Passing of Arthur, forms one of the best passages in the Idylls of the King. The Princess, a Medley, published in 1849, represents the eclectic character of Tennyson's art; a medieval tale with an admixture of modern sentiment, and with the very modern problem of woman's sphere for its theme. The first four Idylls of the King, 1859, with those since added, constitute, when taken together, an epic poem on the old story of King Arthur. Tennyson went to Malory's Morte d' Arthur for his material, but the outline of the first idyl, Enid, was taken from Lady Charlotte Guest's translation of the Welsh Mabinogion. In the idyl of Guinevere Tennyson's genius reached its high-water mark. The interview between Arthur and his fallen queen is marked by a moral sublimity and a tragic intensity which move the soul as nobly as any scene in modern literature. Here, at least, the art is pure and not "decorated;" the effect is produced by the simplest means, and all is just, natural, and grand. Maud--a love novel in verse--published in 1855, and considerably enlarged in 1856, had great sweetness and beauty, particularly in its lyrical portions, but it was uneven in execution, imperfect in design, and marred by lapses into mawkishness and excesses in language. Since 1860 Tennyson has added little of permanent {293} value to his work. His dramatic experiments, like Queen Mary, are not, on the whole, successful, though it would be unjust to deny dramatic power to the poet who has written, upon one hand, Guinevere and the Passing of Arthur, and upon the other the homely, dialectic monologue of the Northern Farmer. When we tire of Tennyson's smooth perfection, of an art that is over exquisite, and a beauty that is well-nigh too beautiful, and crave a rougher touch, and a meaning that will not yield itself too readily, we turn to the thorny pages of his great contemporary, Robert Browning (1812- ----). Dr. Holmes says that Tennyson is white meat and Browning is dark meat. A masculine taste, it is inferred, is shown in a preference for the gamier flavor. Browning makes us think; his poems are puzzles, and furnish business for "Browning Societies." There are no Tennyson societies, because Tennyson is his own interpreter. Intellect in a poet may display itself quite as properly in the construction of his poem as in its content; we value a building for its architecture, and not entirely for the amount of timber in it. Browning's thought never wears so thin as Tennyson's sometimes does in his latest verse, where the trick of his style goes on of itself with nothing behind it. Tennyson, at his worst, is weak. Browning, when not at his best, is hoarse. Hoarseness, in itself, is no sign of strength. In Browning, however, the failure is in art, not in thought. {294} He chooses his subjects from abnormal character types, such as are presented, for example, in Caliban upon Setebos, the Grammarians' Funeral, My Last Duchess, and Mr. Sludge, the Medium. These are all psychological studies, in which the poet gets into the inner consciousness of a monster, a pedant, a criminal, and a quack, and gives their point of view. They are dramatic soliloquies; but the poet's self-identification with each of his creations, in turn, remains incomplete. His curious, analytic observation, his way of looking at the soul from outside, gives a doubleness to the monologues in his Dramatic Lyrics, 1845, Men and Women, 1855, Dramatis Personae, 1864, and other collections of the kind. The words are the words of Caliban or Mr. Sludge; but the voice is the voice of Robert Browning. His first complete poem, Paracelsus, 1835, aimed to give the true inwardness of the career of the famous 16th century doctor, whose name became a synonym with charlatan. His

second, *Sordello*, 1840, traced the struggles of an Italian poet who lived before Dante, and could not reconcile his life with his art. *Paracelsus* was hard, but *Sordello* was incomprehensible. Mr. Browning has denied that he is ever perversely crabbed or obscure. Every great artist must be allowed to say things in his own way, and obscurity has its artistic uses, as the Gothic builders knew. But there are two kinds of obscurity in literature. One is inseparable from the subtlety and difficulty of the thought or the compression {295} and pregnant indirectness of the phrase. Instances of this occur in the clear depths of Dante, Shakspeare, and Goethe. The other comes from a vice of style, a willfully enigmatic and unnatural way of expressing thought. Both kinds of obscurity exist in Browning. He is a deep and subtle thinker; but he is also a very eccentric writer, abrupt, harsh, disjointed. It has been well said that the reader of Browning learns a new dialect. But one need not grudge the labor that is rewarded with an intellectual pleasure so peculiar and so stimulating. The odd, grotesque impression made by his poetry arises, in part, from his desire to use the artistic values of ugliness, as well as of obscurity; to avoid the shallow prettiness that comes from blinking the disagreeable truth: not to leave the saltiness out of the sea. Whenever he emerges into clearness, as he does in hundreds of places, he is a poet of great qualities. There are a fire and a swing in his *Cavalier Tunes*, and in pieces like the *Glove and the Lost Leader*; and humor in such ballads as the *Pied Piper of Hamelin* and the *Soliloquy of the Spanish Cloister*, which appeal to the most conservative reader. He seldom deals directly in the pathetic, but now and then, as in *Evelyn Hope*, the *Last Ride Together*, or the *Incident of the French Camp*, a tenderness comes over the strong verse "as sheathes

A film the mother eagle's eye,
When her bruised eaglet breathes."

{296} Perhaps the most astonishing example of Browning's mental vigor is the huge composition, entitled *The Ring and the Book*, 1868, a narrative poem in twenty-one thousand lines, in which the same story is repeated eleven times in eleven different ways. It is the story of a criminal trial which occurred at Rome about 1700, the trial of one Count Guido for the murder of his young wife. First the poet tells the tale himself; then he tells what one-half of the world says and what the other; then he gives the deposition of the dying girl, the testimony of witnesses, the speech made by the count in his own defense, the arguments of counsel, etc., and, finally, the judgment of the pope. So wonderful are Browning's resources in casuistry, and so cunningly does he ravel the intricate motives at play in this tragedy and lay bare the secrets of the heart, that the interest increases at each repetition of the tale. He studied the Middle Age carefully, not for its picturesque externals, its feudalisms, chivalries, and the like; but because he found it a rich quarry of spiritual monstrosities, strange outcroppings of fanaticism, superstition, and moral and mental distortion of all shapes. It furnished him especially with a great variety of ecclesiastical types, such as are painted in *Fra Lippo Lippi*, *Bishop Blougram's Apology*, and *The Bishop Orders his Tomb in St. Praxed's Church*. Browning's dramatic instinct has always attracted him to the stage. His tragedy, *Stratford* (1837), {297} was written for Macready, and put on at Covent Garden Theater, but without pronounced success. He has written many fine dramatic poems, like *Pippa Passes*, *Colombo's Birthday*, and *In a Balcony*; and at least two good acting plays, *Luria* and *A Blot in the Scutcheon*. The last named has recently been given to the American public, with Lawrence Barrett's careful and intelligent presentation of the leading rôle. The motive of the tragedy is somewhat strained and fantastic, but it is, notwithstanding, very effective on the stage. It gives one an unwonted thrill to listen to a play, by a living English writer, which is really literature. One gets a faint idea of what it must have been to assist at the first night of *Hamlet*.

1. Dickens. *Pickwick Papers*, *Nicholas Nickleby*, *David Copperfield*, *Bleak House*, *Tale of Two Cities*.
2. Thackeray. *Vanity Fair*, *Pendennis*, *Henry Esmond*, *The Newcomes*, *The Four Georges*.
3. George Eliot. *Scenes of Clerical Life*, *Mill on the Floss*, *Silas Marner*, *Romola*, *Adam Bede*, *Middlemarch*.
4. Macaulay. *Essays*, *Lays of Ancient Rome*.
5. Carlyle. *Sartor Resartus*, *French Revolution*, *Essays on History*, *Signs of the Times*, *Characteristics*, *Burns*, *Scott*, *Voltaire*, and *Goethe*.

CHAPTER IX.

THEOLOGICAL AND RELIGIOUS LITERATURE IN GREAT BRITAIN.

BY JOHN FLETCHER HURST.

Miracle plays, rude dramatic representations of the chief events in Scripture history, were used for popular instruction before the invention of printing. In England they began as early as the twelfth century. Moral plays, or moralities, were of the same origin, though dating from the fifteenth century. These were somewhat more refined than the miracle plays, and usually set forth the excellence of the virtues, such as truth, mercy, and the like. Both miracle and moral plays were under the conduct of the clergy. John Bale (1495-1563) was Bishop of Ossory, and wrote much for popular reform. He was the author of nineteen miracle plays. Lord Edward Herbert, of Cherbury (1581-1648), wrote a deistical work, *De Religione Gentilium*, the first of that school of writers which later appeared in Bolingbroke. John Spotiswood (1565-1639), Archbishop of St. Andrews and afterward Chancellor of Scotland, wrote a voluminous *History of the Church of Scotland*. George Sandys (1577-1643), {300} distinguished also as one of the earliest literary characters in America, wrote metrical versions of several of the poetical books of the Bible, and also a tragedy called *Christ's Passion*. John Knox (1505-1572), the great Scotch reformer and polemic, while more prominent as the preacher and spokesman of the Scotch Reformation, wrote *First Blast of the Trumpet against the Monstrous Regimen of Women* (1558), and the *Historie of the Reformation of Religion within the Realme of Scotland*, published after his death. John Jewel (1522-1571) wrote in Latin his *Apologia Ecclesiae Anglicanae*. William Whittingham (1524-1589), who succeeded Knox as pastor of the English Church at Geneva, aided in making the Genevan Version of the Bible and also co-operated in the Sternhold and Hopkins translation of the Psalms. John Fox (1517-1587) was the author of the *Book of Martyrs*, whose full title was *Acts and Monuments of these Latter and Perilous Days, Touching Matters of the Church*. An abridgment of the work has had a very wide circulation. John Aylmer (1521-1594) replied to Knox's *First Blast of the Trumpet* in a work called *An Harbor for Faithful and True Subjects*. Nicholas Sanders (1527-1580), a Roman Catholic professor of Oxford, wrote *The Rock of the Church*, a defense of the primacy of Peter and the Bishops of Rome. Robert Parsons (1546-1610), a Jesuit, wrote several works in advocacy of Roman Catholicism and some political tracts. {301} John Rainolds (1549-1607), a learned Hebraist of Oxford, wrote many ecclesiastical works in Latin and English. He was a chief promoter of King James's Version of the Bible. Miles Smith, (died 1624), Thomas Bilson (1536-1616), John Boys (1560-1643), and George Abbot (1562-1633), Archbishop of Canterbury, were all co-workers on the King James translation of the Scriptures. Next in importance to the English Bible in its effect upon literature stands the English Prayer Book, which is the rich mosaic of many minds. It came through *The Prymer* of the fourteenth century, and contained the more fundamental and familiar portions of the *Book of Common Prayer*, such as the Ten Commandments, the Lord's Prayer, the Litany, and the Apostles' Creed. This compilation differed in form and somewhat in content in the different dioceses in England, and was partly in Latin and partly in English. In 1542 an attempt was made to produce a common form for all England and to have it entirely in English. The Committee of Convocation, who had the work in charge, were prevented from making it complete through the refusal of Henry VIII to continue the approval which he had given to the appointment of the

committee. However, under Edward VI a commission, headed by Archbishop Cranmer, carried their work through, and it was accepted and its use made compulsory by Parliament. It was published in 1549 as the First Prayer Book of Edward VI. Three years later the Second Prayer {302} Book of Edward VI was issued, it being a revision of the First, also under the shaping hand of Cranmer. The Prayer Book received its final revision and substantially its present form in the reign of Elizabeth, in 1559, although in 1662 there was added to the Morning and Evening Prayer a Collection of Prayers and Thanksgivings upon Several Occasions. Gathering thus through three centuries the choice treasures of confession and devotion of the strong and reverent English nation, it has been a large element in the literary training, not only of communicants in the Anglican, the Episcopal, and the Methodist Churches, but, in a measure, also of those who have received their religious instruction and have worshiped in other branches of the Protestant Church. The work of the Assembly of Divines at Westminster (1643-1649), particularly the Confession of Faith, and the Shorter Catechism, became, as specimens of strong and pure English, potent factors in the intellectual and literary discipline of the Presbyterians in all parts of the world. The modern psalms and hymns, or the simplified and popularized forms of the earlier and mediaeval worship, have had vastly to do with the daily thought and education of the people into whose life they have brought not only increase of lofty devotion but also a positive and stimulative culture. Foremost of these collections was that made by Thomas Sternhold, John Hopkins, and others, and {303} known as the Psalter of Sternhold and Hopkins, published in 1562. Francis Rouse made a version in 1645, which, after revision, was adopted in 1649, and largely used by the Scotch Church. A new version was that by Nahum Tate and Nicholas Brady, which appeared in 1696, and has since been called the Psalter of Tate and Brady. The first English hymn book adapted for public worship was that of Isaac Watts, appearing about 1709, although several minor collections and individual productions had preceded Watts, among which should be mentioned those of Joseph Stennett, John Mason, and the fine hymns of Bishop Ken and Joseph Addison. A little later the prolific and spiritual Charles Wesley, aided by the somewhat stricter taste of his more celebrated brother, John, began (1739) his wonderful series of published hymns, which, together with those of Watts, have since formed the larger portion of the Protestant hymnody of the world. Others of the eighteenth century who have made contributions to the sacred lyrics of the Church are John Byrom (1691-1763), Philip Doddridge (1702-1751), Joseph Hart (1712-1768), Anne Steele (1716-1778), Benjamin Beddome (1717-1795), John Cennick (1717-1755), Thomas Olivers (1725-1799), Joseph Grigg (1728-1768), Augustus M. Toplady (1740-1778), and Edward Perronet (died 1792). Approaching our own time, the ranks of our hymn writers include James Montgomery {304} (1771-1854), whose Christian Psalmist was published in 1825, Thomas Kelly, of Dublin (1769-1855); Harriet Auber (1773-1832), Reginald Heber (1783-1826), Sir Robert Grant (1785-1838), Josiah Conder (1789-1855), Charlotte Elliott (1789-1871), Sir John Bowring (1792-1872), Henry Francis Lyte (1793-1847), John Keble (1792-1866), whose Christian Year came out in 1827; John H. Newman (1801-1890), Sarah Flower Adams (1805-1849), and Horatius Bonar (1808-1869). Richard Mant (1776-1848), Henry Alford (1810-1871), F. W. Faber (1815-1863), John Mason Neale (1818-1866), Miss Catherine Winkworth (born 1829), and some others, have given many beautiful and stirring translations from the Latin and German hymns of the ancient and mediaeval periods. Theological writers of the middle of the seventeenth century are numerous. Chief of those belonging to the Anglican Church may be named Joseph Hall, Bishop of Norwich (1574-1656), whose Episcopacy by Divine Right was replied to in Smectymnus, the joint production of five dissenting divines: Stephen Marshal, Edward Calamy, Thomas Young, Matthew Newcomer, and William Spurston; James Ussher (1580-1656), a man of vast literary learning and most known by his Sacred Chronology, published after his death; Thomas Fuller and Jeremy Taylor, mentioned in a previous chapter; John Cosin (1594-1672), who wrote chiefly devotional treatises; William Chillingworth {305} (1602-1664), whose Religion of Protestants has had a wide circulation; John Pearson (1612-1686), whose Exposition of the Creed became a standard; Ralph Cudworth (1617-1688), whose Intellectual System of the Universe dealt a stunning blow to the atheism of his day, and Isaac Barrow (1630-1677), the learned vice-chancellor of Cambridge, wit, mathematician, and theologian all in one, who left a rich legacy in his Sermons. Of the Non-conforming authors deserving notice Richard Baxter (1615-1691) is the most voluminous, if not also the most luminous. Controversy engaged his pen almost constantly, but his most permanent works were his Call to the Unconverted and The Saints' Everlasting Rest. John Owen (1616-1683) was a leading Puritan writer, and under Cromwell was vice-chancellor of Oxford University. His Commentary on the Epistle to the Hebrews and his book on The Holy Spirit are still in use and highly prized. His pen was strong rather than elegant. John Bunyan's immortal allegory throws a halo on universal literature. John Howe (1630-1705), the chief author among the Puritans, wrote many strong works, among which of special note are The Living Temple and The Office and Work of the Holy Spirit. He was Cromwell's chaplain. The spiritual writings of Samuel Rutherford (1600-1661), the Scotch divine; the Annotations on the Psalms by Henry Ainsworth (died 1662), an Independent, who was an exile in Holland for {306} 'conscience' sake; the expository writings of Thomas Manton (1620-1677); the Synopsis of Matthew Poole (1624-1679), later abridged into his celebrated Annotations upon the Bible; the

sermons of Stephen Charnock (1628-1680), particularly the one on "The Divine Attributes;" and *An Alarm to Unconverted Sinners*, by Joseph Alleine (1633-1688), which has had an immense circulation, form a galaxy in the theological firmament of the time of Milton. A later group of theological writers in the latter part of the seventeenth century contains the commanding figures of Symon Patrick (1626-1707), bishop and author of a *Commentary on the Old Testament*; John Flavel (1627-1691) and his works on practical piety; John Tillotson (1630-1694), the Anglican archbishop, whose eloquent sermons are still held in high repute; Robert South (1633-1716), the great pulpit orator, whose discourses are an ornament to the English tongue; Edward Stillingfleet (1635-1699), from whose prolific pen came several valuable treatises, one of which was *The Antiquities of the British Churches*; and William Beveridge (1637-1708), whose *Private Thoughts upon Religion* is still in much esteem. To these we may add Thomas Ken (1637-1710), the good bishop now best known as the author of *Praise God, from Whom all Blessings Flow*; Benjamin Keach (1640-1704), a Baptist preacher of much note and author of *Gospel Mysteries Opened*, which, like his other writings, is marred by an excessive use of figures; Gilbert Burnet (1643-1709), the writer and bishop, who mingled freely in the political affairs of the day and wrote much on a variety of subjects, one being a *History of the Reformation of the Church of England*; William Wall (1646-1728), the prominent defender of infant baptism; Humphrey Prideaux (1648-1724), who wrote the *Connection of the Old and New Testaments*; and Matthew Henry (1662-1714), still valued for his quaint and suggestive *Commentary on the Scriptures*. Here, too, belong George Fox (1624-1690) and Robert Barclay (1648-1690), the heroic founder and the learned champion of the Society of Friends, the former's *Journal* and the latter's *Apology for the True Christian Divinity* being worthy of special note. William Penn (1644-1718), more eminent as the chief colonizer of Pennsylvania, also wrote many powerful works in advocacy of Quaker teachings; and William Sewel's (1650-1726) *History of the Quakers* is a notable contribution to the literature of that much-misunderstood and persecuted people. Among those who graced the first half of the eighteenth century we find the Irish man of letters, Charles Leslie (1650-1722), who gave among others a celebrated treatise on *A Short and Easy Method with the Deists*; Francis Atterbury (1662-1732), Bishop of Rochester, whose *Sermons* still survive; William Wollaston (1659-1724), known as the author of *The Religion of Nature*, a plea for truth; Samuel Clarke (1675-1729), the philosophical writer of *The Demonstration of the Being and Attributes of God*; Matthew Tindal (1657-1733), the leading deist of his day, whose chief work was *Christianity as Old as Creation*; Robert Wodrow (1679-1734), a Scotch preacher who wrote a *History of the Sufferings of the Church of Scotland*; and Thomas Wilson (1663-1755), Bishop of Sodor and Man for fifty-seven years and the author of many useful works on the Scriptures and Christianity. Bishop Joseph Butler (1692-1752) appeared as the champion of Christianity and successfully answered the deistical tendency of Tindal and others by his *Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature*, which, though obscure in style, is still in high repute for its massive thought and mighty logic. Thomas Stackhouse (1680-1752) and his *History of the Bible*; John Bampton (1689-1751), whose estate still speaks at Oxford in defense of Christianity in the annual lectures on Divinity; Daniel Waterland (1683-1740), in his defense of the divinity of Christ; and Joseph Bingham (1668-1723), in his learned treatise on *The Antiquities of the Christian Church*, are also in the front rank of this period. Daniel Neal (1678-1743), in his *History of the Puritans*; John Leland (1691-1766), the Dublin preacher, in his *View of the Deistical Writers*; and Philip Doddridge (1702-1751), in his *Family Expositor* and his briefer and more famous *Rise and Progress of Religion in the Soul*, furnished valuable contributions to theological literature. The latter half of the eighteenth century was prolific of letters. Noteworthy among those who wrote on religious themes are the following: Nathaniel Lardner (1684-1768), who wrote *The Credibility of the Gospel History*; William Law (1687-1761), whose *Serious Call to a Holy Life* and *Christian Perfection* are still powerful works; Richard Challoner (1691-1781), a Roman Catholic author of many practical and devotional works and of a *Version of the Bible*, much prized in his own Church; Alban Butler (1700-1773), who compiled *The Lives of the Saints*; William Warburton (1698-1779), in his *Divine Legation of Moses*; Alexander Cruden (1701-1770), the Scotch author of the famous *Concordance to the Holy Scriptures*; and Lord George Lyttleton (1708-1773), the author of *Observations on the Conversion and Apostleship of St. Paul*. In the same category belong: Robert Lowth (1710-1787), whose book on *Hebrew Poetry* is still consulted; James Hervey (1713-1758), whose *Meditations* became very popular; Hugh Blair (1718-1800), the Scotchman whose *Sermons* for many years rivaled his *Lectures on Rhetoric* in popularity; Joseph Priestley (1733-1804), illustrious in the annals of chemical discovery, who wrote *Institutes of Natural and Revealed Religion*, and is one of the most distinguished Socinian writers; and William Paley (1743-1805), whose *Natural Theology* and *Horae Paulinae* are still standard works. During this period also came the great impulse to the literature of the common people through the tireless pen of John Wesley (1703-1791), whose *Sermons and Notes on the New Testament* have had a powerful influence wherever the Wesleyan revival has spread. James McKnight (1721-1800), the scholarly commentator and harmonist; John Fletcher (1729-1785), the sweet-souled defender of Methodism and author of *Checks to Antinomianism*; Bishop Richard Watson (1737-1816), the

learned apologist; Augustus M. Toplady (1740-1778); the hymnist and polemic; Joseph Milner (1744-1797), the Church historian; Thomas Coke (1747-1814), in his *Commentary on the Old and New Testaments*; and Andrew Fuller (1754-1815) were authors of marked force and ability. Belonging to the first quarter of the nineteenth century the leading theological productions are *The Immateriality and Immortality of the Soul*, by Samuel Drew (1765-1833); the *Translation of the Book of Job*, by John Mason Good (1764-1827); the popular *Commentaries on the Bible* by Thomas Scott (1747-1821), Adam Clarke (1762-1832), and Joseph Benson (1748-1821); the *Sermons* of Robert Hall (1764-1831), the great Baptist preacher; the *Introduction to the Literary History of the Bible*, by James Townley (died 1833); the missionary narratives of Henry Martyn (1781-1812), William Ward (1769-1822) and John Williams (1796-1839); and the pathetic story of *The Dairyman's Daughter*, by Legh Richmond (1772-1827). A little later in this century the first ranks {311} of theological scholarship include the Wordsworths--Christopher (1774-1846), the brother of the poet, and his two sons, Charles (1806-1892) and Christopher, Jr. (1809-1885). *Tracts for the Times*, written by a group of men styling themselves Anglo-Catholics, whose leaders were Edward B. Pusey (1800-1882), John H. Newman (1801-1890), John Keble (1792-1866), Richard H. Froude and others, began in 1833, and for several years continued to be published, reaching ninety in number. Their main purpose was a discussion and defense of the character and work of the Established Church, but a large result was that several of the leading spirits, with about two hundred clergymen and the same number of prominent laymen, became Roman Catholics. This High-Church series of writings was followed in 1860 by *Essays and Reviews*, a volume containing seven articles, whose authors were Frederick Temple (born 1821), Rowland Williams (1817-1870), Baden Powell (1796-1860), Henry B. Wilson (born 1804), C. W. Goodwin, Mark Pattison (1813-1884), and Benjamin Jowett (1817-1893). The purpose of these men was to liberalize the thought of the Church. They accomplished this result, and with it the overthrow of the faith of some. Thomas Chalmers (1780-1847), the great Scotch preacher, left much fruit of his pen, the most celebrated being *Astronomical Discourses*. Other distinguished books are: *A Practical View of {312} Christianity*, by William Wilberforce (1759-1833); *Horae Homileticae*, by Charles Simeon (1759-1836); *The Lives of Knox and Melville*, by Thomas McCrie (1772-1835); *Horae Mosaicae*, by George Stanley Faber (1773-1854); *The Scripture Testimony to the Messiah*, by John Pye Smith (1774-1851); *Theological Institutes*, by the Wesleyan theologian, Richard Watson (1781-1833); the *Histories of the Jews* and *of Christianity*, by Henry Hart Milman (1791-1868); the *Cyclopaedia of Biblical Literature*, by John Kitto (1804-1854); *Mammon*, by John Harris (1804-1856); the *Theological Essays* of John Frederick Denison Maurice (1805-1872); *Missions the Chief End of the Christian Church*, by Alexander Duff (1806-1878); the *Sermons* of Frederick William Robertson (1816-1853); and *The Life and Epistles of Paul*, by William J. Conybeare (1815-1857) and John S. Howson (1816-1885). The latter half of the present century has been marked by many strong and profound theological publications, of which we may name as worthy of particular notice: *The Introduction to the Study of the Holy Scriptures*, by Thomas Hartwell Horne (1780-1862); *Historic Doubts Relative to Napoleon Bonaparte*, by Richard Whately (1787-1863); *Apologia pro Vita Sua* of John H. Newman (1801-1890); *The Typology of Scripture*, by Patrick Fairbairn (1805-1892); *The Eclipse of Faith*, by Henry Rogers (1806-1877); the *Notes on the Parables and Miracles*, by Richard Chenevix Trench (1807-1886); {313} *The Temporal Mission of the Holy Ghost*, by Henry Edward Manning (1808-1892); the series of lectures on the Scriptures, by John Gunning (1810-1881); the *Greek New Testament*, edited by Henry Alford (1810-1871); and the same by Samuel Prideaux Tregelles (1813-1875); the historical works of Arthur Penrhyn Stanley (1815-1881); *Hypatia, or Old Foes with a New Face*, by Charles Kingsley (1819-1875); *Ecce Homo*, by John Robert Seeley (1834-1895); the *Sermons* of Charles Haddon Spurgeon (1834-1892); and *Natural Law in the Spiritual World*, the brilliant venture of the beloved and lamented Henry Drummond (1851-1897), whose *Greatest Thing in the World* bids fair to become a Christian classic. {317}

AMERICAN LITERATURE.

PREFACE.

This little volume is intended as a companion to the *Outline Sketch of English Literature*, published last year for the Chautauqua Circle. In writing it I have followed the same plan, aiming to present the subject in a sort of continuous essay rather than in the form of a "primer" or elementary manual. I have not undertaken to describe or even to mention every American author or book of importance, but only those which seemed to me of most significance. Nevertheless I believe that the sketch contains enough detail to make it of some use as a guide-book to our literature. Though meant to be mainly a history of American *belles-lettres* it makes some mention of historical

and political writings, {318} but hardly any of philosophical, scientific, and technical works. A chronological rather than a topical order has been followed, although the fact that our best literature is of recent growth has made it impossible to adhere as closely to a chronological plan as in the English sketch. In the reading courses appended to the different chapters I have named a few of the most important authorities in American literary history, such as Duyckinck, Tyler, Stedman, and Richardson.

OUTLINE SKETCH OF AMERICAN LITERATURE.

CHAPTER I.

THE COLONIAL PERIOD.

1607-1765.

The writings of our colonial era have a much greater importance as history than as literature. It would be unfair to judge of the intellectual vigor of the English colonists in America by the books that they wrote; those "stern men with empires in their brains" had more pressing work to do than the making of books. The first settlers, indeed, were brought face to face with strange and exciting conditions--the sea, the wilderness, the Indians, the flora and fauna of a new world--things which seem stimulating to the imagination, and incidents and experiences which might have lent themselves easily to poetry or romance. Of all these they wrote back to England reports which were faithful and sometimes vivid, but which, upon the whole, hardly rise into the region of literature. "New England," said Hawthorne, "was then in a {322} state incomparably more picturesque than at present." But to a contemporary that old New England of the seventeenth century doubtless seemed any thing but picturesque, filled with grim, hard, worky-day realities. The planters both of Virginia and Massachusetts were decimated by sickness and starvation, constantly threatened by Indian wars, and troubled by quarrels among themselves and fears of disturbance from England. The wrangles between the royal governors and the House of Burgesses in the Old Dominion, and the theological squabbles in New England, which fill our colonial records, are petty and wearisome to read of. At least,

they would be so did we not bear in mind to what imperial destinies these conflicts were slowly educating the little communities which had hardly as yet secured a foothold on the edge of the raw continent. Even a century and a half after the Jamestown and Plymouth settlements, when the American plantations had grown strong and flourishing, and commerce was building up large towns, and there were wealth and generous living and fine society, the "good old colony days when we lived under the king," had yielded little in the way of literature that is of any permanent interest. There would seem to be something in the relation of a colony to the mother country which dooms the thought and art of the former to a hopeless provincialism. Canada and Australia are great provinces, wealthier and more populous than the {323} thirteen colonies at the time of their separation from England. They have cities whose inhabitants number hundreds of thousands, well equipped universities, libraries, cathedrals, costly public buildings, all the outward appliances of an advanced civilization; and yet what have Canada and Australia contributed to British literature? American literature had no infancy. That engaging _naïveté_ and that heroic rudeness which give a charm to the early popular tales and songs of Europe find, of course, no counterpart on our soil. Instead of emerging from the twilight of the past, the first American writings were produced under the garish noon of a modern and learned age. Decrepitude rather than youthfulness is the mark of a colonial literature. The poets, in particular, instead of finding a challenge to their imagination in the new life about them, are apt to go on imitating the cast off literary fashions of the mother country. America was settled by Englishmen who were contemporary with the greatest names in English literature. Jamestown was planted in 1607, nine years before Shakspeare's death, and the hero of that enterprize, Captain John Smith, may not improbably have been a personal acquaintance of the great dramatist. "They have acted my fatal tragedies on the stage," wrote Smith. Many circumstances in _The Tempest_ were doubtless suggested by the wreck of the _Sea Venture_ on "the still vext Bermoothes," as described by William Strachey in his _True Repertory of the Wrack and {324} Redemption of Sir Thomas Gates_, written at Jamestown, and published at London in 1510. Shakspeare's contemporary, Michael Drayton, the poet of the _Polyolbion_, addressed a spirited valedictory ode to the three shiploads of "brave, heroic minds" who sailed from London in 1606 to colonize Virginia; an ode which ended with the prophecy of a future American literature:

"And as there plenty grows
Of laurel every-where,--
Apollo's sacred tree--
You it may see
A poet's brows
To crown, that may sing there."

Another English poet, Samuel Daniel, the author of the _Civil Wars_, had also prophesied in a similar strain:

"And who in time knows whither we may vent
The treasure of our tongue, to what strange shores~.~.~.
What worlds in the yet unformed Occident
May come refined with accents that are ours."

It needed but a slight movement in the balances of fate, and Walter Raleigh might have been reckoned among the poets of America. He was one of the original promoters of the Virginia colony, and he made voyages in person to Newfoundland and Guiana. And more unlikely things have happened than that when John Milton left Cambridge in 1632, he should have been tempted to follow Winthrop and the colonists of Massachusetts Bay, {325} who had sailed two years before. Sir Henry Vane, the younger, who was afterward Milton's friend-- "Vane, young in years, but in sage counsel old"-- came over in 1635, and was for a short time Governor of Massachusetts. These are idle speculations, and yet, when we reflect that Oliver Cromwell was on the point of embarking for America when he was prevented by the king's officers, we may, for the nonce, "let our frail thoughts dally with false surmise," and fancy by how narrow a chance _Paradise Lost_ missed being written in Boston. But, as a rule, the members of the literary guild are not quick to emigrate. They like the feeling of an old and rich civilization about them, a state of society which America has only begun to reach during the present century. Virginia and New England, says Lowell, were the "two great distributing centers of the English race." The men who colonized the country between the Capes of Virginia were not drawn, to any large extent, from the literary or bookish classes in the Old Country. Many of the first settlers were gentlemen--too many, Captain Smith thought, for the good of the plantation. Some among these were men of worth and spirit, "of good means and great parentage." Such was, for example, George Percy, a younger brother of the Earl of Northumberland, who was one of the original adventurers, and the author of _A

Discourse of the Plantation of the Southern Colony of Virginia_, {326} which contains a graphic narrative of the fever and famine summer of 1607 at Jamestown. But many of these gentlemen were idlers, "unruly gallants, packed thither by their friends to escape ill destinies;" dissipated younger sons, soldiers of fortune, who came over after the gold which was supposed to abound in the new country, and who spent their time in playing bowls and drinking at the tavern as soon as there was any tavern. With these was a sprinkling of mechanics and farmers, indented servants, and the off-scourings of the London streets, fruit of press gangs and jail deliveries, sent over to "work in the plantations." Nor were the conditions of life afterward in Virginia very favorable to literary growth. The planters lived isolated on great estates, which had water fronts on the rivers that flow into the Chesapeake. There the tobacco, the chief staple of the country, was loaded directly upon the trading vessels that tied up to the long, narrow wharves of the plantations. Surrounded by his slaves, and visited occasionally by a distant neighbor, the Virginia country gentleman lived a free and careless life. He was fond of fox-hunting, horse-racing, and cock-fighting. There were no large towns, and the planters met each other mainly on occasion of a county court or the assembling of the Burgesses. The court-house was the nucleus of social and political life in Virginia as the town-meeting was in New England. In such a state of society schools were necessarily few, and popular education did {327} not exist. Sir William Berkeley, who was the royal governor of the colony from 1641 to 1677, said, in 1670, "I thank God there are no free schools nor printing, and I hope we shall not have these hundred years." In the matter of printing, this pious wish was well-nigh realized. The first press set up in the colony, about 1681, was soon suppressed, and found no successor until the year 1729. From that date until some ten years before the Revolution one printing-press answered the needs of Virginia, and this was under official control. The earliest newspaper in the colony was the Virginia Gazette, established in 1736. In the absence of schools the higher education naturally languished. Some of the planters were taught at home by tutors, and others went to England and entered the universities. But these were few in number, and there was no college in the colony until more than half a century after the foundation of Harvard in the younger province of Massachusetts. The college of William and Mary was established at Williamsburg chiefly by the exertions of the Rev. James Blair, a Scotch divine, who was sent by the Bishop of London as "commissary" to the Church in Virginia. The college received its charter in 1693, and held its first commencement in 1700. It is perhaps significant of the difference between the Puritans of New England and the so-called "Cavaliers" of Virginia, that while the former founded and supported Harvard College in 1636, and Yale in 1701, of {328} their own motion, and at their own expense, William and Mary received its endowment from the crown, being provided for in part by a deed of lands and in part by a tax of a penny a pound on all tobacco exported from the colony. In return for this royal grant the college was to present yearly to the king two copies of Latin verse. It is reported of the young Virginian gentlemen who resorted to the new college that they brought their plantation manners with them, and were accustomed to "keep race-horses at the college, and bet at the billiard or other gaming tables." William and Mary College did a good work for the colony, and educated some of the great Virginians of the Revolutionary era, but it has never been a large or flourishing institution, and has held no such relation to the intellectual development of its section as Harvard and Yale have held in the colonies of Massachusetts and Connecticut. Even after the foundation of the University of Virginia, in which Jefferson took a conspicuous part, southern youths were commonly sent to the North for their education, and at the time of the outbreak of the civil war there was a large contingent of southern students in several northern colleges, notably in Princeton and Yale. Naturally, the first books written in America were descriptions of the country and narratives of the vicissitudes of the infant settlements, which were sent home to be printed for the information of the English public and the encouragement of {329} further immigration. Among books of this kind produced in Virginia the earliest and most noteworthy were the writings of that famous soldier of fortune, Captain John Smith. The first of these was his True Relation, namely, "of such occurrences and accidents of note as hath happened in Virginia since the first planting of that colony," printed at London in 1608. Among Smith's other books, the most important is perhaps his General History of Virginia (London, 1624), a compilation of various narratives by different hands, but passing under his name. Smith was a man of a restless and daring spirit, full of resource, impatient of contradiction, and of a somewhat vainglorious nature, with an appetite for the marvelous and a disposition to draw the long bow. He had seen service in many parts of the world, and his wonderful adventures lost nothing in the telling. It was alleged against him that the evidence of his prowess rested almost entirely on his own testimony. His truthfulness in essentials has not, perhaps, been successfully impugned, but his narratives have suffered by the embellishments with which he has colored them, and, in particular, the charming story of Pocohontas saving his life at the risk of her own--the one romance of early Virginian history--has passed into the realm of legend. Captain Smith's writings have small literary value apart from the interest of the events which they describe, and the diverting but forcible {330} personality which they unconsciously display. They are the rough-hewn records of a busy man of action, whose sword was mightier than his pen. As Smith returned to England after two years in Virginia, and did not permanently cast in his lot with the settlement of which he had been for a time the leading spirit, he can hardly be claimed as an

American author. No more can Mr. George Sandys, who came to Virginia in the train of Governor Wyat, in 1621, and completed his excellent metrical translation of Ovid on the banks of the James, in the midst of the Indian massacre of 1622, "limned" as he writes "by that imperfect light which was snatched from the hours of night and repose, having wars and tumults to bring it to light instead of the muses." Sandys went back to England for good, probably as early as 1625, and can, therefore, no more be reckoned as the first American poet, on the strength of his paraphrase of the *Metamorphoses*, than he can be reckoned the earliest Yankee inventor, because he "introduced the first water-mill into America." The literature of colonial Virginia, and of the southern colonies which took their point of departure from Virginia, is almost wholly of this historical and descriptive kind. A great part of it is concerned with the internal affairs of the province, such as "Bacon's Rebellion," in 1676, one of the most striking episodes in our ante-revolutionary annals, and of which there exist a number of narratives, some of them anonymous, and only rescued {331} from a manuscript condition a hundred years after the event. Another part is concerned with the explorations of new territory. Such were the "Westover Manuscripts," left by Colonel William Byrd, who was appointed in 1729 one of the commissioners to fix the boundary between Virginia and North Carolina, and gave an account of the survey in his *History of the Dividing Line*, which was only printed in 1841. Colonel Byrd is one of the most brilliant figures of colonial Virginia, and a type of the Old Virginia gentleman. He had been sent to England for his education, where he was admitted to the bar of the Middle Temple, elected a Fellow of the Royal Society, and formed an intimate friendship with Charles Boyle, the Earl of Orrery. He held many offices in the government of the colony, and founded the cities of Richmond and Petersburg. His estates were large, and at Westover--where he had one of the finest private libraries in America--he exercised a baronial hospitality, blending the usual profusion of plantation life with the elegance of a traveled scholar and "picked man of countries." Colonel Byrd was rather an amateur in literature. His *History of the Dividing Line* is written with a jocularity which rises occasionally into real humor, and which gives to the painful journey through the wilderness the air of a holiday expedition. Similar in tone were his diaries of *A Progress to the Mines* and *A Journey to the Land of Eden* in North Carolina. {332} The first formal historian of Virginia was Robert Beverley, "a native and inhabitant of the place," whose *History of Virginia* was printed at London in 1705. Beverley was a rich planter and large slave owner, who, being in London in 1703, was shown by his bookseller the manuscript of a forthcoming work, Oldmixon's *British Empire in America*. Beverley was set upon writing his history by the inaccuracies in this, and likewise because the province "has been so misrepresented to the common people of England as to make them believe that the servants in Virginia are made to draw in cart and plow, and that the country turns all people black," an impression which lingers still in parts of Europe. The most original portions of the book are those in which the author puts down his personal observations of the plants and animals of the New World, and particularly the account of the Indians, to which his third book is devoted, and which is accompanied by valuable plates. Beverley's knowledge of these matters was evidently at first hand, and his descriptions here are very fresh and interesting. The more strictly historical part of his work is not free from prejudice and inaccuracy. A more critical, detailed, and impartial, but much less readable, work was William Stith's *History of the First Discovery and Settlement of Virginia*, 1747, which brought the subject down only to the year 1624. Stith was a clergyman, and at one time a professor in William and Mary College. {333} The Virginians were staunch royalists and churchmen. The Church of England was established by law, and non-conformity was persecuted in various ways. Three missionaries were sent to the colony in 1642 by the Puritans of New England, two from Braintree, Massachusetts, and one from New Haven. They were not suffered to preach, but many resorted to them in private houses, until, being finally driven out by fines and imprisonments, they took refuge in Catholic Maryland. The Virginia clergy were not, as a body, very much of a force in education or literature. Many of them, by reason of the scattering and dispersed condition of their parishes, lived as domestic chaplains with the wealthier planters, and partook of their illiteracy and their passion for gaming and hunting. Few of them inherited the zeal of Alexander Whitaker, the "Apostle of Virginia," who came over in 1611 to preach to the colonists and convert the Indians, and who published in furtherance of those ends *Good News from Virginia*, in 1613, three years before his death by drowning in James River. The conditions were much more favorable for the production of a literature in New England than in the southern colonies. The free and genial existence of the "Old Dominion" had no counterpart among the settlers of Plymouth and Massachusetts Bay, and the Puritans must have been rather unpleasant people to live with for persons of a different way of thinking. But their {334} intensity of character, their respect for learning, and the heroic mood which sustained them through the hardships and dangers of their great enterprise are amply reflected in their own writings. If these are not so much literature as the raw materials of literature, they have at least been fortunate in finding interpreters among their descendants, and no modern Virginian has done for the memory of the Jamestown planters what Hawthorne, Whittier, Longfellow, and others have done in casting the glamour of poetry and romance over the lives of the founders of New England. Cotton Mather, in his *Magnalia*, quotes the following passage from one of those election sermons, delivered before the General Court of Massachusetts, which formed for many years the great

annual intellectual event of the colony: "The question was often put unto our predecessors, _What went ye out into the wilderness to see? And the answer to it is not only too excellent but too notorious to be dissembled.~.~.~. We came hither because we would have our posterity settled under the pure and full dispensations of the gospel, defended by rulers that should be of ourselves." The New England colonies were, in fact, theocracies. Their leaders were clergymen or laymen, whose zeal for the faith was no whit inferior to that of the ministers themselves. Church and State were one. The freeman's oath was only administered to Church members, and there was no place in the social system for unbelievers or {335} dissenters. The Pilgrim fathers regarded their transplantation to the New World as an exile, and nothing is more touching in their written records than the repeated expressions of love and longing toward the old home which they had left, and even toward that Church of England from which they had sorrowfully separated themselves. It was not in any light or adventurous spirit that they faced the perils of the sea and the wilderness. "This howling wilderness," "these ends of the earth," "these goings down of the sun," are some of the epithets which they constantly applied to the land of their exile. Nevertheless they had come to stay, and, unlike Smith and Percy and Sandys, the early historians and writers of New England cast in their lots permanently with the new settlements. A few, indeed, went back after 1640--Mather says some ten or twelve of the ministers of the first "classis" or immigration were among them--when the victory of the Puritanic party in Parliament opened a career for them in England, and made their presence there seem in some cases a duty. The celebrated Hugh Peters, for example, who was afterward Oliver Cromwell's chaplain, and was beheaded after the Restoration, went back in 1641, and in 1647 Nathaniel Ward, the minister of Ipswich, Massachusetts, and author of a quaint book against toleration, entitled _The Simple Cobbler of Agawam_, written in America and published shortly after its author's arrival in England. The Civil War, too, put a stop to {336} further emigration from England until after the Restoration in 1660. The mass of the Puritan immigration consisted of men of the middle class, artisans and husbandmen, the most useful members of a new colony. But their leaders were clergymen educated at the universities, and especially at Emanuel College, Cambridge, the great Puritan college; their civil magistrates were also in great part gentlemen of education and substance, like the elder Winthrop, who was learned in the law, and Theophilus Eaton, first governor of New Haven, who was a London merchant of good estate. It is computed that there were in New England during the first generation as many university graduates as in any community of equal population in the old country. Almost the first care of the settlers was to establish schools. Every town of fifty families was required by law to maintain a common school, and every town of a hundred families a grammar or Latin school. In 1636, only sixteen years after the landing of the Pilgrims on Plymouth Rock, Harvard College was founded at Newtown, whose name was thereupon changed to Cambridge, the General Court held at Boston on September 8, 1680, having already advanced 400 pounds "by way of essay towards the building of something to begin a college." "An university," says Mather, "which hath been to these plantations, for the good literature there cultivated, _sal Gentium_~.~.~. and a river, without the streams whereof these regions would {337} have been mere unwatered places for the devil." By 1701 Harvard had put forth a vigorous offshoot, Yale College, at New Haven, the settlers of New Haven and Connecticut plantations having increased sufficiently to need a college at their own doors. A printing press was set up at Cambridge in 1639, which was under the oversight of the university authorities, and afterwards of licensers appointed by the civil power. The press was no more free in Massachusetts than in Virginia, and that "liberty of unlicensed printing," for which the Puritan Milton had pleaded in his _Areopagitica_, in 1644, was unknown in Puritan New England until some twenty years before the outbreak of the Revolutionary War. "The Freeman's Oath" and an almanac were issued from the Cambridge press in 1639, and in 1640 the first English book printed in America, a collection of the psalms in meter, made by various ministers, and known as the _Bay Psalm Book_. The poetry of this version was worse, if possible, than that of Sternhold and Hopkins's famous rendering; but it is noteworthy that one of the principal translators was that devoted "Apostle to the Indians," the Rev. John Eliot, who, in 1661-63, translated the Bible into the Algonkin tongue. Eliot hoped and toiled a lifetime for the conversion of those "salvages," "tawnies," "devil-worshippers," for whom our early writers have usually nothing but bad words. They have been destroyed instead of converted; but his (so entitled) _Mamusse Wunneetupanatamwe {338} Up-Biblum God naneeswe Nukkone Testament kah wonk Wusku Testament_--the first Bible printed in America--remains a monument of missionary zeal and a work of great value to students of the Indian languages. A modern writer has said that, to one looking back on the history of old New England, it seems as though the sun shone but dimly there, and the landscape was always dark and wintry. Such is the impression which one carries away from the perusal of books like Bradford's and Winthrop's _Journals_, or Mather's _Wonders of the Invisible World_: an impression of gloom, of night and cold, of mysterious fears besieging the infant settlements, scattered in a narrow fringe "between the groaning forest and the shore." The Indian terror hung over New England for more than half a century, or until the issue of King Philip's War, in 1676, relieved the colonists of any danger of a general massacre. Added to this were the perplexities caused by the earnest resolve of the settlers to keep their New English Eden free from the intrusion of the serpent in the shape of heretical sects in religion. The Puritanism of

Massachusetts was an orthodox and conservative Puritanism. The later and more grotesque out-crops of the movement in the old England found no toleration in the new. But these refugees for conscience' sake were compelled in turn to persecute Antinomians, Separatists, Familists, Libertines, Anti-pedobaptists, and later, Quakers, and still {339} later, Enthusiasts, who swarmed into their precincts and troubled the Churches with "prophesyings" and novel opinions. Some of these were banished, others were flogged or imprisoned, and a few were put to death. Of the exiles the most noteworthy was Roger Williams, an impetuous, warm-hearted man, who was so far in advance of his age as to deny the power of the civil magistrate in cases of conscience, or who, in other words, maintained the modern doctrine of the separation of Church and State. Williams was driven away from the Massachusetts colony--where he had been minister of the Church at Salem--and with a few followers fled into the southern wilderness, and settled at Providence. There and in the neighboring plantation of Rhode Island, for which he obtained a charter, he established his patriarchal rule, and gave freedom of worship to all comers. Williams was a prolific writer on theological subjects, the most important of his writings being, perhaps, his Bloody Tenent of Persecution, 1644, and a supplement to the same called out by a reply to the former work from the pen of Mr. John Cotton, minister of the First Church at Boston, entitled The Bloody Tenent Washed and made White in the Blood of the Lamb. Williams was also a friend to the Indians, whose lands, he thought, should not be taken from them without payment, and he anticipated Eliot by writing, in 1643, a Key into the Language of America. Although at odds with the theology of {340} Massachusetts Bay, Williams remained in correspondence with Winthrop and others in Boston, by whom he was highly esteemed. He visited England in 1643 and 1652, and made the acquaintance of John Milton. Besides the threat of an Indian war and their anxious concern for the purity of the Gospel in their Churches, the colonists were haunted by superstitious forebodings of the darkest kind. It seemed to them that Satan, angered by the setting up of the kingdom of the saints in America, had "come down in great wrath," and was present among them, sometimes even in visible shape, to terrify and tempt. Special providences and unusual phenomena, like earthquakes, mirages, and the northern lights, are gravely recorded by Winthrop and Mather and others as portents of supernatural persecutions. Thus Mrs. Anne Hutchinson, the celebrated leader of the Familists, having, according to rumor, been delivered of a monstrous birth, the Rev. John Cotton, in open assembly, at Boston, upon a lecture day, "thereupon gathered that it might signify her error in denying inherent righteousness." "There will be an unusual range of the devil among us," wrote Mather, "a little before the second coming of our Lord. The evening wolves will be much abroad when we are near the evening of the world." This belief culminated in the horrible witchcraft delusion at Salem in 1692, that "spectral puppet play," which, beginning with the malicious pranks of a few children who {341} accused certain uncanny old women and other persons of mean condition and suspected lives of having tormented them with magic, gradually drew into its vortex victims of the highest character, and resulted in the judicial murder of over nineteen people. Many of the possessed pretended to have been visited by the apparition of a little black man, who urged them to inscribe their names in a red book which he carried--a sort of muster-roll of those who had forsworn God's service for the devil's. Others testified to having been present at meetings of witches in the forest. It is difficult now to read without contempt the "evidence" which grave justices and learned divines considered sufficient to condemn to death men and women of unblemished lives. It is true that the belief in witchcraft was general at that time all over the civilized world, and that sporadic cases of witch-burnings had occurred in different parts of America and Europe. Sir Thomas Browne, in his Religio Medici, 1635, affirmed his belief in witches, and pronounced those who doubted of them "a sort of atheist." But the superstition came to a head in the Salem trials and executions, and was the more shocking from the general high level of intelligence in the community in which these were held. It would be well if those who lament the decay of "faith" would remember what things were done in New England in the name of faith less than two hundred years ago. It is not wonderful that, to the Massachusetts Puritans of {342} the seventeenth century, the mysterious forest held no beautiful suggestion; to them it was simply a grim and hideous wilderness, whose dark aisles were the ambush of prowling savages and the rendezvous of those other "devil-worshippers" who celebrated there a kind of vulgar Walpurgis night. The most important of original sources for the history of the settlement of New England are the journals of William Bradford, first governor of Plymouth, and John Winthrop, the second governor of Massachusetts, which hold a place corresponding to the writings of Captain John Smith in the Virginia colony, but are much more sober and trustworthy. Bradford's History of Plymouth Plantation covers the period from 1620 to 1646. The manuscript was used by later annalists, but remained unpublished, as a whole, until 1855, having been lost during the war of the revolution and recovered long afterward in England. Winthrop's Journal, or History of New England, begun on shipboard in 1630, and extending to 1649, was not published entire until 1826. It is of equal authority with Bradford's, and perhaps, on the whole, the more important of the two, as the colony of Massachusetts Bay, whose history it narrates, greatly outwent Plymouth in wealth and population, though not in priority of settlement. The interest of Winthrop's Journal lies in the events that it records rather than in any charm in the historian's manner of recording them. His style is pragmatic, {343} and some of the incidents which he gravely

notes are trivial to the modern mind, though instructive as to our forefathers' way of thinking. For instance, of the year 1632: "At Watertown there was (in the view of divers witnesses) a great combat between a mouse and a snake, and after a long fight the mouse prevailed and killed the snake. The pastor of Boston, Mr. Wilson, a very sincere, holy man, hearing of it, gave this interpretation: that the snake was the devil, the mouse was a poor, contemptible people, which God had brought hither, which should overcome Satan here and dispossess him of his kingdom." The reader of Winthrop's *Journal* comes every-where upon hints which the imagination has since shaped into poetry and romance. The germs of many of Longfellow's *New England Tragedies*, of Hawthorne's *Maypole of Merrymount*, of *Endicott's Red Cross*, and of Whittier's *John Underhill* and *The Familists' Hymn* are all to be found in some dry, brief entry of the old Puritan diarist. "Robert Cole, having been oft punished for drunkenness, was now ordered to wear a red D about his neck for a year" to wit, the year 1633, and thereby gave occasion to the greatest American romance, *The Scarlet Letter*. The famous apparition of the phantom ship in New Haven harbor, "upon the top of the poop a man standing with one hand akimbo under his left side, and in his right hand a sword stretched out toward the sea," was first chronicled by Winthrop under the year 1648. This meteorological {344} phenomenon took on the dimensions of a full-grown myth some forty years later, as related, with many embellishments, by Rev. James Pierpont, of New Haven, in a letter to Cotton Mather. Winthrop put great faith in special providences, and among other instances narrates, not without a certain grim satisfaction, how "the *Mary Rose*, a ship of Bristol, of about 200 tons," lying before Charleston, was blown in pieces with her own powder, being twenty-one barrels, wherein the judgment of God appeared, "for the master and company were many of them profane scoffers at us and at the ordinances of religion here." Without any effort at dramatic portraiture or character sketching, Winthrop managed in all simplicity, and by the plain relation of facts, to leave a clear impression of many of the prominent figures in the first Massachusetts immigration. In particular there gradually arises from the entries in his diary a very distinct and diverting outline of Captain John Underhill, celebrated in Whittier's poem. He was one of the few professional soldiers who came over with the Puritan fathers, such as John Mason, the hero of the Pequot War, and Miles Standish, whose *Courtship* Longfellow sang. He had seen service in the Low Countries, and in pleading the privilege of his profession "he insisted much upon the liberty which all States do allow to military officers for free speech, etc., and that himself had spoken sometimes as freely to Count Nassau." Captain Underhill gave the colony no end of {345} trouble, both by his scandalous living and his heresies in religion. Having been seduced into Familistical opinions by Mrs. Anne Hutchinson, who was banished for her beliefs, he was had up before the General Court and questioned, among other points, as to his own report of the manner of his conversion. "He had lain under a spirit of bondage and a legal way for years, and could get no assurance, till, at length, as he was taking a pipe of tobacco, the Spirit set home an absolute promise of free grace with such assurance and joy as he never since doubted of his good estate, neither should he, though he should fall into sin.~.~.~. The Lord's day following he made a speech in the assembly, showing that as the Lord was pleased to convert Paul as he was in persecuting, etc., so he might manifest himself to him as he was taking the moderate use of the creature called tobacco." The gallant captain, being banished the colony, betook himself to the falls of the Piscataquack (Exeter, N. H.), where the Rev. John Wheelwright, another adherent of Mrs. Hutchinson, had gathered a congregation. Being made governor of this plantation, Underhill sent letters to the Massachusetts magistrates, breathing reproaches and imprecations of vengeance. But meanwhile it was discovered that he had been living in adultery at Boston with a young woman whom he had seduced, the wife of a cooper, and the captain was forced to make public confession, which he did with great unction and in a manner highly dramatic. "He came {346} in his worst clothes (being accustomed to take great pride in his bravery and neatness), without a band, in a foul linen cap, and pulled close to his eyes, and standing upon a form, he did, with many deep sighs and abundance of tears, lay open his wicked course." There is a lurking humor in the grave Winthrop's detailed account of Underhill's doings. Winthrop's own personality comes out well in his *Journal*. He was a born leader of men, a *conditor imperii*, just, moderate, patient, wise, and his narrative gives, upon the whole, a favorable impression of the general prudence and fair-mindedness of the Massachusetts settlers in their dealings with one another, with the Indians, and with the neighboring plantations. Considering our forefathers' errand and calling into this wilderness, it is not strange that their chief literary staples were sermons and tracts in controversial theology. Multitudes of these were written and published by the divines of the first generation, such as John Cotton, Thomas Shepard, John Norton, Peter Bulkley, and Thomas Hooker, the founder of Hartford, of whom it was finely said that "when he was doing his Master's business he would put a king into his pocket." Nor were their successors in the second or the third generation any less industrious and prolific. They rest from their labors and their works do follow them. Their sermons and theological treatises are not literature, they are for the most part dry, heavy, and dogmatic, but they exhibit great learning, {347} logical acuteness, and an earnestness which sometimes rises into eloquence. The pulpit ruled New England, and the sermon was the great intellectual engine of the time. The serious thinking of the Puritans was given almost exclusively to religion; the other world was all their art. The daily secular events of life, the aspects of nature,

the vicissitude of the seasons, were important enough to find record in print only in so far as they manifested God's dealings with his people. So much was the sermon depended upon to furnish literary food that it was the general custom of serious minded laymen to take down the words of the discourse in their note-books. Franklin, in his Autobiography, describes this as the constant habit of his grandfather, Peter Folger; and Mather, in his life of the elder Winthrop, says that "tho' he wrote not after the preacher, yet such was his attention and such his retention in hearing, that he repeated unto his family the sermons which he had heard in the congregation." These discourses were commonly of great length; twice, or sometimes thrice, the pulpit hour-glass was silently inverted while the orator pursued his theme even unto n'thly. The book which best sums up the life and thought of this old New England of the seventeenth century is Cotton Mather's Magnalia Christi Americana. Mather was by birth a member of that clerical aristocracy which developed later into Dr. Holmes's "Brahmin Caste of New England." His maternal grandfather was John Cotton. His {348} father was Increase Mather, the most learned divine of his generation in New England, minister of the North Church of Boston, President of Harvard College, and author, inter alia, of that characteristically Puritan book, An Essay for the Recording of Illustrious Providences. Cotton Mather himself was a monster of erudition and a prodigy of diligence. He was graduated from Harvard at fifteen. He ordered his daily life and conversation by a system of minute observances. He was a book-worm, whose life was spent between his library and his pulpit, and his published works number upward of three hundred and eighty. Of these the most important is the Magnalia, 1702, an ecclesiastical history of New England from 1620 to 1698, divided into seven parts: I. Antiquities; II. Lives of the Governors; III. Lives of Sixty Famous Divines; IV. A History of Harvard College, with biographies of its eminent graduates; V. Acts and Monuments of the Faith; VI. Wonderful Providences; VII. The Wars of the Lord, that is, an account of the Afflictions and Disturbances of the Churches and the Conflicts with the Indians. The plan of the work thus united that of Fuller's Worthies of England and Church History with that of Wood's Athenae Oxonienses and Fox's Book of Martyrs. Mather's prose was of the kind which the English Commonwealth writers used. He was younger by a generation than Dryden; but as literary fashions are slower to change in a colony than in the {349} mother country, that nimble English which Dryden and the Restoration essayists introduced had not yet displaced in New England the older manner. Mather wrote in the full and pregnant style of Taylor, Milton, Browne, Fuller, and Burton, a style ponderous with learning and stiff with allusions, digressions, conceits, anecdotes, and quotations from the Greek and the Latin. A page of the Magnalia is almost as richly mottled with italics as one from the Anatomy of Melancholy, and the quaintness which Mather caught from his favorite Fuller disports itself in textual pun and marginal anagram and the fantastic sub-titles of his books and chapters. He speaks of Thomas Hooker as having "angled many scores of souls into the kingdom of heaven," anagrammatizes Mrs. Hutchinson's surname into "the non-such;" and having occasion to speak of Mr. Urian Oaks's election to the presidency of Harvard College, enlarges upon the circumstance as follows: "We all know that Britain knew nothing more famous than their ancient sect of DRUIDS; the philosophers, whose order, they say, was instituted by one Samoths, which is in English as much as to say, an heavenly man. The Celtic name Deru, for an Oak was that from whence they received their denomination; as at this very day the Welch call this tree Drew, and this order of men Derwyddon. But there are no small antiquaries who derive this oaken religion and philosophy from the Oaks of Mamre, where the Patriarch Abraham {350} had as well a dwelling as an altar. That Oaken-Plain and the eminent OAK under which Abraham lodged was extant in the days of Constantine, as Isidore, Jerom, and Sozomen have assured us. Yea, there are shrewd probabilities that Noah himself had lived in this very Oak-plain before him; for this very place was called Oyye, which was the name of Noah, so styled from the Oggyan (subcineritiis panibus) sacrifices, which he did use to offer in this renowned Grove. And it was from this example that the ancients and particularly that the Druids of the nations, chose oaken retirements for their studies. Reader, let us now, upon another account, behold the students of Harvard College, as a rendezvous of happy Druids, under the influences of so rare a president. But, alas! our joy must be short-lived, for on July 25, 1681, the stroke of a sudden death felled the tree,

"Qui tantum inter caput extulit omnes

Quantum lenta solent inter viberna cypressi.

"Mr. Oakes thus being transplanted into the better world, the presidentship was immediately tendered unto Mr. Increase Mather."

This will suffice as an example of the bad taste and laborious pedantry which disfigured Mather's writing. In its substance the book is a perfect thesaurus; and inasmuch as nothing is unimportant in the history of the beginnings of such a nation as this is and is destined to be, the Magnalia will always remain a valuable and interesting work. {351} Cotton Mather, born in 1663, was of the second generation of Americans, his grandfather being of the immigration, but his father a native of Dorchester, Mass. A comparison of his writings and of the writings of his contemporaries with the works of Bradford, Winthrop, Hooker, and others of the original colonists, shows that the

simple and heroic faith of the Pilgrims had hardened into formalism and doctrinal rigidity. The leaders of the Puritan exodus, notwithstanding their intolerance of errors in belief, were comparatively broad-minded men. They were sharers in a great national movement, and they came over when their cause was warm with the glow of martyrdom and on the eve of its coming triumph at home. After the Restoration, in 1660, the currents of national feeling no longer circulated so freely through this distant member of the body politic, and thought in America became more provincial. The English dissenters, though socially at a disadvantage as compared with the Church of England, had the great benefit of living at the center of national life, and of feeling about them the pressure of vast bodies of people who did not think as they did. In New England, for many generations, the dominant sect had things all its own way, a condition of things which is not healthy for any sect or party. Hence Mather and the divines of his time appear in their writings very much like so many Puritan bishops, jealous of their prerogatives, magnifying their apostolate, and careful to maintain their {352} authority over the laity. Mather had an appetite for the marvelous, and took a leading part in the witchcraft trials, of which he gave an account in his *Wonders of the Invisible World*, 1693. To the quaint pages of the *Magnalia* our modern authors have resorted as to a collection of romances or fairy tales. Whittier, for example, took from thence the subject of his poem *The Garrison of Cape Anne*; and Hawthorne embodied in *Grandfather's Chair* the most elaborate of Mather's biographies. This was the life of Sir William Phipps, who, from being a poor shepherd boy in his native province of Maine, rose to be the royal governor of Massachusetts, and the story of whose wonderful adventures in raising the freight of a Spanish treasure ship, sunk on a reef near Port de la Plata, reads less like sober fact than like some ancient fable, with talk of the Spanish main, bullion, and plate and jewels and "pieces of eight." Of Mather's generation was Samuel Sewall, Chief Justice of Massachusetts, a singularly gracious and venerable figure, who is intimately known through his *Diary* kept from 1673 to 1729. This has been compared with the more famous diary of Samuel Pepys, which it resembles in its confidential character and the completeness of its self-revelation, but to which it is as much inferior in historic interest as "the petty province here" was inferior in political and social importance to "Britain far away." For the most part it is a chronicle of small beer, the diarist jotting down the minutiae {353} of his domestic life and private affairs, even to the recording of such haps as this: "March 23, I had my hair cut by G. Barret." But it also affords instructive glimpses of public events, such as King Philip's War, the Quaker troubles, the English Revolution of 1688, etc. It bears about the same relation to New England history at the close of the seventeenth century as Bradford's and Winthrop's journals bear to that of the first generation. Sewall was one of the justices who presided at the trial of the Salem witches; but for the part which he took in that wretched affair he made such atonement as was possible, by open confession of his mistake and his remorse in the presence of the Church. Sewall was one of the first writers against African slavery, in his brief tract, *The Selling of Joseph*, printed at Boston in 1700. His *Phenomena Quaedam Apocalyptica*, a mystical interpretation of prophecies concerning the New Jerusalem, which he identifies with America, is remembered only because Whittier, in his *Prophecy of Samuel Sewall*, has paraphrased one poetic passage, which shows a loving observation of nature very rare in our colonial writers. Of poetry, indeed, or, in fact, of pure literature, in the narrower sense--that is, of the imaginative representation of life--there was little or none in the colonial period. There were no novels, no plays, no satires, and--until the example of the *Spectator* had begun to work on this side the water--no experiments even at the lighter forms {354} of essay writing, character sketches, and literary criticism. There was verse of a certain kind, but the most generous stretch of the term would hardly allow it to be called poetry. Many of the early divines of New England relieved their pens, in the intervals of sermon writing, of epigrams, elegies, eulogistic verses, and similar grave trifles distinguished by the crabbed wit of the so-called "metaphysical poets," whose manner was in fashion when the Puritans left England; the manner of Donne and Cowley, and those darlings of the New English muse, the *Emblems* of Quarles and the *Divine Week* of Du Bartas, as translated by Sylvester. The *Magnalia* contains a number of these things in Latin and English, and is itself well bolstered with complimentary introductions in meter by the author's friends. For example:

COTTONIUS MATHERUS.

ANAGRAM.

Tuos Tecum Ornasti.

"While thus the dead in thy rare pages rise
Thine, with thyself, thou dost immortalise,
 To view the odds thy learned lives invite
 'Twixt Eleutherian and Edomite.
 But all succeeding ages shall despair

A fitting monument for thee to rear.
Thy own rich pen (peace, silly Momus, peace!)
Hath given them a lasting writ of ease."

The epitaphs and mortuary verses were especially ingenious in the matter of puns, anagrams, {355} and similar conceits. The death of the Rev. Samuel Stone, of Hartford, afforded an opportunity of this sort not to be missed, and his threnodist accordingly celebrated him as a "whetstone," a "loadstone," an "Ebenezer"--
"A stone for kingly David's use so fit
As would not fail Goliath's front to hit," etc.

The most characteristic, popular, and widely circulated poem of colonial New England was Michael Wigglesworth's Day of Doom (1662), a kind of doggerel Inferno, which went through nine editions, and "was the solace," says Lowell, "of every fireside, the flicker of the pine-knots by which it was conned perhaps adding a livelier relish to its premonitions of eternal combustion." Wigglesworth had not the technical equipment of a poet. His verse is sing-song, his language rude and monotonous, and the lurid horrors of his material hell are more likely to move mirth than fear in a modern reader. But there are an unmistakable vigor of imagination and a sincerity of belief in his gloomy poem which hold it far above contempt, and easily account for its universal currency among a people like the Puritans. One stanza has been often quoted for its grim concession to unregenerate infants of "the easiest room in hell"--a limbus infantum which even Origen need not have scrupled at. The most authoritative expounder of New England Calvinism was Jonathan Edwards {356} (1703-1758), a native of Connecticut, and a graduate of Yale, who was minister for more than twenty years over the Church in Northampton, Mass., afterward missionary to the Stockbridge Indians, and at the time of his death had just been inaugurated president of Princeton College. By virtue of his Inquiry into the Freedom of the Will, 1754, Edwards holds rank as the subtlest metaphysician of his age. This treatise was composed to justify, on philosophical grounds, the Calvinistic doctrines of foreordination and election by grace, though its arguments are curiously coincident with those of the scientific necessitarians, whose conclusions are as far asunder from Edwards's "as from the center thrice to the utmost pole." His writings belong to theology rather than to literature, but there is an intensity and a spiritual elevation about them, apart from the profundity and acuteness of the thought, which lift them here and there into the finer ether of purely emotional or imaginative art. He dwelt rather upon the terrors than the comfort of the word, and his chosen themes were the dogmas of predestination, original sin, total depravity, and eternal punishment. The titles of his sermons are significant: Men Naturally God's Enemies, Wrath upon the Wicked to the Uttermost, The Final Judgment, etc. "A natural man," he wrote in the first of these discourses, "has a heart like the heart of a devil.~.~. The heart of a natural man is as destitute of love to God as a dead, stiff, cold corpse is of vital heat." Perhaps the most {357} famous of Edwards's sermons was Sinners in the Hands of an Angry God, preached at Enfield, Conn., July 8, 1741, "at a time of great awakenings," and upon the ominous text, Their foot shall slide in due time. "The God that holds you over the pit of hell" runs an oft-quoted passage from this powerful denunciation of the wrath to come, "much as one holds a spider or some loathsome insect over the fire, abhors you, and is dreadfully provoked.~.~. You are ten thousand times more abominable in his eyes than the most hateful venomous serpent is in ours.~.~. You hang by a slender thread, with the flames of divine wrath flashing about it.~.~. If you cry to God to pity you, he will be so far from pitying you in your doleful case that he will only tread you under foot.~.~. He will crush out your blood and make it fly, and it shall be sprinkled on his garments so as to stain all his raiment." But Edwards was a rapt soul, possessed with the love as well as the fear of the God, and there are passages of sweet and exalted feeling in his Treatise Concerning Religious Affections, 1746. Such is his portrait of Sarah Pierpont, "a young lady in New Haven," who afterward became his wife, and who "will sometimes go about from place to place singing sweetly, and no one knows for what. She loves to be alone, walking in the fields and groves, and seems to have some one invisible always conversing with her." Edwards's printed works number thirty-six titles. A complete edition of them in ten volumes was published in 1829 by his {358} great-grandson, Sereno Dwight. The memoranda from Edwards's note-books, quoted by his editor and biographer, exhibit a remarkable precocity. Even as a school-boy and a college student he had made deep guesses in physics as well as metaphysics, and, as might have been predicted of a youth of his philosophical insight and ideal cast of mind, he had early anticipated Berkeley in denying the existence of matter. In passing from Mather to Edwards, we step from the seventeenth to the eighteenth century. There is the same difference between them in style and turn of thought as between Milton and Locke, or between Fuller and Dryden. The learned digressions, the witty conceits, the perpetual interlarding of the text with scraps of Latin, have fallen off, even as the full-bottomed wig and the clerical gown and bands have been laid aside for the

undistinguishing dress of the modern minister. In Edwards's English all is simple, precise, direct, and business-like. Benjamin Franklin (1706-1790), who was strictly contemporary with Edwards, was a contrast to him in every respect. As Edwards represents the spirituality and other-worldliness of Puritanism, Franklin stands for the worldly and secular side of American character, and he illustrates the development of the New England Englishman into the modern Yankee. Clear rather than subtle, without ideality or romance or fineness of emotion or poetic lift, intensely practical and utilitarian, broad-minded, inventive, shrewd, versatile, Franklin's sturdy figure {359} became typical of his time and his people. He was the first and the only man of letters in colonial America who acquired a cosmopolitan fame, and impressed his characteristic Americanism upon the mind of Europe. He was the embodiment of common sense and of the useful virtues; with the enterprise but without the nervousness of his modern compatriots, uniting the philosopher's openness of mind with the sagacity and quickness of resource of the self-made business man. He was representative also of his age, an age of *aufklärung*, *eclaircissement*, or "clearing up." By the middle of the eighteenth century a change had taken place in American society. Trade had increased between the different colonies; Boston, New York, and Philadelphia were considerable towns; democratic feeling was spreading; over forty newspapers were published in America at the outbreak of the Revolution; politics claimed more attention than formerly, and theology less. With all this intercourse and mutual reaction of the various colonies upon one another, the isolated theocracy of New England naturally relaxed somewhat of its grip on the minds of the laity. When Franklin was a printer's apprentice in Boston, setting type on his brother's *New England Courant*, the fourth American newspaper, he got hold of an odd volume of the *Spectator*, and formed his style upon Addison, whose manner he afterward imitated in his *Busy-Body* papers in the Philadelphia *Weekly Mercury*. He also read Locke and the English deistical {360} writers, Collins and Shaftesbury, and became himself a deist and free-thinker; and subsequently when practicing his trade in London, in 1724-26, he made the acquaintance of Dr. Mandeville, author of the *Fable of the Bees*, at a pale-ale house in Cheapside, called "The Horns," where the famous free-thinker presided over a club of wits and boon companions. Though a native of Boston, Franklin is identified with Philadelphia, whither he arrived in 1723, a runaway 'prentice boy, "whose stock of cash consisted of a Dutch dollar and about a shilling in copper." The description in his *Autobiography* of his walking up Market Street munching a loaf of bread, and passing his future wife, standing on her father's doorstep, has become almost as familiar as the anecdote about Whittington and his cat. It was in the practical sphere that Franklin was greatest, as an originator and executor of projects for the general welfare. The list of his public services is almost endless. He organized the Philadelphia fire department and street cleaning service, and the colonial postal system which grew into the United States Post Office Department. He started the Philadelphia public library, the American Philosophical Society, the University of Pennsylvania, and the first American magazine, *The General Magazine and Historical Chronicle*; so that he was almost singly the father of whatever intellectual life the Pennsylvania colony could boast of. In 1754, when commissioners from the colonies met at Albany, Franklin proposed a plan, which was {361} adopted, for the union of all the colonies under one government. But all these things, as well as his mission to England in 1757, on behalf of the Pennsylvania Assembly in its dispute with the proprietaries; his share in the Declaration of Independence--of which he was one of the signers--and his residence in France as Ambassador of the United Colonies, belong to the political history of the country; to the history of American science belong his celebrated experiments in electricity, and his benefits to mankind in both of these departments were aptly summed up in the famous epigram of the French statesman Turgot: "*Erupuit coelo fulmen sceptrumque tyrannis*." Franklin's success in Europe was such as no American had yet achieved, as few Americans since him have achieved. Hume and Voltaire were among his acquaintances and his professed admirers. In France he was fairly idolized, and when he died Mirabeau announced, "The genius which has freed America and poured a flood of light over Europe has returned to the bosom of the Divinity." Franklin was a great man, but hardly a great writer, though as a writer, too, he had many admirable and some great qualities. Among these were the crystal clearness and simplicity of his style. His more strictly literary performances, such as his essays after the *Spectator*, hardly rise above mediocrity, and are neither better nor worse than other {362} imitations of Addison. But in some of his lighter bagatelles there are a homely wisdom and a charming playfulness which have won them enduring favor. Such are his famous story of the *Whistle*, his *Dialogue between Franklin and the Gout*, his letters to Madame Helvetius, and his verses entitled *Paper*. The greater portion of his writings consists of papers on general politics, commerce, and political economy, contributions to the public questions of his day. These are of the nature of journalism rather than of literature, and many of them were published in his newspaper, the *Pennsylvania Gazette*, the medium through which for many years he most strongly influenced American opinion. The most popular of his writings were his *Autobiography* and *Poor Richard's Almanac*. The former of these was begun in 1771, resumed in 1788, but never completed. It has remained the most widely current book in our colonial literature. *Poor Richard's Almanac*, begun in 1732 and continued for about twenty-five years, had an annual circulation of ten thousand copies. It was filled with proverbial sayings in prose and verse, inculcating the virtues of industry,

honesty, and frugality.[1] Some of these were original with Franklin, others were selected from the proverbial wisdom of the ages, but a new force was given {363} them by pungent turns of expression. Poor Richard's saws were such as these: "Little strokes fell great oaks;" "Three removes are as bad as a fire;" "Early to bed and early to rise makes a man healthy, wealthy, and wise;" "Never leave that till to-morrow which you can do to-day;" "What maintains one vice would bring up two children;" "It is hard for an empty bag to stand upright." Now and then there are truths of a higher kind than these in Franklin, and Sainte Beuve, the great French critic, quotes, as an example of his occasional finer moods, the saying, "Truth and sincerity have a certain distinguishing native luster about them which cannot be counterfeited; they are like fire and flame that cannot be painted." But the sage who invented the Franklin stove had no disdain of small utilities; and in general the last word of his philosophy is well expressed in a passage of his *Autobiography*: "Human felicity is produced not so much by great pieces of good fortune, that seldom happen, as by little advantages that occur every day; thus, if you teach a poor young man to shave himself and keep his razor in order, you may contribute more to the happiness of his life than in giving him a thousand guineas."

CHAPTER II.

THE REVOLUTIONARY PERIOD.

1765-1815.

It will be convenient to treat the fifty years which elapsed between the meeting at New York, in 1765, of a Congress of delegates from nine colonies, to protest against the Stamp Act, and the close of the second war with England, in 1815, as, for literary purposes, a single period. This half century was the formative era of the American nation.

Historically it is divisible into the years of revolution and the years of construction. But the men who led the movement for independence were also, in great part, the same who guided in shaping the Constitution of the new republic, and the intellectual impress of the whole period is one and the same. The character of the age was as distinctly political as that of the colonial era--in New England at least--was theological; and literature must still continue to borrow its interest from history. Pure literature, or what, for want of a better term we call *belles lettres*, was not born in America until the nineteenth century was well under way. It is true that the Revolution had its humor, its poetry, and even its fiction; but these {366} were strictly for the home market. They hardly penetrated the consciousness of Europe at all, and are not to be compared with the contemporary work of English authors like Cowper and Sheridan and Burke. Their importance for us to-day is rather antiquarian than literary, though the most noteworthy of them will be mentioned in due course in the present chapter. It is also true that one or two of Irving's early books fall within the last years of the period now under consideration. But literary epochs overlap one another at the edges, and these writings may best be postponed to a subsequent chapter. Among the most characteristic products of the intellectual stir that preceded and accompanied the revolutionary movement, were the speeches of political orators like Samuel Adams, James Otis, and Josiah Quincy in Massachusetts, and Patrick Henry in Virginia. Oratory is the art of a free people, and as in the forensic assemblies of Greece and Rome, and in the Parliament of Great Britain, so in the conventions and congresses of revolutionary America it sprang up and flourished naturally. The age, moreover, was an eloquent, not to say a rhetorical age; and the influence of Johnson's orotund prose, of the declamatory *Letters of Junius*, and of the speeches of Burke, Fox, Sheridan, and the elder Pitt is perceptible in the debates of our early congresses. The fame of a great orator, like that of a great actor, is largely traditional. The spoken word transferred to the printed page loses {367} the glow which resided in the man and the moment. A speech is good if it attains its aim, if it moves the hearers to the end which is sought. But the fact that this end is often temporary and occasional, rather than universal and permanent explains why so few speeches are really literature. If this is true, even where the words of an orator are preserved exactly as they were spoken, it is doubly true when we have only the testimony of contemporaries as to the effect which the oration produced. The fiery utterances of Adams, Otis, and Quincy were either not reported at all or very imperfectly reported, so that posterity can judge of them only at second hand. Patrick Henry has fared better, many of his orations being preserved in substance, if not in the letter, in Wirt's biography. Of these the most famous was the defiant speech in the Convention of Delegates, March 28, 1775, throwing down the gauge of battle to the British ministry. The ringing sentences of this challenge are still declaimed by school boys, and many of them remain as familiar as household words. "I have but one lamp by which my feet are guided, and that is the lamp of experience. I know of no way of judging of the future but by the past.~.~. Gentlemen may cry peace, peace, but there is no peace.~.~. Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery! Forbid it, Almighty God! I know not what course others may take, but as for me, give me liberty, or give me death!" The {368} eloquence of Patrick Henry was fervid rather than weighty or rich. But if such specimens of the oratory of the American patriots as have come down to us fail to account for the wonderful impression that their words are said to have produced upon their fellow-countrymen, we should remember that they are at a disadvantage when read instead of heard. The imagination should supply all those accessories which gave them vitality when first pronounced: the living presence and voice of the speaker; the listening Senate; the grave excitement of the hour and of the impending conflict. The wordiness and exaggeration; the highly latinized diction; the rhapsodies about freedom which hundreds of Fourth-of-July addresses have since turned into platitudes--all these coming hot from the lips of men whose actions in the field confirmed the earnestness of their speech--were effective enough in the crisis and for the purpose to which they were addressed. The press was an agent in the cause of liberty no less potent than the platform, and patriots such as Adams, Otis, Quincy, Warren, and Hancock wrote constantly for the newspapers essays and letters on the public questions of the time signed "Vindex," "Hyperion," "Independent," "Brutus," "Cassius," and the like, and couched in language which to the taste of to-day seems rather over rhetorical. Among the most important of these political essays were the *Circular Letter to each Colonial Legislature*, published by Adams {369} and Otis in 1768; Quincy's *Observations on the Boston Port Bill*, 1774, and Otis's *Rights of the British Colonies*, a pamphlet of one hundred and twenty pages, printed in 1764. No collection of Otis's writings has ever been made. The life of Quincy, published by his son, preserves for posterity his journals and correspondence, his newspaper essays, and his speeches at the bar, taken from the Massachusetts law reports. Among the political literature which is of perennial interest to the American people are such State documents as the Declaration of Independence, the Constitution of the United States, and the messages, inaugural addresses, and other writings of our early presidents. Thomas Jefferson, the third president of the United States, and the father of the Democratic party, was the author of the Declaration of Independence, whose opening sentences have become commonplaces in the memory of all readers. One sentence in particular has been as a shibboleth, or war-cry, or declaration of faith among Democrats of all shades of opinion: "We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with

certain unalienable rights; that among these are life, liberty, and the pursuit of happiness." Not so familiar to modern readers is the following, which an English historian of our literature calls "the most eloquent clause of that great document," and "the most interesting suppressed passage in American literature." Jefferson {370} was a southerner, but even at that early day the South had grown sensitive on the subject of slavery, and Jefferson's arraignment of King George for promoting the "peculiar institution" was left out from the final draft of the Declaration in deference to southern members. "He has waged cruel war against human nature itself, violating its most sacred rights of life and liberty, in the persons of a distant people who never offended him, captivating and carrying them into slavery in another hemisphere, or to incur miserable death in their transportation thither. This piratical warfare, the opprobrium of infidel powers, is the warfare of the Christian king of Great Britain. Determined to keep open a market where men should be bought and sold, he has prostituted his negative by suppressing every legislative attempt to restrain this execrable commerce. And, that this assemblage of horrors might want no fact of distinguished dye, he is now exciting those very people to rise in arms against us, and purchase that liberty of which he deprived them by murdering the people upon whom he obtruded them, and thus paying off former crimes committed against the liberties of one people by crimes which he urges them to commit against the lives of another." The tone of apology or defense which Calhoun and other southern statesmen afterward adopted on the subject of slavery was not taken by the men of Jefferson's generation. Another famous {371} Virginian, John Randolph of Roanoke, himself a slaveholder, in his speech on the militia bill in the House of Representatives, December 10, 1811, said: "I speak from facts when I say that the night-bell never tolls for fire in Richmond that the mother does not hug her infant more closely to her bosom." This was said apropos of the danger of a servile insurrection in the event of a war with England--a war which actually broke out in the year following, but was not attended with the slave rising which Randolph predicted. Randolph was a thorough-going "States rights" man, and though opposed to slavery on principle, he cried hands off to any interference by the General Government with the domestic institutions of the States. His speeches read better than most of his contemporaries. They are interesting in their exhibit of a bitter and eccentric individuality, witty, incisive, and expressed in a pungent and familiar style which contrasts refreshingly with the diplomatic language and glittering generalities of most congressional oratory, whose verbiage seems to keep its subject always at arm's length. Another noteworthy writing of Jefferson's was his Inaugural Address of March 4, 1801, with its programme of "equal and exact justice to all men, of whatever state or persuasion, religious or political; peace, commerce, and honest friendship with all nations, entangling alliances with none; the support of the State governments in all their rights;~::~ absolute acquiescence in the decisions {372} of the majority;~::~ the supremacy of the civil over the military authority; economy in the public expense; freedom of religion, freedom of the press, and freedom of person under the protection of the habeas corpus, and trial by juries impartially selected." During his six years' residence in France, as American Minister, Jefferson had become indoctrinated with the principles of French democracy. His main service and that of his party--the Democratic or, as it was then called, the Republican party--to the young republic was in its insistence upon toleration of all beliefs and upon the freedom of the individual from all forms of governmental restraint. Jefferson has some claims, to rank as an author in general literature. Educated at William and Mary College in the old Virginia capital, Williamsburg, he became the founder of the University of Virginia, in which he made special provision for the study of Anglo-Saxon, and in which the liberal scheme of instruction and discipline was conformed, in theory at least, to the "university idea." His Notes on Virginia are not without literary quality, and one description, in particular, has been often quoted--the passage of the Potomac through the Blue Ridge--in which is this poetically imaginative touch: "The mountain being cloven asunder, she presents to your eye, through the cleft, a small catch of smooth blue horizon, at an infinite distance in the plain country, inviting you, as it were, from the riot and {373} tumult roaring around, to pass through the breach and participate of the calm below." After the conclusion of peace with England, in 1783, political discussion centered about the Constitution, which in 1788 took the place of the looser Articles of Confederation adopted in 1778. The Constitution as finally ratified was a compromise between two parties--the Federalists, who wanted a strong central government, and the Anti-Federalists (afterward called Republicans, or Democrats), who wished to preserve State sovereignty. The debates on the adoption of the Constitution, both in the General Convention of the States, which met at Philadelphia in 1787, and in the separate State Conventions called to ratify its action, form a valuable body of comment and illustration upon the instrument itself. One of the most notable of the speeches in opposition was Patrick Henry's address before the Virginia Convention. "That this is a consolidated government," he said, "is demonstrably clear; and the danger of such a government is, to my mind, very striking." The leader of the Federal party was Alexander Hamilton, the ablest constructive intellect among the statesmen of our revolutionary era, of whom Talleyrand said that he "had never known his equal;" whom Guizot classed with "the men who have best known the vital principles and fundamental conditions of a government worthy of its name and mission." Hamilton's speech On the Expediency of Adopting the Federal Constitution, delivered in {374} the Convention of New York, June 24, 1788, was a masterly statement of the necessity and advantages of

the Union. But the most complete exposition of the constitutional philosophy of the Federal party was the series of eighty-five papers entitled the Federalist, printed during the years 1787-88, and mostly in the Independent Journal of New York, over the signature "Publius." These were the work of Hamilton, of John Jay, afterward Chief Justice, and of James Madison, afterward President of the United States. The Federalist papers, though written in a somewhat ponderous diction, are among the great landmarks of American history, and were in themselves a political education to the generation that read them. Hamilton was a brilliant and versatile figure, a persuasive orator, a forcible writer, and as Secretary of the Treasury under Washington the foremost of American financiers. He was killed, in a duel, by Aaron Burr, at Hoboken, in 1804. The Federalists were victorious, and under the provisions of the new Constitution George Washington was inaugurated first President of the United States, on March 4, 1789. Washington's writings have been collected by Jared Sparks. They consist of journals, letters, messages, addresses, and public documents, for the most part plain and business-like in manner, and without any literary pretensions. The most elaborate and the best known of them is his Farewell Address, issued on his retirement from the presidency in 1796. In {375} the composition of this he was assisted by Madison, Hamilton, and Jay. It is wise in substance and dignified, though somewhat stilted in expression. The correspondence of John Adams, second President of the United States, and his diary, kept from 1755-85, should also be mentioned as important sources for a full knowledge of this period. In the long life-and-death struggle of Great Britain against the French Republic and its successor, Napoleon Bonaparte, the Federalist party in this country naturally sympathized with England, and the Jeffersonian Democracy with France. The Federalists, who distrusted the sweeping abstractions of the French Revolution, and clung to the conservative notions of a checked and balanced freedom, inherited from English precedent, were accused of monarchical and aristocratic leanings. On their side they were not slow to accuse their adversaries of French atheism and French Jacobinism. By a singular reversal of the natural order of things the strength of the Federalist party was in New England, which was socially democratic, while the strength of the Jeffersonians was in the South, whose social structure--owing to the system of slavery--was intensely aristocratic. The war of 1812 with England was so unpopular in New England, by reason of the injury which it threatened to inflict on its commerce, that the Hartford Convention of 1814 was more than suspected of a design to bring about the secession of New England from the Union. A good deal of oratory was called {376} out by the debates on the commercial treaty with Great Britain, negotiated by Jay in 1795, by the Alien and Sedition Law of 1798, and by other pieces of Federalist legislation, previous to the downfall of that party and the election of Jefferson to the presidency in 1800. The best of the Federalist orators during those years was Fisher Ames, of Massachusetts, and the best of his orations was, perhaps, his speech on the British treaty in the House of Representatives, April 18, 1796. The speech was, in great measure, a protest against American chauvinism and the violation of international obligations. "It has been said the world ought to rejoice if Britain was sunk in the sea; if where there are now men and wealth and laws and liberty, there was no more than a sand bank for sea-monsters to fatten on; space for the storms of the ocean to mingle in conflict.~.~.~. What is patriotism? Is it a narrow affection for the spot where a man was born? Are the very clods where we tread entitled to this ardent preference because they are greener?~.~.~. I see no exception to the respect that is paid among nations to the law of good faith.~.~.~. It is observed by barbarians--a whiff of tobacco smoke or a string of beads gives not merely binding force but sanctity to treaties. Even in Algiers a truce may be bought for money, but, when ratified, even Algiers is too wise or too just to disown and annul its obligation." Ames was a scholar, and his speeches are more finished and thoughtful, more literary, in a way, than those {377} of his contemporaries. His eulogiums on Washington and Hamilton are elaborate tributes, rather excessive, perhaps, in laudation and in classical allusions. In all the oratory of the revolutionary period there is nothing equal in deep and condensed energy of feeling to the single clause in Lincoln's Gettysburg Address, "that we here highly resolve that these dead shall not have died in vain." A prominent figure during and after the War of the Revolution was Thomas Paine, or, as he was somewhat disrespectfully called, "Tom Paine." He was a dissenting minister who, conceiving himself ill treated by the British Government, came to Philadelphia in 1774 and threw himself heart and soul into the colonial cause. His pamphlet, Common Sense, issued in 1776, began with the famous words: "These are the times that try men's souls." This was followed by the Crisis, a series of political essays advocating independence and the establishment of a republic, published in periodical form, though at irregular intervals. Paine's rough and vigorous advocacy was of great service to the American patriots. His writings were popular and his arguments were of a kind easily understood by plain people, addressing themselves to the common sense, the prejudices and passions of unlettered readers. He afterward went to France and took an active part in the popular movement there, crossing swords with Burke in his Rights of Man, 1791-92, written in defense of the French Revolution. He {378} was one of the two foreigners who sat in the Convention; but falling under suspicion during the days of the terror, he was committed to the prison of the Luxembourg and only released upon the fall of Robespierre July 27, 1794. While in prison he wrote a portion of his best known work, the Age of Reason. This appeared in two parts in 1794 and 1795, the manuscript of the first part

having been intrusted to Joel Barlow, the American poet, who happened to be in Paris when Paine was sent to prison. The Age of Reason damaged Paine's reputation in America, where the name of "Tom Paine" became a stench in the nostrils of the godly and a synonym for atheism and blasphemy. His book was denounced from a hundred pulpits, and copies of it were carefully locked away from the sight of "the young," whose religious beliefs it might undermine. It was, in effect, a crude and popular statement of the Deistic argument against Christianity. What the cutting logic and persiflage--the sourire hideux--of Voltaire had done in France, Paine, with coarser materials, essayed to do for the English-speaking populations. Deism was in the air of the time; Franklin, Jefferson, Ethan Alien, Joel Barlow, and other prominent Americans were openly or unavowedly deistic. Free thought, somehow, went along with democratic opinions, and was a part of the liberal movement of the age. Paine was a man without reverence, imagination, or religious feeling. He was no scholar, and he was {379} not troubled by any perception of the deeper and subtler aspects of the questions which he touched. In his examination of the Old and New Testaments, he insisted that the Bible was an imposition and a forgery, full of lies, absurdities, and obscenities. Supernatural Christianity, with all its mysteries and miracles, was a fraud practiced by priests upon the people, and churches were instruments of oppression in the hands of tyrants. This way of accounting for Christianity would not now be accepted by even the most "advanced" thinkers. The contest between skepticism and revelation has long since shifted to other grounds. Both the philosophy and the temper of the Age of Reason belong to the eighteenth century. But Paine's downright pugnacious method of attack was effective with shrewd, half-educated doubters, and in America well-thumbed copies of his book passed from hand to hand in many a rural tavern or store, where the village atheist wrestled in debate with the deacon or the school-master. Paine rested his argument against Christianity upon the familiar grounds of the incredibility of miracles, the falsity of prophecy, the cruelty or immorality of Moses and David and other Old Testament worthies, the disagreement of the evangelists in their gospels, etc. The spirit of his book and his competence as a critic are illustrated by his saying of the New Testament: "Any person who could tell a story of an apparition, or of a man's walking, could have made such books, for the story is most wretchedly told. {380} The sum total of a parson's learning is a b, ab, and hic, haec, hoc, and this is more than sufficient to have enabled them, had they lived at the time, to have written all the books of the New Testament." When we turn from the political and controversial writings of the Revolution to such lighter literature as existed, we find little that would deserve mention in a more crowded period. The few things in this kind that have kept afloat on the current of time-- rari nantes in gurgite vasto--attract attention rather by reason of their fewness than of any special excellence that they have. During the eighteenth century American literature continued to accommodate itself to changes of caste in the old country. The so-called classical or Augustan writers of the reign of Queen Anne replaced other models of style: the Spectator set the fashion of almost all of our lighter prose, from Franklin's Busybody down to the time of Irving, who perpetuated the Addisonian tradition later than any English writer. The influence of Locke, of Dr. Johnson, and of the Parliamentary orators has already been mentioned. In poetry the example of Pope was dominant, so that we find, for example, William Livingston, who became governor of New Jersey and a member of the Continental Congress, writing in 1747 a poem on Philosophic Solitude which reproduces the trick of Pope's antitheses and climaxes with the imagery of the Rape of the Lock, and the didactic morality of the Imitations from Horace and the Moral Essays : {381}

"Let ardent heroes seek renown in arms,
Pant after fame and rush to war's alarms;
To shining palaces let fools resort
And dunces cringe to be esteemed at court.
Mine be the pleasure of a rural life,
From noise remote and ignorant of strife,
Far from the painted belle and white-gloved beau,
The lawless masquerade and midnight show;
From ladies, lap-dogs, courtiers, garters, stars,
Fops, fiddlers, tyrants, emperors, and czars."

The most popular poem of the Revolutionary period was John Trumbull's McFingal, published in part at Philadelphia in 1775, and in complete shape at Hartford in 1782. It went through more than thirty editions in America, and was several times reprinted in England. McFingal was a satire in four cantos, directed against the American Loyalists, and modeled quite closely upon Butler's mock heroic poem, Hudibras. As Butler's hero sallies forth to put down May games and bear-baitings, so the tory McFingal goes out against the liberty-poles and bon-fires of the patriots, but is tarred and feathered, and otherwise ill entreated, and finally takes refuge in the camp

of General Gage at Boston. The poem is written with smartness and vivacity, attains often to drollery and sometimes to genuine humor. It remains one of the best of American political satires, and unquestionably the most successful of the many imitations of *Hudibras*, whose manner it follows so closely that some of its lines, which {382} have passed into currency as proverbs, are generally attributed to Butler. For example:

"No man e'er felt the halter draw
With good opinion of the law."

Or this:

"For any man with half an eye
What stands before him may espy;
But optics sharp it needs, I ween,
To see what is not to be seen."

Trumbull's wit did not spare the vulnerable points of his own countrymen, as in his sharp skit at slavery in the couplet about the newly adopted flag of the Confederation:

"Inscribed with inconsistent types
Of Liberty and thirteen stripes."

Trumbull was one of a group of Connecticut literati, who made much noise in their time as the "Hartford Wits." The other members of the group were Lemuel Hopkins, David Humphreys, Joel Barlow, Elihu Smith, Theodore Dwight, and Richard Alsop. Trumbull, Humphreys, and Barlow had formed a friendship and a kind of literary partnership at Yale, where they were contemporaries of each other and of Timothy Dwight. During the war they served in the army in various capacities, and at its close they found themselves again together for a few years at Hartford, where they formed a club that met weekly for social and literary purposes. Their presence lent a sort of {383} *éclat* to the little provincial capital, and their writings made it for a time an intellectual center quite as important as Boston or Philadelphia or New York. The Hartford Wits were staunch Federalists, and used their pens freely in support of the administrations of Washington and Adams, and in ridicule of Jefferson and the Democrats. In 1786-87 Trumbull, Hopkins, Barlow, and Humphreys published in the *New Haven Gazette* a series of satirical papers entitled the *Anarchiad*, suggested by the English *Rolliad*, and purporting to be extracts from an ancient epic on "the Restoration of Chaos and Substantial Night." These papers were an effort to correct, by ridicule, the anarchic condition of things which preceded the adoption of the Federal Constitution in 1789. It was a time of great confusion and discontent, when, in parts of the country, Democratic mobs were protesting against the vote of five years' pay by the Continental Congress to the officers of the American army. The *Anarchiad* was followed by the *Echo* and the *Political Green House*, written mostly by Alsop and Theodore Dwight, and similar in character and tendency to the earlier series. Time has greatly blunted the edge of these satires, but they were influential in their day, and are an important part of the literature of the old Federalist party. Humphreys became afterward distinguished in the diplomatic service, and was, successively, ambassador to Portugal and to Spain, whence he {384} introduced into America the breed of merino sheep. He had been on Washington's staff during the war, and was several times an inmate of his house at Mount Vernon, where he produced, in 1785, the best known of his writings, *Mount Vernon*, an ode of a rather mild description, which once had admirers. Joel Barlow cuts a larger figure in contemporary letters. After leaving Hartford, in 1788, he went to France, where he resided for seventeen years, made a fortune in speculations, and became imbued with French principles, writing a song in praise of the Guillotine, which gave great scandal to his old friends at home. In 1805 he returned to America, and built a fine residence near Washington, which he called Kalorama. Barlow's literary fame, in his own generation, rested upon his prodigious epic, the *Columbiad*. The first form of this was the *Vision of Columbus*, published at Hartford in 1787. This he afterward recast and enlarged into the *Columbiad*, issued in Philadelphia in 1807, and dedicated to Robert Fulton, the inventor of the steamboat. This was by far the most sumptuous piece of book-making that had then been published in America, and was embellished with plates executed by the best London engravers. The *Columbiad* was a grandiose performance, and has been the theme of much ridicule by later writers. Hawthorne suggested its being dramatized, and put on to the accompaniment of artillery {385} and thunder and lightning; and E. P. Whipple declared that "no critic in the last fifty years had read more than a hundred lines of it." In its

ambitiousness and its length it was symptomatic of the spirit of the age which was patriotically determined to create, by tour de force, a national literature of a size commensurate with the scale of American nature and the destinies of the republic. As America was bigger than Argos and Troy, we ought to have a bigger epic than the Iliad. Accordingly, Barlow makes Hesper fetch Columbus from his prison to a "hill of vision," where he unrolls before his eye a panorama of the history of America, or, as our bards then preferred to call it, Columbia. He shows him the conquest of Mexico by Cortez; the rise and fall of the kingdom of the Incas in Peru; the settlements of the English Colonies in North America; the old French and Indian Wars; the Revolution, ending with a prophecy of the future greatness of the new-born nation. The machinery of the Vision was borrowed from the 11th and 12th books of Paradise Lost. Barlow's verse was the ten-syllabled rhyming couplet of Pope, and his poetic style was distinguished by the vague, glittering imagery and the false sublimity which marked the epic attempts of the Queen Anne poets. Though Barlow was but a masquerader in true heroic, he showed himself a true poet in mock heroic. His Hasty Pudding, written in Savoy in 1793, and dedicated to Mrs. Washington, was thoroughly American, in subject at least, and its humor, though {386} over-elaborate, is good. One couplet in particular has prevailed against oblivion:

"E'en in thy native regions how I blush
To hear the Pennsylvanians call thee Mush!"

Another Connecticut poet--one of the seven who were fondly named "The Pleiads of Connecticut"--was Timothy Dwight, whose Conquest of Canaan, written shortly after his graduation from college, but not published till 1785, was, like the Columbiad, an experiment toward the domestication of the epic muse in America. It was written like Barlow's poem, in rhymed couplets, and the patriotic impulse of the time shows oddly in the introduction of our Revolutionary War, by way of episode, among the wars of Israel. Greenfield Hill, 1794, was an idyllic and moralizing poem, descriptive of a rural parish in Connecticut of which the author was for a time the pastor. It is not quite without merit; shows plainly the influence of Goldsmith, Thomson, and Beattie, but as a whole is tedious and tame. Byron was amused that there should have been an American poet christened Timothy, and it is to be feared that amusement would have been the chief emotion kindled in the breast of the wicked Voltaire had he ever chanced to see the stern dedication to himself of the same poet's Triumph of Infidelity, 1788. Much more important than Dwight's poetry was his able Theology Explained and Defended, 1794, a restatement, with modifications, of the Calvinism of Jonathan {387} Edwards, which was accepted by the Congregational churches of New England as an authoritative exponent of the orthodoxy of the time. His Travels in New England and New York, including descriptions of Niagara, the White Mountains, Lake George, the Catskills, and other passages of natural scenery, not so familiar then as now, was published posthumously in 1821, was praised by Southey, and is still readable. As President of Yale College from 1795 to 1817, Dwight, by his learning and ability, his sympathy with young men, and the force and dignity of his character, exerted a great influence in the community. The strong political bias of the time drew into its vortex most of the miscellaneous literature that was produced. A number of ballads, serious and comic, Whig and Tory, dealing with the battles and other incidents of the long war, enjoyed a wide circulation in the newspapers, or were hawked about in printed broadsides. Most of these have no literary merit, and are now mere antiquarian curiosities. A favorite piece on the Tory side was the Cow Chase, a cleverish parody on Chevy Chase, written by the gallant and unfortunate Major Andre, at the expense of "Mad" Anthony Wayne. The national song Yankee Doodle was evolved during the Revolution, and, as is the case with John Brown's Body and many other popular melodies, some obscurity hangs about its origin. The air was an old one, and the words of the chorus seem to have been adapted or {388} corrupted from a Dutch song, and applied in derision to the Provincials by the soldiers of the British army as early as 1755. Like many another nickname, the term Yankee Doodle was taken up by the nicknamed and proudly made their own. The stanza,

"Yankee Doodle came to town," etc.,

antedates the war; but the first complete set of words to the tune was the Yankee's Return from Camp, which is apparently of the year 1775. The most popular humorous ballad on the Whig side was the Battle of the Kegs, founded on a laughable incident of the campaign at Philadelphia. This was written by Francis Hopkinson, a Philadelphian, and one of the signers of the Declaration of Independence. Hopkinson has some title to rank as one of the earliest American humorists. Without the keen wit of McFingal some of his Miscellaneous Essays and Occasional Writings, published in 1792, have more geniality and heartiness than Trumbull's satire. His Letter on Whitewashing is a bit of domestic humor that foretokens the Danbury News man, and his Modern Learning, 1784, a burlesque on college examinations, in which a salt-box is described from the point of view of metaphysics, logic, natural philosophy, mathematics, anatomy, surgery and chemistry, long kept its place in school-readers and

other collections. His son, Joseph Hopkinson, wrote the song of Hail Columbia, which is saved from insignificance only by the music to which it was married, {389} the then popular air of "The President's March." The words were written in 1798, on the eve of a threatened war with France, and at a time when party spirit ran high. It was sung nightly by crowds in the streets, and for a whole season by a favorite singer at the theater; for by this time there were theaters in Philadelphia, in New York, and even in Puritanic Boston. Much better than Hail Columbia was the Star Spangled Banner, the words of which were composed by Francis Scott Key, a Marylander, during the bombardment by the British of Fort McHenry, near Baltimore, in 1812. More pretentious than these was the once celebrated ode of Robert Treat Paine, Jr., Adams and Liberty, recited at an anniversary of the Massachusetts Charitable Fire Society. The sale of this is said to have netted its author over \$750, but it is, notwithstanding, a very wooden performance. Paine was a young Harvard graduate, who had married an actress playing at the old Federal Street Theater, the first play-house opened in Boston, in 1794. His name was originally Thomas, but this was changed for him by the Massachusetts Legislature, because he did not wish to be confounded with the author of the Age of Reason. "Dim are those names erstwhile in battle loud," and many an old Revolutionary worthy who fought for liberty with sword and pen is now utterly forgotten, or consigned to the limbo of Duyckinck's Cyclopedia and Griswold's Poets of America. Here and there a line has, by accident, survived to do {390} duty as a motto or inscription, while all its context is buried in oblivion. Few have read any thing more of Jonathan M. Sewall's, for example, than the couplet,

"No pent-up Utica contracts your powers,
But the whole boundless continent is yours,"

taken from his Epilogue to Cato, written in 1778.

Another Revolutionary poet was Philip Freneau; "that rascal Freneau," as Washington called him, when annoyed by the attacks upon his administration in Freneau's National Gazette. He was of Huguenot descent, was a classmate of Madison at Princeton College, was taken prisoner by the British during the war, and when the war was over, engaged in journalism, as an ardent supporter of Jefferson and the Democrats. Freneau's patriotic verses and political lampoons are now unreadable; but he deserves to rank as the first real American poet, by virtue of his Wild Honeysuckle, Indian Burying Ground, Indian Student, and a few other little pieces, which exhibit a grace and delicacy inherited, perhaps, with his French blood. Indeed, to speak strictly, all of the "poets" hitherto mentioned were nothing but rhymers but in Freneau we meet with something of beauty and artistic feeling; something which still keeps his verses fresh. In his treatment of Indian themes, in particular, appear for the first time a sense of the picturesque and poetic {391} elements in the character and wild life of the red man, and that pensive sentiment which the fading away of the tribes toward the sunset has left in the wake of their retreating footsteps. In this Freneau anticipates Cooper and Longfellow, though his work is slight compared with the Leatherstocking Tales or Hiawatha. At the time when the Revolutionary War broke out the population of the colonies was over three millions; Philadelphia had thirty thousand inhabitants, and the frontier had retired to a comfortable distance from the sea-board. The Indian had already grown legendary to town dwellers, and Freneau fetches his Indian Student not from the outskirts of the settlement, but from the remote backwoods of the State:

"From Susquehanna's farthest springs,
Where savage tribes pursue their game
(His blanket tied with yellow strings),
A shepherd of the forest came."

Campbell "lifted"--in his poem O'Conor's Child--the last line of the following stanza from Freneau's Indian Burying Ground:

"By midnight moons, o'er moistening dews,
In vestments for the chase arrayed,
The hunter still the deer pursues--
The hunter and the deer a shade."

And Walter Scott did Freneau the honor to borrow, in Marmion, the final line of one of the {392} stanzas of his poem on the battle of Eutaw Springs:

"They saw their injured country's woe,
The flaming town, the wasted field;
Then rushed to meet the insulting foe;
They took the spear, but left the shield."

Scott inquired of an American gentleman who wished him the authorship of this poem, which he had by heart, and pronounced it as fine a thing of the kind as there was in the language.

The American drama and American prose fiction had their beginnings during the period now under review. A company of English players came to this country in 1752 and made the tour of many of the principal towns. The first play acted here by professionals on a public stage was the *Merchant of Venice*, which was given by the English company at Williamsburg, Va., in 1752. The first regular theater building was at Annapolis, Md., where in the same year this troupe performed, among other pieces, Farquhar's *Beaux' Stratagem*. In 1753 a theater was built in New York, and one in 1759 in Philadelphia. The Quakers of Philadelphia and the Puritans of Boston were strenuously opposed to the acting of plays, and in the latter city the players were several times arrested during the performances, under a Massachusetts law forbidding dramatic performances. At Newport, R. I., on the other hand, which was a health resort for planters from the Southern States and the West Indies. {393} and the largest slave-market in the North, the actors were hospitably received. The first play known to have been written by an American was the *Prince of Parthia*, 1765, a closet drama, by Thomas Godfrey, of Philadelphia. The first play by an American writer, acted by professionals in a public theater, was Royal Tyler's *Contrast*, performed in New York in 1786. The former of these was very high tragedy, and the latter very low comedy; and neither of them is otherwise remarkable than as being the first of a long line of indifferent dramas. There is, in fact, no American dramatic literature worth speaking of; not a single American play of even the second rank, unless we except a few graceful parlor comedies, like Mr. Howell's *Elevator* and *Sleeping-Car*. Royal Tyler, the author of the *Contrast*, cut quite a figure in his day as a wit and journalist, and eventually became Chief Justice of Vermont. His comedy, the *Georgia Spec*, 1797, had a great run in Boston, and his *Algerine Captive*, published in the same year, was one of the earliest American novels. It was a rambling tale of adventure, constructed somewhat upon the plan of Smollett's novels and dealing with the piracies which led to the war between the United States and Algiers in 1815. Charles Brockden Brown, the first American novelist of any note, was also the first professional man of letters in this country who supported himself entirely by his pen. He was born in {394} Philadelphia in 1771, lived a part of his life in New York and part in his native city, where he started, in 1803, the *Literary Magazine and American Register*. During the years 1798-1801 he published in rapid succession six romances, *Wieland*, *Ormond*, *Arthur Mervyn*, *Edgar Huntley*, *Clara Howard*, and *Jane Talbot*. Brown was an invalid and something of a recluse, with a relish for the ghastly in incident and the morbid in character. He was in some points a prophecy of Poe and Hawthorne, though his art was greatly inferior to Poe's, and almost infinitely so to Hawthorne's. His books belong more properly to the contemporary school of fiction in England which preceded the "Waverley Novels"--to the class that includes Beckford's *Vathek*, Godwin's *Caleb Williams* and *St. Leon*, Mrs. Shelley's *Frankenstein*, and such "Gothic" romances as Lewis's *Monk*, Walpole's *Castle of Otranto*, and Mrs. Radcliffe's *Mysteries of Udolpho*. A distinguishing characteristic of this whole school is what we may call the clumsy-horrible. Brown's romances are not wanting in inventive power, in occasional situations that are intensely thrilling, and in subtle analysis of character; but they are fatally defective in art. The narrative is by turns abrupt and tiresomely prolix, proceeding not so much by dialogue as by elaborate dissection and discussion of motives and states of mind, interspersed with the author's reflections. The wild improbabilities of plot and the unnatural and even monstrous developments of character {395} are in startling contrast with the old-fashioned preciseness of the language; the conversations, when there are any, being conducted in that insipid dialect in which a fine woman was called an "elegant female." The following is a sample description of one of Brown's heroines, and is taken from his novel of *Ormond*, the leading character in which--a combination of unearthly intellect with fiendish wickedness--is thought to have been suggested by Aaron Burr: "Helena Cleves was endowed with every feminine and fascinating quality. Her features were modified by the most transient sentiments and were the seat of a softness at all times blushful and bewitching. All those graces of symmetry, smoothness and lustre, which assemble in the imagination of the painter when he calls from the bosom of her natal deep the Paphian divinity, blended their perfections in the shade, complexion, and hair of this lady." But, alas! "Helena's intellectual deficiencies could not be concealed. She was proficient in the elements of no science. The doctrine of lines and surfaces was as disproportionate with her intellects as with those of the mock-bird. She had not reasoned on the principles of human action, nor examined the structure of society.~.~.~ She could not commune in their native dialect with the sages of Rome and Athens.~.~.~

The constitution of nature, the attributes of its Author, the arrangement of the parts of the external universe, and the substance, modes of operation, and ultimate destiny of human {396} intelligence were enigmas unsolved and insoluble by her." Brown frequently raises a superstructure of mystery on a basis ludicrously weak. Thus the hero of his first novel, *Wieland* (whose father anticipates "Old Krook," in Dickens's *Bleak House*, by dying of spontaneous combustion), is led on by what he mistakes for spiritual voices to kill his wife and children; and the voices turn out to be produced by the ventriloquism of one Carwin, the villain of the story. Similarly in *Edgar Huntley*, the plot turns upon the phenomena of sleep-walking. Brown had the good sense to place the scene of his romances in his own country, and the only passages in them which have now a living interest are his descriptions of wilderness scenery in *Edgar Huntley*, and his graphic account in *Arthur Mervyn* of the yellow-fever epidemic in Philadelphia in 1793. Shelley was an admirer of Brown, and his experiments in prose fiction, such as *Zastrozzi* and *St. Irvyne the Rosicrucian*, are of the same abnormal and speculative type. Another book which falls within this period was the *Journal*, 1774, of John Woolman, a New Jersey Quaker, which has received the highest praise from Channing, Charles Lamb, and many others. "Get the writings of John Woolman by heart," wrote Lamb, "and love the early Quakers." The charm of this journal resides in its singular sweetness and innocence of feeling, the "deep inward stillness" peculiar to the people called Quakers. {397} Apart from his constant use of certain phrases peculiar to the Friends, Woolman's English is also remarkably graceful and pure, the transparent medium of a soul absolutely sincere, and tender and humble in its sincerity. When not working at his trade as a tailor, Woolman spent his time in visiting and ministering to the monthly, quarterly, and yearly meetings of Friends, traveling on horseback to their scattered communities in the backwoods of Virginia and North Carolina, and northward along the coast as far as Boston and Nantucket. He was under a "concern" and a "heavy exercise" touching the keeping of slaves, and by his writing and speaking did much to influence the Quakers against slavery. His love went out, indeed, to all the wretched and oppressed; to sailors, and to the Indians in particular. One of his most perilous journeys was made to the settlements of Moravian Indians in the wilderness of Western Pennsylvania, at Bethlehem, and at Wehaloosing, on the Susquehanna. Some of the scruples which Woolman felt, and the quaint *naïveté* with which he expresses them, may make the modern reader smile--but it is a smile which is very close to a tear. Thus, when in England--where he died in 1772--he would not ride nor send a letter by mail-coach, because the poor post-boys were compelled to ride long stages in winter nights, and were sometimes frozen to death. "So great is the hurry in the spirit of this world, that in aiming to do business quickly and to gain wealth, {398} the creation at this day doth loudly groan." Again, having reflected that war was caused by luxury in dress, etc., the use of dyed garments grew uneasy to him, and he got and wore a hat of the natural color of the fur. "In attending meetings, this singularity was a trial to me~.~.~. and some Friends, who knew not from what motives I wore it, grew shy of me~.~.~. Those who spoke with me I generally informed, in a few words, that I believed my wearing it was not in my own will."

{400}

CHAPTER III.

THE ERA OF NATIONAL EXPANSION.

1815-1837.

The attempt to preserve a strictly chronological order must here be abandoned. About all the American literature in existence, that is of any value *as literature*, is the product of the past three quarters of a century, and the men who produced it, though older or younger, were still contemporaries. Irving's *Knickerbocker's History of New York*, 1809, was published within the recollection of some yet living, and the venerable poet, Richard H. Dana--Irving's junior by only four years--survived to 1879, when the youngest of the generation of writers that now occupy public attention had already won their spurs. Bryant, whose *Thanatopsis* was printed in 1816, lived down to 1878. He saw the beginnings of our national literature, and he saw almost as much of the latest phase of it as we see to-day in this year 1887. Still, even within the limits of a single life-time, there have been progress and change. And so, while it will happen that the consideration of writers a part of whose work falls between the dates at the head of this chapter may be postponed {401} to subsequent chapters, we may in a general way follow the sequence of time. The period between the close of the second war with England, in 1815, and the great financial crash of 1837, has been called, in language attributed to President Monroe, "the era of good feeling." It was a time of peace and prosperity, of rapid growth in population and rapid extension of territory. The new nation was entering upon its vast estates and beginning to realize its manifest destiny. The peace with Great Britain, by calling off the Canadian Indians and the other tribes in alliance with England, had opened up the North-west to settlement. Ohio had been admitted as a State in 1802; but at the time of President Monroe's tour, in 1817, Cincinnati had only seven thousand inhabitants, and half of the State was unsettled. The Ohio River flowed for most of its course through an unbroken wilderness. Chicago was merely a fort. Hitherto the emigration to the West had been sporadic; now it took on the dimensions of a general and almost a concerted exodus. This movement was stimulated in New England by the cold summer of 1816 and the late spring of 1817, which produced a scarcity of food that amounted in parts of the interior to a veritable famine. All through this period sounded the axe of the pioneer clearing the forest about his log cabin, and the rumble of the canvas-covered emigrant wagon over the primitive highways which crossed the Alleghanies {402} or followed the valley of the Mohawk. S. G. Goodrich, known in letters as "Peter Parley," in his *Recollections of a Lifetime*, 1856, describes the part of the movement which he had witnessed as a boy in Fairfield County, Conn.: "I remember very well the tide of emigration through Connecticut, on its way to the West, during the summer of 1817. Some persons went in covered wagons--frequently a family consisting of father, mother, and nine small children, with one at the breast--some on foot, and some crowded together under the cover, with kettles, gridirons, feather beds, crockery, and the family Bible, Watts's Psalms and Hymns, and Webster's Spelling-book--the lares and penates of the household. Others started in ox-carts, and trudged on at the rate of ten miles a day. . . . Many of these persons were in a state of poverty, and begged their way as they went. Some died before they reached the expected Canaan; many perished after their arrival from fatigue and privation; and others from the fever and ague, which was then certain to attack the new settlers. It was, I think, in 1818 that I published a small tract entitled *'Tother Side of Oldo*--that is, the other view, in contrast to the popular notion that it was the paradise of the world. It was written by Dr. Hand--a talented young physician of Berlin--who had made a visit to the West about these days. It consisted mainly of vivid but painful pictures of the accidents and incidents attending this wholesale migration. The roads over the Alleghanies, {403} between Philadelphia and Pittsburg, were then rude, steep, and dangerous, and some of the more precipitous slopes were consequently strewn with the carcasses of wagons, carts, horses, oxen, which had made shipwreck in their perilous descents." But in spite of the hardships of the settler's life, the spirit of that time, as reflected in its writings, was a hopeful and a light-hearted one. "Westward the course of empire takes its way," runs the famous line from Berkeley's poem on America. The New Englanders who removed to the Western Reserve went there to better themselves; and their children found themselves the owners of broad acres of virgin soil, in place of the stony hill pastures of Berkshire and Litchfield. There was an attraction, too, about the wild, free life of the frontiersman, with all its perils and discomforts. The life of Daniel Boone, the pioneer of Kentucky--that "dark and bloody ground"--is a genuine romance. Hardly less picturesque was the old river life of the Ohio boatmen, before

the coming of steam banished their queer craft from the water. Between 1810 and 1840 the center of population in the United States had moved from the Potomac to the neighborhood of Clarksburg, in West Virginia, and the population itself had increased from seven to seventeen millions. The gain was made partly in the East and South, but the general drift was westward. During the years now under review, {404} the following new States were admitted, in the order named: Indiana, Mississippi, Illinois, Alabama, Maine, Missouri, Arkansas, Michigan. Kentucky and Tennessee had been made States in the last years of the eighteenth century, and Louisiana--acquired by purchase from France--in 1812. The settlers, in their westward march, left large tracts of wilderness behind them. They took up first the rich bottom lands along the river courses, the Ohio and Miami and Licking, and later the valleys of the Mississippi and Missouri, and the shores of the great lakes. But there still remained back woods in New York and Pennsylvania, though the cities of New York and Philadelphia had each a population of more than one hundred thousand in 1815. When the Erie Canal was opened, in 1825, it ran through a primitive forest. N. P. Willis, who went by canal to Buffalo and Niagara in 1827, describes the houses and stores at Rochester as standing among the burnt stumps left by the first settlers. In the same year that saw the opening of this great water way, the Indian tribes, numbering now about one hundred and thirty thousand souls, were moved across the Mississippi. Their power had been broken by General Harrison's victory over Tecumseh at the battle of Tippecanoe, in 1811, and they were in fact mere remnants and fragments of the race which had hung upon the skirts of civilization, and disputed the advance of the white man for two centuries. It was not until some years later than this that railroads began {405} to take an important share in opening up new country. The restless energy, the love of adventure, the sanguine anticipation which characterized American thought at this time, the picturesque contrasts to be seen in each mushroom town where civilization was encroaching on the raw edge of the wilderness--all these found expression, not only in such well-known books as Copper's *Pioneers*, 1823, and Irving's *Tour on the Prairies*, 1835, but in the minor literature which is read to-day, if at all, not for its own sake, but for the light that it throws on the history of national development: in such books as Paulding's story of *Westward Ho!* and his poem, *The Backwoodsman*, 1818; or as Timothy Flint's *Recollections*, 1826, and his *Geography and History of the Mississippi Valley*, 1827. It was not an age of great books, but it was an age of large ideas and expanding prospects. The new consciousness of empire uttered itself hastily, crudely, ran into buncombe, "spread-eagleism," and other noisy forms of patriotic exultation; but it was thoroughly democratic and American. Though literature--or at least the best literature of the time--was not yet emancipated from English models, thought and life, at any rate, were no longer in bondage--no longer provincial. And it is significant that the party in office during these years was the Democratic, the party which had broken most completely with conservative traditions. The famous "Monroe doctrine" was {406} a pronouncement of this aggressive democracy, and though the Federalists returned to power for a single term, under John Quincy Adams (1825-1829,) Andrew Jackson received the largest number of electoral votes, and Adams was only chosen by the House of Representatives in the absence of a majority vote for any one candidate. At the close of his term "Old Hickory," the hero of the people, the most characteristically democratic of our Presidents, and the first backwoodsman who entered the White House, was borne into office on a wave of popular enthusiasm. We have now arrived at the time when American literature, in the higher and stricter sense of the term, really began to have an existence. S. G. Goodrich, who settled at Hartford as a bookseller and publisher in 1818, says, in his *Recollections*: "About this time I began to think of trying to bring out original American works. . . . The general impression was that we had not, and could not have, a literature. It was the precise point at which Sidney Smith had uttered that bitter taunt in the *Edinburgh Review*, 'Who reads an American book?' . . . It was positively injurious to the commercial credit of a bookseller to undertake American works." Washington Irving (1783-1859) was the first American author whose books, as *books*, obtained recognition abroad; whose name was thought worthy of mention beside the names of English contemporary authors, like Byron, Scott, and Coleridge. He was also the first American writer whose writings are still read {407} for their own sake. We read Mather's *Magnalia*, and Franklin's *Autobiography*, and Trumbull's *McFingal*--if we read them at all--as history, and to learn about the times or the men. But we read the *Sketch Book*, and *Knickerbocker's History of New York*, and the *Conquest of Granada* for ourselves, and for the pleasure that they give as pieces of literary art. We have arrived, too, at a time when we may apply a more cosmopolitan standard to the works of American writers, and may disregard many a minor author whose productions would have cut some figure had they come to light amid the poverty of our colonial age. Hundreds of these forgotten names, with specimens of their unread writings, are consigned to a limbo of immortality in the pages of Duyckinck's *Cyclopedia*, and of Griswold's *Poets of America* and *Prose Writers of America*. We may select here for special mention, and as most representative of the thought of their time, the names of Irving, Cooper, Webster, and Channing. A generation was now coming upon the stage who could recall no other government in this country than the government of the United States, and to whom the Revolutionary War was but a tradition. Born in the very year of the peace, it was a part of Irving's mission, by the sympathetic charm of his writings and by the cordial recognition which he won in both countries, to

allay the soreness which the second war, of 1812-15, had left between England and America. He was {408} well fitted for the task of mediator. Conservative by nature, early drawn to the venerable worship of the Episcopal Church, retrospective in his tastes, with a preference for the past and its historic associations which, even in young America, led him to invest the Hudson and the region about New York with a legendary interest, he wrote of American themes in an English fashion, and interpreted to an American public the mellow attractiveness that he found in the life and scenery of Old England. He lived in both countries, and loved them both; and it is hard to say whether Irving is more of an English or of an American writer. His first visit to Europe, in 1804-6, occupied nearly two years. From 1815 to 1832 he was abroad continuously, and his "domicile," as the lawyers say, during these seventeen years was really in England, though a portion of his time was spent upon the continent, and several successive years in Spain, where he engaged upon the Life of Columbus, the Conquest of Granada, the Companions of Columbus, and the Alhambra, all published between 1828-32. From 1842 to 1846 he was again in Spain as American Minister at Madrid. Irving was the last and greatest of the Addisonians. His boyish letters, signed "Jonathan Oldstyle," contributed in 1802 to his brother's newspaper, the Morning Chronicle, were, like Franklin's Busybody, close imitations of the Spectator. To the same family belonged his Salmagundi papers, 1807, a series of town-satires on New York society, written {409} in conjunction with his brother William and with James K. Paulding. The little tales, essays, and sketches which compose the Sketch Book were written in England, and published in America, in periodical numbers, in 1819-20. In this, which is in some respects his best book, he still maintained that attitude of observation and spectatorship taught him by Addison. The volume had a motto taken from Burton, "I have no wife nor children, good or bad, to provide for--a mere spectator of other men's fortunes," etc.; and "The Author's Account of Himself" began in true Addisonian fashion: "I was always fond of visiting new scenes and observing strange characters and manners." But though never violently "American," like some later writers who have consciously sought to throw off the trammels of English tradition, Irving was in a real way original. His most distinct addition to our national literature was in his creation of what has been called "the Knickerbocker legend." He was the first to make use, for literary purposes, of the old Dutch traditions which clustered about the romantic scenery of the Hudson. Col. T. W. Higginson, in his History of the United States, tells how "Mrs. Josiah Quincy, sailing up that river in 1786, when Irving was a child three years old, records that the captain of the sloop had a legend, either supernatural or traditional, for every scene, and not a mountain reared its head unconnected with some marvelous {410} story." The material thus at hand Irving shaped into his Knickerbocker's History of New York, into the immortal story of Rip Van Winkle, and the Legend of Sleepy Hollow (both published in the Sketch Book), and in later additions to the same realm of fiction, such as Dolph Heyliger in Bracebridge Hall, the Money Diggers, Wolfert Webber, and Kidd the Pirate, in the Tales of a Traveler, and in some of the miscellanies from the Knickerbocker Magazine, collected into a volume, in 1855, under the title of Wolfert's Roost. The book which made Irving's reputation was his Knickerbocker's History of New York, 1809, a burlesque chronicle, making fun of the old Dutch settlers of New Amsterdam, and attributed, by a familiar and now somewhat threadbare device,[1] to a little old gentleman named Diedrich Knickerbocker, whose manuscript had come into the editor's hands. The book was gravely dedicated to the New York Historical Society, and it is said to have been quoted, as authentic history, by a certain German scholar named Goeller, in a note on a passage in Thucydides. This story, though well vouched, is hard of belief: for Knickerbocker, though excellent fooling, has nothing of the grave irony of Swift in his Modest Proposal or of Defoe in his Short Way with Dissenters. Its mock-heroic intention is as transparent as in Fielding's parodies of Homer, which it somewhat resembles, {411} particularly in the delightfully absurd description of the mustering of the clans under Peter Stuyvesant and the attack on the Swedish Fort Christina. Knickerbocker's History of New York was a real addition to the comic literature of the world; a work of genuine humor, original and vital. Walter Scott said that it reminded him closely of Swift, and had touches resembling Sterne. It is not necessary to claim for Irving's little masterpiece a place beside Gulliver's Travels and Tristram Shandy. But it was, at least, the first American book in the lighter departments of literature which needed no apology and stood squarely on its own legs. It was written, too, at just the right time. Although New Amsterdam had become New York as early as 1664, the impress of its first settlers, with their quaint conservative ways, was still upon it when Irving was a boy. The descendants of the Dutch families formed a definite element not only in Manhattan, but all up along the kills of the Hudson, at Albany, at Schenectady, in Westchester County, at Hoboken, and Communipaw, localities made familiar to him in many a ramble and excursion. He lived to see the little provincial town of his birth grow into a great metropolis, in which all national characteristics were blended together, and a tide of immigration from Europe and New England flowed over the old landmarks and obliterated them utterly. Although Irving was the first to reveal to his countrymen the literary possibilities of their early {412} history, it must be acknowledged that with modern American life he had little sympathy. He hated politics, and in the restless democratic movement of the time, as we have described it, he found no inspiration. This moderate and placid gentleman, with his distrust of all kinds of fanaticism, had no liking for the

Puritans or for their descendants, the New England Yankees, if we may judge from his sketch of Ichabod Crane, in the Legend of Sleepy Hollow. His genius was reminiscent, and his imagination, like Scott's, was the historic imagination. In crude America his fancy took refuge in the picturesque aspects of the past, in "survivals" like the Knickerbocker Dutch and the Acadian peasants, whose isolated communities on the lower Mississippi he visited and described. He turned naturally to the ripe civilization of the Old World. He was our first picturesque tourist, the first "American in Europe." He rediscovered England, whose ancient churches, quiet landscapes, memory-haunted cities, Christmas celebrations, and rural festivals had for him an unflinching attraction. With pictures of these, for the most part, he filled the pages of the Sketch Book and Bracebridge Hall, 1822. Delightful as are these English sketches, in which the author conducts his readers to Windsor Castle, or Stratford-on-Avon, or the Boar's Head Tavern, or sits beside him on the box of the old English stage-coach, or shares with him the Yuletide cheer at the ancient English country house, their interest has somewhat faded. {413} The pathos of the Broken Heart and the Pride of the Village, the mild satire of the Art of Book Making, the rather obvious reflections in Westminster Abbey are not exactly to the taste of this generation. They are the literature of leisure and retrospection; and already Irving's gentle elaboration, the refined and slightly artificial beauty of his style, and his persistently genial and sympathetic attitude have begun to pall upon readers who demand a more nervous and accented kind of writing. It is felt that a little roughness, a little harshness, even, would give relief to his pictures of life. There is, for instance, something a little irritating in the old-fashioned courtliness of his manner toward women; and one reads with a certain impatience smoothly punctuated passages like the following: "As the vine, which has long twined its graceful foliage about the oak, and been lifted by it into sunshine, will, when the hardy plant is rifted by the thunderbolt, cling round it with its caressing tendrils, and bind up its shattered boughs, so is it beautifully ordered by Providence that woman, who is the mere dependent and ornament of man in his happier hours, should be his stay and solace when smitten with sudden calamity; winding herself into the rugged recesses of his nature, tenderly supporting the drooping head, and binding up the broken heart." Irving's gifts were sentiment and humor, with an imagination sufficiently fertile, and an observation sufficiently acute to support those two main {414} qualities, but inadequate to the service of strong passion or subtle thinking, though his pathos, indeed, sometimes reached intensity. His humor was always delicate and kindly; his sentiment never degenerated into sentimentality. His diction was graceful and elegant--too elegant, perhaps; and in his modesty he attributed the success of his books in England to the astonishment of Englishmen that an American could write good English. In Spanish history and legend Irving found a still newer and richer field for his fancy to work upon. He had not the analytic and philosophical mind of a great historian, and the merits of his Conquest of Granada and Life of Columbus are rather belletristisch than scientific. But he brought to these undertakings the same eager love of the romantic past which had determined the character of his writings in America and England, and the result--whether we call it history or romance--is at all events charming as literature. His Life of Washington--completed in 1859--was his magnum opus, and is accepted as standard authority. Mahomet and His Successors, 1850, was comparatively a failure. But of all Irving's biographies, his Life of Oliver Goldsmith, 1849, was the most spontaneous and perhaps the best. He did not impose it upon himself as a task, but wrote it from a native and loving sympathy with his subject, and it is, therefore, one of the choicest literary memoirs in the language. {415} When Irving returned to America, in 1832, he was the recipient of almost national honors. He had received the medal of the Royal Society of Literature and the degree of D.C.L. from Oxford University, and had made American literature known and respected abroad. In his modest home at Sunnyside, on the banks of the river over which he had been the first to throw the witchery of poetry and romance, he was attended to the last by the admiring affection of his countrymen. He had the love and praises of the foremost English writers of his own generation and the generation which followed--of Scott, Byron, Coleridge, Thackeray, and Dickens, some of whom had been among his personal friends. He is not the greatest of American authors, but the influence of his writings is sweet and wholesome, and it is in many ways fortunate that the first American man of letters who made himself heard in Europe should have been in all particulars a gentleman. Connected with Irving, at least by name and locality, were a number of authors who resided in the city of New York and who are known as the Knickerbocker writers, perhaps because they were contributors to the Knickerbocker Magazine. One of these was James K. Paulding, a connection of Irving by marriage, and his partner in the Salmagundi Papers. Paulding became Secretary of the Navy under Van Buren, and lived down to the year 1860. He was a {416} voluminous author, but his writings had no power of continuance, and are already obsolete, with the possible exception of his novel, the Dutchman's Fireside, 1831. A finer spirit than Paulding was Joseph Rodman Drake, a young poet of great promise, who died in 1820, at the age of twenty-five. Drake's patriotic lyric, the American Flag, is certainly the most spirited thing of the kind in our poetic literature, and greatly superior to such national anthems as Hail Columbia and the Star Spangled Banner. His Culprit Fay, published in 1819, was the best poem that had yet appeared in America, if we except Bryant's Thanatopsis, which was three years the elder. The Culprit Fay was a fairy story, in which, following Irving's lead, Drake undertook to

throw the glamour of poetry about the Highlands of the Hudson. Edgar Poe said that the poem was fanciful rather than imaginative; but it is prettily and even brilliantly fanciful, and has maintained its popularity to the present time. Such verse as the following--which seems to show that Drake had been reading Coleridge's *Christabel*, published three years before--was something new in American poetry:

"The winds are whist and the owl is still,
The bat in the shelvy rock is hid,
And naught is heard on the lonely hill,
But the cricket's chirp and the answer shrill,
Of the gauze-winged katydid,
And the plaint of the wailing whip-poor-will
{417}
Who moans unseen, and ceaseless sings
Ever a note of wail and woe,
Till morning spreads her rosy wings,
And earth and sky in her glances glow."

Here we have, at last, the whip-poor-will, an American bird, and not the conventional lark or nightingale, although the elves of the Old World seem scarcely at home on the banks of the Hudson. Drake's memory has been kept fresh not only by his own poetry, but by the beautiful elegy written by his friend Fitz-Greene Halleck, the first stanza of which is universally known:

"Green be the turf above thee,
Friend of my better days;
None knew thee but to love thee,
Nor named thee but to praise."

Halleck was born in Guilford, Connecticut, whither he retired in 1849, and resided there till his death in 1867. But his literary career is identified with New York. He was associated with Drake in writing the *Croaker Papers*, a series of humorous and satirical verses contributed in 1814 to the *Evening Post*. These were of a merely local and temporary interest; but Halleck's fine ode, *Marco Bozzaris*--though declaimed until it has become hackneyed--gives him a sure title to a remembrance; and his *Alnwick Castle*, a monody, half serious and half playful on the contrasts between feudal associations and modern life, has {418} much of that pensive lightness which characterizes Præd's best *vers de société*. A friend of Drake and Halleck was James Fenimore Cooper (1789-1851), the first American novelist of distinction, and, if a popularity which has endured for nearly three quarters of a century is any test, still the most successful of all American novelists. Cooper was far more intensely American than Irving, and his books reached an even wider public. "They are published as soon as he produces them," said Morse, the electrician, in 1833, "in thirty-four different places in Europe. They have been seen by American travelers in the languages of Turkey and Persia, in Constantinople, in Egypt, at Jerusalem, at Ispahan." Cooper wrote altogether too much; he published, besides his fictions, a *Naval History of the United States*, a series of naval biographies, works of travel, and a great deal of controversial matter. He wrote over thirty novels, the greater part of which are little better than trash, and tedious trash at that. This is especially true of his *tendenz* novels and his novels of society. He was a man of strongly marked individuality, fiery, pugnacious, sensitive to criticism, and abounding in prejudices. He was embittered by the scurrilous attacks made upon him by a portion of the American press, and spent a great deal of time and energy in conducting libel suits against the newspapers. In the same spirit he used fiction as a vehicle for attack upon the abuses and follies of American life. Nearly all of {419} his novels, written with this design, are worthless. Nor was Cooper well equipped by nature and temperament for depicting character and passion in social life. Even in his best romances his heroines and his "leading juveniles"--to borrow a term from the amateur stage--are insipid and conventional. He was no satirist, and his humor was not of a high order. He was a rapid and uneven writer, and, unlike Irving, he had no style. Where Cooper was great was in the story, in the invention of incidents and plots, in a power of narrative and description in tales of wild adventure which keeps the reader in breathless excitement to the end of the book. He originated the novel of the sea and the novel of the wilderness. He created the Indian of literature; and in this, his peculiar field, although he has had countless imitators, he has had no equals. Cooper's experiences had prepared him well for the kingship of this new realm in the world of fiction. His childhood was passed on the borders of Otsego Lake, when central New York was still a wilderness, with boundless forests

stretching westward, broken only here and there by the clearings of the pioneers. He was taken from college (Yale) when still a lad, and sent to sea in a merchant vessel, before the mast. Afterward he entered the navy and did duty on the high seas and upon Lake Ontario, then surrounded by virgin forests. He married and resigned his commission in 1811, just before the outbreak of the war with England, so {420} that he missed the opportunity of seeing active service in any of those engagements on the ocean and our great lakes which were so glorious to American arms. But he always retained an active interest in naval affairs. His first successful novel was The Spy, 1821, a tale of the Revolutionary War, the scene of which was laid in Westchester County, N. Y., where the author was then residing. The hero of this story, Harvey Birch, was one of the most skillfully drawn figures on his canvas. In 1823 he published the Pioneers, a work somewhat overlaid with description, in which he drew for material upon his boyish recollections of frontier life at Cooperstown. This was the first of the series of five romances known as the Leatherstocking Tales. The others were the Last of the Mohicans, 1826; the Prairie, 1827; the Pathfinder, 1840; and the Deerslayer, 1841. The hero of this series, Natty Bumppo, or "Leatherstocking," was Cooper's one great creation in the sphere of character, his most original addition to the literature of the world in the way of a new human type. This backwoods philosopher--to the conception of whom the historic exploits of Daniel Boone perhaps supplied some hints; unschooled, but moved by noble impulses and a natural sense of piety and justice; passionately attached to the wilderness, and following its westerling edge even unto the prairies--this man of the woods was the first real American in fiction. Hardly less individual and vital {421} were the various types of Indian character, in Chingachgook, Uncas, Hist, and the Huron warriors. Inferior to these, but still vigorously though somewhat roughly drawn, were the waifs and strays of civilization, whom duty, or the hope of gain, or the love of adventure, or the outlawry of crime had driven to the wilderness--the solitary trapper, the reckless young frontiersman, the officers and men of out-post garrisons. Whether Cooper's Indian was the real being, or an idealized and rather melo-dramatic version of the truth, has been a subject of dispute. However this be, he has taken his place in the domain of art, and it is safe to say that his standing there is secure. No boy will ever give him up. Equally good with the Leatherstocking novels, and especially national, were Cooper's tales of the sea, or at least the two best of them--the Pilot, 1823, founded upon the daring exploits of John Paul Jones, and the Red Rover, 1828. But here, though Cooper still holds the sea, he has had to admit competitors; and Britannia, who rules the waves in song, has put in some claim to a share in the domain of nautical fiction in the persons of Mr. W. Clarke Russell and others. Though Cooper's novels do not meet the deeper needs of the heart and the imagination, their appeal to the universal love of a story is perennial. We devour them when we are boys, and if we do not often return to them when we are men, that is perhaps only because we have read them before, and "know the {422} ending." They are good yarns for the fore-castle and the camp-fire; and the scholar in his study, though he may put the Deerslayer or the Last of the Mohicans away on the top-shelf, will take it down now and again, and sit up half the night over it. Before dismissing the belles-lettres writings of this period, mention should be made of a few poems of the fugitive kind which seem to have taken a permanent place in popular regard. John Howard Payne, a native of Long Island, a wandering actor and playwright, who died American Consul at Tunis in 1852, wrote about 1820 for Covent Garden Theater an opera, entitled Clari, the libretto of which included the now famous song of Home, Sweet Home. Its literary pretensions were of the humblest kind, but it spoke a true word which touched the Anglo-Saxon heart in its tenderest spot, and being happily married to a plaintive air was sold by the hundred thousand, and is evidently destined to be sung forever. A like success has attended the Old Oaken Bucket, composed by Samuel Woodworth, a printer and journalist from Massachusetts, whose other poems, of which two collections were issued in 1818 and 1826, were soon forgotten. Richard Henry Wilde, an Irishman by birth, a gentleman of scholarly tastes and accomplishments, who wrote a great deal on Italian literature, and sat for several terms in Congress as Representative of the State of Georgia, was the author of the favorite song, My Life is Like the Summer Rose. Another {423} Southerner, and a member of a distinguished Southern family, was Edward Coate Pinkney, who served nine years in the navy, and died in 1828, at the age of twenty-six, having published in 1825 a small volume of lyrical poems which had a fire and a grace uncommon at that time in American verse. One of these, A Health, beginning "I fill this cup to one made up of loveliness alone," though perhaps somewhat overpraised by Edgar Poe, has rare beauty of thought and expression. John Quincy Adams, sixth President of the United States (1825-29), was a man of culture and of literary tastes. He published his lectures on rhetoric delivered during his tenure of the Boylston Professorship at Harvard in 1806-09; he left a voluminous diary, which has been edited since his death in 1848; and among his experiments in poetry is one of considerable merit, entitled the Wants of Man, an ironical sermon on Goldsmith's text:

"Man wants but little here below
Nor wants that little long."

As this poem is a curiously close anticipation of Dr. Holmes's Contentment, so the very popular ballad, Old Grimes, written about 1818, by Albert Gorton Greene, an undergraduate of Brown University in Rhode Island, is in some respects an anticipation of Holmes's quaintly pathetic Last Leaf. The political literature and public oratory of {424} the United States during this period, although not absolutely of less importance than that which preceded and followed the Declaration of Independence and the adoption of the Constitution, demands less relative attention in a history of literature by reason of the growth of other departments of thought. The age was a political one, but no longer exclusively political. The debates of the time centered about the question of "State Rights," and the main forum of discussion was the old Senate chamber, then made illustrious by the presence of Clay, Webster, and Calhoun. The slavery question, which had threatened trouble, was put off for awhile by the Missouri Compromise of 1820, only to break out more fiercely in the debates on the Wilmot Proviso, and the Kansas and Nebraska Bill. Meanwhile the Abolition movement had been transferred to the press and the platform. Garrison started his Liberator in 1830, and the Antislavery Society was founded in 1833. The Whig party, which had inherited the constitutional principles of the old Federal party, advocated internal improvements at national expense and a high protective tariff. The State Rights party, which was strongest at the South, opposed these views, and in 1832 South Carolina claimed the right to "nullify" the tariff imposed by the general government. The leader of this party was John Caldwell Calhoun, a South Carolinian, who in his speech in the United States Senate, on February 13, 1832, on Nullification and the {425} Force Bill, set forth most authoritatively the "Carolina doctrine." Calhoun was a great debater, but hardly a great orator. His speeches are the arguments of a lawyer and a strict constitutionalist, severely logical, and with a sincere conviction in the soundness of his case. Their language is free from bad rhetoric; the reasoning is cogent, but there is an absence of emotion and imagination; they contain few quotable things, and no passages of commanding eloquence, such as strew the orations of Webster and Burke. They are not, in short, literature. Again, the speeches of Henry Clay, of Kentucky, the leader of the Whigs, whose persuasive oratory is a matter of tradition, disappoint in the reading. The fire has gone out of them. Not so with Daniel Webster, the greatest of American forensic orators, if, indeed, he be not the greatest of all orators who have used the English tongue. Webster's speeches are of the kind that have power to move after the voice of the speaker is still. The thought and the passion in them lay hold on feelings of patriotism more lasting than the issues of the moment. It is, indeed, true of Webster's speeches, as of all speeches, that they are known to posterity more by single brilliant passages than as wholes. In oratory the occasion is of the essence of the thing, and only those parts of an address which are permanent and universal in their appeal take their place in literature. But of such detachable passages there are happily {426} many in Webster's orations. One great thought underlay all his public life, the thought of the Union; of American nationality. What in Hamilton had been a principle of political philosophy had become in Webster a passionate conviction. The Union was his idol, and he was intolerant of any faction which threatened it from any quarter, whether the Nullifiers of South Carolina or the Abolitionists of the North. It is this thought which gives grandeur and elevation to all his utterances, and especially to the wonderful peroration of his reply to Hayne, on Mr. Foot's resolution touching the sale of the public lands, delivered in the Senate on January 26, 1830, whose closing words, "liberty and union, now and forever, one and inseparable," became the rallying cry of a great cause. Similar in sentiment was his famous speech of March 7, 1850, On the Constitution and the Union, which gave so much offense to the extreme Antislavery party, who held with Garrison that a Constitution which protected slavery was "a league with death and a covenant with hell." It is not claiming too much for Webster to assert that the sentences of these and other speeches, memorized and declaimed by thousands of school-boys throughout the North, did as much as any single influence to train up a generation in hatred of secession, and to send into the fields of the civil war armies of men animated with the stern resolution to fight till the last drop of blood was shed, rather than allow the Union to be dissolved. {427} The figure of this great senator is one of the most imposing in American annals. The masculine force of his personality impressed itself upon men of a very different stamp--upon the unworldly Emerson, and upon the captious Carlyle, whose respect was not willingly accorded to any contemporary, much less to a representative of American democracy. Webster's looks and manner were characteristic. His form was massive, his skull and jaw solid, the underlip projecting, and the mouth firmly and grimly shut; his complexion was swarthy, and his black, deep set eyes, under shaggy brows, glowed with a smoldering fire. He was rather silent in society; his delivery in debate was grave and weighty, rather than fervid. His oratory was massive and sometimes even ponderous. It may be questioned whether an American orator of to-day, with intellectual abilities equal to Webster's--if such a one there were--would permit himself the use of sonorous and elaborate pictures like the famous period which follows: "On this question of principle, while actual suffering was yet afar off, they raised their flag against a power, to which, for purposes of foreign conquest and subjugation, Rome, in the height of her glory, is not to be compared; a power which has dotted over the surface of the whole globe with her possessions and military posts, whose morning drum-beat, following the sun and keeping company with the hours, circles the earth with one

continuous and unbroken strain of the {428} martial airs of England." The secret of this kind of oratory has been lost. The present generation distrusts rhetorical ornament, and likes something swifter, simpler, and more familiar in its speakers. But every thing, in declamation of this sort, depends on the way in which it is done. Webster did it supremely well; a smaller man would merely have made buncombe of it. Among the legal orators of the time the foremost was Rufus Choate, an eloquent pleader, and, like Webster, a United States Senator from Massachusetts. Some of his speeches, though excessively rhetorical, have literary quality, and are nearly as effective in print as Webster's own. Another Massachusetts orator, Edward Everett, who in his time was successively professor in Harvard College, Unitarian minister in Boston, editor of the *North American Review*, member of both houses of Congress, Minister to England, Governor of his State, and President of Harvard, was a speaker of great finish and elegance. His addresses were mainly of the memorial and anniversary kind, and were rather lectures and Ph. B. K. prolusions than speeches. Everett was an instance of careful culture bestowed on a soil of no very great natural richness. It is doubtful whether his classical orations on Washington, the Republic, Bunker Hill Monument, and kindred themes, have enough of the breath of life in them to preserve them much longer in recollection. New England, during these years, did not take {429} that leading part in the purely literary development of the country which it afterward assumed. It had no names to match against those of Irving and Cooper. Drake and Halleck--slender as was their performance in point of quantity--were better poets than the Boston bards, Charles Sprague, whose *Shakespeare Ode*, delivered at the Boston theater in 1823, was locally famous; and Richard Henry Dana, whose longish narrative poem, the *Buccaneer*, 1827, once had admirers. But Boston has at no time been without a serious intellectual life of its own, nor without a circle of highly educated men of literary pursuits, even in default of great geniuses. The *North American Review*, established in 1815, though it has been wittily described as "ponderously revolving through space" for a few years after its foundation, did not exist in an absolute vacuum, but was scholarly, if somewhat heavy. Webster, to be sure, was a Massachusetts man--as were Everett and Choate--but his triumphs were won in the wider field of national politics. There was, however, a movement at this time in the intellectual life of Boston and Eastern Massachusetts, which, though not immediately contributory to the finer kinds of literature, prepared the way, by its clarifying and stimulating influences, for the eminent writers of the next generation. This was the Unitarian revolt against Puritan orthodoxy, in which William Ellery Channing was the principal leader. In a community so intensely theological as New England it was natural that any {430} new movement in thought should find its point of departure in the churches. Accordingly, the progressive and democratic spirit of the age, which in other parts of the country took other shapes, assumed in Massachusetts the form of "liberal Christianity." Arminianism, Socinianism, and other phases of anti-Trinitarian doctrine, had been latent in some of the Congregational churches of Massachusetts for a number of years. But about 1812 the heresy broke out openly, and within a few years from that date most of the oldest and wealthiest church societies of Boston and its vicinity had gone over to Unitarianism, and Harvard College had been captured, too. In the controversy that ensued, and which was carried on in numerous books, pamphlets, sermons, and periodicals, there were eminent disputants on both sides. So far as this controversy was concerned with the theological doctrine of the Trinity, it has no place in a history of literature. But the issue went far beyond that. Channing asserted the dignity of human nature against the Calvinistic doctrine of innate depravity, and affirmed the rights of human reason and man's capacity to judge of God. "We must start in religion from our own souls," he said. And in his *Moral Argument against Calvinism*, 1820, he wrote: "Nothing is gained to piety by degrading human nature, for in the competency of this nature to know and judge of God all piety has its foundation." In opposition to Edwards's doctrine of necessity, he emphasized {431} the freedom of the will. He maintained that the Calvinistic dogmas of original sin, foreordination, election by grace, and eternal punishment were inconsistent with the divine perfection, and made God a monster. In Channing's view the great sanction of religious truth is the moral sanction, is its agreement with the laws of conscience. He was a passionate vindicator of the liberty of the individual not only as against political oppression but against the tyranny of public opinion over thought and conscience: "We were made for free action. This alone is life, and enters into all that is good and great." This jealous love of freedom inspired all that he did and wrote. It led him to join the Antislavery party. It expressed itself in his elaborate arraignment of Napoleon in the Unitarian organ, the *Christian Examiner*, for 1827-28; in his *Remarks on Associations*, and his paper *On the Character and Writings of John Milton*, 1826. This was his most considerable contribution to literary criticism. It took for a text Milton's recently discovered *Treatise on Christian Doctrine*--the tendency of which was anti-Trinitarian--but it began with a general defense of poetry against "those who are accustomed to speak of poetry as light reading." This would now seem a somewhat superfluous introduction to an article in any American review. But it shows the nature of the milieu through which the liberal movement in Boston had to make its way. To re-assert the dignity and usefulness of the beautiful arts was, {432} perhaps, the chief service which the Massachusetts Unitarians rendered to humanism. The traditional prejudice of the Puritans against the ornamental side of life had to be softened before polite literature could find a congenial atmosphere in New England. In Channing's *Remarks on National Literature*, reviewing a

work published in 1823, he asks the question, "Do we possess what may be called a national literature?" and answers it, by implication at least, in the negative. That we do now possess a national literature is in great part due to the influence of Channing and his associates, although his own writings, being in the main controversial and, therefore, of temporary interest, may not themselves take rank among the permanent treasures of that literature.

CHAPTER IV.

THE CONCORD WRITERS.

1837-1861.

There has been but one movement in the history of the American mind which has given to literature a group of writers having coherence enough to merit the name of a school. This was the great humanitarian movement, or series of movements, in New England, which, beginning in the Unitarianism of Channing, ran through its later phase in Transcendentalism, and spent its last strength in the antislavery agitation and the enthusiasms of the Civil War. The second stage of this intellectual and social revolt was Transcendentalism, of which Emerson wrote, in 1842: "The history of genius and of religion in these times will be the history of this tendency." It culminated about 1840-41 in the establishment of the *Dial* and the Brook Farm Community, although Emerson had given the signal a few years before in his little volume entitled *Nature*, 1836, his Phi-Beta Kappa address at Harvard on the *American Scholar*, 1837, and his address in 1838 before the Divinity School at Cambridge. Ralph Waldo Emerson (1803-1882) was the prophet of the sect, and {435} Concord was its Mecca; but the influence of the new ideas was not confined to the little group of professed Transcendentalists; it extended to all the young writers within reach, who struck their roots deeper into the soil that it had loosened and freshened. We owe to it, in great measure, not merely Emerson, Alcott, Margaret Fuller, and Thoreau, but Hawthorne, Lowell, Whittier, and Holmes. In its strictest sense Transcendentalism was a restatement of the idealistic philosophy, and an application of its beliefs to religion, nature, and life. But in a looser sense, and as including the more outward manifestations which drew popular attention most strongly, it was the name given to that spirit of dissent and protest, of universal inquiry and experiment, which marked the third and fourth decades of this century in America, and especially in New England. The movement was contemporary with political revolutions in Europe and with the preaching of many novel gospels in religion, in sociology, in science, education, medicine, and hygiene. New sects were formed, like the Swedenborgians,

Universalists, Spiritualists, Millerites, Second Adventists, Shakers, Mormons, and Come-outers, some of whom believed in trances, miracles, and direct revelations from the divine Spirit; others in the quick coming of Christ, as deduced from the opening of the seals and the number of the beast in the Apocalypse; and still others in the reorganization of society and {436} of the family on a different basis. New systems of education were tried, suggested by the writings of the Swiss reformer, Pestalozzi, and others. The pseudo-sciences of mesmerism and of phrenology, as taught by Gall and Spurzheim, had numerous followers. In medicine, homeopathy, hydropathy, and what Dr. Holmes calls "kindred delusions," made many disciples. Numbers of persons, influenced by the doctrines of Graham and other vegetarians, abjured the use of animal food, as injurious not only to health but to a finer spirituality. Not a few refused to vote or pay taxes. The writings of Fourier and St. Simon were translated, and societies were established where co-operation and a community of goods should take the place of selfish competition. About the year 1840 there were some thirty of these "phalansteries" in America, many of which had their organs in the shape of weekly or monthly journals, which advocated the principle of Association. The best known of these was probably the *Harbinger*, the mouth-piece of the famous Brook Farm Community, which was founded at West Roxbury, Mass., in 1841, and lasted till 1847. The head man of Brook Farm was George Ripley, a Unitarian clergyman, who had resigned his pulpit in Boston to go into the movement, and who after its failure became and remained for many years literary editor of the *New York Tribune*. Among his associates were Charles A. Dana--now the editor of the *Sun*--Margaret Fuller, Nathaniel {437} Hawthorne and others not unknown to fame. The *Harbinger*, which ran from 1845 to 1849--two years after the break up of the community--had among its contributors many who were not Brook Farmers, but who sympathized more or less with the experiment. Of the number were Horace Greeley, Dr. F. H. Hedge--who did so much to introduce American readers to German literature--J. S. Dwight, the musical critic, C. P. Cranch, the poet, and younger men, like G. W. Curtis, and T. W. Higginson. A reader of to-day, looking into an odd volume of the *Harbinger*, will find in it some stimulating writing, together with a great deal of unintelligible talk about "Harmonic Unity," "Love Germination," and other matters now fallen silent. The most important literary result of this experiment at "plain living and high thinking," with its queer mixture of culture and agriculture, was Hawthorne's *Blithedale Romance*, which has for its background an idealized picture of the community life, whose heroine, Zenobia, has touches of Margaret Fuller; and whose hero, with his hobby of prison reform, was a type of the one-ideal philanthropists that abounded in such an environment. Hawthorne's attitude was always in part one of reserve and criticism, an attitude which is apparent in the reminiscences of Brook Farm in his *American Note Books*, wherein he speaks with a certain resentment of "Miss Fuller's transcendental heifer," which hooked the other cows, and was evidently to Hawthorne's {438} mind not unsymbolic in this respect of Miss Fuller herself. It was the day of seers and "Orphic" utterances; the air was full of the enthusiasm of humanity and thick with philanthropic projects and plans for the regeneration of the universe. The figure of the wild-eyed, long-haired reformer--the man with a panacea--the "crank" of our later terminology--became a familiar one. He abounded at non-resistance conventions and meetings of universal peace societies and of woman's rights associations. The movement had its grotesque aspects, which Lowell has described in his essay on Thoreau. "Bran had its apostles and the pre-sartorial simplicity of Adam its martyrs, tailored impromptu from the tar-pot. . . . Not a few impecunious zealots abjured the use of money (unless earned by other people), professing to live on the internal revenues of the spirit. . . . Communities were established where every thing was to be common but common sense." This ferment has long since subsided and much of what was then seething has gone off in vapor or other volatile products. But some very solid matters also have been precipitated, some crystals of poetry translucent, symmetrical, enduring. The immediate practical outcome was disappointing, and the external history of the agitation is a record of failed experiments, spurious sciences, Utopian philosophies, and sects founded only to dwindle away or be reabsorbed into some form of {439} orthodoxy. In the eyes of the conservative, or the worldly-minded, or of the plain people who could not understand the enigmatic utterances of the reformers, the dangerous or ludicrous sides of transcendentalism were naturally uppermost. Nevertheless the movement was but a new avatar of the old Puritan spirit; its moral earnestness, its spirituality, its tenderness for the individual conscience. Puritanism, too, in its day had run into grotesque extremes. Emerson bore about the same relation to the absurder outcroppings of transcendentalism that Milton bore to the New Lights, Ranters, Fifth Monarchy Men, etc., of his time. There is in him that mingling of idealism with an abiding sanity, and even a Yankee shrewdness, which characterizes the race. The practical, inventive, calculating, money-getting side of the Yankee has been made sufficiently obvious. But the deep heart of New England is full of dreams, mysticism, romance:

"And in the day of sacrifice,
When heroes piled the pyre,
The dismal Massachusetts ice
Burned more than others' fire."

The one element which the odd and eccentric developments of this movement shared in common with the real philosophy of transcendentalism was the rejection of authority and the appeal to the private consciousness as the sole standard of truth and right. This principle certainly lay in the ethical {440} systems of Kant and Fichte, the great transcendentalists of Germany. It had been strongly asserted by Channing. Nay, it was the starting point of Puritanism itself, which had drawn away from the ceremonial religion of the English Church and by its Congregational system had made each church society independent in doctrine and worship. And although Puritan orthodoxy in New England had grown rigid and dogmatic, it had never used the weapons of obscurantism. By encouraging education to the utmost it had shown its willingness to submit its beliefs to the fullest discussion and had put into the hands of dissent the means with which to attack them. In its theological aspect transcendentalism was a departure from conservative Unitarianism, as that had been from Calvinism. From Edwards to Channing, from Channing to Emerson and Theodore Parker, there was a natural and logical unfolding. Not logical in the sense that Channing accepted Edwards' premises and pushed them out to their conclusions, or that Parker accepted all of Channing's premises, but in the sense that the rigid pushing out of Edwards' premises into their conclusions by himself and his followers had brought about a moral *reductio ad absurdum* and a state of opinion against which Channing rebelled; and that Channing, as it seemed to Parker, stopped short in the carrying out of his own principles. Thus the "Channing Unitarians," while denying that Christ was God, had held that he was of {441} divine nature, was the Son of God, and had existed before he came into the world. While rejecting the doctrine of the "Vicarious sacrifice" they maintained that Christ was a mediator and intercessor, and that his supernatural nature was testified by miracles. For Parker and Emerson it was easy to take the step to the assertion that Christ was a good and great man, divine only in the sense that God possessed him more fully than any other man known in history; that it was his preaching and example that brought salvation to men, and not any special mediation or intercession, and that his own words and acts, and not miracles, are the only and the sufficient witness to his mission. In the view of the transcendentalists Christ was as human as Buddha, Socrates or Confucius, and the Bible was but one among the "Ethical Scriptures" or sacred writings of the peoples, passages from which were published in the transcendental organ, the *Dial*. As against these new views Channing Unitarianism occupied already a conservative position. The Unitarians as a body had never been very numerous outside of Eastern Massachusetts. They had a few churches in New York and in the larger cities and towns elsewhere, but the sect, as such, was a local one. Orthodoxy made a sturdy fight against the heresy, under leaders like Leonard Woods and Moses Stuart, of Andover, and Lyman Beecher, of Connecticut. In the neighboring State of Connecticut, for example, there was until lately, for {442} a period of several years, no distinctly Unitarian congregation worshipping in a church edifice of its own. On the other hand, the Unitarians claimed, with justice, that their opinions had to a great extent modified the theology of the orthodox churches. The writings of Horace Bushnell, of Hartford, one of the most eminent Congregational divines, approach Unitarianism in their interpretation of the doctrine of the Atonement; and the "progressive orthodoxy" of Andover is certainly not the Calvinism of Thomas Hooker or of Jonathan Edwards. But it seemed to the transcendentalists that conservative Unitarianism was too negative and "cultured," and Margaret Fuller complained of the coldness of the Boston pulpits. While contrariwise the central thought of transcendentalism, that the soul has an immediate connection with God, was pronounced by Dr. Channing a "crude speculation." This was the thought of Emerson's address in 1838 before the Cambridge Divinity School, and it was at once made the object of attack by conservative Unitarians like Henry Ware and Andrews Norton. The latter in an address before the same audience, on the *Latest Form of Infidelity*, said: "Nothing is left that can be called Christianity if its miraculous character be denied. . . . There can be no intuition, no direct perception of the truth of Christianity." And in a pamphlet supporting the same side of the question he added: "It is not an intelligible error but a mere absurdity to maintain {443} that we are conscious, or have an intuitive knowledge, of the being of God, of our own immortality . . . or of any other fact of religion." Ripley and Parker replied in Emerson's defense; but Emerson himself would never be drawn into controversy. He said that he could not argue. He announced truths; his method was that of the seer, not of the disputant. In 1832 Emerson, who was a Unitarian clergyman, and descended from eight generations of clergymen, had resigned the pastorate of the Second Church of Boston because he could not conscientiously administer the sacrament of the communion--which he regarded as a mere act of commemoration--in the sense in which it was understood by his parishioners. Thenceforth, though he sometimes occupied Unitarian pulpits, and was, indeed, all his life a kind of "lay preacher," he never assumed the pastorate of a church. The representative of transcendentalism in the pulpit was Theodore Parker, an eloquent preacher, an eager debater and a prolific writer on many subjects, whose collected works fill fourteen volumes. Parker was a man of strongly human traits, passionate, independent, intensely religious, but intensely radical, who made for himself a large personal following. The more advanced wing of the Unitarians were called, after him, "Parkerites." Many of the Unitarian churches refused to

"fellowship" with him; and the large congregation, or audience, which assembled in Music Hall to hear his sermons was {444} stigmatized as a "boisterous assembly" which came to hear Parker preach irreligion. It has been said that, on its philosophical side, New England transcendentalism was a restatement of idealism. The impulse came from Germany, from the philosophical writings of Kant, Fichte, Jacobi, and Schelling, and from the works of Coleridge and Carlyle, who had domesticated German thought in England. In Channing's *Remarks on a National Literature*, quoted in our last chapter, the essayist urged that our scholars should study the authors of France and Germany as one means of emancipating American letters from a slavish dependence on British literature. And in fact German literature began, not long after, to be eagerly studied in New England. Emerson published an American edition of Carlyle's *Miscellanies*, including his essays on German writers that had appeared in England between 1822 and 1830. In 1838 Ripley began to publish *Specimens of Foreign Standard Literature*, which extended to fourteen volumes. In his work of translating and supplying introductions to the matter selected he was helped by Ripley, Margaret Fuller, John S. Dwight and others who had more or less connection with the transcendental movement. The definition of the new faith given by Emerson in his lecture on the *Transcendentalist*, 1842, is as follows: "What is popularly called transcendentalism among us is idealism. . . . The idealism of the present day acquired the name of transcendental {445} from the use of that term by Immanuel Kant, who replied to the skeptical philosophy of Locke, which insisted that there was nothing in the intellect which was not previously in the experience of the senses, by showing that there was a very important class of ideas, or imperative forms, which did not come by experience, but through which experience was acquired; that these were intuitions of the mind itself, and he denominated them *transcendental forms*." Idealism denies the independent existence of matter. Transcendentalism claims for the innate ideas of God and the soul a higher assurance of reality than for the knowledge of the outside world derived through the senses. Emerson shares the "noble doubt" of idealism. He calls the universe a shade, a dream, "this great apparition." "It is a sufficient account of that appearance we call the world," he wrote in *Nature*, "that God will teach a human mind, and so makes it the receiver of a certain number of congruent sensations which we call sun and moon, man and woman, house and trade. In my utter impotence to test the authenticity of the report of my senses, to know whether the impressions on me correspond with outlying objects, what difference does it make whether Orion is up there in heaven or some god paints the image in the firmament of the soul?" On the other hand our evidence of the existence of God and of our own souls, and our knowledge of right and wrong, are immediate, and are independent of the senses. {446} We are in direct communication with the "Oversoul," the infinite Spirit. "The soul in man is the background of our being--an immensity not possessed, that cannot be possessed." "From within or from behind a light shines through us upon things, and makes us aware that we are nothing, but the light is all." Revelation is "an influx of the Divine mind into our mind. It is an ebb of the individual rivulet before the flowing surges of the sea of life." In moods of exaltation, and especially in the presence of nature, this contact of the individual soul with the absolute is felt. "All mean egotism vanishes. I become a transparent eyeball; I am nothing; I see all; the currents of the Universal Being circulate through me; I am part and particle of God." The existence and attributes of God are not deducible from history or from natural theology, but are thus directly given us in consciousness. In his essay on the *Transcendentalist*, Emerson says: "His experience inclines him to behold the procession of facts you call the world as flowing perpetually outward from an invisible, unsounded center in himself; center alike of him and of them and necessitating him to regard all things as having a subjective or relative existence--relative to that aforesaid Unknown Center of him. There is no bar or wall in the soul where man, the effect, ceases, and God, the cause, begins. We lie open on one side to the depths of spiritual nature, to the attributes of God." {447} Emerson's point of view, though familiar to students of philosophy, is strange to the popular understanding, and hence has arisen the complaint of his obscurity. Moreover, he apprehended and expressed these ideas as a poet, in figurative and emotional language, and not as a metaphysician, in a formulated statement. His own position in relation to systematic philosophers is described in what he says of Plato, in his series of sketches entitled *Representative Men*, 1850: "He has not a system. The dearest disciples and defenders are at fault. He attempted a theory of the universe, and his theory is not complete or self-evident. One man thinks he means this, and another that; he has said one thing in one place, and the reverse of it in another place." It happens, therefore, that, to many students of more formal philosophies Emerson's meaning seems elusive, and he appears to write from temporary moods and to contradict himself. Had he attempted a reasoned exposition of the transcendental philosophy, instead of writing essays and poems, he might have added one more to the number of system-mongers; but he would not have taken that significant place which he occupies in the general literature of the time, nor exerted that wide influence upon younger writers which has been one of the stimulating forces in American thought. It was because Emerson was a poet that he is our Emerson. And yet it would be impossible to disentangle his peculiar philosophical ideas from the body of his {448} writings and to leave the latter to stand upon their merits as literature merely. He is the poet of certain high abstractions, and his religion is central to all his work--excepting, perhaps, his *English Traits*, 1856, an acute study of national characteristics, and a few of his essays and verses, which are

independent of any particular philosophical standpoint. When Emerson resigned his parish in 1832 he made a short trip to Europe, where he visited Carlyle at Craigenputtock, and Landor at Florence. On his return he retired to his birthplace, the village of Concord, Massachusetts, and settled down among his books and his fields, becoming a sort of "glorified farmer," but issuing frequently from his retirement to instruct and delight audiences of thoughtful people at Boston and at other points all through the country. Emerson was the perfection of a lyceum lecturer. His manner was quiet but forcible; his voice of charming quality, and his enunciation clean cut and refined. The sentence was his unit in composition. His lectures seemed to begin anywhere and to end anywhere, and to resemble strings of exquisitely polished sayings rather than continuous discourses. His printed essays, with unimportant exceptions, were first written and delivered as lectures. In 1836 he published his first book, *Nature*, which remains the most systematic statement of his philosophy. It opened a fresh spring-head in American thought, and the words of its introduction announced that its author had broken with {449} the past. "Why should not we also enjoy an original relation to the universe? Why should not we have a poetry and philosophy of insight and not of tradition, and a religion by revelation to us and not the history of theirs?" It took eleven years to sell five hundred copies of this little book. But the year following its publication the remarkable Phi Beta Kappa address at Cambridge, on the *American Scholar*, electrified the little public of the university. This is described by Lowell as "an event without any former parallel in our literary annals, a scene to be always treasured in the memory for its picturesqueness and its inspiration. What crowded and breathless aisles, what windows clustering with eager heads, what grim silence of foregone dissent!" To Concord came many kindred spirits, drawn by Emerson's magnetic attraction. Thither came, from Connecticut, Amos Bronson Alcott, born a few years before Emerson, whom he outlived; a quaint and benignant figure, a visionary and a mystic even among the transcendentalists themselves, and one who lived in unworldly simplicity the life of the soul. Alcott had taught school at Cheshire, Conn., and afterward at Boston on an original plan--compelling his scholars, for example, to flog *him*, when they did wrong, instead of taking a flogging themselves. The experiment was successful until his *Conversations on the Gospels*, in Boston, and his insistence upon admitting colored children to his benches, offended conservative opinion and {450} broke up his school. Alcott renounced the eating of animal food in 1835. He believed in the union of thought and manual labor, and supported himself for some years by the work of his hands, gardening, cutting wood, etc. He traveled into the West and elsewhere, holding conversations on philosophy, education, and religion. He set up a little community at the village of Harvard, which was rather less successful than Brook Farm, and he contributed *Orphic Sayings* to the *Dial*, which were harder for the exoteric to understand than even Emerson's *Brahma* or the *Over-soul*. Thither came, also, Sarah Margaret Fuller, the most intellectual woman of her time in America, an eager student of Greek and German literature and an ardent seeker after the True, the Good, and the Beautiful. She threw herself into many causes--temperance, antislavery, and the higher education of women. Her brilliant conversation classes in Boston attracted many "minds" of her own sex. Subsequently, as literary editor of the *New York Tribune*, she furnished a wider public with reviews and book-notices of great ability. She took part in the Brook Farm experiment, and she edited the *Dial* for a time, contributing to it the papers afterward expanded into her most considerable book, *Woman in the Nineteenth Century*. In 1846 she went abroad, and at Rome took part in the revolutionary movement of Mazzini, having charge of one of the hospitals during the siege of the city by the {451} French. In 1847 she married an impecunious Italian nobleman, the Marquis Ossoli. In 1850 the ship on which she was returning to America, with her husband and child, was wrecked on Fire Island beach and all three were lost. Margaret Fuller's collected writings are somewhat disappointing, being mainly of temporary interest. She lives less through her books than through the memoirs of her friends, Emerson, James Freeman Clarke, T. W. Higginson, and others who knew her as a personal influence. Her strenuous and rather overbearing individuality made an impression not altogether agreeable upon many of her contemporaries. Lowell introduced a caricature of her as "Miranda" into his *Fable for Critics*, and Hawthorne's caustic sketch of her, preserved in the biography written by his son, has given great offense to her admirers. "Such a determination to *eat* this huge universe!" was Carlyle's characteristic comment on her appetite for knowledge and aspirations after perfection. To Concord also came Nathaniel Hawthorne, who took up his residence there first at the "Old Manse," and afterward at "The Wayside." Though naturally an idealist, he said that he came too late to Concord to fall decidedly under Emerson's influence. Of that he would have stood in little danger even had he come earlier. He appreciated the deep and subtle quality of Emerson's imagination, but his own shy genius always jealously guarded its independence and {452} resented the too close approaches of an alien mind. Among the native disciples of Emerson at Concord the most noteworthy were Henry Thoreau, and his friend and biographer, William Ellery Channing, Jr., a nephew of the great Channing. Channing was a contributor to the *Dial*, and he published a volume of poems which elicited a fiercely contemptuous review from Edgar Poe. Though disfigured by affectation and obscurity, many of Channing's verses were distinguished by true poetic feeling, and the last line of his little piece, *A Poet's Hope*, "If my bark sink 'tis to another sea," has taken a permanent place in the literature of transcendentalism. The private organ of the transcendentalists was the
